S U R

S U R

(1.) * **SURNAME.** *n. f.* [*surdon*, Fr.] 1. The name of the family; the name which one has over and above the Christian name.—Many which were mere English joined with the Irish against the king, taking on them Irish habits and customs, of which sort be most of the *surnames* that end in *an*, as *Hernan*, *Shinan*, and *Mungan*. *Spenfer*.—He, made heir not only of his brother's kingdom, but of his virtues and haughty thoughts, and of the *surname* also of *Barbarossa*, began to aspire to the empire. *Knolles*.—The epithets of great men, *monfieur Boileau* is of opinion, were in the nature of *surnames*. *Pope*. 2. An appellation added to the original name.—

Witness may

My *surname* *Coriolanus*: the painful service,
The extreme dangers, and the drops of blood
Shed for my thankless country, are required
But with that *surname*. *Shak.*

(2.) **SURNAME** is that which is added to the proper name for distinguishing persons and families. It was originally distinguished from *SIGNAME*, which denotes the name of the *fire* or progenitor; thus *Macdonald* and *Robertson*, are surnames expressing the *son of Donald*, the *son of Robert*. The word *surname*, again from *sur*, Fr. *above* or upon, and *nom*, *name*, signified some name superadded to the proper name to distinguish the individual, as *Artaxerxes Longimanus*, *Harold Harefoot*, *Malcolm Canmore*. From this it is evident, that every *surname* was a *surname*, but every *surname* was not a *surname*. In modern times they are nearly confounded; and as there is now little occasion to preserve the distinction, Dr Johnson has rejected the word *surname* altogether; where-in he certainly did wrong, for he has retained words much more obsolete. See **NAME**. Surnames have been introduced among most nations, but among many not at a very early period. They seem to have been formed at first by adding the name of the father to that of the son. Among the Hebrews,

Caleb is denominated the son of Jephunneh, and Joshua the son of Nun. But it is evident that these were not used as *surnames*. Even so late as our Saviour's time the Jews had no regular family *surnames*. Some had *nicknames*, or personal epithets from accidental or characteristic circumstances, as *Simon Peter*, *Judas Lebbaeus*, *Joseph Barsabas Justus*, *Judas Iscariot*, &c. But none of these were hereditary, as all surnames properly are. *Iscariot* is thought by some commentators to have been a name taken by Judas from his landed property. We admit that in all nations, while men had but one name, it was usual to distinguish them, by mentioning the name of their fathers. That the ancient Greeks, as well as the Jews did so is evident from the very first line of the *Iliad*: *Αχιλλεύς Πηλεΐδης*, "Achilles the son of Peleus." This perhaps gave rise to surnames, which at last became common among most nations. The old Normans used *Fitz*, which signifies *son*; as *Fitzherbert*, *Fitzsimmons*, the *son of Herbert*, the *son of Simon*. The Irish used *O*, or *Oy*, for *grandson*, which is still used in many parts of Scotland; the compiler's maternal great-grandmother boasted that he had 100 eyes: *O'Neal*, *O'Donnel*, &c. therefore signify the *grandson of Neal* and of *Donald*. The Scottish Highlanders employed *Mac*; as *Macdonald*, the *son of Donald*. The Saxons added the word *son* to the end of the father's name, as *Williamson*. The Romans generally had three names, often four or five. The first called *prænomen* answered to our Christian name, and was intended to distinguish the individuals of the family; the 2d called *nomen* corresponded to the word *clan* in Scotland, and was given to all those who were sprung from the same stock; the 3d called *cognomen* expressed the particular branch of the tribe or clan from which an individual was sprung. Thus *Publius Cornelius Scipio*: *Publius* corresponded to our names John, Robert, and William: *Cornelius* was the name of the

VOL. XXII. PART I.

A

the

the clan or tribe, as Campbell was formerly the name of all the duke of Argyle's clients, and Douglas of the retainers of the duke of Hamilton's progenitors: *Scipio* being added, conveyed this information, that *Publius*, who was of the tribe of the *Cornelli*, was of the family of that *Scipio* who led about his aged blind father, and became a *scipio* or *staff* to him. But they had also the *Agnomen*, which was generally *personal*, though sometimes hereditary; and was derived from some particular circumstance or accident happening to individuals. See *AGNOMEN* and *COGNOMEN*. Dr *Cheine* observes, that surnames were unknown in *France* before 987, when the lords began to assume the names of their demesnes. Camden relates, that they were first taken up in England, a little before the conquest, under King Edward the Confessor: but he adds, that they were never fully established among the common people till the time of Edward II. Till then they were varied with the father's name: if the father, e. gr. was called *Richard* or *Reger*, the son was called *Richardson* or *Hodgson*; but from that time they were settled, some say, by act of parliament. The oldest surnames are these we find in Domesday-book, most of them taken from places, with the addition of *de*; as *Gislefridus de Manneville*, *Walterus de Veton*, *Robertus de Oyly*, &c. Others from their fathers, with *filius*; as *Gulielmus filius Osborni*; others from their offices; as *Eudo Dapifer*, *Gulielmus Camerarius*, *Gislebertus Cocus*, &c. But the inferior people are noted simply by their Christian names, without any surnames. Some think they were first introduced into Scotland in the time of William the Conqueror, by the English, who accompanied Edgar Atheling when he fled into that kingdom. These had their proper surnames, as *Maubray*, *Lowly*, *Lisle*, &c. using the particle *de* before them; which makes it probable that these surnames had been derived from the lands which their ancestors or they themselves had possessed. But Scottish historians mention some surnames in Scotland at much earlier periods; and trace the surname of *Macalpine* from a natural son of *King Alpine*, and that of *Macgregor* from another bastard of *King Gregory* the Great, who both reigned in the 9th century. (See SCOTLAND, § 12. and 15.) Some antiquaries date the origin of the surname of *Graham* so early as the 5th century, from one *Graham*, a Scottish hero, who leaped over and demolished part of *Antoniun's* wall, thence called *GRAHAM'S DYKE*. (See SCOTLAND, § 10.) And it is certain that in *Kenneth III's* time, in 800, the great men had begun to call their lands by their own names; and soon after, the various branches of their families took their surnames from their estates. Others, as surnames increased, took their names from their offices, as *Stewarts*; from their business, as *Smith*, *Taylor*, &c.; others from their complexion or stature, as *Black*, *White*, *Red*, *Brown*, *Long*, *Short*, &c. It was long before any surnames were used in *Wales*, except that of son; as *Evan ap Rice*, *Evan* the son of *Rice*; *David ap Howel*, *David* the son of *Howel*: but many of them have at length formed separate surnames, as the English and Scots by leaving out the *a* in *ap*, and joining

the *p* to the father's name: thus *Evan ap Rice* becomes *Evan Price*; *Griffin ap Howel*, *Griffin Powell*.—We are told, surnames were unknown in *Sweden* till 1314, and that the common people of that country use none to this day; and that the same is the case with the vulgar Irish, Poles, and Bohemians. Many surnames were doubtless originally bestowed on account of the qualities of mind, as *Bold*, *Hardy*, *Meek*; some for the qualities of body, as *Strong*, *Low*, *Short*, &c. But the greatest number of surnames were borrowed from the names of places, and not a few from the country at large; as *Scott*, *Scotland*, *English*, *Inglish*, *England*, *Wales*, *Welsh*, *Ireland*, &c. Camden says that there is not a village in *Normandy* but has given its name to some family in *England*. He mentions as examples *Percy*, *Devereux*, *Tanker-ville*, *Mortimer*, *Warren*, &c. They were introduced with *William I.* Several have been derived from places in the Netherlands, as *Gaunt*, *Tournay*, *Grandison*; and many from the names of towns and villages in *England* and *Scotland*, as *Wentworth*, *Markham*, *Murray*, *Aberdeen*. Many have been formed from the names of animals, as *Lion*, *Dog*, *Hog*, *Cock*, *Salmon*, &c.; many from vegetables and minerals, &c. Others are formed from such a variety of accidents that it would be trifling to particularize them. After the revival of learning, when most European authors wrote in Latin, it was a very general practice to Latinize their surnames, either by adding a Latin termination to them, or by a complete translation, which often disguised them entirely. Thus *Francis Holyoak*, author of a Latin dictionary, called himself *Franciscus de Sacra Quercu*; *Kirkwood* and *Ruddiman*, in their Latin grammars, called themselves *Kirkwoodus* and *Ruddimannus*; and even so late as the end of last century, Dr *Brown*, in his *Elementa Medicinæ*, styled himself *Joannes Bruno*; whence the epithet *BRUNONIAN* was applied to his doctrine and his followers. But surnames ought never to be translated; and Christian names always ought, except when borrowed from surnames. See *LOUIS*.

* To SURNAME, *v. a.* [*Surnommé*, Fr. from the noun.] To name by an original appellation added to the name.—Another shall surname himself by the name of *Israel*. *Is.* xlv. 5.—*Pyreicus*, only famous for counterfeiting earthen pitchers, was surnamed *Rupographus*. *Peacham*.—

How he, *surnam'd* of *Africa*, dismiss'd
In his prime youth the fair Iberian maid. *Mil.*
—God commanded man what was good; but the devil surnam'd it evil. *South.*

SUROE, } or SOROE, an island in the North
SUROY, } Sea, on the coast of Norway; 44
miles long and 8 broad. Lon. 40. 0. E. Ferro.
Lat. 70. 34. N.

* To SURPASS, *v. a.* [*surpasser*, French.] To excel; to exceed; to go beyond in excellence.—

The climate's delicate,
Fertile the ille, the temple much surpassing
The common praise it bears. *Shak.*

O, by what name, for thou above all these
Surpass'st far my naming! *Milton.*

—*Achilles* in strength and courage surpass'd the
rest of the Grecian army. *Dryden*.—

A nymph

A nymph of late there was,
Whose heav'nly form her fellows did surpass.

Dryden.

—Under or near the line are mountains which, for bigness and number, surpass those of colder countries, as much as the heat there surpasses that of those countries. *Woodward.*

* **SURPASSABLE.** *adj.* [from *surpass* and *able*.] That may be excelled. *Diſt.*

* **SURPASSING.** *participial adj.* [from *surpass*.] Excellent in an high degree.—

O thou! that, with surpassing glory crown'd,
Look'st from thy sole dominion like the god
Of this new world. *Milton.*

—His miracles proved him to be sent from God, by that surpassing goodness they demonstrated to the world. *Colamy.*

* **SURPASSINGLY.** *adv.* [from *surpassing*.] In a very excellent manner. *Diſt.*

(1.) * **SURPLICE.** *n. f.* [*ſurpelis, ſurplis, Fr. ſuperpellicium, Lat.*] The white garb which the clergy wear in their acts of ministration.—It will wear the surplice of humility over the black gown of a big heart. *Shak.*—The cinctus gabinus is a long garment, not unlike a surplice, which was gathered about the middle with a girdle. *Addison.*

(2.) **SURPLICE.** By Can. 58, every minister saying the public prayers, or ministering the sacrament or other rites of the church, shall wear a decent and comely surplice with sleeves, to be provided at the charge of the parish. But by 1 Eliz. c. 2. and 13 and 14 Car. II. the garb prescribed by act of parliament, in the second year of king Edward VI. is enjoined; and this requires, that in the saying or singing of matins, and even songs, baptizing and burying, the minister in parish churches and chapels shall use a surplice. And in all cathedral churches and colleges, the archdeacon, dean, provosts, masters, prebendaries, and fellows being graduates, may use in the choir, besides their surplices, such hoods as pertain to their several degrees. But in all other places every minister shall be at liberty to use a surplice or not. For the holy communion the rubric appoints a white Alms plain, which differs from the surplice in being close-sleeved, with a vestment or cope. See **ALB**.

* **SURPLUS.** } *n. f.* [*ſur and plus, French.*]
* **SURPLUSAGE.** } A superfluous part;
superplus; what remains when use is satisfied.—

If then thee list my offered grace to use,
Take what thou please of all this surplusage.

Spenser.

That you have vouchsaf'd my poor house to visit,

It is a surplus of your grace. *Shak.*

—When the price of corn falleth, men give over surplus tillage. *Carew.*—We made a substance so disposed to fluidity, that by so small an agitation as only the surplusage of that which the ambient air is wont to have about the middle even of a winter's day, above what it hath in the first part. *Boyle.*—The officers spent all, so as there was no surplusage of treasure. *Davies.*—All that surplusage of affiance is owing not to the love of truth. *Locke.*

* **SURPRISAL.** } *n. f.* [*ſurprise, French; from*
* **SURPRISE.** } the verb.] 1. The act of taking

unawares; the state of being taken unawares.—Parents should mark heedfully the witty excuses of their children, especially at suddains and surprisals. *Wotton.*

This let him know,

Left, wilfully transgressing, he pretend
Surprisal, unadmonish'd, unforwarn'd. *Milton.*
—I set aside the taking of St Jago and St Domingo in Hispaniola, as surprises rather than encounters. *Bacon.*

This strange surprisal put the knight
And wrathful squire into a fright. *Hudibras.*
—There is a vast difference between them, as vast as between surprise and set purpose. *South.*—He whose thoughts are employed in the weighty cares of empire, the laws relieve him against the surprises and machinations of deceitful men. *Davenant.* 2. A dish, I suppose, which has nothing in it.—

Few care for carving trifles in disguise
Of that fantastick dish some call surprise. *King.*
3. Sudden confusion or perplexity.

* **TO SURPRISE.** *v. a.* [*ſurpris, French, from*
surprendre.] 1. To take unawares; to fall upon unexpectedly.—

The cattle of Macduff I will surprise. *Shak.*
Discover who'd the state surprise. *B. Jonson.*

Bid her well beware,
Left, by some fair appearing good surpris'd,
She dictate false. *Milton.*

A weaker may surprise, a stronger take. *Pope.*
Who can speak
The mingled passions that surpris'd his heart!

Thomson.

2. To astonish by something wonderful.—People were not so much frighted as surprised at the bigness of the camel. *L'Estrange.* 3. To confuse or perplex with something sudden.—

Up he starts, discover'd and surpris'd. *Milton.*
* **SURPRISING.** *participial adj.* [from *surprise*.]

Wonderful; raising sudden wonder or concern.—The greatest actions of a celebrated person, however surprising and extraordinary, are no more than what are expected from him. *Spectator.*

* **SURPRISINGLY.** *adv.* [from *surprising*.] To a degree that raises wonder; in a manner that raises wonder.—If out of those ten thousand we should take the men that are employed in publick business, the number of those who remain will be surprisingly little. *Addison.*

* **SURQUEDRY.** *n. s.* [*ſur and cuider, old Fr. to think.*] Overweening pride; insolence. Obsolete.—

Transform'd to fish for their bold surquedry. *Spenser.*

Men may not themselves their own good parts
Extol, without suspect of surquedry. *Donne.*
SURRATTE. See **SHUR**.

* **SURREBUTTER.** *n. s.* [In law.] A second rebutter; answer to a rebutter. A term in the courts.

* **SURREJOINDER.** *n. s.* [*ſurrejoindre, French.* In law.] A second defence of the plaintiff's action, opposite to the rejoinder of the defendant, which the civilians call *triplicatio*. *Bayly.*

(1.) * **SURRENDER.** *SURRENDY.* *n. s.* [from the verb.] 1. The act of yielding.—

A 2

Out

Our general mother, with eyes
Of conjugal attraction unprov'd,
And meek *surrender*, half-embracing, lean'd
On our first father. *Milton.*

—Having mustered up all the forces he could, he
prepares for a *surrender*. *Woodward.*
Juba's *surrender*

Would give up Africk into Cæsar's hands.

Addison.
2. The act of resigning or giving up to another.—
If our father carry authority with such disposition
as he bears, this last *surrender* of his will but of-
fend us. *Shak.*—That hope quickly vanished upon
the undoubted intelligence of that *surrender*. *Glanville.*
—We should have made an entire *surrender*
of ourselves to God. *Decay of Piety.*—In passing a
thing away by deed of gift, are required a *surrender*
on the giver's part of all the property he
has in it: and to the making of a thing sacred, this
surrender by its right owner is necessary. *South.*

(2.) *SURRENDER*, in common law, is a deed or
instrument, testifying that the particular tenant of
lands and tenements, for life or years, doth suffi-
ciently consent and agree, that he who has the
next or immediate remainder or reversion thereof
shall have the present estate of the same in posses-
sion; and that he hereby yields and gives up the
same to him, so that the estate for life or years
may merge or drown by mutual agreement of the
parties. Of *surrenders* there are three kinds; a
surrender properly taken at common law; a *surrender*
of copyhold or customary estates; and a
surrender improperly taken, as of a deed, a patent,
&c. The first is the usual *surrender*, and it is
usually divided into that in deed and that in law.

(3.) *SURRENDER*, in deed, is that which is really
made by express words in writing, where the
words of the lessee to the lessor prove a sufficient
assent to *surrender* his estate back again.

(4.) *SURRENDER*, in law, is that wrought by
operation of the law, and which is not actual.—As
if a man have a lease of a farm for life or years,
and during the term he accepts a new lease; this
act is, in law, a *surrender* of the former.

(5.) *SURRENDER* of a bankrupt. See COM-
MISSION OF BANKRUPTCY.

(6.) *SURRENDER OF COPYHOLDS* is the yielding
up of the estate by the tenant into the hands of
the lord, for such purposes as are expressed in the
surrender: as to the use and behoof of A and his
heirs, to the use of his own will, and the like.
This method of conveyance is so essential to the
nature of a copyhold estate, that it cannot pos-
sibly be transferred by any other assurance. No
testament, fine, or recovery (in the king's courts),
hath any operation upon it. If I would exchange
a copyhold with another, I cannot do it by an
ordinary deed of exchange at the common law,
but we must *surrender* to each other's use, and
the lord will admit us accordingly. If I would
devise a copyhold, I must *surrender* it to the use of
my last will and testament; and in my will I must
declare my intentions, and name a devisee, who
will then be entitled to admission.

(7.) *SURRENDER OF LETTERS PATENT AND
OFFICES.* A *surrender* may be made of letters
patent to the king, so that he may grant the estate
to whom he pleases, &c.; and a second patent for

years to the same person for the same thing is a
surrender in law of the first patent. 10 Rep. 66.
If an officer for life accepts of another grant of the
same office, it is in law a *surrender* of the first
grant; but if such an officer takes another grant
of the same office to himself and another, it may
be otherwise.

(1.) * *To SURRENDER. v. a.* [*surrendre*, old Fr.]
1. To yield up; to deliver up.—Solemn dedica-
tion of the churches serves also to *surrender* up
that right which otherwise their founders might
have in them. *Hooker.*—Recal those grants, and
we are ready to *surrender* ours. *Davenant.* 2. To
deliver up to an enemy: sometimes with up em-
phatically.—

Ripe age bade him *surrender* late

His life and long good fortune unto final fate.

Fairfax.
—He, willing to *surrender* up the castle, forbade
his soldiers to have any talk with the enemy.
Kneller.

Surrender up to me thy captive breath. *Hart.*

(2.) * *To SURRENDER. v. n.* To yield; to give
one's self up.—

This mighty Archimedes too *surrenders* now.

Glanville.

* *SURRENDRY.* See *SURRENDER*, § 1.

* *SURREPTION. n. s.* [*surreptus*, Latin.]
Sudden and unperceived invasion or intrusion.—
Sins compatible with a regenerate estate are sins
of a sudden *surreption*. *Hammond.*

(1.) * *SURREPTITIOUS. adj.* [*surreptitius*,
Latin.] Done by stealth; gotten or produced
fraudulently.—Scaliger hath not translated the
first, perhaps supposing it *surreptitious*. *Brown.*
The Maforites numbered not only the felonies
and limes, but even the words and letters of the
Old Testament, the better to secure it from *sur-
reptitious* practices. *Gov. of the Tongue.*—A correct
copy of the Dunciad, the many *surreptitious* ones
have rendered necessary. *Letter to Publ.*

(2.) *SURREPTITIOUS.* See *SURREPTITIOUS.*

* *SURREPTITIOUSLY. adv.* [from *surrepti-
tious*.] By stealth; fraudulently.—Thou hast got
it more *surreptitiously* than he did, and with less
ease. *Gov. of the Tongue.*

SURREY. See *SURRY.*

* *SURROGATE. n. s.* [*surrogatus*, Latin.] A
deputy; a delegate; the deputy of an ecclesiastical
judge.

* *To SURROGATE. v. a.* [*surrogo*, Latin.] To
put in the place of another.

(1.) * *SURROGATION. n. s.* [*surrogatio*, Lat.]
The act of putting in another's place.

(2.) *SURROGATION, in law.* See *SURROGA-
TION.*

* *To SURROUND. v. a.* [*surround*, Fr.] To
environ; to encompass; to enclose on all sides.—

Yelling monsters, that with ceaseless cry
Surround me, as thou wast. *Milton.*

Cloud and ever-during dark

Surround me. *Milton.*

Bad angels seen

'Twixt upper, nether, and *surrounding* fires.

Milton.
—The bodies that *surround* us diversely affect our
organs. *Locke.*

(1.) *SURRY*, a county of England, bounded on the

the W. by Berkshire and Hampshire, on the S. by Suffex, on the E. by Kent, on the N. by Middlesex, from which it is parted by the Thames; whence it had the name of *Subtre* by the Saxons, i. e. the country on the S. side of the river. It is 38 miles long from E. to W. 27 broad from N. to S. and 212 in circumference. It contains 13 hundreds, 140 parishes, of which 35 are vicarages, 13 market towns, 450 villages, and 592,000 acres. It sends 14 members to parliament, of whom two are from each of the following boroughs, viz. Southwark, Blechingley, Ryegate, Guildford, Gatten, Haslemere, and two for the county. The air towards the middle, which consists mostly of hills and heath, is sharp, but pure and wholesome. About the skirts, where it is more level, and the soil richer, the air is milder, and also salubrious. In the middle parts the soil is barren in general; but towards the extremities, and where the country is open and champaign, it is fruitful in grass and corn, particularly on the S. side, in Holmsdale, in which meadows, woods, and corn fields, are agreeably intermixed. The soil is also very fertile along the Thames, especially towards London, where it greatly contributes to maintain plenty in the London markets. It has several rivers, abounding with fish; the chief are the Wye, the Mole, and the Wandie. By the report of the population of England, given in to the house of commons, June 26, 1801, Surry contained, at that period, 45,535 houses, 126,152 males, and 141,136 females; in all, 267,288 souls.

(2.) **SURRY**, a county of N. Carolina, in Salisbury district, bounded on the N. by Virginia, E. by Stokes, SW. by Iredell, and W. by Wilkes counties. It contained 4693 citizens in 1795, and 698 slaves. It has an iron manufacture on the banks of the Yadkin.

(3.) **SURRY**, a county of Virginia, bounded on the N. by the river James and Charles-city county, E. by the Isle of Wight, S. by Southampton, and W. by Prince George's county. It is 40 miles long and 15 broad, and, in 1795, contained 3130 citizens and 3097 slaves.

(4.) **SURRY**, a town of New Hampshire; 72 miles NW. of Boston, and 160 NNE. of New York.

SURSEE, a town of Switzerland, in the canton of Lucerne, on lake Sempach; 13 miles NW. of Lucerne, and 26 E. of Solcure.

SURSKOI, a town of Russia, in Archangel; 140 miles ESE. of Archangel.

(1.) * **SURSOLID**. *n. s.* [In algebra.] The fourth multiplication or power of any number whatever taken as the root. *Trevaux*.

(2.) **SURSOLID**, or **SURDESOLID**, in arithmetic, is also styled the *fifth power of a number*.

(3.) * **SURSOLID PROBLEM**. *n. s.* [In mathematics.] That which cannot be resolved but by curves of a higher nature than a conic section. *Harris*.

(1.) **SURSOOTY**, a town of Hindostan, in Delhi; 114 miles NW. of Delhi.

(2.) **SURSOOTY**, a river of Hindostan, in Delhi, which joins the Caggar, 105 miles NW. of Delhi. It is one of the seven *sacred* rivers of the superstitious Hindoos.

(3.) **SURSOOTY**, another river of Hindostan, in Guzerat, which runs into the Indian Ocean, 40 miles SW. of Junagur.

SURSWUTTY, a river of Hindostan, which runs into the Puddar, 26 miles W. of Pattun.

SURTAINVILLE, a town of France, in the dep. of the Channel; 12 miles SSW. of Cherburg, and 13½ W. of Valognes.

* **SURTOUT**. *n. s.* [French.] A large coat worn over all the rest.

The *surtout*, if abroad you wear,
Repels the rigour of the air. *Prior*.
—Sir Roger was forced to wear a *surtout* of oiled cloth, by which means he came home pretty clean, except where the *surtout* was a little scanty. *Arbutnot*.

* **TO SURVENE**. *v. a.* [*survenir*, French.] To supervene; to come as an addition.—Hippocrates mentions a supputation that *survenes* lethargies. *Harvey*.

* **SURVEY**. *n. s.* [from the verb.] 1. View; prospect.—

Her stars in all their vast *survey*. *Milton*.
Under his proud *survey* the city lies. *Denham*.
O'erlooks the neighbours with a wide *survey*. *Dryden*.

2. Superintendence. 3. Mensuration.

* **TO SURVEY**. *v. a.* [*surveoir*, old French.] 1. To overlook; to have under the view; to view as from a higher place.—

Round her *surveys*, and well might where he
stood,
So high above. *Milton*.
Search not his bottom, but *survey* his shore. *Denham*.

2. To oversee as one in authority. 3. To view as examining.—

The husbandman's self came that way,
Of custom to *survey* his ground. *Spenser*.
Early abroad he did the world *survey*. *Waller*.
All pale and speechless, he *survey'd* me round. *Dryden*.

4. To measure and estimate land or buildings.
SURVEYING, *n. s.* the art of measuring land; that is, of taking the dimensions of any tract of ground, laying down the same in a map or draught, and finding the content or area thereof. See **GEOMETRY**.

(1.) * **SURVEYOR**. *n. s.* [from *survey*.] 1. An overseer; one placed to superintend others.—

Were't not madness then,
To make the fox *surveyor* of the fold? *Shak*.
—Bishop Fox was not only a grave counsellor, but also a good *surveyor* of works. *Bacon*. 2. A measurer of land.—

Question *surveyors*, know our own estate,
How able such a work to undergo. *Shak*.
—Decempea was a measuring rod for taking the dimensions of buildings; from hence came decempeator, for a *surveyor*, used by Cicero. *Arbutnot*.

(2.) **SURVEYOR** is also used for a person who has the oversight and care of considerable works, lands, or the like.

(3.) **SURVEYOR** likewise denotes a gauger; also a person who makes maps of lands.

* **SURVEYORSHIP**. *n. s.* [from *surveyor*.] The office of a surveyor.

* **TO SURVIEW**. *v. a.* [*surveoir*, old French.] To

To overlook; to have in view; to survey. Not in use.—

Lifted high above this earthly mass,

Which it *survieu'd*, *Spenser.*

* To SURVIVE. *v. n.* [*super vivo*, Latin; *survivre*, Fr.] 1. To live after the death of another.—

I'll assure her of

Her widowhood, be it that she *survives* me,

In all my lands and leaves whatsoever. *Shak.*

Those that *survive*, let Rome reward with love. *Shak.*

Try pleasure,

Which when no other enemy *survives*,

Still conquers all the conquerors. *Denham.*

2. To live after any thing.—Now that he is dead, his immortal fame *surviveth*. *Spenser.*—

The love of horses, which they had alive,

And care of chariots, after death *survive*. *Dryden.*

—The rhapsodies, called the characteristicks, would never have *survived* the first edition, if they had not discovered to strong a tincture of infidelity. *Watts.* 3. To remain alive.—

No longer now that golden age appears,

When patriarch wits *surviv'd* a thousand years,

Now length of fame, our second life, is lost. *Pope.*

* SURVIVER. *n. f.* [from *survive*.] One who outlives another.—

The *surviver* bound

In filial obligation, for some term,

To do obsequious sorrow. *Shak.*

—Although some died, the number of *survivors* must still be very great. *Brown.*—

From his *survivors* I could nothing learn. *Denham.*

—Her majesty is heir to the *survivor* of the late king. *Swift.*

(1.) * SURVIVERSHIP. *n. f.* [from *surviver*.] The state of outliving another.—Such offices granted in reversion were void, unless where the grant has been by *survivorship*. *Ayliffe.*

(2.) SURVIVORSHIP. See SURVIVORSHIP.

SURVIVOR, *n. f.* in law signifies the longest liver of joint tenants, or of any two persons jointly interested in a thing.

(1.) SURVIVORSHIP, *n. f.* is that branch of mathematics which treats of reversions payable, provided one or more particular persons survive certain others. By reversions are meant payments not to take place till some future period. Survivorship forms one of the most difficult and complicated parts of the doctrine of reversions and LIFE ANNUITIES. It has been very fully treated of by Mr Thomas Simpson in his *Select Exercises*; and brought to a state of perfection by Dr Price and Mr Morgan, who bestowed a great deal of attention on this subject. (See ANNUITIES.) The calculations are founded on the expectation of lives at different ages, deduced from tables formed from bills of mortality, of which see several examples under the article MORTALITY, § 3—7. By the *expectation of life* is meant the mean time that any single or joint lives at a given age is found to continue; that is, the number of years which, taking one with another, they actually enjoy, and may be considered as sure of enjoying; those who sur-

vive that period enjoying as much more time in proportion to their number as those who fall short of it enjoy less. Thus, supposing 46 persons alive all 40 years of age, and that one will die every year till they are all dead in 46 years, half 46 or 23 will be the *expectation* of each of them. If M. de Moivre's hypothesis were true, that men always decrease in an arithmetical progression, the *expectation* of a single life is always half its complement, and the *expectation* of two joint lives one third of their common complement. By the *complement of a life* is meant what it wants of 86, which M. de Moivre makes the boundary of human life. Thus if a man be 30, the complement of his life is 56. Thus, supposing a man 40, his *expectation* would be 23, the half of 46, his complement: the *expectation* of two joint lives, each 40, would be 15 years 4 months, or the third part of 46. The number expressing the *expectation*, multiplied by the number of single or joint lives, (of which it is the *expectation*), added annually to a society, gives the whole number living together, to which such an annual addition would in time grow. Thus, since 19, or the third of 57, is the *expectation* of two joint lives, whose common age is 29, 20 marriages every year between persons of this age would in 57 years grow to 20 times 19, or 380 marriages, always existing together. And since the *expectation* of a single life is always half its complement, in 57 years 20 single persons added annually to a town will increase to 20 times 28.5, or 570; and when arrived at this number, the deaths every year will just equal the accessions, and no farther increase be possible. It appears from hence, that the particular proportion that becomes extinct every year, out of the whole number constantly existing together of single or joint lives, must, wherever this number undergoes no variation, be exactly the same with the *expectation* of those lives, at the time when their existence commenced. Thus, was it found that a 19th part of all the marriages among any bodies of men, whose numbers do not vary, are dissolved every year by the deaths of either the husband or wife, it would appear that 19 was, at the time they were contracted, the *expectation* of these marriages. In like manner, was it found in a society, limited to a fixed number of members, that a 28th part dies annually out of the whole number of members, it would appear that 28 was their common *expectation* of life at the time they entered. So likewise, were it found in any town or district, where the number of births and burials are equal, that a 20th or 30th part of the inhabitants die annually, it would appear that 20 or 30 was the *expectation* of a child just born in that town or district. These *expectations*, therefore, for all single lives, are easily found by a table of observations, showing the number that die annually at all ages out of a given number alive at those ages; and the general rule for this purpose is, to divide the sum of all the living in the table, at the age whose *expectation* is required, and at all greater ages, by the sum of all that die annually at that age and above it; or, which is the same, by the number (in the Table) of the living at that age; and half unity subtracted from the quotient will be the required *expectation*. Thus,

Thus, in Dr. HALLEY'S TABLE, in the article ANNUITIES, *Sec.* II. the sum of all the living at 20 and upwards is 20,744, which, divided by 598, the number living at the age of 20, and half unity subtracted from the quotient, gives 34.15 for the expectation of 20. In calculating the value or expectation of joint lives, M. De Moivre fell into various mistakes, which we need not enumerate; as Dr Price and Mr Morgan have given tables of the value of lives, not founded on any *hypothesis*, but deduced from bills of mortality. Mr Morgan has likewise given rules for calculating values of lives in this manner. Dr Price, in the 3d essay in the first volume of his *Treatise on Reversionary Payments*, has also given proper rules for calculating these values, the most important of which are comprehended in the following paragraphs.

(a.) SURVIVORSHIP, CASES OF. I. Suppose a set of married men to enter into a society in order to provide annuities for their widows, and that it is limited to a certain number of members, and constantly kept up to that number by the admission of new members as the old ones are lost; it is of importance, in the first place, to know the number of annuitants that after some time will come upon the establishment. Now, since every marriage produces either a widow or widower, and since all marriages taken together would produce as many widows as widowers, were every man and his wife of the same age, and the chance equal which shall die first; it is evident, that the number of widows that have ever existed in the world, would in this case be equal to half the number of marriages. And what would take place in the world must also, on the same suppositions, take place in this society. In other words, every other person in such a society leaving a widow, there must arise from it a number of widows equal to half its own number. But this does not determine what number, all living at one and the same time, the society may expect will come to be constantly upon it. It is, therefore, necessary to determine how long the duration of survivorship between persons of equal ages will be compared with the duration of marriage. And the truth is, that, supposing the probabilities of life to decrease uniformly, the former is equal to the latter; and consequently that the number of survivors (or, which is the same, supposing no second marriages), of widows and widowers alive together which will arise from any given set of such marriages constantly kept up, will be equal to the whole number of marriages; or half of them (the number of widows in particular) equal to half the number of marriages. Now it appears that in most towns the decrease in the probabilities of life is in fact nearly uniform. According to the Breslaw Table of Observation, (see ANNUITIES, *Sec.* II.) almost the same numbers die every year from 20 years of age to 77. After this indeed, fewer die, and the rate of decrease in the probabilities of life is retarded. But this deviation from the hypothesis is inconsiderable; and its effect, in the present case, is to render the duration of survivorship longer than it would otherwise be. According to the London Table of Observations, the numbers dying every year begin to grow less at 50 years of age; and from hence to

extreme old age there is a constant retardation in the decrease of the probabilities of life. Upon the whole, therefore, it appears that, according to the Breslaw Table, and supposing no widows to marry, the number inquired after is somewhat greater than half the number of the society; but according to the London Table, a good deal greater. This, however, has been determined on the supposition that the husbands and wives are of equal ages, and that then there is an equal chance who shall die first. But in reality husbands are generally older than wives, and males have been found to die sooner than females, as appears incontrovertibly from several of the tables in Dr Price's *Treatise on Reversions*. It is therefore more than an equal chance that the husband will die before his wife. This will increase considerably the duration of survivorship on the part of the women, and consequently the number which we have been inquiring after. The marriage of widows will diminish this number, but not so much as the other causes will increase it. II. If the society comprehends in it from the first all the married people of all ages in any town, or among any class of people where the numbers always continue the same, the whole collective body of members will be at their greatest age at the time of the establishment of the society; and the number of widows left every year will at a medium be always the same. The number of widows will increase continually on the society, till as many die off every year as are added. This will not be till the whole collective body of widows are at their greatest age, or till there are among them the greatest possible number of the oldest widows; and therefore not till there has been time for an accession to the oldest widows from the youngest part. Let us, for the sake of greater precision, divide the whole medium of widows that come on every year into different classes according to their different ages, and suppose some to be left at 56 years of age, some at 46, some at 36, and some at 26. The widows, constantly in life together, derived from the first class, will come to their greatest age, and to a *maximum*, in 30 years, supposing, with M. de Moivre, 86 to be the utmost extent of life. The same will happen to the second class in 40 years, and to the third in 50 years. But the whole body composed of these classes will not come to a *maximum* till the same happens to the fourth or youngest class; that is, not till the end of 60 years. After this the affairs of the society will become stationary, and the number of annuitants upon it of all ages will keep always nearly the same. III. If a society begins with its complete number of members, but at the same time admits none above a particular age; if, for instance, it begins with 200 members all under 50, and afterwards limits itself to this number, and keeps it up by admitting every year, at all ages between 26 and 50, new members as old ones drop off; in this case, the period necessary to bring the *maximum* of annuitants will be just doubled. To determine the sum that every individual ought to pay in a single present payment, in order to entitle his widow to a certain annuity for her life, let us suppose the annuity 31. *per annum*, and the rate of interest four per cent. It is evident, that the value

value of such an expectation is different, according to the different ages of the purchasers, and the proportion of the age of the wife to that of the husband. Let us then suppose, that every person in such a society is of the same age with his wife, and that, one with another, all the members when they enter may be reckoned 40 years of age, as many entering above this age as below it. It has been demonstrated by M. de Moivre and Mr Simpson, that the value of an annuity on the joint continuance of any two lives, subtracted from the value of an annuity on the life in expectation, gives the true present value of annuity on what may happen to remain of the latter of the two lives after the other. (See ANNUITIES, *Sett. I. Table II. and Sett. II. Tables, III, IV, and V.*) In the present case, the value of the annuity to be enjoyed during the joint continuance of two lives, each 40, is by Table II. 9826, according to the probabilities of life in the Table of Observations, formed by Dr Halley from the bills of mortality of Breslaw in Silesia. The value of a single life 40 years of age, as given by M. de Moivre, agreeably to the same table is 1320; and the former subtracted from the latter, leaves 337, or the true number of years purchase, which ought to be paid for any given annuity, to be enjoyed by a person 40 years of age, provided he survives another person of the same age, interest being reckoned at four per cent *per annum*. The annuity, therefore, being 30l. the present value of it is 30 multiplied by 337, or 1011. 25. IV. If, instead of a single present payment, it is thought preferable to make annual payments during the marriage; what these annual payments ought to be is easily determined by finding what annual payments during two joint lives of given ages are equivalent to the value of the reversionary annuity in present money. Suppose, as before, that the joint lives are each 40, and the reversionary annuity 30l. *per annum*. An annual payment during the continuance of two such lives is worth (according to Table II.) 982 years purchase. The annual payment ought to be such as, being multiplied by 982, will produce 1011. the present value of the annuity in one payment. Divide then 1011 by 982, and 1013 the quotient will be the annual payment. This method of calculation supposes that the first annual payment is not to be made till the end of a year. If it is to be made immediately, the value of the joint lives will be increased one year's purchase; and, therefore, in order to find the annual payments required, the value of a present single payment must be divided by the value of the joint lives increased by unity. If the society prefer paying part of the value in a present single payment on admission, and the rest in annual payments; and if they fix these annual payments at a particular sum, the present single payment paid on admission is found by subtracting the value of the annual payment during the joint lives from the whole present value of the annuity in one payment. Suppose, for instance, the annual payments to be fixed at five guineas, the annuity to be 30l. the rate of interest four per cent, and the joint lives each 40: the value of the annuity in one present single payment is 1011. The value of

five guineas or 5.25 *per annum*, is (5.25 multiplied by 982 the value of the joint lives) 5155; which, subtracted from 1011. gives 495, the answer. V. If a society takes in all the marriages among persons of a particular profession within a given district, and subjects them for perpetuity to a certain equal and common tax or annual payments, in order to provide life annuities for all the widows that shall result from these marriages; since, at the commencement of such an establishment, all the oldest, as well as the youngest, marriages are to be entitled equally to the proposed benefit, a much greater number of annuitants will come immediately upon it than would come upon any similar establishment which limited itself in the admission of members to persons not exceeding a given age. This will check that accumulation of money which should take place at first, in order to produce an income equal to the disbursement at the time when the number of annuitants comes to a *maximum*; and therefore will be a particular burden upon the establishment in its infancy. For this some compensation must be provided; and the equitable method of providing it is, by levying fines at the beginning of the establishment on every member exceeding a given age, proportioned to the number of years which he has lived beyond that age. But if such fines cannot be levied, and, if every payment must be equal and common, whatever disparity there may be in the value of the expectations of different members, the fines must be reduced to one common one, answering as nearly as possible to the disadvantage, and payable by every member at the time when the establishment begins. After this, the establishment will be the same with one that takes upon it all at the time they marry; and the tax or annual payment of every member adequate to its support will be the annual payment during marriage due from persons who marry at the mean age at which, upon an average, all marriages may be considered as commencing. The fines to be paid at first are, for every particular member, the same with the difference between the value of the expectation to him at his present age, and what would have been its value to him had the scheme begun at the time he married. Or, they are, for the whole body of members, the difference between the value of the common expectation, to persons at the mean age of all married persons taken together as they exist in the world, and to persons at that age which is to be deemed their mean age when they marry. VI. Suppose we wish to know the present value of an annuity to be enjoyed by one life, for what may happen to remain of it beyond another life, after a given term; that is, provided both lives continue from the present time to the end of a given term of years; the method of calculating is this; Find the value of the annuity for two lives, greater by the given term of years than the given lives; discount this value for the given term; and then multiply by the probability, that the two given lives shall both continue the given term; and the product will be the answer. Thus, let the two lives be each 30, the term seven years, the annuity 10l. interest for four per cent. The given lives, increased by seven years, become each 37. The value of two joint lives, each 37, is (by

TO THE BINDER.

TABLE IV. SHOWING THE VALUE OF ANNUITIES ON TWO JOINT LIVES, ACCORDING TO THE PROBABILITIES OF THE DURA-

[illegible]

TABLE II.) 10'25. The value of a single life at 37 is (by the table under the article ANNUITIES,) 13'67. The former subtracted from the latter is 3'42, or the value of an annuity for the life of a person 37 years of age, after another of the same age, as has been shown above: 3'42 discounted for seven years (that is, multiplied by 0'76 the value of 1l. due at the end of seven years) is 2'6. The probability that a single life at 30 shall continue 7 years is $\frac{1}{2}$. The probability, therefore, that two such lives shall continue 7 years, is $\frac{1}{4}$, or in decimals 0'25; and 2'6 multiplied by 0'25 is 1'989, the number of years purchase which ought to be given for an annuity to be enjoyed by a life now 30 years of age, after a life of the same age, provided both continue seven years. The annuity then being 10l. its present value is 19'89l. Suppose the value is required of an annuity to be enjoyed for what may happen to remain of one life after another, provided the life in expectation continues a given time. 1. Find the present value of the annuity for the remainder of the life in expectation after the given time, which is done in this manner: Multiply the present value of the life at the given time by the present value of 1l. to be received at that time, and multiply the product again by the probability that the life in expectation will continue so long. Let the given time which the life in expectation is to continue be 15 years, and let the person then be arrived at 50 years of age. A life at fifty, according to M. de Moivre's valuation of lives, and reckoning interest at 4 per cent. is worth 11'34 years purchase. The present value of 1l. to be received at the end of 15 years, is 0'553, and the probability that a life at 35 will continue 15 years is $\frac{1}{4}$. These three values multiplied into one another give 4'44l. for the present value of the life in expectation. 2. Find the value of the reversion, provided both lives continue the given time, by the rule given above. 3. Add these values together, and the sum will be the answer in a single present payment. We shall now illustrate this rule by an example. An annuity of 10l. for the life of a person now 30, is to commence at the end of 11 years, if another person now 40 should be then dead; or, if this should not happen at the end of any year beyond 11 years in which the former shall happen to survive the latter: What is the present value of such an annuity, reckoning interest at four per cent. and taking the probabilities of life as they are in Dr Halley's table, given in the article MORTALITY? The value of 10l. *per annum*, for the remainder of the life of a person now 30, after 11 years is 169'43. The probability that a person 40 years of age shall live 11 years, is, by Dr Halley's table, $\frac{1}{4}$. The probability, therefore, that he will die in 11 years, is $\frac{1}{4}$ subtracted from unity $\frac{3}{4}$, or $\frac{3}{4}$; which multiplied by 169'43, gives l. 17'16. — The value of the reversion, provided both live 11 years, is 17l. and this value added to the for-

mer, makes l. 34'16 the value required in a single present payment; which payment, divided by l. 11'43, the value of two joint lives, aged 30 and 40, with unity added, gives 3l.; or the value required in annual payments during the joint lives, the first payment to be made immediately.

(3.) SURVIVORSHIP, TABLES FOR CALCULATING THE VALUE OF ANNUITIES IN. See *Preceded Leaf*.

(4.) SURVIVORSHIP, VALUATION OF LIVES IN.

The values of joint lives in these tables have been computed for only one rate of interest; and of single lives in Table III. for only two rates of interest. The following rules will show, that it would be a needless labour to compute these values (in strict conformity to the observations) for any other rates of interest. ACCOUNT of a method of deducing, from the correct values (according to any observation) of any single or joint lives at one rate of interest, the same values at other rates of interest. PRELIMINARY PROBLEMS. PROB. I. The expectation given of a single life by any table of observations, to find its value, supposing the decrements of life equal, at any given rate of interest. *Solution*. Find the value of an annuity certain for a number of years equal to twice the expectation. Multiply this value by the perpetuity increased by unity, and divide the product by twice the expectation: The quotient subtracted from the perpetuity will be the value required. *Example*. The expectation of a male life aged 10 by the Sweden observations, is 43'94. Twice this expectation is 87'88. The value of an annuity certain for 87'88 years is (reckoning interest at 4 per cent.) 24'200. The product of 24'200 into 26 (the perpetuity increased by unity) is 629'2, which divided by 87'88, gives 7'159. And this quotient subtracted from 25 (the perpetuity) gives 17'84 years purchase, the value of a life aged 10, deduced from the expectation of life at that age according to the Sweden observations. (See the tables in Dr Price on *Reversions*, vol. iii.) PROB. II. Having the expectations given of any two lives by any table of observations, to decide from thence the value of the joint lives at any rate of interest, supposing an equal decrement of life. *Solution*. Find the difference between twice the expectation of the youngest life and twice the expectation of the oldest life increased by unity and twice the perpetuity. Multiply this difference by the value of an annuity certain for a time equal to twice the expectation of the oldest life; and by twice the same expectation divide the product, reserving the quotient. From twice the perpetuity subtract the reserved quotient, and multiply the remainder by the perpetuity increased by unity. This last product, divided by twice the expectation of the youngest life and then subtracted from the perpetuity, will be the required value. When twice the expectation of the youngest life is greater than twice the expectation of the oldest life

increased

VOL. XXII. PART I.

† The probability that a given life shall continue any number of years, or reach a given age, is (as is well known) the fraction, whose numerator is the number of the living in any table of observations opposite to the given age, and denominator, the number opposite to the present age of the given life.

‡ For the difference between unity and the fraction expressing the probability that an event will happen, gives the probability that it will not happen.

created by unity, and twice the perpetuity the reserved quotient, instead of being subtracted from twice the perpetuity, must be added to it, and the sum, not the difference, multiplied by the perpetuity increased by unity. *Example.* Let the joint lives proposed be a female life aged 10, and a male life aged 15; and let the table of observations be the Sweden table for lives in general, and the rate of interest 4 per cent. Twice the expectations of the two lives are 90'14 and 83'28. Twice the expectation of the oldest life, increased by unity, and twice the perpetuity, is 134'28, which lessens by 90'14 (twice the expectation of the youngest life), leaves 44'14 for the reserved remainder. This remainder multiplied by 24'045 (the value of an annuity certain for 83.28 years), and the product divided by 83'28 (twice the expectation of the oldest life), gives 12'744, the quotient to be reserved; which subtracted from double the perpetuity, and the remainder (or 37'555) multiplied by the perpetuity increased by unity (or by 26) gives 968.630, which divided by 90'14 (twice the expectation of the youngest life) and the quotient subtracted from the perpetuity, we have 14'254 for the required value. The value of an annuity certain, when the number of years is a whole number with a fraction added (as will be commonly the case) may be best computed in the following manner. In this example the number of years is 83'28. The value of an annuity certain for 83 years is 24'035. The same value for 84 years is 24'072. The difference between these two values is 0'37; which difference multiplied by '28 (the fractional part of the number of years), and the product (0'103) added to the least of the two values, will give 24'045 the value for 83'28 years. *General Rule.* Call the correct value (supposed to be computed for any rate of interest) the first value. Call the value deduced (by the preceding problems) from the expectations at the same rate of interest, the second value. Call the value deduced from the expectations for any other rate of interest the third value. Then the difference between the first and second values added to or subtracted from the third value, just as the first is greater or less than the second, will be the value at the rate of interest for which the third value has been deduced from the expectations. The following examples will make this perfectly plain. *Example I.* In the two last tables the correct values are given of two joint lives among mankind at large, without distinguishing between males and females, according to the Sweden observations, reckoning the interest at 4 per cent. Let it be required to find from these values the values at 3 per cent. and let the ages of the joint lives be supposed 10 and 10. The correct value, table IV. (reckoning interest at 4 per cent.), is 16'141. The expectation of a life aged 10 is 45'07. The value deduced from this expectation at 4 per cent. by Prob. II. is 14'539. The value deduced by the same problem from the same expectation at 3 per cent. is 16'808. The difference between the first and second values is 1'602, which, added to the third value (the first being greater than the second), makes 18'410, the value required. *Example II.* Let the value be required of a single male life aged 10, at 3 per cent. interest,

from the correct value at 4 per cent. according to the Sweden observations. First, or correct value, at 4 per cent. (by table III.) is 18'674. The expectation of a male life aged 10 is 43'94. The second value (or the value deduced from this expectation by problem I.) is 17'838. The 3d value (or the value deduced from the same expectation at 3 per cent.) is 21'177. The difference between the first and second is '836; which (since the first is greater than the second) must be added to the third; and the sum (that is, 21'113) will be the value required. The third value, at 5 per cent. is 15'286; and the difference added to 15'286 makes 16'112 the value of a male life aged 10 at 5 per cent. according to the Sweden observations. The exact value at 5 per cent. is (by table III.) 16'014. Again: The difference between 16'014 (the correct value at 5 per cent.) and 15'286 (the value at the same interest deduced from the expectation), is '728; which, added (because the first value is greater than the second) to 13'335 (the value deduced at 6 per cent. from the expectation) gives 14'063, the value of the same life, reckoning interest at 6 per cent. These deductions, in the case of single lives particularly, are so easy, and give the true values so nearly, that it will be scarcely ever necessary to calculate the exact values (according to any given observations) for more than one rate of interest. If, for instance, the correct values are computed at 4 per cent. according to the observations, the values at 3, 3½, 4½, 5, 6, 7 or 8 per cent. may be deduced from them by the preceding rules as occasion may require, without much labour or any danger of considerable errors. The values thus deduced will seldom differ from the true values so much as a tenth of a year's purchase. They will not generally differ more than a 20th or 30th of a year's purchase. In joint lives they will differ less than in single lives, and they will come equally near to one another whatever the rates of interest are. The preceding tables furnish the means of determining the exact differences between the values of annuities, as they are made to depend on the survivorship of any male or female lives; which hitherto has been a desideratum of considerable consequence in the doctrine of life-annuities. What has made this of consequence is chiefly the multitude of societies lately established in this and foreign countries for providing annuities for widows. The general rule for calculating from these tables the value of such annuities is the following. *Rule.* "Find in table III. the value of a female life at the age of the wife. From this value subtract the value in table IV. of the joint continuance of two lives at the ages of the husband and wife. The remainder will be the value in a single present payment of an annuity for the life of the wife should she be left a widow. And this last value divided by the value of the joint lives increased by unity, will be the value of the same annuity in annual payments during the joint lives, and to commence immediately." *Example.* Let the age of the wife be 24, and of the husband 30. The value in table III. (reckoning interest at 4 per cent.) of a female life aged 24, is 17'252. The value in table IV. of two joint lives aged 24 and 30, is 13'453; which

which subtracted from 17,252 leaves 3,797, the value in a single present payment of an annuity of £1. for the life of the wife after the husband; that is, for the life of the widow. The annuity, therefore, being supposed 20l. its value in a single payment is 20 multiplied by 3,797, that is, 75,941. And this last value divided by 14,455 (that is, by the value of the joint lives increased by unity), gives 5.25, the value in annual payments beginning immediately, and to be continued during the joint lives of an annuity of 20l. to a wife aged 24 for her life, after her husband aged 30.

SURUNGA, or **SUISJU**, a sea-port town of Japan, in the life of Nippon, and capital of a province so named; 170 miles E. of Meaco.

SURWILISKI, a town of Lithuania, in the late palatinate of Wilna, now annexed to Prussia; 36 miles SSE. of Wilna.

(1.) **SURY**, or **SURY EN VAUX**, a town of France, in the dep. of the Cher: 3 miles N. of Sancerre, and 12 NE. of Henrichmont.

(2.) **SURY LE COMTAL**, a town of France, in the dep. of the Rhone and Loire: 6 miles SE. of Montbrison, and 12 NW. of St Etienne. Lon. 21. 51. E. Ferro. Lat. 45. 32. N.

SURYA, the orb of the sun personified and adored by a sect of Hindoos as a god, like the *Phœbus* of Greece and Rome. The sect who pay him particular adoration are called *Sauras*. Their poets and painters describe his car as drawn by seven green horses, preceded by *Arjūn*, or the *Dawn*, who acts as his charioteer, and followed by thousands of genii worshipping him and modulating his praises. He has a multitude of names, and among them 12 epithets or titles, which denote his distinct powers in each of the 12 months; and he is believed to have descended frequently from his car in a human shape, and to have left a race on earth, who are equally renowned in the Indian stories with the *Heliada* of Greece: it is very singular, that his two sons called *Aswinin* and *Aswinimmarau*, in the dual, should be considered as twin-brothers, and painted like *Castor* and *Pollux*; but they have each the character of *JEsculapius* among the gods, and are believed to have been born of a nymph, who, in the form of a mare, was impregnated with sunbeams.

SURZEE, a town of Switzerland in Lucern, near lake Sempach, 3 miles S. of Lucern.

SURZUR, a town of France, in the department of Morbihan; 6 miles SE. of Vannes.

(1.) **SUS**, or **SUZ**, or **Sous**, in geography, a province of Africa, belonging to Morocco; bounded on the N. by mount Atlas; E. by *Gesula*; S. by the sands of Numidia and *Sus*; and W. by the Ocean. It is a level fertile country, abounding in corn, sugar-canes, dates, &c. In the mountains the inhabitants are free and governed by their own chiefs, or *scheiks*. **TAKODANT** is the capital. (*Brookes*.) But the rev. C. Cruttwell makes *Darab* its boundary on the E. and *Nus* on the S. He adds, that *Aguadir*, *TOMA*, *TECENT*, and *MESSA*, are also among its chief towns.

(II) **SUS**, **SUZ**, or **Sous**, a river of Africa, which rises from Mount Atlas, in the empire of Moroc-

co, bounds the above province, to which it gives name, on the S. and falls into the Atlantic Ocean, near Santa Cruz.

(III.) **Sus**, the *Hog*, in zoology, a genus of quadrupeds belonging to the class of *mammalia* and order of *bellua*. There are four cutting teeth in the upper jaw, whose points converge; and, for the most part, six in the lower jaw, which stand forwards. There are two tusks in each jaw, those in the upper jaw being short, while those of the under jaw are long, and extend out of the mouth. The snout is prominent, moveable, and has the appearance of having been cut off, or truncated. The feet are armed with divided or cloven hoofs. There are six species:

1. **SUS ÆTHIOPICUS**, the *Engallo*, or *Ethiopian hog*, has no fore teeth, but small tusks in the lower jaw, very large ones in the upper, in old boars bending towards the forehead in form of a semicircle: nose broad, depressed, and almost of a horny hardness: head very large and broad: beneath each eye a hollow, formed of loose skin, very soft and wrinkled; under these a great lobe or wattle, lying almost horizontal, broad, flat, and rounded at the end, placed so as to intercept the view of any thing below from the animal. Between these and the mouth on each side, there is a hard callous protuberance. The mouth is small: skin dusky: bristles disposed in fasciculi, of about five each; longest between the ears and on the beginning of the back, thinly disposed on the rest of the back. Ears large and sharp pointed, inside lined with long whitish hairs: tail slender and flat, not reaching lower than the thighs, and is covered with hairs disposed in fasciculi. Body longer, and legs shorter, than in the common swine: its whole length 4 feet 9 inches; height before, 2 feet 2 inches: but in a wild state, it grows to an enormous size. These animals inhabit the hottest parts of Africa, from Senegal to Congo, also the island of Madagascar. They are very fierce, active and swift; they will not breed with the domestic sow. They burrow under ground, into which they dig with surprising expedition. Buffon confounds this with the African.

2. **SUS AFRICANUS**, the *African hog*, has only 2 fore teeth in the upper jaw, and 6 in the lower; on each side 6 grinders. The body is covered with very long and fine bristles; the tail reaches to the first joint of the hind leg; is very slender, and ends in a large tuft: the head is long; nose slender; the upper jaw extending far beyond the lower; the ears narrow, erect and pointed, with very long bristles at the end. They inhabit Africa, from Cape Verd to the Cape of Good Hope.

3. **SUS BABYRUSSA**, the *Indian hog*, has 4 cutting teeth in the upper, six in the lower jaw; ten grinders to each jaw; in the lower jaw two tusks pointing towards the eyes, and standing near 8 inches out of their sockets; from two sockets on the outside of the upper jaw two other teeth, 12 inches long, bending like horns, their ends almost touching the forehead: ears small, erect, sharp-pointed; along the back are some weak bristles; on the rest of the body only a sort of wool, such as is on lambs: the tail long, ends in a tuft, and is often twisted: the body plump and square.

square. It inhabits Buero, a small isle near Amboyna; is also found in Celebes, but neither on the continent of Asia or Africa. They are sometimes kept tame in the Indian isles; live in herds; have a very quick scent; feed on herbs and leaves of trees; never ravage gardens like other swine; their flesh well tasted. When pursued and driven to extremities, they rush into the sea, swim very well, and even dive, and pass thus from isle to isle. In the forests they often rest their heads, by hooking their upper tusks on some bough. The tusks, from their form, are useless in fight.

4. *SUS PORCUS, the Guinea hog*, has no bristles; the hinder part of the back is covered with long hairs; the tail is long and naked, and hangs down to the ground; the ears are longish and much pointed; the body is covered with short and shining red hairs. This species inhabits Guinea. There is a variety called the *Siamese hog*. Both are smaller than the common hog.

5. *SUS SCROFA, the common hog*, having the body covered with bristles; two large teeth above and below. There are four varieties:

i. *SUS SCROFA DOMESTICUS, the domestic hog*, has the ears long, sharp-pointed, and slouching; the colour generally white, sometimes mixed with other colours. In a tame state it is universal, except in the frigid zones, and in Kamtschatka, where the cold is very severe. Since its introduction into America by the Europeans, it abounds to excess in the hot and temperate parts. Of all quadrupeds, the hog is the most rude and brutal. All his habits are gross; all his appetites are impure; all his sensations are confined to a furious lust and a brutal gluttony. He devours indiscriminately every thing that comes in his way, even his own progeny the moment after their birth. This voraciousness seems to proceed from the perpetual cravings of his stomach, which is of an immoderate size; and the grossness of his appetites, it is probable, arises from the bluntness of his senses of taste and of feeling. The rudeness of the hair, the hardness of the skin, and the thickness of the fat, render these animals less sensible to blows. Mice have been known to lodge upon a hog's back, and to eat his skin and fat, without his showing any marks of feeling. The other senses of the hog are very good. It is well known to the hunters that the wild boar hears and smells at a great distance; for, to surprise him, they are obliged to watch him in silence during the night, and to place themselves opposite to the wind, that he may not perceive the smell, which never fails to make him turn back. The parts of this animal are finely adapted to its way of life. As its method of feeding is by turning up the earth with its nose for roots of different kinds, so it has a more prone form than other animals: a strong brawny neck; eyes small, and placed high in the head; a long front, nose callous and tough, and a quick sense of smelling to trace out its food. Its intestines have a strong resemblance to those of the human species. Notwithstanding its powers of motion, it is by nature stupid, inactive, and drowsy; much inclined to increase in fat, which is disposed in a different manner from that of other animals, and forms a regular coat over the whole body. It is restless at a change of weather,

and in high winds is so agitated as to run violently, screaming horribly at the same time: it is fond of wallowing in the dirt, either to cool its overheated body, or to destroy the lice, ticks, and other insects with which it is infested. Its diseases generally arise from foul feeding and intemperance; such as measles, imposthumes, and scrophula. These are best prevented by keeping the animals, as the ancients strongly recommended, very clean in their sties; allowing them air, exercise, and a sufficiency of water. Linnaeus observes, that its flesh is wholesome food for athletic constitutions, or those that use much exercise; but bad for such as lead a sedentary life: it is, however, of most universal use, and furnishes numberless materials for epicurism. The boar, or male, is chosen with great care, when intended for propagation; and is thus employed from the age of two to five years, and then either sold or fattened. The males not allotted to this use are castrated, sometimes at the age of six weeks, sometimes six months; and then fed to a great size either for sale or for use. Sows are kept for breed generally from one year old to seven, and are then fattened. They have commonly more grease on their intestines than hogs, these being fattest on their backs. Aristotle says, that hogs in general live 20 years; and adds, that both males and females are fertile till they arrive at 15. They can engender at 9 or 12 months; but it is better to restrain them till they be 18 months or two years. The first litter of the sow is not numerous; and, when only one year old, her pigs are weak, and even imperfect. She may be said to be in season at all times. Though impregnated, she solicits the approach of the male, which is an excess among animals; for almost every other species refuse the male after conception. The ardour of the sow, though almost perpetual, is however marked by paroxysms and immoderate movements, which always terminate by her wallowing in the mire. She, at the same time, emits a thick whitish fluid. She goes four months with young; brings forth in the beginning of the fifth; and soon after solicits the male, is impregnated a second time, and thus brings forth twice a-year. Only 8 or 9 of the litter are kept; the rest are sold. In 15 days, pigs are excellent food. The flesh of all the different species of swine, and at all ages, is a very substantial and agreeable aliment; and in their proper seasons, the different sorts of provisions thus supplied are all of them very saleable. The flesh was much more in favour with our ancestors than with us; though BRAWN has still many admirers, is made in the greatest perfection, and considered as a rarity peculiar to this country. PORK, though it might be wisely prohibited in some warm countries, is found equally nutritive and salutary here. As such it furnishes a very large proportion of that food which is vended in our markets. It takes salt better and keeps longer than the flesh of any other animal; and the consumption of it is prodigious when pickled or salted, more especially in our foreign garrisons and in the sea service. Our bacon is differently cured, so as to render it acceptable to all palates; and our hams are not at all inferior to those of other countries. Fresh pork sells nearly as dear as beef; the lard brings double

bie or triple the price; the blood, the intestines, the feet, and the tongue, are all prepared as food. The fat of the intestines and web, which differs from common lard, is employed for greasing axles of wheels, and for many other purposes. Sives are made of the skin; and brushes, pencils, &c. of the bristles. The dung is reputed next in value to that of sheep. Mr Worlidge proposes that swine should be turned into a close well paled, and planted with greens, pulse, and roots, on which they may feed, and by their trampling and their dung raise a great quantity of excellent soil. Mr Mortimer assures us that some, on poor light shallow land in Staffordshire, sow a small white pea, which they never reap, but turn in so many hogs to eat them as they think they will fat; and there they lie day and night, and their dung will so enrich the land, that it will bring a good sword upon it, and will graze many years afterwards. Our old husbandmen had an ill opinion of this dung, as supposing it bred weeds. In some places they wash with hogs dung for want of soap; which answers tolerably well, if the linen hangs long enough in the air to become thoroughly sweet. The snout of an old boar is the only part that is esteemed; but every part of the castrated and young boar, not exceeding one year fed, makes delicate eating. The pork of the domestic boar is worse than that of the wild boar; and it can only be rendered fit for eating by castration and fattening.

ii. *SUS SCROFA DOM. MONUNGULUS*, the *Single-boofed Hog*, has undivided hoofs on all the feet, and resembles the common kind in every thing else. They inhabit Upsal in Sweden and other places; and are mentioned by the ancients.

iii. *SUS SCROFA DOM. SINENSIS*, the *Chinese Hog*, has the back almost naked and the belly hanging down to the ground; the legs are short, and the tail short and pendulous. They are common in China, the islands in the Indian Ocean, and South Sea, and in New Guinea. They are cultivated in Europe, and are much more cleanly than the common hog; the flesh is whiter and more favoury.

iv. *SUS SCROFA FERUS*, the *Wild Hog*, is of a dark brinded colour, and beneath the bristles is a soft short hair; the ears short and a little rounded. It is found wild in most parts of Europe. In the forests of South America there are vast droves, which derive their origin from the European kind relapsed into a state of nature; and are what Mr Bancroft, in his history of Guiana, describes as a particular species by the name of *Warree*. They cannot bear excessive cold; inhabit wooded countries; and are very swift. In America they are useful by clearing the country of rattlesnakes, which they devour without danger. The external form of its body is very unwieldy: yet, by the strength of its tendons, the wild boar is enabled to fly from the hunters with amazing agility; the back toe on the feet of this animal prevents its slipping while it descends declivities, and must be of singular use when pursued. As to the age of these animals, it is said the life of the wild boar may be extended to 25 or 30 years. The flesh of the wild boar was esteemed a great delicacy by the ancient Romans. The wild sow, which every

way resembles the domestic kind, produces only once a year. This difference in fertility is probably owing to want of nourishment, and the necessity of suckling her pigs much longer than the domestic sow, which is never allowed to nurse her young above 15 days or three weeks. The wild boar was formerly a native of England, as appears from the laws of Hoel Dha, who permitted his grand huntsman to chase that animal from the middle of November to the beginning of December. William I. punished with the loss of their eyes any that were convicted of killing the wild boar, the stag, or the roebuck; and Fitz Stephen tells us, that the vast forest that in his time grew on the N. side of London, was the retreat of stags, fallow-deer, wild boars, and bulls. Charles I. turned out wild boars in the New Forest, Hampshire, but they were destroyed in the civil wars. On the continent the wild boar is hunted with dogs, or killed by surprise during the night, when the moon shines. As he runs slowly, leaves a strong odour behind him, and defends himself against the dogs, and often wounds them dangerously, fine hunting dogs are unnecessary, and would have their nose spoiled, and acquire a habit of moving slowly by hunting him. Mastiffs, with very little training, are sufficient. The oldest, which are known by the tract of their feet, should only be attacked: A young boar of three years old is difficult to hunt down; because he runs very far without stopping. But the older boars do not run far, allow the dogs to run near, and often stop to repel them. During the day, he commonly remains in his soil, which is in the most sequestered part of the woods. He comes out in the night in quest of food. In summer, when the grain is ripe, it is easy to surprize him among the cultivated fields, which he frequents every night. As soon as he is slain, the hunters cut off his testicles, the odour of which is so strong, that in a few hours it would infect the whole flesh. The ancients castrated the young boars which they could carry off from their mothers, and returned them to the woods, where they grew fat, and their pork was much better than that of domestic hogs.

6. *SUS TAJASSUS*, the *TAJASSU, PECARY, or Mexican Hog*, with 4 cutting teeth above, and six below; two tusks in each jaw; those in the upper jaw pointing down, and little apparent when the mouth is shut; the others hid: length from nose to the end of the rump about three feet: head not so taper as in common swine: ears short and erect: body covered with bristles, stronger than those of the European kind, and more like those of a hedge hog; they are dusky, surrounded with rings of white; those on the top of the neck and back are near 5 inches long; shorter on the sides; the belly almost naked; from the shoulders to the breast is a band of white: no tail: on the lower part of the back is a gland, open at the top, discharging a fetid ichorous liquor; this has been by mistake called a *navel*.—Inhabits the hottest parts of South America, and some of the Antilles; lives in the forests on the mountains: is not fond of mire or marshy places: less fat than the common hog. These animals go in great droves. They are very fierce, and will fight stoutly with the beasts of prey: the jaguar, or American leopard, is their

mort; 1

mortal enemy; often the body of that animal is found with several of these hogs slain in combat. Dogs will scarce attack this animal; if wounded, it will turn on the hunters. They feed on fruits and roots; also on toads and all manner of serpents, which they hold with their fore-feet, and skin with great dexterity. The flesh is reckoned very good food; but all writers agree that the dorsal gland must be cut out as soon as the animal is killed, or the flesh will become so infected as not to be eatable. The Indian name of this species is *paquiras*, whence is derived that of *pecary*.

(1.) **SUSA**, or **SHUSHAN**, the ancient royal residence of the kings of Persia, built by Darius Hytaspis, according to Piny; though he probably only restored it, being a very ancient city, founded by **TITHONUS**, the father of Memnon. It was in compass 120 stadia, of an oblong quadrangular form, with a citadel called *Memnonium*. In Scripture it is called **SHUSHAN**, the royal citadel, from the great number of lilies growing in that district (*Athenus*); situate on the river U-lai or Euleus (*Daniel*): Sufa was the winter, as Eubatana was the summer residence of the kings of Persia. (*Xenophon, Strabo, Plutarch.*) Here the kings kept their treasure; and Alexander found immense riches in it. (*Herodotus.*) It is now called **SUSTER**.

(2.) **SUSA**, in modern geography, a strong town of the French empire, in the department of Doria, and late marquise of Sufa, with a fort, seated on the Doria, and called the *key of Italy*, as being the chief passage out of France into Italy. It has a triumphal arch, erected in honour of Augustus. It was taken by the French in 1690, but restored in 1696, again in 1704, but restored to the D. of Savoy in 1707. It was taken by the French republicans, on the 22d May, 1800. (See **SUZA**, N° 3.) It is 30 miles NW. of Turin, and 25 NE. of Brancion. Lon. 7. 24. E. Lat. 45. 20. N.

(3.) **SUSA**, a co-devant marquise of Piedmont, now included in the French empire, and department of Doria. **SUSA** was the capital. See **SUZA**, N° 2.

(4.) **SUSA**, or **SUZA**. See **SUZA**.

(5.) **SUSA**, a town of Persia, in Chorasán, 60 miles NNW. of Herat.

***SUSCEPTIBILITY**. *n. s.* [from *susceptible*] Quality of admitting; tendency to admit.—The *susceptibility* of those influences, is the general providential law whereby other physical beings are governed. *Hale*.

***SUSCEPTIBLE**. *adj.* [*susceptible*, Fr. *Prior* has accented this improperly on the first syllable.] Capable of admitting; disposed to admit.—He moulded him platonically to his own idea, because he found him *susceptible* of good form. *Wotton*.—In their tender years they are more *susceptible* of virtuous impressions than afterwards. *L'Estrange*.—Children's minds are narrow, and usually *susceptible* but of one thought at once. *Locke*.

Blow with empty words the *susceptible* flame.

***SUSCEPTION**. *n. s.* [*susceptus*, Latin.] Act of taking.—A canon, promoted to holy orders, before he is of a lawful age for the *susception* of orders, shall have a voice in the chapter. *Ayliffe*.

***SUSCEPTIVE**. *adj.* [from *susceptus*, Lat.] This word is more analogical, though less used than *susceptible*.] Capable to admit.—Since nature is *susceptive* of errors on all sides, it fit we should have notices given us how far other persons may become the causes of false judgment. *Watts*.

SUSCHANABAD, a town of Persia, in Mazanderan, 60 miles S. of Ferabad.

***SUSCIPENCY**. *n. s.* [from *suscipiens*.] Reception; admission.

***SUSCIPIENT**. *n. s.* [*suscipiens*, Lat.] One who takes; one that admits or receives.

***To SUSCITATE**. *v. n.* [*susciter*, French *suscito*, Lat.] To rouse; to excite.—It concurs but unto predisposed effects, and only *suscitate* those forms whose determinations are seminal. *Brown*.

***SUSCITATION**. *n. s.* [*suscitation*, Fr. from *suscitate*.] The act of rousing or exciting.

SUSDAL, a town of Russia, in Volodimir, capital of a duchy so named, with an archbishop's see; seated on the Khafma, 90 miles NE. of Moscow. Lon. 40. 25. E. Lat. 56. 26. N.

SUSELL, a town of Holstein; 8 miles ESE. of Euryu.

SUSIANA, or **CHUSISTAN**. See **CHUSISTAN**.

(1.) ***SUSPECT**. *part. adj.* [*suspect*, Fr.] Doubtful.—Sordid interests are not like to render your reports *suspect* or partial. *Glanville*.

***SUSPECT**. *n. s.* [from the verb.] Suspicion; imagination without proof. *Obsolete*.—

Nefancy mine, no other wrong *suspect*. *Sidney*.

The fate of offices and towns in France, If they were known, as the *suspect* is great,

Would make thee quickly hop without a head. *Shak.*

My most worthy master, in whose breast Doubt and *suspect*, alas! are plac'd too late, You should have fear'd false times. *Shak.*—There be to many false prints of praise, that a man may justly hold a *suspect*. *Bacon*.—Nothing more jealous than a favourite towards the waining time and *suspect* of satiety. *Wotton*.—

They might hold sure intelligence Among themselves, without *suspect*. *Daniel*.—If the king ends the differences, and takes away the *suspect*. *Suckling*.

(1.) ***To SUSPECT**. *v. a.* [*suspicio*, *suspectrum*, Lat.] To imagine with a degree of fear and jealousy what is not known.—Nothing makes a man *suspect* much, more than to know little. *Baron*.

Let us not then *suspect* our happy state.

2. To imagine guilty without proof.—Many poets may *suspect* themselves for the partiality of parents to their youngest children. *Dryden*.—Some would persuade us that body and extension are the same thing, which change the signification of words, which I would not *suspect* them of. *Locke*. 3. To hold uncertain; to doubt.—I have no manner of reason to *suspect* the truth. *Addison*.

(2.) ***To SUSPECT**. *v. n.* To imagine guilt.—If I *suspect* what cause, let me be your jail. *Shak.* **SUSPENCE**. See **SUSPENSE**.

***To SUSPEND**. *v. a.* [*suspendre*, French; *suspendo*, Lat.] 1. To hang; to make to hang by any thing.—

*Twist

'Twixt two equal armies fate

4

Suspends uncertain victory.

Donne.

—It is reported by Ruffinus, that in the temple of Serapis there was an iron chariot *suspended* by loadstones; which stones removed, the chariot fell and was dashed to pieces. *Brown*. 2. To make to depend upon.—God hath in the scripture *suspended* the promise of eternal life upon this condition, obedience and holiness of life. *Tillotson*. 3. To interrupt; to make to stop for a time.—

The harmony

Suspended hell, and took with ravishment

The thronging audience.

The guard nor fights nor flies; their fate so near,

At once *suspends* their courage and their fear.

Denham.

Our love *suspended*, we neglect the fair

For whom we burn'd.

Granville.

4. To delay; to hinder from proceeding.—*Suspend* your indignation against my brother. *Shak.*—

Godfrey wisely did his grant *suspend*. *Fairfax*.

I *suspend* their doom.

Milton.

—The reasons for *suspending* the play were ill founded. *Dryden*.—This is the hinge on which turns the liberty of intellectual beings, that they can *suspend* this prosecution in particular cases. *Locke*. 5. To keep undetermined.—A man may *suspend* his choice from being determined for or against the thing proposed. *Locke*. 6. To debar for a time from the execution of an office or enjoyment of a revenue.—Good men should not be *suspended* from the exercise of their ministry. *Santerian*.—The bishop of London was summoned for not *suspending* Dr Sharp. *Swift*.

(1.) *SUSPENDED*, *part. adj.* [from *suspend*.] in medicine, stopt; interrupted: chiefly used of the vital functions.

(2.) *SUSPENDED ANIMATION*, that state of an animal in which all the functions of life are so completely stopt and interrupted, that it is hardly possible to discover any sign of life, or difference from a state of death; while yet the principle of life remains and is recoverable, if proper means be used. That swallows, marmots, and many other animals, fall into this torpid state naturally and annually, is a fact well known in natural history. (See *HIRUNDO*, N° 2. and 16; *MUS*, § III. N° 5—15; and *SWALLOW*.) The artificial *REVIVISCENCY* of three flies, too, by the celebrated Dr FRANKLIN, by exposing them to the rays of the sun, 17 months after they had been drowned in wine in France, is a fact equally well known. In the human species also there have occurred frequent cases of suspended animation, some of whom have been timeously recovered before interment; but many more, it is to be feared, have been allowed to perish, from the hurry and precipitation with which funerals are generally conducted in most countries. The discernible differences between the end of a weak life and the commencement of death are so small, and the uncertainty of the signs of the latter are so great, in all cases of syncope and suspended animation, as is acknowledged by the best medical writers ancient and modern, that too much caution cannot be observed in all such emergencies, nor too much

time spent in waiting for the *chance* of recovery, at least till the most indubitable signs of mortification appear on the corpse. But the best physicians say, that all the usual signs of death, except absolute *mortification*, are very uncertain. Coldness, stiffness, heaviness of the body, even a livid colour, or yellowness of the visage, does not assure dissolution. See *INTERMENT*, § 4—7.

(1.) * *SUSPENSE*. *adj.* [*suspensus*, Lat.] 1. Held from proceeding.—

Suspense in heav'n

Held by thy voice.

Milton.

2. Held in doubt; held in expectation.—The self-same orders allowed, but yet established in more wary and *suspense* manner. *Hooker*.—

This said, he sat: and expectation held

His looks *suspense*.

Milton.

(2.) * *SUSPENSE*. *n. s.* [*suspens*, Fr. *suspensus*, Lat.] 1. Uncertainty; delay of certainty or determination; indetermination.—Their good affection towards the church is acceptable; but the way they prescribe us to preserve it by must rest in *suspense*. *Hooker*.—

Such true joy's *suspense*

What dream can I pretend to recompense?

Waller.

Ten days the prophet in *suspense* remain'd.

Denham.

2. Act of withholding the judgment.—In propositions where there are proofs as considerable on the contrary side, *suspense* or dissent are often voluntary. *Locke*.—Whatever necessity determines to the pursuit of real bliss, the same necessity establishes *suspense*, deliberation, and scrutiny. *Locke*. 3. Stop in the midst of two opposites.—

A cool *suspense* from pleasure or from pain.

Pope.

(3.) *SUSPENSE*, in music. See *SUSPENSION*, § 3.

(1.) * *SUSPENSION*. *n. s.* [*suspension*, French; from *suspend*.] 1. Act of making to hang on any thing. 2. Act of making to depend on any thing. 3. Act of delaying.—

With thousand vows and tears we should have fought

That sad decree *suspension* to have wrought.

4. Act of withholding or balancing the judgment.—In his Indian relations, wherein are contained incredible accounts, he is surely to be read with *suspension*. *Brown*.—The mode of the will, which answers to dubitation, may be called *suspension*. *Grew*. 5. Interruption; temporary cessation.—Nor was any thing done for the better adjusting things in the time of that *suspension*. *Clarendon*. 6. Temporary privation of an office; as, the clerk incurred *suspension*.

(2.) *SUSPENSION*, in Scots law. See *LAW*, Part III. Ch. III. Sect. III. § 5.

(3.) *SUSPENSION*, or *SUSPENSE*, in music, is produced by *Supposition*, and is nearly the same. (See *SUPPOSITION*, § 2.) It consists in retaining as many as possible of the sounds in a preceding chord that they may be heard in that which succeeds.

(1.) * *SUSPENSORY*. *adj.* [*suspensoire*, Fr. *suspensus*, Lat.] That by which a thing hangs.—There are several parts peculiar to brutes which are

are wanting in man, as the seventh or *suspensory* muscle of the eye. *Roy.*

(2.) SUSPENSORY BAG. See SURGERY, *Index.*

* SUSPICION. *n. s.* [*suspicion*, Fr. *suspicio*, Lat.] The act of suspecting; imagination of something ill without proof.—This *suspicion* Miso for the hoggish shrewdness of her brain, and Mopsa for a very unlikely envy, stumbled upon. *Sidney.*—*Suspicious* amongst thoughts are like bats amongst birds, they ever fly by twilight. *Bacon.*—*Suspicion* all our lives shall be stuck full of eyes. *Shak.*

Though wisdom wake, *suspicion* sleeps

At wisdom's gate. *Milton.*

* SUSPICIOUS. *adj.* [*suspiciosus*, Lat.] 1. Inclined to suspect; inclined to imagine ill without proof.—Nature itself, after it has done an injury, will for ever be *suspicious*. *South.* 2. Indicating suspicion or fear.—A wife man will find us to be rogues by our faces; we have a *suspicious*, fearful, constrained countenance. *Swift.* 3. Liable to suspicion; giving reason to imagine ill.—They were exceeding forward to traduce him as an author of *suspicious* innovations. *Hooker.*

I spy a black *suspicious* threat'ning cloud.

Shak.

—Authors are *suspicious*, nor greedily to be swallowed, who pretend to deliver antipathies, sympathies, and the occult abstrusities of things. *Brown.*

Private, unactive, calm, contemplative,

Little *suspicious* to any king. *Milton.*

—Many mischievous insects are daily at work, to make people of merit *suspicious* of each other. *Pope.*

* SUSPICIOUSLY. *adv.* [from *suspicious*.] 1. With suspicion. 2. So as to raise suspicion.—His guard entering the place, found Plangus with his sword in his hand, but not naked, but standing *suspiciously* enough. *Sidney.*

* SUSPICIOUSNESS. *n. s.* [from *suspicious*.] Tendency to suspicion.—To make my estate known seemed impossible, by reason of the *suspiciousness* of Miso. *Sidney.*

* SUSPIRATION. *n. s.* [*suspiratio*, from *suspiro*, Lat.] Sigh; act of fetching the breath deep.—

Not customary suits of solemn black,

Nor windy *suspiration* of forc'd breath. *Shak.*

—In deep *suspirations* we take more large gulps of air to cool our heart, overcharged with love or sorrow. *More.*

* To SUSPIRE. *v. v.* [*suspiro*, Latin.] 1. To sigh; to fetch the breath deep. 2. It seems in *Shakespeare* to mean only to begin to breathe; perhaps mistaken for *respire*.—

Since the birth of Cain, the first male child,

To him that did but yesterday *suspire*,

There was not such a gracious creature born.

Shak.

SUSQUEHANNAH, the largest river of Pennsylvania, formed by the junction of the E. and W. branches of Lake Osego. It is navigable for five miles above its mouth, by vessels of 200 tons. It crosses the line of division between New York and Pennsylvania three times in a S. by W. course; then at the W. end of Peter's Mountain turns S. by E. into Maryland; and after dividing York and Lancaster counties, falls into Chesapeake Bay by a mouth $1\frac{1}{4}$ miles wide. It receives the Swatara,

and is connected with the SCHUYLKILL by a canal 80 miles long. See SWATARA.

SUSSAC, a town of France, in the department of the Upper Vienne; 15 miles SE. of Limoges.

SUSSETH, a town of Germany, in Croatia seated on the Sultz.

(1.) SUSSEX, a county of England, so named from its situation in respect of the other Saxons and called *Suffex*, i. e. the country of the South Saxons. It is bounded by Hampshire on the W. the British channel on the S. Surry on the N. and Kent on the E. It is 65 miles long, 30 broad, and 170 in circumference. It is divided into 6 *rapes*, and these into 65 hundreds, in which are 342 parishes of which 123 are vicarages, one city, 16 market towns, 1,140,000 acres, and about 120,000 souls. No return was made to parliament of its population in 1801; but the cattle were enumerated and amounted to 60,885 black cattle, and 549,997 sheep, deer, goats, and pigs. It has few good ports, though it lies along the channel for 6 miles, which is its greatest length, the coast being encumbered in many places with rocks; and where it is more open, such quantities of sand are thrown upon it by the south-west winds, and the harbours so choked up, that they will not admit vessels of any great draught or burden. The county is well watered by the rivers Arun, Adur, Ouse, Rother, Lavant, Cuckmere, Alburn, and Alton, which all rise and fall into the sea within the county, and by which it is well supplied with fish, as well as from the sea. Hence different places of the county are famed for different sort of fish; as the Arun for mullets, which enter it from the sea in summer in shoals, and by feeding upon a particular kind of herb become extremely delicious; Chichester for lobsters, Selsey for cockles, Amberley for trouts, Pulborough for eels, Rye for herrings, and the county in general for carp. The air, as well as the soil, is various in different parts of the county. Upon the coast the air is agreeable, upon the hills and downs pleasant and wholesome; but somewhat moist and foggy in the valleys, the soil being deep and rich, and the vegetation in summer very vigorous. The down in some places are very fertile in corn and grass; in others they feed great flocks of sheep, whose flesh and wool are very fine; but of the latter great quantity is clandestinely exported to France. In the Weald and the valleys the roads are very deep. In the north quarter are many woods, and some forests in other places; whence the king's yards are supplied with the largest and best timber in England, besides what is made into charcoal and consumed in the iron-works; for on the east side is plenty of iron ore, with furnaces, forges, and mills for manufacturing it. The gunpowder of this county excels that of any other. *Wheat* bred in this shire are no bigger than a lark, but almost an entire lump of fat. That part now called the *Wild* or *Weald* of Suffex was anciently a mere desert for hogs and deer, of great extent, taken in a part of Kent and Surry; and was called *Anderra Siroa*, *Coid Andred*, and *Andrafooth* from *Anderra*, an adjoining city. This county in the home circuit and diocese of Chichester, and sends 28 members to parliament, viz. two for the county, two for the city of Chichester, and two

each for Horsham, Lewes, Bramber, East Grinstead, Midhurst, Shoreham, Staining, Arundel, Hastings, Rye, Winchelsea, and Seaford; of which the four last are cinqueports.

(2.) SUSSEX, an extensive maritime county of the United States, in Delaware; bounded on the N. by Kent county, NE. by Delaware Bay, E. by the Atlantic; S. and W. by Maryland. It is nearly square, being 44 miles long, and 43 broad. In 1795, it contained 16,463, citizens, and 4025 slaves. The lands are mostly low, sandy and barren. GEORGETOWN is the capital.

(3.) SUSSEX, a large and mountainous county of New Jersey, 61 miles long, and 21 broad. It is bounded on the NE. by New York; SE. by Morris and Hunterdon counties; W. and N. by the Delaware, which separates it from Northampton county in Pennsylvania. It is divided into 11 townships; named Greenwich, Oxford, Mansfield, Knowlton, Sandyston, Wantage, Hardyston, Montague, Wallach, Newton, Independence, and Hardwicke. The population, in 1795, was 19,061 citizens, and 439 slaves. It abounds with mines of iron ore, and manufactures of pig and bar iron are carried on in it. Newton is the capital.

(4.) SUSSEX, a county of Virginia, bounded on the N. by Prince George's county, NE. by Surry, S. by Southampton, SW. by Dinwiddie, and W. by Greenville counties. It is 25 miles long, and 15 broad. In 1795, the total population was 10,554; consisting of 5167 citizens, and 5387 slaves. It has a court house, where the county meetings are held the 1st Thurs. of every month.

* TO SUSTAIN. *v. a.* [*soustenir*, Fr. *sustineo*, Lat.] 1. To bear; to prop; to hold up.—The largeness and lightness of her wings and tail *sustain* her without lassitude. *Morgan*.

Vain is the force of man,

To crush the pillars that the pile *sustain*. *Dryd.*
2. To support; to keep from sinking under evil.—The singular excellency of this design will *sustain* the patience and animate the industry of him who shall undertake it. *Holder*.—If he have no comfortable expectations of another life to *sustain* him under the evils in this world, he is of all creatures the most miserable. *Tillotson*. 3. To maintain; to keep.—

What food

Will he convey up thither to *sustain*

Himself and army?

Milton.

She the body doth *sustain* and cherish. *Davies*.

My labour will *sustain* me. *Milton*.

4. To help; to relieve: to assist.—They charged neither to entreat for him nor any way *sustain* him. *Shak.*

His sons who seek the tyrant to *sustain*,

He dooms to death.

Dryden's Æneid.

5. To bear; to endure.—

Can Cryx then *sustain* to leave his wife? *Dryd.*

Shall Turnus then such endless toil *sustain*.

Dryden.

—The mind stands collected within herself, and *sustains* the flock. *Addison*. 6. To bear without yielding.—

Such a liquor as no brain

That is mortal can *sustain*—

Waller.

VOL. XXII. PART I.

7. To suffer; to bear as inflicted.—

You shall *sustain* more new disgraces. *Shak.*

Were it I thought death menac'd would ensue

This my attempt, I would *sustain* alone

The worst, and not persuade thee. *Milton*.

* SUSTAINABLE. *adj.* [*sustainable*, Fr. from *sustain*.] That may be sustained.

* SUSTAINER, *n. f.* [from *sustain*.] 1. One that props; one that supports. 2. One that suffers; a sufferer.—

Thyself hast a *sustainer* been

Of much affliction in my cause. *Chapman*.

* SUSTENANCE. *n. f.* [*sustenance*, French.]

1. Support; maintenance.—Scarcely allowing himself fit *sustenance* of life. *Sidney*.—There are unto one endundry means; as for the *sustenance* of our bodies many kinds of food. *Hooker*.—Is then the honour of your daughter of greater moment to her, than to my daughter hers, whose *sustenance* it was? *Addison*. 2. Necessaries of life; victuals.—The experiment cost him his life for want of *sustenance*. *L'Estrange*.—The ancients were inventors of all arts necessary to life and *sustenance*. *Temple*.

* SUSTENTATION. *n. f.* [*sustentation*, Fr. from *sustento*, Lat.] 2. Support; preservation from falling.—These streams once raised above the earth, have their ascent and *sustentation* aloft promoted by the air. *Boyle*. 2. Use of victuals.—A very abstemious animal, by reason of its frigidity and latency in the winter, will long subsist without a visible *sustentation*. *Brown*. 3. Maintenance; support of life.—When there be great shoals of people, which go on to populate, without foreseeing means of life and *sustentation*; it is of necessity that once in an age they discharge a portion of their people upon other nations. *Bacon*.

SUSTER, an ancient city of Persia, the capital of Chusistan, anciently called *Susa*. (See *Susa*, N° 1.) It has manufactures of silks, stuffs, and rich cloths. It lies 105 miles SW. of Ispahan, or 22 Cruttwell says 150, and 100 N. of Bassora. Lon. 51. 19. E. Lat. 31. 15. N.

SUSTEREN, a town of France, in the dep. of the Roer, and late duchy of Juliers: 2 miles from the Maefe, and 12 S. of Ruremond. Lon. 5. 50. E. Lat. 50. 16. N.

SUSTERS, an island in the North Sea, on the coast of Norway; 12 miles SE. of Tonberg.

* SUSURRATION. *n. f.* [from *susurro*, Lat.] Whisper; soft murmur.

SUTAMOR. See SUTEMA.

SUTCLIFF, Matthew, an English divine, who flourished in the end of the 16th century. He became Dean of Exeter, and published several controversial Tracts; the chief of which is, *A Treatise on Ecclesiastical Discipline*. Lond. 1591; 4to.

* SUTE. *n. f.* [for *sute*.] Sort. I believe only misprinted.—This we conceive that they are not of one *sute*. *Hooker*.

SUTEMA, or SUTAMOR, a town of Africa, in the kingdom of Tomano.

SUTERRA, a town of Sicily, in the valley of Mazara; 6 miles NNE. of Girgenti.

SUTHAUSEN, a town of Osnaburg; 2 miles SSW. of Osnaburg.

(1.) SUTHERLAND, one of the most northerly counties

C

counties of Scotland. Including STRATHNAVERN, (which fee) it borders on Caithness on the N. and NE. is bounded by the ocean on the N. the county of Aylsh on the W. Ross on the S. and by the German sea on the E. and SE. It stretches about 70 miles in length, and 40 in breadth; is generally hilly, though in many parts arable; well watered by small rivers replete with fish, and by 66 lakes, the habitation of various fish, swans, ducks, geese, &c. One of the largest of these is *Loch Shin*. (See LOCHSWIN.) Some of them are interperfed with small verdant iflands, which in fummer yield a very agreeable prospect. On the coast are many commodious harbours; all the bays swarm with fish; and the mufcles produce fome valuable pearls. Sutherland affords iron-ftone, free-ftone, and flate in abundance; alfo quarries of marble, and mines of coal, though the people ufe turf and peat for fuel. Lead ore, impregnated with filver, and even fome gold, have been found, with cryftals and pebbles, &c. The air is fo temperate, and the foil fo good, that faffron has been brought to perfection. Many parts of the country are remarkably fruitful in corn, and the paffurage is excellent everywhere. Befides 3 great forefts, there are many fmaller woods in Sutherland, abounding with deer and other game. On the hills are fed numerous flocks of fheep and black cattle; fmall, yet fweet and juicy. There is one bird peculiar to this fhire, called *knag*, which refembles a parrot, and digs its neft with its beak in the trunks of oaks. The N. part, called *Strathnavern*, and feparated from the reft by a ridge of mountains, is bounded on the N. by the Deucalionian fea, on the W. by the channel called the *Minch*, on the E. by Caithness, and on the S. by Aylsh. The length of it, from E. to W. amounts to 34 miles; but the breadth from N. to S. does not exceed 12 in fome places. It is very hilly; and the mountains are fo high, that the fnow remains on the tops of them till mid-fummer. It is watered by NAVERN, whence its name. Here are feveral woods, frequented by deer and other game, which are hunted. Iron mines have been worked in fome places, but to no great advantage. Strathnavern has many frefh water lakes; the chief of which are Loch Naver and Loch Uyl: there are feveral iflands on the N. coast; and in the country are monuments of victories obtained over the Danes or other foreign invaders. Sutherland boasts of fome towns, and a great number of villages. The people are numerous, hardy, bold, and enterprifing; courteous to ftrangers, cheerful, open, frugal, and induftrious. They, as well as their neighbours of Caithness, fpeak the language, and wear the garb, ufed in the Lowlands of Scotland. They carry on a confiderable falmon-fifhery. They drive a traffic with their black cattle, fheep, and horfes, at the neighbouring fairs; but export their corn, barley, falt, coal, falmon, falted beef, butter, cheefe, wool, fkins, hides, and tallow. Here are provifions of all forts in plenty; and fo cheap through all this county, that a gentleman may keep houfe and live much more fumptuoufly for 200l. a year than for three times the money in the fouth of England.

(2.) SUTHERLAND POINT, the S. point of the entrance into Botany Bay; fo named from Forby Sutherland, one of Captain Cook's men, buried there in 1770.

SUTHERLANDSHIRE. See SUTHERLAND, N° 1.

SUTLER. *n. f.* [*foetler*, Dutch; *fudler*, German.] A man that fells provifions and liquer in a camp.—

I fhall *sutler* be

Unto the camp.

Send to the *sutler's*.

Shak.

Dryden.

SUTORS OF CROMARTY, two rocky promontories of Scotland, one on each fide of the opening of the Frith of CROMARTY.

SUTRI, a town of Italy, in Patrimonio, with a bifhop's fee; on the Puzzolo, furrrounded with rocks; 24 miles NW. of Rome. Lon. 12. 15. E. Lat. 42. 10. N. It was anciently called

SUTRIUM, a famous city, and an ancient colony of the Romans, the key of Etruria; founded about 7 years after the taking of Rome by the Gauls. (*Felleius*.)

SUTTEE, in Indian theology, the fixth and higheft heaven; the refidence of BRAMA. See GENTOOS.

SUTTICO, or SETRICO, a town of Africa, in the kingdom of Woolly.

(1.) SUTTON, Thomas, Esq; founder of the Charter-houfe, was born at Knaith in Lincolnfhire, in 1532, of an ancient and genteel family. He was educated at Eton, and Cambridge, and ftudied the law in Lincoln's Inn; but preferred travelling, and during his abfence, his father died, and left him a large fortune. On his return, he became fecretary to the earl of Warwick, and his brother the earl of Leicester. By the former, in 1569, he was appointed mafter of the ordnance at Berwick; and diftinguifhing himfelf greatly on the rebellion which broke out in the north, he obtained a patent for that office for life. He was one of the chiefs of thofe 1500 men who marched into Scotland, by order of Q. Elizabeth, to affift the regent, Morton, in 1573. He purchafed the manors of Gatehead and Wickham; which, producing coal mines, became to him a fource of extraordinary wealth. Soon after this, he married a rich widow, who brought him a confiderable eftate; and commencing merchant, riches flowed in to him. He was likewise a commiffioner for prizes, and took a Spanifh fhip worth 20,000l. His whole fortune, at his death, was, in land 5000l. a year; in money above 60,000l.; the greateft eftate then in the poffeffion of any private gentleman. He lived with great munificence and hofpitality; but lofing his lady in 1602, he retired from the world, and having no ifue, he purchafed of the Early of Suffolk *Howard Houfe*, or the *Charter-houfe*, near Smithfield, for 15,000l. where he founded the prefent hofpital, in 1612, for the relief of poor men and children. He died Dec. 11, 1611, at Hackney, aged 79. His body was conveyed to Chrift-church, and there depofited, till 1614, when it was removed to the charter-houfe, and interred in the chapel under a magnificent tomb.

(2.) SUTTON, Samuel, was born at Alfreton in Derbyfhire, and going into the army ferved under

under the duke of Marlborough in Queen Anne's wars with great credit. He afterwards came to London, commenced brewer, and kept a coffee-house in Aldergate-street, which was well frequented by the learned men of that time, by which Mr Sutton was much respected as a man of strong natural parts and cultivated genius. About 1740 he schemed a very simple and natural method for extracting the foul air from the wells of ships, by pipes communicating with the fire-places of the coppers; which operated as long as any fire was kept burning for the ship's use. He took out a patent in 1744, to secure the profits of his invention; and died 1752.

(3.) SUTTON, a town of England, in Cambridgeshire, SW. of Ely, and 14 miles from Cambridge, where antiquities have been found.

(4.) SUTTON, a township of Massachusetts, in Worcester county, 33 miles SW. of Boston; containing 2642 citizens in 1795.

(5.) SUTTON COLEFIELD, a town of England, in Warwickshire, with a market on Monday, 7 miles N. of Birmingham, 24 NW. of Warwick, and 111 NW. of London. Lon. 1. 40. W. Lat. 52. 39. N.

SUTTON'S AIR-PIPES. See AIR-PIPES.

(1.) * SUTURE. *n. s.* [*sutura*, Lat.] 1. A manner of sewing or stitching, particularly of stitching wounds.—Wounds, if held in close contact for some time, reunite by inoculation; to maintain this situation, several sorts of sutures have been invented; those now chiefly described are the interrupted, the glovers, the quill'd, the twisted, and the dry sutures, but the interrupted and twisted are almost the only useful ones. *Sharp*. 2. Suture is a particular articulation: the bones of the cranium are joined to one another by four sutures. *Quincy*.—The sutures of the skin are abolished in old age. *Arbutnot*.

(2.) SUTURE, in anatomy. See ANATOMY, Index.

(3.) SUTURE, in surgery. See SURGERY, Index.

SUVARROF, } Alexander, Count RY-
SUVOROF, } MINSKI, a late eminent ge-
SUWARROW, or } neral in the Russian ser-
SUWOROW, } vice. His family was an-
cient and respectable; but being far from affluent, and their property lying at the very extremity of the empire, the subject of this memoir was the first of the family that ever was at court. He was born in 1730. His father had destined him for the law, but his inclination led him to the profession of a soldier; and in 1752 he was enrolled as a fusilier in the guards of Seimonow. He was afterwards a corporal, than a serjeant, and in 1754, he quitted the guards with the brevet of Lieutenant in the army. He made his first campaign in the 7 years war against the Prussians, in 1759, entering upon actual service under Prince Wolgouiski. In 1761, he was ordered on service in the light troops under Gen. Berg; and with the rank of a Lieutenant Colonel he performed prodigies of valour. At the peace of 1762, he received from the empress a colonel's commission, written with her own hand; and being advanced, in 1768, to the rank of brigadier, he was, in November, ordered to repair to the frontiers of Poland. The

object of the empress, at this time, was to subdue the Polish confederates, and to possess herself of certain provinces of that ill-fated kingdom. How completely she and her two allies, the Emperor of Germany and the King of Prussia, succeeded in their enterprise, has been related under POLAND, § 23—26. Here we need only observe, that the successes of the Russians were chiefly owing to the military skill of Suworow. In 1770, he had been promoted to the rank of Major general; and for his exploits in the Polish war, the Empress conferred upon him, at different times, the orders of St Anne, St George, and Alexander Newsky. After performing some important services on the frontiers of Sweden, Suworow was ordered in 1773, to join the army in Moldavia, under Field-marshal Romanow; and there he began that successful career, which soon made his name a terror to the Turks. His first exploit was the taking of TURKUSKY. During the remainder of the war, which was short, Suworow was constantly engaged, and constantly successful. Early in 1774, he was promoted to the rank of Lieut. Gen. and on the 11th June, he defeated the Turks in a great battle. Soon after this victory, peace was concluded, and Suworow was called to Moscow to quell the rebellion of the *Cossack Pugatscheff*. For several years after this, Suworow was employed in the Crimea, on the Cuban, and against the Nogay Tartars, in a service, which, though it was of the utmost importance to the Empress, and required all his address, furnished no opportunities for that wonderful promptitude and resource which had characterized his more active campaigns. In the end of 1786, Suworow was promoted to the rank of General in Chief; and, at the breaking out of the war with the Turks in 1787, he made a most masterly defence of *Kinburn*; a place of little strength, but great importance, as it is situated at the mouth of the Dnieper, opposite to Oczakow. For his zeal and abilities on this occasion, the Empress honoured him with the order of St Andrew. At the siege of Oczakow, Suworow, who commanded the left wing of the army under Prince Potemkin, received a dangerous wound in the neck, which was followed by so smart a fever, that, for some time his life was despaired of; but, preferring regimen to medicine, his health was gradually re-established. In 1789, he was appointed to command the army which was to co-operate with the Prince of Saxe-Cobourg in Wallachia; and, by marches of inconceivable rapidity, he twice, in 2 months, preferred the army of that Prince from destruction. Putting himself at the head of 8000 Russians, and literally running to the aid of his ally, he came up with the Turks in time to change the fate of the day at the battle of *Forhani*, which was fought on the 1st of July; and again at *Rymnik*, which, with 7000 men, he had reached with equal celerity, he gained, on the 22d Sept. in conjunction with the Prince, one of the greatest victories that have ever been achieved. No quarter was given to the Turks; and on this account the Russian General has been charged with savage ferocity. The taking of *Bender* and *Belgrade* were the immediate consequences of the victory of Rymnik; and to sensi-

He was the emperor Joseph II. how much the military skill of Suworow had contributed to that victory, that he created him a Count of the Roman empire, and accompanied the diploma with a very flattering letter. Similar honours were conferred upon him by Catherine II. who sent him the diploma of Count of the empire of Russia, with the title of *Rymnikski*, and the order of St Andrew. In autumn 1790, he took Ilimailow, after being defended by the Turks at an expence of 33,000 men killed or dangerously wounded; 10,000 taken prisoners; besides 6000 women and children, and 2000 Christians of Moldavia, who fell in one general massacre. Peace being concluded with the Turks in Dec. 1791, no events occurred from that period to call forth the talents of Suworow till 1794; when mutinies having broken out among the Polish troops in the service of Russia, and the Empress with her two allies having resolved on the second partition of Poland, Suworow received orders, in May, to proceed into Red Russia, with a corps of 15,000 men, and to disarm all the Polish troops in that province. This service he soon performed, disarming, in less than a fortnight, 8000 men, dispersed over a country of 130 miles in circuit. Soon afterwards he was ordered to march into Poland; the King of Prussia having raised the siege of Warsaw, and the Empress perceiving that more vigorous measures were necessary to accomplish her design. Under the article POLAND § 25, 26, we have given a detailed account of his route to Warsaw. Suffice it to add, that he in the course of a very few months, overturned the kingdom and republic of Poland. For this service Catherine promoted him to the rank of Field-marshal General, loading him with jewels, and presenting him with an estate of 7000 peasants in the district of Kubin, which had been the scene of his first battle in the campaign. From the subjugation of Poland we hear little more of Suworow till he entered upon his great career in Italy. Of his exploits there, where, to use his own words, he destroyed armies and overturned states, we have given a full account under the article REVOLUTION, N^o VI. § 38—40; 42—44. Paul rewarded him by creating him a Prince by the title of *Prince Suworow Italiski*; but he gave him a very different reception when he returned into the Russian dominions at the head of his veteran and victorious bands. He would not see him, and positively forbade his appearance at court. To the messenger who brought the order, he gave a purse of money, turned his carriage another way, and drove to a wooden house at a distance from the court, and from his former friends, where the conqueror of the Turks, the Poles, and the French republicans, died, almost unattended, on the 18th of May 1800. The sovereign, who thus disgraced him at the end of his life, gave him a magnificent funeral! In his person Suworow was tall, considerably exceeding six feet, and full chested. His countenance was stern; but among his friends, his manners were pleasant, and his dispositions were kind. His temper was naturally violent; but that violence he laboured much to moderate, though he was never able completely to extinguish it. He was a scholar, a man of science, and a poet. In 1774, he married a daughter

of the General Prince John Proskotowski, by whom he had two children, now living: Natalia, married to General Count Nicolas Zubow; and Arcadius Count Suworow, a youth of promising abilities, who accompanied his father in his march from Italy into Switzerland.

SUYATYN, a town of the ci-devant Poland, in the new Austrian province of Galicia, formerly Red Russia; 44 miles SE. of Iahetz.

SUZ, or SUS. See SUS, N^o 1. and II.

(1.) SUZA, SUSA, or SOUSE, a town of Africa, in the kingdom of Tunis, near the east coast; remarkable for its antiquities, relics of ancient edifices, granite pillars, subterranean houses, baths, &c. It is supposed to have been one of those cities which submitted to Caesar in his march to Rufina. It is still the chief mart of Tunis for linens, oil, and other goods; and is of consequence one of the richest towns in the kingdom. It lies 24 miles E. of Cairuan, and 54 S. of Tunis.

(2.) SUZA, or SUSA, a ci-devant marquisate of Italy, in the late Piedmontese, now annexed to the French empire, and included in the department of Doria. It is 30 miles long, 10 broad, and is watered by the Doria and the Ciniella. The chief towns are SUSA (N^o 3.) Glavenna, or Javenna, Avigliana, and Novale.

(3.) SUZA, or SUSA, a town of the French empire, in the department of the Doria, and late capital of the marquisate. See SUSA, N^o 2. To the account there given, we have to add, that it was anciently called SEGUSIO, or *Segusium*, or *Segusina*; (See SEGUSIO,) and the people SEGUSIANI. It was the capital of the kingdom of Cottius, and his chief place of residence. Being seated on the frontiers of ancient Gaul or old France, and ci-devant Savoy, it has been often plundered. It was sacked by the Gauls under Brennus; by the Carthaginians under Hannibal; by the Romans under Flavius Valens, the friend of Vitellius; by the soldiers of Constantine the Great, after the defeat of Maxentius; and afterwards successively by the Vandals, Goths, Lombards and Saracens; and last of all, it was plundered, burnt, and razed by the bloody Frederick Barbarossa. It was held as a marquisate by the descendants of Charlemagne, and fell to the house of Savoy, by the marriage of the duke with Adelaide, daughter and heiress of the late marquis. It has a citadel, three churches, and a triumphal arch, erected in honour of Augustus. It is seated on the Doria, at the foot of the Alps.

SUZANNE, ST, a town of France, in the department of Maine, and ci-devant province so named. It has a considerable paper manufactory, and lies 24 miles W. of Mans.

SUZAO, a town of Portugal, in Beira; 22 miles NE. of New Braganza.

SUZARA, a town of the new kingdom of Italy, in the department of the Mincio, district and late duchy of Mantua; 14 miles S. of Mantua.

SUZAVIN, a town of Persia, in the province of Irac; 90 miles E. of Amadas.

SUZAY, a town of France, in the department of the Eure; 4½ miles ENE. of Grand Andelys.

SUZDAL, a town of Russia, in Volodimir, 24 miles NNE. of Volodimir. It seems to be the same with SUSDAL. Peter the Great, after divorcing

vorcing his empress Eudoxia, confined her in the Convent of St Basil in this town.

(1.) SUZE, Henriette De COLIGNI, Countess of, daughter of the celebrated Marshal De COLIGNI, a French lady, eminent for her poetical abilities. She married first Thomas Hamilton, a Scottish nobleman, and after his death the Count La Suze, who was also of an illustrious family. But this second marriage proved unhappy, and ended in a separation. She wrote a great number of *Poems*, which were much admired; and were collected and printed with those of PELLISSON and Madam SCUDERY, at Trevois, in 1725, 12mo. She died in 1673.

(1.) SUZE, a river of Switzerland, which runs into Lake Bienné, about a mile below the town of Bienné.

(3.) SUZE, a town of France, in the department of the Sarthe; 9 miles SW. of Mans, and 12 N. of Fleche.

(4.) SUZE LA ROUSSE, a town of France, in the department of the Drome; 13 miles S. of Montelimart.

* SWAB. *n. s.* [*swabbish*, Swedish.] A kind of mop to clean floors.

* To SWAB. *v. a.* [*swabban*, Saxon.] To clean with a mop. It is now used chiefly at sea.—

He made him *swab* the deck. *Shavetock.*

* SWABBER. *n. s.* [*swabbër*, Dutch.] A sweeper of the deck.—

The master, the *swabber*, the boatswain and I, Lov'd Mall, Meg, and Marrian, and Margery. *Shak.*

—Was any thing wanting to the extravagance of this degenerate age, but the making a tarpawlin and a *swabber* the hero of a tragedy? *Dennis.*

SWABIA. See SUABIA.

* SWADDLE. *n. s.* [from the verb.] Cloaths bound round the body.—I begged them to uncase me: no, no, say they; and upon that carried me to one of their houses, and put me to bed in all my *swaddles*. *Addison.*

* To SWADDLE. *v. a.* [*swedan*, Saxon.] 1. To swathe; to bind in clothes, generally used of binding newborn children.—

Swaddled as new-born in fable shrouds. *Sandys.*

Cloths are taken from a chest of sweets,

To *swaddle* infants. *Herbert.*

—They *swaddled* me up in my night-gown with long pieces of linen. *Addison.* 2. To beat; to cudgel. A low ludicrous word.—

Great on the bench, great in the saddle.

That could as well bind o'er as *swaddle*. *Hudib.*

* SWADDLINGBAND. } *n. s.* [from *swad-*

* SWADDLINGCLOTH. } *dle.* Cloth wrap-

* SWADDLINGCLOUT. } ped round a new

born child.—

From thence a fairy thee unwetting rest,

There as thou slept'st in tender *swaddlingband*. *Spenser.*

—That great baby you see there is not yet out of his *swaddlingcloths*. *Shak.*—The *swaddlingbands* were purple, wrought with gold. *Dryden.*

SWADLINGBAR, a town of Ireland, in Cavan, Ulster; 74 miles from Dublin. It has a celebrated mineral spring within half a mile.

SWADLINGCOTE, a town of England, in Derbyshire, SE. of Burton upon Trent.

SWAFFHAM, a town of England, in Norfolk, one of the best in the county, with 300 houses, seated on a hill, with a market on Saturday; 15 miles SE. of Lynn, 34 NNE. of Newmarket, and 94 NE. of London. Lon. 0. 46. E. Lat. 52. 42. N.

* To SWAG. *v. n.* [*sigan*, Saxon; *swaigid*, Islandick.] To sink down by its weight; to hang heavy.—They are more apt, in *swagging* down, to pierce with their points. *Walton.*—He hath a long fin upon his back, and another answering to it on his belly; by which he is the better kept upright, or from *swagging* on his sides. *Grew.*

* To SWAGE. *v. a.* [from *assuage*.] To ease; to soften; to mitigate.—

Apt words have pow'r to *swage*

The tumors of a troubled mind. *Milton.*

Nor wanting pow'r to mitigate and *swage*, Anguish, and doubt, and fear. *Milton.*

I'd find some intervals, when my poor heart Should *swage* itself. *Osway.*

* To SWAGGER. *v. n.* [*swadder*, Dutch, to make a noise; *swegan*, Saxon.] To bluster; to bully; to be turbulently and tumultuously proud and insolent.—Drunk? squabble? *swagger*? and discourse sustain with one's own shadow! *Shak.*—A rascal that *swagger'd* with me last night. *Shak.*—The leiser size of mortals love to *swagger* for opinions. *Glanville.*—Many such asses in the world huff, look big, stare, dress, cock, and *swagger* at the same noisy rate. *L'Estrange.*—

He chuck'd,

But *swagger'd* like a lord. *Dryden.*

—The ignorant think there is something more than ordinary in a *swaggering* man. *Tillotson.*—To be great, is not to be flattered, and formal and supercilious; to *swagger* at our footmen, and browbeat our inferiors. *Collier on Pride.*—What a pleasure is it to be victorious in a cause? to *swagger* at the bar? *Arbutnot.*

* SWAGGERER. *n. s.* [from *swagger*.] A blusterer; a bully; a turbulent noisy fellow.—He's no *swaggerer*, hoists; a tame cheater; you may stroke him as gently as a puppy greyhound. *Shak.*

* SWAGGY. *adj.* [from *swag*.] Dependent by its weight.—The beaver is called animal ventricosum, from his *swaggy* and prominent belly. *Brown.*

* SWAIN. *n. s.* [*swain*, Saxon and Runick.] 1. A young man.—

Whose fellowship seem'd far unfit for war-like *swain*. *Spenser.*

2. A country servant employed in husbandry.—

It were a happy life

To be no better than a homely *swain*. *Shak.*

3. A pastoral youth.—

Blest *swains*! whose nymphs in ev'ry grace excel;

Blest nymphs! whose *swains* those graces sing so well. *Pope.*

Leave the meer country to meer country *swains*. *Harte.*

(1.) * SWAINMOTE. *n. s.* [*swainmote*, law Lat.] A court touching matters of the forest, kept by the charter of the forest, thrice in the year.

year. This court of *swainmote* is as incident to a forest, as the court of piepowder is to a fair. The *swainmote* is a court of freeholders within the forest. *Cowley*.

(a.) **SWAINMOTE.** See **FOREST COURTS.**

(1.) **SWALE**, a river of England, in Yorkshire, which rises on the confines of Westmoreland, and running SE. passes Richmond and Thirsk, and falls into the Ouse near Borrow-bridge.

(2.) **SWALE, EAST**, a river of England, in Kent, the E. branch of the **MEDWAY**, which branches off to the right, and runs south of the island of Sheppey, and joins the Thames below **SHELLNESS**.

(3.) **SWALE, WEST**, another river of Kent, the main stream of the **Medway**, which runs due N. and falls into the Thames at **SHEERNESS**. See **MEDWAY**.

* **To SWALE.** *To SWEAL.* v. a. [*swelan*, Sax; to kindle.] To waite or blaze away; to melt; as the candle swales.

* **SWALLET.** n. s. Among the tin-miners, water breaking in upon the miners at work. *Bailey*.

(1.) * **SWALLOW.** n. s. [*swalewe*, Sax. *birundo*.] A small bird of passage; or, as some say, a bird that lies hid and sleeps in the winter.—The swallow follows not summer more willingly than we your lordship. *Shak.*

Daffodils,

That come before the swallow dares. *Shak.*
—The swallows make of celandine, and the linnet of euphrasia. *Morr.*

Swallows fleet far high and sport in air. *Gay.*

(2.) **SWALLOW**, in ornithology. See **HIRUNDO**. Concerning these birds, a question has oft been discussed, What becomes of them in winter? Upon this subject there are three opinions. Some say that they migrate to a warmer climate; some that they retire to hollow trees and caverns, where they lie in a torpid state; and others affirm that they lie in the same state in the bottom of lakes and under the ice. The first opinion is supported by Marfigli, Ray, Willoughby, Catesby, Reamar, Adanson, Buffon, &c. The first and 2d opinions are both adopted by Pennant and White. The 3d is sanctioned by Schæffer, Hevelius, Derham, Klein, Ellis, Linnæus, Kalm: and the 2d and 3d have been strongly defended by the Hon. Daines Barrington. Those who assert that swallows migrate to a warmer country in winter, argue, That many birds migrate, is a fact fully proved by the observations of natural historians. (See **MIGRATION**, § 2.) Is it not more probable, therefore, that swallows, which disappear regularly every season, retire to some other country, than that they lie in a state of torpor in caverns or lakes? But this opinion is founded on facts. We often see them collected in great flocks on churches, rocks, and trees, about the time when they annually disappear. The direction of their flight has been observed to be to the southward. Mr White, the ingenious historian of Selborne, travelling near the coast of the British Channel one morning early, saw a flock of swallows take their departure, with an easy and placid flight towards the sea. Mr Laskey of Exeter observed the direction which a flock of swallows took in autumn 1793. On the 22d Sept. about 7 A. M. the wind

being easterly, accompanied with a cold drizzling rain, Mr Laskey's house was entirely covered with house swallows. At intervals large flocks arrived and joined the main body, and at their arrival an unusual chirping commenced. The appearance of the whole company was so lethargic, that he found it an easy matter to catch a considerable number of them, which he kept in a room all that day. By heating the room they all revived: he opened four of them, and found their stomachs quite full. The main body occupied the house top all day, except for two hours. About half an hour after 9 A. M. the 23d, there was a great commotion, with very loud chirping, and within a few minutes after, the whole multitude took their flight, in a SE. direction, having ascended to a great height in the atmosphere. He let go the birds which he had caught, at certain intervals till four o'clock, and they all fled toward the same quarter. They have also been found on their passage at a great distance from land. Mr Adanson informs us, that about 50 leagues from the coast of Senegal 4 swallows settled upon the ship on the 6th October; that these birds were taken; and that he knew them to be European swallows, which, he conjectures, were returning to the coast of Africa. Sir Charles Wager says, "Returning home, in spring, as I came into soundings in our channel, a great flock of swallows came and settled on all my rigging; every rope was covered, they hung on one another like a swarm of bees; the decks and carving were filled with them. They seemed almost famished and spent, and were only feathers and bones; but, being recruited with a night's rest, took their flight in the morning." This vast fatigue proves that their journey must have been very great, considering their amazing swiftness, in all probability they had crossed the Atlantic ocean, and were returning from the shores of Senegal, or other parts of Africa; so that this account from that most able and honest seaman, confirms the latter information of Mr Adanson. Mr Bruce also mentions in his travels, that in Abyssinia, there is a great variety of swallows; but "those that are common in Europe appear in passage at the very season when they take their flight from thence. We saw the greatest part of them in the island of Masuah, where they lighted and tarried two days, and then proceeded with moon light to the SW." Mr Kalm acknowledges, that in crossing the Atlantic from Europe, a swallow lighted on the ship on the 2d Sept. when it had passed only two 3ds of the ocean. Since, therefore, swallows have been seen assembled in great flocks in autumn flying off in company towards southern climes, since they have been found both in their passage from Europe and returning again, can there be any doubt of their annual migration? (See **MIGRATION**, § 2.) The 2d notion (says Mr Pennant) has great antiquity on its side. Aristotle and Pliny say, that swallows do not remove very far from their summer habitation, but winter in the hollows of rocks, and during that time lose their feathers. Of late several proofs have been brought of some species having been discovered in a torpid state. Mr Collinson mentions three gentlemen, eye-witnesses to numbers of land martins being

drawn

drawn out of a cliff on the Rhine, in March 1762. And the Hon. Daines Barrington communicated the following fact, on the authority of the late Lord Belhaven, That numbers of swallows have been found in old dry walls and in sand hills near his Lordship's seat in East Lothian; from year to year; and that when they were exposed to the warmth of a fire they revived. We have heard of the same annual discoveries near Morpeth, in Northumberland. Others prove the residence of those birds in a torpid state during winter. First, in the chalky cliffs of Suffex; as was seen on the fall of a great fragment some years ago. 2. In a decayed hollow tree that was cut down, near Dolgelli, in Merionethshire. 3. In a cliff, near Whitby, Yorkshire; where, on digging out a fox whole bustles of swallows were found in a torpid condition. 4. The rev. Mr Conway of Sychton, Flintshire, a few years ago, on looking down an old lead mine in that county, observed numbers of swallows clinging to the timbers of the shaft, seemingly asleep; and on flinging some gravel on them they just moved, but never attempted to fly: this was between All Saints and Christmas. From all these facts, we must conclude, that one part of the swallow tribe migrate, and that others have their winter quarters near home. The 3d opinion is that of Mr Kalm, who pleads for their immersion in water; and mentions the following facts: "Dr Wallerius, the celebrated Swedish chemist, informs us, That he has seen, more than once, swallows assembling on a reed till they were all immersed and went to the bottom; this being preceded by a dirge of a quarter of an hour's length. He had seen a swallow caught during winter out of a lake with a net, drawn as is common in northern countries, under the ice; this bird was brought into a warm room, revived, fluttered about, and soon after died. Mr Klein, applied to many farmers general of the king of Prussia's domains, who had great lakes in their districts, the fishery in them being a part of the revenue. All the people that were questioned made affidavits upon oath before the magistrates. 1. The mother of the countess of Lehndorf said, that she had seen a bundle of swallows brought from the Frische-Hoff (a lake communicating with the Baltic at Pilsau), which, when brought into a moderately warm room, revived and fluttered about. 2. Count Schileben gave an instrument on stamped paper, importing, that by fishing on the lake belonging to his estate of Gerdauden in winter, he saw several swallows caught in the net, one of which he took up in his hand, brought it into a warm room, where it lay about an hour, when it began to stir, and half an hour after it flew about in the room." Mr Kalm mentions similar affidavits made by four farmers; and at last adds, "7thly, I can reckon myself (says our author) among the eye witnesses of this paradox of natural history. In 1735, being a boy, I saw several swallows brought in winter by the fishermen from the Viskula to my father's house; where two of them were brought into a warm room, revived and flew about. I saw them several times settling on the warm stove, and I recollect well, that the same forenoon they died, and I had them, when dead, in my hand. In Jan. 1754, being

covered with ice, I ordered the fishermen to fish therein, and in my presence several swallows were taken, which the fishermen threw in again; but one I took up myself, brought it home, five miles from thence, and it revived, but died about an hour after. These are facts attested by people of the highest quality. It is therefore incontestably true, that swallows retire in the northern countries, during winter, into the water, and stay there in a torpid state till the return of warmth revives them again in spring. The swallows in Spain, Italy, France, and perhaps some from England, remove to warmer climates; some English ones, and some in Germany and other mild countries retire into clefts and holes in rocks, and remain there in a torpid state. In the colder northern counties the swallows immerse in the sea, in lakes, and rivers; and remain in a torpid state, under ice, during winter. It is objected, Why do not rapacious fish, and aquatic quadrupeds and birds, devour these swallows? The answer is obvious; swallows choose only such places in the water for their winter retreat as are near reeds and rushes; so that sinking down there between them and their roots they are secured against their enemies. As to the argument taken from their being so long under water without corruption, there is a real difference between animals suffocated in water and animals being torpid therein. Natural history ought to be studied as a collection of facts. There are five species of swallows which visit Britain during summer; the common swallow, the martin, sand martin, swift, and goat-sucker. 1. The common swallow frequents almost every part of the old continent; being known (says Dr Latham) from Norway to the Cape of Good Hope on the one side, and from Kamtschatka to India and Japan on the other. It is also found in all parts of N. America, and in several West Indian islands. In Europe it disappears during winter. It appears generally a little after the vernal equinox; but rather earlier in the southern, and later in the northern latitudes. It adheres to the usual seasons with much regularity. In the warm spring of 1774 they appeared no earlier than usual. They remain in some warm countries the whole year. Kolben assures us that this is the case at the Cape of Good Hope. Some birds of this species live, during winter, even in Europe; e. g. on the coast of Genoa. 2. The martins are also widely diffused through the old continent. 3. The sand martins are found in every part of Europe, and often spend the winter in Malta. 4. The swift visits the whole continent of Europe; has also been observed at the Cape of Good Hope, and in Carolina in North America. 5. The goat suckers are not very common, yet are found in every country between Sweden and Africa: also in India Mr Markwick of Catsfield, near Battle in Suffex, has drawn up an accurate table, expressing the day of the month on which the migratory birds appeared in spring, and disappeared in autumn, for 16 years, from 1766 to 1783, at Catsfield. Were tables of the same kind made in every different country, particularly within the torrid zone, it would be easy to determine the question which we have been considering. To many, perhaps, it may not appear of so much importance as to be worth

worth the labour. But the inquiry must be highly gratifying to every mind that admires the wisdom of the Great Architect of nature. The instinct of the swallow is indeed wonderful: it appears among us just at the time when insects become numerous; and it continues with us during the hot weather, to prevent them from multiplying too much. It disappears when these insects are no longer troublesome. It is never found in solitude; it is the friend of man, and always takes up its residence with us, to protect us from being annoyed with swarms of insects.

(3.) * SWALLOW. *n. f.* [from the verb.] The throat; voracity.—Had this man of merit and mortification been called to account for his ungodly *swallow*, in gorging down the estates of helpless widows and orphans, he would have told them that it was all for charitable uses. *South.*

(4.) SWALLOW, in geography, an island in the S. Pacific Ocean, discovered by Roggewins in 1722. Lon. 162. 30. E. of Paris. Lat. 10. 0. S.

(5.) SWALLOW BAY, a bay on the N. coast of Egmont Island, between Hanway's Point and SWALLOW POINT, N° 7.

(6.) SWALLOW ISLAND, one of QUEEN CHARLOTTE'S ISLANDS in the South Sea; about 18 miles long. Lon. 164. 58. E. Lat. 10. 8. S.

(7.) SWALLOW POINT, a cape on the N. coast of Egmont Island in the S. Pacific Ocean. Lon. 164. 46. E. Lat. 10. 42. S.

* To SWALLOW. *v. a.* [*swelgan*, Sax. *swelgen*, Dutch.] 1. To take down the throat.—

Capital crimes chew'd, *swallow'd*, and digested,

Appear before us?

—Men must *swallow* down opinions, as silly people do empiricks pills. *Locke.* 2. To receive without examination.—Judge of it as a matter of reason, and not *swallow* it as a matter of faith. *Locke.* 3. To engross; to appropriate; often with *up* emphatical.—Far be it from me, that I should *swallow up* or destroy. 2. *Sam.*—Homer has *swallowed up* the honour of those who succeeded him. *Pope.* 4. To absorb; to take in; to sink in any abyss; to engulf: with *up*.—

The yesty waves

Confound and *swallow* navigation *up.* *Shak.*

I may be pluck'd into the *swallowing* womb

Of this deep pit, poor Bassianus' grave. *Shak.*

—Death is *swallow'd up* in victory. 1 *Cor.* xv. 54.

—If the earth open her mouth and *swallow* them *up*, ye shall understand that these men have provoked the Lord. *Numb.* xvi.—

In bogs *swallow'd up* and lost. *Milton.*

—He had many things from us, not that they would *swallow up* our understanding, but divert our attention from what is more important. *Deceay of Piety.*—

Nature would abhor

To be forced back again upon herself,

And like a whirlpool *swallow* her own streams. *Dryden.*

Should not the sad occasion *swallow up*

My other cares and draw them all into it?

Addison.

5. To occupy.—The necessary provision for life *swallows* the greatest part of their time. 6. To freeze and waste.—

Corruption *swallow'd* what the liberal hand
Of bounty scatter'd. *Thomson.*

7. To engross; to engage completely.—The priest and the prophet are *swallowed up* of wine. *Isa.*

8. *Swallow* implies, in all its figurative senses some nauseous or contemptuous ideas, something of grossness or of folly.

SWALLOW'S TAIL, in fortification, is a single

tenaille, which is narrower towards the place than

toward the country.

(1.) * SWALLOWTAIL. *n. f.* A species of willow.—The thinning willow they call *swallowtail* *Bacon.*

(2.) SWALLOWTAIL is a species of *SALIX.*

(1.) * SWALLOWWORT. *n. f.* [*asclepias.*] A plant.

(2.) SWALLOW-WORT, in botany. See *ASCLEPIAS.*

SWALLY, a town of Hindostan, in the Deccan, and province of Cambaya, with a good harbour; 12 or 15 miles NW. of Surat. Lon. 72. 15 E. Lat. 21. 18. N.

SWALM, a town of France, in the dep. of the Roer, and cidevant province of Guelderland; 4 miles N. of Ruremond.

(1.) * SWAM. The preterite of *swim.*

(2.) SWAM, in geography, a fort at the mouth of the Medway, near Sheerness. See *MEDWAY* N° 1.

SWAMMERDAM, John, a celebrated natural philosopher, was the son of John James Swammerdam, an apothecary and famous naturalist of Amsterdam, and born in 1637. His father intended him for the church, and with this view had him instructed in Latin and Greek; but he preferred physic. Being kept at home till he should engage in that study, he was often employed in cleaning his father's curiosities, and putting every thing in order. This inspired him with an early taste for natural history; so that he soon began to make a collection of his own. When grown up, he attended to his anatomical and medical studies; but spent part of the day and the night in discovering, catching, and examining the flying insects of Holland, Guelderland, and Utrecht. Thus initiated in natural history, he went to the university of Leyden in 1651; and in 1663 was admitted a candidate of physic. While studying anatomy, he considered how the parts of the body, prepared by dissection, could be preserved for anatomical demonstration; and he succeeded as he had done before in his nice contrivances for dissecting the minutest insects. He then went to France, where he spent some time at Saumur, and became acquainted with several learned men. In 1667 he returned to Leyden, and took his degree of M. D. In 1668, the grand duke of Tuscany being in Holland, came to view the museum of our author and his father; and Swammerdam made some anatomical dissections of insects in his presence. He was struck with admiration at his great skill in managing them; and proving that the future butterfly lay with all its parts neatly folded up in a caterpillar, by removing the integuments, and exhibiting all its parts, however minute, with incredible ingenuity, by instruments of inconceivable fineness. The duke offered him 12,000 florins for

for his collection, on condition of his removing them into Tuscany, and residing at the court of Florence; but Swammerdam declined. In 1663, he published a *General History of Insects*. About this time his father, offended at his neglecting the practice of physic, would neither supply him with money nor clothes. This reduced him to some difficulties. In 1675, he published his *History of the Ephemeras*; and his father dying in 1676, left him a fortune; but he died in 1682, aged only 45. Gubius translated all his works from the Dutch into Latin, from which they were translated into English, in folio, in 1748. See *ANATOMY, Index*. Boerhaave wrote his life.

(1.) * **SWAMP**, *n. f.* [*swamms*, Goth. *swam*, Saxon; *swamm*, Islandick; *swamme*, Dutch; *swamp*, Danish; *swamp*, Swedish.] A marsh; a bog; a fen.

(2, 3.) **SWAMP**, in geography. See **DISMAL**, N° 2, 3.

(4.) **SWAMP**, **GREAT DISMAL**. See **DISMAL**, N° 4.

* **SWAMPY**, *adj.* [from *swamp*.] Boggy; fenny.—

Swampy fens brave destructive myrinds.

Thomson.

SWAMSCOT, or **EYETER**, or *Great River*, a river of New Hampshire, which rises in Chester county, and after running through Sandown, Poplin, Brentwood, and great part of Exeter townships, during which course it turns many mills, falls over a cataract 30 rods high, and joins the tide from **PISCATAQUA** harbour, in the centre of the township of Exeter. A small river falls into it, a little above Exeter.

(1.) * **SWAN**, *n. f.* [*swan*, Sax. *swan*, Danish; *swaan*, Dutch; *cygnus*, Latin.] The *swan* is a large water-fowl, that has a long neck, and is very white, excepting when it is young. Its legs and feet are black, as is its bill, which is like that of a goose, but something rounder, and a little hooked at the lower end of it; the two sides below its eyes are black and shining like ebony. *Swans* use wings like sails, which catch the wind, so that they are driven along in the water. They feed upon herbs and some sorts of grain like a goose, and some are said to have lived 300 years. There is a species of swans with the feathers of their heads, towards the breast, marked at the ends with a gold colour inclining to red. The swan is reckoned by Moses among the unclean creatures; but it was consecrated to Apollo the god of music, because it was said to sing melodiously when it was near expiring; a tradition generally received, but fabulous. *Calmet*.—

Compare her face with some that I shall show.

And I will make thee think thy *swan* a crow.

Shak.

Let musick sound, while he doth make his choice;

Then if he lose, he makes a *swan*-like end.

Shak.

A jarring sound results, and mingles in the sky,

Like that of *swans* remurm'ring to the floods.

Dryden.

VOL. XXII. PART .

—The idea, which an Englishman signifies by the name *swan*, is a white colour, long neck, black beak, black legs, and whole feet, and all these of a certain size, with a power of swimming in the water, and making a certain kind of noise. *Locke*.

(2.) **SWAN**. See **ANAS**, § 15, N° 1. and 2. It is now ascertained, beyond the possibility of doubt, that there are *black swans*, of equal size and the same habitudes with the common white swans of this island. These fowls have been seen chiefly in New Holland; and Captain Vancouver, when there, saw several of them in very stately attitudes swimming on the water, and, when flying, discovering the under part of their wings and breasts to be white. Black swans were likewise seen in New Holland by Gov. Philips, Capt. White, and by a Dutch navigator, so long ago as in 1697; Gov. Philips describes the black swan as a very noble bird, larger than the common swan and equally beautiful in form. Mr White indeed says, that its size is not quite equal to that of the European swan; but both agree with Capt. Vancouver in mentioning some white feathers in its wings.

(3—5.) **SWAN**, **SWEYN**, **SUENO**, or **SWENO**, I, II. and III. 3 kings of Denmark. See **DENMARK**, § 5; **ENGLAND**, § 16—18, and **SWENO**.

(6.) **SWAN ISLAND**, an island of the United States, in Maine, in the Kennebeck, much frequented by swans; 4 miles S. of Pownallburg.

(7.) **SWAN ISLAND**, an island of Ireland, in Lough Strangford, Down county, near Down Patrick.

(8.) **SWAN LAKE**, a lake of Canada; 171 miles NNW. of Quebec.

SWANAGE BAY, a bay of the English Channel, on the coast of Dorchester, S. of Studland Bay.

SWANEMOTE, *n. f.* See **FOREST-COURTS**, and **SWAINMOTE**.

SWANNANO, a river of Tennessee, the head-water of French Broad River.

SWANPAN, or Chinese **ABACUS**, an instrument for performing arithmetical operations, described by Du Halde in his History of China. It is composed of a small board, crossed with 10 or 12 parallel rods or wires, each strung with ivory balls, which are so divided by a partition in the middle, that two are on one side of it, and five on the other. The two on the upper part stand each for five units, and each of the five in the lower part for one. "In joining and separating these balls, they reckon much as we do with counters; but, according to our author, more expeditiously than Europeans do even with figures." This is hardly credible; but if all the Chinese weights and measures be decimally divided, it is easy to conceive how computation may be made by this instrument very expeditiously. See **BLIND**, § 15—18.

SWANSBOROUGH, a city of N. Carolina, the capital of Wilmington district, and of Onslow county. It has a court-house, and a court is held in it, the 1st Monday in Jan. April, July, and Oct.

SWANSCOMB, a small town of England, in Kent, 4 miles W. by S. of Gravesend; memorable for being the place where the Kentish patriots,

D

with

with boughs in their hands like a moving wood, surprised William the Conqueror, and, throwing down their boughs, threatened to give him battle, if he did not agree to secure them in all their ancient customs, rights, and franchises; to which William immediately consented: in consequence of which they still retain gavel-kind and other ancient privileges enjoyed by the Saxons. (See GAVEL-KIND.) There are relics of Danish camps and forts near it.

(1.) **SWANSEA**, or **SWANSEY**, a populous trading town of S. Wales, in Glamorgan-shire, on a bay so named (N^o 3), with a good harbour at the mouth of the Tawy, whence it is also named *Aber Towy*. It has a great trade in coals, pottery, copper, and lead, which are smelted from the ores, and sent to Ireland, Bristol, and the S. of England, to which ships are constantly sailing. In 1768, 694 vessels sailed from this port; tonnage 30,631: in 1792, the number of ships was 1677, containing 74,926 tons: in September 1799, the ships had increased to 2600, and the tonnage to 124,264 tons. It has markets on Wednesday and Saturday, and is famed for ship-building. It has an ancient castle and two churches; and joins with Cowbridge and other towns in sending a member to parliament. It is governed by a portreeve, a chief, 12 aldermen, 2 chancellors, and 66 councillors. It is 2½ miles WNW. of Cowbridge, 8½ E. of Haverford West, and 205 W. of London. Lon. 4. 0. W. Lat. 51. 38. N.

(2.) **SWANSEA**, a town of Massachusetts, on the Taunton; 36 miles S. of Boston.

(3.) **SWANSEA BAY**, a bay of S. Wales, on the Bristol Channel, at the mouth of the Tawy, on the coast of **SWANSEA**, N^o 1.

SWANSEY. See **SWANSEA**, N^o 1.

SWANSHALES, a town of Sweden, in W. Gothland; 23 miles WSW. of Linköping.

* **SWANSKIN**. *n. s.* [*swan* and *skin*.] A kind of soft flannel, imitating for warmth the down of a swan.

SWANWICH, a town of Dorsetshire, in Purbeck isle; 2 miles from London.

* **SWAP**. *adv.* [*ad swipa*, to do at a snatch, Islandick.] Hastily; with hasty violence: as, he did it *swap*. It seems to be of the same original with *swarp*. A low word.

* **TO SWAP**. *v. a.* To exchange. See **TO SWOP**.

* **SWARD**. *n. s.* [*sward*, Swedish.] 1. The skin of bacon. 2. The surface of the ground; whence *green sward*, or *green sward*.—Water, kept too long, loosens and softens the *sward*. *Note on Tusser*.

The noon of night was past, and then the foe
Came dreadful o'er the level *sward*. *A. Phillips*.
—To plant a vineyard in July, when the earth is very dry and combustible, plow up the *swarthy*, and burn it. *Mortimer*.

* **SWARE**. The preterite of *swear*.

SWARKSTON, a town of England, in Derbyshire, on the road from Derby to Ahby de la Zouch; which has a bridge over the Trent, with 39 arches, supposed to be the longest in Europe, except that of Eszek, in Hungary. (See **ESZEK**.) It extends across the meadows about a mile; but the battlements are low.

SWARLAN, a river of Sweden, in Nericia, which runs into Lake Hielmas, near Orebro.

* **SWARM**. *n. s.* [*swarm*, Saxon; *swarm*, Dutch.] 1. A great body or number of bees, or other small animals, particularly those of bees that migrate from the hive.—

A *swarm* of bees that cut the liquid fly.

Dryden

2. A multitude; a crowd.—

From this *swarm* of fair advantages

You grip'd the general sway.

Shak.

—If we could number up those prodigious *swarms* that had settled themselves in every part of it, they would amount to more than can be found.

Addison.—

This *swarm* of themes that settles on my pen,
Which I, like summer flies, shake off again,
Let others sing.

Young.

* **TO SWARM**. *v. a.* [*swearman*, Saxon; *swermen*, Dutch.] 1. To rise as bees in a body, and quit the hive.—

Some found the trumpet for the rest to
swarm.

Dryden.

Swarm'd on a rotten stick the bees I spy'd.

Gay.

—When bees hang in *swarming* time, they will presently rise. *Mortimer*. 2. To appear in multitudes; to crowd; to throng.—

The merciless Macdonel,

The multiplying villanies of nature

Do *swarm* upon.

Shak.

Our superfluous lacqueys, and our peasants,

Who in unnecessary action *swarm*

About our squares of battle.

Shak.

What a multitude of thoughts at once

Awaken'd in me *swarm*!

Milton.

In crowds around the *swarming* people join.

Dryden.

3. To be crowded; to be over-run; to be thronged.—Throughout all Ireland, every place *swarms* with soldiers. *Spenser*.—Her lower region *swarms* with all sorts of fowl. *Hoswel*.—Those days *swarmed* with fables. *Brown*.—

Life *swarms* with ills, the boldest are afraid;
Where then is safety for a tender maid? *Young*.

4. To breed multitudes.—

Not so thick *swarmed* once the foil

Bedropp'd with blood of Gorgon.

Milton.

5. It is used in conversation for climbing a tree, by embracing it with the arms and legs.

* **SWART**. **SWARTH**. *adj.* [*swarts*, Gothic; *swarti*, Saxon; *swart*, Dutch.] 1. Black; darkly brown; tawney.—

A nation strange, with visage *swart*. *Spenser*.

A man

Of *swarth* complexion.

Spenser.

I was black and *swart* before.

Shak.

No goblin, or *swart* fairy of the mine,

Hath hurtful power o'er true virginity. *Milton*.

4. In *Milton* it seems to signify gloomy; malignant.—

Ye valleys low,

On whose fresh lap the *swart* star sparsely looks.

Milton.

* **TO SWART**. *v. a.* [from the noun.] To blacken; to dusk.—The heat of the sun may *swart* a living part. *Bacon*.

SWARTA.

SWARTA, a town of Sweden, in Sudermanland; 4 miles NE. of Nykiöping.

SWART-BEGGER, a mountain of Sweden, in Dalecarlia, abounding with iron ore. See **IRON**, § 9.

SWARTEBERG, a town of Sweden, in W. Gothland; 18 miles NW. of Uddevalla.

* **SWARTH**. See **SWART**.

* **SWARTHILY**. *adv.* [from *swarthy*.] Blackly; duskyly; tawnily.

* **SWARTHINESS**. *n. s.* [from *swarthy*.] Darkness of complexion; tawiness.

* **SWARTHY**. *adj.* [See **SWART**.] Dark of complexion; black; dusky; tawney.—

The *swarthy* Africans complain. *Roscommon*.
—In the torrid climates the common colour is black or *swarthy*. *Hale*.—

Here *swarthy* Charles appears. *Addison*.

Their *swarthy* hosts would darken all our plains. *Addison*.

SWARTOW, a river of Germany, in Holstein, which joins the Trave, 3 miles N. of Lubeck.

SWARTSLUYS, a town and fort of Holland, in the dep. of Yssel, and late prov. of Overysseck on the Vecht, in a marshy country; defended by five bastions. It is 18 miles W. of Covorden, and 33 N. of Zutphen.

(1.) * **SWASH**. *n. s.* [A cant word.] A figure whose circumference is not round, but oval; and whose moldings lie not at right angles, but oblique to the axis of the work. *Moxon*.

(2.) * **SWASH**. *n. s.* [from the verb.] Impulse of water flowing with violence. *Diss*.

* **To SWASH**. *v. n.* To make a great clatter or noise; whence *swashbuckler*. Not in use.—

We'll have a *swashing* and a martial outside. *Shak*.

—Gregory, remember thy *swashing* blow. *Shak*.

SWASH-BUCKLER. *n. s.* [*swash* and *buckler*.] A vain-glorious sword-player; a vapouring fellow. *Ash*.

* **SWASHER**. *n. s.* [from *swash*.] One who makes a flow of valour or force of arms. Obsolete.—I have observed these three *swashers*; three such antics do not amount to a man. *Shak*.

(1.) **SWATARA**, or **SWETARA**, a navigable river of Pennsylvania, which rises in Broad Mountain, Berks county; thence running S. by W. passes through the Blue Mountain, and receives the **LITTLE SWATARA**, (N^o 2.); thence turning SW. by S. receives the *Quitapahilla*, a navigable river; and passing by Humeltown, falls into the **SUSQUEHANNAH** below Middletown. A canal was begun in 1793, and since finished, which connects this river with the **SCHUYLKILL** and the **TULPEHOCKEN**, a distance of near 80 miles.

(2.) **SWATARA**, **LITTLE**, a small river of Pennsylvania, which runs into the **SWATARA** at Jonestown.

* **SWATCH**. *n. s.* A *swathe*. Not in use.—

Barlie in *swatches* may fill it thereby. *Tusser*.

* **SWATH**. *n. s.* [*swade*, Dutch.] 1. A line of grass cut down by the mower.—

Grass, lately in *swathes*, is meat for an ox. *Tusser*.

The *straw* Greeks, ripe for his edge,
Fall down before him, like the mower's *swath*. *Shak*.

—If it lie thick in the *swath*, neither air nor fun can pass freely through it. *Mortimer*. 2. A continued quantity.—An affection'd ass, that cons state without book, and utters it by great *swaths*. *Shak*.

3. [*Spedan*, to bind, Saxon.] A band; a fillet.—An Indian comb, adorned with fine straws laid along the sides, and lapped round about it in several distinct *swaths*. *Grew*.—Long pieces of linen they folded about me, till they had wrapped me in above 100 yards of *swath*. *Spekator*.

* **To SWATHE**. *v. n.* [*swedan*, Saxon.] To bind as a child with bands and rollers.—

He had two sons; the eldest three years old, I th' *swathing* cloaths the other. *Shak*.

—Their children are never *swathed*. *Abbot*.—

Swath'd in her lap the bold nurse bore him out. *Dryden*.

Master's feet are *swath'd* no longer. *Prior*.

SWATKA, a town of Bohemia, in the circle of Chrudim; 8 miles W. of Politzka.

SWATTERAGH, a town of Ireland, in the county of Derry, and province of Ulster.

SWAVESEY, a small town of England, in Cambridgeshire, SE. of St Ives.

* **SWAY**. *n. s.* [from the verb.] 1. The swing or sweep of a weapon.—

To strike with huge two-handed *sway*. *Milton*.

2. Any thing moving with bulk and power.—

Are not you mov'd, when all the *sway* of earth
Shakes like a thing unfirm? *Shak*.

3. Weight; preponderation; cast of the balance.—

When to advance, or stand, or turn the *sway*
Of battle. *Milton*.

4. Power; rule; dominion.—This was but to please the minds of the people, to the end they might think their own *sway* somewhat. *Hooker*.—

The *sway*, revenue, execution of th' heft,
Beloved sons, be yours. *Shak*.

Her father counts it dangerous
That she should give her sorrow so much *sway*. *Shak*.

Each thinks a world too little for his *sway*. *Dryden*.

When vice prevails, and impious men bear *sway*,
The post of honour is a private station. *Addis*.

5. Influence; direction; weight on one side.—

In the end, very few excepted, all became subject to the *sway* of time. *Hook*.—An evil mind in authority doth not only follow the *sway* of the desires already within it, but frames to itself new desires. *Sidney*.—

The branches bend before their sweepy *sway*. *Dryden*.

(1.) * **To SWAY**. *v. a.* [*schweben*, German, to move.] 1. To wave in the hand; to move or wield any thing massy: as, to *sway* the sceptre.—

Heavy hammers on the wedge are *sway'd*. *Spenser*.

2. To bias; to direct to either side.—

Heav'n forgive them, that so much have *sway'd*
Your majesty's good thoughts away from me. *Shak*.

I took your hands; but was, indeed,
Sway'd from the point. *Shak*.

Sway'd from the point. *Bowie*.

Bowls run true by being made

On purpose false, and to be *sway'd*. *Hudibras*.
—Let not temporal and little advantages *sway*
you against a more durable interest. *Tillotson*.
3. To govern; to rule; to overpower; to influ-
ence.—

The lady's mad: yet if 'twere so,

She could not *sway* her house. *Shak.*

The will of man is by his reason *sway'd*. *Sh.*

On Europe thence, and where Rome was to
sway

The world. *Milton.*

A gentle nymph, not far from hence,
That with moist curb *sways* the smooth Severn
Acren;

Sabrina is her name. *Milton.*

Take heed lest passion *sway*

Thy judgment. *Milton.*

—The judgment is *swayed* by passion. *Glanv.*

This was the race

To *sway* the world. *Dryden.*

Yet those I *sway'd*

With powerful speech. *Dryden.*

—All is *sway'd* by particular malice. *Dowdant.*

(2.) * To *SWAY*. *v. n.* 1. To hang heavy; to
be drawn by weight.—The balance *sways* on our
part. *Bacon*. 2. To have weight; to have influ-
ence.—The example of sundry churches doth
sway much. *Hooker*. 3. To bear rule; to go-
vern.—

The mind I *sway* by, and the heart I bear. *Sh.*

Had'st thou *sway'd* as kings should do,

They never then had sprung. *Shak.*

—Aged tyranny *sways* not as it hath power, but
as it is suffered. *Shak.*

There let him still victor *sway*. *Milton.*

* To *SWEAL*. See To *SWALE*.

(1.) * To *SWEAR*. *v. n.* preter. *swore* or
sware; part. pass. *sworn*. [*savaran*, Gothick;
sawerian, Saxon; *swerecen*, Dutch.] 1. To ob-
test some superior power; to utter an oath.—If
a man *swear* an oath to bind his soul, he shall not
break his word. *Numbers*.—

Savage Indians *swear* by Anna's name. *Tickel.*

2. To declare or promise upon oath.—

—We shall have old *swearing*. *Shak.*

I gave my love a ring and made him *swear*
Never to part with it. *Shak.*

—When I *swear*, it is irrevocable. *Shak.*—Jacob
said, *swear* to me; and he *swore* unto him. *Gen.*—
He *swore* he had rather lose all his father's images
than that table. *Peacham*. 3. To give evidence
upon oath.—

Corrupt minds procure knaves as corrupt

To *swear* against you? *Shak.*

4. To obtest the great name profanely.—Because
of *swearing* the land mourneth. *Jer.*

Swear not. *Shak.*

—None so nearly disposed to scoffing at religion,
as those who have accustomed themselves to
swear on trifling occasions. *Tillotson*—

Teach the neighbouring echoes how to *swear*.

(2.) * To *SWEAR*. *v. a.* 1. To put to an oath;
to bind by an oath administered.—Moses had
bravely *sworn* the children of Israel. *Ex. xiii. 19.*—
I can swim like a duck, I'll be *sworn*. *Shak.*

Let me *swear* you all to secrecy. *Dryden*

2. To declare upon oath; as, *be sworn treason a-*
gainst his friend. 3. To obtest by an oath.—

King, thou *swarest* by thy gods in vain. *Shak.*

* *SWEARER*. *n. s.* [from *swear*.] A wretch
who obtests the great name wantonly and pro-
fanely.—

—Who must hang them?

—Why the honest men!

—Then the liars and *swearers* are fools; for there
are liars and *swearers* enow to beat the honest men
and hang them up. *Shak.*—

The cheap *swearer* through his open sluice
Lets his soul run for nought. *Herbert.*

—Of all men a philosopher should be no *swearer*.
Brown.—It is the opinion of our most refined
swearers, that the same oath cannot, consistently
with true politeness, be repeated above nine
times in the same company. *Swift.*

SWEARING, part. *n. s.* See *OATH*.

(1.) * *SWEAT*. *n. s.* [*sweat*, Saxon; *sweet*,
Dutch.] 1. The matter evacuated at the pores by
heat or labour.—*Sweat* is salt in taste; for that
part of the nourishment which is fresh and sweet,
turneth into blood and flesh; and the *sweat* is
that part which is excreed. *Bacon*.—Some in-
sensible effluvia, exhaling out of the stone,
comes to be checked and condensed by the air,
as it happens to *sweat* on the skins of animals.
Boyle.—

Soft on the flow'ry herb I found me laid
In balmy *sweat*. *Milton.*

A cold *sweat* stands in drops on ev'ry part.
Dryden.

—*Sweat* is produced by changing the balance be-
tween the fluids and solids, in which health con-
sists. *Arbuthnot*. 2. Labour; toil; drudgery.—
This painful labour of abridging was not easy, but
a matter of *sweat* and watching. *2 Mac. ii. 26.*—

The field
To labour calls us, now with *sweat* impos'd.

What from Johnson's oil and *sweat* did flow.
Derham.

3. Evaporation of moisture.—Those that are to
be kept are not to be thrashed 'till Much, that
they may have had a thorough *sweat* in the mow.
Mortimer.—

(2.) *SWEAT*. See *ANATOMY*, *Index*, and *PER-*
SPIRATION, § 2. The excess of sweat dries and
weakens the body, deprives the humours of their
watery parts, and induces the blood to an inflam-
matory and atrabiliary disposition. A sudden
suppression of it will hurt as well as a suppres-
sion of perspiration. In cases of excessive sweat-
ing, from hard labour, many people ruin their
health for life, and sometimes even bring on sudden
death, by too suddenly exposing themselves to cold
air, taking cold drinks, &c. In all cases of exces-
sive perspiration, the most speedy and effectual an-
tidote against all dangerous consequences is a glass
of spirits, and keeping moderately warm till the
perspiration wear gradually off. All persons ex-
posed by their daily labour to excessive sweating,
should wear flannel next their skin.

(1.) * To *SWEAT*. *v. n.* preterite *swet*, *sweated*;
particip. pass. *swatzen*, [from the noun.] 1. To
be moist on the body with heat or labour.—

Why *sweat* they under burthens? *Shak.*

—Mistress

—Mistress Page at the door, *sewating* and blowing, and looking wildly. *Shak.*—

With such an agony, he *sewated* exceedingly. *Shak.*

—There reigned in the city a disease then new; which, of the accidents and manner thereof, they called the *sewating* sickness. *Bacon.*—

Sweating beneath a shield's unruly weight. *Cowley.*

2. To toil; to labour; to drudge.—

How the drudging goblin *sewats*! *Milton.*

To please you, he'd have the poets *sewate*. *Waller.*

3. To emit moisture.—Wainfcoats will *sewate* fo that they run with water. *Bacon.*—In cold evenings there will be a moisture or *sewating* upon the stool. *Mortimer.*

(1.) * *To SWEAT. v. a. 1.* To emit as sweat.—

Grease that's *sewaten*

From the murderer's gibbet. *Shak.*

For him the rich Arabia *sewats* her gum. *Dryd.*

2. To make to sweat.

* *SWEATER. n. f.* [from *sweat*.] One who sweats.

(1.) *SWEATING. part. n. f.* See *SWEAT*, § 2.

(2.) *SWEATING SICKNESS*, a disorder which appeared in England about 1481, and was by foreigners called the *English sweat*. It returned again in 1485; then in 1505; afterwards in 1517. It appeared again in 1528 or 1529, at which time alone it spread itself to the Netherlands and Germany; a circumstance which shows the impropriety of calling it the *English sweat*, in Latin, *sudor Anglicanus*: besides, Sennertus takes notice, that it spread as far as Denmark, Norway, and France. It raged again in 1548. And the last return of it in London was in 1551, when it was so violent as in one day to take off 120 of the inhabitants of Westminster. Some were seized abroad and cut off in the road, others at home; some when awake, others when fast asleep. Some died in a moment, and others in one, two, three, four, or more hours after they began to sweat.

* *SWEATY. adj.* [from *sweat*.] 1. Covered with sweat; moist with sweat.—The rabblement houted and clasp'd their chop'd hands, and threw up their *sweaty* night-caps. *Shak.*—

A *sweaty* reaper from his tillage brought First-fruits. *Milton.*

2. Consisting of sweat.—

No noisome whiffs, or *sweaty* steams. *Swift.*

3. Laborious; toilsome.—

Those who labour

The *sweaty* forge. *Prior.*

SWEDE. n. f. A native of SWEDEN.

(1.) *SWEDEN*, one of the most northerly kingdoms of Europe, lying between Lat. 55° 20' and 69° 30' N. and between Lon. 12° and 32° E. of London. On the S. it is bounded by the Baltic, on the N. by Danish Lapland, on the E. by Muscovy, and on the W. by the mountains of Norway; being 800 miles in length, and 350 in breadth. *Stockholm* is the capital.

(2.) *SWEDEN*, ANCIENT HISTORY OF. The early history of Sweden is no less involved in fables than that of most other nations. *Affredius* gives a chronological list of 149 monarchs of Sweden, from *MACOG*, the son of *Japhet*, and

grandson of Noah, who, he says, began to reign in Sweden and Gothland, A. M. 1745, 83 years after the flood, to Q. *Christina*; in 1633: Others affirm, that ancient SCANDINAVIA was first governed by judges elected for a certain time by the voice of the people. Among these temporary princes the country was divided, until A. M. 2054, when Eric I. was raised to the supreme power, with the prerogatives of all the temporary magistrates united in his person for life. From this very early period till 1366 of the Christian era, the histories of Sweden present us with nothing but what is common to all nations in their early periods, viz. the endless combats and massacres of barbarians, tending to no other purpose than the effusion of blood, and the temporary acquisition of a little territory. At this time, however, Albert of Mecklenburg, having concluded a peace between Sweden and Denmark, which had been at violent war for some time before, was proclaimed king of Sweden.

(3.) *SWEDEN*, CLIMATE OF. See § 60.

(4.) *SWEDEN*, HISTORY OF, FROM ALBERT'S ACCESSION TILL THE DEATH OF Q. MARGARET. The peace above mentioned (§ 2.), was of short duration, being broken in 1368; on which Albert entered into an offensive and defensive league with the earl of Holstein, the Jutland nobility, the dukes of Sleswick, Mecklenburg, and the Hanse Towns, against the kings of Denmark and Norway. Albert proved very successful against Waldemar king of Denmark at that time, driving him entirely out of his dominions; but he himself was defeated by the king of Norway, who laid siege to his capital. Soon after this, a new treaty of peace was concluded, by which Albert was allowed to enjoy the crown of Sweden in peace. However, having formed a design of rendering himself absolute, he fell under the displeasure of his subjects, and Margaret of Norway was proclaimed queen of Sweden by the malecontents. A war immediately ensued, in which Albert was defeated and taken prisoner; but as the princes of Mecklenburg, the earls of Holstein, and the Hanse Towns, entered into a league in his favour, the war was so far from being extinguished by this event, that it raged with more fury than ever. At length, in 1394, the contending parties came to an accommodation. Albert was set at liberty, on condition that he should in three years surrender to Margaret all pretensions to the city of Stockholm; and the Hanse Towns engaged to pay 60,000 marks of silver in case of Albert's breach of faith. Not long after this, Eric the son of Albert died; and he, having no other child, did not think it worth his while to contend for the kingdom of Sweden: he therefore acquiesced in the pretensions of Margaret, and passed the remainder of his days at Mecklenburg. Margaret died in 1414 or 1415. See DENMARK, § 5, 6; and MARGARET, N° 4.

(5.) *SWEDEN*, HISTORY OF, FROM ERIC XIII. TILL THE DEATH OF CHARLES VIII. Margaret was succeeded by Eric XIII. of Pomerania. This prince's reign was cruel and oppressive to the last degree. The people were ruined by taxes; and the Danes being everywhere preferred to the offices of power, committed the greatest cruelties. The consequence of this was a revolt; and Charles

Charles Canutson, grand marshal of Sweden and governor of Finland, having joined the malecontents, was declared commander in chief of their army. Eric was now formally deposed, and commenced pirate: Canutson was chosen regent: but beginning to oppress the people, and aspiring openly at the crown, the Swedes and Danes revolted; in consequence of which a revolution took place, and Christopher duke of Bavaria, nephew to Eric, was chosen king of Denmark, Sweden, and Norway, in 1442. On the accession of the new prince, complaints against Canutson were brought from all quarters; but, through the interest of his friends, he escaped punishment; and in 1448, Christopher having died after a tyrannical reign of five years, he was raised to the throne by the name of Charles VIII. However, the kingdoms of Denmark and Norway refused to own allegiance to him; upon which a war immediately commenced. In 1454 peace was concluded, and Denmark for the present freed from the Swedish yoke. Neither did Charles VIII. long enjoy the crown of Sweden. Having quarrelled with the archbishop of Upsal, the latter formed such a strong party that the king could not resist him. Christian I. king of Denmark was called to the throne of Sweden; and, in 1459, once more united the three kingdoms. But having begun to oppress his subjects in an arbitrary manner, he was soon after obliged to retire to Denmark in 1463. Katil bishop of Linköping, who had driven out the king, took upon himself the office of regent. Next year Christian returned with a powerful army, but was defeated. The people then recalled Charles; but he, on his accession, having offended bishop Katil, was by him defeated, and obliged to renounce his right to the crown. After this the kingdom was rent into factions, between whom the most cruel civil wars took place, until 1476, when Charles was again recalled, and enjoyed the kingdom, though not without opposition, till his death, in 1470.

(6.) SWEDEN, HISTORY OF, FROM THE DEATH OF CHARLES VIII. TILL THE ELECTION OF CHRISTIAN II. AND THE MASSACRE OF THE NOBILITY. The confusion in which the Swedish affairs had been so long involved did not cease on the death of Charles. Christian again invaded Sweden; but was defeated by Steno Sture, nephew of the late king. After this the kingdom remained in peace till 1487, when the Russians invaded Carelia, committing every where the greatest ravages. These were soon driven out: but in 1497, a rupture happening between Sture and the senate, an offer was made of the Swedish crown to John king of Denmark, who readily accepted the offer, and was crowned accordingly; but no sooner was he seated on the throne than he became odious to the Swedes, from his partiality to the Danes. In a short time he set out for Denmark, leaving his queen with a strong garrison in the citadel of Stockholm. He was no sooner gone than the capital was invested; and though the queen made a noble defence, she was obliged to capitulate, on condition of being allowed to pass into Denmark. All the garrison were made prisoners of war, and the queen was confined in a monastery till 1498. The Swedish

affairs continued to be involved in the same dreadful confusion until 1520, when a great revolution was effected by GUSTAVUS VASA, the son of Eric Vasa, a nobleman of the first rank, who restored the kingdom to its liberty, and laid the foundation of its future grandeur. The occasion of this great revolution was as follows: In 1518, Christian II. king of Denmark invaded Sweden, with a design to subdue the whole country; but being defeated with great loss by young STENO STURE, then regent, he set sail for Denmark. But meeting with contrary winds, he made several descents on the Swedish coast, which he ravaged with all the fury of an incensed barbarian. The inhabitants, however, bravely defended themselves, and Christian was reduced to the utmost distress; one half of his forces having perished with hunger, and the other being in the most imminent danger by the approach of a rigorous winter. He then thought of a stratagem, which had almost proved fatal to the regent; for having invited him to a conference, at which he designed either to assassinate or take him prisoner, Sture was about to comply, had not the senate, who suspected the plot, interposed and prevented him. Christian then offered to go in person to Stockholm to confer with Sture, upon condition that six hostages should be sent in his room. This was accordingly done; but the wind happening then to prove favourable, he set sail for Denmark with the hostages. Next year he returned; and having drawn Sture into an ambush, the regent received a wound of which he died soon after. The kingdom being thus left without a head, matters soon came to the most desperate crisis. The army disbanded itself; and the senate, instead of taking proper measures to oppose the enemy, spent their time in idle debates. Christian, in the mean time, advanced into the heart of the kingdom, destroying every thing with fire and sword; but on his arrival at Strängnäs, he granted a suspension of arms, to give the people time to deliberate on their situation, and to reflect that they might easily get rid of their troubles by electing him king. This they accordingly did; and Christian proved one of the most bloody tyrants that ever sat on the throne of any kingdom. Immediately after his coronation, he gave grand entertainments for three days; during which time he projected the diabolical design of extirpating at once all the Swedish nobility, and actually executed above 60 people of the first rank. Innumerable other cruelties were committed. At last he departed for Denmark, ordering gibbets to be erected, and causing the peasants to be hanged on them for the slightest offences, as he passed along; and at Jönköping he caused two boys to be whipped to death.

(7.) SWEDEN, HISTORY OF, TILL THE DEFEAT OF THE DANES BY GUSTAVUS VASA. This monstrous cruelty, instead of securing him on the throne, exasperated the whole nation against him. GUSTAVUS VASA was among the hostages whom Christian had perfidiously carried to Denmark in 1519. Large promises had been made to reconcile him to Christian, and threats had been used for the same purpose, but all in vain. Banner, a Danish nobleman, prevailed on the king to put him into his hands, to try whether

he

he could prevail upon him to change his sentiments. The king, however, told Banner, that he must pay 6000 crowns in case the prisoner should make his escape. Banner generously assented; and having brought the noble prisoner to his fortress of Calo in Jutland, soon allowed him all the liberty he could desire, and otherwise heaped favours upon him. All this, however, could not extinguish his remembrance of the cruelties of Christian, and the desire he had of being serviceable to his country. He therefore determined to make his escape. With much difficulty, and under various disguises, he effected his escape, which Banner was no sooner acquainted with, than he set out after him, and found him at Lubec. He reproached him as ungrateful and treacherous; but he was soon appeased by the arguments urged by Gustavus, and by the promise he made of indemnifying him for the loss of his ransom. Upon this Banner returned, giving out that he could not find his prisoner. Christian, enraged at his escape, ordered Otho his general to do his utmost to arrest him. Gustavus applied to the regency for a ship to convey him to Sweden, but the captain steered a different course, and put him on shore near Calmar; a city hitherto garrisoned by the troops of Christiana, widow of the regent. When Gustavus arrived, he made himself known to the governor and the principal officers of the garrison, who were mostly Germans, and his fellow-soldiers in the late administrator's army. He flattered himself that his birth, his merit, and his connections, would immediately procure him the command. But they seeing him without troops and without attendants, threatened to kill or betray him, if he did not instantly quit the city. Thus disappointed, Gustavus departed with great expedition; and his arrival being known, he was again forced to have recourse to disguise to conceal himself from the Danish emissaries who were in search of him. In a waggon loaded with hay, he passed through every quarter of the Danish army, and at last repaired to an old family castle in Sudermania. From hence he wrote to his friends, notifying his return to Sweden, and beseeching them to assemble all their forces to break through the enemy's army into Stockholm, at that time besieged; but they, too, refused to embark in so hazardous and desperate an attempt. He next applied to the peasants; but they also refused to engage. At length, after several vain attempts to throw himself into Stockholm, and disappointed in all his hopes, he determined to apply to the Dalecarlians. Attended by a peasant, to whom he was known, he travelled in disguise through Sudermania, Nericia, and Westermania, and, after a laborious and painful journey, arrived in the mountains of Dalecarlia. Scarce had he finished his journey, when he found himself deserted by his companion and guide, who carried off with him all the money he had provided for his subsistence. Thus forlorn, destitute, half starved, he entered among the miners, and wrought like a slave under ground; here he continued until he was discovered accidentally by a gentleman, his acquaintance, in the neighbourhood, who offered him an asylum in his house. This he joyfully accepted; but finding it impos-

sible to make him take arms in his behalf, he fled to the house of one Peterfon with whom he had formerly served. This last proved a traitor to his friend, and Gustavus would have been delivered to the Danes, had he not received timely warning from the wife of his host. By her advice he took refuge with a clergyman, who shut him up in an apartment adjoining to the church, and counselled him to apply at once to the peasants at an approaching annual festival. They listened to him with enthusiasm, and he instantly led them against the governor's castle; which he took by assault, and put the garrison to the sword. This inconsiderable enterprise was attended with the most happy consequences. Great numbers of the peasants flocked to his standard; some of the gentry openly espoused his cause, and others supplied him with money. Christian was soon acquainted with what had passed; but despising such an inconsiderable enemy, he sent only a slender detachment under the command of one Soren Norby, to assist his adherents in Dalecarlia. Gustavus advanced with about 5000 men, and defeated a body of Danes commanded by one Melcen; but he was strenuously opposed by the archbishop of Upsal, who raised numerous forces for king Christian. The fortune of Gustavus, however, still prevailed, and the archbishop was defeated with great loss.

(8.) SWEDEN, HISTORY OF, TILL THE ELECTION OF GUSTAVUS I. KING. Gustavus then laid siege to Stockholm; but his force being too inconsiderable for such an undertaking, he was forced to abandon it with loss. This check did not prove in any considerable degree detrimental to the affairs of Gustavus; the peasants from all parts of the kingdom flocked to his camp, and he was joined by a reinforcement from Lubec. Christian, unable to suppress the revolt, wreaked his vengeance on the mother and sisters of Gustavus, whom he put to death with the most excruciating torments. Several other Swedish ladies he caused to be thrown into the sea, after having imposed on them the inhuman task of making the sacks into which they were to be inclosed. His barbarities served only to make his enemies more resolute. Gustavus having assembled the states at Wadstena, he was unanimously chosen regent, the diet taking an oath of fidelity to him, and promising to assist him to the utmost. Having thus obtained the sanction of legal authority, he pursued his advantages against the Danes. A body of troops appointed to throw succours into Stockholm were totally cut in pieces; and the regent sending some troops into Finland, struck the Danes there with such terror, that the archbishop of Upsal, together with Slaborg and Baldenacker the Danish governors, fled to Denmark. He then sent express orders to all his governors and officers in Finland and Sweden to massacre the Swedish gentry without distinction. The Swedes made reprisals by massacring all the Danes they could find; so that the whole country was filled with bloodshed and slaughter. In the mean time Gustavus had laid siege to the towns of Calmar, Abo, and Stockholm; but Norby obliged him to raise all of them with loss. Gustavus, in revenge, laid siege to the capital a third time, and petitioned the

the regency of Lubeck for a squadron of ships and other succours for carrying on the siege. This was complied with, but on very hard conditions, viz. that Gustavus should oblige himself, in the name of the states, to pay 60,000 marks of silver as the expence of the armament; that, until the kingdom should be in a condition to pay that sum, the Lubeck merchants trading to Sweden should be exempted from all duties on imports or exports; that all other nations should be prohibited from trading with Sweden, and that such traffic should be deemed illicit; that Gustavus should neither conclude a peace, nor even agree to a truce with Denmark, without the concurrence of the regency of Lubeck; and that in case the republic should be attacked by Christian, he should enter Denmark at the head of 20,000 men. Upon these hard terms did Gustavus obtain assistance from the regency of Lubeck; nor did his dear bought allies prove very faithful. They did not indeed go over to the enemy; but in a sea-fight, where the Danes were entirely in the power of their enemies, they suffered them to escape, when their whole force might have been entirely destroyed. This treachery had well nigh ruined the affairs of Gustavus; for Norby was now making preparations effectually to relieve Stockholm: in which he probably would have succeeded; but at this critical period news arrived that the Danes had unanimously revolted, and driven Christian from the throne; and that the king had retired into Germany, in hopes of being restored by the arms of his brother-in-law, the emperor. On hearing this news, Norby retired with his whole fleet to the island of Gothland, leaving but a slender garrison in Calmar. Gustavus did not fail to improve this opportunity to his own advantage, and quickly made himself master of Calmar. Mean time Stockholm continued closely invested; but Gustavus protracted the siege until he should get himself elected king. Having, for this purpose called a general diet, the first step was to fill up the vacancy in the senate occasioned by the massacres of Christian. Gustavus had the address to get such nominated as were in his interest; and of consequence the assembly was no sooner met, than a speech was made, containing the highest encomiums on Gustavus, setting forth in the strongest light the many eminent services he had done for his country, and concluding that the states would show themselves equally ungrateful and blind to their own interest, if they did not immediately elect him king. This proposal was acceded to by such tumultuous acclamations that it was impossible to collect the votes; so that Gustavus himself acknowledged, that their affection exceeded his merit, and was more agreeable to him than the effects of their gratitude.

(9.) SWEDEN, HISTORY OF, TILL THE DEATH OF GUSTAVUS I. Gustavus on his election was urged to have the ceremony of his coronation immediately performed; but the king having some designs on the clergy, did not think proper to comply with their request, as he would have been obliged to take an oath to preserve them in their rights and privileges. Indeed he had not been long seated on the throne before he incurred the displeasure of that body; for having large ar-

rears due to the army, with other incumbrances, Gustavus found it necessary to raise large contributions on the clergy. On this he was accused of avarice and hereby before the pope's nuncio. Gustavus defended himself against these accusations; and soon after showed a great partiality for the doctrines of Luther, which by this time had been preached and received by many people in Sweden. This embroiled him more than ever with the clergy; and it soon appeared, that either Gustavus must resign his throne, or the clergy some part of the power they had assumed. Matters were driven to extremities by the king's allowing the scriptures to be translated into the Swedish language. In 1526, the king, finding them entering into a combination against the reformists, went to Upsal, and publicly declared his resolution of reducing the number of oppressive and idle monks and priests, who, under the pretence of religion, fattened on the spoils of the industrious people. At last, taking advantage of the war between the pope and Charles V. of Spain, he declared himself to be of the reformed religion, and established it throughout his dominions; and at the same time, to humble the arrogance of the ecclesiastics, he gave the senators the precedence of them, and in many other respects degraded them from the dignities they formerly enjoyed. For some time the states hesitated at supporting the king in his work of reformation; inasmuch, that at last he threatened to resign the kingdom, which he said, was doomed to perpetual slavery either to its temporal or spiritual tyrants. On this the states came into his measures, and retrenched the privileges of the ecclesiastics in the manner he proposed. Several disturbances however ensued. An impostor, who pretended to be of the family of Sture, the former regent having claimed the throne, the Dalecarlians revolted in his favour; but on the approach of a powerful army sent by Gustavus, they submitted. Soon after Lutheran professors were established in every diocese; upon which a new rebellion ensued. At the head of this was Thure Johanesson, who had married the king's sister. Several of the nobility joined him; and the king of Denmark acceded to their cause, thinking, by means of these disturbances, to reunite the three kingdoms of Sweden, Denmark, and Norway, as formerly. But Gustavus prevailed, and the rebels were obliged to take refuge in Denmark. A fresh accident, however, had like to have embroiled matters worse than before. The subsidy granted to the regency of Lubeck was still due; and for the payment of it the states granted to the king all the useless bells of the churches and monasteries. The people were shocked at the sacrilege; and the Dalecarlians again betook themselves to arms. Intimidated, however, by the courage and vigorous conduct of the king, they again submitted, and were taken into favour. But tranquillity was not yet restored. Christian having established a powerful interest in Norway, once more made an attempt to recover his kingdoms, and was joined by the Dalecarlians; but being defeated by the Swedish forces, he was forced to return to Norway, where, being obliged to capitulate with the Danish generals, he was

hapt

kept prisoner all his life. In 1542, Gustavus having happily extricated himself out of all his troubles, prevailed on the states to make the crown hereditary in his family; after which he applied himself to the encouragement of learning and commerce. A treaty was set on foot for a marriage between his eldest son Eric and Elizabeth queen of England. The prince's brother, duke John, went over to England, and resided for some time at the court of London with great splendour. He returned full of expectations of success; but bringing with him no sort of proofs in writing, his father soon perceived that he had been the dupe of Elizabeth's superior policy. However, at last he allowed Prince Eric to go in person to England; but before he could embark, the death of Gustavus, in 1569, made him lay aside all thoughts of the voyage and marriage.

(10.) SWEDEN, HISTORY OF, TILL THE DEPOSITION OF ERIC XIV. Gustavus Vasa was succeeded by his son Eric XIV. The new king was a man possessed of all the exterior ornaments which give an air of dignity to the person; but he had neither the prudence nor the penetration of his father. He created the first nobility that were ever known in Sweden; which he had no sooner done than he quarrelled with them, by passing some acts which they thought derogatory to their honour and dignity. The whole course of his reign was disturbed by wars with Denmark, and disputes with his own subjects. In the former he was unfortunate, and towards the latter he behaved with the greatest cruelty. At last, by the torments of his own conscience, it is said, he run mad. He afterwards recovered his senses, but was dethroned by his brothers; of whom Duke John, who had been hitherto kept prisoner by Eric, succeeded him in the kingdom.

(11.) SWEDEN, HISTORY OF, TILL THE DEPOSITION OF SIGISMUND, AND DEATH OF CHARLES IX. This revolution took place in 1568, but with no great advantage to Sweden. Disputes about religion between the king and his brother, and wars with Muscovy, threw matters into the utmost confusion. At last prince Sigismund, the king's son, was chosen king of Poland, which proved the source of much trouble to the kingdom. (See POLAND, § 19.) In 1590 king John died: and as Sigismund was at a distance, every thing fell into the utmost confusion: the treasury was plundered, and the wardrobe quite spoiled, before even duke Charles could come to Stockholm to take the administration into his hands, until king Sigismund should return. This, however, was far from being the greatest disaster which befel the nation at this time. It was known that the king had embraced the Popish religion, and it was with good reason suspected that he would attempt to restore it upon his arrival in Sweden. Sigismund also was obliged, on leaving Poland, to promise that he would stay no longer in Sweden than was necessary to regulate his affairs. These circumstances served to alienate the minds of the Swedes from their sovereign even before they saw him; and the universal dissatisfaction was increased, by seeing him attended, on his arrival in Sweden, in 1593, by Malaspina the pope's nuncio, to whom he made a present of

30,000 ducats to defray the expences of his journey to Sweden. What the people had foreseen was too well verified: the king refused to confirm the Protestants in their religious privileges, and showed such partiality on all occasions to the Papists, that a party was formed against him; at the head of which was duke Charles his uncle. Remonstrances, accompanied with threats, took place on both sides; and at an interview between the king and Charles, the dispute would have ended in blows, had they not been parted by some of the nobility. This, however, made such an impression upon Sigismund, that he was apparently reconciled to his brother, and promised to comply with the inclinations of the people in every respect, though without any inclination to perform what he promised. The agreement, indeed, was scarce made, before Sigismund, conceived the horrid design of murdering his uncle at the Italian comedy acted the night after his coronation. The duke, however, having notice of the plot, avoided it. This enraged the king so much, that he resolved to accomplish his design by force; and therefore commanded a Polish army to march towards the frontiers of Sweden, where they committed all the ravages that could be expected from an enraged and cruel enemy. Complaints were made by the Protestant clergy to the senate: but no other reply was made them, than that they should abstain from these bitter invectives and reproaches which had provoked the Catholics until the king's departure; at which time they would be at more liberty. In 1595 Sigismund set sail for Dantzic, leaving the administration in the hands of duke Charles. The consequence of this was, that the dissensions which had already taken place being continually increased by the obstinacy of the king, duke Charles assumed the sovereign power; and in 1604 Sigismund was formally deposed, and his uncle Charles IX. raised to the throne. He proved a wife and brave prince, restoring the tranquillity of the kingdom, and carrying on a war with vigour against Poland and Denmark. He died in 1611, leaving the kingdom to his son, the celebrated GUSTAVUS ADOLPHUS.

(12.) SWEDEN, HISTORY OF, TILL THE CAPTURE OF RIGA, BY GUSTAVUS ADOLPHUS. Though Charles IX. by his wife and vigorous conduct had in a great measure retrieved the affairs of Sweden, they were still in a very disagreeable situation. The finances of the kingdom were entirely drained by a series of wars and revolutions; powerful armies were preparing in Denmark, Poland, and Russia, while the Swedish troops were not only inferior in number to their enemies, but the government was destitute of resources for their payment. Though the Swedish law required that the prince should have attained his 18th year before he was of age, yet such striking marks of the great qualities of Gustavus appeared, that he was allowed by the states to take upon him the administration even before this early period. His first act was to resume all the crown grants, that he might be the better able to carry on the wars in which he was unavoidably engaged; and to fill all places, both civil and military, with persons of merit. At the head of do-

metic and foreign affairs was placed chancellor Oxenstiern, a person every way equal to the important trust, and the choosing of whom impressed marked with the highest opinion of the young monarch's penetration and capacity. Soon after his accession, Gustavus received an embassy from James I. of Britain, exhorting him to make peace with his neighbours. This was seconded by another from Holland. But as the king perceived that the Danish monarch intended to take every opportunity of crushing him, he resolved to act with such vigour, as might convince him that he was not easily to be overcome. Accordingly he broke into Denmark with three different armies at once; and though the enemy's superiority at sea gave them great advantages, and the number of the king's enemies distracted his attention, he carried on the war with such spirit, that in 1613 a peace was concluded upon good terms. This war being finished, the king applied himself to civil polity, and made some reformation in the laws of Sweden. In 1615, hostilities were commenced against Russia, on account of the refusal of that court to restore some money which had been formerly lent them. The king entered Ingria, took Kexholm by storm, and was laying siege to Pleskow, when, by the mediation of James I. peace was concluded, on condition of the Russians repaying the money, and yielding to Sweden some part of their territory. In this and the former war, notwithstanding the shortness of their duration, Gustavus learned the rudiments of the military art for which he soon became so famous. In one campaign, he not only learned, but improved, all the military maxims of La Gardie, a celebrated general, brought the Swedish army in general to a more steady and regular discipline than formerly had been exercised, and formed and seasoned an invincible body of Finlanders, who had afterwards a very considerable share in the victories of the Swedes. Peace was no sooner concluded with Russia, than Gustavus was crowned with great solemnity at Upsal. Soon after this, Gustavus ordered his general La Gardie to acquaint the Polish commander Ciolekowitz, that as the truce between the two kingdoms, which had been concluded for two years, was now expired, he desired to be certainly informed whether he was to expect peace or war from his master. In the mean time, having borrowed money of the Dutch for the redemption of a town from Denmark, he had an interview on the frontiers with Christian IV. At this interview, the two monarchs conceived the utmost esteem and friendship for each other; and Gustavus obtained a promise, that Christian would not assist Sigismund in any designs he might have against Sweden. In the mean time, receiving no satisfactory answer from Poland, Gustavus began to prepare for war. Sigismund entered into a negotiation, and made some pretended concessions, with a view to seize Gustavus by treachery; but the latter having intimation of his design, the whole negotiation was changed into reproaches and threats on the part of Gustavus. Immediately after this, Gustavus made a tour in disguise through Germany, and married Eleonora the daughter of the Elector of Brandenburg. He

then resolved to enter heartily into a war with Poland; and with this view set for Riga, with a great fleet, which carried 20,000 men. The place was well fortified, and defended by a body of veterans enthusiastically attached to Sigismund; but it was carried after a siege of six weeks, accompanied by much desperate fighting.

(13) SWEDEN, HISTORY OF, TILL THE DEFEAT OF THE POLES AND GERMANS BY GUSTAVUS. After the reduction of Riga, the Swedish monarch entered Courland, where he reduced Mitau; but ceded it again on the conclusion of a truce for one year. Sigismund, however, no sooner had time to recover himself, than he began to form new enterprises against the Swedes in Prussia; but Gustavus setting sail with his whole fleet for Dantzick, where the king of Poland then resided, so broke his measures, that he was obliged to prolong the truce for another year. Sigismund, however, was not yet apprised of the danger he was in, and refused to listen to any terms of accommodation; upon which Gustavus entering Livonia, defeated the Polish general, and took Dorpat, Hockenhausen, and several other places of less importance; after which, entering Lithuania, he took the city of Brien. Notwithstanding this success, Gustavus proposed peace on the same equitable terms as before; but Sigismund was still insatuated with the hopes that, by means of the emperor of Germany, he should be able to conquer Sweden. Gustavus finding him inflexible, resolved to push his good fortune. His general Horn and Thurn defeated the Poles in Semigalia. Gustavus himself with 150 ships set sail for Prussia, where he landed at Pulaw. This place was immediately delivered up to him: as were also Bransberg, Frauenberg, Elbing, Marienburg, Mew, Dirschau, Stum, Christburg, &c. Sigismund, alarmed at the great successes of Gustavus, sent a body of forces to oppose him, and to prevent Dantzick from falling into his hands. In this he was attended with as bad success as before. His troops were defeated before Marienburg, Mew, and Dirschau; and in May 1627, Gustavus arrived with fresh forces before Dantzick, which he would probably have carried, had he not been wounded in the belly by a cannon-shot. The Poles in the mean time recovered Mew; and the States of Holland sent ambassadors to mediate a peace between the two crowns. Sigismund, however, depending upon the assistance of the emperor of Germany and king of Spain, determined to hearken to no terms, and resolved to make a winter campaign; but Gustavus was so well intrenched, and all his forts were so strongly garrisoned, that the utmost efforts of the Poles were to no purpose. Dantzick in the mean time made such a desperate resistance as greatly irritated Gustavus. In a sea engagement the Swedish fleet defeated that of the enemy; after which Gustavus, having blocked up the harbour with his fleet, pushed his advances on the land side with incredible vigour. He made a surprising march over a morass 12 miles broad, assisted by bridges of a peculiar construction, over which he carried a species of light cannon invented by himself. By this unexpected manoeuvre he got the command of the city in such a manner, that the garrison

garrison were on the point of surrendering, when, by a sudden swell of the Vistula, the Swedish works were ruined, and the king was obliged to raise the siege. In other respects, however, the affairs of Gustavus went on with their usual good fortune. His general Wrangel defeated the Poles before Brodantz; and at Stum the king gained another and more considerable victory in person. In addition to these misfortunes of the Poles, a famine and plague raged in their camp, so that they were at last obliged to consent to a truce for six years, to June 1635. Gustavus restored some places, but kept the port and citadel of Memel, the harbour of Pillau, the town of Elbing, Branfb-rg, and all that he had conquered in Livonia.

(14.) SWEDEN, HISTORY OF, TILL THE DEFEAT OF COUNT TILLY BY GUSTAVUS. Gustavus having thus brought the war with Poland to an honourable conclusion, began to think of relenting the conduct of the emperor in assisting his enemies and oppressing the Protestant states. Before embarking in such an important undertaking, it was necessary that he should consult the diet. In this the propensity of engaging in a war with Germany was warmly debated; but after much altercation, Gustavus in a very noble speech determined the matter, and set forth in such strong terms the virtuous motives by which he was actuated, that the whole assembly wept, and every thing was granted which he could require. It was not difficult for Gustavus to begin his expedition. His troops amounted to 60,000 men, hardened by a succession of severe campaigns in Russia, Finland, Livonia, and Prussia. His fleet exceeded 70 sail, carrying from 20 to 40 guns, and manned with 6000 mariners. Embarking his troops, he landed at Uedum on the 24th of June 1730, the Imperialists having evacuated all the fortresses they possessed there; and the isle of Rugen had been before reduced by general Lally, in order to secure a retreat if fortune should prove unfavourable. Passing the strait, Gustavus stormed Wolgast and another strong fortress in the neighbourhood, leaving general Banner with a garrison for the defence of these conquests. He then proceeded to Stettin; which was no sooner invested than it consented to receive a Swedish garrison, and the king persuaded the duke of Pomerania to enter into an alliance with him. In consequence of this the Swedish troops were received into several towns of Pomerania; and the most bitter enmity took place between the Imperialists and Pomeranians, each refusing the other quarter. These successes of Gustavus struck the empire with consternation; for being already overwhelmed with civil dissensions, they were in no condition to resist so impetuous an enemy. At this time also the Imperialists were without a general; but at last count Tilly was fixed upon, and invested with the dignity of Field Marshal. In the mean time the king being reinforced by a considerable body of troops in Finland and Livonia under Gustavus Horn, defeated the Imperialists before Grifenhagen; taken the place soon after by assault. By this and some other conquests he opened a passage into Lusatia and Silesia; but in the mean time count Tilly cut off 2000 Swedes at New Brandenburg, owing to the obstinacy of their com-

mander Kniphausen, who had orders to evacuate the place and join the main army. This advantage, however, was soon overbalanced by the conquest of Frankfort on the Oder, which Gustavus took by assault, making the whole garrison prisoners. Thus he commanded the rivers Elbe and Oder on both sides, and had a fair passage not only to these countries, but also to Saxony and the dominions of the house of Austria. Soon after this, Gustavus laid siege to Landsberg, which he took by assault; though the number of soldiers he had with him was so inconsiderable, that he had thoughts of sending to the main army for a reinforcement before the prisoners should march out, being apprehensive that they might give him battle in the open field, though they could not defend themselves behind walls. About this time the Protestant princes held a diet at Leipzig; to which Gustavus sent deputies, and conducted his negotiations with such address as tended greatly to promote his interests. Immediately after this he reduced Griptwald, and with it all Pomerania. Then marching to Custrów, he restored the dukes of Mecklenburg to their dominions. Here the Imperialists had tyrannized in such a manner that Gustavus was received as the deliverer of the people; and the ceremony of the duke's inauguration was performed with great solemnity. All this time count Tilly was employed in the siege of Magdeburg; but now, being alarmed at the repeated successes of the Swedes, he left Pappenheim with part of the army before that city, while he marched with the rest into Thuringia, to attack the landgrave of Hesse-Cassel and the elector of Saxony. After a most obstinate defence, Magdeburg fell into the hands of Pappenheim, where he committed all imaginable cruelties. Gustavus formed a plan of recovering the city; but relinquishing it, he ordered Banner to attack Havelsburg; which was done with such resolution, that the place was forced in a few hours, and all the garrison made prisoners. Werben was next obliged to submit after an obstinate conflict, in which many fell on both sides. These successes obliged count Tilly to attempt in person to check the progress of the Swedes. He detached the vanguard of his army, composed of the flower of the imperial cavalry, within a few miles of the Swedish camp. An action ensued, in which Bernstein the imperial general was defeated and killed, with 1500 of his men. Gustavus, after this advantage, placed himself in a situation so much superior to his enemies, that count Tilly was fired with indignation, and marched up to the Swedish lines to give him battle. Gustavus kept within his works, and Tilly attacked his camp, though almost impreguably fortified, keeping up a most terrible fire from a battery of 32 pieces of cannon; which, however, produced no other effect, than obliging the Swedish monarch to draw up his army behind the walls of Werben. Tilly had placed his chief hopes in being able to nail up the enemy's cannon, or set fire to their camp in divers quarters; after which he proposed making his grand attack. With this view he bribed some prisoners; but they betrayed him, and told his design to Gustavus. The king ordered fires to be lighted in different part of his camp, and his sol-

diers to imitate the noise of a tumultuous disorderly rabble. This had the desired effect. The count led his army to the breach made by the cannon; where he was received with such a volley of grape-shot as cut off the first line, and put the whole body in disorder, so that they could never be brought back to the charge. In this confusion the imperial army was attacked by Banditzzen, and, after an obstinate conflict, obliged to quit the field.

(15) SWEDEN, HISTORY OF, TILL THE DEFEAT OF THE IMPERIALISTS AT LEIPZIG. Soon after this action the queen arrived at the camp with a reinforcement of 8000 men; at the same time a treaty was concluded with Charles I. of England, by which that monarch allowed the marquis of Hamilton to raise 6000 men for the service of Gustavus. These auxiliaries were to be conducted to the main army by a body of 4000 Swedes; and were in every thing to obey the king while he was personally present, but in his absence were to be subject to the orders of the marquis. With these troops the king had resolved to make a diversion in Bremen: but the marquis finding it impossible for him to effect a junction with the Swedish army, resolved, without debarking his troops, to steer his course for the Oder, and land at Uledom. Gustavus was very much displeased at finding his project thus disconcerted; however, making the best of the existing circumstances, he commanded the British troops to act on the Oder instead of the Weser. The number of this little army was magnified exceedingly by report, inasmuch that count Tilly had some thoughts of marching against them with his whole force; but on the departure of the marquis for Silesia, he reinforced the army in that country with a large detachment, which was thought to contribute not a little to the defeat he soon after received. Ever since the late action, Gustavus had kept within his intrenchments, where his army was well provided with every thing. Tilly made several attempts to surprise or draw him to an engagement; but finding all his endeavours fruitless, he marched into Saxony and laid siege to Leipzig. This precipitate measure proved highly advantageous to the Swedish monarch; as thus the elector who had been wavering in his resolutions, was now obliged to have recourse to the Swedes, to preserve himself from utter destruction. A treaty offensive and defensive was immediately concluded with Gustavus; and the elector willingly promised every thing that was required of him; and among the rest, that not only the prince his son, but he himself should reside in the Swedish camp, and engage his life and fortune in the common cause. Tilly, in the mean time carried fire and sword into the unhappy electorate. At the head of an army of 44,000 veterans, he summoned Leipzig to surrender; denouncing the same vengeance against it as had been executed on Magdeburg, in case of a refusal. By this the governor was so much intimidated, that he instantly submitted; and also surrendered the castle of Passenbourg, which was in a condition to have stood out till the arrival of the Swedish army. The elector, enraged at the loss of these valuable places, ordered his army to join the Swedes with all expedition, and pressed

the king so warmly to engage, that at last he yielded to his desire. On the 7th Sept. 1631, Gustavus gained the celebrated battle of Leipzig, in which 7000 Imperialists lay dead on the field of battle; 4000 were taken prisoners; a fine train of artillery was lost, and upwards of 100 standards, ensigns, and other military trophies. On this occasion, the Scots regiment in the Swedish service first practised the method of firing in platoons; to which some ascribe the astonishment and confusion that appeared in the Imperial army.

(16) SWEDEN, HISTORY OF, TILL THE DEATH OF GUSTAVUS ADOLPHUS. Gustavus next penetrated into Franconia, where he reduced the fort of WORKBURG and other places. Tilly having collected his scattered troops, which formed an army still superior to that of Gustavus, marched to the relief of this place; but came too late. He then directed his march towards Rottenberg, where four regiments were cut in pieces by a Swedish detachment. After this the king reduced Hanau, Frankfort on the Maine, and Mentz; destroying a body of Spaniards, who had thrown themselves in the way to obstruct his passage. The court of Vienna was now thrown into the utmost confusion; and sent everywhere begging assistance, and soliciting the Catholic princes to arm in defence of their religion. The emperor was most embarrassed in finding out a general capable of opposing Gustavus in the field; for the late misfortunes of count Tilly had entirely sunk his reputation. Wallenstein, an old experienced officer, was made choice of; but as he had formerly been disgraced, it was apprehended that he would not accept of the command; yet he not only accepted, but, at his own expense, augmented the army to 40,000 men. During the whole winter the Swedish army kept the field; and before the approach of summer had reduced Crantzach, Ebennaufen, Kirchberg, Magdeburg, Goxlar, Northeim, Göttingen, and Dunderstadt; while the landgrave William made great progress in Westphalia. Gustavus Horn was repulsed before Bamberg; but soon had his revenge, by entirely destroying two regiments of imperialists. The king now resolved to give battle to Tilly, who was marching into Bavaria to prevent the Swedes from gaining a footing in that electorate. He pursued the imperial general thro' a vast tract of country, defeated his rear-guard, and, having reduced many towns and fortresses on the Danube, penetrated as far as Ulm. Advancing to the river Leck, count Tilly posted himself in a wood on the opposite side, to dispute his passage. Gustavus endeavoured to dislodge him by a regular fire from 30 pieces of cannon. The slaughter was dreadful; and Tilly himself, being wounded by a cannon-ball in the knee, died a few days before he was to have been superseded by Wallenstein. The following night the imperial army evacuated the post; part retiring to Ingoldstadt, and others to Newburg. Gustavus immediately crossed the river, and seized the towns of Rain and Newburg, which the enemy had abandoned. Augsburg next submitted; and from the inhabitants of this place Gustavus exacted an oath of fidelity, not only to himself but to the crown of Sweden. This measure

ture gave the greatest offence to many of the Germanic body, and made them imagine that the king of Sweden had other views than the defence of the Protestant cause. From Augsburg the Swedes advanced towards Ratibon; but were disappointed in their design of getting possession of that city, by the Bavarians having thrown a very numerous garrison into the place. In the mean time, ambassadors arrived from Denmark, offering the mediation of that crown for obtaining a lasting peace. Gustavus, however, replied, that no such peace could take place till the Catholic princes thought proper to grant the Protestants full and ample security for their enjoyment of true tranquility. But the ambassadors had no instructions to propose any thing farther. Gustavus now, resolving to retort upon the Bavarians the cruelties which they had inflicted on the Protestants, laid the towns of Morzbourg, Frielengen, and Landshut, in allies. The inhabitants of Munich saved themselves by submission; but as the peasants in that neighbourhood had converted themselves into bodies to murder the stragglers from the Swedish army, Gustavus burnt their houses, and defeated the forces of the elector, who had been joined by a body of militia. While Gustavus was thus employed, Wallenstein had assembled a vast army. He was solicited by the elector of Bavaria to come to his assistance; but, in revenge of the elector's having formerly obtained the command for count Tilly in preference to himself, he drew off towards Bohemia to encounter the Saxons. Arnheim, who commanded the Saxon forces in that place, was the enemy of Gustavus, who had formerly rallied him for his cowardice. He therefore permitted Wallenstein to gain an easy victory, in hopes that his master the elector of Saxony, a prince entirely devoted to his pleasure, might be induced to relinquish the friendship of such a restless and warlike ally as Gustavus; and indeed he used all the eloquence of which he was master to detach him from the Swedish cause. Several advantages, in the mean time, were gained by the Imperialists. Pappenheim defeated the archbishop of Bremen's cavalry at Warden; and 3 Swedish regiments were cut off near Kadingen. Pappenheim, however, was forced to withdraw his forces from Stade; of which the Swedes took possession. Wallenstein and the elector of Bavaria, who had now joined their forces, threatened Gustavus with greatly superior numbers. At last, however, the king, being reinforced with 15,000 men, no longer declined the engagement; but Wallenstein was too wise to trust the fate of the empire to a single engagement against such an enemy as the king of Sweden. Gustavus attacked his camp, but was repulsed with the loss of 4000 men; which caused a general murmuring against his rashness. Several other misfortunes happened to the Swedes; and at last, after various manœuvres, Wallenstein bent his course towards Misnia, to oblige the elector of Saxony to declare against the Swedes, and to draw them out of Bavaria. Gustavus, notwithstanding the inconstancy of Augustus, immediately set out to assist him. With incredible speed he marched to Misnia, where the Imperialists were assembling their whole strength. Hear-

ing that the enemy were encamped at Wefenfels, and that Pappenheim had been detached with a strong corps, Gustavus resolved to engage them before they could effect a junction. With this view he marched to Lutzen, where he attacked Wallenstein with incredible fury. The Swedish infantry broke the Imperialists in spite of their utmost efforts, and took all their artillery. The cavalry not being able to pass the river so expeditiously as the king thought it necessary, he led the way, attended only by the regiment of Smaland and the duke of Saxe-Lauenburg. Here, after charging impetuously, he was killed, as Puffendorff alleges, by the treachery of the duke; who, being corrupted by the emperor, shot him in the back during the heat of the action. The news of his death was in an instant spread over both armies. The courage of the Imperialists revived, and they now made themselves sure of victory. But the Swedes, eager to revenge the death of their beloved monarch, charged with such fury that nothing could resist them. The Imperialists were defeated a second time, just as Pappenheim, with his fresh corps, came up to their assistance. On this the battle was renewed, but the Swedes were still irresistible. Pappenheim was mortally wounded, and his army finally routed, with the loss of 9000 killed in the field and in the pursuit.

(17.) SWEDEN, HISTORY OF, TILL THE DEFEAT OF THE SAXONS BY GEN. BANNER. The victory of Lutzen proved more unfortunate to Sweden than the greatest defeat. The crown devolved upon CHRISTINA, an infant of six years old; the nation was involved in an expensive foreign war, without any person equal to the arduous task of commanding the armies, or regulating domestic affairs as Gustavus had done. However, Christina the daughter of Gustavus was immediately proclaimed queen. The regency devolved on the grand bairiff, the marshal, the high-admiral, the chancellor, and the treasurer of the crown. Oxenstiern was invested with the chief management of affairs, and conducted himself with the greatest prudence. He was greatly embarrassed indeed by the divisions among the Protestant princes, which became more violent after the death of Gustavus; but, in spite of all difficulties, he went on pursuing the interest of his country, and planning the means of retaining the Swedish conquests. Matters went on pretty successfully till 1634, when, through the rashness of the Swedish soldiers, they were defeated at Nordlingen, with the loss of 6000 men killed, a number of prisoners, and 130 standards taken by the enemy. Oxenstiern's constancy was shaken by this dreadful blow; but he applied himself diligently to repair the loss, by recruiting the army, and rendering the allies faithful. The latter proved the most difficult task. The death of Gustavus, and the defeat of Nordlingen, had thrown them into despair; and every one was desirous of making the best terms he could with the emperor. The Saxons not only renounced their alliance with Sweden, but openly commenced war against it; and though the regency would gladly have consented to an honourable peace, the enemy were now too much flushed with

with success to grant it. Oxenstiern had no other resource than an alliance with France, and the bravery of his generals. In 1635, he went in person to the court of Lewis XIII. and concluded a treaty; which, however, was never observed. The enemy, in the mean time, pushed their good fortune. They surprized Philipburg, where the French had laid up vast magazines; and reduced Spire, Augsburg, Treves, Wurtzburg, Cobourg, and some other places. To complete the misfortunes of Sweden, it was expected that the Poles would immediately invade Prussia. To prevent this, La Gardie was dispatched thither with a powerful army; but as it was impossible to resist so many enemies at once, the chancellor purchased the friendship of Poland for 26 years, by ceding that duchy to the republic. Thus he got rid of a powerful enemy; and the Swedish affairs began to revive by a victory which Gen. Banner gained over the Saxons, in consequence of which they were driven beyond the Elbe. Early in spring 1636, the Saxons made some motions as if they intended to cut off Banner's communication with Pomerania. This he prevented by a stratagem; defeated a body of the enemy; and obliged the Saxons to retire. Soon after this he drove them out of their winter quarters with considerable loss; at which time also a considerable body of imperialists who came to their assistance were dispersed. In Westphalia Gen. Kniphausen beat the imperialists with the loss of 1500 men, but he himself was killed in the pursuit, and his army obliged to repass the Weier. Some advantages were also gained in the neighbourhood of Minden by Gen. Lesly, who had assembled a considerable army. In Alsace, Bernard, duke of Saxe-Weymar defeated count Gallas the imperial general and dispersed his army. But when every thing seemed thus successful for the Swedes, the city of Magdeburg, contrary to the expectation of every body, surrendered for want of powder, which the garrison had wantonly consumed. The Saxons also made some conquests on the Elbe, which obliged Banner to recall Gen. Lesly from Westphalia to march against them. The Saxons fixed on a most convenient situation, where they hoped to destroy the Swedish army without coming to a battle. But Banner, resolving to hazard every thing rather than suffer his army to be wasted by famine, advanced towards Berleberg, a place closely blocked up by the enemy. Here he drove from an advantageous post 4 regiments of Saxon cuirassiers, having killed or taken prisoners 400 men; after which he soon forced them to a general engagement. The numbers were very unequal, Banner's army amounting to 9000 horse and 7000 foot, and the Saxons to 15,000 horse and 13 battalions of foot. The battle began with great fury; the right wing of the Swedes was almost oppressed by numbers before the left could come to their assistance. They were ten times driven back, and as often returned to the charge. At last they made such a desperate effort, that the enemy were entirely defeated; 5000 killed on the spot, 3000 wounded, and as many taken prisoners, with 150 standards, and several pieces of cannon.

(18.) SWEDEN, HISTORY OF, TILL THE DEFEAT

OF THE IMPERIALISTS BY BANNIER. Thus ended the campaign of 1636. in a manner highly honourable to the Swedes. Some fruitless negotiations were set on foot during the winter; but these coming to nothing, Banner quitted his winter quarters very early in the season; and falling upon 8 regiments of Saxons cantoned at Eulenburg, pursued them to Torgau, where he obliged them to surrender at discretion. Another party of Saxons was defeated near Leipzig; which he proposed investing, but was disappointed by the imperialists penetrating into Thuringia. He then called in all his detachments; defeated 2000 imperialists near Pegau, and destroyed several detachments that attempted to obstruct his march. Yet, he still found his situation every day more straitened, from the continual increase of the enemy's forces; which obliged him at last to retreat into Pomerania, out of which he soon drove count Gallas. The affairs of the Swedes were now once more on the brink of ruin, through the misconduct of Gen. Wrangel, who had also an army in Pomerania, but who imagining himself perfectly secure, cantoned his troops, and extended his quarters, to accommodate his army. But Gallas suddenly returned, ravaged all Upper Pomerania, and reduced the towns of Uledom, Demmin, and Wollin; after which, leaving garrisons in the forts he returned to his winter quarters in Saxony. This unfortunate campaign counterbalanced all the advantages of the former. Wrangel was so struck with the saddennels of the blow, that he could take no measure for opposition. Some of the Swedish allies again fell off, and took up arms against them. In 1638, the Swedish affairs again began to revive in this quarter, through the excellent conduct of Banner, who defeated count Gallas with the loss of 3000 men killed and taken prisoners. Pursuing his good fortune, he so harrailed the count, that he obliged him to repass the Elbe, and take shelter in Austria.

(19.) SWEDEN, HISTORY OF, TILL THE DEATH OF THE D. OF SAXE-WEYMAR. Great as Banner's exploits had been, however, they were eclipsed by those of Bernard Duke of Saxe-Weymar. That general had so increased his army in the Protestant cantons of Switzerland, and in Franche Comte, that he was in a condition to act without the assistance of the French, who indeed were but treacherous allies. Advancing to the Rhine, he seized on Seckingen and Lauffburg, and laid siege to Rheinfeld. The imperialists, in conjunction with the troops of Bavaria, advanced to the relief of the place. An engagement ensued, in which the victory was disputed; the enemy threw succours into the city, and the duke withdrew his army. Within a month he gave them battle a second time; and so completely defeated them, that only one imperial officer above the rank of a captain escaped being killed or taken prisoner. He then renewed the siege of RHEINFELD; which he reduced, as well as several other importance places. Advancing to Brisach, he blocked it up to force the garrison to surrender. General Gotz, with 12,000 men, attempted to throw in 1000 waggons of provisions; but he was defeated with the loss of all his men except 2500.

Duke

Duke Charles of Lorraine, with 4000 men, joined the remains of Gotz's army, but being surprised by Bernard, his whole army was cut in pieces. A 3d attempt was made by Gotz, but it proved as unsuccessful as the former; and the place being reduced to great straits, was obliged to capitulate. In Jan. 1639, the two victorious generals Bernard and Bannier prepared to attack the enemy on their own ground. Bannier made an irruption into Anhalt and Halberstadt. Leaving his infantry, he pushed on with his cavalry, and surprised Salis, grand master of the imperial artillery. After a bloody conflict, the Swedes gained a complete victory, 7 regiments of the enemy being cut to pieces. Next entering Saxony, he defeated 4 regiments of the enemy, obliging a much larger body to take shelter under the cannon of Dresden. Hearing that the Saxons were encamped near CHEMNITZ, where they waited to be joined by the imperialists, he attacked them before this junction could be effected, and the Saxons were almost all killed or taken. Bannier next entering into Bohemia, laid the country under contribution; after which, returning across the Elbe, he fell on Gen. Hofskirk, who was encamped near Brandeburg with 10 regiments of horse, and several battalions of foot. Him he defeated with the loss of 2000 men. The remains of the imperial forces were pursued to the walls of Prague, and the generals Hofskirk and Montecuculi were taken prisoners. Yet notwithstanding these successes, the enemies of Bannier multiplied daily. The Protestant princes, overawed by the enemy, did not send him assistance. Undismayed, however, by difficulties, Bannier performed wonders. He defeated a body of imperialists at Glatz; drove the Saxons thence from their camp at Firm; and yet was forced to evacuate the place, because he could not spare a garrison. His army being destitute of recruits was much diminished in number; yet with it he reduced many towns, and obtained various other important advantages, when on a sudden all his hopes were blasted by the death of the duke of Saxe-Weymar; poisoned, as was supposed, by the French, who wished to get Briſac into their hands, from which the duke prevented them.

(30.) SWEDEN, HISTORY OF, TILL THE DEATH OF GEN. BANNIER. The difficulties to which Bannier was now reduced proved extreme. Lewis XIII. took upon him to dispose of the army and conquests of Bernard as he thought proper. Briſac, and other places of importance, he kept to himself; after which, the French endeavoured to ruin the army. In the mean time, the imperial army, under Piccolomini, in the Netherlands, was prodigiously augmented; and the archduke Leopold-William, as generalissimo, was assembling his whole strength to crush the Swedes at once. But Bannier did not despair. George duke of Lunenburg, being disgusted at the emperor, Bannier hoped to gain him over; he therefore approached nearer to his country, and also drew towards the armies of Weymar and Hesse. In his way he cut in pieces a body of 3000 Croats. Gen. Konigsmark routed the imperialists at Gera; a 2d time at Scholen; and a 3d time entirely defeated them near Leipzig. Bannier was very pref-

ing on the allies to join him; and at last, in 1640, he was joined by the Weymar army under the dukes of Longueville and Gubrien, a body of Russians led by general Melander, and the troops of Lunenburg commanded by general Klitzing. The army now amounted to 22 battalions of infantry and 22,000 horse; so that they were much more than a match for their enemies, had they been under the sole direction of Bannier. But unanimity was wanting; every one would be supreme, and Bannier, the best general, had the least influence. Instead of those masterly strokes by which the Swedes had hitherto distinguished themselves, the armies continued looking at one another, each suffering the rigours of famine. At last Bannier, resolving to expose his troops no longer, set out for Thuringia, through Franconia, to seize an advantageous post on the Maine; but as he advanced to the Sala, he found the imperialists entrenched on the other side. Finding it impossible to force a passage, he took the road through Hesse, where his troops suffered greatly by famine. Here he proposed to fight the enemy; but the Landgrave and D. of Lunenburg refused their consent. Upon this he threatened to leave them to the mercy of the confederates, and thus obliged them to be somewhat more pliant. None of those brilliant successes, however, now attended the operations of the Protestant allies; the campaigns of 1640 and 1641 were spent in useless marches and countermarches; serving only to bring the army into the greatest dangers, from which they were as constantly relieved by the active and intrepid Bannier. At last this brave general, worn out with perpetual fatigues, died of a fever in 1641, leaving the Swedish army in a worse situation than ever.

(31.) SWEDEN, HISTORY OF, TILL THE CAPTURE OF OLMUTZ BY GENERAL TORSTENSON. The imperialists were too well acquainted with the abilities of Bannier, not to take advantage of the opportunity offered by his death. A Swedish detachment was cut in pieces at Quedlinburg. The Swedish army, accustomed only to be obedient to Bannier, became mutinous, and Piccolomini resolved to fall upon them with his whole force. But the four generals, Wrangel, Konigsmark, Wittenberg, and Pful, having convinced the soldiers of the necessity of defending themselves, made such excellent dispositions, that the imperialists durst not attack them. Piccolomini then detached part of his army to attack the Hessians in their quarters; but Wrangel and Konigsmark threw themselves in their way, and defeated them with the loss of 2000 men. This victory, however, did not retrieve the Swedish affairs. Dissensions and mutiny began again to take place in the army to such a degree as threatened its dissolution. In 1642 Gen. Torstenſon was sent from Sweden with money, and a strong reinforcement, to take upon him the supreme command. This general was inferior to none of his predecessors, and designed to come to an immediate engagement; but the Weymar army separating from him, obliged him to remain for a considerable time inactive. He was also confined to his chamber by the gout; and thus a report of his death being spread, the imperialists were encouraged to begin a long

a long march through roads scarce passable, in hopes of surprising the Swedish army without a general. But Torstenfon seized an advantageous post, which could not be forced, and thus obliged the enemy to retreat, after having suffered as much by their fatiguing march as if they had fought a bloody battle. Then joining Gen. Stahlebrand, who had been driven by the imperialists out of Silesia, he reduced Great Glogau, with a number of other important places; after which he laid siege to Schweidnitz. The duke of Saxe-Lauenburg, with his cavalry, endeavoured to throw in succours; but was defeated with the loss of 3000 men, taken prisoner, and died of chagrin a few days after. In consequence of this defeat Schweidnitz surrendered at discretion; and Torstenfon having sent a detachment to invest the city of Neisse, proceeded with the rest to drive the enemy entirely out of Silesia. This he effectually performed; obliging them to retire over barren mountains, almost famished for want of provisions, and harassed by his light troops; so that this already formidable army was almost entirely ruined. With his victorious troops the Swedish general then poured into Moravia; where, in five days, he reduced the strong town of OLMUTZ.

(21.) SWEDEN, HISTORY OF, TILL THE CAPTURE OF LEIPZIG. Litta and Neudacht shared the fate of Olmutz; after which the Swedes, returning suddenly to Silesia, took Oppelen and Brieg, and laid siege to Breslau. Here the garrisons made such an obstinate defence, that the imperialists had time to assemble under the conduct of the archduke Leopold, and come to their relief. As Torstenfon was greatly inferior in number, he raised the siege; but appeared so formidable in his retreat, that the enemy durst neither attack him, nor attempt to prevent his encamping in a very advantageous situation. The imperialists then laid siege to Glogau; but after having lost a great number of men, they were forced to abandon the enterprise on the junction of Wrangel with Torstenfon; by which means the Swedes were once more in a condition to face their enemies in the field. Torstenfon now projected an irruption into Bohemia, but in this he was prevented by the vigilance of the enemy; however, he reduced the city of ZITTAU, where, for the first time, a cartel for prisoners was established; by which means the Swedish army was considerably augmented. Torstenfon then directed his course to Leipzig, but the imperial generals assembled their whole force, and set out to relieve it. The two armies soon came in sight of each other; and the Swedes, after an obstinate conflict, obtained a complete victory; 5000 of the enemy being killed on the spot, 3000 wounded, and as many taken prisoners. This victory was followed by the immediate surrender of Leipzig.

(22.) SWEDEN, HISTORY OF, TILL THE TREATY OF WESTPHALIA. In all probability the Swedes would have finally triumphed over all their enemies, had not a rupture with Denmark ensued. Torstenfon and Horn behaved with their usual valour in Holstein and Schonen, while Gen. Königsmark distinguished himself in Germany; but the ruin of the Weymar army, which was totally

defeated with the loss of one half its number at Dettingen by the Bavarians, proved a dreadful blow, from which the Swedes could scarce recover themselves. Indeed, notwithstanding the valour and success of the Swedes, their affairs in Germany must have gone to wreck in the campaigns of 1643 and 1644, had not the French under Condé and Turenne made a most powerful diversion, and performed such exploits as immortalized their names. In 1645, the war against Denmark was pushed with such vigour, that a peace, very advantageous for Sweden, was concluded. Torstenfon now took measures for carrying the war into the Austrian dominions. Hatfield assembled a considerable army to oppose the Swedes; and the emperor came to Prague to animate his troops. The two armies came in sight at Jancowitz, and prepared for an engagement. The valour of the Swedes once more prevailed, and they totally defeated their enemies: 4000 of the imperialists were killed on the spot, among whom were general Hatfield and many officers; and near 5000 were taken prisoners. Yet no great advantages were derived from this victory. Some towns indeed were reduced; but at last Torstenfon was obliged to retire into Moravia, where he put his army into winter quarters; and in the beginning of 1646 resigned the command to Wrangel. Wrangel conducted the Swedish affairs with great ability and success; till at last the imperialists, unable to drive the Swedes out of Germany, concluded a peace in 1648. This was the memorable treaty of Westphalia, by which the Germanic constitution was settled, and those disputes which had so long torn the empire were ended: the duchies of Bremen and Verden, all the Upper and part of Lower Pomerania, the city of Wismar and the isle of Rugen, were assigned to Sweden, and five millions of crowns were given to the army.

(23.) SWEDEN, HISTORY OF, TILL THE RESIGNATION OF Q. CHRISTINA. Sweden now enjoyed some years of repose. Charles Gustavus, count palatine, having gained the favour of Christina, was appointed generalissimo of the forces, and heir apparent to the crown. A marriage was proposed between them; but the queen would never listen to this or any other proposal of the kind. In 1650, the ceremony of the queen's coronation was performed; but in 1654 she resigned the crown in favour of Gustavus. See CHRISTINA.

(24.) SWEDEN, HISTORY OF, TILL THE CONQUEST OF POLAND BY CHARLES X. Charles Gustavus, who now took the name of CHARLES X. found himself involved in considerable difficulties on his accession. The treasury was quite exhausted; great part of the revenue was appointed for the support of Christina's household; the people were oppressed with taxes; the nation, having been alarmed for several years, began to lose its reputation. To remedy these evils, Charles proposed to resume all the crown lands which had been alienated to favourites during the late reign; to repeal the duty upon salt; to put the kingdom in a posture of defence; and to enter upon a war with some neighbouring state. Under pretence that Calimir king of Poland had questioned his title to the throne, he prepared to invade that kingdom. Several embassies were sent

from

from Poland to Stockholm; but they returned without their errand. General Wittenberg made an irruption into Poland from Pomerania. The Poles opposed him with an army of 15,000 men; but in a short time they entirely dispersed themselves. Charles, with a powerful army, pursued his march, all the cities throwing open their gates to him. As he advanced to Cracow, Calimir, made one effort to save his capital. But his army amounted only to 10,000 men; and these, after a feeble resistance, fled with precipitation, having lost 1000 men in killed and prisoners. A few days after this, Charles defeated the Poles a second time, about 24 miles from Cracow; upon which Calimir fled with his family to Oppelen, in Silesia. The capital was then invested; and though defended with the utmost valour by Stephen Czarnecki, was soon obliged to capitulate. Thus, in less than three months, Charles apparently became master of Poland; but the Poles had no intention of abandoning their former sovereign.

(26.) SWEDEN, HISTORY OF, TILL THE DEFEAT OF THE RUSSIANS AT RIGA. In 1656 a war took place with the elector of Brandenburg. While Charles was employed in the conquest of Poland, that prince had invaded the Royal and Ducal Prussia, and reduced the most considerable towns. The king of Sweden marched against him, defeated his forces in several slight encounters, and obliged him to own that he was a vassal of Sweden. These rapid conquests alarmed all Europe; and the different powers fought for means of driving the Swedes out of Poland, which they had so unjustly seized. The Poles, assured that they should be assisted, every where revolted and massacred the Swedes. Calimir returned from Silesia; and those troops and generals who had submitted to Charles now ranged themselves under his antagonist. Charles immediately marched for Prussia, and totally defeated 15,000 Poles under Czarnecki. This did not hinder all the Poles incorporated with his troops to desert; which reduced his army: and the campaign being performed in the depth of winter, he was obliged to retreat to Prussia. In his march he was harassed by the Poles; and a body of 4000 Swedes was defeated by them at Warka. But this loss was soon after compensated by a complete victory gained by Adolphus the king's brother, and Gen. Wrangel, over Czarnecki. In the mean time Charles took measures for laying siege to Dantzic; but the Dutch threatened to oppose him, unless a proper regard was paid to their interest. Charles accordingly granted them advantageous terms; and afterwards gained over the elector of Brandenburg, by ceding to him the sovereignty of Prussia, that he might be at liberty to turn his whole strength against Poland. By the treaty with the elector, the latter was to assist Charles in his war with Poland; but the elector had for procrastinated matters, that the Poles, having obtained assistance from the Tartars, had reduced the city of Warsaw. The two princes, however, now marched in concert against their enemies, who were encamped in a strong situation near Warsaw, their camp being fronted by the Vistula. The Poles were driven from their encroachments with prodigious slaughter, and a vast number taken prisoners. The Poles and Tartars

then laboured to break the alliance; entered Ducal Prussia, and defeated the electoral army, taking prince Radzilvil and other great persons prisoner. The Swedes soon had their revenge. Gen. Steinhöck attacked the Polish army at Philippowa, and overthrew it with such slaughter as obliged the Poles to quit the field. A more formidable enemy than the Poles now began to appear. The Russians invaded the provinces of Carelia, Ingermania, and Livonia, while the elector of Brandenburg began to waver in his fidelity. To preserve this only ally at such a critical juncture, Charles was obliged to give him more advantageous terms; while the Russians were repulsed in Carelia and Ingermania. But in Livonia they had better success, two important fortresses falling into their hands; after which they laid siege to Riga. For seven months they battered the walls of this city, without once venturing to pass the ditch or storm the practicable breaches. The besieged, under Magnus de la Gardie and Simon Heimfeld, defended themselves with the greatest intrepidity, cutting off many thousands of the enemy in the sallies they made. At last they attacked the Russian camp, drove them out of it with great slaughter, and obliged them to raise the siege with precipitation.

(27.) SWEDEN, HISTORY OF, TILL THE TREATY OF ROSCHILD. Charles, notwithstanding the number of his enemies, was now become so formidable by the valour of his troops, that whole armies often fled on the very news of his approach. At last, in 1657, the Poles, finding they could not resist him in the field, harassed the Swedes on their march, and cut off the foragers and convoys. This proved much more destructive to the Swedes than their former method; so that Charles was obliged to enter into an alliance with Ragotski prince of Transylvania, by assigning him certain provinces in his neighbourhood, to furnish himself with irregular troops, who might fight the Poles in their own way. But the confederates, after spending a whole campaign in Lithuania, were obliged to return without accomplishing more than the reduction of a single fortress; upon which Charles returned with the Swedish army to Prussia. Leopold, the young king of Hungary, having beheld for a long time the Swedes with a jealous eye, resolved to declare for Poland. To curb the ambition of the Swedish monarch, he solicited the king of Denmark to break with him. This was complied with, and the Danes invaded Bremen. Charles hastened to oppose this new enemy; which gave such offence to Ragotski, that he neglected to take proper measures for his own defence in the absence of the Swedes, and suffered his army to be destroyed by the Poles and Tartars. At the same time the Turks invaded Transylvania, under pretence that Ragotski, being a vassal of the Grand Seignior, had no right to invade Poland without his leave. Ragotski opposed them in the field; where he was defeated and killed, leaving Charles destitute of the only ally on whom he could have depended. But not dismayed by this misfortune, he traversed Pomerania and Mecklenburg; after which he fell upon Holstein, while Gen. Wrangel with another corps entered Bremen. In 15 days Wrangel retook all

the towns which the enemy had reduced; defeated and drove the Danish army out of the country, killing 3000 of their best soldiers. In Holstein the king reduced several fortresses, laid Itzehoe in ashes, defeated a body of Danes, and laid siege to Frederic Uddø, into which the Danes had thrown a strong garrison. The conduct of this siege he left to Wrangel, he himself retiring to Wismar to observe the situation of Poland; but no sooner was he gone than Wrangel attacked the place with such fury, that he became master of it in two hours. In Holland the Swedes were defeated; but the enemy derived no advantage from their victory: at sea the fleets met and maintained a hot engagement for two days, without any considerable advantage on either side. In Poland matters went on much worse. The house of Austria had now declared for Casimir; a German army entered Poland, and reduced Cracow, thought not without great loss. Czarneski entered Pomerania, where he butchered the unhappy peasants; but on the approach of Charles he fled as usual, having gained nothing by his expedition but the character of a cruel barbarian. The king of Sweden was now surrounded by enemies. The elector of Brandenburg had declared against him; and he had besides to engage the armies of Austria, Poland, Russia, and Denmark, in the field. In this dangerous situation he resolved to attack Denmark, in such a manner as should oblige that power to come to a speedy accommodation. His designs were forwarded by a very early frost which enabled him to transport his troops without shipping. Having passed over on the ice to the island of Funen, he cut in pieces a body of 4000 Danish soldiers and 500 peasants. The whole island was reduced in a few days: after which he passed to Langland, then to Laaland, after that to Falster, and lastly to Zealand. The Danes were terrified at this unexpected invasion, and were giving themselves up to despair, when Charles offered peace upon equitable terms. The king of Denmark very gladly consented. By this treaty called the *treaty of Roskilde*, concluded 12th March 1658, the provinces of Schonen, Halland, and Bleking, Lyfter, and Huwen, the isle of Bornholm, the bailiages of Bahus and Drontheim in Norway, were yielded to Sweden, and a free passage through the Sound was granted to the Swedish ships.

(28.) SWEDEN, HISTORY OF, TILL THE DEATH OF CHARLES X. No sooner was Charles retired, than the king of Denmark began to act against him in an underhand manner; on which, resolving to anticipate him in his design, he appeared unexpectedly with a fleet before Copenhagen. Had he given the assault immediately, before the inhabitants had time to recover from their surprise, it would probably have surrendered at once; but, by landing at the distance of 17 miles, he gave them time to prepare for their defence: the siege proved extremely tedious, and at last the place was relieved by a Dutch fleet. On this Charles converted the siege into a blockade, which continued till the end of the war. Wrangel reduced the strong fortresses of Gronenburg; and the Swedish forces were so judiciously posted, that all Denmark was in a manner blocked up; when in 1666, king Charles X. died of an epidemical

fever: and thus an end was put for that time, to all the ambitious designs of Sweden.

(29.) SWEDEN, HISTORY OF, TILL THE DEATH OF CHARLES XI. The new king Charles XI. was a minor at his father's death; and as the kingdom was involved in a dangerous war with so many enemies, the regency determined to conclude a peace, if it could be obtained on reasonable terms. A treaty was accordingly concluded at Oliva: by which Casimir renounced his pretensions to the crown of Poland, and that republic gave up all pretensions to Livonia. Bornholm and Drontheim were ceded to Denmark; and an equivalent in Schonen remained with Sweden. During the minority of the king, nothing remarkable occurred. In 1672 he entered into alliance with Lewis XIV.; which, in 1674, involved him in a war with the elector of Brandenburg. At first the Swedes carried all before them; and Gen. Wrangel having fallen sick, they continued their conquests under *Mardenfeldt*. Almost all the towns in Brandenburg were reduced, when the elector arrived with an army. He retook several towns, defeated *Mardenfeldt* in a general engagement, and soon after forced them to abandon all their conquests. In conjunction with the Danes, he then invaded the Swedish dominions: many places of importance were reduced; and in 1676, Sweden received a most destructive blow by the defeat of her fleet in an engagement with the combined fleets of Denmark and Holland. Soon after this the king took the government into his own hands, and in some degree restored the fortune of Sweden; but though matters went on in a prosperous way where the king commanded in person, the same disgrace attended the Swedish arms in every other quarter. In Pomerania, count *Königsmark* lost every part of importance excepting Stralsund, Stetin, and Gripsholm. In 1678, the Swedish fleet was defeated in two engagements. At Landskrona a most obstinate battle was fought from 10 A. M. till 6 P. M. when both parties were obliged by fatigue, to retire to their camps. At *Oldeval*, in Norway, the Swedes were defeated; and the Danes laid desolate the islands of Oeland, Smaland, Unno, and Kuno; while the electoral troops and Imperialists reduced count *Königsmark* to the utmost distress near Stralsund. But in this deplorable situation, count *Königsmark* attacked his enemies to such advantage, that he obtained a complete victory; after which he ravaged the duchy of Mecklenburg. Yet he could not prevent the elector from reducing Stralsund; after which he was obliged to evacuate Pomerania; and, to complete his distress, the fleet which transported the Swedish army from Pomerania was wrecked on the coast of Bornholm; by which accident 2000 persons were drowned, and the remainder plundered and taken prisoner by the Danes, though they had been furnished with passports from king Frederic. In this unprosperous situation of affairs a peace was concluded at St Germain's, with France, by which the Swedes and Danes were left to decide their quarrel by themselves. Denmark being no match for Sweden, even in her distressed situation, a treaty was soon concluded on terms very favourable to Sweden; and confirmed by a marriage between Charles,

an

and Ulrica Eleonora, daughter to the king of Denmark. From this time the Swedish monarch applied himself to the reformation of the state; and by artfully managing the disputes between the nobility and peasants, he obtained a decree of the states empowering him to alter the constitution as he pleased. Being thus invested with absolute power, he proceeded to take some very extraordinary measures. In 1685 it was projected to liquidate the public debts by raising the nominal value of money, without adding any thing to its intrinsic value. This was put into execution in 1686, by which the creditors of the government lost upwards of 9 millions of crowns. This, with some other arbitrary steps, disgusted all the nobility, merchants, and crown creditors. In Livonia they were highly offended; and remonstrances were repeatedly sent by the hands of deputies, who had orders to insist upon their privileges, confirmed by many acts of the king's predecessors. The deputies could obtain nothing, so that the diet was assembled. On their report the nobility resolved to draw up a stronger remonstrance than any of the former, to be presented to the king by captain Patkul one of the deputies, who had already distinguished himself by his boldness and attachment to liberty. His public spirit, however, produced no other effect than to procure his own destruction. (See PATKUL.) On the 15th April 1697, died Charles XI. leaving his crown to his son, the celebrated Charles XII. then a minor.

(30.) SWEDEN, HISTORY OF, TILL THE DEFEAT OF THE RUSSIANS BY CHARLES XII. AT NARVA. Charles XII. on his accession, was only fifteen. He was scarce seated on the throne when a powerful combination was formed against him. King Augustus of Poland formed designs on Livonia; Christian V. of Denmark revived the disputes with the duke of Holstein, as a prelude to a war with Sweden; and Peter the Great of Muscovy began to form designs upon Ingria, formerly a province of Russia. In 1699, Christian marched an army into Holstein. Charles sent troops to the duke's assistance; but before their arrival the Danes had ravaged the country, taken the castle of Gottorp, and laid siege to Tonningen. Here Christian commanded in person; and was assisted by the troops of Saxony, Brandenburg, Wolfenbüttele, and Hesse-Cassel. England and Holland, as guaranties of the last treaty with Denmark, in concert with Sweden, joined Charles against this confederacy, and sent fleets to the Baltic. They proposed a termination of the war upon equitable terms; but these were haughtily refused by the Danish monarch, who despised the youth of Charles, and relied upon his alliance with Saxony, Brandenburg, Poland, and Russia. The town of Tonningen, however, resisted all his efforts; and when he ordered the place to be stormed, his troops were driven headlong from the walls by a few Swedes under gen. Banner. In 1700, Charles having entrusted the affairs of the nation with a council chosen out of the senate, set out on the 28th May from his capital, to which he never afterwards returned. He embarked at Carlscroon, and defeated the fleet of the allies. Having made a descent on Zealand, he defeated a body of

cavalry, and proceeded to invest Copenhagen by sea and land. Frederick IV. the new king of Denmark, saw the danger of having his capital destroyed, and concluded a treaty in 11 days, upon the same terms as the former. Charles, being thus at liberty to turn his arms against the other princes, resolved to lead his army against Augustus king of Poland; but hearing that the czar had laid siege to Narva with 100,000 men, he immediately embarked at Carlscroon, though it was then mid winter, and the Baltic scarce navigable; and soon landed at Pernaw in Livonia with part of his forces. His army did not exceed 20,000 men; but they were the best soldiers in Europe, while the Russians were only an undisciplined rabble. The consequence was, the Swedes were victorious, entirely routing this vast army, and taking all the cannon, 20,000 prisoners, and entirely destroying the remainder.

(31.) SWEDEN, HISTORY OF, TILL THE DEFEAT OF THE SAXONS ON THE DUNA. Peter was advancing with 40,000 men to surround the Swedes, when he received intelligence of the dreadful defeat at Narva. He was greatly chagrined; but returned to his own dominions to raise another army. He evacuated all the provinces which he had invaded, and for a time abandoned all his great projects, thus leaving Charles at liberty to prosecute the war against Poland. As Augustus had expected an attack, he endeavoured to draw the czar into a closer alliance with him. The two monarchs had an interview at Birsen, where it was agreed that Augustus should lend the czar 50,000 German soldiers, to be paid by the czar, who should send an equal number of his troops to be trained up to war in Poland; and that he should pay the king three millions of rixdollars in two years. Of this treaty Charles had notice, and, by means of his minister count Piper, entirely frustrated the scheme. In 1701, Charles having received a reinforcement from Sweden, took the field, and appeared suddenly on the banks of the Duna, along which the Saxon army was posted to receive him: he gained a signal victory.

(32.) SWEDEN, HISTORY OF, TILL THE SECOND DEFEAT OF THE SAXONS, AND CAPTURE OF CRACOW. This victory was followed by the surrender of all the towns and fortresses in the duchy of Courland. The king then passed into Lithuania, where every town opened its gates to him. At Birsen, an army of 20,000 Russians retired with precipitation on his approach. Charles, perceiving that Poland was greatly disaffected to Augustus, began to project the scheme of de-throning him by means of his own subjects. While count Piper was intriguing with the Poles for this purpose, Augustus determined to trust his fortune to the Saxon army and the nobility of Cracow, who offered to support him to the utmost. The Saxon army was now advanced to the frontiers, and Augustus put himself at the head of it. Being joined by the nobility of Cracow, his forces amounted to 30,000 men, all brave and well disciplined. With these he marched in quest of his enemy; who did not decline the combat, though he had with him only 12,000 men. Though the Saxons were strongly posted, they were entirely defeated, with the loss of 4000 killed, 2000 prisoners

soners, and all their baggage and cannon. This victory was followed by the loss of Cracow; after which Charles set out in pursuit of the flying army, with a design of preventing them from reassembling; but his horse falling under him, he had the misfortune to break his thigh bone, by which he was confined six weeks; and thus Augustus obtained some respite.

(33.) SWEDEN, HISTORY OF, TO THE DEFEAT AND MASSACRE OF THE RUSSIANS BY RENSCHILD. Augustus made the best of this interval. Having convoked a diet first at Mariburg, and then at Lublin, from them he obtained the following resolutions; that an army of 50,000 men should be raised by the republic for the service of the prince; that six weeks should be allowed the Swedes to determine whether they were for war or peace; and that the same time should be granted to the turbulent and discontented nobles of Poland to make their concessions. To counteract the effects of these resolutions, Charles assembled another diet at Warfaw; and while the two assemblies disputed concerning their rights and privileges, he recovered of his wound, received a strong reinforcement from Pomerania, and utterly defeated and dispersed the remains of the Saxon army. The ill fortune of Augustus continued. In 1704 he was formally deposed by the diet, and the crown conferred by Charles on STANISLAUS LECINSKY palatine of Polesia. Augustus, however, did not yet tamely give up his kingdom. His adherents daily skirmished with the Swedes, and Augustus himself being reinforced by 9000 Russians, retook Warfaw, and was very near surprising the new king, who lived in perfect security in the city, while Charles fought in his cause. Count Horn, with 1500 Swedes, vigorously defended the citadel; but finding it no longer tenable, he surrendered at discretion. The reduction of Warfaw was amongst the last advantages gained by Augustus in this war. His troops were now composed of Saxon recruits and undisciplined Poles, who had no attachment to his person. Charles and Stanislaus advanced with the victorious army; the Saxons fled, and the towns for several miles round sent their submissions. The Poles and Saxons were under Schullenberg, a most experienced general, who used every expedient to check the progress of the Swedes. But, with all his conduct and caution, he found himself outwitted, and Charles near his camp, ready to fall upon him, while he thought him at 50 leagues distance. The king attacked him with a superior army, but entirely composed of horse. This was almost the first time that infantry had been regularly opposed to cavalry, and the superiority of the former was evident. After the engagement had continued about three hours, the Saxons retreated in good order; which no enemy had ever done before in any engagement with Charles. The Swedes pursued them towards the Oder, but Schullenberg effected a retreat which Charles always spoke of with admiration, and said he had been conquered by Schullenberg. No material advantage, however, resulted from this to Augustus; who was again obliged to leave Poland, and fortify the capital of Saxony, which he expected every moment to see invested,

In the mean time, the Russians having recovered their spirits, fell upon the Swedes in Livonia with the utmost fury. Narva, Dorpat, and several other towns were taken, and the inhabitants and garrisons treated with great barbarity. Soon after an army of 100,000 Russians entered Poland: 60,000 Cossacks, under Mazeppa, entered the country at the same time, and ravaged every thing with the fury of barbarians. Schullenberg, too, advanced with 14,000 Saxons and 7000 Russians, disciplined in Germany, and reputed excellent soldiers. But Charles seemed to triumph over his enemies with more ease, the more numerous they were. The Russians were defeated so fast, that they were all dispersed before one party had notice of the misfortunes of another. The Swedish general Renschild engaged and defeated Schullenberg in half an hour. Whole regiments of Saxons threw down their arms, and begged their lives: 6000 were slain in the field, and 7000 taken prisoners: 36 pieces of cannon, 11,000 muskets, 40 pair of colours and standards, with all the Saxon baggage, fell into the hands of the Swedes; and the consequences were still more important; for now a passage was opened into Saxony, and Augustus seemed to be in as great danger of losing his hereditary dominions as he had been of losing Poland. This extraordinary victory, which was gained Feb. 12. 1706, was looked upon with admiration, and thought to make the renown of Renschild equal to that of his sovereign. Charles himself became jealous of his fame. But the cruelty of Renschild sullied his reputation; for six hours after the engagement, he caused 1000 Russians to be massacred in cold blood, to revenge, as he said, the cruelties they had committed in Poland.

(34.) SWEDEN, HISTORY OF, TO THE DEFEAT OF THE SWEDS BY AUGUSTUS. Soon after this victory, Charles entered Saxony at the head of 24,000 men. The diet at Ratibon declared him an enemy to the empire if he crossed the Oder. But to this declaration he paid no regard but pursued his march; while Augustus was reduced to the condition of a vagrant in Poland, where he possessed not a single town besides Cracow. Into this city he threw himself with a few Saxon, Polish, and Russian regiments, and began to erect some fortifications for its defence; but the approach of the Swedish general Meyerfeldt, and the news of the invasion of Saxony, disconcerted all his measures, and threw him into despair. The Russians indeed were his faithful allies; but he dreaded them almost as much as the Swedes: so that he was under the necessity of writing to Charles with his own hand, begging for peace on any terms. But as he was then at the mercy of the Russians, this transaction was concealed with the greatest care. His emissaries were introduced to Charles in the night-time; and received the following answer: That Augustus should for ever renounce the crown of Poland, acknowledge Stanislaus, and promise never to ascend the throne, should an opportunity offer; that he should release the princes Soliseki, and all the Swedish prisoners made in the course of the war; surrender Pskow, then resident at his court as ambassador for the Czar of Muscovy, and stop proceedings

proceedings against all who had passed from his into the Swedish service. Augustus all this time was obliged to continue a show of war, though he had neither ability nor inclination to carry it on. He was joined by prince Menzikoff with 30,000 Russians; which obliged him, contrary to his inclination, to engage with Meyerfeldt, who commanded 10,000 men, one half of whom were Swedes. As at this time no disparity of numbers was reckoned an equivalent to the valour of the Swedes, Meyerfeldt did not decline the combat, though the army of the enemy was four times as numerous as his own. With his countrymen he defeated the enemy's first line; and was on the point of defeating the second, when Stanislaus, with the Poles and Lithuanians, gave way. Meyerfeldt then perceived that the battle was lost; but he fought desperately, to avoid the disgrace of a defeat. At last, however, he was oppressed by numbers, and forced to surrender: suffering the Swedes, for the first time, to be conquered by their enemies. The whole army were taken prisoners excepting major-general Krassau; who having repeatedly rallied a body of horse formed into a brigade, at last broke through the enemy, and escaped to Posenia.

(35.) SWEDEN, HISTORY OF, TO CHARLES'S PROTECTION OF THE GERMAN PROTESTANTS. Augustus had scarce sung *Te Deum* for this victory, when his plenipotentiary returned from Saxony with the articles of the treaty above-mentioned. The king hesitated and scrupled, but at last signed them; after which he set out for Saxony, glad at any rate to be freed from such an enemy as the king of Sweden, and from such allies as the Russians. The Czar Peter was no sooner informed of this extraordinary treaty, and the cruel execution of his plenipotentiary Patkul, (See PATKUL.) then he sent letters to every court in Christendom, complaining of this gross violation of the law of nations, but without effect. In 1707, he entered Poland at the head of 60,000 men. Advancing to Leopold, he made himself master of that city, where he assembled a diet and solemnly deposed Stanislaus, with the same ceremonies which had been used with regard to Augustus. The country was now reduced to the most miserable situation; one party through fear adhered to the Swedes; another was gained over, or forced by Peter to take part with him: a violent civil war took place between the two, and great numbers of people were butchered, while cities, towns, and villages, were laid in ashes by the frantic multitude. The appearance of a Swedish army under king Stanislaus and general Lewenhaupt put a stop to these disorders, Peter himself not caring to stand before such enemies. He retired, therefore, into Lithuania, giving as the cause of his retreat, that the country could not supply him with provisions and forage necessary for so great an army. In the mean time Charles had taken up his residence in Saxony, where he gave law to the court of Vienna, and intimidated all Europe. He declared himself the protector of the Protestant interest in Germany, particularly of the emperor's Protestant subjects in Silesia. He desired, or rather commanded, the emperor to renew and confirm to them all the liberties granted by the treaties of Westphalia,

but since that time reclaimed or eluded at the treaty of Ryswick. The emperor durst not refuse; and upwards of 100 churches were given to the Protestants. At last, Charles began to evacuate Saxony, in pursuit of his great plan, the de-throning Czar Peter, and conquering the vast empire of Russia. While the army was on full march in the neighbourhood of Dresden, he surprised king Augustus with a visit with only 5 attendants.

(36.) SWEDEN, HISTORY OF, TO THE GREAT VICTORY OVER THE RUSSIANS, AT THE BORIS-THENES. The armies of Sweden, in Saxony, Poland, and Finland, now exceeded 70,000 men; a force more than sufficient to have conquered all the power of Russia had they met them on equal terms. Peter, who had his army dispersed in small parties, instantly assembled it on receiving notice of the king of Sweden's march; was making all possible preparations for a vigorous resistance, and was on the point of attacking Stanislaus, when the approach of Charles struck his whole army with terror. In Jan. 1708 he passed the Niemen, and entered the S. gate of Grodno, just as Peter was quitting the place by the north gate. Charles at this time had advanced to some distance before the army at the head of 600 horse. The Czar having intelligence of his situation, sent back a detachment of 2000 men to attack him: but they were utterly defeated; and this disappointment was followed by the total evacuation of Lithuania. The king pursued his flying enemies in the midst of snow and ice, over mountains, rivers, morasses, and through almost every obstacle that could be surmounted by human power; and, coming up with them at the Boristhenes completely defeated them.

(37.) SWEDEN, HISTORY OF, TO THE BATTLE OF SMOLENSKO. The Czar, finding himself closely pursued by the enemy with whom he was not able to cope, proposed peace; but Charles returned no other answer than that he would treat at Moscow; which being reported to Peter, he coolly replied, "My brother Charles affects to play Alexander, but he will not find in me a Darius." However, he did not venture an engagement, but continued his retreat; and Charles pursued so closely, that he was daily skirmishing with the rear of the enemy. In these actions the Swedes had generally the advantage, though in the main these victories proved detrimental, by weakening the army in a country where it was impossible to recruit. Near Smolensko, the king, with only six regiments, defeated a body of 10,000 horse and 6000 Cossacks. In this engagement he was exposed to the utmost danger, the enemy having separated him from his troops.

(38.) SWEDEN, HISTORY OF, TO THE ARRIVAL OF REINFORCEMENTS UNDER LEWENHAUPT. By the 3d of October 1708 Charles was within 109 leagues of Moscow; but Peter had made the roads impassable, either by laying them under water, digging deep ditches, or covering them with the wood of whole forests. He had also destroyed the villages on every side, and taken away every possibility of subsisting an army. The season was also far advanced; the intense severe weather was approaching; so that the Swedes were threatened with all the miseries of cold and famine,

mine, at the same time that they were exposed to the attacks of an enemy greatly superior in number. For these reasons the king resolved to pass through the Ukraïn, where Mazeppa, a Polish gentleman, was general and chief of the nation. Mazeppa, having been affronted by the Czar, readily entered into a treaty with Charles, whom he promised to assist with 30,000 men, great quantities of provisions and ammunition, and with all his treasures, which were immense. The Swedish army advanced towards the Dîna, where they had to encounter the greatest difficulties; a forest above 40 leagues in extent filled with rocks, mountains, and marshes. To complete their misfortunes, they were led 90 miles out of the right way; all the artillery was sunk in bogs and marshes; the provision of the soldiers, which consisted of biscuit, was exhausted; and the whole army spent and emaciated when they arrived at the Dîna. Here they expected to have met Mazeppa with his reinforcement; but instead of that, they perceived the opposite banks of the river covered with a hostile army, and the passage itself almost impracticable. Charles, however, was still undaunted; he let his soldiers by ropes down the steep banks; they crossed the river, either by swimming or on rafters hastily put together; drove the Russians from their post, and continued their march. Mazeppa soon after appeared, having with him about 6000 broken remains of the army he had promised. The Russians had got intelligence of his designs, defeated and dispersed his adherents, laid his towns in ashes, and taken all the provisions collected for the Swedish army. However, he still hoped to be useful by his intelligence in an unknown country; and the Cossacks, out of revenge, crowded daily to the camp with provisions. Greater misfortunes still awaited the Swedes. When Charles entered the Ukraïn, he had sent orders to general Lewenhaupt to meet him with 15,000 men, 6000 of whom were Swedes and a large convoy of provisions. Against this detachment Peter now bent his whole force, and marched against him with an army of 65,000 men. Lewenhaupt defeated him in a number of engagements, and at last arrived at the camp of Charles with 4000 men, after having killed upwards of 30,000 of the enemy on their march.

(39.) SWEDEN, HISTORY OF, TO THE VICTORY OVER CHARLES XII. BY PETER THE GREAT AT PULTOWA. This was the last effort of Swedish valour. The difficulties they had now to undergo exceed what human nature could bear; yet still they hoped, by constancy and courage to overcome every obstacle. In the severest winter known for a long time even in Russia, they made long marches, clothed like savages in the skins of wild beasts; all the draught horses perished; thousands of soldiers dropped dead with cold and hunger: so that by Feb. 1707, the whole army was reduced to 18,000 Swedes. Amidst numberless difficulties these penetrated at last to PULTOWA, a town on the eastern frontier of the Ukraïn, where the Czar had laid up magazines; and of these Charles resolved to get possession. The place made an obstinate defence, the Swedes were repulsed in every assault, and 8000 of them were defeated, and almost entirely cut off, in an

engagement with a party of Russians. To complete his misfortunes, Charles received a shot from a carabine in his heel, which shattered the bone. For some days the Czar, with an army of 70,000 men, had lain at a small distance, harassing the Swedish camp, and cutting off the convoys of provision; but now intelligence was received, that he was advancing as if with a design of attacking the lines. In this situation, Charles determined to be the assaulter and on the 8th of July 1709, he lost the memorable battle of Pultowa which decided the fate of the Swedes. Our limits forbid a detail of the particulars, but the issue of the day was, that Charles escaped with a mere handful of followers; the rest of his army being slain or taken prisoners.

(40.) SWEDEN, HISTORY OF, TO THE VICTORY OVER THE DANES BY THE SWEDES. Charles fled in a mean calash, attended by a little troop inviolably attached to his person, some on foot, and some on horseback. They were obliged to cross a sandy desert, where neither herb nor tree was to be seen, and where the burning heat and want of water were more intolerable than the extremities of cold they had formerly suffered. They reached Oczakow, the bashaw of which supplied the king with every necessary. But it was some time before boats could be got ready for transporting the whole of the king's attendants; by which accident 500 Swedes and Cossacks fell into the hands of the enemy. This loss affected him more than all his other misfortunes. The king remained but a few days at Oczakow, when the seraskier of Bender sent an aga to compliment him on his arrival in the Turkish dominions, and to invite him to that city. Here he was treated with the utmost hospitality. In the Turkish divan it was proposed to escort Charles with a numerous army to the frontiers of Poland; but the revolution which took place there quickly put an end to all such projects. AUGUSTUS thought himself no longer bound to observe the treaty which he had made, than Charles was at hand to force him to it. After the battle of Pultowa, therefore, he entered Poland, and took every measure, in concert with the Czar, for the recovery of his kingdom. STANISLAUS was obliged to leave his dominions and fly to Bender, in the disguise of a Swedish officer, to share the fortune of Charles.—It was not in Poland alone that the Swedish affairs began to suffer in consequence of the defeat at Pultowa. The Danes invaded the province of Schonen with an army of 13,000 foot and 2500 horse. Only 13,000 Swedish forces remained to defend all the territories possessed by Charles in Germany; and of these only a small part were allotted for the defence of Schonen. The regency of Sweden, however, exerted themselves to the utmost to repel this ungenerous invasion; and having collected an army of 12,000 militia and 8000 regulars, dispatched them under general Steenbock into Schonen. Some Saxon troops were incorporated in this army; and among these a prodigious desertion took place, which the general found it impossible to prevent; and thus the Danes gained several advantages, and at last took Christianstadt. Their insolence on this success was so great, that the Swedes

Swedes demanded to be instantly led against them. Here the good fortune of Sweden seemed once more to revive. The Dapcs were driven from a very strong situation, with the loss of 8000 killed and taken prisoners, besides a vast number wounded.

(41.) SWEDEN, HISTORY OF, UNTIL CHARLES XII.'s IMPRISONMENT IN TURKEY. In the meantime, Charles, by his agents, count Poniatowski and Sieur Neugebar, used his utmost efforts to procure a rupture between the Porte and Russia. For a long time the money bestowed by Peter on the vizirs and janisaries prevailed; but at last, in 1713, the grand signior, influenced by his mother, who was strongly in the interest of Charles, and had been wont to call him *her lion*, determined to avenge his quarrel with Peter. He therefore gave orders to the vizir to fall upon the Russians with an army of 200,000 men. The vizir promised obedience; but professed his ignorance in the art of war. The khan of Crim Tartary, who had been gained over by the reputation and presents of the king of Sweden, had orders to take the field with 40,000 of his men, and had the liberty of assembling his army at Bender, that Charles might see that the war was undertaken upon his account. The Czar, on these news, left the siege of Riga, where he had continued for some months; and with 24,000 men entered Moldavia, where he was joined by Cantemir, a vassal of the Porte. The vizir marched against Peter with a prodigious army, and through the negligence of the Czar, cooped him up in such a manner that he could neither advance nor retreat. In this desperate situation, he perceived that he was now in as bad a situation as Charles at Pultowa; and gave orders for breaking through the enemy with fixed bayonets. The desponding spiritless soldiers, however, were little disposed to execute these orders; when Catharine, wife to the czar, without his knowledge, set on foot a treaty with the vizir; and having soon obtained his consent, had the peace signed in six hours; by which means the whole Russian army was saved. The new treaty was most violently opposed by count Poniatowski and the khan of Tartary. The former had made the king acquainted with the situation of both armies; on which he instantly set out from Bender, filled with the hopes of fighting the Russians, and taking ample vengeance. Having ridden 30 leagues post, he arrived at the camp just as the czar was drawing off his half-famished troops. He alighted at Poniatowski's tent; and being informed of particulars, instantly flew in a rage to the vizir, whom he loaded with reproaches, and accused of treachery. Recollecting himself, however, he proposed a method by which the fault might be remedied; but finding his proposal rejected, he posted back to Bender, after having by the grossest insults showed his contempt of the vizir. This violent behaviour of Charles did not promote his interest. The vizir perceived that his stay in Turkey might prove fatal to himself; and therefore determined to get him out of the country as soon as possible, either by fair means or foul. Succeeding vizirs adopted the same plan; and at last the grand signior himself wrote a letter to the king, in which he desired him to

depart by next winter, promising to supply him with a sufficient guard, with money, and every thing else necessary for his journey. Charles gave an evasive answer, and determined to procrastinate his journey, as well to gratify his own stubborn temper, as because he discovered a correspondence between Augustus and the khan of Tartary, the object of which, he had reason to believe, was to betray him to the Saxons. When he was therefore again pressed to fix the day of his departure, he replied, that he could not think of going before his debts were paid. Being asked how much was necessary for this purpose, he replied, 1000 purses, (of 30 sequins each,) 1200 purses were instantly sent to the seraskier at Bender, with orders to deliver them to the king of Sweden; but not before he should have begun his journey. By fair promises, however, Charles persuaded him to part with the money; after which, instead of setting out, he squandered away his treasure in presents and gratifications, and then demanded 1000 purses more before he would set out. The seraskier was astonished at this behaviour. He shed tears; and, turning to the king told him, that his head would be the forfeit of having obliged him with the money. The grand signior, on being acquainted with this shameful behaviour of Charles, flew into a rage, and called an extraordinary divan, where he himself spoke, a thing very unusual for the Turkish monarchs. It was unanimously agreed that such a troublesome guest ought to be removed by force should other means fail. Orders were therefore positively sent to Charles to depart; and, in case of refusal, to attack him in his quarters. Nothing could equal his obstinacy on this occasion: in spite of the menaces of his enemies, in spite of the intreaties of his friends, he persisted in his resolution; and at last determined to resist, with 300 Swedes, being all the attendants he had, an army of 20,000 janisaries well armed and furnished with cannon. At length he was attacked in earnest; though even in this extremity, the Turks showed their regard to him, and were tender of his life. Most of the Swedes surrendered, as thinking it the only method of saving the king's life. But Charles became the more obstinate the more desperate his affairs seemed to be. With 40 menial servants only, and the generals Hord and Dardorff, he determined to defend himself to the last extremity, and after the house was on fire, he was forcing his way to an adjoining building, which had a stone roof, when his foot slipped, and his fall saved his life by making him a prisoner. This happened on the 12th Feb. 1713. He was now kept prisoner, with all his retinue; and in this situation he was visited in disguise by the unfortunate Stanislaus, whom he desired "never to make peace with Augustus; adding, we shall soon have a change in our affairs."

(42.) SWEDEN, HISTORY OF, UNTIL CHARLES XII.'s RETURN FROM TURKEY. Such were the considerations that still occurred to the mind of Charles; however, at last he seemed inclined to submit to his fate, and began seriously to think of returning to his kingdom, now reduced to the most deplorable situation. His habitation was now fixed at Demotica, a small town about six leagues from

from Adrianople. Here he was allowed provisions for his own table and those of his retinue; but, only 25 crowns a-day in money, instead of 500, which he had received at Bender. During his residence here he received a deputation from Hesse-Cassel, soliciting his consent to the marriage of Frederick the landgrave with **ULRICA ELEANORA**, princess royal of Sweden; to which he readily agreed. A deputation was also sent him by the regency of Sweden, requesting that he would prepare for returning to his own dominions, which were ready to sink under a ruinous war in his absence. What determined him, however, more than any thing to hasten his return, was the following accident. The new grand vizir, **Ibrahim Molla**, having for private reasons determined to come to a rupture with the czar, invited Charles to a conference, in the style and with the familiarity of an equal. Charles was so much chagrined at this indignity, that he sent his chancellor **Muller** to meet the vizir, with a pretence that he was sick. To avoid giving offence to this minister, Charles was obliged to keep his bed during his residence at Demotica, which was for 10 months after. At last, this vizir being strangled, and the Swedish interest at the Porte thereby entirely ruined, he determined to quit Turkey at all events. His departure was to be negotiated by his favourite **Grothufen**, whom he vested with the character of ambassador extraordinary; sending him to Adrianople with a train of 14 persons richly dressed. To equip this retinue the king was reduced to the most mortifying shifts, and to the necessity of borrowing money from usurers at 50 per cent. The great object was, to obtain from the vizir money, and a passport. **Grothufen** was received with all the respect due to his rank; but the vizir started difficulties. With regard to the passport, he said, it could be of no use until the consent of the court of Vienna was first obtained; and as to money, he said, "his master knew how to give when he thought proper, but it was beneath his dignity to lend; that the king should have every necessary provided for his journey, and possibly the Porte might make some pecuniary present, but he would not have it expected." The imperial minister, however, removed every difficulty with regard to the passport, by granting it in the most full and ample manner, in the name of the emperor, the princes and states of Germany. He sent also a present to the king, consisting of a tent of scarlet richly embroidered with gold; a sabre, the handle of which was studded with jewels; and eight fine horses richly caparisoned. Money, the article most wanted, was entirely forgotten; however, the day was fixed for Charles's departure, and the vizir appointed 60 carriages loaded with all kinds of provisions, and several companies of janissaries and other troops to attend him to the frontiers of Transylvania. On the 14th Oct. 1714, Charles quitted his bed at Demotica, and set out for Sweden. All the princes through whose territories he was to pass, had given orders for his entertainment in the most magnificent manner; but the king, perceiving that these compliments only rendered his imprisonment and other misfortunes more conspicuous, suddenly dismissed his Turkish attendants, and

assembling his own people, bid them take no care about him, but make the best of their way to Stralsund. After this he set out post, in the habit of a German officer, attended only by colonel **During**. Keeping the bye-roads through Hungary, Moravia, Austria, Bavaria, Wirtemberg, the Palatinate, Westphalia, and Mecklenburg, he arrived on the 21st Nov. at midnight before the gates of Stralsund. Being unknown, he was admitted with difficulty; but being soon recognized by the governor, the greatest tokens of joy were shown all over the town. In the midst of the tumult Charles went to bed. He had been booted for 16 days, and now his legs were swelled to such a degree that it was necessary to cut his boots off. Having slept for some hours, he arose, reviewed his troops, and gave orders for renewing the war with redoubled vigour.

(43.) SWEDEN, HISTORY OF, UNTIL THE CAPTURE OF STRALSUND. Sweden was now in the greatest distress. On the defeat at Pultowa, the Danes had invaded Schonen, but were defeated by Gen. **Steenbock**. This victory, however, did not put an end to the war, for the kings of Denmark and Poland, with the czar of Muscovy, entered into stricter bonds of amity than ever. They dreaded the return of Charles to his own dominions, and apprehended that numberless victories would soon efface the remembrance of Pultowa. They determined, therefore, to make the best use of their time; and Charles never took a more imprudent resolution than obstinately to remain so long in the Turkish dominions. The kings of Denmark and Poland invaded Pomerania; but after laying siege in vain to Stralsund, Wismar and other places, they were obliged to retire, with disgrace. In 1712, the king of Denmark invaded and reduced Bremen and Verden; but the same year met with a terrible defeat from **Steenbock**, with the loss of a vast number killed and wounded and almost all their artillery taken. The following year, however, this general being pursued and surrounded by the united forces of the Russians, Danes, and Saxons, was obliged to throw himself into the neutral town of **Tonnungen**; where he was besieged, and obliged to surrender at discretion, with his whole army. The consequence was an invasion of Finland by the czar; which he totally reduced, after defeating the Swedes in several battles. Indeed, the Swedish forces were now unable to cope with almost any enemy. The return of Charles, however, seemed to give new life to the nation. Though the number of inhabitants was visibly diminished, the levies he had ordered were completed in a few weeks; but the hands left to cultivate the earth consisted of the infirm, aged, and decrepid; so that a famine was threatened in consequence of the military tag which had seized all the youth of the kingdom. The presence of Charles did not now produce those consequences which the allies had feared. The kingdom was too much reduced to be able to furnish the necessary supplies of men and money; and though the king's courage and military skill were not in the least diminished, the effort he made, instead of restoring Sweden to its splendour, served entirely to ruin it. In 1715, **Prussia** declared against him, on account of his de-

mandin

manding back the town of Stetin, which that monarch had seized. To complete his embarrassment, George I. of Britain also became his enemy. The forces of Denmark, Prussia, Saxony, and Hanover, joined to invest Wismar, while a body of 36,000 men formed the siege of Stralsund; at the same time that the czar, with a fleet of 20 large ships of war, and 150 transports, carrying 30,000 men, threw every part of the Swedish coast into the greatest consternation. The heroism of Charles could not prevail against so many enemies; yet he was still so dreadful, that the prince of Anhalt, with 12,000 brave troops, did not think himself a match for this furious enemy when at the head of only 2000, till he had entrenched his army behind a ditch, defended by chevaux de frize. This precaution was not unnecessary: for in the night Charles with his men clambered up the ditch, and attacked the enemy furiously. Numbers, however, at last prevailed; and Charles was obliged to retire, after having seen his favourite Grothufen, Gen. Dindorff and During, the companions of his exile, killed by his side, he himself being wounded in the breast. This rash attempt was to save Rugen, from whence the town of Stralsund was supplied with provisions. The place was well fortified, and garrisoned with 9000 men, with Charles himself at their head; but nothing could resist the efforts of the enemy. The houses were laid in ashes by the bombs; the walls miserably shattered, and large breaches made in them by the cannon; so that by the 17th of December it was proposed to give the assault. The attack on the horn-work was desperate; the enemy was twice repulsed; but at last, by dint of numbers, effected a lodgement. The next day Charles headed a sally, in which he dealt terrible destruction among the besiegers, but was at length overpowered and obliged to retreat into the town. At last his officers, apprehending that he must either fall into the hands of the enemy, or be buried in the ruins of the place, intreated him to retire. A retreat, however, was now almost as dangerous as to remain in the town, on account of the fleets of the enemy with which the sea was covered; and this very circumstance induced the king to consent to it. Setting out, therefore, in a small boat with sails and oars, he passed all the enemy's ships and batteries, and arrived safe at YSTEDT in Schonen.

(44.) SWEDEN, HISTORY OF, UNTIL THE DEATH OF CHARLES XII. To revenge himself for these losses, Charles invaded Norway with an army of 25,000 men. The Danes were every where defeated and pursued with that vigour for which Charles was so remarkable; but strong reinforcements arriving from Denmark, and provisions failing, he was at last obliged to retire. Soon after this the Swedes lost WISMAR; but when every thing seemed to go to wreck, Baron Goertz, the chief minister and favourite of Charles, set on foot a treaty with the czar, by which the most formidable of all Charles's enemies was taken off. The minister prevailed upon the inflexible temper of Charles, by representing to him that the cession of certain provinces to Peter would induce him to assist him in his projects of again dethroning

Augustus, and of replacing James on the throne of Britain; which last scheme he had projected out of revenge for the elector of Hanover having seized on the duchies of Bremen and Verden. In consequence of the conferences between the czar and Goertz, the former engaged to send into Poland an army of 80,000 men to dethrone that prince whom he had so long defended. He engaged also to furnish ships for transporting 30,000 Swedes to Germany, and 10,000 into Denmark. This treaty, however, was not fully ratified; and the king's death put a final stop to all the great prospects of Sweden. Charles had resolved on the conquest of Norway, and he marched his army into that cold and barren country in October, when the ground was covered with frost and snow. With 18,000 men he formed the siege of Fredericksahl, though the severity of the frost rendered it almost impossible to break the ground. Charles, however, resolved to form trenches; and his soldiers cheerfully obeyed, digging into the ground with the same labour as if they had been piercing a rock. On the 11th Dec. 1718, the king visited the trenches in the midst of a terrible fire from the enemy, to animate his men by his presence. He took his post in a most dangerous station, standing upon a gabion and leaning over the parapet, while the enemy were firing chain shot at the very spot where he stood. He was intreated to change his station; but he remained obdurate, as if he had been proof against cannon bullets. At last he was seen to fall on the parapet with a deep groan. A small cannon ball had struck him on the temple, beat in the left eye, and forced the right eye quite out of its socket; his right hand in the mean time grasped the hilt of his sword, as if he had meant to revenge the blow. See CHARLES XII.

(45.) SWEDEN, HISTORY OF, UNTIL THE DEATH OF FREDERICK. Charles XII. was succeeded by his sister, princess ULRICA ELEONORA, wife to Frederick, hereditary prince of Hesse. On this occasion the states took care to make a previous stipulation for the recovery of their liberties, and obliged the princess to sign a paper to this purpose before entering on the government. Their first care was to make a peace with Great Britain, which the late king intended to have invaded. The Swedes then, to prevent their farther losses by the progress of the Russian, the Danish, the Saxon, and other arms, made many great sacrifices to obtain peace from those powers. In 1720, Q. Ulrica Eleonora resigned the crown in favour of her husband Frederick, who was elected by the States, and crowned May 3d, 1721. The French, about 1738, formed a dangerous party in the kingdom, under the name of the *Habs*; which not only broke the internal quiet of the kingdom, but led it into a ruinous war with Russia, by which the province of Finland was lost. Their Swedish majesties having no children, it was necessary to settle the succession; especially as the duke of Holstein was descended from the queen's eldest sister, and was, at the same time, the presumptive heir to the empire of Russia. Four competitors appeared; the duke of Holstein Gottorp, prince Frederick of Hesse-Cassel, nephew to the king,

king, the prince of Denmark, and the duke of Deux Ponts. The duke of Holstein had undoubtedly the best right. His name was *Peter Ulric*, the son of Charles Frederick, prince of Holstein-Gottorp, and grandson of Duke Frederick IV. by *Hedeviga Sophia*, eldest sister to Charles XII. but he had embraced the Greek religion; that he might succeed to the throne of Russia; which he did, on the death of Elizabeth, and became the unfortunate PETER III. The czarina interposed, and offered to restore all the conquests she had made from Sweden, excepting a small district in Finland, if the Swedes would receive the duke of Holstein's uncle, Adolphus Frederick, bishop of Lubeck, as their hereditary prince and successor to their crown. This was agreed to; and a peace was concluded at Abo, under the mediation of his Britannic majesty. This peace was so firmly adhered to by the czarina, that the king of Denmark dropt all resentment for the indignity done his son. Queen Ulrica Eleonora died in 1741, and king Frederick, her husband, in 1751.

(46.) SWEDEN, HISTORY OF, UNTIL THE DEATH OF K. ADOLPHUS FREDERICK. King Adolphus Frederick was elected successor to the throne July 4. 1743; and on July 17. 1744. had married princess Louisa Ulrica, third sister to the king of Prussia. In 1751 he entered into the possession of his new dignity, which proved to him a crown of thorns. Through a strange medley of affairs and views of interest, the French had acquired vast influence in all the deliberations of the Swedish senate. The intrigues of the senators forced Adolphus to take part in the late war against Prussia; but as that war was disagreeable not only to the people, but also to the king of Sweden, the nation never made so mean an appearance; and upon Russia's making peace with the king of Prussia, the Swedes likewise made their peace, upon the terms of leaving things as they stood at the beginning of the war. Adolphus died dissipated in 1751, after a turbulent reign of 20 years; and was succeeded by his son Gustavus III.

(47.) SWEDEN, HISTORY OF, UNTIL THE EXTRAORDINARY REVOLUTION IN 1772. The most remarkable transaction of the reign of Gustavus III. is the revolution which took place in the government in 1772, by which the king, from being the most limited, became one of the most despotic monarchs in Europe. Ever since the death of Charles XII. the whole power of the kingdom had been lodged in the states; and this power they had on all occasions most grievously abused. Gustavus therefore determined either to seize on that power of which they made such a bad use, or perish in the attempt. By the power of his eloquence, he obtained the acquiescence of all the military in one day; and on the following morning the terrified senate subscribed with acclamations to 57 new articles of government which he presented to them, lodging their power in his own hand. The power, however, thus obtained, the king employed for the good of his subjects. He took care that the law should be administered with impartiality to the richest noble and the poorest peasant, making a severe example of such judges as were proved to have made justice venal.

He gave particular attention and encouragement to commerce, was a liberal and enlightened patron of learning and science, and laboured strenuously to introduce into his kingdom the most valuable improvements in agriculture that had been made in foreign countries.

(48.) SWEDEN, HISTORY OF, UNTIL THE MURDER OF GUSTAVUS III. Gustavus, while thus active in promoting the arts of peace, was not inattentive to those of war. The fleet and the army he placed on a more respectable footing than they had ever before attained. Of this the war with Russia afforded numerous proofs. It is needless for us to enter into a detail of the particulars of that war, which, as well as the astonishing activity and military skill displayed by the Swedish monarch, are fresh in the memory of all our readers. Suffice it to say, that neither Gustavus Adolphus nor Charles XII. gave greater proofs of undoubted courage and military conduct in their long and bloody wars, than were given by Gustavus III. from the end of 1787 to 1790, when peace was restored between the courts of St Petersburg and Stockholm. In 1792, he entered into the alliance that was formed against the revolutionary government of France; and to raise an army to co-operate with the emperor and the king of Prussia, he was obliged to negotiate large loans, and to impose upon his subjects heavy taxes. The nobles took advantage of that circumstance to prejudice the minds of the people against the sovereign, who had laboured so long for their real good. On the 16th of March 1793, he received an anonymous letter, warning him of his immediate danger from a plot that was laid to take away his life, requesting him to remain at home, and avoid balls for a year. Gustavus, like Cæsar, read the note with contempt, and at a late hour went to a ball that very night. He mingled, without apprehension, among the crowd; and just as he was preparing to retire in company with the Prussian ambassador, he was surrounded by several persons in masks, one of whom fired a pistol at the back of the king, and lodged the contents in his body. The king languished from the 17th to the 29th of March, when he died with that unshaken courage he had manifested during his life. A few hours before his decease, he appointed his brother, the duke of Sudermania, sole regent, till his son, who was then about fourteen, should have attained the age of eighteen. His last words were a declaration of pardon to the conspirators against his life. But his orders in this instance were disobeyed. The assassin Aukarstrom, who had been detected by the pistols and cutlase he dropped, was severely whipped three successive days; on the last of which, his right hand and head were cut off, and his body impaled. Four of his accomplices were beheaded, and others were imprisoned, and some pardoned. Immediately on the death of the king, his son was proclaimed king by the title of Gustavus IV.

(49.) SWEDEN, HISTORY OF, UNTIL THE PRESENT TIME. Gustavus IV. during his short and unfortunate reign, certainly displayed much of the genius of his illustrious ancestors; but madness was mixed with his genius, and the utmost extravagance of mind with the greatest generosity of

of intention. His conduct in the unfortunate war which removed Prussia from the list of European powers we have already noticed under the article **REVOLUTION OF FRANCE**, § 50. The singular and unexpected revolution by which his aged uncle, the worthless tool of France, deprived him of his crown, has also been noticed, § 53. The unfortunate monarch, with all the fine qualities with which he was adorned, seems to have had in his own country neither friend nor party. He lived for a little while in England, which he quitted suddenly, we know not why. He has since retired to Switzerland, and taken the simple name of Gottorp; acquiescing, it would appear, in his own exclusion, and in that of his family. He has lately repudiated his wife, become a Moravian in his religion, and proposed to marry a young lady of that sect; all evident signs of mental derangement, belying, in a very melancholy manner, the promise of his early years. The election of Bernadotte to be crown prince of Sweden has also been recorded in the same article, § 53. The war with Russia, which we then anticipated, § 54, has actually commenced: twelve French bulletins have already been published; but nothing decisive has yet been done. The Russians have retired and the French have advanced; there has been much severe fighting, and much loss on both sides; but no general action, and nothing decisive. It is the object of the Russians to avoid a general action; and hitherto, as far as we know, down to this date (1st September 1812), they have succeeded. A treaty of peace has been signed between Great Britain, Russia, and Sweden. Lord Viscount Cathcart has gone out as British ambassador to Russia, and Mr Thornton remains in Sweden. An expedition has been prepared, in concert with Great Britain and Russia, under the crown prince (Bernadotte), in Sweden, with the view, it is said, of attacking Bonaparte in his rear. If it is the interest of Bernadotte, and perhaps it is his interest, to attack his former friend—and if there is a reasonable prospect of success, and perhaps there is such a prospect—we may perhaps rely on Bernadotte's hearty co-operation. Ministers must know more than the public can or ought yet to know; but to us it does not yet appear that Bernadotte has absolutely committed himself with his imperial master; and there is an apparent dilatoriness in his operations, and in the progress of the promised expedition, which we cannot account for. If, after all, he is merely playing Bonaparte's game, the villainy is deep and detestable. But it is vain, in any circumstance, to rely with confidence on French honour. They have reduced deceit and duplicity to system: their government, in all its gradations from the head through all its members, is regulated by deceit. Honourable individuals may yet be found in France; but honour can no longer be esteemed the general attribute of that nation, of which *seven hundred officers*, many of the highest rank, have, in the short space of three years, broke their parole. We yet wish, for the sake of our country, of humanity, and of the world, that our suspicions of the good faith of this crown prince may be groundless. We shall probably have an op-

portunity of recording the fact, whatever it may be, under the article **WAR**.

(50.) **SWEDEN, INHABITANTS. CHARACTERS. DRESS, DIVERSIONS, &c. OF.** There is a great diversity of characters among the people of Sweden; and they have had different characters in different ages. At present, their peasants seem to be a heavy plodding race of men, strong and hardy, but without any other ambition than that of subsisting as well as they can: they are honest, simple, hospitable, and religious; and the mercantile classes are much of the same cast: but great application and perseverance is discovered among them all. The nobility and gentry of Sweden are brave, polite, and hospitable; they have high and warm notions of honour, and are jealous of their national interests. The dress of the people is almost the same with that of Denmark: the higher ranks are infatuated with French modes and fashions. The common diversions of the Swedes are skating, running races in sledges, and sailing in yachts upon the ice. The women plough, thresh out the corn, row upon the water, serve the bricklayers, carry burdens, and do all the common drudgeries in husbandry. Longevity is common in Sweden.

(51.) **SWEDEN, LANGUAGE AND LITERATURE OF THE PEOPLE OF.** The Swedish language is a dialect of the Teutonic, and resembles that of Denmark. The Swedish nobility and gentry are, in general, more conversant in polite literature than those of many other flourishing states. They have of late exhibited some noble specimens of their munificence for the improvement of literature and science, particularly natural history; and the botanical and chemical discoveries and improvements of LINNÆUS, BERGMAN, and SCHERLE, will confer everlasting honour on their native country.

(52.) **SWEDEN, MANUFACTURES, COMMODITIES, MINES, METALS, STAPLE TOWNS, TRADE, &c. OF.** The inhabitants subsist by agriculture, mining, grazing, hunting, and fishing. Their materials for traffic are the bulky and useful commodities of masts, beams, and other sorts of timber for shipping; tar, pitch, bark of trees, potash, wooden utensils, hides, flax, hemp, peltry, furs, copper, lead, iron, cordage, fish, and train oil. Even the manufacturing of iron was introduced into Sweden so late as the 16th century: for till that time they sold their own crude ore to the Hanse Towns, and brought it back again manufactured into utensils. About the middle of the 17th century, by the assistance of the Dutch and Flemings, they set up some manufactures of glass, starch, tin, woollen, silk, soap, leather-dressing, and saw-mills. They have since had sugar-baking, tobacco plantations, and manufactures of sail-cloth, cotton, fustian, and other stuffs; also of linen, alum, brimstone, paper-mills, and gunpowder-mills. Vast quantities of copper, brass, steel, and iron, are now wrought in Sweden, dug from mines, some of them more than 100 feet deep. The iron mine of Dannemora, which is much the most profitable of any of those with which every part of Sweden abounds, is said to yield 60 lb. of metal in 100 lb. of ore, and the others about 30 lb.

The iron extracted from this is known in Europe under the name of *Öregrund*; which name is derived from a sea-port on the Baltic. A large portion of it is employed by different nations for making the best steel. The mine was discovered in 1470. The unwrought ore was first sold to the merchants of Lubeck. It was not until the reign of Gustavus Vasa that the Swedes worked it themselves. The mine of Dannemora yields about 40,000 stones of bar iron per year, which is supposed to be one tenth part of the quantity which all the iron mines of Sweden produce. Of this product, amounting to 400,000 stones, 300,000 are annually exported; the remainder is manufactured at home. It is calculated that no less than 25,600 men are employed in mining, and the branches immediately connected with it; viz. 4000 for breaking the rocks, either by explosion or manual labour; 10,800 to hew timber and burn it into charcoal; 2000 are employed in smelting; 1800 in transporting the metal from the furnaces to the forges; 600 in transporting sand, fuel, &c.; 4000 for transporting the charcoal; and 2400 at the forges. They have also founderies for cannon, forgeries for fire-arms and anchors, armories, wire and flattening mills, mills also for fulling, and for boring and stamping; and of late they have built many ships for sale. There are likewise in Sweden some silver mines, of which that of *Sätha*, or *Sälberg*, is the richest as well as the most ancient. It existed so early as 1188, and, during the whole of the 14th century, it yielded 24,000 marks of silver annually. In the 15th century the quantity was diminished to 20,000. In the reign of Charles X. it gave only 2000, and it furnishes at present still less, the ore yielding only one ounce of pure metal per quintal. The chief gallery, where the purest silver was obtained, having fallen in, is not yet cleared, notwithstanding their incessant labour. They are also digging pits in a perpendicular direction, in order to arrive at the principal vein, which extends itself from the N. to the SE. Formerly lead employed in separating the metal was imported from England; but the mine furnishes at present a sufficient quantity for the purpose. Certain towns in Sweden, 14 in number, are called *Staple towns*, where the merchants are allowed to import and export commodities in their own ships. Those towns which have no foreign commerce, though lying near the sea, are called *land towns*. A third kind are termed *mine towns*, as belonging to mine districts. The Swedes, about the year 1752, had greatly increased their exports, and diminished their imports, most part of which arrive or are sent off in Swedish ships; the Swedes having now a kind of navigation act like that of the English.

(53.) SWEDEN, MILITARY STRENGTH OF. No country has produced greater heroes or braver troops than the Swedes; and yet they cannot be said to maintain a standing army, as their forces consist of a regulated militia. The cavalry is clothed, armed, and maintained, by a rate raised upon the nobility and gentry, according to their estates; and the infantry by the peasants. Each province is obliged to find its proportion of soldiers according to the number of farms it contains; every farm of 60l. or 70l. per annum is charged

with a foot soldier, furnishing him with diet, lodging, and ordinary clothes, and about 20s. a-year in money; or else a little wooden house is built him by the farmer, who allows him hay and pasturage for a cow, and ploughs and sows land enough to supply him with bread. When embodied, they are subject to military law, but otherwise to the civil law of the country. It may therefore literally be said that every Swedish soldier has a property in the country he defends. This national army is thought to amount to above 50,000 men. Sweden formerly could have fitted out 40 ships of the line.

(54.) SWEDEN, MINERALS, WATERFALLS, &c. 18. Sweden produces crystals, amethysts, topazes, porphyry, lapis lazuli, agate, cornelian, marble, and other fossils. The chief wealth of the country, however, arises from her mines of silver, copper, lead, and iron. (See § 52.) This last employs no fewer than 350 forges, hammering-mills, and smelting houses. A gold mine has likewise been discovered in Sweden; but inconsiderable. One silver mine is said to produce 20,000 crowns a-year. The product of the copper mines is uncertain; but the whole is loaded with vast taxes and reductions to the government, which has no other resources for the exigencies of the state. The waterfalls in Sweden are numerous, and many of them picturesque; but their utility is chiefly to be admired in the immense number of water-wheels they drive throughout Sweden.

(55.) SWEDEN, POPULATION OF. The total population of Sweden is estimated by Cruttwell at near three millions. Most other geographers are silent on the subject.

(56.) SWEDEN, PROVINCES AND DISTRICTS OF. This extensive kingdom, which is the largest state in Europe, except Russia, is divided into five large districts or territories, improperly called *provinces* by some geographers, and *parts* by others, which is a very indefinite epithet. These districts are, 1. SWEDEN PROPER: 2. GOTHLAND: 3. NORKLAND: 4. SWEDISH LAPLAND: and, 5. FINLAND. (See these articles.) Each of these is subdivided into several provinces. I. Sweden Proper contains 5 provinces; viz. UPLAND, SUDERMANIA, NERICIA, WESTMANIA, and DALECARLIA. II. Gothland contains 10 provinces; viz. OSTROGOTHIA, SMOLAND, WESTROGOTHIA, the isles of GOTELAND and ÖLAND, WARMELAND, BOHUS, DALIA, SCHONEN, HALLAND, and BLEKINGEN. III. Norland includes 7 provinces; viz. GASTRICIA, HELSINGIA, MEDELPAIDIA, HIEMPTLAND, HERJESDALIA, ANGERNANIA, and W. BOTHNIA. IV. Swedish Lapland comprehends 7; viz. *Afela*, *Hiemptland*, *Umeo*, *Pitbo*, *Luleo*, *Torneo*, and *Kemi*. And, V. Finland contains 6 provinces; viz. FINLAND PROPER, E. BOTHNIA, TAVASTELAND, NYLAND, SAVOLAX, and part of *Carolia* and *Cymene*. Most of these provinces are described in their order.

(57.) SWEDEN, QUADRUPEDS, BIRDS, FISH, PLANTS, &c. OF. The celebrated Linnæus says, there are in Sweden 1400 different species of animals, and 1200 species of plants, of which 200 are medicinal. Among the former are bears, elks, does, roe-bucks, beavers, fables, polecats, wolves, foxes, hares, rabbits, squirrels, moor-fowls,

fowls, wood-cocks, falcons, partridges, and a great variety of other game; besides the domestic animals, horses, sheep, goats, hogs, and black cattle. The coasts and rivers abound with fish, which are salted and exported. There are no venomous reptiles in Sweden.

(58.) SWEDEN, RELIGION OF THE PEOPLE OF. Christianity was introduced here in the 9th century. Their religion is Lutheranism. The Swedes are surprisingly uniform in religious matters; and have such an aversion to popery, that castration is the fate of every Roman Catholic priest discovered in Sweden. The Abp. of Upsal has a revenue of about 400 l. a-year; and has under him 13 suffragans, besides superintendents, with moderate stipends. No clergyman has any concern in affairs of state; but their morals and the sanctity of their lives, endear them to the people. Their churches are neat, and often ornamented. A body of ecclesiastical laws and canons direct their religious economy. A conversion to popery, or a long continuance under excommunication, which cannot pass without the king's permission, is punished by imprisonment and exile.

(59.) SWEDEN, REVENUE OF. The revenue of Sweden, since the unfortunate wars of Charles XII. has been greatly reduced. Her specie, in the reign of Ad. Frederic, arose chiefly from the king's German dominions. Formerly the crown lands, poll-money, tithes, mines, and other articles, are said to have produced a million sterling. The payments that are made in copper, which is here the chief medium of commerce, is extremely inconvenient; some of these pieces being as large as tiles; and a cart or wheelbarrow is often required to carry home a moderate sum. The Swedes, however, have gold ducats, and eight-mark pieces of silver, valued each at 5s. 2d.

(60.) SWEDEN, SURFACE, CLIMATE, SOIL, AND PRODUCE OF. The surface, climate, soil, &c. of Sweden, are pretty similar to those of its neighbouring countries; only it has the advantage of navigable rivers. Summer and winter suddenly succeed each other, with hardly any interval of spring and autumn as in other countries. Vegetation is therefore quite rapid, the heat being excessive. The long days of summer have hardly any night. Stoves and warm furs mitigate the cold of winter, which is so intense that the noses and extremities of the inhabitants are sometimes mortified. The Swedes, since the days of Charles XII. have been at incredible pains to correct the native barrenness of their country, by erecting colleges of agriculture, and in some places with great success. The soil is much the same with that of Denmark and some parts of Norway, generally very bad, but in some valleys surprisingly fertile. The Swedes now follow the agriculture of France and England; and rear almost as much grain as maintains the natives. Gothland produces wheat, rye, barley, oats, pease, beans; and deficiencies are supplied from Livonia and the Baltic provinces. In summer the fields are verdant, and covered with flowers; and produce strawberries, raspberries, currants, and other small fruits; and melons are brought to great perfection in dry seasons. Sweden is happily free from earthquakes.

(II.) SWEDEN, PROPER. See N° I. § 55.

SWEDENBORG, Emanuel, was born at Stockholm on the 29th Jan. 1689. His father was bishop of W. Gothia. Young Swedenborg's education, from the character of the father, must have been pious; and by his appearing with reputation as an author, at 20 years of age, it is proved successful. His first work was a vol. of Latin poems, published in 1709; and in 1710, he published a collection of pieces, in Latin verse, entitled *Ludus Heliconius, five Carmina Miscellanea, quæ variis in locis crevit*. The same year he began his travels into England, Holland, France, and Germany; and returning to Stockholm in 1714, he was in 1716 appointed assessor in the Metallic College by Charles XII. who honoured him with frequent conversations. At this period he devoted his attention to phycic and mathematics; and in 1718 he accompanied the king to the siege of Fredericks-hall, where he gave an eminent proof that he had not studied in vain, by designing a canal 2½ miles long, through which he conveyed from Sweden two galleys, five large boats, and a sloop, loaded with battering pieces, to be employed in the siege. During this siege he completed a collection of essays on mathematics and phycics, called *Dædalus Hyperboreus*; and published an introduction to algebra, under the title of *The Art of the Rules*. At the siege of Fredericks-hall he lost his patron Charles; but found another in his sister, Q. Ulrica Eleonora; by whom in 1719 he was ennobled, and took his seat among the senators of the equestrian order in the triennial assemblies of the States. He published in the same year *A Method to fix the Value of Money, and to determine the Swedish Measures in such a way as to suppress all the Fractions and facilitate the Calculations*. About the same time he gave the public a treatise on the *Position and Course of the Planets*; with another on the *Height of the Tides, and Flux and Reflux of the Sea*. As he continued, under the new sovereign, to hold the office of assessor to the Metallic College, he made a second journey into foreign countries, to examine their mines, particularly those of Saxony and Harts. During these travels, he printed at Amsterdam, 1. *Prodromus principiorum Naturalium, five novorum tentaminum, Chemiam et Phyciam experimentalem geometricè explicandi*. 2. *Nova observata & inventa circa Ferrum & Ignem, præcipue naturam Ignis Elementarum, una cum nova Camini inventione*. 3. *Methodus nova inveniendi Longitudines locorum terra marique opæ Lunæ*. 4. *Modus construendi receptacula navalia, vulgo in Suedois, Dockbygnadder*. 5. *Nova constructio aggeris aquatici*. 6. *Modus explorandi virtutes Navigiorum*. And at Leipzig and Hamburg, 7. *Miscellanea observata circa res naturales, præsertim Mineralia, Ignem, & Montium Arata*. In 1733 he finished his grand work, entitled *Opera Philosophica & Mineralia*. In 1734, he went to inspect the mines of Austria and Hungary. In 1729, he was made a member of the Society of Sciences at Upsal, and was, probably about the same time, made a Fellow of the Royal Academy of Sciences at Stockholm. The Academy of St Petersburg sent him, on the 17th of December 1734, a diploma of association as a correspondent member. But all these

these marks of the approbation of the learned could not preserve the strong mind of the Baron from falling a victim to the wildest fanaticism. He declared that the Lord had manifested himself to him in a personal appearance, in 1743, to open in him a sight of the spiritual world, and to enable him to converse with *spirits* and *angels*. From that time he bade adieu to science, and employed his time in travelling, and expended large sums in publishing mystic tracts, declaring in his own words "the various unknown *Arcana*, which have been either seen by me or revealed to me, concerning heaven and hell, the state of men after death, the true worship of God, the spiritual sense of the Scriptures, and many other important truths tending to salvation and true wisdom." He died at London, March 29, 1772. Though Baron Swedenborg's followers appear not to have been numerous during his life, they have increased since his death; and a sect subsists at present in England which derives its origin from him, and is called the *New Jerusalem Church*. The discriminating tenets of this sect seem to be the following: "Holding the doctrine of one God, they maintain that this one God is no other than Jesus Christ, and that he always existed in a human form; that for the sake of redeeming the world, he took upon himself a proper human or material body, but not a human soul; that this redemption consists in bringing the hells or evil spirits into subjection, and the heavens into order and regulation, and thereby preparing the way for a new spiritual church; that without such redemption no man could be saved, nor could the angels retain their state of integrity; that their redemption was effected by means of trials, temptations, or conflicts with evil spirits; and that the last of them, by which Christ glorified his humanity, perfecting the union of his divine with his human nature, was the passion of the cross. Though they maintain that there is but one God, and one divine person, they hold that in this person there is a real Trinity; consisting of the divinity, the humanity, and the operation of them both in the Lord Jesus; a Trinity which did not exist from all eternity, but commenced at the incarnation. They believe that the Scriptures are to be interpreted not only in a literal but in a spiritual sense, not known to the world till it was revealed to B. Swedenborg; and that this spiritual sense extends to every part of Scripture, except the Acts of the Apostles. They believe that there are angels attending upon men, residing, as B. Swedenborg says, in their affections; that temptation consists in a struggle between good and bad angels within men; and that by these means God assists men in these temptations, since of themselves they could do nothing. Indeed B. Swedenborg maintains, that there is an universal influx from God into the souls of men, inspiring them especially with the belief of divine unity. This efflux of divine light on the spiritual world he compares to the efflux of the light from the sun in the natural world. "There are (says B. Swedenborg) two worlds, the natural and the spiritual, entirely distinct, though perfectly corresponding to each other; that at death a man enters into the spiritual world, when his soul is clothed with a body,

which he terms *substantial*, in opposition to the present *material* body, which, he says, is never to rise out of the grave."

SWEDES. *n. s.* the natives of Sweden. See SWEDEN, N° 1, § 49.

SWEDESBOROUGH, a post town of New Jersey, in Gloucester county, on the Raccoon, which runs into the Delaware, and is navigable up to this town. It has a fine church, and is 21 miles SSW. of Philadelphia.

(1.) **SWEDISH.** *adj.* Of, or belonging to SWEDEN; or sprung, brought from, or invented in that kingdom.

(2.) **SWEDISH LAPLAND.** See LAPLAND, N° III.

(3.) **SWEDISH TURNIP.** See RUTA, N° 14.

SWEDLER, a town of Hungary, 7 miles S. of Kapfdorf.

(1.) * **SWEEP.** *n. s.* [from the verb.] 1. The act of sweeping. 2. The compas of any violent or continued motion.—A door drags when the bottom edge rides in its sweep upon the floor. *Moxon*.—

A torrent swell'd,

Breaking away impetuous, involves

Within its sweep, trees, houses, men. *Philips*.

3. Violent and general destruction.—In countries subject to great epidemical *sweeps*, men may live very long. *Graunt*. 4. Direction of any motion not redilinear.—Having made one incision a little circularly, begin a second, bringing it with an opposite sweep to meet the other. *Sharp*.

(2.) **SWEEP**, in the sea language, is that part of the mould of a ship where she begins to compass in the rung heads; also when the hauler is dragged along the bottom of the sea to recover any thing that is sunk, they call this action *sweeping* for it.

(1.) * **To SWEEP.** *v. a.* [*swapan*, Saxon.] 1. To drive away with a besom. 2. To clean with a besom.—What woman, having ten pieces of silver, if she lose one, doth not sweep the house, and seek diligently? *Luke*, xv. 8. 3. To carry with pomp.—

Like a peacock, sweep along his tail. *Shak*.

4. To drive or carry off with celerity and violence.

I could,

With barefac'd power, sweep him from my sight. *Shak*.

—The river of Kishon swept them away. *Judges*,

v.—The blustering winds striving for victory, swept the snow from off the tops of those high mountains. *Kneller*.—

They miss or sweep but common souls away.

Waller.

My looking is the fire of penitence,

That sweeps at once the people and the prince.

Dryden.

—I have already swept the stakes. *Dryden*.—

Is this the man who drives me before him

To the world's ridge, and sweeps me off? *Dryden*.

With equal speed the torrent flows

To sweep fame, power, and wealth away.

Fenton.

—A duke drew a huge heap of gold; but never observed a sharper, who under his arm swept a great deal of it into his hat. *Swift*. 5. To pass over with celerity and force. 6. To rub over.

Their long descending train

With

With rubies edg'd and sapphires, *sweep* the plain.
Dryden.

7. To strike with a long stroke.—

Descend, ye nine: descend and sing,
And *sweep* the sounding lyre. *Pope.*

(2.) * *TO SWEEP. v. n.* 1. To pass with violence, tumult, or swiftness. Perhaps in the first quotation we should read *sweep*.—

I with wings as swift
May *sweep* to my revenge. *Shak.*

—A poor man that oppresseth the poor, is like a *sweeping* rain which leaveth no food. *Prov. xxviii. 3.*

Cowen in her course
Tow'rds the Sabrinian shores, as *sweeping* from
her source,
Takes Tow. *Drayton!*

Stars shooting through the darkness gild the night
With *sweeping* glories. *Dryden.*

2. To pass with pomp; to pass with an equal motion.—

She *sweeps* it through the court. *Shak.*
In gentle dreams I often will be by,
And *sweep* along before your closing eye. *Dryd.*

3. To move with a long reach.—

Nor always err; for oft the gauntlet draws
A *sweeping* stroke along the crackling jaws. *Dryd.*

* *SWEEPER. n. s.* [from *sweep*.] One that sweeps.

* *SWEEPING. n. s.* [from *sweep*.] That which is swept away.—Should this one broomstick enter the scene, covered with dust, though the *sweeping* of the finest lady's chamber, we should despise its vanity. *Swift.*

* *SWEEPNET. n. s.* [*sweep* and *net*.] A net that takes in a great compass.—She was a *sweep-net* for the Spanish ships. *Camden.*

* *SWEEPSTAKE. n. s.* [*sweep* and *stake*.] A man that wins all.—

Sweepstake, you will draw both friend and foe,
Winner and loser? *Shak.*

* *SWEEPSTAKE'S FORELAND*, a cape in the Straits of Magellan. Lon. 71. 24. W. Lat. 52. 40. N.

* *SWEEPLY. adj.* [from *sweep*.] Passing with great speed and violence over a great compass at once.—

The branches bend before their *sweepl*y sway.
Dryden.

(1.) * *SWEET. adj.* [*sweete*, Sax. *soet*, Dutch.]

1. Pleading to any sense.—*Sweet* expresses the pleasant perceptions of almost every sense: *sugar* is *sweet*, but it hath not the same sweetness as music; nor hath music the sweetness of a rose, and a *sweet* prospect differs from them all; nor yet have any of these the same sweetness as discourse, counsel, or meditation hath; yet the royal Psalmist saith of a man, we took *sweet* counsel together: and of God, my meditation of him shall be *sweet*. *Watts.* 2. Luscious to the taste.—

This honey tasted still is ever *sweet*. *Davies.*

3. Fragrant to the smell.—

Burn *sweet* wood to make the lodging *sweet*.
Shak.

—Where a rainbow hangeth over or toucheth, there breatheth a *sweet* smell; for that this happeneth but in certain matters which have some sweetness which the dew of the rainbow draweth

forth. *Bacon.*—Shred very small with thine, *sweet* marjory, and a little winter savoury. *Walton.*—

The balmy zephyrs, silent since her death,
Lament the ceasing of a *sweeter* breath. *Pope.*

To sell the bounteous product of the spring;
Sweet smelling flow'rs. *Gay.*

4. Melodious to the ear.—

The dulcimir, all organs of *sweet* Rop. *Milt.*
Her speech is grac'd with *sweeter* sound
Than in another's song is found. *Waller.*

No more the streams their murmurs shall
forbear

A *sweeter* music than their own to hear. *Pope.*

5. Pleading to the eye.—

Thou hast the *sweetest* face I ever look'd on.
Shak.

6. Not salt.—The white of an egg, or blood mingled with salt water, gathers the saltness, and maketh the water *sweeter*. *Bacon.*—

Sweet waters mingle with the briny main. *Dryd.*

7. Not sour.—Time changeth fruits from more sour to more *sweet*; but contrariwise liquors, even those that are of the juice of fruit, from more *sweet* to more sour. *Bacon.*—Trees whose fruit is acid last longer than those whose fruit is *sweet*. *Bacon.*—When metals are dissolved in acid menstruums, and the acids in conjunction with the metal act after a different manner, the compound has a different taste, much milder than before, and sometimes a *sweet* one. *Newton.* 8. Mild; soft; gentle.—

Let me report to him
Your *sweet* dependency. *Shak.*

The Pleiades before him danc'd,
Shedding *sweet* influence. *Milton.*

Mercy has, could mercy's self be seen,
No *sweeter* look than this propitious queen. *Waller.*

9. Grateful pleading.—

Nothing so *sweete* is as our country's earth,
And joy of those, from whom we claim our birth. *Chapman.*

Sweet interchange of hill and valley. *Milton.*

The Trojan host

No fairer face or *sweeter* air could boast. *Æn.*

10. Not stale; not stinking; as, *that meat is sweet*.
(2.) *SWEET*, in the above quotation, (§ 1, def. 1.) is rather *confused* than *explained* by *Dr Watts*; for in all the senses stated by the Dr except the first, *sweet* and *sweetness* are used *metaphorically*; but it is absurd to illustrate a simple intension of taste by metaphors borrowed from it.

(3.) * *SWEET. n. s.* 1. Sweetness; something pleasing.—

Let them not lick
The *sweet* which is their poison. *Shak.*

What softer sounds are these salute the ear,
As if the centre of all *sweets* met here! *Ben Jonson.*

If ev'ry *sweet* and ev'ry grace
Must fly from that forsaken face. *Carreau.*

Hail! weeded love,
Perpetual fountain of domestic *sweets*! *Milton.*

Nor with perplexing thoughts
To interrupt the *sweets* of life. *Milt.*

Now since the Latian and the Trojan brood
Have tasted vengeance, and the *sweets* of blood,
Speak. *Dryden.*

Can Ceyx then sustain to leave his wife,
And unconcern'd forsake the sweets of life?

Dryden.

—A little bitter mingled in our cup leaves no
relish of the sweet. *Locke.*

Love had ordain'd that it was Abra's turn
To mix the sweets, and minister the urn. *Prior.*

2. A word of endearment.—

Sweet! leave me here a while. *Shak.*

Wherefore frowns my sweet? *B. Jonson.*

3. A perfume.—

As in perfumes,

'Tis hard to say what scent is uppermost;

So the was all a sweet. *Dryden.*

Flowers

Rebound their sweets. *Prior.*

(4.) SWEET, *n. s.* in the wine trade denotes
any vegetable juice, whether obtained by means
of sugar, raisins, or other foreign or domestic
fruit, which is added to wines with a design to
improve them.

* SWEETBREAD. *n. s.* The pancreas of the calf.
—Never tie yourself always to eat meats of easy
digestion, as veal, pullets, or sweetbreads. *Harvey.*

Sweetbread and collops were with skewers
prick'd. *Dryden.*

—Remember your sweetheart the butler loves a
sweetbread. *Swift.*

(1.) * SWEETBRIAR. *n. s.* [sweet and briar.] A
fragrant shrub.—For March come violets and
peach-tree in blossom, the cornelian tree, and
sweetbriar. *Bacon.*

(2.) SWEETBRIAR. See ROSA, § IV. N° 7.

* SWEETBROOM. *n. s.* [*grica*, Lat.] An herb.
Ainsworth.

(1.) * SWEETCICELY. *n. s.* [*myrrhus*, Lat.] A
plant. *Miller.*

(2.) SWEET CICELY is a species of SCANDIX.

(1.) * To SWEETEN. *v. a.* [from sweet.] 1. To
make sweet.—

The world the garden is, she is the flow'r

That sweetens all the place. *Sidney.*

—Here is the smell of the blood still: all the per-
fumes of Arabia will not sweeten this little hand.
Shak.—Give me an ounce of civet to sweeten my
imagination. *Shak.*

With fairest flow'rs, Fidele,

I'll sweeten thy sad grave. *Shak.*

Sweeten your tea, and watch your toast. *Swift.*

2. To make mild or kind.—As rivers of fresh
water falling into the main sea; the sea swallows
them all, but is not changed or sweetened by
them. *South.*—Devotion softens his heart, en-
lightens his mind, sweetens his temper. *Law.* 3.
To make less painful.—She even sweetens the
death which her sweetness brought upon me.
Sidney.

She thy cares will sweeten with her charms.

Dryden.

—Interest of state and change of circumstances
may have sweetened these reflections to the politer
fort. *Addison.*

Thy mercy sweet'ned ev'ry foil. *Addison.*

4. To palliate; to reconcile.—These lessons may
be gilt and sweetened as we order pills and potions.
L'Estrange. 5. To make grateful or pleasing.—

Angry sometimes, to sweeten off the rest

Of her behaviour. *Ben Jonson.*

6. To soften; to make delicate.—Correggio has
his memory made immortal, by sweetening his
lights and shadows. *Dryden.*

(2.) * To SWEETEN. *v. n.* To grow sweet.—
Where a wasp hath bitten in a grape, or any
fruit, it will sweeten hastily. *Bacon.*

* SWEETENER. *n. s.* [from sweeten.] 1. One
that palliates; one that represents things ten-
derly.—

But you who, till your fortune's made,
Must be a sweet'ner by your trade. *Swift.*

—Those softners, sweeteners, and compounders
shake their heads so strongly, that we can hear
their pockets jingle. *Swift.* 2. That which con-
temporates acrimony.—Powder of crabs eyes and
claws, and burnt egg-shells, are prescribed as
sweeteners of any sharp humours. *Temple.*

SWEET FERN. See SCANDIX.

SWEET GUM. See LIQUIDAMBAR.

* SWEETHEART. *n. s.* [sweet and heart.] 1.
lover or mistress.—

Mistress, retire yourself

Into some covert; take your sweetheart. *Shak.*
—Sweetheart, your colour is as red as any rose
Shak.

One thing, sweetheart, I will ask,
Take me for a new-fashion'd mask. *Gleaveland.*

—A wench was crying; she had newly parted
with her sweetheart. *L'Estr.*

Foretels th' estate, when the rich uncle dies
And fees a sweetheart in the sacrifice. *Dryden.*

* SWEETING. *n. s.* [from sweet.] 1. A sweet
luscious apple.—A child will chuse a sweeting be-
cause it is fair and pleasant. *Aisbarn.* 2. A word
of endearment.—

Tripe no further, pretty sweeting. *Shak.*
SWEET JOHN, a species of DIANTHUS.

* SWEETISH. *adj.* [from sweet.] Somewhat
sweet.—They effluenated that blood pituitous na-
turally, which abounded with an exceeding quan-
tity of sweetish chyle. *Floyer.*

* SWEETLY. *adv.* [from sweet.] In a sweet
manner; with sweetness.—The best wine for me
beloved goeth down sweetly. *Cant.*

He bore his great commillion in his look;
But sweetly temper'd awe. *Dryden.*

No poet ever sweetly sung,
Unless he were like Phæbus young. *Swift.*

* SWEETMEAT. *n. s.* [sweet and meat.] Del-
cacies made of fruits preserved with sugar.—More
sa, as glad as of sweetmeats to go of such an e-
rand, quickly returned. *Sidney.*

Wine and desserts, and sweetmeats to digest.
Dryden.

—The dishes were ill soited; whole pyramids of
sweetmeats for boys and women, but little solid
meat for men. *Dryden.*

Make your transparent sweetmeats truly nic
With Indian sugar and Arabian spice. *King.*

—If a child cries, you purchase his quiet by giving
him a less hurtful sweetmeat; this may prevent
his health, but spoils his mind. *Locke.*—The sweet-
meats do not make their appearance till people
are cloyed up with beef and mutton. *Addison.*
—A professor who always stands by, will not
suffer them to bring any presents of toys or sweet-
meats. *Swift.*

* SWEETNESS. *n. s.* [from sweet.] The qu
16

lity of being sweet in any of its senses; fragrance; melody; lusciousness; deliciousness; agreeableness; delightfulness; gentleness of manner; mildness of aspect.—She the *sweetness* of my heart, even sweetness the death which her sweetness brought upon me. *Sidney*.—The right form, the true figure, the natural colour that is fit and due to the dignity of a man, to the beauty of a woman, to the *sweetness* of a young babe. *Ascham*.—

O our lives *sweetness*! *Shak.*

—Where a rainbow toucheth, there breatheth forth a sweet smell: for this happeneth but in certain matters, which have in themselves some *sweetness*. *Bacon*.—His *sweetness* of carriage is very particularly remembered. *Fell*.—

Serene and clear harmonious Horace flows, With *sweetness* not to be express'd in prose. *Rosc.*—Suppose two authors equally sweet, there is a great distinction to be made in *sweetness*. *Dryd.*—

This old man's talk, though honey flow'd In every word, would not lose all its *sweetness*. *Addison*.

Praise the easy vigour of a line, Where Denham's strength and Waller's *sweetness* join. *Pope*.

—These qualities are adorned with great modesty and a most amiable sweetness of temper. *Swift*.

SWEET ROOT, or CARMELE, the English name of a species of GLYCYRRHIZA. See MURRAY, N° 8.

SWEET SOP. See ANNANO, § II. N° 7.

SWEET SPRINGS, a post town of Virginia, 456 miles from Philadelphia.

SWEET SULTAN, a species of CENTAUREA.

SWEET WEED. See CAPRARIA.

(1.) * SWEETWILLIAM. SWEETWILLow, *n. s.* [*armeria*, Lat.] Plants. A species of gilliflowers.

(2.) SWEETWILLIAM See DIANTHUS, N° 7.

(3.) SWEETWILLIAM OF BARBADOS, a species of IPOMOEA.

(1.) * SWEETWILLow. *n. s.* Gale or Dutch myrtle.

(2.) SWEETWILLow. See MYRICA, N° 2.

SWEIN. See SUENO, and SWENO.

SWEIN MOTE. See FOREST COURTS, and SWAIN MOTE.

* SWELL. *n. s.* [from the verb.] Extension of bulk.—

The swan's down feather, That stands upon the *swell* at full of tide. *Shak.*

(1.) * To SWELL. *v. n.* participle pass. *swollen*, [*swellan*, Sax. *swellen*, Dutch.] 1. To grow turgid; to extend the parts.—

A gentle *swelling* and a peaceful flood. *Æn.*

2. To tumify by obstruction.—

All *swell's*, and ulc'rous; pitiful to the eye,

The mere despair of surgery he cures. *Shak.*

Swell'n is his breast. *Dryd.*

3. To be exasperated.—

My mildness hath allay'd their *swelling* griefs. *Shak.*

4. To look big.—

Here he comes, *swelling* like a Turkey cock. *Shak.*

5. To be turgid. Used of style.—

Peleus and Telephus exit'd and poor,

Forgot their *swelling* and gigantic words. *Rosc.*

6. To protuberate.—This iniquity shall be as a

Vol. XXII. PART I.

breach ready to fall, *swelling* out in a high wall. *Isa. xxx. 13.* 7. To rise into arrogance; to be elated.—

Your equal mind yet *swells* not into state.

Dryden

8. To be inflated with anger.—I will help every one from him that *swelleth* against him. *Psalms, xii. 6.*

We have made peace of enmity

Between these *swelling* peers. *Shak.*

To stubborn spirits

They *swell* and grow as terrible as storms. *Shak.*

9. To grow upon the view.—

A kingdom for a stage, princes to act,

And monarchs to behold the *swelling* scene. *Shak.*

10. It implies commonly a notion of something wrong.—

Your youth admires

The throws and *swellings* of a Roman soul. *Add.*

Immoderate valour *swells* into a fault. *Addis.*

(1.) * To SWELL. *v. a.* 1. To cause to rise or increase; to make tumid.—

Wind, blow the earth into the sea.

Or *swell* the curled waters 'bove the main. *Shak.*

You who *swell* those feeds with kindly rain. *Dryden.*

2. To aggravate; to heighten.—It is low ebb with his accuser, when such peccadillos are put to *swell* the charge. *Atterbury.* 3. To rise to arrogance.—All these miseries have usually attended kingdoms *swollen* with long plenty, pride, and excess. *Clarendon.*—

The king of men who *swollen* with pride

Refus'd his presents. *Dryden.*

(1.) * SWELLING. *n. s.* [from *swell*.] 1. Morbid humour.—There is not a chronic disease that more frequently introduces the distemper, than strumous or scrophulous *swellings* or ulcers. *Blackmore.* 2. Protuberance; prominence.—The superficies of such plates are not even, but have many cavities and *swellings*. *Newton.* 3. Effort for a vent.—My heart was torn in pieces to see the husband suppressing and keeping down the *swellings* of his grief. *Tatler.*

(1.) SWELLING. See SURGERY, and TUMOUR.

(3.) SWELLING, WHITE, or PARONYCHIA. See SURGERY, Index.

SWELLY, a river of Ireland, in Donegal; which runs into the Foynce, 3 miles N. of Lifford.

* To SWELT. *v. n.* To break out in sweat, if that be the meaning.—

Chearful blood in faintness chill did melt,

Which, like a fever fit, through all his body *swelt*. *Spenser.*

(1.) * To SWELTER. *v. n.* [This is supposed to be corrupted from *sultry*.] To be pained with heat.—

If the sun's excessive heat

Makes our bodies *swelter*,

To an offer hedge we get

For a friendly shelter. *Chalkil.*

(2.) * To SWELTER. *v. a.* To parch, or dry up with heat.—One climate would be scorched and *sweltered* with everlasting dog-days while an eternal December blasted another. *Bentley.*

* SWELTRY. *adj.* [from *swelter*.] Suffocating with heat.

SWENE, or SWINE. See SUSPUS.

H (1.) SWE-

(1.) **SWENO** I, or **SUENO**, **SWAN**, **SWAIN**, or **SWYN**, a king of Denmark, who flourished in the 10th century, twice invaded England, conquered part of it, and became father of Canute the Great, who conquered the whole of it, and reigned many years. See **DENMARK**, § 5, and **ENGLAND**, § 16—18: also **SWENO's STONE**.

(2, 3.) **SWENO**, II, and III. See **DENMARK**, § 5.

SWENO's STONE, an ancient monument near **Forres**, erected in memory of the defeat of the Danes under **Sweno**. On that side of it which fronts the South, and measures the thickness of the obelisk about four feet above the pavement on the top of the steps by which one ascends, is the inscription engraved on *Plate CCCXXIX*. The inscription is disposed in two lines, on a scale of 15 inches in length, and the rev. Dr James Playfair reads it thus, LOHH in refi; and says it composes the initials of the following words *Legē obelisci bijas hieroglyphicis in nostro regno extinctionem Suenonū inuolūti*; which the Dr translates thus, "Understand that the hieroglyphicks of this obelisk represent the extinction, in our kingdom, of the invasion under **Sweno**." The monument was placed here, because the Danes had attempted to form their settlement in this quarter. Translated literally it signifies "By the hieroglyphicks of this obelisk, read the extinction, in our kingdom, of the invasion under **Sweno**."

• **SWEEP**. The participle and preterite of *sweep*.

• **To SWERD**, *v. n.* To breed a green turf, [See **To SWARD**.] The clays, that are long in *swerding*, are the best land for clover. *Mortimer*.

SWERNICK, a town of European Turkey, on the Drino, on the confines of Serbia and Bosnia; 70 miles SW. of Belgrade. Lon. 19. 32. E. Lat. 44. 42. N.

SWERTIA, or more properly **SUERTIA**; for, it is monstrously unclassical to put **W** even into a modern Latin word. To avoid such barbarism the late Dr Brown turned his name into **BRUNO**. **MARSH GENTIAN**, in botany, a genus of plants belonging to the class of *pentandria*, and to the order of *digynia*; and in the natural system ranging under the 20th order, *rotacea*. The corolla is wheel-shaped. There are nectariferous pores at the bases of the segments of the corolla. The capsule is unilocular and bivalve. There are 6 species; viz. 1. **SWERTIA CARINTHIACA**; 2. **CORNICULATA**; 3. **DICHOTOMA**; 4. **DIFFORMIS**; 5. **PERENNIS**; and 6. **ROTATA**.

SWERTIA PERENNIS is a native of England. It is distinguished by radical oval leaves. It flowers in August.

• **To SWERVE**, *v. n.* [*swerven*, Saxon, and Dutch.] 1. To wander; to rove.—

A maid thitherward did run,
To catch her sparrow which from her did *swerve*.

Sidney.

The *swerwing* vines on the tall elms prevail.

Dryden.

2. To deviate; to depart from rule, custom or duty.—That which angels do clearly behold, and without any *swerwing* observe, is a law celestial. *Hooker*.—Howsoever *swerwings* are now and then incident into the course of nature. *Hooker*.—I *swerve* not from thy commandments. *Com. Prayer.*

Were I the fairest youth

That ever made the eye *swerve*. *Shak.*
—In obedience, to their just commands upon extraordinary occasions, in the execution of their trusts, they *swerve* from the strict letter of the law. *Clarendon*.—Till then his majesty had not in the least *swerved* from that act of parliament. *Clarendon*.—Defect and *swerwing* in the creature would immediately follow. *Hakewill*.—

Firm we subsist, yet possible to *swerve*. *Milt.*
—Many, through the contagion of ill example, *swerve* exceedingly from the rules of their holy faith. *Atterbury*. 3. To ply; to bend.—

Now their mightiest quell'd, the battle *swerve'd*
With many an inroad go'd. *Milton.*

4. [I know not whence derived] To climb on a narrow body.—

Nimble up from bough to bough I *swerve'd*.

Dryden.

She fled returning by the way she went,

And *swerve'd* along her bow. *Dryden.*

SWETARA. See **SWATARA**.

SWEYN, or **SUENO**. See **SUENO** and **SWENO**.

SWIERZNO, a town of Lithuania, in **Novogrodek**; 36 miles E. of **Novogrodek**; now annexed to Russia.

SWIETEN. See **VAN SWIETEN**.

SWIETENIA, or more properly **SUETENIA**, **MAHOGANY**, in botany, a genus of plants belonging to the class of *decandria*, and to the order of *monogynia*; and in the natural system arranged under the 34th order, *Miscellaneæ*. The calyx is quinquefid. There are five petals; the nectarium is cylindrical, supporting the antheræ with its mouth. The capsule is five-celled, woody, and opening at the mouth. The seeds are imbricated and winged. There is only one species;

SWIETENIA MAHAGONY, a native of the warmest parts of America, growing also in the island of Cuba, Jamaica, Hispaniola, and the Bahama islands. It abounded formerly in the low lands of Jamaica, but it is now found only on hills and places difficult of access. It thrives in moist soils, but varies in texture and grain according to the nature of the soil. On rocks it is of a smaller size, but very hard and weighty, of a close grain and beautifully shaded; while the produce of the low and richer lands is observed to be more light and porous, of a paler colour and open grain; and that of mixed soils to hold a medium between both. The tree grows very tall and straight, and is usually 4 feet in diameter; the flowers are of a reddish or fawn colour, and the fruit of an oval form, and about the size of a turkey's egg. The wood is generally hard, takes a fine polish, and is found to answer better than any other sort in all kinds of cabinet ware. It is said to be used sometimes in ship-building: a purpose for which it is remarkably adapted, if it were not too costly, being very durable, capable of resisting gun-shots, and buoying the floats without splintering. The seed vessels are of a curious form, consisting of a large cone splitting into five parts, and disclosing its winged seeds, disposed in the regular manner of those of apocynum. The seeds being winged, are dispersed on the surface of the ground, where some falling into the chinks of the rocks strike root; the creep out on the surface of it, and seek another

chink

think, into which they creep and swell to such a size and strength, that at length the rock splits and is forced to admit of the root's deeper penetration; and with this little nutriment the tree increases to a stupendous size in a few years. The first use to which mahogany was applied in England, was to make a box for holding candles for Dr Gibbons, an eminent physician in the latter end of the 17th and beginning of the 18th century, who had a brother, a West India captain, who brought over some planks of this wood as ballast. The superior qualities of it being immediately discovered, it soon came into general use.

(1.) SWIFT, Dr Jonathan, so universally admired as a wit and classical writer of the English language, was born in Dublin, Nov. 30th 1667. His father was an attorney, and of a good family; but dying poor, the expence of his son's education was defrayed by his friends. At the age of six, young Swift was sent to the school of Kilkenny, whence he removed in his 15th year to Trinity College, Dublin. So much did he despise the study of the old logicians, at that time held so indispensably necessary, that he was refused a degree on account of his ignorance of their writings, and obtained it afterwards through the interest of his friends, and "by special favour," as inserted in the college registry. He remained in the college near 3 years after this, little known or regarded. By scholars he was reckoned a blockhead; and as his circumstances would not permit him to keep company with persons of equal rank, upon an equal footing, he lived much alone, and his time was employed in pursuing his course of reading in history and poetry. Yet under this pressure, he conceived the first rude draught of the *Tale of a Tub*. In 1688, being, by the death of Godwin Swift his uncle, who had chiefly supported him, left without subsistence, he went to consult his mother, who then lived in Leicester, about the future course of his life; and, by her direction, solicited the advice and patronage of Sir William Temple, whose father had lived in great friendship with Godwin Swift. Temple received him with great kindness, and was so much pleased with his conversation, that he detained him two years in his house, and recommended him to king William, who offered to make him a captain of horse. This not suiting his disposition, and Temple not having it quickly in his power to provide for him otherwise, Swift left his patron (1694) in discontent: having previously taken his master's degrees at Oxford. He now resolved to enter into the church, where his first preferment was only £100 a-year, being the prebend of *Kilroot in Conner*; which some time afterwards, upon Sir William Temple's earnestly inviting him back to his house at *Morpark*, he resigned. In 1699, Swift lost his patron Sir William Temple, who left him a legacy in money, with the property of his MSS.; and, on his death-bed, obtained for him a promise from the king of the first prebend that should become vacant at Westminster or Canterbury. Swift dedicated to the king the posthumous works with which he was entrusted, and for a while attended the court; but soon found it in vain. He was then invited by the earl of Berkeley to accompany him into Ireland, where he obtained the livings of La-

racor and Rathbaggin in the diocese of Meath; and soon afterwards invited over the unfortunate *STELLA*, a young woman of the name of Johnson, whose life he contrived to embitter, and whose days, though he certainly loved her, we may confidently affirm that he shortened by his caprice. This lady is generally believed to have been the daughter of Sir William Temple's steward, though some say, that she was Sir William's own natural daughter, and Swift himself his natural son; and that a discovery of this relationship was the cause of Swift's otherwise unaccountable conduct to that excellent woman. Be that as it may, it is certain that Sir William left her £1000; and that, accompanied by Miss Dingley, whose whole fortune amounted to an annuity of £127 for life, she went, in consequence of Swift's invitation, to Laracor. With these two ladies he passed his hours of relaxation, and to them he opened his bosom; but they never resided in the same house, nor did he see either without a witness. In 1701 Swift published *A discourse of the contests and dissensions in Athens and Rome*. It was the only work which he ever expressly acknowledged. Early in the following spring king William died; and Swift, on his next visit to London, found queen Anne upon the throne. He was during the earlier part of the queen's reign of no party, but employed himself in discharging the duties of his function, and in publishing from time to time such tracts as he thought might be useful. In 1704 he published the *Tale of a Tub*; which, considered merely as a work of genius, is unquestionably the greatest which he ever produced; but the levity with which religion was thought to be there treated, raised up enemies to him among all parties, and eventually precluded him from a bishopric. From that period till 1708, he seems to have employed himself in solitary study; but he then gave successively to the public *The sentiments of a Church of England man*, the ridicule of astrology under the name of *Bickerstaff*, the *Argument against abolishing Christianity*, and the defence of the *Sacramental Test*. Soon after began the busy and important part of Swift's life. He was employed in 1710, by the primate of Ireland to solicit the queen for a remission of the first fruits and tenth parts to the Irish clergy. This introduced him to Mr Harley, afterwards earl of Oxford, who, though a Whig himself, was at the head of the Tory ministry, and in great need of an auxiliary so able as Swift, by whose pen he and the other ministers might be supported in pamphlets, poems, and periodical papers. In 1710 was commenced the *Examiner*; of which Swift wrote 33 papers, beginning his first on the 10th of Nov. 1711. In 1712 he published the *Conduct of the Allies* ten days before the parliament assembled; and soon afterwards, *Reflections on the barrier Treaty*. The purpose of these pamphlets was to persuade the nation to a peace, by showing that "mines had been exhausted and millions destroyed" to secure the Dutch and aggrandize the emperor, without any advantage whatever to Great Britain. Though these two publications, together with his *Remarks on the Bishop of Sarum's Introduction to the third Volume of his History of the Reformation*, certainly turned the tide of popular opinion

opinion, and effectually promoted the designs of the ministry, the best preference which his friends could venture to give him was the deanery of St Patrick's, which he accepted in 1713. In the midst of his power and his politics, he kept a journal of his visits, his walks, his interviews with ministers, and quarrels with his servant, and transmitted it to Mrs Johnson and Mrs Dingely, to whom he knew that whatever befel him was interesting; but in 1714 an end was put to his power by the death of the queen, which broke down at once the whole system of Tory politics, and nothing remained for him but to withdraw from persecution to his deanery. In the triumph of the Whigs, Swift met with every mortification that a spirit like his could possibly be exposed to. The people of Ireland were irritated against him beyond measure; and every indignity was offered him as he walked the streets of Dublin. Nor was he insulted by the rabble only, but persons of distinguished rank and character forgot the decorum of common civility to give him a personal affront. In this situation, he retired from the world to discharge his duties as a clergyman, and attend to the care of his deanery. That no part of his time might lie heavy on his hands, he employed his leisure hours on some historical attempts relating to the change of the ministers and the conduct of the ministry; and completed the *History of the four last years of queen Anne's reign*, which had been begun in her lifetime, but which he never published. Of the work which bears that title, and is said to be his, Dr Johnson doubts the genuineness; and it certainly is not such as we should have expected from a man of Swift's sagacity and opportunities of information. In 1716 he was privately married to Mrs Johnson by Dr Ashe bishop of Clogher; but the marriage made no change in their situation, and it would be difficult to prove (says Lord Orrery) that they were ever afterwards together but in the presence of a third person. The dean lived in a private manner, known and regarded only by his friends, till about 1720 that he published his first political pamphlet relative to Ireland, entitled *A Proposal for the Universal Use of Irish Manufactures*; which so roused the indignation of the ministry that they commenced a prosecution against the printer, which drew the attention of the public to the pamphlet, and at once made its author popular. Whilst he was enjoying the laurels which this work had wreathed for him, his felicity, as well as that of his wife, was interrupted by the death of Mrs Van Homrigh, and the publication of his poem called *Cadenus and Vanessa*, which brought upon him much merited obloquy. With Mrs Van Homrigh he became acquainted in London during his attendance in Court; and finding her possessed of genius and fond of literature, he took delight in directing her studies, till he got insensibly possession of her heart. From being proud of his praise, she grew fond of his person; and despising vulgar restraints, she made him sensible that she was ready to receive him as a husband. She had wit, youth, beauty, and a competent fortune to recommend her, and for a while Swift seems to have been undetermined whether or not he should comply with her wish. She had followed him to

Ireland, where she lived in a house about 12 miles from Dublin; and he continued to visit her occasionally, and to direct her studies, as he had done in London; but with these attentions she was not satisfied, and at last sent to him a letter written with great ardour and tenderness, insinuating that he should immediately accept or refuse her as a wife. His answer, which probably contained the secret of his marriage, he carried himself; and having indignantly thrown it on the lady's table, instantly quitted the house, we believe, without speaking to her, and returned to Dublin to reflect on the consequences of his own conduct. These were dreadful. Mrs Van Homrigh survived her disappointment but a few weeks; during which time she cancelled a will that she had made in his favour, leaving him a large fortune of £8000 a-year; and ordered the poem to be published in which Cadenus had proclaimed her excellence and confessed his love. In 1724, his patriotism again burst forth, to obstruct the currency of Wood's halfpence; and his zeal was crowned with success. Wood had obtained a patent to coin 180,000 l. in halfpence and farthings for the kingdom of Ireland; and was about to turn his brass into gold, when Swift, finding that the metal was debased to an enormous degree, wrote letters under the name of *M. B. Drapier* to show the folly of giving gold and silver for coin not worth a third part of its nominal value. A prosecution was carried on against the printer; and lord Carteret, then lord lieutenant, issued a proclamation, offering £200 for discovering the author of the 4th letter. The day after, Swift brushed up to the lord lieutenant at a levee at the castle, and upbraided him in loud and petulant terms, with persecuting a poor shop-keeper whose crime was an endeavour to save his country from ruin; when lord Carteret, who had listened with great composure to the whole speech, made this fine reply, in a line of Virgil:

Res duræ, & regni novitas me talia cogunt
Melliri.

From this time Swift was considered by the populace as the champion, patron, and instructor of Ireland. In 1727 he returned to England; where, in conjunction with Pope, he collected three volumes of miscellanies; and the same year he sent into the world his *Gulliver's Travels*. Whilst he enjoyed the reputation of this work, he was suddenly called to a home of sorrow. Poor Stella was sinking into the grave; and after a languishing decay of about two months, died in her 44th year, Jan. 28, 1728. With her vanished all his domestic enjoyments; the severity of his temper increased; he drove his acquaintance from his table, and wondered why he was deserted. The fits of giddiness and deafness to which he had been subjected from his boyish years, became more frequent and violent as he grew old. In 1736, while he was writing a satire, called the *Legion Club*, against the Irish parliament, he was seized with so dreadful a fit of his malady, that he left the poem unfinished; and never after attempted a composition that required a course of thinking. From this time his memory gradually declined. In 1741, he became utterly incapable of conversation; and it was found necessary to appoint legal guardians to his person and his fortune. He now

lost all sense of distinction. During next year a short interval of reason ensuing, gave hopes of his recovery; but in a few days he sunk into lethargic stupidity, motionless, heedless, and speechless. After a year of total silence, however, when his housekeeper told him that the usual illuminations were preparing to celebrate his birth, he answered, "It is all folly; they had better let it alone." He at last sunk into a perfect silence, which continued till the 19th October 1745, when he expired without a struggle, in his 78th year. By his will, dated May 1740, just before he ceased to be a reasonable being, he left about 1200*l.* in specific legacies; and the rest of his fortune, which amounted to about 11,000*l.* to erect and endow a hospital for lunatics and idiots. He was buried in the most private manner, according to his will, in the great aisle of St Patrick's cathedral.

(2.) **SWIFT**, Deane, Esq. a near relation of the dean, grandson to Godwin Swift, the dean's uncle, was born in Dublin, educated at the university there, and completed his studies at Oxford. He had a fine taste, wrote entertaining verses, and was esteemed a perfect master of the Greek and Roman classics. He published *An Essay upon the Life, Writings, and Character of Dr Jonathan Swift*, 1755: 2. The 8th 4to vol. of the Dean's works, 1765: and, 3. His *Letters*, in 2 vols. 1768. He died at Worcester in 1783.

(3.) * **SWIFT**. *adj.* [*swift*, Saxon.] 1. Moving far in a short time; quick; fleet; speedy; nimble; rapid.—

The *swiftest* wing of recompense is slow

To overtake thee. *Shak.*

Swift-winged with desire to get a grave. *Shak.*
—As *swift* as the rock upon the mountains. *1 Chron.* xii. 8.—We practise to make *swifter* motions than any out of other muskets. *Bacon.*—

To him with *swift* ascent he up return'd. *Milt.*
—Things that move to *swift* as not to affect the senses distinctly, are not perceived to move. *Locke.*
—It preserves the ends of the bones from incalcescence, which they would contract from any *swift* motion. *Ray.*—

So the dull eel moves nimbler in the mud,
Than all the *swift* fin'd racers of the flood. *Dorf.*
Nor staying longer than one *swift-wing'd* night. *Prior.*

—The *swift-footed* martin pursued him. *Arbutnot.*—

Swift of foot, and terrible in fight. *Pope.*
Swift they descend, with wing to wing conjoin'd. *Pope.*

2. Ready.—Let every man be *swift* to hear. *Ja. i.* 19.—

To mischief *swift*. *Milton.*
(4.) * **SWIFT**. *n. f.* The current of a stream.—He can live in the strongest *swifts* of the water. *Walton.*

(5.) * **SWIFT**. *n. f.* [from the quickness of their flight; *apus*.] A bird like a swallow; a martin.—*Swifts* and swallows have remarkably short legs. *Derham.*

(6.) **SWIFT**, in geography, a river of England, which rises in Leicestershire, and falls into the Avon near Rugby in Warwickshire.

(7.) **SWIFT**, in ornithology. See **HIRUNDO**, No 2.

* **SWIFTLY**. *adv.* [from *swift*.] Fleetly; rapidly; nimbly; with celerity; with velocity.—These move *swiftly*, and at great distance. *Bacon.*
Pleas'd with the passage, we slide *swiftly* on,
And see the dangers which we cannot shun. *Dryden.*

Too *swiftly* fleet by human sight. *Prior.*
* **SWIFTNESS**. *n. f.* [from *swift*.] Speed; nimbleness; rapidity; quickness; velocity; celerity.—

All things thought upon,
That may with reasonable *swiftness* add
More feathers to our wings. *Shak. Henry V.*
We may outrun

By violent *swiftness* that which we run at,
And lose by over-running. *Shak. Henry VIII.*
Speed to describe whose *swiftness* number
fails. *Milton.*

Then curses his conspiring feet, whose scent
Betrays that safety which their *swiftness* lent. *Denham.*

Such is the mighty *swiftness* of your mind,
That, like the earth's, it leaves our sense behind. *Dryden.*

SWIFTYATE, a river in Gloucestershire.

* To **SWIG**. *v. n.* [*swiga*, Islandick.] To drink by large draughts.

SWIGAN, a town of Bohemia, in Boleslau.
* **SWILL**. *n. f.* [from the verb.] Drink, luxuriously poured down.—Give swine such *swill* as you have. *Mortimer.*—

Thus they swim in mutual *swill*. *Thomson.*
* To **SWILL**. *v. a.* [*swilgan*, Saxon.] 1. To drink luxuriously and grossly.—

The wretched, bloody, and usurping boar,
Swills your warm blood like wash. *Shak.*
—The most common of these causes are hereditary disposition, and *swilling* down great quantities of cold liquors. *Arbutnot.*—

Such is the poet, fresh in pay,
His morning draughts till noon can *swill*,
Among his brethren of the quill. *Swift.*

2. To wash; to drench.—
As fearfully as doth a galled rock,
Swill'd with the wild and wasteful ocean. *Shak.*
With that a German oft has *swill'd* his throat. *Philips.*

3. To inebriate; to swell with plenitude.—
To meet the rudeness and *swill'd* insolence
Of such late waiters. *Milton.*
He drinks a *swilling* draught. *Dryden.*
* **SWILLER**. *n. f.* [from *swill*.] A luxurious drinker.

(1.) **SWILLY**, an island in the S. Pacific Ocean, 13½ miles S. of the S. Cape of New Holland. Lon. 147. 6. E. Lat. 43. 55. S.

(2.) **SWILLY**, a river of Ireland, in Donegal, which runs into Lough Swilly.

(3.) **SWILLY**, LOUGH, a lake or bay of Ireland, on the N. coast of Donegal, 18 miles long, and from one to four broad, but above 30 in circumference. The S. end of it is 6 miles from Lough Foyle.

(4.) **SWILLY**, LOUGH. See **LOUGH SWILLY**.
* **SWIM**. *n. f.* [from the verb.] The bladder of fishes by which they are supported in the water.—The braces have the nature and use of tendons, in contracting the *swim*, and thereby transfusing the

the air out of one bladder into another, or discharging it from them both. *Grew.*

(1.) * *To SWIM. v. n. Pret. swam, swum, or swim.* [*swimman*, Saxon; *swemmen*, Dutch.] 1. To float on the water; not to sink.—I will scarce think you have *swam* in a gondola. *Shak.*—We have slips and boats for going under water; also *swimming* girdles and supporters. *Bacon.* 2. To move progressively in the water by motion of the limbs.

Leap in with me into this angry flood,

And *swim* to yonder point. *Shak. Jul. Cesar.*
I have ventur'd,

Like little wanton boys that *swim* on bladders,
These many summers in a sea of glory. *Shak.*
—The soldiers counsel was to kill the prisoners, left any of them should *swim* out and escape. *As* xxvii. 42.—The rest driven into the lake, were seeking to save their lives by *swimming*, they were slain in coming to land by the Spanish horsemen, or else in their *swimming* shot by the arquebusers. *Knolles.*—Animals *swim* in the same manner as they go. *Brown.*—

The frightened wolf now *swims* among the sheep;

The flag *swims* faster than he ran before. *Dryd.*
The ready Nereids heard and *swam* before.

Dryden.

3. To be conveyed by the stream.—Protection of them from the fury of those who would soon drown them, if they refused to *swim* down the popular stream with them. *King Charles.*—I *swam* with the tide. *Dryden.* 4. To glide along with a smooth or dizzy motion.—

She with pretty and with *swimming* gait

Following. *Shak.*

A hovering mist came *swimming* o'er his sight,
And seal'd his eyes in everlasting night. *Dryd.*

Priests, altars, victims, *swam* before my sight!

Smith.

O'er his eye-balls *swam* the shades of night.

Pope.

5. To be dizzy; to be vertiginous.—I am taken with a grievous *swimming* in my head. *Dryden.*

6. To be floated.—When the heavens are filled with clouds, when the earth *swims* in rain, I withdraw myself from these uncomfortable scenes. *Adison.*—

Sudden the ditches swell, the meadows *swim*.

Thomson.

7. To have abundance of any quality; to flow in any thing.—

They now *swim* in joy,

Ere long to *swim* at large.

Milton.

(2.) * *To SWIM. v. a. To pass by swimming.*—

Sometimes he thought to *swim* the stormy main,

By stretch of arms.

Dryden.

* *SWIMMER. n. f.* [from *swim*.] 1. One who swims.—Birds find ease in the depth of the air, as *swimmers* do in a deep water. *Bacon.*—Latrofitrous and flat-billed birds, being generally *swimmers*, the organ is wisely contrived for action. *Brown.*—

Life is oft preserv'd

By the bold *swimmer*.

Thomson.

2. The *swimmer* is situated in the fore legs of a horse, above the knees, and upon the inside, and almost upon the back parts of the hind legs, a

little below the ham: this part is without hair, and resembles a piece of hard dry horn. *Farrier's Dict.*

(1.) *SWIMMING, part. n. f.* the art of suspending one's self on water, and at the same time making a progressive motion through it. Although swimming is not natural to man, yet there are no nations so barbarous but the art is known among them, even in greater perfection than among civilized people. It is probable, therefore, that the art, though not absolutely natural, will always be acquired by people in a savage state from imitating the brutes, most of whom swim naturally. The theory of swimming depends upon this simple principle: that if a force is applied to any body, it will always move towards that side where there is the least resistance. This is evident in the motion of vessels; and the same thing takes place in swimming, whether the animal be man, quadruped, bird, or fish. When a man swims, he strikes the water with his hands, arms, and feet; in consequence of which the body moves in a direction contrary to the stroke. Upon this principle, and on this only, a man may either ascend, descend, or move obliquely, in any possible direction in the water. It is incredible what expert swimmers will perform in this way; of which Mr Forster gives a remarkable instance in the inhabitants of Otaheite; whose agility was such, that when a nail was thrown overboard, they would jump after it into the sea, and never fail to catch it before it came to the bottom. As to the practice of swimming, few directions can be given. The great obstacle is the natural dread which people have of being drowned; and this it is impossible to overcome by any thing but practice and habit. With regard to the real danger of being drowned, it is but little, and arises entirely from terror. Dr FRANKLIN justly observes, "1st, That though the legs, arms, and head, of a human body, being solid parts, are specifically heavier than fresh water, yet the trunk, particularly the upper part, from its hollowness, is so much lighter than water, as that the whole of the body, taken together, is too light to sink wholly under water, but some part will remain above until the lungs become filled with water; which happens from drawing water into them instead of air, when a person in the fright attempts breathing while the mouth and nostrils are under water. 2dly, That the legs and arms are specifically lighter than salt water, and will be supported by it; so that a human body would not sink in salt water though the lungs were filled as above, but from the greater specific gravity of the head. 3dly, That therefore a person throwing himself on his back in salt water, and extending his arms, may easily lie so as to keep his mouth and nostrils free for breathing; and by a small motion of his hands may prevent turning, if he should perceive any tendency to it. 4thly, That in fresh water, if a man throws himself on his back near the surface, he cannot long continue in that situation, but by a proper action of his hands on the water. If he uses no such action, the legs and lower part of the body will gradually sink till he comes to an upright position; in which he will continue suspended, the hollow of the breast keeping the head

head uppermost. 5thly, But if in this erect position the head is kept upright above the shoulders, as when we stand on the ground, the immersion will, by the weight of the part of the head that is out of the water, reach above the mouth and nostrils, perhaps a little above the eyes; so that a man cannot long remain suspended in water with his head in that position. 6thly, The body continuing suspended as before, and upright, if the head be leaned quite back, so that the face looks upwards, all the back part of the head being then under water, and its weight consequently in a great measure supported by it, the face will remain above water quite free for breathing, will rise an inch higher every inspiration, and sink as much every expiration, but never so low as that the water may come over the mouth. 7thly, If therefore a person unacquainted with swimming, and falling accidentally into the water, could have presence of mind to avoid struggling and plunging, and to let the body take this natural position, he might continue long safe from drowning; till perhaps help would come; for, as to the clothes, their additional weight, while immersed, is very inconsiderable, the water supporting it; though, when he comes out of the water, he would find them very heavy indeed." The Doctor's method of learning to swim is as follows: The person must walk into water so deep that it will reach to the breast. He is then to lie down gently on the belly, keeping the head and neck perfectly upright, the breast advancing forward, the thorax inflated, and the back bent; then, withdrawing the legs from the bottom and stretching them out, strike the arms forward in unison with the legs. Swimming on the back is somewhat similar to that on the belly; but with this difference, that although the legs are employed to move the body forwards, the arms are generally unemployed, and the progressive motion is derived from the movement of the legs. In diving, a person must close his hands together, and, pressing his chin upon his breast, make an exertion to bend with force forwards. While in that position, he must continue to move with rapidity under the surface; and whenever he wishes to return to his former situation, he has nothing to do but bend back his head, and he will immediately return to the surface. It is very common for povies to use corks or bladders to assist in keeping the body above the water. Dr Franklin allows that they may be of service for supporting the body while one is learning what is called the *stroke*, or that manner of drawing in and striking out the hands and feet that is necessary to produce progressive motion. "But (says he) you will be no swimmer till you can place confidence in the power of the water to support you: I would therefore advise the acquiring that confidence in the first place, especially as I have known several who, by a little of the practice necessary for that purpose, have insensibly acquired the stroke, taught as it were by nature. The practice I mean is this: Choosing a place where the water deepens gradually, walk coolly into it till it is up to your breast; then turn round your face to the shore, and throw an egg into the water between you and the shore; it will sink to the bottom, and be easily seen there, if the

water is clear. It must lie on the water so deep as that you cannot reach it to take it up but by diving for it. To encourage yourself to do this, reflect that your progress will be from deeper to shallower water; and that at any time you may, by bringing your legs under you, and standing on the bottom, raise your head far above the water: then plunge under it with your eyes open, throwing yourself towards the egg, and endeavouring, by the action of your hands and feet against the water, to get forward till within reach of it. In this attempt you will find that the water buoys you up against your inclination, and it is not so easy a thing to sink as you imagined; that you cannot but by active force get down to the egg. Thus you feel the power of the water to support you, and learn to confide in that power; while your endeavours to overcome it, and to reach the egg, teach you the manner of acting on the water with your feet and hands; which action is afterwards used in swimming to support your head higher above water, or to go forward through it." Many other rules have been laid down for acquiring this; but if a young man once gets rid of fear, these are sufficient, and by practice he may soon acquire various evolutions; or he may find a full account of these in the *Encyclopédie Méthodique*.

(2.) **SWIMMING OF FISH.** A great proportion of the inhabitants of the waters have an air-bladder, by which they poise themselves. Their movements chiefly depend upon their tail. See **ICHTHYOLOGICAL ZOOLOGY**.

* **SWIMMINGLY.** *adv.* [from *swimming*.] Smoothly; without obstruction. A low word.—John got on the battlements, and called to Nick, I hope the cause goes on *swimmingly*. *Arbutnot.*

SWINBRIDGE, a town of England, in Devonshire, W. of S. Moulton.

SWINCOMB, a small town of England, in Oxfordshire, E. of Wallingford.

To SWINDLE. *v. n.* [*schwindel*, German.] To cheat.

SWINDLER. *n. f.* [*schwindel*, Germ. to cheat.] Swindling has now become so common in several of the great towns of this country, that it is unfortunately too well known to require any description.

(1.) **SWINDON**, a town of England, in Wiltshire, on the top of a hill, built with stone, near a fertile valley, with a market on Monday; 10 miles N. of Marlborough, 28 N. of Salisbury, and 83 W. of London. Lon. 1. 45. W. Lat. 51. 30. N.

(2-4.) **SWINDON**; 3 towns: 1. in Gloucestershire; 2. in Staffordshire; 3. in Yorkshire, on the Ribble, SE. of Settle.

(1.) * **SWINE.** *n. f.* [*swin*, Sax. *swijn*, Dutch. It is probably the plural of some old word, and is now the same in both numbers.] A hog; a pig. A creature remarkable for stupidity and nastiness.

O monstrous beast! how like a *swine* he lies!
Shak.

—He will be *swine* drunk. *Shak.*

Now I sat his *swine* for others cheere. *Chapm.*
Whoever tasted, lost his upright shape,
And downward fell into a groveling *swine*.

Milton.
—Had the upper part, to the middle, been of human shape, and all below *swine*, had it been murder to destroy it? *Locke.*

How.

How instinct varies in the grov'ling swine,
Compar'd, half reas'ning elephant, with thine!

Pope.

(2.) SWINE in zoology. See SUS, N° III.
(3.) SWINE, in geography, a branch of the O-
DER, anciently called SUEVUS.

(4.) SWINE, a small town of Yorkshire, near
Constable Burton.

(5-7.) SWINE, or SWEYN. See SWENO, N°
I-3.

(1.) * SWINEBREAD. *n. f.* [*cyclaminus*.] A kind
of plant; trufflea. *Bailey.*

(2.) SWINEBREAD, in botany. See CYCLAMEN.

(1.) * SWINE GRASS. *n. f.* [*centinodir*, Lat.] An
herb.

(1.) SWINE-GRASS, or SWINE CRESS. See
COCHLEARIA.

* SWINEHERD. *n. f.* [*swin* and *hyrd*, Saxon.]
A keeper of hogs.—

There *swineherd*, that keepeth the hog.

Tusser.

—Eumeus, has been judg'd to be of the same
rank and condition with our modern *swineherds*.
Broome.

SWINEMUNDE, a town of Lower Saxony,
in the isle of Ufedom, at the mouth of the Peena,
at the N. end; built in 1775 on the ruins of
SWINE-SCHANZ. Lon. 31. 27. E. Ferro. Lat. 54.
8. N.

* SWINE-PIPE. *n. f.* [*turdus iliacus*.] A bird of
the thrush kind. *Bailey.*

SWINE-SCHANZ, a small town and fort of
Lower Saxony, in the isle of Ufedom, destroyed
by the Swedes, in 1757. See SWINEMUNDE.

SWINE'S CRESS, a species of COCHLEARIA.

SWINE-STONE. *Lapis Sæillus*, or *Fætid Stone*, so
called from its excessively fetid smell, is a species
of *Saline Stone*. It is found, 1. Solid, with the
particles scarcely visible, of a black colour; as the
marble of Flanders and Jutland. 2. With visible
grains of a blackish brown colour, found in Sweden.
3. With coarse scales, found also in Sweden.
Many of the limestones found in England, belong
to this species, and emit a very fetid smell when
struck violently; but it goes off in the fire. See
MINERALOGY, Part II. Chap. IV. Cl. I. Ord. II.
Gen. I. Sp. 1. § II. Var. 5.

SWINESUND, a town of Norway, in the
province of Aggerhuus; 5 miles NW. of Pre-
derickshald.

* SWING. *n. f.* [from the verb.] 1. Motion
of any thing hanging loosely.—In casting of any
thing, the arms, to make a greater *swing*, are
first cast backward. *Bacon*.—If any one should ask
how he certainly knows that the two successive
swings of a pendulum are equal, it would be
very hard to satisfy him. *Locke*. 2. A line on which
any thing hangs loose. 3. Influence or power of a
body put in motion.—

The ram that batters down the wall,

For the great *swing* and rudeness of his poise,

They place before his hand that made the en-
gine.

Shak.

—In this encyclopædia, and round of knowledge,
like the great wheels of heaven, we're to observe
two circles, that, while we are daily carried
about, and whirled on by the *swing* and rapt of
the one, we may maintain a natural and proper

course in the sober wheel of the other. *Brown*.—
The descending of the earth to this orbit is not
upon that mechanical account Cartesius pretends,
namely, the strong *swing* of the more solid glo-
buli that overflow it. *More*. 4. Course; unrestrain-
ed liberty; abandonment to any motive.—

Facts unjust

Commit, even to the full *swing* of his lust.

Chapman.

Take thy *swing*.

Dryden.

—His whole time lay upon his hands, and gave
him leisure to contrive, and with full *swing* pur-
sue his follies. *Woodward*.—

Let them all take their *swing*

To pillage the king.

Saunders.

5. Unrestrained tendency.—Where the *swing*
goeth, there follow, fawn, flatter, laugh, and be
lustily at other mens liking. *Ascham*.—Those that
are so persuaded give up themselves to the *swing*
of their unbounded propensities. *Glanville*.—Were
it not for these, civil government were not able to
stand before the prevailing *swing* of corrupt na-
ture. *Scutb*.

(1.) * TO SWING. *v. n.* [*swingan*, Saxon.] 1.
To wave too and fro hanging loosely.—I tried if:
pendulum would *swing* faster, or continue *swing-
ing* longer in our receiver, in case of exhalation
of the air. *Boyle*.—If the coach *swing* but the lead
to one side, she used to shriek so loud, that all
concluded she was overturned. *Arbutnot*.—Jack
hath hang'd himself; let us go see how he *swings*.
Arbutnot.—

When the *swinging* signs your ears offend

With creaking noise, then rainy floods impend

Gay

2. To fly backward and forward on a rope.

(1.) * TO SWING. *v. a.* preterite, *swing*, *swing*
1. To make to play loosely on a string. 2. To
whirl round in the air.—

His sword prepar'd,

He *swing* about his head.

Shak.

—Take bottles and *swing* them. *Bacon*.—*Swing-
ing* a red-hot iron about, it will sooner grow cold
Brown.—

Swing thee in the air, then dash thee down.

Milton

3. To wave loosely.—

If one approach to dare his force,

He *swings* his tail.

Dryden

(1.) * SWINGE. *n. f.* [from the verb.] A way
a sweep of any thing in motion. Not in use.—

The shallow water doth her force infringe,
And renders vain her tail's impetuous *swing*.

Waller.

(1.) SWINGE, in geography, a river of German
in the duchy of Bremen; which runs past Stade
into the Elbe.

* TO SWINGE. *v. a.* [*swingan*, Saxon. The
in this word, and all its derivatives, sounds as
gem, *giant*.] 1. To whip; to bastinado; to
punish.—Sir, I was in love with my bed; I thank
you, you *swing'd* me for my love. *Shak*.—

This very rev'rend lecher, quite worn out
Forgets what he in youthful times has done.

And *swing*s his own vices in his son. *Dryd*.

—The printer brought along with him a bundle
of those papers which have *swing'd* off the En-
miner. *Swift*. 2. To move as a lash. Not in u

He, wroth to see his kingdom fail,

Swizes the scaly horror of his folded tail. *Milt.*

• **SWINGEBUCKLER.** *n. f.* [*swing* and *buckler*.] A bully; a man who pretends to feats of arms.—You had not four such *swingebucklers* in all the inns of court again. *Shak.*

• **SWINGER.** *n. f.* [*from swing*.] He who swings; a hurler.

(1.) • **SWINGING.** *adj.* [*from swing*.] Great; huge. A low word.—The countrymen seeing the lion disarmed, with a *swinging* cudgel broke off the match. *L'Esfrange*.—A good *swinging* sum of John's readiest cash went towards building of Horcus's countryhouse. *Arbutnot*.

(2.) • **SWINGING.** *part. n. f.* A kind of exercise strongly recommended to persons in consumption by some physicians, and disapproved of by others. See *MEDICINE. Index*.

• **SWINGINGLY.** *adv.* [*from swing*ing, or *swing*.] Vastly; greatly.—

Peace forward he'll print neither pamphlet nor linen,

And, if swearing can do't, shall be *swingingly* mau'd. *Swift.*

SWINGLE. *n. f.* in the fire-works in England, the wooden spoke which is fixed to the barrel that draws the wire, and which, by its being forced back by the cogs of the wheel, is the occasion of the force with which the barrel is pulled.

• **To SWINGLE.** *v. n.* [*from swing*.] 1. To dangle; to wave hanging. 2. To swing in pleasure.

SWING-TREE. *n. f.* of a waggon, is the bar fastened across the fore guide to which the traces of the horses are fastened.

SWING-WHEEL. *n. f.* in a royal pendulum, that wheel which drives the pendulum. In a watch or balance clock it is called the *crown-wheel*.

SWINHULT. a town of Sweden, in E. Gothland; 40 miles S. of Linköping.

(1.) • **SWINISH.** *adj.* [*from swine*.] Befitting swine; resembling swine; gross; brutal.—

They clepe us drunkards, and with *swinish* phrase

Soil our addition. *Shak.*

Swinish gluttony

Ne'er looks to Heav'n. *Milton.*

(2.) **SWINISH MULTITUDE.** a contemptuous expression, used by the late celebrated Edmund Burke, Esq. for the lower ranks of mankind.

• **SWINK.** *n. f.* [*swine*, Saxon.] Labour; toil; drudgery. Obsolete.—

Ah, Piers, been thy teeth on edge, to think
How great sport they gaynen with little *swinke*? *Spenser.*

Thou's but a lazy boorde,

And rekes much of thy *swinke*. *Spenser.*

(1.) • **To SWINK.** *v. n.* [*swine*, Saxon.] To labour; to toil; to drudge. Obsolete.—

Riches, renown, and principality,
For which men *swink* and sweat. *Spenser.*

For they do *swink* and sweat to feed the
other,

Who live like lords. *Spenser.*

(2.) • **To SWINK.** *v. a.* To overlabour. Obsolete.—

The *swinked* hedger at his supper sat. *Milt.*

VOL. XXII. PART I.

SWINNA. an island of Scotland, in the Pentland Frith, one mile long and half a mile broad, inhabited by 6 families, and about 22 souls, who live chiefly by piloting vessels through the dangers of the frith, and the whirlpools, called the Wells of SWINNA.

(1.) **SWINTON.** John, a very celebrated English antiquary, the son of John Swinton of Bex-ton, gent. was born in Cheshire in 1703. His parents were not affluent, as he was entered at Oxford as a servitor at Wadham college, in Oct. 1719. On June 30, 1723, he was elected a scholar on a Cheshire foundation. In Dec. 1723, he became B. A. and on Dec. 1, 1726, M. A. He was ordained deacon, May 30, 1725; priest, May 28, 1727; and made rector of St Peter le Builey in Oxford, in Feb. 1728. In June 1728 he was elected a fellow of his college; but willing to see the world, he accepted of a chaplainship to the English factory at Leghorn. But as he did not enjoy his health, he went to Florence in April 1735, where he attended Mr Coleman, the English envoy, in his last moments. He returned through Venice and Vienna, and visited Preburg, in Hungary. While he was abroad, he was admitted into some foreign societies; viz. the academy degli *Apatisti* at Florence, and the *Etruscan Academy* of Cortona. On his return, he settled at Oxford, where he became chaplain to the goal. He married in 1743, and gave up his fellowship. In 1759, he became B. D.; in 1767, he was elected *Custos Archivorum*; and, on April 4, 1777, he died without issue. His wife died in 1784, and both were buried in the chapel of Wadham college. His publications were numerous and learned. He published. 1. *De Linguz Etruziz Regalia vernacula Dissert.* 4to, 19 p. Oxon. 1738. 2. A critical essay on the words *Antiqua* and *Supra*. 8vo. London, 1739. 3. *De prisicis Romanorum literis*; 4to, 20 p. Ox. 1746. 4. *De Primogenio Etruscorum Alphabeto*; Ox. 1846. 5. *Inscriptiones Citicæ*; five in binas Inscriptiones Phœnicias, inter rudera Citi nuper repertas, conjecture. Accedit de nummis quibusdam Samaritanis et Phœniciis, vel insolitam præ se literaturam ferentibus, vel in lucem hactenus non editis, dissertatio, 3to, 87 p. Ox. 1750. 6. *Inscriptiones Citicæ*; five in binas alias Inscriptiones Phœnicias, inter rudera Citi nuper repertas, conjecture, 4to, 19 p. 7. *De nummis quibusdam Samaritanis et Phœniciis, vel insolitam præ se literaturam ferentibus, vel in lucem hactenus non editis diff.* ada. 4to, 36 p. 8. *Metitia*; five de quinaria Gentis Metulæ, et nummis vetustis ceteroquin minimum notæ, diff. 4to, 22 p. Ox. 1750. 9. Several dissertations in the *Philos. Trans.* As a dissertation upon a Parthian Coin; with characters on the reverse resembling those of the Pahnynenes, vol. xlix. p. 593. Remarks on a Parthian Coin, with a Greek and Parthian legend, vol. l. p. 16. A dissertation upon the Phœnician numeral characters anciently used at Sidon, vol. li. p. 791. In nummum Parthicum hactenus ineditum conjecture, vol. li. p. 683. A dissertation upon a Samite Denarius, vol. lii. p. 28. An account of a tubercated Denarius of the Ptolemaic family, with an Etruscan inscription, vol. lxii. p. 60. Observations upon five ancient

Persian Coins, struck in Palestine or Phœnicia before the dissolution of the Persian empire," vol. lxii. p. 345. 10. A part of the Ancient Universal History, in the 6th and 7th vols. of that work. The particulars of this piece of literary history were communicated by Dr. Johnson to Mr. Nichols, in a paper printed in the *Genl. Mag.* for Dec. 1784. The original is deposited in the British museum. It assigns the following divisions of the history to Mr Swinton. "The history of the Carthaginians, Numidians, Mauritanians, Gætulians, Garamantes, Melano Gætulians, Nigritæ, Cyrenaica, Marmorica, the Regio Systica, Turks, Tartars, and Moguls, Indians, and Chinese; a dissertation on the peopling of America, and one on the independency of the Arabs.

(2.) SWINTON, a parish of Scotland, in Berwickshire, united with that of SIMPRIN, in 1761. The two extend 4 miles from E. to W. in length and from 3 to 3½ in breadth from N. to S. The surface consists of gently sloping hills and alternate flats, with some small marshes. The soil is deep and fertile, producing good crops and fine grafs. The *Lee* runs through it, and sometimes overflows its banks. It abounds with good freestone. The population, in 1792, was 898; the increase 404, since 1755. The name of the parish and of the family of Swinton, whose property it is, originated from the district having been granted to the first of that family for clearing the ground of *swine*, which is confirmed by the armorial bearing of the family. The Swintons made a conspicuous figure in the reign of Malcolm Canmore, who confirmed their right to the property of the parish, by one of the oldest Scottish charters extant, which is still preserved in the archives of Durham. Notwithstanding its situation on the borders of the two kingdoms, and the turbulent spirit of the barons, this property continued in the possession of the same family for 731 years, and, including the last proprietor, was possessed by 22 barons within that period.

(3.) SWINTON, a village in the N.E. corner of the above parish; containing 357 inhabitants, in 1792; when the adjacent village of SIMPRIN contained 75 persons.

(4.) SWINTON, a town of Yorkshire, near a canal on the Don, with a pottery and iron manufacture; 9 miles SW. of Doncaster, and 165 N. of London.

SWIRSEN, a town of Germany, in Upper Saxony, in Farther Pomerania; 7 m. ESE. of Polnow.

(1.) SWISS, *adj.* Of or belonging to Switzerland, or the Helvetic republic.

(2.) SWISS, or } *n. s.* the people of Switzerland.

(2.) SWISSERS, } *land.*

SWISSERLAND. See SWITZERLAND.

* SWITCH, *n. s.* A small flexible twig.—Fetch me a dozen crabtree staves, and strong ones; these are but *switches*.—*Shak.*

When a circle 'bout the wrist

Is made by handle exercise,

The body feels the spur and *switch*.—*Hudibras.*
—Mauriana, on the fifth medal, leads a horse with something like a thread; in her other hand she holds a *switch*.—*Addison.*

* To SWITCH, *v. a.* [from the noun.] To lash; to jerk.—

Lay thy bridle's weight

Most on the left side; thy right horse thou *switchest*.—*Chapman.*

SWITZ, or SCHWITZ, a canton of the Helvetic republic, with its capital, which give name to the whole country of SWITZERLAND. See SCHWITZ, N^o 1. and 2.

SWITZER, a native of Switzerland.

(1.) SWITZERLAND, or SWISSERLAND, a mountainous country of Europe, bounded on the N. by Swabia; E. by Tyrol and Austrian Suabia; S. by the ci-devant duchy of Savoy and Italy; and W. by old France; being about 260 miles long, and 100 broad. But the rev. Mr Cruttwell makes it only 180 miles long from E. to W. and 140 broad. It was divided into 13 cantons, viz. BERNE, ZURICH, SCHAFFHAUSEN, BASEL, LU-CERNE, UNDERWALDEN, URI, SCHWITZ, TRIBURG, ZUG, SOLEURE, GLARIS, and APPENZEL. See these articles.

(2.) SWITZERLAND, CLIMATE, SURFACE, SOIL, AND PRODUCE OF. The climate of this country is very various. That part of the canton of Berne, E. of the lake of Geneva, together with the cantons of Uri, Schwitz, Underwalden, Glaris, Appenzel, and part of the canton of Lucerne, consist of stupendous mountains, whose tops are from 9000 to 12,000 feet above the level of the sea, consisting of craggy inaccessible rocks, of which some are quite bare, while others are always covered with ice and snow. Among the mountains are many excellent medicinal and other springs, cold and warm baths, water-falls, craggy precipices, deep narrow valleys, and caverns. They yield also a great variety of herbs, thickets, and bushes, in the upper parts; and in the lower, rich pastures and woods. The highest are those in the canton of Uri. Many of the valleys are covered with lakes, or watered by brooks and rivers. In some of them are towns, villages, woods, vineyards, and corn lands. Both on the mountains and in the valleys the air is extremely cold in winter; but in summer it is very pleasant, cool, and refreshing on the former, but excessively hot in the latter. Sometimes it is winter on the N. side of a mountain when it is summer on the S.; nay, flowers may be gathered sometimes with one hand, and snow with the other. Predigious masses of ice and snow often fall from them in winter, and do a great deal of damage; (see GLACIERS); and most of the streams and rivers take their rise from the thawing of the ice and snow on the sides and tops. From the rising or descending of the clouds, with which they are commonly enveloped, the inhabitants can pretty exactly foretel the changes of the weather. The other and lower parts of Switzerland are very pleasant and fertile, being diversified with vineyards, corn-fields, meadows, and pasture grounds. The mountains in these are but mole hills in comparison of the others: there is neither snow nor ice on them in summer; and they afford not only good pasturage, but arable ground. (See § 10.) In the lower parts of Switzerland they grow oats, barley, flax, and hemp. Wines of various sorts are also produced in some of them, with variety of fruits. Of wood for fuel and other uses there is generally plenty; in some places however

however, they are obliged to burn sheep's dung, and in others a kind of heath and small shrubs. In the valleys they cultivate fasson with success. Barley is sowed on the very ice mountains, the oats in a warmer soil; rye in a warmer still, and the warmest of all is assigned to spelt. In most parts a threefold produce is accounted a tolerable harvest. Flax, hemp, and tobacco, are much cultivated. Apples, pears, nuts, cherries, plums, and chestnuts are plentiful; and the part towards Italy abounds in peaches, morelles, almonds, figs, citrons, pomegranates, and others of the more delicate fruits.

(3.) SWITZERLAND, HISTORY OF, TILL THE SECTION OF THE HELVETIC CONFEDERACY. The Swiss were anciently called *HELVETI*, and the country *HELVETIA*, whence the modern name of the *HELVETIC REPUBLIC*. See *HELVETIA*, and *HELVETIC*, § 1-3: The ancient Helvetians were a Gaulish or Celtic people, and Helvetia was divided into 4 cantons or territories. Julius Cæsar was the first who reduced the inhabitants under the dominion of the Romans, and these founded colonies here under the names of *Julia Equestris*, *AVGUSTA RAUROCORUM*, and *Acuticum*. Their dominion continued till the 5th century, when the country was over-run by the Burgundians and Germans; but soon after the Franks made themselves entire masters of it. On the decease of Lewis I. king of the Franks, and emperor of the Romans, the S. part of Helvetia, or Burgundy, devolved to the emperor Lotharius, and the N. or that of *ALLEMANN*, to king Lewis the German. Lotharius II. son to the former, and king of Austria, retained the S. part of Helvetia, which, together with Burgundy, or *FRANCIE COMTE*, was styled the *Lesser Burgundy*. After his demise, this S. part also devolved to Lewis the German, who thus became possessed of all Switzerland, and from him it descended to his son, Charles the Fat. In 888, Rodolphus, duke of the Lesser Burgundy, took on him the title of king, but the N. part of Switzerland continued under the dominion of the emperor Arnolphus. Rodolphus II. son to the former, obtained a grant of the Argau from the emperor Henry I. This prince was succeeded by his son Conrad, as the latter was by his son Rodolphus III. who, in 1052, by a formal will, bequeathed his kingdom of the Lesser Burgundy to the emperor Conrad II. whereby all Switzerland once more became united to the German empire. In the 13th century, it became a third time a nominal province of the German empire, which, however, was possessed of little real authority here. A great part of the country was in the hands of the clergy, and the remainder in general of particular nobles. The inhabitants of Uri, Schwitz, Underwald, and the territory of Glaris, were, from time immemorial, possessed of the right of being governed by their own magistrates, with other important privileges; and, in the 12th century, the three first entered into an alliance, which they solemnly renewed every tenth year. They had always declared themselves averse to the authority of the emperor's *Rathsholder* in Switzerland, till, in 1299, Otto IV. compelled them to receive Rodolphus III. count of Habsburg, as his representative, though

he was to take an oath that he would govern according to law and equity, and make no encroachments upon their rights and liberties. This nobleman seems to have been little observant of that engagement; for, in 1311, we find them unanimously addressing the emperor, Henry VII. to recall him; which he accordingly did, further confirming to them all their privileges. In 1249, the like was done by his successor, Frederic. In 1257, during the interregnum, in consideration of his great power, they chose for their protector Rodolphus V. count of Habsburg, who, in 1273, became emperor of Germany. At the solicitation of his son, Albert, duke of Austria, he intended to have erected a particular dukedom in Switzerland, which design did not transpire till several years after, when it appeared that he had purchased of the abbot of Murbach the town of Lucern, with his revenues, and prerogatives in several villages in the territory of Schwetz. These three districts, on the death of Rodolphus, faithfully adhered to his successor, the emperor Adolphus, which gave so much offence to his son, duke Albert, that on his accession to the crown of Germany, on the death of the latter, he displayed his resentment in more than one instance, not only refusing peremptorily to confirm their privileges, without vouchsafing to allege any reason for his refusal, but likewise setting over them two noblemen of the most infamous character for avarice and arrogance, whose administration became quite insupportable. On this, feeling that nothing less was in agitation than the total deprivation of their liberties, and the bringing them under the yoke of Austria, they united in a firm resolution to defend themselves to the last extremity. The tyranny of *Griser*, the Austrian governor, hastened this revolution, by his barbarously ordering William Tell, the celebrated Swiss patriot, to shoot an apple off his son's head at a considerable distance. Tell, having accomplished this, without hurting his son, Griser observed, that he had another arrow concealed under his cloak, and asked him, for what purpose that was.—To which Tell boldly replied “To have shot *you* through the heart if I had had the misfortune to have killed my son.” On this the enraged Governor ordered Tell to be hanged, but his fellow citizens, flew to arms, attacked and vanquished Griser, who was shot to death by William Tell, and instantly formed an association for their independence. This memorable event happened on the 7th of Nov. 1307. (See *TELL*.) *Arnold Melchthal* of Underwalden was the first who raised the standard of liberty. The citizens chose for commanders 3 gentlemen of approved courage and abilities; namely, Werner, or Gerhard Stauffach, of Schwitz, Walthur Furst, of Uri, and Arnold Melchthal above mentioned, who secretly agreed together, that on the first day of Jan. 1368, they should surprise and demolish the castles in which the imperial governors resided. This resolution being effected, these three places joined again in a league for ten years, which gave birth to the Helvetic confederacy. *SWITZ* being the most powerful of the three confederate places, and the first meeting of the confederates being held at *Bramen*, in its territories, as also the first league concluded there

there, and after that the first battle, by the success of which the liberty of the confederates was retrieved, being fought within its jurisdiction, its name was given to the general confederacy. The emperor Albert thinking that this was the season for totally reducing these three places by force of arms, hastened to Baden, to begin the preparations, but being, on his return, murdered by his brother's son, John of Habsburg, the design was dropped; till, not long after, the house of Austria invented another pretence for falling on the United Cantons. For their and other parts of Switzerland, adhering to the emperor Lewis of Bavaria, his competitor, Frederic of Austria, was so extremely irritated, that the Switzers having, during their contests with the abbey of Einsiedlen, made some of its monks prisoners, put them under the ban, to which the bishop of Constance added excommunication. The former was taken off again by the emperor Lewis, and the latter by the Abp. of Mentz. Leopold duke of Austria, by virtue also of a commission from his brother Frederic, above mentioned, in 1315, attacked the confederates with a powerful army, but was defeated by them at Morgarten. Hereupon, on the 8th of Dec. 1315, they entered into a perpetual alliance, which proved the origin of the late Helvetic confederacy. In 1332, Lucern acceded to it; in 1351, Zurich and Glarus; and in 1352 their number was increased by the accession of Zug and Bern.

(5.) SWITZERLAND, HISTORY OF, TILL THE TREATY OF WESTPHALIA. For the space of 125 years, this confederacy was composed only of the above 8 territories or cantons, on which account they are called the Old Cantons. In 1481, Friburg and Soleure, and in 1501, Basil and Schaffhausen, were admitted into the confederacy; and in 1513 Appenzel also acceded to it. These 13 towns and counties, which properly constituted the HELVETIC REPUBLIC, were united by a reciprocal convention, which, though not in all places the same, and the unions of the 8 old and 5 later cantons differing in certain respects, yet in the principal points nearly agreed; the first and chief articles relating to the succour, assistance, and protection, to be given to any one of them in case of any unjust violence, and determining in what manner and by whom the reasons for any military enterprise should be discussed, as also how and where such succour should be given, and stating both the expences of the war and the distribution of any acquisitions. The 2d article regulated their procedure in accommodating any differences which might arise between two or more towns or cantons, &c. In some leagues, and particularly in those of the old towns, it was permitted to enter into any other connections at pleasure, provided such connections did not affect the original confederacy; but in the conventions with the later towns and cantons, it was expressly stipulated that they should not contract any engagements without the privacy, advice, and consent of the old ones. The federal union, however, extended no farther than to the succours stipulated in the leagues, and other cases set forth in the same; in all other incidental affairs relative to the confederacy, the majority of votes was not obligatory to the whole body; particularly with

respect to the making of alliances with foreign powers, wherein every town and canton was at liberty to act as a contracting party or not, and that even though such alliance should have been approved of by all the other towns and cantons. Thus the whole Helvetic body consisted properly of 13 distinct republics or free states, united by oath for their mutual security and maintenance. It had for some centuries before the French revolution, supported itself in an absolute freedom and independency, enjoyed all the privileges of majesty, made wars, concluded treaties, received and sent envoys from and to the several European powers, entered into alliances with them, given what form they thought proper to their constitution, enacted laws and ordinances both in temporal and spiritual affairs, and exercised all the various prerogatives of sovereignty. Accordingly, at the peace of Westphalia, in 1648, it was acknowledged to be a free state, even by the emperor and empire.

(5.) SWITZERLAND, HISTORY OF, TO THE PRESENT TIME. This brave nation continued to enjoy their freedom and independence, under their respective various constitutions with little interruption, except what took place in their internal governments, by occasional alterations from 1648, till the commencement of the French Revolution in 1789. But soon after that great event, which more or less convulsed all the states of Europe, the rage for innovation, and the hopes of establishing a perfect liberty and equality, reached the Swiss Cantons: and the democratic party not only attempted to overturn the old aristocratic governments, but even to new-model those democratic cantons, the governments of which by universal suffrage, and other established privileges appeared to be as perfectly free as they could be rendered by any change. At last, on the 22d March 1798, they were revolutionized upon the plan of the French republic, under a director and two councils. (See HELVETIC REPUBLIC § 3.) After this the whole country was repeatedly over run, and successive changes made in its government, by the different belligerent powers while the inhabitants, notwithstanding the natural strength of their situation, were subjected to all the horrors of war, as related under the article REVOLUTION, N^o VI, § 33, 38—40; 43—44. We need only add, that the whole of this once free country, except such portions of it as has been annexed to the French empire, or the Italian kingdoms, (See § 12.) and these need hardly be excepted, being still under the same imperial despotism, are now entirely subjected to the arbitrary will and pleasure of the emperor Napoleon, who, together with his other titles, has assumed that of Mediator of Switzerland.

(6.) SWITZERLAND, INHABITANTS OF. The Switzers are a brave, honest, hospitable, hardy, people very true to their engagements, friendly and humane. In short, there is not a people in Europe whose national character is better. In their persons they are generally tall, robust, and well made; by their complexions are none of the best, and the that live in the neighbourhood of the mountains are subject to wens. The women are generally handsome and well-shaped, sensible and mode-

yet frank, easy, and agreeable in conversation. Few of the peasants are miserably poor; many of them are rich, especially in the Protestant cantons, and that of Berne in particular.

(7.) SWITZERLAND. LATE CONSTITUTION AND GOVERNMENT OF. The late form of government in the several states of the Helvetic republic, was in some monarchical, in others aristocratical, and in others democratical. Their sovereigns were the princes of the empire, such as the bishop of Basle, and the abbot of St Gall. The aristocratical governments were, the cantons of Zurich, Basle, and Schaffhausen, with some incorporate places, as the towns of St Gall, Muhlhausen and Biel, the cantons of Bern, Lucern, Friburg, and Solure, over which were appointed *Schultheissen* or justices, and Neuchatel and Geneva. The democratical form of government prevailed in the six cantons of Uri, Schwitz, Unterwalden, Zug, Glaris, and Appenzell, which were under the direction of *Landsammans*; as also, though with some variation in the Grisons and the Valais, but in all, every male of the age of 16, whether master or servant, had a vote in the enacting of laws, and electing of magistrates. The general annual diets were held at BADEN or *Frauenfeldt*, extraordinary diets at ALCOR. Lucern took the lead of the Roman catholic cantons, but ZURICH, though less powerful than Berne, took the precedence of the whole. With respect to their military establishment, the only regular forces here were those of the garrisons of Zurich, Bern, Basle, Geneva, and Arburg; but every burgher, peasant, and subject, was diligently to exercise himself in the use of arms, to appear on the stated days for shooting at a mark, to furnish himself with proper clothing, accoutrements, powder and ball, to be always ready for the defence of his country, and punctually to comply with every article of war. Switzerland was, and probably still is, well provided with arsenals, particularly at Bern; but the only fortified places in it are Solure, Zurich, Bern, Basle, and Arburg. The Swizers engaged in the service of foreign princes and states, either merely as guards, or as marching regiments; in the latter case, the government permitted the enlisting volunteers, though only in such states as they were in alliance or had made a previous agreement with: and no subject was to be forced into foreign service, nor even to be enlisted without the concurrence of the magistracy. All the advantages arising to the regencies from these levies were usually only an annual subsidy paid by the state in whole favour the levies were thus granted; and perhaps a promise of reciprocal aid when necessary. A public benefit, however, attending this custom was, that these men returning home after a long service abroad, were a great improvement to the standing militia of their country. The confederates of the Swiss Cantons were the abbot of St Gall and the Valais; the Grisons, towns of Geneva, St Gall, Bienne, Muhlhausen, and Neuchatel. The independent states under the protection of the states or the allies were Grisaun, Engelberg, and Kapperschweil, Roman Catholics; and Haldenstein, Protestants. The subjects were Baden, Morat, Granfon, Echalen, Orbe, Schwartzenburg, Werdenberg, and Bienne, Protestants;

the free bailiwicks, Uznach, Gaster, the Italian bailiwicks, Rom in catholics; and the Thurgau, Rheintal, Surgans, and Tockenburg, mixed. But great changes have taken place in the constitution and government of this country during the late revolutionary war. See § 12, and REVOLUTION, § VI.

(8.) SWITZERLAND, MANUFACTURES AND TRADE OF. The principal manufactures are linen of several sorts, lace, thread, silk, and worsted stockings, neck-cloths, cotton stuffs, gloves, handkerchiefs, silks of several sorts, gold and silver brocades, a variety of woollen manufactures, hats, paper, leather of all sorts, earthen wares, snuff and tobacco, porcelain, watches, clocks, toys, and other hardwares, &c. Trade is greatly promoted by many navigable lakes and rivers. In some of the above manufactures, and in cheese, butter, sheep, horses, black cattle, hides, and skins, the exports are considerable; and as the imports are chiefly grain and salt, with some American and Asiatic goods, there is a large balance in their favour. In some parts of Switzerland drefs was restrained by sumptuary laws.

(9.) SWITZERLAND, MINERALS IN. Slates, black and variegated marble, porphyry, gypsum, alabaster, crystal, saltpetre, salt, coal, &c. abound here, with silver, copper, lead, and iron ores. Gold dust is found in the sands of several rivers, particularly the Rhine, Emmet, Aar, Reufs, Arve, and Inn. Iron ore also abounds and is wrought.

(10.) SWITZERLAND, MOUNTAINS, CATARACTS, MEDICINAL SPRINGS, &c. OF. The greater part of this country is composed of mountains, with narrow valleys between: these mountains are composed of stupendous rocks, two, four, or six masses, piled on each other, and from 4000 to 10,000 feet in perpendicular height. One peak, on mount St GOTHARD, is, by Du Cret computed at 16,500 French feet. The lower part of these high mountains are covered with woods and pastures, the herbage in which is of a remarkable length and richness. The middle consists of Alps abounding in a great variety of odoriferous herbs, thickets, and bushes, with excellent springs, in summer resorted to by herdsmen, with their cattle. The third part of these mountains consists almost entirely of craggy and inaccessible rocks, some of which are quite bare, without herbage growing upon them, or even so much as grass, whilst others are continually covered with snow and ice. The valleys between these mountains appear like so many smooth frozen lakes. The ice hills begin in the canton of Glarus, and after passing through the territory of the Grisons, and thence into the canton of Uri, terminate in that of Bern. The highest of these mountains are those in the canton of Uri, viz. St Gothard, Firka, Crispalt, and Lucmanier, which send forth rivers to all parts of Europe. This is the most dreary part of all Switzerland, and on the summits of the mountains one eternal cold almost prevails, with hard gales of wind and very damp fogs. During the greatest part of the year, the clouds lie beneath the peaks of the highest mountains, inasmuch, that from thence they appear like a sea, the peaks projecting among them like islands. Sometimes, too, they break, and thus display a

VIEW

view of the country beneath. Not one of the mountains is without a cataract; and as the eye, by reason of the intervention of the clouds, is not always able to reach the beginning of them, they look as if poured down from heaven upon the rocks. Among these mountains are many excellent springs, some of which are medicinal, others warm, and others cold baths, celebrated for their extraordinary virtues. Of these summits, too, some form a part of the Alps, so frequently mentioned in the Greek and Roman writers, the AP-PENNINES (or *Alpes Summe*, now ST GOTHARD and *Crispalt*), with the *Alpes Leponticæ*, the *Alpes Rheticæ*, &c. Very different from this is the remaining and smaller part of Switzerland, including the county of THURGAU, which is a part of the cantons of Zurich, Schaffhausen, Bern, Basil, Soleure, and Fribourg; for though this district is not without mountains, some of which are even 2000 or 2500 feet high, yet it is much more level than the above-mentioned parts: the mountains, and sometimes also the very summits, are covered with vineyards, corn-fields, meadows, and pasture grounds. Here are likewise no Alps nor rocky precipices, no cataracts, few trees, and in summer neither snow nor ice. The mountains, instead of being interrupted by vast chasms or abysses, are generally entire, and composed of a few small eminences, the summits of which, far from shooting out into peaks, are flat or round, to the extent of many miles, without any considerable inequality, and frequently afford not only pasturage, but also arable ground. It is only during long rains, that in these parts the clouds link below the eminences. Great numbers of petrifications, more particularly of marine shells and plants, are found among them. The fields, too, though generally stony, are fertile, and the meadows in most places are planted with fruit-trees. This more level part of Switzerland is watered only by a few rivers, but these are large.

(11.) SWITZERLAND, POPULATION, LANGUAGE, RELIGION, EDUCATION, &c. OF. Switzerland is not so populous as many other countries in Europe; the Popish cantons are less so than the Protestant. The total number of the inhabitants is computed at two millions. The language generally spoken is the German, in which also all public affairs are transacted; but in those parts of the country that border on Italy or France, a corrupt French or Italian prevails. The two predominant religions are Calvinism and Popery. Of the former are the cantons of Zurich and Bern, the town of St Gall, Mühlebühl, and Biel, the principality of Neuchâtel, the greater part of Basil, Schaffhausen, the country of the Grisons, the Thurgau, Toggenburg, Glaris, and the Rhine valley; the frontiers of Appenzel, with a small part of Solothurn, and some places in the countries of Baden and Sargans. The rest of the Swiss cantons are Popish. For the education of youth there is an university at Basil, and academies at Zurich, Berne, Lausanne, and Geneva, besides *gymnasia* and *scholæ illustres*, both in the Popish and Protestant cantons. There are also societies among them for the improvement of the German language and the sciences.

(12.) SWITZERLAND, PRESENT STATE OF.

The present political state of this country being mentioned above, in § 5. we have only to take notice of the geographical alterations which have been made upon it during and since the late revolutionary war. Of these the most flagrant was the compelling of the citizens of Geneva in 1798, to annex their city and republic to the French republic. (see GENEVA, N° 1.); in consequence whereof they now form the department of LAC LEMAN in the French empire. To that empire is also annexed the whole of the PAYS DE VAUX, or country of the celebrated VAUDOIS, or WALDENSES. The VALTELINE, CHIAVENNA, and BORMIO, were, at the voluntary request of the citizens, separated from the country of the GRISONS, by Bonaparte, in 1797, and annexed to the Cisalpine republic. (see CISALPINE, N° 2.); whence they now form a part of the Italian kingdom, as does also the country of the Grisons, which was afterwards annexed to the ITALIAN REPUBLIC. Part of the bishoprics of Basil and Constance, with Baden, and some other places, were allotted among the indemnities to the new elector of Baden, (see REVOLUTION, § VIII.); and these constitute the chief dismemberments of this ancient republic.

(13.) SWITZERLAND, QUADRUPEDS AND BIRDS OF. The inhabitants derive their chief subsistence from their cattle; both the valleys and Alps, or middle parts of their enormous mountains, yielding excellent fodder. In the beginning of summer the cattle are driven up among the Alps, and committed to the care of the Senns. (see SENN, N° 1.) The Senns on all the Alps likewise keep hogs, which are fed with the whey after making the butter and cheese. The Swiss cheese is much esteemed in other parts of Europe, but the best is that of Berne, and Griers in the canton of Fribourg. Great numbers of horses are bought up here for the French cavalry. Of wild animals, the CHAMOIS and the marmozet are the most remarkable. (see CAPRA, N° XIV.) Among the Alps is found a species of hares, which in summer perfectly resemble other hares, but in winter become all over white, inso much that they are scarce distinguishable among the snow. Here are also yellow and white foxes in great numbers, which in winter come down to the valleys. The *lammergeier*, which delights in the highest peaks, is a large bird of the eagle kind, and its wings are 14 feet in breadth. These birds prey alike on wild and tame animals. There are several edible fowls here, such as the moorcock, the rail, the snipe, the partridge, and some others.

(14.) SWITZERLAND, REVENUES OF. The public revenues were in general very inconsiderable, arising chiefly from the regalia, the demesnes, and public granaries, voluntary contributions, the sale of salt, and a land-tax; in the Protestant cantons, from the church-lands also that were seized at the Reformation, except in Zurich, Berne, Basil, and Schaffhausen, where the people are more industrious, have a greater trade, and are richer than in the others, they defray the ordinary charges, and that is all. How much the agents of Napoleon now squeeze from the Swiss we know not.

(15.) SWITZERLAND, RIVERS AND LAKES OF. The principal rivers are the Rhine, the Rhone, the

the Reufs, the Aar, the Adda, and the Tefino, with many others that join them. The principal lakes are those of Geneva, Neufchâtel, Biel, Zurich, the Waldstatter, Thun, and Brien, Constance, and Lucern. Both rivers and lakes abound with fish.

(16.) SWITZERLAND, STATE OF SCIENCE IN. The arts and sciences have long been cultivated with assiduity and success in Switzerland; and several of the cantons and states connected with the Confederacy have given birth to learned men, whose abilities and writings have done honour to the country. See CALVIN, GESNER, ROUSSEAU, SPANHEIM, SUICER, SULZER, ZIMMERMAN, ZUINGLIUS, &c.

(17.) SWITZERLAND, TROOPS AND MILITIA OF. The cantons never kept any standing troops, except for a few garrisons; but their militia was long reckoned the best regulated of any in Europe. Every male from 16 to 60 was enrolled, and about one third of them regimented. They all provided themselves with arms, clothing, and accoutrements, and appeared on the stated days for exercise; and the several cantons and districts were furnished with a train of artillery, and all the other implements of war. The Switzers of the several cantons were allowed to engage in the service of such foreign princes and states as were in alliance with those cantons, or with whom they had made a previous agreement. Such states, paying an annual subsidy to the respective cantons, were allowed to make levies. Every man enlisted voluntarily, and for what number of years he pleased; at the expiration of which he was at liberty to return home. A great number thus always returning from foreign service, Switzerland was never unprovided with able and experienced officers and soldiers.

SWITZERS. *n. s. plur.* [from *Switz*.] The people of Switzerland. See SWITZERLAND, § 6.

(1.) * SWIVEL. *n. s.* Something fixed in another body so as to turn round in it.

(2.) A SWIVEL is a kind of ring made to turn round in a staple or other ring. These are used when a ship lies at her moorings; also in tadders for cattle, that they may turn round without unwarping the tadder.

(3.) SWIVEL CANNON, a small piece of artillery belonging to a ship of war, which carries a shot of half a pound, and is fixed in a socket on the top of the ship's side, stern, or bow, and also in her tops. The trunnions of this piece are contained in a sort of iron crotch, of which the lower end terminates in a cylindrical pivot resting in the socket, so as to support the weight of the cannon. The socket is bored in a strong piece of oak, reinforced with iron hoops, in order to enable it to sustain the recoil. By this frame, which is called the *swivel*, and an iron handle on its cable, the gun may be directed by the hand to any object. It is therefore very necessary in the tops, particularly when loaded with musket balls, to fire down on the upper decks of the adversary in action.

* SWOBBER. *n. s.* [See SWABBER.] 1. A sweeper of the deck.—

On a brown george with lousy *swobbers* fed.
Dryden.

2. Four privileged cards that are only incidentally used in betting at the game of whist.—The clergyman used to play at whist and *swobbers*; but he could not digest those wicked *swobbers*.
Swift.

SWOJANOW, a town of Bohemia, in the circle of Chrudim; 9 miles SE. of Politzka.

SWOLL. See ZWOLL.

* SWOLLEN. } The participle passive of

* SWOLN. } *sawell*.—

Her dreadful bear, who, *sawoln* with blood of late,
Came ramping forth. *Spenser.*
When thus the gather'd storms of wretched love

In my *sawoln* bosom with long war had strove,
At length they broke their bounds. *Prior.*

—Whereas at first we had only three of these principles, their number is already *sawoln* to five.

Baker.

* SWOM. The preterite of *swim*.

(1.) * SWOON. *n. s.* [from the verb.] A lipothymy; a fainting fit.

(2.) SWOON. See MEDICINE, § 207–213; SYNCOPE, &c.

* To SWOON. *v. n.* [*aswunnon*, Saxon.] To suffer a suspension of thought and sensation; to faint.—

So play the foolish throngs with one that *sawoons*;

Come all to help him, and so stop the air

By which he should revive. *Shak.*

—If thou stand'st not i' th' state of hanging, behold now presently, and *sawoon* for what's to come upon thee. *Shak.*—We see the great and sudden effect of smells in fetching men again, when they *sawoon*. *Bacon.*—

The most in years *sawoon'd* first away. *Dryd.*

The woman finds it all a trick,

That he could *sawoon* when she was sick. *Prior.*

—He seemed ready to *sawoon* away in the surprise of joy. *Tatler.*

SWOONING. *part. n. s.* See MEDICINE, 207–213.

* SWOOP. *n. s.* [from the verb.] Fall of a bird of prey upon his quarry.—

What, all my pretty chickens and their dam,

At one fell *swoop*? *Shak.*

—The eagle fell into the fox's quarters, and carried away a whole litter of cubs at a *swoop*. *L'Estrange.*

* To SWOOP. *v. a.* [I suppose formed from the found.] 1. To seize by falling at once, as a hawk upon his prey.—A fowl in Madagascar, called a ruck, the feathers of whose wings are twelve paces, can with as much ease *swoop* up an elephant as our kites do a mouse. *Wilkins.*—

Now at last you came to *swoop* it all. *Dryd.*

2. To prey upon; to catch up.—The physician looks with another eye on the medicinal herb than the grazing ox, which *swoops* it in with the common grass. *Glanville.* 3. To pass with violence. Not used.—

Proud Tamer *swoops* along with such a lusty train,

As fits so brave a flood. *Drayton.*

* To SWOP. *v. a.* [Of uncertain derivation.] To change; to exchange one thing for another. A low word.—

Oh that insulting word! I would have *sawopp'd* Youth for old age, and all my life behind.

To have been then a momentary man. *Dryden.*

(1.) * **SWORD.** *n. s.* *sword*, *Saxon*; *sawerd*, *Dutch*. 1. A weapon used either in cutting or thrusting; the usual weapon of fights hand to hand.—

Old unhappy traitor, the *sword* is out
That must destroy thee *Shak.*
—Each man took his *sword*. *Gen.*—

But the *sword*

Of Michael from the armoury of God
Was giv'n him temper'd so, that neither keen
Nor solid might resist that edge; it met
The *sword* of Satan with steep force.
The griding *sword* with discontinuous wound
Pass'd through him. *Milton.*

2. Destruction by war; as fire and *sword*.—The *sword* without, and terror within. *Deut. xxxii.*

25. 3. Vengeance of justice.—
Justice to Merit does weak aid afford,
She quits the balance, and resigns the *sword*.
Dryden.

4. Emblem of authority.—

This I, her *sword*-bearer do carry,
For civil deed and military. *Hudibras.*

(2.) A *Sword* is an offensive weapon worn at the side, and serving either to cut or stab. Its parts are, the handle, guard, and blade; to which may be added the bow, scabbard, pommel, &c.

(3.) **SWORD OF STATE**, which is borne before the king, lords, and governors of counties, cities, or boroughs, &c. For or before the king, it ought to be carried upright; the hilt as low as the bearer's waist, the blade up between his eyes. For or before a duke, the blade must decline from the head, and be carried between the neck and the right shoulder. For or before an earl, the blade is to be carried between the point of the shoulder and the elbow; and for or before a baron, the blade is to be born in the bend of the arm. This ceremonial form no less denotes the dignity of a governor than the coronet set on his coat of arms.

* **SWORDED.** *adj.* [from *sword*.] Girt with a sword.—

The *sworded* seraphim
Are seen in glitt'ring ranks. *Milton.*

* **SWORDER.** *n. s.* [from *sword*.] A cut-throat; a soldier. In contempt.—

A Roman *sworder* and banditto slave
Murder'd sweet Tully. *Shak.*
Cæsar will

Unstate his happiness, and be stag'd to th' show
Against a *sworder*. *Shak.*

SWORD-FIGHT. *n. s.* [*sword* and *fight*.] A duel or combat with swords. See **SWORDPLAYER**.

(1.) * **SWORDFISH.** *n. s.* [*xiphias*.] A fish with a long sharp bone issuing from his head.—

A *swordfish* small him from the rest did funder.
Spenser.

—Malpighi observed the middle of the optic nerve of the *swordfish* to be a large membrane, folded in many doubles, like a fan. *Derham.*

Our little fleet was now engag'd so far,
That, like the *swordfish* in the whale, they fought.
Dryden.

(2.) **SWORD FISH.** See **XIPHIAS**.

(1.) * **SWORDGRASS.** *n. s.* [*gladiolus*.] A kind of sedge; gladi. *Anisworth.*

(2.) **SWORD GRASS**, or *Corn Flag*. See **GLADIOLUS**.

* **SWORDKNOT.** *n. s.* [*sword* and *knot*.] Ribband tied to the hilt of the sword.—

Wigs with wigs, *swordknots* with *swordknots* strive. *Pope.*

* **SWORDLAW.** *n. s.* Violence; the law by which all is yielded to the stronger.—

So violence

Proceeded, and oppression, and *swordlaw*.

Milton.
SWORDLE, a hill of Scotland, in the ill of Sky, and parish of **STRATH-SWORDLE**.

* **SWORDMAN.** *n. s.* [*sword* and *man*.] Soldier; fighting man.—Worthy fellows, and like to prove most finely *swordmen*. *Shak.*—

At Lecca's house,

Among your *swordmen*. *Ben Jonson.*

—Liffex was made lieutenant-general of the army, the darling of the *swordmen*. *Clarendon.*

* **SWORDPLAYER.** *n. s.* [*sword* and *play*.] Gladiatorial; tencer; one who exhibits in public his skill at the weapons by fighting for prizes.—These they called *swordplayers*, and this spectacle a swordfight. *Haksarwill.*

SWORDS, in geography, a town of Ireland, in Dublin county, *Latimer*; 7 miles N. of Dublin.

* **SWARE.** The pretense of *swear*.—

How soon unlay

What feign'd submission *sware*. *Milton.*

(1.) * **SWORN.** The participle passive of *swear*.—

I'll be *sworn*'s true. *Shak.*

I am *sworn* brother sweet. *Shak.*

—They that are mad against me, are *sworn* against me. *Ps.*—He refused not the civil offer of a Pharisee, though his *sworn* enemy. *Calamy.*

The nation all elects some patron knight.

Sworn to be true to love. *Graucville.*

(2.) **SWORN BROTHERS**, [*fratres jurati*], persons who, by mutual oath covenanted to share each others fortune. Formerly, in any notable expedition to invade and conquer an enemy's country, it was the custom for the eminent soldiers to engage themselves by reciprocal oaths to share the rewards of their service. This practice gave occasion to the proverb of *sworn brothers or brethren in iniquity*, because of their dividing plunder and spoil.

* **SWUM.** Preterite and participle passive of *swim*.—

Air, water, earth,

By fowl, fish, beast, was *swum*. *Milt.*

* **SWUNG.** Preterite and participle passive of *swing*.—

Her hair within her hair she wound,
Swung her to earth, and dragg'd her. *Addison.*

SYA, a town of Sweden, in W. Gothland; 12 miles SW. of Linköping.

SYAGRUS, an ancient Greek poet, who flourished in the same age with Homer, to whom he was a rival, being the first who wrote on the *Trojan War*. (*Jelian*.) Diogenes calls him *Saguris*.

* **SYB.** *adj.* [Properly *sib*, *sib*, *Saxon*.] Related by blood. The Scottish diskie still retains it.—

Siker I am very *syb* to you.

Spenser.

(1.) SYBARIS, an ancient city of Italy, in Lucania, at the mouth of the river, (N^o 2.) on the bay of Tarentum; founded by a colony of Achæans. It became very rich and powerful; and at one period had the command of 4 adjacent nations, of 25 towns, and an army of 300,000 men. The city walls were 6½ miles in circumference, and the suburbs covered 7 miles of the banks of *Crathis*. It was 5 times destroyed but always rebuilt. It stood a long and vigorous siege, by the Crotonians, but at last was reduced by the Pythagoreans, A. A. C. 508. A town was built on its site called *Thurium*, A. A. C. 444.

(2.) SYBARIS, a river of Italy, which runs into the bay of Tarentum at the above town.

SYBARITÆ, } the people of SYBARIS, who
SYBARITES, } were long celebrated for bravery and skill in arts; but at last degenerated so much by the increase of luxury, that *Sybarite* became synonymous with *effeminate*.

SYBERG, or SIEBERG, a town of Germany, in the circle of Westphalia, and county of Mark; on the site of SYBURG.

SYBIL CUMMAN. See SIBYLS.

SYBILHEAD, a cape of Ireland on the W. coast of Kerry; 8 miles NNW. of Dingle. Lon. 10. 18. W. Lat. 52. 11. N.

SYBILLINE ORACLES. See SIBYLLINE, and SIBYLS.

SYBILS. See SIBYLS.

SYBOTA, a sea port of Epirus.

SYBRECHT, John, See SIBRECHTS. The D. of Buckingham brought him over to London, where he acquired great fame as a landscape painter; and died in 1703, aged 78.

SYBURG, an ancient town and fort of the Saxons, at the conflux of the Ruer and Lenni. It was taken by Charlemagne twice, viz. 18. in 772; and again in 775: but it was destroyed in 1287, and SYBERG built on its site 2½ miles SW. of Schwiert.

(1.) * SYCAMINE. } s. 1. A tree. The sy-

(2.) * SYCAMORE. } camore of Scripture is not the same with ours.—*Sycamore* is our *acer majus*. *Mortimer*.—If ye had faith as a grain of mustard-seed, ye might say unto this *sycamine* tree, be thou plucked up, and it should obey you. *Luke*, xvii. 6.—I was no prophet, but an herdsman, and a gatherer of *sycamore* fruit. *Amos*, vii. 14.—Go to yonder *sycamore* tree, and hide your bottle of drink under its hollow root. *Walton*.—

Sycamores with eglantine were spread;

A hedge about the sides, a covering over head.
Dryden.

(2.) SYCAMORE, in botany. See ACER.

(3.) SYCAMORE, FALSE. See ACER, N^o 2.

(4.) SYCAMORE TREE of Scripture. See FICUS, N^o 5.

SYCHAR, a city of Samaria, anciently called *Shechem*. See SAMARIA, N^o 2; SAMARITANS; and SHECHEM, N^o 2.

SYCKE, a town of Germany, in Westphalia, and county of Hoya; 16 miles NW. of Hoya.

(1.) * SYCOPHANT. s. 1. [*συκοφαντες*; *sycophantia*, Lat.] A talebearer; a rakebate, a malicious parasite.—Accusing *sycophants*, of all men, did best sort to his nature; but therefore not seeming

sycophants. *Sidney*.—Men know themselves void of those qualities which the impudent *sycophant*, at the same time, both ascribes to them, and in his sleeve laughs at them for believing. *South*.

(2.) SYCOPHANT was an appellation given by the ancient Athenians to those who informed of the exportation of figs contrary to law; and hence it is still used in general for all informers, parasites, flatterers, &c.

* To SYCOPHANT. v. n. [*συκοφαντες*; from *θηρ*, noun.] To play the *sycophant*. A low bad word.—His *sycophanting* arts being detected, that game is not to be played the second time. *Gov. of the Tongue*.

* SYCOPHANTICK. adj. [from *sycophant*.] Talebearing; mischievously officious.—

* To SYCOPHANTISE. v. n. [*συκοφαντες*; from *sycophant*.] To play the talebearer. *DiG*.

SYCURIUM, a town of Theffaly, at the foot of Ossa. *Liv.* 43, c. 54.

SYDAPOUR, a town of Hindoostan, in the Caranatic; 22 miles SW. of Nellore.

(1.) SYDENHAM, Floyer, M. A. a learned English writer, born in 1710, and educated at Wadham College, Oxford; where he took his degree in 1734. He translated some parts of Plato's writings, and published them between 1753 and 1767. He was known and esteemed by many gentlemen eminent in literature; but having, from that excess of modesty which two often accompanies great merit and excessive sensibility, concealed his distress, he was put in jail for a small debt contracted for maintenance, and died without letting his friends know his wants. Of this melancholy event, the rev. and ingenious David Williams speaks in the following indignant and affecting terms, in his *Claims of Literature*, p. 93.—"During the summer of 1788, an event took place, which tarnished the character of English opulence and humanity, and afflicted the votaries of learning. FLOYER SYDENHAM, the well known translator of Plato, one of the most useful, if not one of the most competent Greek scholars of his age, a man revered for his knowledge, and beloved for the candour of his temper, and the gentleness of his manners, died in consequence of having been arrested and detained for a debt to a victualler, who had for some time furnished his frugal dinner. At the news of that event, every friend of literature felt a mixture of sorrow and shame; and one of the members of a club at the Prince of Wales's Coffee house, proposed, that it should adopt, as its object and purpose, some means to prevent similar afflictions, and to assist deserving authors and their families in distress." This gave rise to the establishment of that excellent and now flourishing institution, the LITERARY FUND for the relief of AUTHORS and their FAMILIES; of which we gave a brief notice under LITERARY FUND, and a more full account under SOCIETY, Part II, Sect. 1. N^o VII.

(2.) SYDENHAM, Thomas, M. D. an excellent English physician, was the son of William Sydenham, of Winford Eagle in Dorsetshire, and was born there about 1624. He studied at Magdalen-hall, Oxford; but left that university when Oxford was garrisoned for king Charles I and went to London: where, becoming acquainted with

Dr Thomas Cox, an eminent physician, that gentleman persuaded him to study physic; accordingly, after the garrison was delivered up to the parliament, he retired again to Magdalen-hall, entered on the study of medicine, and in 1648 was created M. B. Soon after, he was made a fellow of All-Souls college, and continued there several years; when, leaving the university, he settled at Westminster; became M. D. at Cambridge; grew famous for his practice; and was the chief physician in London from 1660 to 1670; when he became disabled by the gout. He died in 1689.

(3.) SYDENHAM, William, elder brother of the Dr (N^o 2.) was for some time a gentleman commoner of Trinity College, Oxford. Entering into the army of the Parliament, he acquitted himself so well, that he rose to the highest offices. In 1649 he was appointed governor of the Isle of Wight, and vice-admiral of that Isle and of Hampshire. In 1653, he was chosen M. P. for Dorsetshire; in 1654, was appointed commissioner of the Treasury, and a member of the privy council; and in 1658 was summoned to Parliament by the Protector, Richard Cromwell. What became of him after the restoration we know not.

SYDEROPÆCILUS, in mineralogy, a stone mentioned by the ancients. It was found in Arabia, and obtained this name from its being spotted with a ferruginous colour. It might possibly be a granite with spots of this peculiar colour.

SYDERVELT, a town of Holland, in the department of the Rhine, and late province of Guelderland; 6 miles W. of Culemburg.

SYDLING, a town of England in Dorsetshire; called also *St Nicholas*; with a fair Dec. 6.

(1, 2.) SYDNEY. See SIDNEY, N^o 1, and 2.

(3.) SYDNEY BAY, a bay of the S. Pacific Ocean, on the S. side of NORFOLK ISLAND, formed by Point Hunter and Point Rosa, which are $\frac{1}{2}$ miles asunder. On this bay is formed a settlement of British convicts. Lon. 168. 12. E. Lat. 29. 4. S.

(4.) SYDNEY COVE, a town on the coast of New South Wales, on the E. coast of New Holland; which was begun to be erected at PORT JACKSON, as a settlement for convicts, in Feb. 1788. The ground around it was then covered by a thick forest; but a considerable part of it was soon cleared; and convenient lodgings were erected for the governor, deputy governor, judge, and other civil and military officers, by March 1790. (See WALES, NEW SOUTH.) Lon. 151. 28. E. Lat. 33. 50. S.

(5.) SYDNEY COVE, a harbour of New S. Wales, within Port Jackson, which gives name to the above town, (N^o 4.) It lies open to the NE. and extends near 1000 yards SW. gradually decreasing from the breadth of 1400 feet, till it terminates in a point, where it receives a rivulet. The anchorage extends 2000 feet up the cove, and has soundings of 4 fathoms near the shore, and from 5 to 7 near the middle of the channel. It is quite secure from all winds, and ships can lie close to the shore on both sides, there being neither rocks nor shallows. Mr Crutwell places this harbour in Lon. 159. 20. E. Lat. 32. 53. S.

SYEDRA, an ancient town of Cilicia.

SYEKE, or SYCKE. See SYCKE.

SYENE, an ancient city of Egypt, situated, according to Mr Bruce, in lat. $24^{\circ} 0' 45''$ N. although Pliny and Strabo both say that it lay directly under the tropic of Cancer. Syene is remarkable for being the place where the first attempt was made to measure the circumference of the earth, by Eratosthenes, whom Ptolemy Euergetes had invited from Athens to Alexandria. It is now called *Affouan*. It is 375 miles S. of Cairo. Lon. 49. 28. E. Ferro.

SYER, a river of France, which rises 6 miles N. of Thionville, and runs into the Moselle, near Wasserbillich.

SYGAMBRI. See SICAMBERI.

(1.) SYL, a river of Wallachia, which runs into the Danube; 16 miles S. of Krajova.

(2.) SYL, a town of Wallachia; 28 miles SSW. of Brancovan.

SYLBURGIUS, Frederick, a learned German, born at Marpurg in Hesse, in 1546. He taught Latin, Greek, and French, for some time at Licha; but afterwards applied himself solely to the revising and correcting of ancient authors, particularly the Greek classics, for the presses of Wechel and Commelin. He also greatly assisted the celebrated Henry Stephens, in compiling his *Theaurus Græcæ Linguae*. (See STEPHENS, N^o 7.) He likewise published a *Greek Grammar*, which was much esteemed. For these services he had a salary from the university of Marpurg. He died in 1596.

SYLEUM, an ancient town of Pamphylia.

SYLLA, Lucius Cornelius, was descended from the illustrious family of the CORNELII, but from a branch quite distinct from that of the SCIPIOS. His debauched behaviour in his younger years did not correspond with his excellent education. Nicopolis, a rich courtesan, left him heir to her great estate.—He learned the art of war under Marius, whom he attended to Numidia as questor; and soon became the most skilful soldier in the army, while by his obliging behaviour he gained the esteem of all. His courage and dexterity contributed to the success of the war; and his eloquence persuaded Bocchus to deliver up Jugurtha. He served afterwards in the social war, and as a reward he was raised to the prætorship, next elected consul, and soon after declared general of the army against Mithridates VII. king of Pontus. Marius was exasperated, that the management of this war was not committed to him. The people were persuaded by his intrigues to reverse the decree, and substitute him in place of Sylla. Upon this he sent down officers to take the command of the army; but Sylla by this time had gained over the soldiers; who, instead of obeying the decree of the people, slew Marius's officers, and intreated Sylla to lead them instantly to Rome. Accordingly he entered the city sword in hand, slew Sulpicius the consul, obliged Marius to flee, new-modelled the laws, and afterwards marched into the East, and immediately laid siege to Athens; for that city, together with the rest of Greece, had fallen into the power of Mithridates. He wrote to the Amphictions, who were assembled at Delphi, to send him all the gold in the temple of Apollo, promising to restore it at the end of the war; and when he received it said that

he now was sure of victory, since the gods themselves furnished him with money. Athens was at last taken by assault, and Sylla was upon the point of destroying it, when he recollected its ancient glory, and spared (as he said) the living for the sake of the dead. After burning the Piræus, he gained two decisive victories over the generals of Mithridates. In the second battle, fought at Orchomenus, he was almost defeated; his troops began to flee, when, leaping from his horse, he snatched up a standard, and crying out, "I will die here gloriously; and soldiers, when you are asked where you abandoned your general, answer, At Orchomenus." This reproach recalled the courage of the Romans; they followed him and gained a complete victory. Mithridates then sued for peace. Mean time Cinna had declared against Sylla in Italy; and Marius returning from banishment, had taken the most severe vengeance on all his enemies. Sylla was declared a traitor; his laws reversed, his friends were murdered, and the government new-modelled. These news induced Sylla to conclude a treaty with Mithridates, and march directly to Rome. His approach terrified the Romans. Marius and Cinna were both dead; but the consuls made vigorous preparations to oppose him. A civil war was begun; but Sylla in the end subdued all his enemies, and entirely ruined the Marian faction. He entered Rome at the head of his victorious army, and assumed the title of *Felix, Happy*. The remainder of his life was stained with the most abominable cruelties. He ordered 3000 wretches, who had thrown themselves upon his clemency, to be butchered in the Campus Martius. To carry on these cruelties with the appearance of justice, he commanded the people to elect him dictator. He kept this office above two years; and then, to the amazement of all, laid it down, and offered to stand his trial before the people. Soon afterwards he retired into the country, and plunged into every kind of debauchery. He died of the lousy disease in the 60th year of his age. His person was elegant, his air noble, and his manners easy. He was eloquent, liberal, crafty, insinuating; and a profound master of dissimulation, by which he concealed a hideous train of vices. This *Nero* of the republic, did one essential service to science, by recovering the works of ARISTOTLE at the taking of Athens.

* SYLLABICAL. *adj.* [from *syllable*.] Relating to syllables; consisting of syllables.

* SYLLABICALLY. *adj.* [from *syllabical*.] In a syllabical manner.

* SYLLABICK. *adj.* [from *syllabique*, Fr. from *syllable*.] Relating to syllables.

(1.) * SYLLABLE. *n. f.* [σύλλαβος; *syllabe*, Fr.] 1. As much of a word as is uttered by the help of one vowel or one articulation.—

I heard

Each *syllable* that breath made up between them.

Shak.

—There is that property in all letters of aptness to be conjoined in *syllables* and words. *Holder*. 2. Any thing proverbially concise.—Abraham, Job, and the rest that lived before any *syllable* of the law of God was written, did they not sin as much as we do? *Hooker*.

To-morrow, and to-morrow, and to-morrow,

Creeps in this petty pace from day to day,

To the last *syllable* of recorded time. *Shak.*

—He hath told so many melancholy stories, without one *syllable* of truth, that he hath blunted the edge of my fears. *Swift*.

(2.) A SYLLABLE, in grammar, is one or more letters pronounced by a single impulse of the voice, forming a complete sound, and constituting a word or a part of a word. No single letter can form a syllable except a vowel. The longest syllable in the English language is the word *strength*. The most natural way of dividing words into syllables, is, to separate all the simple sounds of which any words consists, so as not to divide those letters which are joined close together, according to the most accurate pronunciation.

* To SYLLABLE. *v. a.* [from the noun.] To utter; to pronounce; to articulate. Not in use.

Airy tongues that *syllable* mens names

On sands and shores. *Milton*.

(1.) * SYLLABUB. *n. s.* [Rightly SYLLABUS, which see.] Milk and acids.—

No *syllabubs* made at the milking pail,

But what are compos'd of a pot of good ale.

Beaumont.

—Two lines would express all they say in two pages: 'tis nothing but whipt *syllabus* and froth. *Pelton*.

(2.) A SYLLABUS is a kind of compound drink, most usual in summer; ordinarily made of white wine and sugar, into which is squirted new milk with a syringe or wooden cow. Sometimes it is made of canary, in which case the sugar is spared; and a little lemon and nutmeg are added in lieu of it. To prepare it the best way, the wine and other ingredients, except the milk, are to be mixed over night, and the milk or cream added in the morning. The proportion is, a pint of wine to three of milk.

(3.) SYLLABUS WHIPT. To half a pint of white wine or Rhenish is put a pint of cream, with the whites of three eggs. This they season with sugar and beat with birchen rods, or work with a syringe. The froth is taken off as it rises, and put into a pot; where, after standing to settle two or three hours, it is fit to eat.

(1.) * SYLLABUS. *n. s.* [σύλλαβος.] An abstract; a compendium containing the heads of a discourse.

(2.) SYLLABUS, in literature, denotes also a table of contents, or an index to the chief heads of a book.

SYLLEPSIS: *n. s.* [σύνληψις, Gr.] in grammar, a figure in which two nominative cases of the singular number are joined to a plural verb.

(1.) * SYLLOGISM. *n. s.* [συλλογισμός; *syllogisme*, Fr.] An argument composed of three propositions: as, *Every man thinks; Peter is a man, therefore Peter thinks*.—A piece of rhetoric is a sufficient argument of logic; an apologue of *Aesop* beyond a *syllogism* in *Barbara*. *Brown*.—What a miraculous thing should we count it, if the flint and the steel, instead of a few sparks, should chance to knock our definitions and *syllogisms*? *Bentley*.

(2.) A SYLLOGISM, in logic, consists of three propositions; the two first called *premises*; the last the *conclusion*. See LOGIC, Part III. Sect. IV.

* SYLLOGISTICAL. SYLLOGOSTICK. *adj.* [συλλογιστικός; from *syllogism*.] Retaining to syllo-

K 2

gism;

gism; consisting of a syllogism.—Though we suppose subject and predicate, and copula, and propositions, and *sylogistical* connections in their reasoning, there is no such matter. *Hale*.—Where the composition of the whole argument is plain, simple and regular, it is properly called a simple syllogism, since the complexion does not belong to the *sylogistick* form of it. *Watts*.

* **SYLLOGISTICALLY**. *adv.* [from *sylogistick*.] In the form of a syllogism.—A man knows first, and then he is able to prove *sylogistically*; so that syllogism comes after knowledge. *Locke*.

* **SYLLOGISTICK**. See **SYLLOGISTICAL**.

* **To SYLLOGIZE**. *v. n.* [*sylogizer*, Fr. *sylogiser*.] To reason by syllogism.—Logick is, in effect, the art of *sylogizing*. *Baker*.—Men have endeavoured to teach boys to *sylogize*, or frame arguments and refute them, without real knowledge. *Watts*.

SYLOES, a promontory of Africa.

SYLPH, *n. s.* in modern mythology and demonology, an ideal being, somewhat analogous to the *Fairy* of the British; (See **FAIRY**;) supposed to attend with anxious care about all the minutie and paraphernalia of a fine lady. *Pope's Rape*.

SYLT, an island of Denmark, in the North Sea, 12 miles from the W. coast of the duchy of Sleswick. It is about 40 miles in circumference, but of a very irregular form, and in no place above 4 miles broad. Lon. 8. 20. E. Lat. 54. 55. N.

SYLVA. See **PANCARPUS**.

(1.) * **SYLVAN** *adj.* [Better *silvan*.] Woody; shady; relating to woods.—

Cedar and pine, and fir and branching palm,
A *silvan* scene? *Milton*.

Watch'd by the *silvan* genius of the place.
Pope.

(2.) * **SYLVAN**. *n. s.* [*silvain*, Fr.] A wood god, or satyr; perhaps sometimes a rustick.—

Her private orchards, wall'd on ev'ry side,
To lawless *silvans* all access deny'd. *Pope*.

(1.) **SYLVANUS**, in church history. See **SILAS**.

(2.) **SYLVANUS**, in the mythology. See **SILVANUS**, N^o 2.

(3.) **SYLVANUS**, a brave warrior among the Franks, under the emperor Constantius, who, being by the most deliberate villany and forgery, of Dynamis, compelled to declare himself emperor, was afterwards, when his innocence was discovered, murdered by Urficinus, another traitor. See **CONSTANTINOPLE**, § 6.

(1, 2.) **SYLVESTER**, I. and II. Popes. See **SILVESTER**.

(3.) **SYLVESTER**, Joshua, born in 1563. He translated the works of *Du Bartas*; some pieces of *Præcæstorius* from the Latin; and the *Quatrains* of *Pibrac*, with some other tracts from the French. He died in Holland, in 1618.

(1.) **SYLVIA**, or **ILIA**, or **RHEA SYLVIA**, the mother of **ROMULUS**. See **RHEA**, N^o 3; and **ROME**, § 3.

(2.) **SYLVIA**, in ornithology, a new genus of birds, belonging to the order of passeris, formed by Dr Latham, by limiting the motacilla to the wagtail, and arranging the other species, formerly classed under that genus, under the sylvia. (See **ORNITHOLOGY**, Order III. p. 523. The **MOTACILLA** he thus describes: The beak is subulated,

slender, and somewhat indented at the point. The tongue seems torn at the end, and the tail is long. He thus characterizes the **SYLVIA**: The beak is subulated, straight, and small; the mandibles are nearly equal. The nostrils are obovate, and a little depressed. The exterior toe is joined at the under part to the base of the middle one. The tongue is cloven and the tail is small. He makes 13 species of the motacilla, and 174 species of the sylvia. See **MOTACILLA**.

SYLVICOLIST. *n. s.* [from *sylvæ*, a wood, and *colo*, to cultivate.] One who dwells in a wood.

Ash.

SYLVISBORG. See **SOLFVITZBURG**.

(1, 2.) **SYLVIVS**, Æneas, I. and II. kings of Alba, the son and grandson of Æneas, the Trojan, by Lavinia. See **ROME**, § 3.

(3.) **SYLVIVS**, Æneas. See **PRUS II**.

(4, 5.) **SYLVIVS**, James, or James *Du Bois*, a celebrated French anatomist and physician, the son of Nicholas Du Bois, a camblet weaver, born at Amiens, in Picardy, in 1478. He acquired a great knowledge of Greek and Latin, and some Hebrew, under his elder brother Francis SYLVIVS, or *Du Bois*, who was principal of the College of Tournay, at Paris, and a great promoter of learning. James, wrote several works on anatomy, medicine, and pharmacy, which have been often printed, though he was much opposed by his contemporaries. He defended Galen against Vesalius. (See **ANATOMY**, Index.) He was also a good mathematician, and invented several useful machines. His great vice was *avarice*, which prevented him from taking the degree of M. D. though he went to Montpellier in 1520, on purpose; but he was reconciled to his brethren and admitted M. B. in June 1531. He read lectures on Hippocrates and Galen, which spread his fame far and wide. In 1535, he was appointed a professor in the college of Triquet, and in 1548, professor of physic in the Royal College at Paris; which office he retained till his death, in 1555. He was never married.

SYMA, or **SYME**, a town of Asia. *Lemp.*

SYMARD, a town of France, in the department of Saone and Loire; 5 miles N. of Louhans, and 13½ E. of Chalons sur Saone.

(1.) * **SYMBOL**. *n. s.* [*symbole*, Fr. *συμβολον*; *symbolum*, Lat.] 1. An abstract; a compendium; a comprehensive form.—Beginning with the *symbol* of our faith. *Baker*. 2. A type, that which comprehends in its figure a representation of something else.—Salt, as incorruptible, was the *symbol* of friendship. *Brown*.—Words are the signs and *symbols* of things. *South*.—The heathens made choice of these lights as apt *symbols* of eternity. *Addison*.

(2.) A **SYMBOL** is a sign or representation of something moral, by the figures or properties of natural things. Hence symbols are of various kinds; as hieroglyphics, types, enigmas, parables, fables, &c.

* **SYMBOLICAL**. *adj.* [*symbolique*, Fr. *συμβολικος*; from *symbol*.] Representative; typical; expressing by signs; comprehending something more than itself.—By this encroachment idolatry first crept in, men converting the *symbolical* use of idols into their proper worship. *Brown*.—The sacraments

sacrament is a representation of Christ's death, by such *symbolical* actions as himself appointed. *Taylor*.

* **SYMBOLICALLY**. *adv.* [from *symbolical*.] Typically ; by representation.—This distinction of animals was hieroglyphical, in the inward sense implying an abstinence from certain vices, *symbolically* intimated from the nature of those animals. *Brown*.—It *symbolically* teaches us our duty. *Taylor*.

* **SYMBOLIZATION**. *n. s.* [*symbolize*.] The act of symbolizing ; representation ; resemblance.—The hieroglyphical symbols of Scripture are oftentimes racked beyond their *symbolization*. *Brown*.

(1.) * **To SYMBOLIZE**. *v. a.* To make representative of something.—Some *symbolize* the same from the mystery of its colours. *Brown*.

(2.) * **To SYMBOLIZE**. *v. n.* [*symboliser*, Fr. from *symbol*.] To have something in common with another by representative qualities.—Our king finding himself to *symbolize* in many things with that king of the Hebrews, honoured him with the title of this foundation. *Bacon*.—The pleasing of colour *symbolizeth* with the pleasing of any single tone to the ear ; but the pleasing of order doth *symbolize* with harmony. *Bacon*.—Aristotle and the schools have taught, that air and water, being *symbolizing* elements, are easily transmutable. *Boyle*.—They both *symbolize* in this, that they love to look upon themselves through multiplying glasses. *Houel*.—I affectedly *symbolized* in careless mirth and freedom with the libertines, to circumvent libertinism. *More*.—The soul is such, that it strangely *symbolizes* with the thing it mightily desires. *South*.

SYMBOLUM, an ancient town of Macedonia, near Philippi ; on the borders of Thrace. *Lempr*.

SYME. See **SYMA**.

SYMI, or **SIMI**. See **SIMI**.

(1.) **SYMINGTON**, or **SYMONTON**, a parish of Scotland in Ayrshire, in the district of Kyle, above 4 miles long, and $1\frac{1}{2}$ broad. The surface consists of a beautiful landscape of gently rising grounds, and sloping fields ; with numerous inclosures, elegant gentlemen's seats, and clumps of planting. The soil is clay or rich black loam on a free-stone bottom. The parish comprehends 2,100 acres, of which above 1100 are cultivated, and 500 more susceptible of it. In 1792, the population was 610 ; increase, 251 since 1755. On the SW. border, the parish is ornamented with the elegant house of *Rosemount*, the seat of Wm Fullarton, Esq. and its extensive plantations.

(2.) **SYMINGTON**, a village in the above parish, pleasantly seated on the great road from Edinburgh and Glasgow to Portpatrick ; containing 204 inhabitants, in 1792.

(3.) **SYMINGTON**, a parish of Scotland, in Lanarkshire, of a circular figure, 3 miles in diameter. The surface is mostly level, sloping from the foot of the hill of **TINTO** to the Clyde. The greater part of it is well cultivated and inclosed ; and produces good crops. The population, in 1792, was 307 ; the increase 43, since 1755.

(4.) **SYMINGTON**, a village in the above parish, (N^o 3.) seated on the Clyde, 30 miles from Edinburgh and 33 from Glasgow. Near it are relics of an ancient strong fortification, called *Coslie Hill*.

SYMITHUS. See **SIMETHUS**.

(1.) **SYMMACHUS**, a writer who flourished in the 4th century, and translated the Hebrew Bible into Greek. Only a few fragments of his work are extant.

(2.) **SYMMACHUS**, a senator, and orator, of Rome, who was consul A. D. 391. He wrote *Ten Books of Epistles, against the Christian Religion* ; which are extant, and have been refuted by Ambrose, Bp. of Milan, and Prudentius, the Christian Poet. He was banished from Rome by Valentinian, but recalled and received into favour by Theodosius. Ammianus Marcellinus speaks of him as a man of great learning and modesty. Scioppius, Pareus, and other learned men, have written notes upon his epistles. The best editions are those of Geneva, 8vo, 1598 ; Paris, 4to, 1604 ; and Frankfurt, 8vo, 1642.

* **SYMMETRIAN**. *n. s.* [from *symmetry*.] One eminently studious of proportion.—His face was a thought longer than the exact *symmetrians* would allow. *Sidney*.

* **SYMMETRICAL**. *adj.* [from *symmetry*.] Proportionate ; having parts well adapted to each other.

* **SYMMETRIST**. *n. s.* [from *symmetry*.] One very studious or observant of proportion.—Some exact *symmetrists* have been blamed for being too true. *Wotton*.

(1.) * **SYMMETRY**. *n. s.* [*symmetrie*, French ; *εὐ and μέγεθος*.] Adaptation of parts to each other ; proportion ; harmony ; agreement of one part to another.—

She by whose lines proportion should be

Examind, measure of all *symmetry*. *Donne*.

And in the *symmetry* of her parts is found

A pow'r, like that of harmony in sound. *Waller*.—*Symmetry*, equality, and correspondence of parts, is the discernment of reason. *More*.—Their measure and *symmetry* were owing to him. *Dryd*.

(2.) **SYMMETRY** is the just proportion of the several parts of any thing, so as to compose a beautiful whole.

(3.) **SYMMETRY**, in painting. See **PAINTING**, Part I. *Set* III.

SYMONDSBOROUGH, a remarkable large burrow of Flintshire, near Wellington in Devonshire, in the northern extremity of Hemyock. The people have a notion that a king called *Symon* was buried here.

SYMONTON. See **SYMINGTON**, N^o 1.

SYMPATHANT. *n. s.* [from *sympathy*.] One who is sympathized with by a friend. See **SYMPATHY**, § 3.

(1.) **SYMPATHETIC**. See **SYMPATHETICAL**.

(2.) **SYMPATHETIC INK**. (See **INK**, § 13.) A new Sympathetic Ink has been made from a solution of a mixture of sulphat of copper and muriat of ammonia, which appears of a bright yellow, when exposed to heat, but disappears with cold or moisture.

* **SYMPATHETICAL**. *SYMPATHETIC*. *adj.* [*sympathetique*, French, from *sympathy*.] Having mutual sensation ; being affected by what happens to another ; feeling in consequence of what another feels.—Hereupon are grounded the gross mistakes in the cure of diseases, not only from *sympathetic* receipts, but amulets, charms, and all incantatory applications. *Brown*.

United

United by this *sympathetick* bond,
 You grow familiar, intimate, and fond. *Rosc.*
 —To confer at the distance of the Indies by
sympathetick conveyances may be as usual to fu-
 ture times as to us in a literary correspondence.
Glanville.—

Your *sympathetick* hearts she hopes to move,
 From tender friendship. *Prior.*
 —All the ideas of sensible qualities are the effects
 of their motion upon our nerves, and *sympathe-*
tical and vital passions produced within ourselves.
Bentley.

* *SYMPATHETICALLY.* *adv.* [from *sympa-*
thetick.] With sympathy; in consequence of sym-
 pathy.

* *SYMPATHETICK.* *Sec* *SYMPATHETICAL.*

* To *SYMPATHIZE.* *v. n.* [*sympathiser*, *Fr.*
 from *sympathy*.] 1. To feel with another; to feel
 in consequence of what another feels; to feel
 mutually.—The men *sympathize* with the mastiffs
 in robustions coming on. *Shak.*—

As rous'd with rage, with rage doth *sympa-*
thize. *Shak.*

Nature in awe to him
 Hath doff'd her gaudy trim,
 With her great master to *sympathize*. *Milton.*
 —He *sympathizes*, and is concerned for them.
Locke.—Their countrymen *sympathized* with their
 heroes in all their adventures. *Addison.*—None
 condole and *sympathize* more heartily. *Collier.* 2.
 To agree; to fit. Not proper.—Blue and yellow
 are two colours which *sympathize*. *Dryden.*

SYMPATHIZER. *n. s.* [from *sympathize*.] One
 who *sympathizes* with another.

(1.) * *SYMPATHY.* *n. s.* [*sympathie*, French;
συμπάθεια.] Fellow feeling; mutual sensibility;
 the quality of being affected by the affection of
 another.—

A world of earthly blessings to my soul,
 If *sympathy* of love unite our thoughts. *Shak.*
 —You are not young; no more am I; go to then,
 there's *sympathy*: you are merry, so am I; ha!
 ha! then there's more *sympathy*: you love sack,
 and so do I; would you desire better *sympathy*?
Shak.—

The action of my life is like it, which I'll keep.
 If but for *sympathy*. *Shak.*

I started back;
 It started back: but pleas'd I soon return'd;
 Pleas'd it return'd as soon with answering looks
 Of *sympathy* and love. *Milton.*

They saw, but other sight instead, a crowd
 Of ugly serpents: horror on them fell,
 And horrid *sympathy*. *Milton.*

Or *sympathy*, or some connatural force. *Mil.*
 —Every man would be a distinct species to him-
 self, were there no *sympathy* among individuals.
South.—

Kindness by secret *sympathy* is tied. *Dryden.*
 —To this might be attributed most of the *sympa-*
thies and antipathies observable. *Lacke.*

(2.) *SYMPATHY*, also signifies an agreement of af-
 fections and inclinations, or a conformity of natural
 qualities, humours, temperaments, which make
 two persons delighted and pleased with each other.

(3.) *SYMPATHY* may subsist either between dif-
 ferent persons, or between different parts
 of the same body. It is either *similar* or *dissimilar*.

similar, when the affection or action in the *SYM-*
PATHIZER is similar to the affection or action in
 the *SYMPATHANT*; and dissimilar, when those are
 different.—Sympathy, too, is often an imitative
 faculty, sometimes involuntary, frequently without
 consciousness: thus we yawn when we see others
 yawn, and are excited to laugh by the laughing
 of others. Sympathy, according to Dr Jackson
 relates to the operations of the affections of the
 mind, to the operations of the imagination, and
 to the affections of the external senses. 1. The
 affections of the mind produce in the body differ-
 ent sensations and impressions, and, as sympathies
 of consciousness, determine in general the spirits
 to those parts which are most apt to be affected.
 The affections of the mind of one person will
 often work upon the spirits of many. Thus whole
 companies are sometimes disposed to be sad and
 melancholy, or merry and jovial, when any one
 present is much inclined to either of those states
 of mind. Those tender sympathetic affections
 which lay hold of the mind at the representation
 of theatrical performances originate from the
 same principle, while they are the surest test of
 just execution in the actor, and of the expressive
 language of the author. Indeed all stage effect
 depends on sympathy. 2. It is probable that a
 connexion between the affections and sensations
 of the female mind and uterus is very materially
 concerned in the process of generation, and pro-
 bably can alone give efficacy to those actions and
 impressions subservient to conception through the
 sympathizing affections of the mind. But this is
 a subject of which we as yet know little; though
 the facts are numerous and incontrovertible; but
 physiologists seem unwilling to admit of them
 because they cannot account for them. See
NAVUS and *NAVI MATERNI*, under *SURGERY*.
Index. 3. As affecting the senses, sympathies have
 been compared to unions of sound in music, which
 produce agreeable sympathetic feelings; and the
 reverse produces disagreeable feelings. "All con-
 cords and discords of music are sympathies and
 antipathies of sound." A disagreeable sound will
 often set the teeth on edge. The most agreeable,
 as well as odious objects operate in a secondary
 way in producing those sympathetic impressions
 and actions which they commonly give rise to.
 An increased secretion of saliva often takes place
 at the sight of a favourite dish. Many have at-
 tempted to account for the remarkable sympathy
 which takes place between parts of the body
 seemingly unconnected with each other; but
 these attempts are merely conjectures.

SYMPHONIA, in botany, a genus of plants
 belonging to the class of *monadelphia* and order of
pentandria.—There is one pistil. The corolla is
 globular, and the berry five-celled. There is only
 one species yet discovered, viz.

* *SYMPHONIA GLOBULIFERA.*

* *SYMPHONIOUS.* *adj.* [from *symphony*.]
 Harmonious; agreeing in sound.—

Follow'd with acclamation and the sound
 Of *Symphonious* of ten thousand harps. *Milton.*

(1.) * *SYMPHONY.* *n. s.* [*symphonie*, French
συμφωνία, and *sym*.] Concert of instruments; harmony
 of mingled sounds.—A learned searcher from Py-
 thagoras?

thagoras's school, determines the comeliest proportion between breadths and heights, reducing symmetry to *symphony*. *Wotton*.

Angels! for ye behold him, and with songs
And choral *symphonies* day without night,
Circle his throne rejoicing. *Milton*.

The trumpets found,

And warlike *symphony* is heard around. *Dryd*.

(1.) *SYMPHONY*, in music, denotes a conformance of several sounds agreeable to the ear, whether vocal or instrumental. See *HARMONY*.

(1.) * *SYMPHYSIS*, *n. s.* [*συμφυσις* and *συμφυσις*.] *Symphysis* in its original signification, denotes a connascency, or growing together; and perhaps is meant of those bones which in young children are distinct, but after some years unite and consolidate into one bone. *Wiseman*.

(2.) *SYMPHYSIS*, in anatomy, one of the kinds of junctures or articulations of the bones. See *ANATOMY*, *Index*.

(3.) *SYMPHYSIS PUBIS*, SECTION OF THE. See *MIDWIFERY*, *Part II.* *SECT. IX.*

SYMPHYTUM, *COMFREY*, in botany, a genus of plants belonging to the class of *pentandria*, and order of *monogynia*; and in the natural system, ranging under the 41st order, *asperifolia*. The limb of the corolla is tubular and ventricose, and the throat is shut with awl-shaped rays. There are 3 species; of which

SYMPHYTUM OFFICINALE is a British plant. The stem is about two feet high, round, branched, green, and rough. The radical leaves are very large and rough; those on the stalks are decurrent, and alternate. The flowers grow on loose spikes, and are either of a yellowish or purple colour. It grows on the banks of rivers and flowers from May to October.

SYMPLEGADES, or *Cyanea*, 2 rugged islands at the entrance of the Euxine sea; 20 stadia from the mouth of the Thracian Bosphorus: the one on the coast of Asia, and the other on that of Europe; separated by only 20 furlongs of water, which however foams and rages constantly, so as to render the passage very dangerous. They were first explored by the Argonauts. They were also called *Planete*, or *Wanderers*, from a mistaken idea, that they moved or floated. *Plin.* vi. c. 12.

SYMPLOCE, *n. s.* [*συμπλοκε*], in rhetoric, a figure, where the same word is repeated. See *ORATORY*, § 213.

SYMPLOCOS, in botany, a genus of plants belonging to the class of *polydelphia*, and to the order of *polyandria*; and in the natural system ranging under those the order of which is doubtful. The calyx is quinquefid and inferior: the corolla is pentapetalous: the stamens are attached to the tube of the corolla in a fourfold series. There are 5 species; viz.

1. *SYMPLOCOS ALSTONIA*; } are described
2. *SYMPLOCOS ARECHEA*; and } by Mr L'
3. *SYMPLOCOS CISPONIMA*; } Heritier of

the Academy of Sciences at Paris.

4. *SYMPLOCOS MARTINICENSIS*, the only species described by Linnaeus, is a native of Martinico.

5. *SYMPLOCOS TINCTORIA*, a plant used by dyers, is also mentioned by L' Heritier.

* *SYMPOSIACK*, *adj.* [*συμπόσιαι*, French; *symposiack*.] Relating to merry-makings; hap-

pening where company is drinking together.—By desiring a secrecy to words spoken under the rose, we only mean in society and comotation, from the ancient custom of *symposiack* meetings to wear chaplets of roses about their heads. *Brown*.—In some of those *symposiack* disputations amongst my acquaintance, I affirmed that the dietetick part of medicine depended upon scientifick principles. *Arbutnot*.

SYMPOSIARCH, *n. s.* [from *Συμμετρις*, a banquet, and *αρχων*, governor,] in antiquity, the director or manager of an entertainment. This office was sometimes performed by the person at whose charge the entertainment was provided; sometimes by another named by him; and at other times, especially in entertainments provided at the common expence, he was elected by lot, or by the suffrages of the guests.

(1.) * *SYMPTOM*, *n. s.* [*symptome*, French; *συμπτωμα*.] 1. Something that happens concurrently with something else, not as the original cause, nor as the necessary or constant effect.—The symptoms are often nothing but the principles or seeds of a growing but unripe gout. *Blackmore*. 2. A sign; a token.—Ten glorious campaigns are passed, and now, like the sick man, we are expiring with all sorts of good symptoms. *Swift*.

(2.) *SYMPTOM*, in medicine, means any circumstance which indicates the existence, nature, or stage of a disease. Pain, weakness, drowsiness, convulsions, suppression of urine, difficulties of breathing and swallowing, coughs, distastes, nausea, thirst, swoonings, faintings, looseness, costiveness, dryness and blackness of the tongue, are the principal symptoms of diseases. See *MEDICINE*, *Ind*.

* *SYMPTOMATICALLY*, *adj.* [from *symptomatical*.] In the nature of a symptom.—The causes of a bubo are vicious humours in the blood, or nerves excreted sometimes critically, sometimes *symptomatically*. *Wiseman*.

* *SYMPTOMATICAL*, } *adj.* [*symptomatique*,
* *SYMPTOMATICK*, } French; from *symptom*.] Happening concurrently or occasionally.—*Symptomatical* is often used to denote the difference between the primary and secondary causes of diseases; as a fever from pain is said to be *symptomatical*, because it arises from pain only. *Quincy*.—The fever, appearing but *symptomatical*, lessened as the heat and pain mitigated. *Wiseman*.

SYMUS, a mountain of Armenia, from which the *ARAXES* rises.

SYNERESIS, for *CRASIS*, CONTRACTION, in grammar, a figure whereby two syllables are united in one; as *veniens*, for *vehiemens*, *opps* for *opiac*, *ruix* for *ruixis*, &c.

* *SYNAGOGICAL*, *adj.* [from *synagogue*.] Pertaining to a synagogue.

(1.) * *SYNAGOGUE*, *n. s.* [*synagogue*, French; *συναγωγή*.] An assembly of the Jews to worship.—Go, Tubal, and meet me at our *synagogue*. *Shak*.—He went into the *synagogue* on the sabbath. *Gospel*.

(2.) *SYNAGOGUE*, among the Jews, was a place where people met to worship. Authors are not agreed about the time when the Jews first began to have synagogues:—Some will have them as old as the Ceremonial Law, and others fix their beginning

ginning to the times after the Babylonish captivity. They erected synagogues not only in towns and cities, but also in the country, especially near rivers that they might have water for their purifications and ceremonious washings. No synagogue was built in any town, unless there were ten persons of leisure in it; but there might be many in one town, or in one quarter of a town, provided it was very populous. Jerusalem is said to have contained 480. The chief things belonging to a synagogue were, 1. The ark or chest, made after the model of the ark of the covenant, containing the *Pentateuch*. 2. The pulpit and desk in the middle of the synagogue, in which he that was to read or expound the law stood. 3. The seats or pews for the people. 4. The lamps to give light at evening service, and the feast of dedication. 5. Rooms or apartments for the utensils and alm-chests. The synagogue was governed by a council or assembly, over whom was a president, called, *The ruler of the synagogue*. There are sometimes called *Chiefs of the Jews, The Rulers, The Priests or Elders, The Governors, The Overseers, The fathers of the Synagogue*. Their business was to punish the disobedient by censures, excommunication, or penalties, such as fines and scourging; to take care of the alms, which are frequently called by the name of righteousness. The chief ruler, or one of the rulers, gave leave to have the law read and expounded, and appointed who should do it. In every synagogue, there were several ministers who had different offices assigned to them. Service was performed three times a-day, viz. in the morning, in the afternoon, and at night; at the time of morning sacrifice, evening sacrifice, and after the evening sacrifice on Mondays, Thursdays, and Saturdays, there was a more forcible obligation upon the people to attend, than upon the other days. There are synagogues at London, Amsterdam, Rotterdam, Avignon, Metz, &c.

SYNAGOOAN, a town of Walachia, with a famous abbey: 12 miles N. of Bucharest.

(1.) * **SYNALEPHA**, *n. s.* [*συναληψια*.] A contraction or excision of a syllable in a Latin verse, by joining together two vowels in the scanning, or cutting off the ending vowel; as, *ill' ego*.—Virgil, though smooth, frequently uses *synalephas*, and concludes his sense in the middle of his verse. *Dryden*.

(2.) **SYNALEPHA**, or } in grammar, or *Collisio*, a **SYNALEPHA**, } contraction of syllables, performed principally, by suppressing some vowel or diphthong at the end of a word, on account of another vowel or diphthong at the beginning of the next, As *ill' ego* for *ille ego*, &c.

Conticuer' omnes intentique ora tenebant. Virgil.

(1.) * **SYNARTHROSIS**. *n. s.* [*συν and αρθρωσις*.] A close conjunction of two bones.—There is a conspicuous motion where the conjunction is called *diarthrosis*, as in the elbow; an obscure one, where the conjunction is called *synarthrosis*, as in the joining of the carpus to the metacarpus. *Wiseman*.

(2.) **SYNARTHROSIS**. See **ANATOMY**, *Index*.

SYNBORG, a pleasant town of Denmark, in the isle of Funen; with a large and commodious harbour.

(1.) **SYNCELLUS**, an ancient Byzantine historian, of whom we have met with no memoir; which is the more surprising, that his works are still extant, and were published at Paris in folio, in 1652.

(2.) **SYNCELLUS**, or **SINCELLUS**, an ancient officer in the family of the patriarchs, and other prelates of the eastern church. The word, in the corrupt Greek, *συγκελλος*, signifies a person who lies in the chamber with another; a *chamber-fellow*, or *cham*. The *syncellus* was an ecclesiastic, who lived with the patriarch of Constantinople, to be a witness of his conduct; whence it is, that the *syncellus* was also called the *patriarch's eye*; because his business was to observe and watch. The other prelates had also their *syncelli*, who were clerks living in the house with them, and even lying in the same chamber, to be witnesses of the purity of their manners. Afterwards the office degenerated into a mere dignity; and there were made *syncelli* of churches. At last it became a title of honour, and was bestowed by the emperor on the prelates themselves; whom they called *pontificales syncelli*, and *syncelli Augustales*.

SYNCERUS, *Adrius*. See **NAME**, § 2; and **SANNAZARIUS**, where *Syncerus* is erroneously printed *Cincerus*.

(1.) * **SYNCHONDROSIS**. *n. s.* [*συν and χονδρος*.]—*Synchondrosis* is an union by gristles of the sternum to the ribs. *Wiseman*.

(2.) **SYNCHONDROSIS**. See **ANATOMY**, *Index*.

* **SYNCHRONICAL**. *adj.* [*συν and χρονος*.] Happening together at the same time.—It is difficult to make out how the air is conveyed into the left ventricle of the heart, the systole and diastole of the heart and lungs being far from *synchronical*. *Boyle*.

(1.) * **SYNCHRONISM**. *n. s.* [*συν and χρονος*.] Concurrence of events happening at the same time.—The coherence and *synchronism* of all the parts of the Mosical chronology, alter the flood, bear a most regular testimony to the truth of his history. *Hale*.

(2.) **SYNCHRONISM**. See **CHRONOLOGY**.

* **SYNCHRONOUS**. *adj.* [*συν and χρονος*.] Happening at the same time.—The variations of the gravity of the air keep both the solids and fluids in an oscillatory motion, *synchronous* and proportional to their changes. *Arbutnot*.

SYNCHYSIS. *n. s.* in Latin prosody, that confused and intricate order of the words, which is so frequently used by the best Latin poets, and is commonly called the *artificial order*: as *Saxa vocant Itali mediis quæ in fluctibus Aras*, Virgil.

SYNCOPE. *n. s.* in music, denotes a striking or beating of time, whereby the distinction of the several times or parts of the measure is interrupted. However, it is more properly used for the connecting the last note of any measure, or bar, with the first of the following measure, so as only to make one note of both. A *syncope* is sometimes also made in the middle of a measure. *Syncope* is also used when a note of one part ends or terminates on the middle of a note of the other part. This is otherwise denominated *binding*. It is likewise used for a driving note; that is, when some shorter note at the beginning of a measure,

or half measure, is followed by two, three, or more longer notes before another short note occurs, equal to that which occasioned the driving, to make the number even, *e. gr.* when an odd crotchet comes before 2 or 3 minims, or an odd quaver before 2, 3, or more crotchets. In syncopated or driving notes, the hand or foot is taken up, or put down, while the note is sounding.

(1.) ***SYNCOPE.** *n. s.* [*syncope*, Fr.; *συνκοπή*] *f.* Fainting fit.—The symptoms attending gunshot wounds are pain, fever, delirium, and *syncope*. *Freeman.* 2. Contraction of a word by cutting off part in the middle.

(2.) **SYNCOPE**, in grammar, an elision or retrenchment of a letter or syllable out of the middle of a word, as *caldas* for *calidus*.

(3.) **SYNCOPE**, in medicine, **FAINTING**; a deep and sudden swooning, wherein the patient continues without any sensible heat, motion, sense, or respiration, and is seized with a cold sweat over the whole body; all the parts, in the mean time, turning pale and cold, as if he were dead. See *Medicine, Index*.

***SYNCOPIST.** *n. s.* [from *syncope*.] Contraction of words.—To outline all the modern *synopses*, and thoroughly content my English readers, I intend to publish a *Speculator* that shall not have a single vowel in it. *Spec.*

SYNDELEDFOIERD, a gulf in the North Sea, on the coast of Norway: 40 miles NNW. of Christianland.

SYNDER HEAD, a cape of Denmark, on the E. coast of Sleswick. Lon. 9. 39. E. Lat. 55. 11. N.

SYNDIC, *n. s.* in government and commerce, an officer in divers countries, intrusted with the affairs of a city or other community, who calls meetings, makes representations and solicitations to the ministry, magistracy, &c. according to the urgency of the case.

* To **SYNDICATE.** *v. n.* [*syndiquer*, French; *syndicare* and *syndicare*.] To judge; to pass judgment on; to condemn. An unusual word. Not in use.—Aristotle undertook to censure and *syndicate* his master, *Hakewill*.

***SYNDROME.** *n. s.* [*syndromos*.] Concurrent action; concurrence.—All things being linked together by an uninterrupted chain of causes, every single motion owns a dependence on such a *syndrome* of prerequisite motions. *Glarville*.

(1.) ***SYNEDOCHE.** *n. s.* [*synedochē*, French; *synecdoche*.] A figure by which a part is taken for the whole, or the whole for a part.—The whole work is attributed to them by a *synedochē*; that is, they do in this manner the work for which God ordained them. *Taylor*.

(2.) **SYNEDOCHE.** See **ORATOR** § 175—181.

***SYNEDOCHEAL.** *adj.* [from *synedochē*.] Expressed by *synedochē*: implying a *synedochē*. Should I bring you into hospitals, and show you many souls, narrowly lodged in *synedochical* bodies, see their cottages moulder away to dust, by the loss of one limb after another, surviving but part of themselves, and living to see themselves sold and buried by piecemeal. *Boyle*.

SYNCHONESIS. *n. s.* in grammar, a coalition, whereby two syllables are pronounced as one; being much the same as **SYNALOUPHA** and **SYNCHONESIS**.

AXII. PART I.

SYNESIS. *n. s.* in Latin grammar, a figure whereby the construction of a sentence is regulated not by the words, but by the sense, as to gender or number: as, in Livy, *Latium Capuamque agro multati*; instead of *Latini et Capuani*.

SYNESIUS, a celebrated father of the Christian church, who flourished under Theodosius II. He was born at Cyrene, in Africa, of noble parentage. In 410, he was appointed bishop of Ptolemais. His works consist of 155 *Epistles*, and some other curious tracts, written in very pure and elegant Greek. The best editions are those of Paris, in 8vo 1605; folio, 1612, and 1633; and Amsterdam, 1749.

SYNEUROISIS. See **ANATOMY, Index**; and **SYNEUROISIS**.

SYNGE, Edward, a late eminent prelate of Ireland, was the son of Dr Edward Synge, bishop of Cork, and born April 6, 1659, at Inishonane. He was educated at Cork; admitted Commoner, and A. B. at Christ-Church, Oxford; and finished his studies at Dublin. He was made vicar at Christ-Church, in Cork, and after other promotions rose to be bishop of Raphoe, in 1714; and at last in 1716, archbishop of Tuam, being a zealous whig. He wrote and published many excellent tracts on divinity, in 4 vols 12mo; and died at Tuam, in 1741.

SYNGENESIA. [*syn* and *genesis*, congeneration.] The 19th class in Linnæus's artificial system; comprehending those plants which have the anthers united into a cylinder. The orders are six: 1. Polygamia æqualis. 2. Polygamia superflua. 3. Polygamia frustranea. 4. Polygamia necessaria. 5. Polygamia segregata. 6. Monogamia. The five first orders contain the compound flowers, and forms a class truly natural. See **BOTANY, Index**.

SYNGNATHUS, in ichthyology, **PIPE-FISH**, according to Linnæus, a genus belonging to the class of *amphibia*, and order of *nantes*, but arranged by Gmelin more properly under the class of *pisces*, and order of *branchiostegi*. The head is small; the rostrum somewhat cylindrical, long, and turned up at the point, where the mouth is placed, which is covered with a lid or valve. The gills are covered in the same manner. The body is covered with a strong crust, and has no ventral fins. There were formerly enumerated 8 species. Of these, 3 are found in the British seas, *viz.* N^o 1, 3, and 5.

1. **SYNGNATHUS ACUS**, the **NEEDLE FISH**, or *shorter pipe fish*, is thicker than the **BARBARUS**, (N^o 3.) yet it has been seen of the length of 16 inches. The middle of the body in some is hexangular, in others heptangular. The mouth is formed like that of the *barbarus*, the irides are yellow; close behind the head are the pectoral fins, which are small and short. On the lower part of the back is one narrow fin; beyond the vent the tail commences, which is long and quadrangular. At the extremity is a fin round and radiated. The body is covered with a strong crust, elegantly divided into small compartments. The belly is white; the other parts are brown.

2. **SYNGNATHUS ÆQUORUS.** See N^o 6.

3. **SYNGNATHUS BARBARUS**, or *longer pipe fish*. One described by Sir Robert Sibbald was two feet in length; that examined by Mr Pennant only 16 inches. The ucle was an inch long, compressed

I. sidewise,

sidewise, and the end of the lower mandible turned up; the aperture of the mouth was very small. The sides were red; behind each ear was a deep brown line. The body, in the thickest part, was equal to a swan's quill, hexangular from the end of the dorsal fin; from thence to the tail, quadrangular. The belly was slightly carinated, and marked along the middle with a dusky line. Under the tail, commencing at the anus, is a falcus or groove, $\frac{6}{16}$ inches long, covered by two longitudinal valves, which conceal a multitude of young fish. On crossing this part, hundreds may be observed to crawl out.

4. *SYNGNATHUS HIPPOCAMPUS*, the *sea-horse*, which was classed by Aristotle under the *Syngnathus*, is now, by later ichthyologists, arranged under *TRICHECHUS*; which see.

5. *SYNGNATHUS GRUNIDON*, or *little pipe fish*, seldom exceeds 3 inches in length, is very slender, and tapers to a point. It wants both the dorsal and tail fins; is covered with a smooth skin, not with a crust. The nose is short, and turns a little up; the eyes are prominent. On the back is one narrow fin. This species is not viviparous: on the belly of the female is a long hollow, to which adhere the eggs in two or three rows. They are large, and not numerous. *Serpent* is used in several languages to express these fish: the French call one species *crucal*, from a sort of snake, like the blindworm; the Germans call it *müherchlang*; and the Cornish the *sa-adder*.

6. *SYNGNATHUS PELAGICUS*, } are all na-

7. *SYNGNATHUS TETRAGONUS*, } tives of fo-

8. *SYNGNATHUS TYPHELE*, and } reign coun-

SYNGNATHUS AEQUOREUS, } tries.

SYN-MU, or *SIN-NOO*. See *DELUGE*, N° 5.

SYNNADA, *plur.* or } an ancient town of Phry-

SYNNAS, *frag.* } gia, famous for marble

quarries. *Strab.* 12. *Claud.*

(1.) * *SYNNEUROSIS*. *n. s.* [*syn* and *neurosis*.] *Synneurosis* is when the connexion is made by a ligament.—Of this in *synchysis* we find instances, in the connexion of the ossa pubis together, especially in women, by a ligamentous substance. In articulation, it is either round, as that which unites the head of the os femoris to the coxa; or broad, as the tendon of the patella, which unites it to the os tibiae. *Wigeman*.

(2.) *SYNNEUROSIS*. See *ANATOMY*, *Index*, at *SYNEUROSIS*.

SYNOCHA, and } in medicine, two species of

SYNOCHUS, } continued fever. See *ME-*

DICINE, *Index*.

(1.) * *SYNOD*. *n. s.* [*synod*, French; *convocat.*]

1. An assembly called for consultation: it is used particularly of ecclesiastics. A provincial *synod* is commonly used, and a general council.—The glorious gods sit in hourly *synod* about thy particular prosperity. *Shak.*

It hath in solemn *synod* been decreed,

'T admit no traffic to our adverse towns. *Shak.*

—The opinion was not only condemned by the *synod*, but imputed to the emperor as extreme madness. *Bacon.*

Flea-bitten *synod*, an assembly brew'd

Of clerks and clergymen. *Cleveland.*

—His royal majesty, according to these presby-

terian rules, shall have no power to command his clergy to keep a national *synod*. *White.*

Well have ye judg'd, well ended long debate

Synod of gods! *Milton's Paradise Lost.*

Let us call to *synod* all the blest. *Milton.*

—The second council of Nice, he saith, I must irreverently call that wise *synod*. *Stillingfleet.*

You bright *synod* of the powers above! *Dryden.*

2. Conjunction of the heavenly bodies.—

Howe'er love's native hours are set,

Whatever starry *synod* met,

'Tis in the mercy of her eye,

If poor love shall live or die. *Crahaas.*

Their planetary motions and aspects

In *synod* unbend. *Milton.*

—The planets and stars have, according to astrologers, in their great *synods* or conjunctions, much more powerful influences on the air than ascribed to one or two of them out of that aspect. *Boyle.*

(2.) *SYNOD*, in astronomy, a conjunction or concourse of two or more stars or planets, in the same optical plane of the heavens.

(3.) *SYNOD* signifies also a meeting of ecclesiastical persons to consult on matters of religion.—Of these there are four kinds, viz. 1. *General* or *ecumenical*, where bishops, &c. meet from all nations. These were first called by the emperors, afterwards by Christian princes; till in later ages the pope usurped to himself the greatest share in this business, and by his legates presided in them when called. 2. *National*, where those of one nation only come together, to determine any point of doctrine or discipline. The first of this sort held in England was that of Herford or Hertfort, in 673; and the last was held by cardinal Pole in 1555. 3. *Provincial*, where those only of one province meet, now called the *convocation*. 4. *Diocesan*, where those but of one diocese meet, to enforce canons made by general councils, or national and provincial *synods*, and to consult upon rules of discipline for themselves. These were not wholly laid aside, till, by the act of submission 25 Hen. VIII. c. 19. it was made unlawful for any *synod* to meet but by royal authority. See *COUNCIL* and *CONVOCACTION*.

(4.) *SYNODS*, *PROVINCIAL*, in the government of the church of Scotland. See *PRESBYTERIANISM*.

§ 5.

(1.) * *SYNODAL*. *SYNODICAL*. *SYNODICK*. *ad.* [*synodique*, French, from *synod*.] 1. Relating to *synod*; transacted in a *synod*.—The various dignity of their several churches, and of their manners in them, by the frequency of their *synodical* and professional meetings, have necessarily raised many questions of place among them. *Selden.*—St Athanasius writes a *synodical* epistle to those of Antioch. *Stillingfleet*. 2. [*Synodique*, French] Reckoned from one conjunction with the sun to another.—The *synodick* revolution of the moon measures the month. *Holder*.—The moon makes its *synodical* motion about the earth in 29 days, 12 hours, and about 44 minutes. *Locke*.

(2.) * *SYNODAL*. *n. s.* [from *synod*.] Money paid annually to the bishop, &c. at Easter visitation.

(3.) *SYNODALS*, or *SYNODIES*, were pecuniary rents (commonly of two shillings) paid to the bishop or archdeacon at the time of their Easter visitation.

visitation, by every parish priest. They were thus called, because usually paid in synods; as anciently bishops used to visit and hold their diocesan synods once. They are sometimes also denominated *synodical*; but more especially, *procurations*.

(1.) * **SYNODICAL**. See **SYNODAL**, § 1.

(2.) **SYNODICAL EPISTLES** are circular letters written by the synods to the absent prelates and churches; or even those general ones directed to all the faithful, to inform them of what had passed in the synod.

* **SYNODICALLY**. *adv.* [from *synodical*.] By the authority of a synod or public assembly.—It shall be needful for those churches *synodically* to determine those points. *Saunderson*.—The alterations made by the commissioners were brought to the convocation, where they were *synodically* agreed upon. *Nelson*.

* **SYNODICK**. See **SYNODAL**.

SYNODIES. See **SYNODAL**, § 3.

SYNOECI, and **PERIOECI**. See **GEOGRAPHY**, **§§. VIII.**

SYNOECIA, in Grecian antiquity, a feast celebrated at Athens in memory of Theseus's having united all the petty communities of Attica into one single commonwealth; the feast whereof was at Athens, where all the assemblies were to be held. This feast was dedicated to Minerva; and, according to the scholiast on Thucydides, it was held in the month *Metagitnion*.

* **SYNONYMA**. *n. f.* [Latin; *synonyma*.] Names which signify the same thing.

SYNONYME. *n. f.* [*synonyme*, Fr.] A synonymous word.

* **To SYNONYMISE**. *v. a.* [from *synonyma*.] To express the same thing in different words.—This word fortis we may *synonymise* after all these fashions, stout, hardy, valiant, doughty, courageous, adventurous, brave, bold, daring, intrepid. *Camden*.

SYNONYMI. *n. f.* [from *synonyma*.] In botany, a writer who collects the different names of the same plants, as described by different authors. *A. B.*

(1.) * **SYNONYMOUS**. *adj.* [*synonyme*, Fr. *synonymes*.] Expressing the same thing by different words.—When two or more words signify the same thing, as wave and billow, mead and meadow, they are usually called *synonymous* words. *Watts*.—Wisdom and understanding are *synonymous* words here. *Tillotson*.—Fortune is but a *synonymous* word with nature and necessity. *Bentley*.

(2.) **SYNONYMOUS WORDS**. Several works have been composed for the express purpose of explaining synonymous words. Dr Hall's is the latest work on Latin synonyms. We know none of high character in our own language.

* **SYNONYMOUSLY**. *adv.* [from *synonymous*.] In a synonymous manner; in the same or nearly a similar sense.

* **SYNONYMY**. *n. s.* [*synonymia*.] The quality of expressing by different words the same thing.

SYNOPE. See **SYNOPE**, N° 1. and 2.

SYNOPLÉ. See **SYNOPLÉ**.

* **SYNOPSIS**. *n. s.* [*synopsis*.] A general view; all the parts brought under one view.

* **SYNOPTICAL**. *adj.* [from *synopsis*.] Affording a view of many parts at once.—We have

collected so many *synoptical* tables, calculated for his monthly use. *Evelyn*.

SYNOVIA, *n. s.* in anatomy, a term first used by Paracelsus and his school for the nutritious juice proper and peculiar to each part; as the synovia of the joints, &c. See **ANATOMY**, *Index §* **PHYSIOLOGY**, *§§. VI.*; and **SINOVIA**.

SYNOVIAL GLANDS. See **ANATOMY**, § 112.

* **SYNTACTICAL**. *adj.* [from *syntaxis*, Lat.] 1. Conjoined; fitted to each other. 2. Relating to the construction of speech.

SYNTACTICALLY. *adv.* [from *syntactical*.] In a manner consistent with the rules of syntax.

SYNTAGM, } *n. s.* [*συνταγμα*, Gr. from *syn*,
SYNTAGMA, } with, and *tagma*, to order.] A disposition of things according to order in literature; a regular treatise on any subject.

SYNTESIS, *n. s.* [from *syn*, with, and *teno*, to stretch,] in surgery, a preternatural distension of the parts.

(1.) * **SYNTAX**. **SYNTAXIS**. *n. s.* [*συνταξις*.] 1. A system; a number of things joined together.—They owe no other dependance to the first than what is common to the whole *syntax* of beings. *Glanville*. 2. That part of grammar which teaches the construction of words.—They do not so much as understand common grammar and *syntax*. *Swift*.

(2.) **SYNTAX**, in grammar, the proper construction or due disposition of the words of a language into sentences and phrases. See **GRAMMAR**, under **ENGLISH LANGUAGE**, p. 702.

* **SYNTAXIS**. See **SYNTAX**, § 1.

(1.) * **SYNTHESIS**. *n. s.* [*συνθεσις*.] The act of joining; opposed to *analysis*.—*Synthesis* consists in assuming the causes discovered and established as principles, and by them explaining the phenomena proceeding from them, and proving the explanations. *Newton*.

(2.) **SYNTHESIS**, in logic, denotes a certain branch or method, opposite to *analysis*. In the synthetic method we pursue the truth by reasons drawn from principles before established or assumed, and propositions formerly proved; thus proceeding by a regular chain to the conclusion. Such is the method in Euclid's Elements, and most demonstrations of the ancient mathematicians which proceed from definitions and axioms to prove propositions, &c. and from those propositions proved to prove others. This method we also call *composition*, in opposition to *analysis* or *resolution*. See **ANALYSIS** and **ANALYTIC**.

* **SYNTHETICK**. *adj.* [*συνθετικη*.] Conjoining; compounding; forming composition: opposed to *analytick*.—*Synthetic* method is that which begins with the parts, and leads onwards to the knowledge of the whole: it begins with the most simple principles and general truths, and proceeds by degrees to that which is drawn from them or compounded of them; and therefore it is called the method of composition. *Watts*.

SYPHÆUM, an ancient town of the Brutii, in Italy. (*Liv.* c. 19.) See **MURANUM**.

SYPHAX, king of the Masæyli, in Numidia. For his adventures, see **NUMIDIA**, § 4—7. He married Sophonisba. See **SOPHONISBA**. He died in prison at Rome, A. A. C. 201.

SYPHILIS. See **MEDICINE**, *Index*.

L 2

(1.) * **SYPHON**.

(1.) *SYPHON. *n. s.* [This should be written *siphon*; *super.*] A tube; a pipe.—Take your glass *siphon*, or crane, and draw it off from its last *feces* into small bottles. *Mortimer.*

(2.) SYPHON. See HYDROSTATICS, Part I. *Sec.* XII. and XIII. Some uncommon phenomena in nature may be accounted for upon the principles of the syphon; as for instance, that of reciprocating springs. See PNEUMATICS, *Sec.* I. II. and IV.

(3.) SYPHON, WIRTEMBERG. See PNEUMATICS, *Sec.* IV. page 716. col. 1.

SYPOMBA, an island of S. America, on the coast of Brazil; 21 miles N.E. of St John's Island, and N.W. of a range of islands which form the great bay of PARA.

SYR, or ZUR. See ZUR.

(1.) SYRA, an island in the Grecian Archipelago, anciently called SYROS. It is mountainous, but produces plenty of wheat, barley, vines, figs, olives, and cotton. The air is cool and moist, but temperate and salubrious. The inhabitants are mostly Roman Catholics, with a few Greeks.

(2.) SYRA, the capital of the above island, built on the site of the ancient SYROS, of which it exhibits many relics, in the remains of grand buildings. It is built on a steep mountain, and has a harbour, 12 miles S. of Andros. Lon. 42. 40. E. Ferro. Lat. 37. 27. N.

SYRACO, a marsh of Sicily, near SYRACUSE, to which it gave name.

SYRACOSIA, festivals anciently held in Syracuse, for ten days annually, during which the women were chiefly employed in sacrificing. *Syracosa* was also the name of another annual festival, celebrated near the lake where it was supposed that PLUTO had carried off PROSERPINA.

SYRACUSA, *fug.* } ancient names of SYRA-
SYRACUSÆ, *plur.* } CUSE.

SYRACUSAN, *adj.* Of or from Syracuse.

SYRACUSANS, the people of Syracuse.

(1.) SYRACUSE, a celebrated city of Sicily, and the capital of the island. It was built, according to Thucydides and Strabo, by Archias, one of the Heraclidae, who came from Corinth into Sicily in the 2d year of the 11th Olympiad, or about 732 years before the Christian era. It was named SYRACUSE from SYRACO, a marsh near it. It lies 72 miles S. by W. of Messina, and 110 or 115 S.E. of Palermo. Lon. 15. 30. E. Lat. 37. 17. N.

(2.) SYRACUSE, ANCIENT FLOURISHING STATE OF. This city was of a triangular form, and, in its most flourishing state, extended 180 stadia, or 22 English miles and 4 furlongs, in circumference, and was divided into four districts, viz. ORTYGIA, *Acradina*, TYCHA, and NEAPOLIS. There was also a fifth district, called *Epipole*; but as it was thinly inhabited, it is often omitted by geographers. Each of the four chief districts formed separate cities, and were fortified with three citadels, and three-fold or triple walls. Syracuse had also two spacious harbours, separated from each other by the island of Ortygia. (See ORTYGIA, N° 2.) The greatest harbour was above 5000 paces in circumference, and its entrance 500 paces wide. The city was well built, and the houses were *lat. 17* and magnificent.

(3.) SYRACUSE, ANCIENT HISTORY OF, TILL

THE DEATH OF GELON. What form of government first prevailed in the city is not known. The history is obscure till the time of Gelon, who was born in Gela, in Sicily. He signalized himself in a war carried on by Hippocrates tyrant of Gela against the Syracusans, whom he defeated in a pitched battle, and had well nigh taken their city. Having thus become very powerful, he soon seized on the sovereignty. Putting himself at the head of some Syracusan exiles, he marched towards that place, where he was received with loud acclamations by the faction to which they belonged; and by their means obtained possession of the city. Gelon, to people the capital of his new dominions, first demolished the neighbouring city of Camarina, and transplanted the inhabitants to Syracuse. Soon after, entering into a war with the Megarans, he defeated them, took and razed their cities, and in like manner transplanted the people. Syracuse thus became very powerful, and full of inhabitants; and the friendship of Gelon was courted both by Athens and Lacedæmon at the time of the Persian invasion. His assistance, however, was afterwards rejected, as he insisted upon being made commander in chief either of the fleet or the army. In the mean time the Carthaginians had entered into a treaty with the Persians; by which it was agreed, that the former should attack those of the Greek name in Sicily and Italy, to divert them from assisting one another. Sicily was accordingly invaded by the Carthaginians with a vast army; but they were utterly overthrown by Gelon and his father-in-law Theron, prince of AGRIGENTUM, as related under the article CARTHAGE, § 4. After this victory, the people out of gratitude obliged him to take upon himself the title of *king*, which till that time he had refused. A decree was passed without opposition, by which the crown was settled on his two brothers Hiero and Thrasybulus after his death. The new king spent the remainder of his short reign in studying the happiness of his people. He died A. C. 475, after reigning four years.

(2.) SYRACUSE, HISTORY OF, TILL THE DEATH OF HIERO I. AND THE ERECTION OF A REPUBLIC. Gelon was succeeded by his brother HIERO, whose character is diffidently drawn by historians. He was twice engaged in a war with the Agrigentines, and drove from their habitations the people of Catan and Naxos, settling in their room a colony of Syracusans and Peloponnesians. Hiero I. died A. C. 459, and was succeeded by Thrasybulus, who proving a tyrant, was in ten months driven out, and a popular government restored which continued 35 years.

(3.) SYRACUSE, HISTORY OF, TILL THE DEFEAT OF THE SYRACUSANS BY THE ATHENIANS. Several persons for some time aspired at the sovereignty; to prevent which they had recourse to *petalism*; but being productive of great inconveniences, the law was repealed soon after it had been enacted. (See PETALISM.) About this time the Syracusans entered into a war with the SICULI, which terminated in the subjection of the latter. Syracuse now became so powerful, that it in a manner gave law to the whole island. The Locutines, disputing the supremacy of the Syracusans

ensans, their territory was laid waste, and their city reduced to great straits. LEONTINI was an Athenian colony; and this furnished the Athenians, who had already meditated the conquest of Sicily, with a pretence to attack the Syracusans with their whole force. But the Leontines, sensible that their pretended allies aimed at the conquest of the whole island, concluded a peace with Syracuse. In A. C. 416, a dispute happening between the inhabitants of ZEGESIA, or SEGESTA and Selinus concerning some lands which the latter had seized, the Segestines applied for assistance to Agrigentum, Syracuse, and even to Carthage. But as none of these states chose to interst themselves in their quarrel, they applied at last to the Athenians, who joyfully accepted of the opportunity of again interfering in the affairs of Sicily. With the most sanguine expectations the Athenians landed 7000 men in Sicily, under Nicias, possessed themselves of a strong post, and put the Syracusans to flight.

(6.) SYRACUSE, HISTORY OF, TO THE DEFEAT OF THE ATHENIANS. In the mean time the Syracusans received assistance from the Lacedæmonians under the command of an experienced officer named *Gylippus*, who arrived just in time to prevent Syracuse from surrendering. At the head of 7000 foot and 200 horse, he made directly for Epipolæ, where Nicias had fortified himself in a castle named *Labdalon*, he drew up his small army under the walls; and sent an herald to Nicias, to tell him that he would allow him only five days to leave Sicily. Nicias returned no answer; but Gylippus soon after stormed the fort, and put to the sword all the Athenians in it. This opened a way into the city, where he was received with loud acclamations. The fortune of the war was again changed. The Athenians gained an advantage by land, but were next day defeated with great loss. The Syracusans received fresh supplies from Corinth, and the Athenians from Attica. Many engagements both by sea and land took place, in which the success was ultimately in favour of the Syracusans. At last the Athenian affairs were totally ruined by the loss of a sea-fight, in which 60 of their ships were taken or destroyed, and the rest left quite unserviceable. In this desperate situation it was determined to abandon their ships, and retire that night to the city of their confederates. But this measure was delayed from a piece of false intelligence; and Nicias did not march out till the 3d day after. The Athenians and their allies also marched out to the number of 40,000; but finding themselves shut up on all sides, and being obliged to fight their way through every outlet, they soon sunk into despair. Nicias did his utmost to encourage them; and at last they marched out in two bodies. The vanguard led by Nicias continued to advance in good order; but half the rear, commanded by Demosthenes, lost their way in the night, and were obliged to surrender. Nicias being informed of this misfortune, offered to pay the whole expence of the war, provided he was allowed to march off with his men. But this being rejected he set out, though galled all the way by showers of darts from his enemies. Arriving at a river called *Amarus*, they rushed into it without order;

in which confusion the Syracusan cavalry attacked them so desperately, that 18,000 perished, and the river for many miles was dyed with their blood. The remainder surrendered, on condition of having their lives saved; but the terms were shamefully broken by the Syracusans. The generals were first ignominiously whipt, and then put to death: the soldiers were sent to labour in quarries, where they were allowed only two small measures of flour and one of water a day; and where, being crowded, they suffered inexpressible miseries for many months. Most of them perished by this cruel treatment, and the few who survived were sold for slaves.

(7.) SYRACUSE, HISTORY OF, TO THE DEATH OF DIONYSIUS I. The war was scarce ended, when a new and formidable invasion by the Carthaginians took place; but the event of that expedition was as unfortunate to the Carthaginians as the former had been, of which a particular account is given under the article CARTHAGE, § 4. See also AGRIGENTUM. In the mean time, however, a considerable revolution had happened in Syracuse. DIONYSIUS, a man of great valour and eloquence acquired such influence with the populace, that step by step he attained to sovereign power, possessed himself of the citadel, where all the arms and provisions were kept; and publicly took the title of *king of Syracuse*, A. C. 404. The Syracusans did not tamely submit to their new master: but Dionysius managed matters so well, that their frequent revolts answered no other purpose than more certainly to entail slavery on themselves; and he was allowed to possess the throne without much opposition till his death, A. C. 366. See DIONYSIUS I, and SICILY, § 7.

(8.) SYRACUSE, HISTORY OF, TO THE DEFEAT OF DIONYSIUS II. BY DION. On the death of Dionysius, he was succeeded by his son, DIONYSIUS II. He was naturally of a mild and peaceable temper, averse from cruelty, and inclined to learning; but his father, to whom all merit, even in his own children, gave umbrage, stifled as far as possible his good qualities by a mean education. He no sooner ascended the throne, than DION, brother to Aristomache the other wife of Dionysius the Elder, undertook to correct the faults of his education, and to inspire him with thoughts suitable to the high station in which he was placed. For this purpose he sent for the philosopher PLATO, under whose care he put the young king. This produced a reformation on Dionysius; but the courtiers, dreading the effects of the philosopher's instructions, prevailed on him to banish Dion, and to keep Plato himself in a kind of imprisonment in the citadel. At last, however, he set him at liberty; upon which Plato returned to his own country. Dion, in the mean time, visited several of the Grecian cities, and at last took up his residence in Athens; but the honours which were every where paid him, raised such jealousies in the breast of the tyrant, that he stopped his revenue, and caused it to be paid in to his own treasury. In a short time Dionysius again sent for Plato; but finding it impossible to dissolve the friendship between him and Dion, disgraced, and placed him in a very dangerous situation, in the midst of assassins who hated him.

(See

(See PLATO.) Not daring, however, to offer him any violence, he allowed him soon after to depart; revenging himself on Dion, whose estate he sold, and gave his wife Arete in marriage to Timocrates one of his own flatterers. Dion now resolved to revenge himself on the tyrant for the many injuries he had sustained, and at once to deliver his country from the oppression under which it groaned. He began with raising foreign troops privately, by proper agents. Many Syracusans of distinction entered into his scheme and gave him intelligence of what passed in the city; but of the exiles, only 25 joined him, with about 800 men. He arrived at the port of Minoa, near Agrigentum. Here they received intelligence that Dionysius had set sail for Italy, with a fleet of 80 galleys. On this Dion resolved to take advantage of the tyrant's absence; and immediately set sail for Syracuse. On his march he prevailed upon the inhabitants of Agrigentum, Gela, Camarina, and other cities, to join him. As soon as he entered the territories of Syracuse, multitudes flocked to him; and as nobody appeared to oppose him, he boldly entered the city, where he quickly found himself at the head of 30,000 men. Seven days after Dion's arrival, Dionysius returned and entered the citadel by sea. Finding his affairs in a desperate situation, he had recourse to artifice; and having amused the Syracusans by a feigned negotiation, until he observed that they kept a negligent guard, he attacked them all at once with such fury, that he had almost taken the city. But Dion encouraged the soldiers by his example so much, that he at last obtained a complete victory; for which they presented him with a crown of gold. Dionysius was obliged to fly to Italy.

(9.) SYRACUSE, HISTORY OF, TO THE MURDER OF DION. It was not long, however, before the ungrateful Syracusans began to confer quite different rewards on their benefactor. Dion having opposed a proposal for a new division of lands, was obliged to leave the city and reside some time at Leontini, where he was received with respect. In the mean time, the citadel still continued in the hands of the adherents of Dionysius. Being blocked up on all sides, they were reduced to great straits, and were actually making proposals of capitulation, when Nypsius, an experienced general, and greatly attached to Dionysius, appeared with a numerous squadron of galleys, and a large fleet of transports laden with provisions. The general landed his men, and got them into the citadel; but almost all his galleys and ships laden with corn were sunk or taken. This victory proved the ruin of the Syracusans; for, giving themselves up to riot and debauchery, the enemy sallied out in the night time from the citadel, and massacred the citizens without mercy. An embassy was then sent to Dion, intreating him to return and save the city a second time. To this he agreed, and instantly set out on his march; but in the mean time, as the soldiers of Dionysius, fatiated with the slaughter, had retired into their fortrefs, the ungrateful Syracusans began to repent of their having sent an embassy to Dion. The chief commanders, therefore, sent messengers to stop his march; but as some of his friends

sent deputies to him at the same time, contradicting this message, he proceeded on his journey. The insatuated mob seized the gates to dispute his entrance; but they paid dear for their frenzy. The Dionysians again sallied out upon them, and made a sad massacre. As they knew that Dion was hastening to the relief of the city, they endeavoured to destroy it entirely before his arrival; for, after they had murdered all the inhabitants they could find, they set fire to the houses, by which great numbers perished. But, during this confusion Dion arrived; and having briskly attacked the enemy, at last defeated them with great slaughter, driving the remainder into the citadel. The citadel soon after surrendered; and Dion allowed Apollocrates the tyrant's son, who commanded there, to retire with five galleys to his father. As soon as Dion entered the citadel, he was met by his sister and wife Arete, whom he received with affection, notwithstanding her having lived so long with Timocrates. He then left the Syracusans in possession of the citadel, rewarded his followers, dismissed his guards, and lived like a private citizen. In a short time after he lost his life, through the base treachery of Calippus, or Gylippus, who pretended to be his intimate friend, and who immediately after caused his wife and sister to be carried to prison. See DION, N° 1.

(10.) SYRACUSE, HISTORY OF, TO THE TOTAL EXPULSION OF DIONYSIUS II. BY TIMOLEON. Calippus having thus removed Dion, soon made himself master of Syracuse, where he committed all manner of cruelties; but was driven out, and forced to fly to Rhegium, where he was murdered with the same dagger wherewith he had killed Dion. In 350 B. C. Dionysius again made himself master of Syracuse; and being exasperated by his past misfortunes, tyrannized worse than ever. The Syracusans first had recourse to Ictas tyrant of Leontini; but as the Carthaginians took this opportunity to invade them with a powerful fleet and army, they were obliged to apply to the Corinthians. By them Timoleon, a celebrated commander, was sent to assist the Syracusans, whom he found in a very distressed situation; Ictas being master of the city, the Carthaginians of the harbour, and Dionysius of the citadel. As all parties were equally the enemies of Dionysius, he found it impossible, to hold out, and therefore surrendered himself to Timoleon, by whom he was sent to Corinth; where at last he was reduced to the necessity of teaching a school for his support.

(11.) SYRACUSE, HISTORY OF, UNTIL THE DEATH OF TIMOLEON. After the expulsion of the tyrant, Timoleon withdrew to Catana, leaving only 400 Corinthians, under the command of an experienced officer named *Leas*, to guard the citadel. These were immediately besieged by Ictas and the Carthaginians, but Timoleon relieved them in spite of all opposition; and having dispersed emissaries through the army of Mago the Carthaginian general, exhorting the mercenary Greeks to forsake him, he was so much intimidated, that in spite of all the remonstrances Ictas could make, he set sail for Africa, leaving his colleague to carry on the war in the best manner he could. The day after the departure of Mago,

Timoleon

Timoleon assaulted the city so briskly, that the troops of Ictas were driven from the walls, and the Corinthians became masters of the place. Timoleon invited the inhabitants to assist in demolishing the citadel and other castles, which he called *nests of tyrants*; after which he caused edifices to be erected in the place where the citadel had stood, for the administration of justice. He found the city in a most miserable situation, and almost a desert. He supplied the city with inhabitants from Corinth and other cities of Greece, and distributed the lands among them *gratis*; but sold the houses, and with the money arising from the sale, established a fund for the support of the poor. Having thus restored Syracuse, he in like manner delivered all the Greek cities of Sicily from the tyrants who had taken possession of them, all of whom he put to death. After this he resigned his authority, and led a retired life, honoured in the highest degree by the Syracusans, and by all the cities in Sicily. After his death he was honoured as a god.

(12.) SYRACUSE, HISTORY OF, UNTIL THE DESTRUCTION OF TUNIS BY AGATHOCLES. For 30 years the Syracusans enjoyed the fruits of Timoleon's victories; but, new disturbances arising, another tyrant started up, who exceeded all that had gone before him in cruelty and other vices. This was the celebrated Agathocles, of whose exploits against the Carthaginians, some account is given under the articles AGATHOCLES, AGRIGENTUM, CARTHAGE, § 1. and SICILY, § 2. But farther particulars belong to this article. In two years he subdued all the Greek part of Sicily. He next committed great devastations in the Carthaginian territories, their general Hamilcar not offering to disturb him. This perfidious conduct greatly incensed the people of those districts against Hamilcar, whom they accused before the senate. He died, however, in Sicily; and Hamilcar the son of Gisco was appointed to succeed him in the command of the forces. The last place that held out against Agathocles was Messina, whither all the Syracusan exiles had retired. Paphilus, Agathocles's general, cajoled the inhabitants into a treaty; which Agathocles paid no regard to, but, as soon as he was in possession of the town, cut off all those who had opposed his government; for, as he intended to prosecute the war with the utmost vigour, against Carthage, he wished to destroy as many of his Sicilian enemies as possible. The Carthaginians in the mean time having landed a powerful army in Sicily, an engagement ensued, in which Agathocles was defeated with the loss of 7000 men. After this defeat he was obliged to shut himself up in Syracuse, which the Carthaginians immediately invested, and most of the Greek states in the island submitted to them. Agathocles seeing himself stripped of almost all his dominions, and his capital itself in danger of falling into the hands of the enemy, determined to transfer the war into Africa, and lay siege to the enemy's capital. For this purpose he contrived to carry over 14,000 men, and land them with little opposition. As soon as his forces were landed, Agathocles burnt his fleet, that his soldiers might have no possibility of flying. He first advanced to a place called *the Great City*. This, after a

feeble resistance he took and plundered. From hence he marched to Tunis, which surrendered on the first summons; and Agathocles levelled both places with the ground.

(13.) SYRACUSE, HISTORY OF, UNTIL THE DEATH OF HAMILCAR. The Carthaginians were at first thrown into the greatest consternation; but recovering themselves, the citizens took up arms, and in a few days they had an army of 40,000 foot and 1000 horse, with 2000 armed chariots. The command of this army they entrusted to Hanno and Bomilcar, two generals between whom there subsisted a great animosity. This occasioned the defeat of their whole army, with the loss of their camp. Upon this defeat, the Carthaginians, according to their barbarous superstition, offered up 200 children and other 300 voluntary human sacrifices. In Sicily, Hamilcar, still resolved to storm the city, did his utmost to conceal from the Syracusans the intelligence of Agathocles's victory; but in vain, for Agathocles got it conveyed by a galley. Hamilcar then erected scaling ladders, and began his attack upon Syracuse, but though at first he was somewhat successful, he was soon repulsed with great loss. Raising the siege he over-ran the country and took some towns in alliance with Syracuse; after which he renewed his attack on the city in the night, but was completely defeated, his troops slaughtered, and himself taken prisoner, carried into Syracuse, and beheaded.

(14.) SYRACUSE, HISTORY OF, UNTIL THE DEATH OF OPHELLAS. About this period the Agrigentines, finding the Carthaginians and Syracusans had greatly weakened each other, thought it a proper time to seize the sovereignty of the whole island, and therefore commenced a war against both; in which they had such success, that they took many capital towns both from the Carthaginians and Syracusans.—In the mean time Agathocles was extremely successful in Africa. He took most of the towns of note in the Carthaginian territories; and hearing that Elymas king of Libya, their ally, was coming against him, he entered Upper Libya, and gave him a complete overthrow, slaughtering a great number of his troops with his general at their head. After this he advanced against the Carthaginians with such expedition, that he surprised and defeated them, with the loss of 2000 killed, and a great number taken prisoners. He next prepared for the siege of Carthage itself; and advanced within 5 miles of that city; but, notwithstanding the great losses they had sustained, the Carthaginians, with a powerful army, encamped between him and their capital. In this situation Agathocles received advice of the defeat of the Carthaginian forces before Syracuse, along with the head of Hamilcar. Upon this he immediately rode up to the enemy's camp, and showing them the head, gave them an account of the total destruction of their army before Syracuse. This threw them into such consternation, that in all human probability Agathocles would have made himself master of Carthage, had not an unexpected mutiny arisen in his camp, which gave the Carthaginians time to recover from their terror. The year following an engagement happened, in which neither party gained any great advantage; but soon after, the tyrant, notwithstanding, all his victories,

victories found himself unable to carry on the war alone; and therefore endeavoured to gain over Ophellas, one of the captains of Alexander the Great. In this he succeeded: Ophellas brought an army to his assistance through many trials; in reward for which Agathocles cut him off by treachery, and then by promises persuaded his troops to serve under himself.

(15.) SYRACUSE, HISTORY OF, UNTO THE MURDER OF AGATHOCLES. Agathocles now finding himself at the head of a numerous army, assumed the title of *King of Africa*, intending to complete his conquests by the reduction of Carthage. He began with the siege of URICA, which was taken by assault. After this he marched against Hippo Diarrhytus, the *Biserta* of the moderns, which was also taken by storm; and after this most of the people bordering upon the sea coasts, and even those who inhabited the inland parts, submitted. But in the midst of this success, the Sicilians formed an association to recover their liberty; which obliged the tyrant to return home, leaving his son Archagathus to carry on the war in Africa. ARCHAGATHUS, after his father's departure, greatly extended the African conquests. He sent Eumachus at the head of a large detachment to invade some of the neighbouring provinces, while he himself, with the greatest part of his army, observed the motions of the Carthaginians. Eumachus falling into Numidia, first took the great city of TOCAS, and conquered several of the Numidian cantons. Afterwards he besieged and took Phellina; which was attended with the submission of the Aphodelodians, a nation, (says Diodorus,) as black as the Ethiopians. He then reduced several other cities; and being at last elated with such a run of good fortune, resolved to penetrate into the more remote parts of Africa. Here he at first met with success; but hearing that the barbarous nations were advancing in a formidable body to give him battle, he abandoned his conquests, and retreated with the utmost precipitation towards the sea-coasts, after having lost many men. This unfortunate expedition made a great alteration for the worse in the affairs of Archagathus. The Carthaginians hearing of Eumachus's bad success, resolved to repair their former losses. They divided their forces into 3 bodies; one they sent to the sea-coasts; another into the Mediterranean parts, and the last to upper Africa. Archagathus divided his forces likewise into 3 bodies: one he sent to observe the Carthaginian troops on the coasts; and to advance afterwards into Upper Africa; another, under Æschion, he sent into the heart of the country; and with the last, which he led in person, he kept nearer Carthage, preserving a communication with the other two, to send them succours, or recall them, as the exigency should require. The Carthaginian troops sent into the heart of the country were commanded by Hanno, a general of great experience, who being informed of the approach of Æschion, laid an ambuscade for him, into which he was drawn and cut off with 4000 foot and 200 horse. Himilco, who commanded the Carthaginian forces in Upper Africa, having advice of Eumachus's march, immediately advanced against him. An engagement ensued, in which the Greeks were almost totally

cut off, or perished with thirst after the battle; out of 8000 foot only 30, and of 800 horse only 40, having escaped. Archagathus receiving the news of these two defeats, immediately called in the detachments he had sent out. He was, however, soon hemmed in on all sides in such a manner as to be reduced to the last extremity for provisions, and ready every moment to be swallowed up by his numerous enemies. In this distress, he sent an express to his father informing him of his losses. Hereupon Agathocles, leaving the care of the Sicilian war to Leptines, procured the assistance of 18 Etruscan ships, with which he fought the Carthaginian squadron then on the coast, took 5 of their ships and made prisoners of their men. Having thus become master of the port, and secured a passage into it for trading vessels, plenty was soon restored; of which taking a sufficient supply for himself, he immediately sailed for Africa. Upon his arrival, he found his forces to consist of 25,000 Greeks, Samnites, Etruscans, Celtes, and Africans; besides 1500 horse. He offered the enemy battle, but they declined. He, however, forced them to action, attacked the camp with his usual bravery, and in all probability would have gained a complete victory, had not his mercenaries deserted him. The barbarous sacrifice made by the Carthaginians, and its dreadful consequences to their whole army are related under CARTHAGE, § 4; as well as its consequences to Agathocles, who with difficulty escaped from his enemies, and his own enraged soldiers, who murdered his sons, and made peace with Carthage. After all this reverse of fortune, Agathocles returned to Italy, gathered a new army, relieved CORCYRA, and forced Cassander to raise the siege of it; burned the Macedonian fleet; avenged the murder of his wives and children; met with his old troops, who had deserted him in Africa; defeated and massacred them all; ravaged the coasts of Italy, and took *Hipponium*. At last he was poisoned, some say by his grandson, others by one *Menon*, A. A. C. 289, in the 28th year of his reign, and 95th of his age.

(16.) SYRACUSE, HISTORY OF, UNTO THE DEPARTURE OF PYRRHUS. After Agathocles's death, a succession of tyrants followed, till at last the city, being held by two rivals, TOENION and SOSTRATUS, who made war within the very walls, Pyrrhus king of Epirus was invited into Sicily, to put an end to these destructions. He willingly complied with the invitation; and was everywhere received with loud acclamations, as the deliverer not only of Syracuse, but of all Sicily. Puffed up with the expectation of reducing the whole island, he caused his son take upon him the title of *King of Sicily*; but in the mean time having displeased the Sicilians by his arbitrary behaviour, they deserted from him in such numbers that he was glad to set out for Italy. He embarked in the ships which he had brought with him from Italy; but was met at sea by the Carthaginians, who sunk 70 of his vessels, and dispersed or took the rest; so that he saved himself in Italy only with 12 vessels, the poor remains of a fleet of 200 sail.

(17.) SYRACUSE, HISTORY OF, UNTO THE DEATH OF HIERO II. After the departure of Pyrrhus, Hiero II, the son of Hierocles, a descendant

of GELON the first king of Syracuse, was chosen general of the forces, along with another named *Artemidorus*. The two generals earnestly wished to put an end to the confusion and disorder which reigned in the city; for which reason they entered it at the head of their forces. On this occasion *Hiero* discovered extraordinary talents for government. By mere dint of insinuation and address, without shedding blood or hurting a single citizen, he so gained the affections of all, that he was invested with the whole civil as well as military power in the state. Soon after this, he married the daughter of one of the first citizens; and having distinguished himself by his exploits against the *Mamertines*, was unanimously elected king of Syracuse, A. A. C. 265. Some time after *Hiero's* accession to the throne, he again defeated the *Mamertines*, and reduced them to such straits, that they were obliged to call in the Romans to their assistance. The consequences of this have been fully related under the articles *ROME* and *CARTHAGE*, § 5. *Hiero*, who had allied himself with the Carthaginians, being himself defeated by the Romans, and finding his allies unable to protect him against the power of that republic, concluded an alliance with them, and continued faithful to them even in the time of the second Punic war, when they were in the greatest distress. In his reign flourished the celebrated mathematician *Archimedes*, whose genius he employed in fortifying the city of Syracuse, by innumerable machines, in such a manner as rendered it absolutely impregnable to every method of attack known at that time. See *ARCHIMEDES*. *Hiero II.* died about A. A. C. 211.

(18.) SYRACUSE, HISTORY OF, UNTO THE SIEGE AND CAPTURE OF THE CITY, AND THE MURDER OF ARCHIMEDES. *Hiero* was succeeded by his grandson *Hieronymus*; but he imprudently forsook the counsels of his grandfather, and entered into an alliance with the Carthaginians. Soon after this he was murdered, in consequence of his tyranny and cruelty, and the greatest disorders took place in the city; which Hannibal, though then in Italy, found means to foment, in hopes of keeping the Syracusans in his interest. This indeed he effected; but as his own affairs in Italy began to decline, (see *CARTHAGE*, § 6.) he could not prevent *Marcellus* from landing in Sicily with an army, which the Sicilians were unable to resist. Syracuse was soon invested; but the machines invented by *Archimedes* baffled all attempts to take it by assault. These were so stupendous and powerful, that ships were dashed to pieces by the huge rocks they discharged, and the troops were more annoyed by the showers of arrows and stones than modern armies are by musketry. The consuls, finding themselves thus defeated in every attempt, turned the siege into a blockade, reduced most of the other places in the island, and defeated the forces which were sent against them; and at last *Marcellus* made himself master of Syracuse itself, of which the following account is given by Mr Hooke. "He took the opportunity of a festival, when the soldiers and citizens had drunk plentifully, to make a detachment scale the walls of Tyche, in that

part of it which was nearest to Epipolæ, and which was ill guarded. He presently after possessed himself of Epipolæ; whereupon the inhabitants of Neapolis, as well as Tyche, sent deputies to him and submitted. *Marcellus* granted life and liberty to all of free condition, but gave up those quarters of the city to be plundered. Notwithstanding this, there was a great deal yet to do. *Acradina* and *Ortygia*, which were strongly fortified, still held out; *Hippocrates* and *Himilco* arrived with their troops to the relief of the besieged; and the Romans were forced to exert all their bravery and skill to maintain the advantages they had gained. But now a plague made terrible havock in both armies. At the first breaking out of the pestilence, the Sicilians, who served under *Hippocrates* and *Himilco*, disbanded themselves, and returned to their respective homes; but all the Carthaginian soldiers perished together with those two generals. The Romans suffered less by the infection; because, having been a long time before Syracuse, they were seasoned to the air and water of the country. About this time *Bomilcar* arrived on the coast of Sicily from Carthage, with a fleet of 130 galleys and 700 ships of burthen: but was long hindered by contrary winds from doubling the cape of Pachynum. *Epicycles*, fearing the Carthaginians might sail back to Africa, left the command of *Acradina*, to the generals of the mercenaries, and went to *Bomilcar*, in order to persuade him to fight the Roman fleet. The admiral would not engage, but sailed away to Tarentum with all his galleys, ordering his ships of burden to return to Africa. *Epicycles*, thus frustrated of his hopes, and knowing himself unable to defend a city already half taken, retired to Agrigentum; whereupon the Syracusians massacred the commanders appointed by him, chose new prætors to govern in the town, and sent deputies to *Marcellus* to treat of peace. In the mean time, the deserters, fearing to be given up to the vengeance of the Romans, persuaded the mercenaries that they also would have the same fate. Instantly the soldiers ran to arms, put to death the new prætors, together with many of the Syracusans, and plundered part of the city. After this slaughter they chose six generals, three to command in *Acradina*, and three in *Ortygia*. Upon the return of the deputies from *Marcellus*, the mercenaries, finding that their case was different from that of the deserters, and that there was no design against their lives, became perfectly satisfied, and the negotiations went on. During the course of the treaty, *Marcellus* found means to corrupt *Mericus*, a Spaniard, one of the six generals chosen by the soldiers, and engaged him to admit the Romans into that part of the city where he commanded. *Mericus*, the better to accomplish this design, feigned an extraordinary zeal for the preservation of the place; pretended not to like that deputies should have leave to go out and in at pleasure; and proposed, that for the greater security of the town, each general should have a distinct quarter assigned him, and be responsible for any neglect of duty in it. The motion was agreed to; and upon the dissen-

fountain of Arethusa to the mouth of the great port fell to his care. Marcellus, informed of what was done, took his measures accordingly. He sent a body of troops to that side where Mericus commanded, and the Spaniards admitted them at the gate of Arethusa. At the same time, the proconsul ordered a false attack to be made on Acradina; which drawing almost all the soldiers of the garrison thither, Ortygia was in a manner left defenceless. Foreseeing this, he had detached another party of soldiers to take advantage of it. These entered Ortygia almost without fighting; upon which the deserters made their escape, the Romans giving them way; and the Syracusans in Acradina, thus delivered from the fear of the deserters, immediately opened their gates to Marcellus, who thereby became master of the whole city. And now the conqueror, who is said to have wept during the siege with compassion for the inhabitants, gave up both Ortygia and Acradina to be plundered by his army, after he had secured the late king's treasures for the use of the republic, and the statues, paintings, and principal ornaments of Syracuse to illustrate his triumph. The soldiers had orders to spare the lives of the citizens; but they were cruel in their avarice, slew many of them, and among the rest the incomparable Archimedes. He was very intent on a demonstration in geometry, and calmly drawing his lines, when a soldier entered the room, and clapped a sword to his throat. "Hold!" said Archimedes one moment, and my demonstration will be finished." But the soldier, equally regardless of his prayer and his demonstration, killed him instantly. There are different accounts of the manner of his death; but all agree that Marcellus regretted it extremely, and showed a singular favour to his relations for his sake."

(19) SYRACUSE, MODERN HISTORY OF. The apostle Paul spent 3 days in this city, in his voyage to Rome, and Christianity was early planted in it. It continued subject to the western empire till its declension, when the island of Sicily, being ravaged by different barbarians, the capital also underwent various revolutions. In 675, it was taken and plundered by the Saracens, who, about 827, had subdued all Sicily, and destroyed much of its ancient grandeur; (See CONSTANTINOPLE, § 10.) but in 1090, it was recovered by Roger, Earl of Sicily. (See SICILY, § 10.) It has since shared the fortune of the rest of Sicily. Near this port there was a sea engagement, in 1718, between the Spaniards and the British, in which the former were defeated, and obliged to leave Sicily; but, in 1735, they retook Syracuse. Like the rest of Sicily it is much subject to earthquakes; and, in 1693, was almost totally destroyed by one. (See EARTHQUAKE, § 6.)

(20) SYRACUSE, POPULATION OF. The present population of Syracuse is estimated, by Mr Swineburne, not to exceed 18,000.

(21.) SYRACUSE, PRESENT STATE OF. The relics of this ancient city now forms a bishop's see, in the valley of Noto. "At present, says Mr Swineburne, it is strongly fortified towards the land, and the ditches of the bastions form the communications between the two havens. It is

very weak towards the sea, but the shelves render it hazardous to debark on that side. The garrison is one of the best appointed in the kingdom, but the heights of Acradina command the works. The dwellings are far from being memorials of ancient Syracusan architecture or opulence.

SYRACUSIANS, *n. s.* an anomalous spelling of SYRACUSANS.

SYRAU, a town of Germany, in upper Saxony, in the Vogland; 4 miles NNW. of Plauen.

(1.) SYRE, a river of Norway, which runs into the North Sea; 20 miles SW. of Syre.

(2, 3.) SYRE, a town and lake of Norway, in the province of Christianland; the former 24 miles, the latter 30 NW. of Christianland.

SYREFORD, a small town of England, in Gloucestershire, in the parish of Whittington.

(1.) SYRIA, a very ancient country or kingdom of Asia, lying between the Mediterranean on the W. the Euphrates on the E. and Arabia Deserta, Phœnicia, and Palestine on the S. or, as Crutwell describes it, "this name is given to the whole space contained between two lines drawn, the one from Alexandretta to the Euphrates, and the other from Gaza in the desert of Arabia; bounded on the E. by this desert, and on the W. by the Mediterranean." But Mr Lempriere says, that ancient Syria; whose boundaries are not accurately ascertained by the ancients, was bounded on the E. by the Euphrates, N. by Mount Taurus, W. by the Mediterranean, and S. by Arabia.

(2.) SYRIA, ANCIENT DIVISIONS AND NAMES OF. This country appears in the patriarchal age to have been divided into a great number of cantons or petty principalities. Very early after the flood, it went by the general name of ARAM, from Aram the youngest son of SHEM, who settled in it. Hence the different cantons were named *Aram-nabarin*, *Aram-zobah*, *Aram-machab*, and *Aram-zebob*. Within a few centuries afterwards, it had obtained its present name of SYRIA; for we find *Zebul*, the nephew, and LABAN, the grand-nephew, of Abraham, styled SYRIANS, even in the patriarchal age. (See Gen. xxv. 20.) It is a piece of *learned folly*, therefore, to quote Plutarch's derivation of this name from the fabulous hero, SYRUS, the son of Apollo. Much more credit is due to those etymologists who suppose it to be a contraction of the name ASSYRIA, which the best historians, etymologists, and chronologists, derive from ASHUR, the 2d son of SHEM. (See ASSYRIA, § 1. and 2.) Mr Lempriere makes it so very extensive as to have comprehended "PHOENICIA, SELUCIA, JUDEA, or PALESTINE, MESOPOTAMIA, BABYLON, and ASSYRIA;" which last name, he adds, was used *indifferently* with SYRIA by some ancient authors. But be that as it may, all the petty states, provinces, principalities, and cantons, into which Syria Proper was originally divided, appear to have been afterwards reduced under subjection to the four principal ones, ZOBAB, DAMASCUS, Hamath, and Geshur. Afterwards the whole country was divided into two parts only, viz. COELESYRIA and PHOENICIA; though the Phœnicians, Idumeans, Jews, Gazites, and Azotites, inhabiting the whole country of the PHILISTINES, were

were included. After the death of Alexander, Syria, in the great extent of the word, was divided, according to Strabo, into COMAGENE, SELEUCIS of Syria, COELESYRIA, PHOENICE on the sea coast, and JUDEA in the midland. Ptolemy, however, subdivides these; and in the Proper Syria reckons only *Comagene, Pieria, Cyrrhastica or Cyrrhestica, Seleucis, Cassiotis or Caiotis, Chalybonitis, Chalcidice or Chalcidene, Apamene, Laodice, Phœnicia Mediterranea, Cœlesyria, and Palmyrene*. It has long been, and still is, named by the Arabs, the descendants of Ishmael, *Barr el Shâm, or the country of Shem*.

(3.) SYRIA, ANCIENT HISTORY OF. The history of the ancient Syrians, till the time of their being carried away by the king of Assyria, is altogether unknown, excepting a few particulars to be gleaned from Scripture, which it is unnecessary here to repeat. During the continuance of the empires of BABYLONIA and PERSIA, the history of Syria affords nothing peculiar, being involved in that of these countries; but after the death of ALEXANDER the Great, who had subdued all these empires, it became a very considerable kingdom, which makes a conspicuous figure in ancient history.

(4.) SYRIA, HISTORY OF, FROM ITS ERECTION INTO A KINGDOM BY SELEUCUS I. TILL HIS DEATH. At the death of Alexander, the name of Syria was not confined to Syria properly so called, but comprehended all those vast provinces of Upper Asia, which formed the Persian empire; being, in its full extent, bounded by the Mediterranean upon one side, and the river Indus on the other. Seleucus, one of the generals of Alexander the Great, after the death of that conqueror, being made governor of Babylon, was tempted, by the example of Alexander's other captains, to set up for himself. Eumenes, who had sincerely at heart the interest of Alexander's family, solicited his assistance against Antigonus, who had openly revolted; but Seleucus not only refused his assistance, but attempted to destroy Eumenes himself with his whole army, by cutting the sluices of the Euphrates, and laying under water the whole plain where they were encamped. Eumenes, however, escaped the danger without the loss of a man. Upon this Seleucus endeavoured to gain over his troops; but finding that impossible, he made a truce with Eumenes, and granted him a safe passage through his province; but at the same time sent an express to Antigonus, desiring him to fall upon him before he was joined by the governors of Upper Asia. Antigonus did not fail to follow his advice; but having thus prevailed against Eumenes through treachery, he next thought of bringing Seleucus himself under subjection. On his return to Babylon, therefore, after having been feasted with his whole army by Seleucus, he demanded an account of the revenues of his province. This being refused, Antigonus was so much exasperated, that Seleucus, not thinking himself a match for him, fled into Egypt. By the flight of Seleucus, Antigonus was left master of all his provinces; but his son Demetrius being afterwards defeated by Ptolemy at Gaza, Seleucus began to think of recovering what he had lost. Being furnished by Ptolemy with

1000 foot and 200 horse, he set out with that slender force to attempt the recovery of Babylon. Nothing could have a more desperate appearance than this undertaking; yet Seleucus on his arrival at Carrhæ in Mesopotamia, partly by force and partly by persuasion, prevailed on the Macedonians, who garrisoned that place, to revolt from Antigonus and join him. Being thus reinforced, he entered the territories of Babylon, where new supplies were continually added to his army; his ancient subjects flocking to him from all parts, and declaring themselves ready to stand by him with their lives and fortunes. This happened in consequence of the lenity with which they had been treated by Seleucus; whereas Antigonus was universally detested on account of his severity. As he approached the city, those who favoured Antigonus retired into the citadel, but were soon obliged to surrender; and in that fortress Seleucus found his children, friends, and domestics, whom Antigonus had kept prisoners ever since his flight into Egypt. Seleucus having thus made himself master of Babylon, in A. A. C. 312, began to prepare for encountering Antigonus, who he knew would soon attack him with all his force. Nicanor, governor of Media under Antigonus, first advanced against him at the head of 10,000 foot and 7000 horse; but Seleucus with only 3000 foot and 400 horse, having drawn him into an ambush, cut off almost the whole of his army, and the surviving soldiers willingly enlisted under him. The consequence of this victory was the submission of all Media and Susiana; which, alarming Antigonus, he sent his son Demetrius with an army of 5000 Macedonian foot, 10,000 mercenaries, and 4000 horse. Seleucus was then in Media; and Patrocles, whom he had left to take care of Babylon, finding his force inadequate to that purpose, compelled the inhabitants to leave the city and disperse themselves in the adjacent countries, while he himself, with what troops he had, retired into two forts, which he thought could easily be defended. When, therefore, Demetrius entered Babylon, he was surprised to find it deserted, upon which he instantly attacked the forts. One was quickly reduced; but as the other held out till the expiration of the time which had been allowed him by his father, he left 5000 foot and 1000 horse under Archelaus to carry on the siege. With the rest he marched away, suffering his soldiers to live at discretion as he went along; which so provoked the Babylonians, that they were ever after attached to Seleucus as if he had been their natural prince. On the return of Seleucus to Babylon, he easily drove out the troops left by Antigonus, recovered the castle which he had garrisoned, and settled his authority on such a firm foundation, that it could never afterwards be moved. Having then marched again into Media, he defeated and killed with his own hand Nicanor, whom Antigonus had sent against him; after which, having settled the affairs in Media, he reduced all Persia, Bactria, and Hyrcania, subjecting to his new kingdom these and all the other provinces on this side the Indus which had been conquered. Seleucus being now master of all the countries which lie between the Euphrates and the Indus, took the title of *king of Babylon and*

Media. But, not satisfied with these possessions, ample as they were, he crossed the Indus, to conquer those regions which had submitted to Alexander beyond that river. But, during the time that the generals of Alexander had been making war upon his family and upon one another, Sandrocottus, a native of India, had driven out the Macedonians and made himself master of the whole country. (See SANDROCOTTUS.) He opposed Seleucus with an army of 600,000 men, and a prodigious number of elephants; which intimidated the Macedonian so much, that he offered to leave Sandrocottus in quiet possession of his dominions, provided he would furnish him with 500 elephants. To this Sandrocottus readily assented; upon which Seleucus marched back into the west against Antigonus, and, in conjunction with Lyfimachus and Ptolemy, engaged and totally defeated and killed him at Ipsus. (See ANTIGONUS I.) After this Seleucus marched into Upper Syria, which he reduced entirely, and built the city of Antioch on the Orontes. In the same country he built several other cities; one of which he called *SELEUCIA*, from his own name; another *APAMEA*, from his wife Apama, the daughter of one Artabazus a Persian; and a third *LAODICEA*, from his mother Laodice. He first entered into an alliance with Demetrius, and married Stratonice his daughter, (See STRATONICE;) but soon after assisted Lyfimachus and Ptolemy to deprive him of the best part of his dominions. Thus Demetrius being reduced so low that he could give him no farther jealousy, Seleucus built another city, called likewise *SELEUCIA*, seated where BAGDAD now stands. Besides these, he built many others; 16 of which he called *ANTIOCH*, from his brother or son Antiochus; 9 *SELEUCIA*; 3 *APAMEA*; 1 *STRATONICEA*, and 6 *LAODICEA*, from his relations above mentioned. In 284, Seleucus entered into a war with Lyfimachus, with whom he had hitherto lived in amity. Out of 36 general officers left by Alexander the Great, they two only survived, and both were upwards of 70 years old; yet both were filled with the ambition and animosity of young men. The two armies met at a place called *Curepidion* in Phrygia, where an obstinate engagement took place. Victory was long doubtful; but at last Lyfimachus was run through with a spear, and died on the spot; on which his troops fled, and left Seleucus master of all their baggage. This victory added to the possessions of Seleucus all those provinces which had formerly been subject to Lyfimachus. He exulted much in his good fortune; boasting that he was now the last of Alexander's captains, and by this victory became, as he styled it, *the conqueror of conquerors*; whence he is generally called *Nicator*, or *the conqueror*. His triumph, however, was but short lived; for, 7 months after, as he was marching towards Macedon to take possession of that kingdom, he was treacherously murdered by Ptolemy Ceraunus, on whom he had conferred innumerable favours. Philetæus, prince of Pergamus, purchased his body at a great price from Ptolemy, and sent it to his son Antiochus; who, with extraordinary pomp, burned it in Seleucia on the

sea-coast, erecting on the place a magnificent chapel, called from his surname *Nicatorium*.

(5.) SYRIA, HISTORY OF, TILL THE DEATH OF ANTIOCHUS I. Seleucus was succeeded by his son Antiochus Soter, who reigned 19 years. He resigned to Antigonus Gonatas all pretensions to the crown of Macedon; and having engaged in a war with Eumenes king of Pergamus, he was defeated by him, and obliged to yield up part of his dominions. He died in 261 B. C.

(6.) SYRIA, HISTORY OF, TILL THE DEATH OF ANTIOCHUS II. Antiochus I. was succeeded by his son Antiochus II. blasphemously surnamed *Theos*, or *the God*, who having engaged in a war with Ptolemy Philadelphus king of Egypt, the Parthians and Bactrians took an opportunity to revolt, and could never afterwards be reduced. In 246 B. C. the *God* was poisoned by his wife Laodice, whom he had divorced for Berenice daughter to Ptolemy, with whom he made peace on the revolt of the Bactrians. On the death of Ptolemy, Antiochus had divorced Berenice, and took back Laodice; who, to secure herself against the effects of his fickle disposition, poisoned him, and raised to the throne her own son, named *Seleucus Callinicus*.

(7.) SYRIA, HISTORY OF, TILL THE DEATH OF SELEUCUS II. AND III. Laodice not thinking herself safe as long as Berenice lived, began immediately to concert measures for putting both her and her son to death. Berenice attempted to save herself by retiring to Daphne, where the stout herself up in an asylum built by Seleucus Nicator. There she was closely besieged by the sons of Seleucus; of which the cities of Asia having intelligence, formed a confederacy in her favour. Her brother the king of Egypt also hastened to her relief with a considerable army; but before either of these could come to her assistance, both she and her son were barbarously murdered, with all the Egyptians who attended them. Ptolemy, on hearing the melancholy news of his sister's death, determined to take the most severe vengeance on her murderers. Joining his forces to those of the Asiatics, he carried every thing before him. Having first killed the cruel Laodice, he made himself master of all Syria and Cilicia; then passing the Euphrates, he subdued all the country as far as Babylon and the Tigris; and had not the progress of his arms been interrupted by a sedition which obliged him to return to Egypt, it is probable that he would have subdued the whole Syrian empire. As soon as he was returned, Seleucus attempted to revenge himself; but his fleet being destroyed by a violent storm, and his army defeated by Ptolemy, he concluded a truce for ten years. During all this time Arsaces the prince of Parthia, had established himself so firmly on the throne, that it was in vain to think of dispossessing him. However, as soon as his other affairs would permit, Seleucus undertook an expedition against Arsaces, by whom he was utterly defeated, taken prisoner, and carried into Parthia, where he died four years after. He was succeeded by his eldest son Seleucus III. surnamed *Callinicus*, or *the Thunderer*, a weak prince and was poisoned by two of his officers, when he had reigned one year.

(8.) SYRIA

(8.) SYRIA, HISTORY OF, TILL THE EXPEDITION OF ANTIOCHUS THE GREAT INTO THE EAST. Antiochus, furnished the *Great*, brother of Seleucus III. ascended the throne in 215 B. C. In the beginning of his reign, two of his generals, Alexander and Molo, rebelled against him. The former had been appointed governor of Persia, and the latter of Media; but they, despising the king's youth, refused to obey. The occasion of this revolt is said to have been their dread of the cruelty of Hermias, the king's prime minister; and as they hoped to draw into their schemes Achæus governor of Asia Minor, they doubted not of success. In this, however, they failed. Epigenes, the commander of the troops about the king's person, advised him to march without delay against the rebels; but as Hermias reproached him with treachery, and a design to betray him into the hands of his enemies, Antiochus sent two of his generals into the east, while he himself undertook an expedition against Ptolemy Philadelphus, to recover Cœle Syria. In this attempt, however he was disappointed; and the generals whom he had sent into the east were totally defeated, and their troops cut off; upon which he determined to lay aside his Syrian enterprize, and march in person against the rebels. This was again opposed by Hermias; but as he found it impossible to alter the king's mind, the treacherous minister found means to get Epigenes, the author of this project, executed, under pretence of holding a correspondence with Molo one of the rebel chiefs. Antiochus in the mean time pursued his march against the rebels, whom he defeated in a pitched battle; upon which their chiefs killed themselves. On his return he received the submission of the Atropatii, a barbarous people in Media; and put to death his prime minister Hermias, whose treachery he at last discovered. During his life, however, the traitor, by accusing Achæus of treason, had obliged him to revolt in his own defence; so that the king had still two important wars on his hands, viz. that with Ptolemy king of Egypt, and the other against Achæus. After some deliberation, he resolved to march first against the king of Egypt; and was at first very successful, reducing many cities in Cœle Syria and Palestine, and defeating the Egyptians in a pitched battle; but in 217 B. C. being worsted in the battle of Raphia, he was obliged to abandon all his conquests; of which Ptolemy immediately took possession, and Antiochus was obliged to cede them to him, that he might pursue war against Achæus. Antiochus having made vast preparations for his expedition, soon reduced Achæus to such distress, that he was obliged to shut himself up in the city of Sardis, which he defended for some time with great bravery; till at last, being betrayed by two Cretans, he was delivered up to the king, and by his order put to death. Antiochus then undertook an expedition against the Parthians, whom he obliged to conclude a peace on very advantageous terms. He then turned his arms against the king of Bactria, whom he also compelled to agree to his terms; one of which was, that he should give him up all his elephants. For the confirmation of the treaty, the king of Bactria sent his son to Anti-

ochus; who being taken with his majestic mien and agreeable conversation, gave him one of his daughters in marriage. He then crossed Mount Caucasus, and entered India; where having renewed his alliance with Sophagafenus, the king of that country, he received also of his elephants, which increased his stock to 150. (See INDIA, § 5.) From India he marched into Arachosia, Drangiana, and Carmania, establishing order and discipline in all those countries; then passing through Persia, Babylonia, and Mesopotamia, he returned to Antioch, after an absence of seven years.

(9.) SYRIA, HISTORY OF, TO THE DEFEAT OF ANTIOCHUS AT THERMOPYLÆ. In the year 204 B. C. Antiochus made an easy conquest of Judea; but treated the Jews with great kindness and humanity, as related under the article Jews, § 4. In the same year, he entered into a league with Philip V. of Macedon, on purpose to deprive Ptolemy Epiphanes, the infant king of Egypt, of all his dominions. The Egyptians, however, put the young king under the tuition of the Romans; who immediately required the confederate princes to desist from any enterprize against the king of Egypt, under the penalty of incurring the displeasure of the republic. After delivering this message M. Æmilius Lepidus, one of the ambassadors, repaired to Egypt, where he took upon himself the office of regent and guardian to the young king. Having regulated affairs there in the best manner he could, he returned to Rome, after having appointed one Aristomenes, an Acarnanian, to be chief minister to the king. Aristomenes, being a man of prudence and fidelity, acquitted himself very well in his new station. Having taken care to recruit his army as well as he could, he sent one Scopas, a man of great authority among the Ætolians, into that country, to raise auxiliaries. Scopas soon raised an army of 6000 Ætolians, at that time reputed the best soldiers in the world; and having joined the Egyptian army, reduced all Judea, put a garrison into the castle at Jerusalem, and, on the approach of winter returned to Alexandria loaded with booty. These exploits, however were performed when Antiochus was absent in Asia Minor; and no sooner was he returned, than the face of affairs was changed. Scopas was defeated in a pitched battle, where one half of his men were destroyed. He himself escaped to Sidon, where he shut himself up with 10,000 of his soldiers; but Antiochus having invested the place, Scopas was reduced to the necessity of surrendering at discretion. The king pursued his conquests; recovered all Palestine and Cœle Syria; after which he invaded Asia Minor, in hopes of reducing it also, and restoring the Syrian empire to the same extent it had in the time of Seleucus Nicator. The free cities in Asia Minor immediately had recourse to the Romans, who sent an embassy to Antiochus on the occasion; but as both parties treated each other haughtily, no satisfaction was given, but every thing tended to an open rupture. While matters were in this situation, HANNIBAL the Great, being obliged to leave his own country, fled to Antiochus: from whom he met with a gracious reception. As Hannibal had, while a child, sworn perpetual en-

imity

mity against the Romans, he used all his eloquence to persuade Antiochus to make war with them; and as the many victories which he had gained over them left no room to doubt of his capacity, Antiochus doubted nothing of being able, by his assistance, to conquer that haughty people. Several embassies passed between the two nations; but chiefly with a design, on the part of Antiochus, to gain time. Hannibal endeavoured to draw his countrymen into the confederacy against Rome, but without effect. Antiochus having strengthened himself by several alliances, at last resolved to begin the war in earnest. To consult on the measures proper to be taken, he called a council of war; but excluded from it the only man whose advice he ought to have followed; viz. Hannibal. The reason of this was, that he had become jealous of him from the too great intimacy, as he thought, which he had kept with the Roman ambassadors. However, in this council it was agreed that the war should be immediately commenced. The king himself was prevailed upon by the Ætolians to pass over into Greece, and entirely to reject the advice which Hannibal had formerly given, of sending him with an army into Italy. Here he was made generalissimo of the Greek forces; but made none of those efforts that had formerly obtained him the title of Great. Indeed it now plainly appeared, not only that he was incapable of carrying on war against such enemies as the Romans, but even of accepting proper advice when it was given him. In another council in which Hannibal was admitted, that commander advised the king, before he undertook any thing else, to use his utmost endeavours to gain over Philip V. of Macedon; which, he said, was a step so important, that if it could be gained, they might, without much ado, become masters of all Greece. But if Philip could not be prevailed on to make war on the Romans, he was of opinion that the king should send his son Seleucus into Macedon at the head of an army, and thus prevent Philip from giving the Romans any assistance. But he still maintained, that the only way to defeat the Romans was to send an army into Italy. This advice was again rejected; and the king imprudently became the aggressor, by falling on a body of 500 Romans before war had been declared. He also made Philip his enemy, by entertaining the regent of Athamania, who was a pretender to the crown of Macedon. To complete all, he himself fell in love, though above 50 years of age, with a beautiful young woman of Chalcis, whom he married; and became so great a slave to this passion, that he entirely neglected his affairs; the army gave themselves up to dissipation and debauchery, and every trace of military discipline vanished. In 191 B. C. Antiochus was roused from his lethargy by a declaration of war against him at Rome, and set out for Ætolia. His army at this time amounted to no more than 10,000 foot and 500 horse. He had been made to believe that he would receive a vast reinforcement in Ætolia; but all the troops he could raise there amounted to only 4000 men. With this force, so exceedingly inadequate to the purpose, he was obliged to oppose the Roman army, who were advancing in conjunction with

the Macedonians, and had already made surprising progress. Antiochus seized the Straits of Thermopylæ; but was driven from them by the Romans, the king himself being the first that fled. Almost his whole army was destroyed in the battle or in the pursuit, and Antiochus returned with disgrace into Asia.

(10.) SYRIA, HISTORY OF, TO THE BATTLE OF MAGNESIA. Soon after his return, Antiochus equipped a fleet of 200 sail; on which he immediately embarked for the Thracian Cherfoneus, now Crim Tartary, where he fortified the cities of Lyfimachia, Sestus, and Abydos, with others in that neighbourhood, to prevent the Romans from crossing the Hellespont. In the mean time Polyxenidas the Syrian admiral sent intelligence to the king that the Roman fleet had appeared off Delos; upon which he desired him to seek them out and engage them at all events. He did so, and was defeated with the loss of 40 ships taken or sunk in the engagement. This was soon after revenged by the destruction of the Rhodian fleet by the artifice of Polyxenidas; but in the end the king's affairs went everywhere to wreck. Having laid siege to the city of Pergamus, he was obliged to raise it with loss; the Phœnician fleet commanded by Hannibal was defeated by the Rhodians; and soon after the Syrian fleet under Polyxenidas was utterly defeated by the Romans. Antiochus was so much disheartened by these repeated defeats, that he appeared like one infatuated. Instead of fortifying more strongly those cities which lay on the frontiers of his kingdom, he entirely deserted them; and thus Lyfimachia and Abydos, the two keys to Asia, fell into the hands of the Romans without the least resistance. The arrival of the Romans in Asia struck Antiochus with such terror, that he instantly sued for peace. The terms he offered were indeed very advantageous, but by no means agreeable to the expectations of the Romans. They therefore gave him this final answer: 1. That since he had drawn upon himself the war, he should defray the whole expence of it: 2. That he should restore liberty in general to all the Greek cities in Asia: and, 3. That, to prevent future hostilities, he should relinquish all Asia on this side Mount Taurus. These terms, however, still appeared to him so intolerable, that he resolved to continue the war; and determined also to take the most imprudent method of carrying it on, namely, by hazarding all on the event of a general engagement. The king encamped near Magnesia, and strongly fortified his camp. The Romans insulted him in his trenches, and proposed to attack his fortifications, if he continued to decline an engagement. At last the king, thinking it would be shameful for him longer to refuse an engagement, fought a battle, which issued in his entire defeat. No less than 50,000 foot and 4000 horse were killed; 1500 were taken prisoners, and 15 elephants. In the consular army there were but 300 foot killed, and 25 horse.

(11.) SYRIA, HISTORY OF, TO THE PEACE WITH THE ROMANS. Antiochus retired to Sardis with as many of his forces that had escaped the slaughter as he could draw together. From Sardis he soon marched to rejoin his son Seleucus, who

who had fled to Apamea. As for the consul, he took advantage of the king's defeat and flight, making himself master of all the neighbouring countries. Deputies hastened to him from all parts: the cities of Thyatira, Magnesia, Trallis, Magnesia in Caria, all Lydia, and Ephesus itself, though highly favoured by Antiochus, declared for the Romans. Polyxenidas, upon the news of the king's defeat, left the port of Ephesus, and sailed to Patara, where he landed with a very small guard, and returned by land into Syria. The consul took the road to Sardis, which opened its gates to him. Antiochus finding his affairs in a bad situation both by sea and land, hastened to conclude a peace, which he obtained on the following terms: He was to confine his dominions within Mount Taurus; to pay 15,000 Euboic talents for the expenses of the war; to deliver up Hannibal and some other foreigners who were obnoxious to the Romans. For the fulfilment of these articles he gave 70 hostages, one of whom was his youngest son Antiochus. The peace being ratified by the Sarati, the Greek cities were by the Romans restored to their liberty, the provinces of Caria and Lydia given to the Rhodians, and all the rest that had belonged to Antiochus on that side of Mount Taurus bestowed upon Eumenes.

(12.) SYRIA, HISTORY OF, UNTIL THE DEATH OF ANTIOCHUS THE GREAT. Antiochus did not long survive his misfortune at Magnesia. Some tell us, that being greatly puzzled how to raise the sum he had engaged to pay to the Romans, he seized on the riches which had for many ages been deposited in a temple of Jupiter Belus in the province of Elymais; upon which the populace rose in arms, and slew him and all his attendants. Others inform us that he was killed at an entertainment by one of his guests. Antiochus the Great died in 187, and with him the glory of the Syrian empire.

(13.) SYRIA, HISTORY OF, UNTIL THE DEATH OF ANTIOCHUS EPIPHANES. Antiochus the Great was succeeded by his son Seleucus IV. surnamed *Philopator*, A. A. C. 187, who reigned only 12 years, dying in 175, and leaving the Syrian throne to his son, or his brother according to Alftidius, ANTIOCHUS IV. surnamed EPIPHANES, the most barbarous and bloody tyrant that ever reigned in Syria. The Romans now gave laws to the kings of Syria; inasmuch, that when Antiochus Epiphanes hesitated at obeying the commands of the senate, one of the ambassadors drew a circle round him with a rod on the floor, and told him he should not go out of that spot before he had told him what he was to do. But the most horrible transactions of this prince are his wars with the Jews, and persecutions of them; of which a full account is given under the article Jews, § 5. and 6.

(14.) SYRIA, HISTORY OF, UNTO ITS CONQUEST BY THE ROMANS. After the miserable death of the monster Epiphanes, at TABÆ, as related under the article Jaws, § 6, the Syrian throne fell a prey to a series of tyrants, impostors, and usurpers, of whom it is sufficient to give the following brief chronological list: ANTIOCHUS V. surnamed EUPATOR, succeeded his wicked father in 164; but reigned only 2 years. He was succeeded

in 162 by DEMETRIUS I. surnamed *Soter*, a brother of Antiochus Epiphanes, who had only reigned 11 years, when, in 151, the crown was claimed by Alexander Balas an impostor, who pretended to be a son of Epiphanes; and being supported in this false claim by Ptolemy Philometor king of Egypt, by the kings of Pergamus and Cappadocia, and by the Romans, defeated and killed Demetrius, and reigned 5 years, some say 6; but was at last killed in Arabia, A. A. C. 146. (See ALEXANDER BALAS.) Demetrius II. surnamed *Nicator*, the lawful heir, being the son of Demetrius I. then succeeded; but he being taken prisoner 2 years after by the Parthians, in 144, the throne was seized by ANTIOCHUS VI. surnamed *Antiochus*, who reigned 2 years along with an usurper named DIODOTUS TRYPHON, who afterwards assumed the sole power for other 3 years, till A. A. C. 139, when he was expelled by ANTIOCHUS VII. surnamed ZIDETES, and also *Pius* and *Soter*, the son of Demetrius I. and brother of Demetrius II. who reigned 10 years. But Demetrius II. being now liberated by the Parthians, was restored to his kingdom; but had reigned only 3 years, when *Alexander Zebina*, a new impostor, who pretended to be the son of the impostor Alexander Balas, being assisted and supported by Ptolemy Physcon, the tyrant of Egypt, expelled Demetrius a second time in 126, and reigned 3 years. In 123, however, the usurper Zebina was justly dethroned and killed by ANTIOCHUS VIII. surnamed *Grypus*, the son of Demetrius II. (See ALEXANDER ZEBINA.) Grypus reigned 19 years in all; but in his 9th year, his brother *Antiochus Cyzicenus* rebelled against him, and in his 11th, A. A. C. 112, erected COELESYRIA into a separate kingdom, wherein he reigned for 18 years, and hence is ranked as ANTIOCHUS IX. by chronologists. On the death of these two brothers, A. A. C. 94 and 93, Seleucus V. a 3d son of Antiochus VIII. claimed the crown of Syria, but was opposed by 4 other pretenders, viz. *Antionius Eusebes*, *Philip*, *Demetrius III.* surnamed *Eucerus*, and *Antiochus X.* surnamed *Pius*, all claiming as descendants of the royal house of the SELEUCIDÆ. These claimants involved the country in a civil war for 6 years; when Philip overcoming them all, reigned 2 years alone. But ARETAS seized Coelesyria in 85; and 2 years thereafter, TIGRANES king of Armenia, taking advantage of the dissensions of the Seleucide, and being invited by a party of the Syrians themselves, reduced the whole country in 83, and governed it for 13 years with more tranquillity than it had enjoyed for a long period. ANTIOCHUS XI. however, surnamed *Asaticus*, or the XIII. as he is styled by some, (for there were other 2 usurpers of the name,) the son of Cyzicenus, who had been skulking in Cilicia, claimed the crown, in A. A. C. 69, and was supported against Tigranes by Lucullus the Roman general, who defeated Tigranes, and declared Antiochus king of Syria. But his reign was short, only 4 years; for Tigranes attempting to recover the kingdom, was defeated by Pompey the Great, who, disregarding Antiochus's claim, reduced the whole kingdom to a Roman province, A. U. C. 691, and A. A. C. 65.

(15.) SYRIA, HISTORY OF, UNTO ITS CONQUEST BY THE SARACENS. From being a province

vince of the Roman republic, Syria became, on the division of the Roman empire, subject to the emperors of the East; but in A. D. 634 it was invaded by the Saracens, who completed the conquest of it in 640, when it was confirmed to them by the treaty made with Constantine IV. See CONSTANTINOPLE, § 10; and SARACENS, § 6.

(16.) SYRIA, HISTORY OF, UNTO ITS CONQUEST BY THE TARTARS. In A. D. 970, Syria was conquered by the FATEMITE KHALIFS, soon after their conquest of Egypt. (See EGYPT, § 16. and 17.) But the emirs of Damascus revolted in 1067; and those of Aleppo in 1068. In 1096, the croisades from Europe commenced; and the Christians conquered that part of Syria called the *Holy Land*, which they kept possession of for above 100 years. (See CROISADES, § 3, 4.) In 1166, Nureddin, or Nuroddin, emir of Damascus, defeated the Egyptians, and conquered the greatest part of Syria, (see EGYPT, § 17.); and his nephew, the famous SALADIN, soon after, on the death of the khalif Aded, seized the government of Egypt, put an end to the power of the Fatemites, and erected a new dynasty. (See EGYPT, § 17, 18.) But in 1259 all Syria was over-run and conquered by the Tartars under Hulaku. See EGYPT, § 19.

(17.) SYRIA, HISTORY OF, UNTO ITS CONQUEST BY THE TURKS. The Tartars did not long retain possession of Syria. It was soon recovered by the sultans of Egypt; who also, in 1291, totally expelled the Christian croisaders out of Syria. (See CROISADES, § 4.) Syria was again over-run and ravaged by TAMERLANE, in 1400; but he did not attempt to retain it. After this period it underwent the revolutions of Egypt, till both were conquered by the Turks under SELIM I. in 1517. See EGYPT, § 19.

(18.) SYRIA, HISTORY OF, UNTO THE PRESENT TIME, 1205. Ever since the above conquest by Selim, this country has continued in the undisturbed possession of the Turks, till the invasion of Egypt by the French in 1798, as related under EGYPT, § 21. Soon after that event, Bonaparte over-ran Syria, and took GAZA and JAFFA, or JOFFA, &c. as mentioned under these articles; but found a fatal blow put to his victorious career by British valour, at ACRE, or ST JEAN D'ACRE, the ancient PTOLEMAIS; where the brave Sir Sidney Smith gained immortal fame by the defence of that small town, as related under the article REVOLUTION, N° VI. § 41.

(19.) SYRIA, INHABITANTS, LANGUAGE, &c. OF. The inhabitants may be divided into three principal classes: the descendants of the Greeks of the Lower Empire; the Arabs, their conquerors, consisting of Motoualis, Druses, and Anlatians; and the Turks, the present ruling power; besides three wandering tribes of Turkomen, Curds, and Bedouin Arabs. The ancient inhabitants before the Greeks under Alexander are entirely lost. The inhabitants are of a middling stature, and the eyes of the women almost everywhere beautiful, and their shape correct and well proportioned. The general language is Arabic. Syriac is a dead language.

(20.) SYRIA, MOUNTAINS OF. This country abounds with many celebrated mountains, which will be found described in their order. See ANTI-

LIBANUS, LEBANON, LIBANUS, MORIAH, SINAI, ZION, &c.

(21.) SYRIA, PROVINCES AND CHIEF CITIES OF. Syria is at present divided into five provinces or governments, called *Pachalies*; viz. ALEPPO, TRIPOLI, DAMASCUS, ACRE, and PALESTINE; the capitals of which are ALEPPO, the ancient BEREA, TRIPOLI, DAMASCUS, or *Sham*, or *Sebam*, as the Arabs style it, PTOLEMAIS or ACRE, and JERUSALEM. See these articles.

(22.) SYRIA, REVENUE OF. The whole revenue of this extensive country is estimated by a modern traveller, to bring into the grand signior's treasury only the small sum of 312,500l. Sterling.

(23.) SYRIA, SOIL AND PRODUCE OF. Syria is exceedingly fertile, and the variety of its productions is very great. Besides wheat, rye, barley, beans, and the cotton plant, which is cultivated everywhere, Palestine abounds in fescum, from which oil is procured, and doura as good as that of Egypt. Maize thrives in the light soil of Balbec, and rice is cultivated with success on the borders of the marshy country of Havula. They plant sugar-canes in the gardens of Saide and of Bairout, equal to those of the Delta. Indigo grows without cultivating on the banks of the Jordan, in the country of Bisan, and only requires care to make it of an excellent quality. The hill sides of Latakia produce tobacco. Gaza produces dates and pomegranates; Tripoli affords oranges; Bairout, figs and bananas; Aleppo produces pistachios; and Damascus possesses all the fruits known in Europe: apples, plums, peaches, and twenty sorts of apricots are reckoned there, the stone of one of which contains a kernel highly valued through all Turkey. The cochineal plant, which grows on all that coast, contains that precious insect in as high perfection as it is found in Mexico and St Domingo.

(24.) SYRIA, SURFACE AND CLIMATE OF. Syria is in general a chain of mountains, varying in their levels, situation, and appearances. The country, however, next the sea, is low, and there are several extensive valleys. The climate on the sea-coast and in these valleys is very hot, but in the higher parts of the country it bears a good deal of resemblance to that of France.

(25.) SYRIA, TROOPS OF. All the Turkish troops in the above five pachalies (§ 21.) united, are said to amount to only 5700 men.

(1.) SYRIAC, *adj.* from Syria. Of or belonging to Syria: chiefly used of the language.

(2.) SYRIAC LANGUAGE. See PHILOLOGY, Sect. IV. and SYRIA, § 19.

SYRIACUM MARE, *the Syrian Sea*, that part of the MEDITERRANEAN which washes the coast of Syria.

(1.) SYRIAN. *adj.* Of or belonging to Syria; born, or produced, or made in Syria.

(2.) SYRIAN, *n. f.* in geography, a large town of Asia, in Regue, near the coast of the Bay of Bengal. Lon. 96. 40. E. Lat. 16. 50. N.

(3.) SYRIAN, a river of Asia, one of the extreme branches of the Ava, which runs into the Bay of Bengal at the above town.

SYRIANS. *n. f.* The natives of Syria, ancient and modern. See SYRIA, § 2. and 19.

SYRINGA, the LILAC, or PIPE TREE, in botany,

botany, a genus of plants belonging to the class of *diandria*, and order of *monogynia*; and in the natural system ranking under the 44th order, *Sepiaria*. The corolla is quadrifid, and the capsule is bilocular. There are three species, viz.

1. *SYRINGA PERSICA*, the *Perfian lilac*, is a native of Persia. It has lanceolate leaves, and was cultivated in Britain in the middle of the 17th century, about 1658, or earlier.

2. *SYRINGA SUSPENS*A, the *hauging lilac*, is a native of Japan.

3. *SYRINGA VULGARIS*, the *common lilac*, is originally a native of Persia. It is distinguished by oval heart-shaped leaves, and was cultivated in Britain about 1597, by Mr John Gerard.

(1.) * *SYRINGE*. *n. f.* [*σῦριξ*]. A pipe through which any liquor is squirted.—The heart seems not designed to be the fountain or conservatory of the vital flame, but as a machine to receive the blood from the veins, and force it out by the arteries through the whole body, as a *syringe* doth any liquor. *Ray*.

(2.) The *SYRINGE* is a well-known instrument, serving to imbibe or suck in a quantity of fluid, and to squirt or expel the same with violence. It is formed from the Greek *σῦριξ*, or the Latin *syrix*, a pipe. A syringe is only a single pump, and the water ascends in it on the same principle as in the common sucking pump. See *HYDROSTATICS*, Part II. *Sett.* II.; and *PNEUMATICS*, *Sett.* I.

(3.) *SYRINGE*, CONDENSING. See *PNEUMATICS*, *Sett.* I. Page 699. Col. 1.

* *TO SYRINGE*. *v. a.* [from the noun.] 1. To spout by a syringe.—A flux of blood from the nose, mouth, and eye, was stopt by the *syrring* up of oxyerate. *Wifeman*. 2. To wash with a syringe.

SYRINGOIDES LAPIS, a fossil stone. See *PLATE CLXVIII*.

(1.) * *SYRINGOTOMY*. *n. f.* [*σῦριξ* and *τομή*]. The art or practice of cutting fistulas or hollow fores.

(2.) *SYRINGOTOMY*. See *SURGERY*, *Index*, under *FISTULA*.

SYRIX, in the mythology, a nymph of *Arvadia*, daughter of the river-god *Ladon*. *PAN*, the god of shepherds and rural economy, fell in love with her; but when he attempted to offer violence, *Syrinx* preyed to the gods for aid, and was changed into a reed, which thenceforth bore her name, *σῦριξ*. *Pan*, therefore, made a pipe with one of her reeds, and it became his favourite musical instrument. *Ovid. Met.* i. 691.

(1.) *SYRNA*, the wife of *PODALIRIUS*, the son of *Æsculapius*.

(2.) *SYRNA*, an ancient town of *Caria*, built by *PODALIRIUS*, where he was afterwards worshipped.

(1.) *SYRO-GRECIAN*, *adj.* [from *Syria* and *Grecian*], an epithet applied to the empire of the *SELEUCIDÆ* in *Syria*, being founded by the Greeks in *Syria*. See *SYRIA*, § 4—14.

(2.) *SYRO-GRECIANS*, *n. f.* the people of *Syria*, under the *Seleucidæ*, being a mixture of Greeks and Syrians.

(1.) *SYRO-MACEDONIAN*, *adj.* [from *Syria* and *Macedon*], a word synonymous with *SYRO-GRECIAN*.

VOL. XXII. PART I.

(2.) *SYRO-MACEDONIAN ERA*. See *SELEUCIDÆ*, § 4.

SYRO-PHOENICIA, a country lying between *Syria* and *Phoenicia*, inhabited, according to *Borchart*, by natives of both nations mixed.

SYRO-PHOENICIANS, the inhabitants of the above country. They were originally *CANAANITES*. The importunate woman, whose daughter our Saviour cured, after repeated seeming refusal, was a native of this country. See *Mat. xv. 23—28*. *Mark vii. 25—30*.

(1.) *SYROS*, in ancient geography, an island in the *Ægean Sea*, one of the *CYCLADES*; about 20 miles in circumference, and very fertile in corn, wine, and fruits. The climate is mild, and the inhabitants long-lived. *Hom. Od. xv. 504*. *Strabo*, 10.

(2.) *SYROS*, a town of *Caria*. *Paus. iii. c. 25*.

SYRTES, in ancient geography, two large sandbanks in the Mediterranean, on the coast of *Africa*; the one near *Leptis*, the other near *CARTHAGE*. As they often shifted, and were sometimes very high, sometimes very low under water, they were very dangerous, and often fatal to ships. *Mela*, i. c. 7. ii. c. 7.

SYRTICA REGIO, the } a country of *Africa*,
SYRTIC REGION, } one of the three great divisions of ancient *Libya*. (See *CYRENAICA*, *LIBYA*, § 1—4; *LYBIA*, and *MARMARICA*.) It comprehended the coast of *Barbary* between *Tripoli* and *Barca*; and was so named from

(1, 2.) *SYRTIS*, an island and a spacious gulf of *Africa*, on the coast of *Barbary*, between the above limits; now called *Sidra*. (See *SIDRA*, N° 2, 3.) The quicksands in the gulf shifted, whence the word was used as an appellative. See § 3.

(3.) * *SYRTIS*. *n. f.* [Latin.] A quicksand; a bog,—

A boggy *syrtis*, neither sea

Nor good dry land.

Milton.

SYRUP, *n. f.* in pharmacy, a saturated solution of sugar, made in vegetable decoctions or infusions. See *PHARMACY* and *MEDICINE Indexes*, *SIRUP*, and *SUGAR*, § 11. 13. and 19.

(1.) *SYRUS*, in fabulous history, the son of *Apollo* by the nymph *Sinope*. (See *SINOPE*, N° 1.) He is fabled to have given his name to *Syria*. *Plut. in Luc*.

(2.) *SYRUS*, *Publius*, a Syrian mimic poet, who flourished about 44 years B. C. He was originally a slave sold to a Roman patrician called *Domitius*, who brought him up with great attention, and gave him his freedom when of age. He gained the esteem of the most powerful men at *Rome*, and reckoned *J. Cæsar* among his patrons. He soon eclipsed the poet *Lælius*, whose burlesque compositions were in general esteem. There remains of *Syrus* a collection of moral sentences, written in iambics, and placed in alphabetical order.

(3.) *SYRUS*, an island. See *SYROS*, N° 1.

SYSIGAMBIS, or *SISYGAMBIS*, the mother of *DARIUS III.* king of *Persia*. She was so very kindly treated by *Alexander the Great*, that, though she had been able to survive the death of her son, and the overthrow of his empire, she could not survive that of *Alexander*, but killed herself when

N he

he died. See **MACEDON**, § 16; and **ORATORY**, § 267.

SYSONBY, a small town of England, in Leicestershire, near Melton-Mowbray.

SYSSARCOSIS. *n. f.* in anatomy, [from *συσ*, *with*, and *σάρξ*, *flesh*.] a kind of articulation by the intervention of flesh. *Ash*.

(1.) ***SYSTEM**. *n. f.* [*système*, Fr. *συσμα*.] 1. Any complexure or combination of many things acting together. 2. A scheme which reduces many things to regular dependence or co-operation. 3. A scheme which unites many things in order.—He presently bought a *system* of divinity. *Fell*.—Aristotle brings morality into *system*, by treating of happiness under heads, and ranges it in classes. *Baker*.—The best way to learn any science is to begin with a regular *system*. *Watts*.

(2.) **SYSTEM**, in general, [from *συσμα*, *composition*.] denotes a chain of principles and conclusions, or the whole of any doctrine, the several parts whereof are bound together, and depend on each other.

(3.) **SYSTEM**, in music, an assemblage of the rules for harmony, deduced from some common principle by which they are reunited; by which their connection one with another is formed; from whence, as from their genuine source, they natively flow; and to which, if we would account for them, we must have recourse. See **CHROMATIC**, **DIA TONIC**, **ENHARMONIC**, **HARMONY**, **INTERVAL**, and **MUSIC**.

(4.) **SYSTEMS**, in the animal economy, are the *vascular*, the *nervous*, and the *cellular*. See **ANATOMY**, § 389—526.

(5.) **SYSTEMS** of astronomy. See **ASTRONOMY**, *Index*.

(6.) **SYSTEMS** of botany. See **BOTANY**, *Index*.

(7.) **SYSTEMS** of chemistry, new and old. See **CHEMISTRY**, § 31, &c. *passim*; *Index*; and *Vocab.* I. and II.

(8.) **SYSTEMS** of medicine, new and old. See **BRUNonian SYSTEM**, § 4—10. **MEDICINE**, **PHARMACY**, and **SURGERY**, *Indexes*.

SYSTEMATIC *adj.* Systematical.

***SYSTEMATICAL**. *adj.* [*système*, Fr. *συσματικός*; from *system*.] Methodical; written or formed with regular subordination of one part to another.—It will be necessary, in a discourse about the formation of the world, to give you a brief account of some of the most principal and *systematical* phenomena that occur in it. *Bentley*.—Now we deal much in essays, and unreasonably despise *systematical* learning; whereas our fathers had a just esteem for regularity and systems. *Watts*.

***SYSTEMATICALLY**. *adv.* [from *systematical*.] In form of a system.—I treat of the usefulness of writing books of essay, in comparison of that of writing *systematically*. *Boyle*.—Aristotle brings morality into system, distinguishing virtues into their several kinds, which had not been handled *systematically* before. *Baker*.—

SYSTEMATIST. *n. f.* One who adopts a particular system in science; it is chiefly used of botanical writers.

(1.) ***SYSTOLE**. *n. f.* [*συστολή*, Fr. *συστολή*.] 1. [In anatomy.] The contraction of the heart.—The *syssole* resembles the forcible bending of a spring, and the diastole its flying out again to its

natural site. *Ray*. 2. [*συστολή*, Fr.] In Grammar, the shortening of a long syllable.

(2.) **SYSTOLE**, in anatomy, is the opposite state to the *diastole*, or *dilatation of the heart*. See **ANATOMY**, § 377.

SYSTYLE. *n. f.* in architecture, that manner of placing columns where the space between the two shafts consists of two diameters, or four modules. See **ARCHITECTURE**, *Index*.

SYSYGAMBIS. See **SYSGAMBIS**.

SYSYRINCHIUM. See **SISYRINCHIUM**.

SYTHAS, a river of Peloponnesus, running through Sicyonia, into the bay of Corinth. *Pauf.* ii. 7. **SYTHE**. *n. f.* (*Pope*, *Swiss*.) or *Scitbe*, (*Milton*.) or *Scitbe*, (*Shak.*) See **SITHE**, N° 1.

SYWELL, a small town of England, in Northamptonshire, NW. of Wellingborough.

SYXFORD, a town of England, in Yorkshire, on the Nyd; in Netherdale.

SYXHANDEMAN. *n. f.* [*Sax.*] a man of the middle rank, under the Anglo-Saxon government: a man worth 600 shillings. *Ash*.

SYZYCIA, *n. f.* [from *σύν*, *conjunction*.]

SYZYGY, } in astronomy, a term equally used for the conjunction and opposition of a planet with the sun. The word is formed from the Greek *σύν*, which properly signifies *conjunction*. On the phenomena and circumstances of the syzygies a great part of the lunar theory depends. See **ASTRONOMY**, § 627, 638.

SZACK, a town of Lithuania, in the palatinate of Minsk; 24 miles S. of Minsk, now annexed to Russia.

SZADECK, a town of Great Poland, in the late palatinate of Siradia, 22 miles NE. of Siradia, now annexed to Prussia.

SZALGEN, an island in the Black Sea, opposite the mouth of the Danube. Lon. 48. 40 E. Ferro. Lat. 45. 20 N.

SZAMOSFALVA, a town of Transylvania, on the river Sáros, one mile N. of Colofvár. Lon. 45. 9 E. Ferro. Lat. 47. 18 N.

SZAMOSVIVAR. See **SAMOSVIVAR**.

SZASY, a town of Hungary, 4 miles ESE. of Schemnitz.

SZEBEN, a town of Hungary, on the Tereza, 30 miles N. of Căchău, and 48 NW. of Ungvár. In 1604, it was taken by Count Botkay; and in 1663, by the Turks.

SZEBENY, or **HERMANSTADT**. See **HERMANSTADT**.

SZEGED. See **ZEGEDIN**.

SZEKELY, a town of Hungary, formerly fortified, 7 miles NNW. of St Job, and 18 ESE. of Debreczyn. It stood a siege in 1660, but surrendered in 1664, to Abadî, prince of Transylvania, who dismantled it.

SZEKES-FEJERVAR. See **STULWEISENBURG**.

SZEKZARD, a town of Hungary, with a fort, on the Sarvitz, famed for its wine, 27 miles E. of Ziget.

SZELITZE, a town of Hungary, 5 miles W. of Căchău, with a large cavern, which is said to be hot in winter, and very cold in summer.

SZERBESTI, a town of European Turkey, in Moldavia; 52 miles SW. of Jassy.

SZEREGNYI, a town of Hungary, 12 miles N. of Munkacs, and 12 S. of Ungvár.

SZERWENIK,

SZERWENTY, a town of Lithuania, in Wilna, 16 miles SE. of Wilkomierz, now annexed to Prussia.

SZINY, a town of Hungary, 14 miles E. of Căschau.

SZITES, a town of Transylvania, 4 miles W. of Schefburg.

SZITTKEMEN, a town of Prussian Lithuania, 14 miles E. of Goldapp.

SZOBOTISZA, a town of Hungary, on the Marich, 31 miles W. of Topoltzan.

SZOMBATH-HELY, or **STEINAM**, a town of Hungary, built on the ruins of an ancient Roman town, called *Subaria*, 43 miles SSW. of Presburg, and 48 S. of Vienna.

SZOMOLNOK. See **SMELNITZ**.

SZOMUS, a river of European Turkey, in Moldavia, which runs into the Siret, near Dubrada.

SZREBERNIK, a town of Bosnia, 36 miles NNW. of Zwarnik.

SZREDITS, a town of Croatia, 16 miles E. of Carlstadt.

SZRODKA, a suburb of Posnania.

SZTROPKO, a town of Hungary, 28 miles ESE. of Palotza.

SZUCCA, a town of Western Prussia, in the palatinate of Culm, on the Vistula. Lon. 19. 11. E. Lat. 53. 14. N.

SZULGO, a fort of Hungary, 5 miles E. of Bolefko.

SZYATY, a town of Lithuania, in the Palatinate of Troki, 48 miles NNW. of Troki, now annexed to Prussia.

SZYDLOW, a town of Samogitia, 8 miles NNE. of Rosicenne.

T

(1.) * **T** A mute consonant, which, at the beginning and end of words, has always the same sound, nearly approaching to that of *d*; but before an *i*, when followed by a vowel, has the sound of an obscure *s*: as, *notion*, *salvation*; except when *s* precedes *t*: as *Christian*, *question*.

(2.) **T** is used, 1. as a letter; 2. as an abbreviation; 3. as a word; and 4. it was anciently used as a numeral. I. As a LETTER, **T**, or *t*, is the 19th of our alphabet, and the 15th consonant. The sound is formed by a strong expulsion of the breath through the mouth, upon a sudden drawing back of the tongue from the fore part of the palate, with the lips at the same time open. The proper sound of *t* is expressed in most words beginning or ending with that letter; as in *take*, *tell*, *bat*, *put*. *Ti* before a vowel has the sound of *fi*, or rather of *shi*, as in *creation*, except when *s* precedes, as in *question*; and in derivatives from words ending in *ty* as *mighty*, *mightier*. Anciently this syllable *ti* was considered as distinct from the vowel that followed it, and such words as *na-ti-on*, *sta-ti-on*, &c. formed trissyllables in poetry, as appears from the version of the Psalms still used in our churches. But now, in modern improved English, *ti* is not considered as a distinct syllable, but only as softening the *t* to the sound of *sh*, as if the words were spelt *na-shon*, *sta-shon*, &c. *Th* has two sounds; the one hard, as *than*, *father*; the other soft, as *thing*, *think*. The sound is hard, in these words, *the*, *then*, *than*, *there*, with their derivatives and compounds; and in the words *that*, *this*, *thus*, *thy*, *they*; and in all words in which *th* comes between two vowels, as, *whether*, *rather*; and between *r* and a vowel, as *broken*: but it is soft in *thane*, *thank*, *thatch*, *show*, *theatre*, *thrift*, *thence*, *theocracy*, and all other derivatives of **ΘΕΟΣ**, *theorem*, *theory*, *thesis*; and all other words of Greek derivation, *thick*, *thief*, *thigh*, *thin*, *third*, *thirst*, *thistle*, *though*, *thong*, *thorn*, *thorough*, *thought*, *thousand*, *thrall*, *thrash*, *thread*, *threat*, *three*, *thrice*, *thrift*, *thrive*, *throat*, *throne*, *throng*, *through*, *thruw*, *thrum*, *thrush*, *thrust*, *thump*, *thunder*, *thursday*, *thwack*, *thwart*, &c. and all their compounds and derivatives. But in the word *thither*, and its compounds, *th*

T A A

sounds soft in the first syllable and hard in the second: and in *thyme* the *h* is not sounded. II. As an ABBREVIATION, **T** was used among the Roman writers, for *Titus*, *Titus*, &c.; *Tab*, for *Tabularius*; *Tab. P. H. C.* *Tabularius Provincie Hispanie Citerioris*; *Tar. Targuinus*; *Ti. Tiberius*; *Ti. F. Tiberii filius*; *Ti. L. Tiberii libertus*; *Ti. N. Tiberii Nepos*; *T. J. A. V. P. V. D.* *tempore judicem arbitrumque postulat ut det*; *T. M. P. terminum posuit*; *T. M. D. D. terminum dedicavit*; *Ti. trans. tribunicus*; *Tr. M. or Mv. tribunus militum*; *TR. PL. DES. tribunus plebis designatus*; *TR. AER. tribunus aerarii*; *TRV. CAP. triumviri capitales*; *T. P. or TRIB. POT. tribunicia potestate*; *Tul. H. Tullus Hostilius*. In music **T** stands for *tutti*, "all or altogether." III. As a word it is used without a vowel, both in Surgery and Mechanics. (See N^o 3, and 4.) IV. As a NUMERAL, **T** was used among the ancients, for one hundred and sixty; and with a dash at top, thus, **T**, it signified one hundred and sixty thousand.

(3.) **T**, *adj.* is used as a distinction for a peculiar kind of bandage, in surgery. See **T BANDAGE**, under **SURGERY**, *Index*.

(4.) **T**, *n. f.* **T SQUARE**, or **TEE SQUARE**, in drawing and mechanics, an instrument so named from its resemblance to a capital **T**.

(1.) **TA**, a river of China, which runs into the East Sea, in Lon. 139. 20. E. Ferro. Lat. 36. 55. N.

(2.) **TA**, a town of China of the 2d rank, with a fortress, in the province of Setchuen: 650 miles SW. of Peking. Lon. 125. 1. E. Ferro. Lat. 31. 18. N.

(3.) **TA**, or **LOUGH TA**, a lake of Ireland, on the S. coast of Wexford; 3 miles NW. of Carnfore Point, and 9 SSE. of Wexford. It receives several rivers, but having no outlet, would soon desolate the country, if they did not make an outlet by cutting off the bank next the sea; which soon fills up again.

(4.) **TA**, or **TASLOUSAC**, a town of Lower Canada. Lon. 69. 30. W. Lat. 48. 5. N.

TAAFE, or **TAVE**, a very rapid river of S. WALES, in Glamorganshire, which runs into the sea at Cardiff. Over this river, near N 2 Carphilly

Carphilly, there is a stone bridge of one arch, called *Pont y Pryddal*, which is supposed to be one of the widest in the world; being 140 feet in the span across the river, and 34 feet high. It was planned and executed, by a common mason of Glamorganshire, who had acquired all his skill without teaching. Why is not his name at least recorded?

TAAHNGE, an island of Denmark, 16 miles in circumference; with its capital so named; between the isle of Funen and Langeland.

TAAIF, a town of Arabia, in the province of Hedjaz, seated on a mountain in a pleasant and fertile country, 60 miles SE. of Mecca. It has a considerable trade to Mecca and Djidda in almonds, raisins, and other fine fruits.

TAANATH-SHILON, a town of Israel, in Ephraim, 10 miles E. of Shechem. It existed under the name of **THENATH**, as late as A. D. 400.

TAAS, a city of Arabia, in Yemen, at the foot of a fertile hill, called *Sabber*. It is surrounded with a strong wall, from 16 to 30 feet thick, and defended by several towers. It has also a fort, called *Kahbe*, in the circuit of the wall; 2 gates fortified with 3 towers, and a garrison of 600 men. It lies 48 miles NE. of Mocha. Lon. 44. 10. E. Lat. 13. 37. N.

TAATA, a town of Upper Egypt, a mile from the Nile, and 200 miles S. of Cairo. It has many curious relics of antiquity, and is the residence of a governor. It makes a grand appearance from the Nile. Lon. 31. 25. E. Lat. 26. 56. N.

TAAUT, } or **THOTH**, a Phœnician deity,
TAAITES, } the same with **Hermes** of Egypt,
TAAUTOS, } and **Mercury** of the Greeks and
TAAUTUS, } Romans. See **HERMES**, N° 1-3;
MERCURY, N° 1. **MYSTERIES**, § 35; **MYTHOLOGY**, § 10, 11; **POLYTHEISM**, p. 121, col. 2.
SANCHONIATHO, and **THOTH**. But Mr Lempriere makes him the same with **SATURN**, for which he quotes *Varro*.

TAAWIRRY, an island in the S. Pacific Ocean, situated, along with the isle of *Bocourou*, on the E. side of Otaheite, and within the reef. Both have good anchorage within the reef. The French ships, under Bougainville, lay here.

TAB, a river of Persia, which separates the provinces of Chusistan and Farsistan, and falls into the Persian Gulf near Chiraz.

TABA, a town of Africa, on the Grain Coast.

TABACHASAN, a town of Asiatic Turkey, in Natolia, in the county of Bozoe, among mountains; seated on the Adena, near its source, 50 miles above the town of Adena.

TABACO, a province of Mexico, in Yucatan, where the **TOBACCO** plant was first discovered, and from which it was named. See **NICOTIANA**, and **TOBACCO**.

TAB/E, an ancient town of Pisidia, (*Liv.* 38. c. 13.), memorable for being the scene of the miserable death of the monster Antiochus Epiphanes. See **JEWS**, § 6; and **SYRIA**, § 14.

TABAGA, or } an island of the S. Pacific
 (1) **TABAGO**, } Ocean, in the bay of Panama, near the coast of Mexico, belonging to Spain; 4 miles long and 3 broad. It is mountainous, but the land slopes, with a gentle descent, on the N. side to the coast, where it is very fertile, and

resembles a garden of fruit and forest trees. The chief productions are plantains and bananas. It has a good road for vessels, from 16 to 18 fathoms water, a mile from the shore. Lon. 80. 16. W. Lat. 7. 50. S. (*Brookes*.) Lat. 82. 9. W. Lat. 8. 40. N. *Cruikwell*.

(2.) **TABAGO**. See **TOBAGO**.

(3) **TABAGO LITTLE**. See **TABAGUILLA**.

TABAGUILLA, a small islet, near **TABAGO**.

TABANIE, a town of Egypt, on the E. branch of the Nile, 6 miles SW. of Mansura.

TABANKA, or **TABARCA**. See **TABARCA**.

TABANUS, the **BREEZE-FLY**, a genus of insects belonging to the order of *diptera*. The mouth is extended in a fleshy proboscis, terminated by two lips. The rostrum is furnished with two pointed palpi placed on each side of the proboscis, and parallel to it. Gmelin has enumerated 38 species; of which three only are found in Great Britain; viz.

1. **TABANUS BOVINUS**, or *great horse fly*, has a grey head; the eyes almost of a black brown, occupying the greatest part of it. The thorax is of a grey colour; the abdomen is yellowish, with a triangular white spot on the middle of every ring, which constitutes a longitudinal band of spots, the point of which is directed towards the thorax. The thighs are blackish, and the legs yellow. The wings are dusky, with brown veins of a deeper dye. This insect is the terror of horned cattle, horses, &c. Its mouth is armed with two sharp hooks which penetrate their hide; while with its proboscis, which is shaped like a siphon, it sucks their blood, of which it is very greedy. The puncture of the tabanus is keen and painful. The insect is very common in damp woods and meadows, especially during the great heats, when it is most troublesome. The horned cattle are sometimes so molested by their stings, that they go mad, run down precipices, tear themselves on the stumps of trees, stones, &c.

2. **TABANUS CONCIUENS** has a brown head; eyes green and brown, with black spots; the thorax brown with black spots; the abdomen above, yellow with triangular brown spots; yellow legs, and white wings with black and brown spots. The length is four lines and a half.

3. **TABANUS PLUVIATILIS** is of an ashen grey colour; its eyes are green, with brown streaks. The thorax is brown, marked with about 7 longitudinal grey lines; the wings, which are brown and ash-coloured, are dotted over with small white spots, and have a black spot on the margin; the legs are surrounded with brown and white rings alternately. This species is very common in meadows, and is about 4 lines in length.

TABAQUER, or **TABARCA**. See **TABARCA**.

TABARA, a town of Spain, in the province of Leon, 14 miles N. of Zamora.

(1.) **TABARCA**, an island in the Mediterranean, 2 miles from the coast of Africa, at the mouth of the Zeine, which separates Algiers from Tunis. It was long possessed by the *Lamellini*, or *Lomellini*, a noble family of Genoa, to whom it was given by the celebrated Andrew Doria, to whom the Tunisians had given it in ransom for one of their princes, whom Doria had taken prisoner. It is defended by a castle, well armed, which

which long protected the coral fishery on its coasts. But, in 1740, Ali Bey, the tyrant of Tunis, took it by treachery, massacred part of the Genoese citizens, and carried the rest, about 400, captives. Lon. 9. 16. E. Lat. 36. 50. or 55. N.

(2.) **TABARCA**, a town of Africa, in Tunis, on the coast, opposite the above island.

TABARIA, or **TABERAYAN**, a town of Palestine, anciently called **TIBERIAS**, seated on the W. bank of the Sea of Tiberias, or lake of **GENESARETH**; at the foot of a high mountain, surrounded with walls, except towards the lake. (See **TIBERIAS**.) It has some warm baths. The Christians have a church in it, and the Jews a seminary. It is 30 miles NNE. of Jerusalem, and 70 SSW. of Damascus.

TABAS, a town of Asiatic Turkey, in Natolia, 34 miles S. of Degnizlu.

(1.) **TABASCO**, a province of N. America, in Mexico; bounded N. by the Gulf of Mexico, or bay of Campeachy; E. by Yucatan; S. by Chiapa; and W. by Guaxaca. It is 100 miles long, and equally broad, but Cruttwell says it is narrow. It is fertile in various herbs, maize, rice, barley, Indian corn, cocoa-nuts, vines, lemon, orange, and fig trees; also the largest cabbage and cotton trees in the world grow on the banks of the river, N^o 2. The climate is moist and unhealthy, as it rains 9 months in the year. The other three, February, March, and April, are extremely hot, and give birth to numberless swarms of insects. From September to March, tempestuous winds are frequent from the N. Cattle and fish abound. Extensive woods of cedar, brasil wood, mangroves, bamboos, &c. are much frequented by lions, tigers, deer, wild bears, rabbits, apes, squirrels, &c.

(2.) **TABASCO**, a river in the above province, which rises in the mountains of Chiapa, and runs into the Gulf of Mexico; in Lon. 75. 52. E. Ferro. Lat. 17. 40. N.

(3.) **TABASCO**, an island in the above river, N^o 2. 36 miles long, and from 7 to 10 broad; abounding with cattle, mountain cows, and other animals. It is near the bay of Campeachy, but 10 miles from the sea, and 160 SW. of Campeachy. Cortes gained a victory in it, on his first arrival.

(4.) **TABASCO**, a well built town in the above island, (N^o 3.) capital of the island and province, (N^o 1.) much frequented and enriched by merchants and tradesmen. It is seated at the mouth of the Grijalva. Lon. 76. 0. W. Ferro. Lat. 17. 40. N.

TABASHEER, *n. s.* a Persian word, signifying a hard substance found in the cavities of the bamboo or Indian reed, and highly valued as a medicine in the East Indies. From the experiments of Dr Ruffel, it appears, that the tabasheer is the juice of the bamboo thickened and hardened. Its medical effects are mentioned in a Persian work of *Mahammed Monein Hosemy*, by Mr Williams, a surgeon in the East Indies. It is useful in bilious vomitings, the bloody flux, palpitations of the heart, faintings, cases of debility from heat; also in the piles, acute burning fevers, pustules in the mouth, thrush; and, with oxymel, is of great service against restlessness, melancholy, and hypochondriacal affections. The habitual internal use of it is prejudicial to the vile powers, and to the

lungs. Its correctives are the gum of the pine and honey.

TABBAY, one of the Western islands of Scotland, near the E. coast of the isle of Sky. Lon. 2. 37. W. of Edinburgh. Lat. 57. 15. N.

(1.) * **TABBY**, *adj.* Brinded; brindled; varied with different colours.—

A tabby cat sat in the chimney corner. *Addison*.

On her tabby rival's face,

She deep will mark her new disgrace. *Prior*.

(2.) * **TABBY**, *n. s.* [*tabis, tabino*, Italian; *tabis*, French.] A kind of waved silk.—

Brocades, and tabbies, and gaufes. *Swift*.

(3.) **TABBY**, in commerce, is a rich silk which has undergone the operation of tabbaying.

TABBYING, *n. s.* a passing the silk or stuff under a calendar, the rolls of which are made of iron or copper variously engraven, which bearing unequally on the stuff renders the surface thereof unequal, so as to reflect the rays of light differently, making the representation of waves thereon.

* **TABEFACTION**, *n. s.* [*tabefactio*, Latin.] The act of wasting away.

* **To TABEFY**, *v. n.* [*tabefacio*, Latin.] To waste; to extenuate.—Meat eaten in greater quantity than is convenient *tabefies* the body. *Harvey*.

TABELLARIÆ LEGES, in Roman antiquity, laws made by *suffrages delivered upon TABELLÆ, tablets*, and not *viva voce*. There were 4 of them, *viz.* the *Gabinian*, by Gabinus, A. U. C. 614; the *Cassian*, by Cassius, A. U. C. 616; the *Papirian*, by Papirius Carbo, A. U. C. 622; and the *Cælian*, by Cælius, A. U. C. 646. *Cic. de Legg.* iii. c. 16.

TABELLIO, in the Roman law, an officer or scrivener, much the same with our notaries-public, who are often called *tabelliones*. See **STIPULATION**, § 2.

TABENE, a town of Asiatic Turkey, in Curdistan, 50 miles ESE. of Kerkuk.

TABERAYAN. See **TABARIA**, and **TIBERIAS**.

* **TABERD**, *n. s.* [*taberda*, low Latin; *tabard*, French.] A long gown; a herald's coat: sometimes written *tabard*.

* **TABERDER**, *n. s.* [from *taberd*.] One who wears a long gown.

TABERG, a town of Sweden, in Smaland, near a mountain so named, which abounds in iron ore; 8 miles S. of Jonkioping.

TABERISTAN, a province of Persia, which forms part of **MEZANDERAN**.

(1.) * **TABERNACLE**, *n. s.* [*tabernacle*, French; *tabernaculum*, Latin.] A temporary habitation; a casual dwelling.—

They sudden rear'd

Cælestial tabernacles. *Milton's Paradise Lost*.

2. A sacred place; a place of worship.—His works, though consecrated to the *tabernacle*, became the national entertainment, as well as the devotion of his people. *Addison*.

(2.) **The TABERNACLE**, under the Hebrew theocracy, was a kind of building, in the form of a tent, set up, by command of God, for the performance of religious worship, sacrifices, &c. during the journeying of the Israelites in the wilderness: and, after their settlement in Canaan, used for the same purpose till the building of the temple. It was divided into two parts: the one covered,

vered, and properly called the *tabernacle*; and the other open, called the *court*. See *Exod.* xxv-xxvii.

(3.) **TABERNACLES, FEAST OF**, a solemn festival of the Hebrews, observed after harvest, on the 15th day of the month Tisri, instituted to commemorate the goodness of God, who protected the Israelites in the wilderness, and made them dwell in booths, when they came out of Egypt. On the first day of the feast, they began to erect booths of the boughs of trees, and in these they continued 7 days. The booths were placed in the open air, and were not covered with cloths, nor made too close by the thickness of the boughs; but so loose that the sun and the stars might be seen, and the rain descend through them. For further particulars, see *Levit.* xxiii.

* **To TABERNACLE.** *v. n.* [from the noun.] To enshrine; to house.—The Word was made flesh, and tabernacled among us. *John*, i. 14.

TABERNÆ. *n. s. plur.* [Lat.] in Roman antiquity, were houses made of boards, shops, or ware-houses. Such shops set up in conquered countries, gave rise to towns; as,

1. **TABERNÆ RHENANÆ**, a town of Germany, at the conflux of the Rhine and the Felsbach: now called RHINE-ZABERN.

2. **TABERNÆ RIGUÆ**, a town of ancient Gaul, on the Moselle; now called BERN CASTLE.

3. **TABERNÆ TRES.** See **TRES TABERNÆ.**

4. **TABERNÆ TRIBOCORUM**, a town of Gaul, in the ci-devant province of Lower Alsace, now in the department of the Lower Rhine; called *Saverne*. See **SAVERNE**, N° 1.

TABERNÆMONTANA, in botany, a genus of plants belonging to the class of *pentandria*, and order of *monogynia*; and in the natural system arranged under the 30th order, *Contorta*. There are two horizontal folioides, and the seeds are immersed in pulp. There are 8 species, all foreign plants.

TABERNAS, a town of Spain, in Grenada; 15 miles NNE. of Almeria.

TABES. See **MEDICINE, Index.**

TABEYRO, a town of Spain, in Galicia, 5 miles SE. of St Jago.

TABIANA, a town of the Italian kingdom in Parma: 13 miles W. of Parma.

* **TABID.** *adj.* [*tabide*, Fr. *tabidus*, Lat.] Wasted by disease; consumptive.—The *tabid* disposition, or the ulcer of the lungs, is very different from a diminution of the body. *Blackmore*.—In *tabid* persons milk is the best restorative. *Arb*.

* **TABIDNESS.** *n. s.* [from *tabid*.] Consumptiveness; state of being wasted by disease.

TABINSK, a town of Russia, in the province of Upa, on the Bielaia; 40 miles S. of Upa. Lon. 74. o. E. Ferro. Lat. 54. o. N.

TABITHA, or *Dorcas*, a Christian widow at Joppa, who abounded in works of charity, and after dying, was raised to life by St Peter. *Acts* ix, 36-42.

TABLANATZ, a town of Maritime Austria, in Istria, 24 miles NE. of Pedena.

* **TABLATURE.** *n. s.* [from *table*.] Painting on walls or ceilings,

(1.) * **TABLE.** *n. s.* [*table*, Fr. *tabula*, Latin.]

1. Any flat or level surface.—Upon the castle hill there is a bagnio paved with fair *tables* of marble.

Sandys. 2. A horizontal surface raised above the ground, used for meals and other purposes.—

We may again

Give to our *tables* meat. *Shak.*
—If I find not what I seek, let me for ever be your *table* sport. *Shak.*—Children at a *table* never asked for any thing. *Locke.*—This shuts them out from all *table* conversation. *Addison.*—We may safely come to the Lord's *table*. *Kettlewell.*—Differing from other apples, yet is a good *table* fruit. *Mortimer.*

The nymph the *table* spread. *Pope.*
3. The persons sitting at table, or partaking of entertainment.—

To the general joy of the whole *table*. *Shak.*
4. The fare or entertainment itself: as, *he keeps a good table.* 5. A tablet; a surface on which any thing is written or engraved.—He was the writer of them in the *tables* of their hearts. *Hooker.*

To see him every hour; to fit and draw
His arched brows, his hawking eye, his curls,
In our hearts *table*. *Shak.*

All these true notes of immortality
In our hearts *table* we shall written find. *Dav.*
Ev'n this had been your elegy which now
Is offer'd for your health, the *table* of my vow. *Dryden.*

—There are books extant which the Atheist must allow of as proper evidence; even the mighty volumes of visible nature, and the everlasting *tables* of right reason. *Bentley.*—The prætor granted administration, not only according to the *tables* of the testament, but even contrary to those *tables*. *Ayliffe.*—By the twelve *tables*, only those were called into succession of their parents that were in the parents power. *Ayliffe.* 6. [*Tableau*, Fr.] A picture, or any thing that exhibits a view of any thing upon a flat surface.—

Now, infixed, I beheld myself
Drawn in the flat'ring *table* of her eye. *Shak.*
—His Bacchus he so esteemed, that he had rather lose all his father's images than that *table*. *Peach.*
—Saint Anthony has a *table* that hangs up to him from a poor peasant. *Addison.* 7. An index; a collection of heads; a catalogue; a syllabus.—It might seem impertinent to have added a *table* to a book of so small a volume, and which seems to be itself but a *table*. *Evelyn.*—Their learning reaches no farther than the *tables* of contents. *Watts.* 8. A synopsis; many particulars brought into one view.—

No forged *tables*
Of long descents. *Ben Jonson.*
9. The palm of the hand.—
Mistress of a fairer *table*
Hath not history nor fable. *Ben Jonson.*
10. Draughts; small pieces of wood shuted on squares.—

Monsieur the nice,
When he plays at *tables*, chides the dice. *Shak.*
—We are in the world like men playing at *tables*. *Taylor.* 11. To turn the **TABLES.** To change the condition or fortune of two contending parties: a metaphor taken from the vicissitude of the fortune at gaming-tables.—They that are honest would be arrant knaves, if the *tables* would be turned. *L'Estrange.*—If it be thus, the *tables* would be turned upon me. *Dryden.*

(1.) **A TABLE** is a moveable piece of furniture, usually made of wood or stone, and supported on pillars or feet, for the reception of things placed on it.

(3.) **TABLE**, in mathematics, a system of numbers calculated to be ready at hand for expediting astronomical, geometrical, and other operations.

(4.) **TABLES, LAWS OF THE TWELVE**, were the first set of laws of the Romans; thus called either because the Romans then wrote with a style on thin wooden tablets covered with wax; or rather, because they were engraved on tables or plates of copper, to be exposed in the most noted part of the public forum. After the expulsion of the kings, as the Romans had no fixed system of law, ample enough to take in the various cases that might occur, they resolved to adopt the best laws of the Greeks. One Hermodorus was appointed to translate them, and the decemviri arranged them in ten tables. After much care, they were enacted and confirmed by the senate and people, A. U. C. 303. In 304 they found something wanting, which they supplied from the laws of the kings, and from certain customs which use had authorized: all these being engraven on two other tables, made the law of the XII. tables, so famous in the Roman jurisprudence, the source of the civil or Roman law.

(5.) **TABLES OF THE LAW**, in Jewish antiquity, two tables on which was written the decalogue, or ten commandments, given by God to Moses on mount Sinai.

(1.) * **To TABLE. v. a.** [from the noun.] To make into a catalogue; to set down.—I could have looked on him without admiration, though the catalogue of his endowments had been *tabled* by his side. *Shak.*

(2.) * **To TABLE. v. n.** To board; to live at the table of another.—He lost his kingdom, was driven from the society of men to *table* with the beasts. *South.*—You will have no notion of delicacies if you *table* with them. *Felton.*

(1.) **TABLE BAY**, a bay of Africa, on the W. coast of the S. extremity, which washes the foot of **TABLE MOUNTAIN**, near the Cape of Good Hope. See **GOOD HOPE**, N° 2. and **HOTTENTOTS**, § 2.

(2.) **TABLE BAY**, a bay of America, on the N. Atlantic Ocean, on the E. coast of Labrador. Lon. 20. 57. W. Lat. 53. 45. N.

* **TABLEBED. n. s.** [from *table* and *bed*.] A bed of the figure of a table.

* **TABLEBEER. n. s.** [*table* and *beer*.] Beer used at victuals; small beer.

(1.) * **TABLEBOOK. n. s.** [*table* and *book*.] A book on which any thing is graven or written without ink.—

What might you think,

If I had play'd the desk or *table book*? *Shak.*
—Nature wipes clean the *table-book* first. *Merr.*
Put into your *table-book* whatsoever ye judge worthy. *Dryden.*

Nature's fair *table-book*, our tender souls,
We scrawl all o'er. *Swift.*

(2.) **TABLE BOOK.** See **WRITING**.

(1.) * **TABLECLOTH. n. s.** [*table* and *cloth*.] Linen spread on a table.—I will end with Odo hold-

ing master doctor's mule, and Anne with her *tablecloth*. *Camden.*

(2.) **TABLE CLOTH**, in meteorology, a white cloud resembling a table-cloth, often seen on the top of **TABLE MOUNTAIN**. See **GOOD HOPE**, N° 2.

(1.) **TABLE ISLAND**, an island in the North Sea, near the coast of Spitzbergen. Lon. 20. 30. E. Lat. 80. 57. N.

(2.) **TABLE ISLAND**, an island in the S. Pacific Ocean, one of the New Hebrides. Lon. 167. 7. E. Lat. 15. 38. S.

TABLE LAND. See **GOOD HOPE**, N° 2.

* **TABLEMAN. n. s.** A man at draughts.—In clericals the keys are lined, and in colleges they use to line the *tablemen*. *Bacon.*

(1.) **TABLE MOUNTAIN**, a mountain of Africa, the most westerly cape in that part of the world, and near the Cape of Good Hope. See **GOOD HOPE**, N° 2. and **HOTTENTOTS**, § 2. It is so called from its flat summit, which resembles a *table*: Yet by its height it is seen at 30 miles distance at sea, in clear weather, being 3,567 feet above the sea level.

(2.) **TABLE MOUNTAIN**, a mountain of Ireland, in Wicklow; 15 miles W. of Wicklow.

(3.) **TABLE MOUNTAINS**, a range of Mountains in the United States, in N. Carolina. Lon. 81. 40. W. Lat. 36. 0. N.

* **TABLER. n. s.** [from *table*.] One who boards. *Ainsworth.*

(1.) * **TABLET. n. s.** [from *table*.] 1. A small level surface. 2. A medicine in a square form.—It hath been anciently in use to wear *tablets* of arsenick, or preservatives, against the plague. *Bac.* 3. A surface written on or painted.—It was by the authority of Alexander, that through all Greece the young gentlemen learned to design upon *tablets* of boxen wood. *Dryden.*

The pillar'd marble, and the *tablet* brass,
Mouldering, drop the victor's praise. *Prior.*

(2.) **TABLET**, in confectionary, a cake of sugar, ginger and other spiceries, made thin and in a level form, to be cut into small squares, of about 2 inches each.

* **TABLETALK. n. s.** [*table* and *talk*.] Conversation at meals or entertainments; table discourse. Let me praise you while I have a stomach.

—No; let it serve for *tabletalk*. *Shak.*

His fate makes *tabletalk*. *Dryden's Juvenal.*
—He improves by the *tabletalk*. *Guardian.*—No fair adversary would urge loose *tabletalk* in controversy. *Atterbury.*

TABLE VALLEY, a valley of Africa, at the Cape of Good Hope, surrounded by 3 mountains, called **TABLE MOUNTAIN**, *Devil's Tower*, and *Lion's Head*. The *Cape Town* is seated in it: See **GOOD HOPE**, N° 2. and **HOTTENTOTS**, § 2.

TABLIER, a town of France, in the dep. of the Vendée; 6 miles SSE. of Roche sur Yon, and 9 NW. of Luçon.

(1.) **TABO**, a town of Africa, on the Ivory coast.

(2.) **TABO DAGROU**, a town of Africa, in Quoja.

(3.) **TABO DUNE**, a town of Africa on the Ivory Coast.

TABOA, a town of Portugal, in Beira, on the Mondego: 9 miles S. of Viseu.

TABOGA. See **TABAGO**.

TABOGUILLA,

TABOGUILLA, or **LITTLE TABAGO**, an island in the bay of Panama, near Tabago. The channel between them is narrow, but good. Ships pass by it to Point Chama.

(1.) **TABOO**, *adj.* a word used by the South Sea islanders, nearly of the same import as prohibited or interdicted. It applies equally to persons and things, and is also expressive of any thing sacred, devoted, or eminent.

(2.) **TABOO**, in geography, a kingdom of Africa, SW. of Fezzan.

TABOOYAMANOO, an island in the S. Pacific Ocean, subject to HUAHEINE, one of the SOCIETY ISLANDS.

(1.) **TABOR**, in ancient geography, a mountain of Galilee, near Kadeth, about 12 miles from TIBERIAS. It has the form of a sugar-loaf, in the midst of an extensive plain, and is 30 stadia in height. (*Josephus*.) The ascent is so easy, that one may ascend on horseback. On the top there is a plain two miles in circumference. Flavius Josephus, the historian and governor of Galilee, caused the summit of this mountain, for two miles and a half, to be surrounded with walls. The inhabitants of Tabor long braved the power of the Roman armies; but being deprived of water, they were forced to surrender to Placidius the general of Vespasian. Several churches and monasteries were built upon this mountain by St Helen. Tabor was also the seat of a bishop, dependant on the patriarch of Jerusalem. When Godfrey of Bouillon seized on this mountain, he repaired the ancient churches. Under Baldwin I. in 1113, the Saracens retook Tabor. It again fell into the hands of the Christians; but the Catholic standard was by Saladin pulled down the year after, and all the churches destroyed. The Christians retook it in 1253; and rebuilt them. Pope Alexander IV. granted Tabor to the Templars, who fortified it again. At length, in the course of 1290, the sultan of Egypt destroyed and laid waste the buildings of this mountain, which could never be repaired afterwards; so that it is now uninhabited.

(2.) **TABOR**, a city given by the Zebulonites to the Merarites. 1 *Chron.* vi. 77.

(3.) **TABOR**, in modern geography, a town of Bohemia, in the circle of Bechin, founded by the Hussites, under John Ziska; who, after plundering and razing the town of *Austi*, in 1420, built Tabor, in the form of a *camp of houses* out of its ruins, whence the Hussites were named **TABORZI**, or **TABORITES**. Being seated on a steep mountain, on the river **LUZNICE**, it is naturally strong. It is also fortified with a ditch, walls, and bulwarks. The emperor Sigismund made it a royal borough. Albert of Austria in vain attempted to take it. But Rodolph II. took it by stratagem, in 1611. It was also taken in 1621, 1648, and 1744. It is 10 miles NNE. of Bechin, and of Budweis.

TABORITES. See **TABOR**, N° 3.

TABORNOST, a town of Africa, in Darah.

TABORO, a mountain of Naples, in the W. part of the Principato Citra; near Lavora.

TABOROWKA, a town of Poland, in the Palatinate of Kiow; 16 miles WNW. of Bialacerkiew.

TABORZI. See **TABOR**, N° 3.

* **TABOUR**, *n. f.* [*tabourin*, *tabour*, old French.]

A small drum; a drum beaten with one stick to accompany a pipe.—If you did but hear the pedlar at door, you would never dance again after a *tabour* and pipe. *Shak.*

The shepherd knows not thunder from a *tabour*. *Shak.*

The *tabour* and the pipe some take delight to sound. *Drayton*

—Morrice dancers danced a maid marian, and a *tabour* and pipe. *Temple.*

* To **TABOUR**. *v. n.* [*taborer*, old French, from the noun.] To strike lightly and frequently.—And her maids shall lead her as with the voice of doves, *tabouring* upon their breasts. *Nab. ii. 7.*

* **TABOUREK**. *n. f.* [from *tabour*.] One who beats the *tabour*.—

Would I could see this *tabourer*. *Shak.*

* **TABOURET**. *n. s.* [from *tabour*.] A small *tabour*.—They shall depart the manor before him with trumpets, *tabourets*, and other minstrelsy. *Spenser.*

* **TABOURINE**. *n. f.* [French.] A *tabour*; a small drum.

Make it mingle with our rattling *tabourines*. *Shak.*

TABOUROT, Stephen, a French poet, born at Dijon, in 1549. He was king's advocate, in the parliament of Dijon; and was a man of genius, but addicted to trifles; and his poetry was licentious, agreeably to the taste of the times. He published *Les Bigarreaux*, Paris, 1582; and *Les Touches*, Paris, 1585; with some other pieces; in all of which he assumed the whimsical title of *Lord of Accords*. See **ACCORDS**. He died 24th July, 1563, aged 46.

TABRACA, an ancient sea-port town of Africa, near Hippo. It was made a Roman colony. The forests abounded with monkeys. *Plin. v. 3.*

* **TABRERE**. *n. f.* *Tabourer*. Obsolete.—

Before them yode a lusty *tabrere*,

That to the merry hornpipe plaid. *Spenser.*

* **TABRET**. *n. f.* A *tabour*.—I might have sent thee away with mirth and with *tabret*. *Gen. xxxi. 27.*

TABRISTAN, a province of Persia, on the S. coast of the Caspian Sea.

TABUDA, in ancient geography, a river of Germany, now called the **SCHELD**. *Ptol.*

TABUE, a town of Egypt, on the Nile; 9 miles SW. of Menuf.

TABUK, a town of Asia, in Palestine; 208 miles ESE. of Jerusalem.

* **TABULAR**. *n. f.* [*tabularis*, Lat.] 1. Set down in the form of tables or synopses. 2. Formed laminae.—Most of the spotted ones, and indeed all whatever, except those that are *tabular* and plated. *Woodward.* 3. Set in squares.

* To **TABULATE**. *v. a.* [*tabula*, Lat.] 1. To reduce to tables or synopses. 2. To shape with a flat surface.

* **TABULATED**. *adj.* [*tabula*, Lat.] Having a flat surface.—Many of the best diamonds are pointed with six angles, and some *tabulated* or plain. *Grew.*

TABURNUS, a mountain of Italy, in Campania, abounding with olives. *Virg. Geor. ii. 38.*

TABY, a town of Sweden, in E. Gothland; 14 miles SE. of Nordkiöping.

TACALAPPO, a town of Mexico, in Tabasco; 23 miles SW. of Tabasco.

TACAMAHAC

TACAMAHAU, } in pharmacy, a solid re-
TACAMAHAU, } sin, improperly called a
 gum in the shops. It exudes from a species of
 poplar; and is in repute for mitigating pains and
 aches, and is also reckoned a vulnerary. See **MAT-
 TERIA MEDICA**.

(1.) **TACAMES**, or *Atacames*, a province of
 S. America, in Terra Firma, N. of Guayaquil,
 and W. of the Andes. It contains 20 towns, 5
 of which are on the sea-coast. The inhabitants
 of these 5 are Spaniards, mestizoes, negroes, and
 various casts, sprung from these. Those of the
 other 15 are mostly American Indians. The cli-
 mate and produce are similar to those of Gua-
 yaquil. It also produces grain, fruits, cocoa nuts,
 vanilla, sarsaparilla, indigo, and much honey and
 wax; and the forests abound with trees of great
 height and bulk, very thick set.

(2.) **TACAMES BAY**, a bay of the Pacific Ocean
 on the coast of Peru. Lat. 1. 6. N.

TACAPE, an ancient town of Africa.

TACATUA, a sea port town of Numidia.

TACAZZE, a river of Africa, in Abyssinia,
 and, next to the Nile, the largest in that empire.
 It rises from 3 sources in the district of Angot, a-
 bout 200 miles SE. of Gondar; runs between Sire
 and the mountains of Samen, and joins the Nile,
 at Nak, in Nubia. Mr Bruce says, that it carries
 near one third of the water which falls on the
 whole empire; and when passing it, he saw the
 marks of its stream, the preceding year, 18 feet
 perpendicular above the bottom; nor could it be
 ascertained whether this was the highest point to
 which it had reached. It is extremely pleasant;
 being shaded with fine lofty trees, the water ex-
 tremely clear, and the banks adorned with the
 most fragrant flowers. At the ford where they
 crossed, this river was fully 200 yards broad, and
 about three feet deep; running very swiftly over a
 bottom of pebbles. At the edge of the water the
 banks were covered with tamarisks, behind which
 grew tall and stately trees, that never lose their
 leaves. It abounds with fish, and is inhabited by
 crocodiles and hippopotami; the former often
 carry off people who attempt to cross the river
 upon blown up skins. The neighbouring woods
 are full of lions and hyænas. The Tacazze is
 marked by Mr Bruce in his map as a branch of
 the Atfaboras, which falls into the Nile. The
 Lat. of the ford was 13° 42' 45" N.

TACCA, in botany, a genus of plants belonging
 to the class of *dodecandria*, and order of *trigynia*.
 The flower is above. The corolla has six petals,
 and is vaulted. The calyx is hexaphyllous; the
 fruit a dry, angular, three-celled berry. There is
 only one species; viz.

TACCA PINNATIFIDA.

TACHAR, a town of Asia, in Thibet; 43
 miles S. of Tourfan.

TACFARINAS, a Numidian who, after serving
 some time in the Roman legions, became a gene-
 ral in his own country, and commanded an army
 against its conquerors in the reign of Tiberius.
 In the course of this war he repeatedly defeated
 Tiberius's generals. Tacfarinas was at last killed
 in battle, performing heroic deeds of valour, by
 Dabala. Tac. Ann. ii.

TACHA. See **TACHAU**.

TACHAMPSO, an island in the Nile, near
 Thebais. The Egyptians held one half of it, and
 the Ethiopians the other. Herodot. ii.

TACHARD, Guidon, or Guy, a traveller, and
 writer, who accompanied M. De Chaumont, as
 missionary, in his embassy to Siam, in 1686, and
 returned to Europe in 1688. He again went to
 India, in his apostolic function; and died there
 in 1694. He published *Voyage de Siam, en 1685*.

TACHAR SEGHIN, a town of Asia, in Thi-
 bet; 50 miles S. of Tourfan.

TACHAU, a town of Bohemia, in the circle of
 Pilsen, 22 miles S. Embogen, and 28 W. of Pilsen.
 It was besieged by Zisca, in 1421, without suc-
 cess; in 1427, he took it by storm, and sacked it.
 In 1431, it was besieged by the Germans in vain.

* **TACHE**. *n. f.* [from *tack*.] Any thing taken
 hold of; a catch; a loop; a button.—Make fifty
taches of gold, and couple the curtains together
 with the *taches*. Exod. xxv. 6.

TACHENS, a lake of Bavaria, in Saltzburg, 5
 miles long and 1 broad; 14 m. NW. of Saltzburg.

TACHIFI, a cape on the coast of Mexico; 12
 miles from Pomaro.

TACHOW, or **TACHAU**. See **TACHAU**.

TACHUS, or **TACHOS**, a king of Egypt, who
 flourished in the reign of Artaxerxes Ochus, but
 was dethroned by NECTANEBUS II.

* **TACHYGRAPHY**. *n. f.* [ταχυς and γραφο.]
 The art or practice of quick writing.

TACINA, a river of Italy, in the country of
 the Brutii.

* **TACIT**. *adj.* [tacite, Fr. tacitus, Latin.] Sil-
 lent; implied; not expressed by words.—There
 is a natural and *tacit* confederation amongst all
 men, against the common enemy of human socie-
 ty, pirates. Bacon.—In elective governments there
 is a *tacit* covenant, that the king of their own
 making shall make his maker's princes. L'Esrange.
 —Capacioufness not only produces misbecoming
 expressions and carriage but is a *tacit* reproach of
 some incivility. Locke.

TACITA, in the Roman mythology, the god-
 des of Silence. King Numa Pompilius paid par-
 ticular veneration to her.

* **TACITLY**. *adv.* [from *tacit*.] Silently; with-
 out oral expression.—While they are exposing an-
 other's weaknesses, they are *tacitly* aiming at their
 own commendations. Addison.—Indulgence to the
 vices of men can never be *tacitly* implied. Rogers.

* **TACITURNITY**. *n. f.* [taciturnité, French;
taciturnitas, Lat.] Habitual silence.—

The secretest of natures

Have not more gift in *taciturnity*. Shaks.
 Some women have some *taciturnity*. Donne.
 —Too great loquacity, and too great *taciturnity* by
 fits. Arbuthnot.

(1.) **TACITUS**, Caius Cornelius, a celebrated
 Roman historian, and one of the greatest men of
 his time, born about A. U. C. 809. He applied
 himself early to the bar, in which he gained high
 reputation. Having married the daughter of A-
 GRICOLA, the road to public honours was open
 to him, under Vespasian and Titus; but during
 the sanguinary tyranny of Domitian, he and his
 friend Pliny retired from public affairs. The
 reign of Nerva restored these luminaries of litera-
 ture to Rome, and Tacitus was engaged, in 850,

to pronounce the funeral oration of the venerable Virginius Rufus, the colleague of the emperor in the consulship, and afterwards succeeded him as consul A. D. 97. It is supposed that he died in the end of the reign of Trajan. His works which remain are, 1. Five books of his History. 2. His Annals. 3. A Treatise on the different Nations who then inhabited Germany. 4. The Life of Agricola. 5. A Treatise on Eloquence. No ancient author has obtained a more splendid reputation than Tacitus. Kings, princes, and authors of all ranks have read and admired him; though a spirit of liberty runs through his whole works. Never were description and sentiment so beautifully blended; nor the actions and characters of men delineated with such precision. In short, he has all the merits of other authors without their defects. There have been 5 translations of his works into English.

(2.) **TACITUS**, M. Claudius, an excellent emperor of Rome, who succeeded Aurelian, A. D. 275. See **ROME**, § 77.

(1.) * **TACK**. *n. f.* [from the verb.] 1. A small nail. 2. The act of turning ships at sea.—

At each *tack* our little fleet grows less. *Dryden*.
5. To hold **TACK**. To last; to hold out. *Tack* is still retained in Scotland, and denotes hold or persevere in cohesion.—

Martinmas beefe doth bear good *tack*. *Thf.*

If this twig be made of wood

That will hold *tack*, I'll make the fur
Fly 'bout the ears of that old cur. *Hudibras*.

(2.) **TACK**, in Scots law, § 1. *def* 3. See **LAW**, Part III. *Chap.* II. *Sec.* vi. 8; and **LEASE**, § 3.

(3.) **TACK**, in ship-building, a rope used to confine the foremast lower corners of the courses and stay-sails in a fixed position, when the wind crosses the ship's course obliquely; also the rope employed to pull out the lower corner of a studding-sail or driver to the extremity of its boom. The main-sail and fore-sail of a ship are furnished with a tack on each side, which is formed of a thick rope tapering to the end, and having a knot wrought upon the largest end, by which it is firmly retained in the clew of the sail. One tack is thus always fastened to the windward, at the same time that the sheet extends the sail to the leeward.

(4.) **TACK** is also applied, by analogy, to that part of any sail to which the tack is usually fastened. A ship is said to be on the starboard or larboard tack, when she is close-hauled, with the wind upon the starboard or larboard side; and in this sense the distance which the sails in that position is considered as the length of the tack; although this is more frequently called **BOARD**. See that article.

(1.) * To **TACK**. *v. a.* [*tacher*. Breton] 1. To fasten to any thing. It has now a sense approaching to contempt.—

Thy great arm, which spans the East and West,
And *tacks* the centre to the sphere! *Herbert*.

But living as you list, and to your mind,
And loosely *tack'd*, all must be left behind.

Dryden.

—The symmetry of cloathes fancy appropriates to the wearer, *tacking* them to the body as if they belonged to it. *Grew*.—Frame so as to be covered with the hair-cloth, or a blanket *tacked* about the edges. *Mortimer*.—They serve every turn that

shall be demanded, in hopes of getting some commendam *tacked* to their fees. *Swift*. 2. To join to unite; to stitch together.—The half shirt is two napkins *tack'd* together. *Shak*.—I *tack'd* two plays together for the pleasure of variety. *Dryden*.

(2.) * To **TACK**. *v. n.* [probably from *tackle*.] To turn a ship.—This verbifier they continue to be the compass, which is better interpreted the rope that turns the ship; as we say, makes it *tack* about. *Brown*.—Seeing Holland fall into close measures with us and Sweden, upon the triple alliance, they have *tacked* some points nearer France. *Temple*.

On either side they nimbly *tack*. *Dryden*.

They give me signs

To *tack* about, and steer another way. *Addison*.

(3.) To **TACK**, (§ 2.) is to change the course from one board to another, or turn the ship about from the starboard to the larboard tack, in a contrary wind. Thus a ship being close hauled on the larboard tack, and turning her prow suddenly to windward, receives the impression of the wind on her head-sails, by which she falls off upon the line of the starboard tack. **TACKING** is also used in a more enlarged sense, to imply the manoeuvre in navigation by which a ship makes an oblique progression to the windward, in a zigzag direction. This, however, is more usually called *beating*, or *turning to windward*. See **NAVAL TACTICS**, **NAVIGATION**, and **SAILING**.

TACKING, *part. n. f.* See last article, and the references there pointed out.

(1.) * **TACKLE**. *n. f.* [*tackel*, Welsh, an arrow.

1. An arrow.—

The *takil* smote, and in it went. *Chaucer*.

2. Weapons; instruments of action.—

She to her *tackle* fell,

And on the knight let fall a peal

Of blows so fierce, and press'd so home,

That he retir'd. *Hudibras*.

—He resolved to take up his *tackle* and be gone. *L'Estrange*. 3. [*Tackel*, a rope, Dutch.] The ropes of a ship; in a looser sense, all the instruments of sailing.—

The sails of gold, of silk the *tackle* were.

A seeming mermaid steers; the silken *tackle*
Swell with the touches of those flower-soft
hands

That yarely frame the office. *Shak*.

Though thy *tackle's* torn,

Thou shew'st a noble vessel. *Shak*.

A stately ship

With all her bravery on, and *tackle* trim. *Mil-*
—As for *tackle*, the Boeotians invented the oar.
Dædalus and his son Icarus, the masts and sails.
Heylyn.—

Ere yet the tempest roars

Stand to your *tackle*, mates. *Dryden*.

—If he drew the figure of a ship, there was not a rope among the *tackle* that escaped him. *Addison*.

(2.) **TACKLE**, (§ 1. *def* 3.) in ship-building. See **MAST**, § 2; **ROPE-MAKING**, *Sec.* III.—VIII. **SHIP**, § 15; and **SHIP-BUILDING**.

TACKLE-BOARD. *n. f.* [*tackle* and *board*.] See **ROPE-MAKING**, *Sec.* V.

* **TACKLED**. *adj.* [from *tackle*.] Made of ropes *tacked* together.—

My man shall

Bring the cords, made like a *tackled* stair. *Shak.*

(1.) * **TACKLING.** *n. s.* [from *tackle*.] 1. Furniture of the mast. They wondered at their ships and their *tacklings*. *Abbot.*—*Tackling*, as sails and cordage, must be foreseen. *Bacon.*—

Our *tackling* yields, and wrecks at last succeed.

Garth.

2. Instruments of action: as *fishing* tackling, *kitchen* tackling.—I will furnish him with a rod, if you will furnish him with the rest of the *tackling*, and make him a fisher. *Walton.*

(2.) **TACKLING.** See **FISHERY**, **FISHING**, **FISHING-FLOAT**, **FISHING-HOOK**, **NET**, &c. also **TACKLE**, § 2. and the articles there referred to.

TACKSMAN, *n. s.* See **TENURE**.

TACKUMBRET, a town of Africa, anciently called *Siga* or *Sigeum*, and once the capital of Mauritania; seated on the coast of the Mediterranean, 44 miles SW. of Oran.

TAC-CONG-LOCHE, a town of the Chinese empire, in the island of Formosa. Lon. 137. 50. E. Ferro. Lat. 22. 22. N.

TAC-COU, a river of China, in Chan-tong, which runs into the East Sea; 7 miles ENE. of Kiao.

TAC-POU-CHAI, } 2 towns of Thibet; the one
TAC-POU-NAI, } 255 miles SE. of Lassa; the other 240.

TACPOY, a city of Thibet, and capital of a district so named; 126 miles SE. of Lassa, and 150 NNW. of Ghergong. Lon. 92. 52. E. Lat. 28. 13. N.

TACQUET, Andrew, a Jesuit of Antwerp, who flourished in the 17th century. He was a most labourious writer in mathematics; and published *A treatise on Astronomy*, an edition of *Euclid*, and many other tracts. His works were collected, and printed at Antwerp, in one large volume, folio, 1669. He died in 1660.

TACSAI RAKI, a lake of Asia, in Thibet, 36 miles in circumference. Lon. 16. 20. E. Ferro. Lat. 32. 0. N.

* **TACTICAL.** } *adj.* [*tacticos*, *tattuo*, *tac-*
(1.) * **TACTICK.** } *ique*, Fr.] Relating to the art of ranging a battle.

(2.) * **TACTICKS**, *n. s.* [*tactica*.] The art of ranging men in the field of battle.—When Tully had read the *tacticks*, he was thinking on the bar, which was his field of battle. *Dryden.*

(3.) **TACTICS**, in the art of war, is the method of disposing forces to the best advantage in order of battle, and of performing the several military motions and evolutions.

(4.) **TACTICS**, **NAVAL.** See **NAVAL TACTICS**.—It is to the late ingenious and justly celebrated Mr **CLERK**, that Great Britain owes the present highly improved state of her Naval Tactics, in which she is superior to all the other powers of Europe; and for which she is chiefly indebted for the glory of all our naval victories, obtained since the 12th of April, 1782, when these improved tactics were first carried into practice. Rodney, Howe, Duncan, Jervis, Nelson, and all our other brave naval heroes, have been highly and deservedly honoured and rewarded, for their important services in this line. But *what honours, what rewards*, have been conferred on Mr Clerk, whose astonishing genius laid

the foundation of all these brilliant victories, which have contributed, at such a critical period, to preserve our free constitution, and all the liberty and independence Britons still boast and enjoy?

* **TACTILE.** *adj.* [*tañile*, Fr. *tañilis*, *tañum*, Lat.] Susceptible of touch.—

She on the scene her *tactile* sweets presented.

Braumont.

—We have iron, sounds, light, figuration, *tactile* qualities. *Hale.*

* **TACTILITY.** *n. f.* [from *tactile*.] Perceptibility by the touch.

* **TACTION.** *n. f.* [*tañion*, Fr. *tañio*, Lat.] The act of touching.

TACUBA, a town of Mexico, NW. of the city. **TACUMADAARS**, or **TIGUMEDS**, a town of Africa, in Darah, the original country of the reigning sheriffs of Morocco.

TACUNGA, a populous city of Peru, in Quito, 20 miles S. of Quito. The inhabitants drive a great trade in woollen cloths, which they manufacture. It has the ruins of a noble palace of the yncas. It had also a grand temple of the Sun.

TACZLI, a river of European Turkey, which runs into the Danube, near Kilia, in Bessarabia.

TADAMERI, a town of Hindoostan, in Myfore: 100 miles NE. of Chittadroog, and 140 NNE. of Seringapatam.

TADAPOOLY, a town of Hindoostan, in Myfore: 5 miles SE. of Sattimungulam.

TADCASFER, a town of England in the W. Riding of Yorkshire, noted for plenty of limestone dug up near it; and for being one of the first places in which a building was erected for Sunday schools. It is 9 miles SW. of York, and 188 N. of London.

TADCUL, a town of Hindoostan, in the Myfore; 6 miles SE. of Caveripatara.

TADEN, a town of Holstein; 14 miles E. of Meldorp.

TADER, a river of Spain near New Carthage.

(1.) **TADIVAN**, or **TADOUN**, a town of Asiatic Turkey in Armenia, on lake Van, with a harbour: 120 miles SSE. of Erzerum.

(2.) **TADIVAN**, or **TADUAN**, a town of Persia, in Farshitan, seated in a beautiful plain, among springs, and surrounded with excellent fruit-trees: 60 miles S. of Schirau.

TADMOK. See **PALMYRA**.

TADORNA. See **ANAS**, N° 36.

TADOUN. See **TADIVAN**, N° 1.

TADOUSAC, a town of N. America, in Lower Canada, at the mouth of the **SAGUENY**, on the left side of the St Lawrence. It is a place of great resort for the American Indians, who give furs in exchange for cloth, and other European goods. It was first settled by the French, but was taken by the English in 1529. It was retaken by the French in 1633; but ceded to Britain with the rest of Canada, at the peace in 1763. It is 100 miles NE. of Quebec. Lon. 69. 40. W. Lat. 48. 5. N.

(1.) * **TADPOLE.** *n. f.* [*tad*, *toad*, and *pola*, a young one, Saxon.] A young shapeless frog or toad, consisting only of a body and a tail; a porwiggle.—

I'll broach the *tadpole* on my rapier's point. *Shak.*

—Poor Tom eats the toad and the *tadpole*. *Shak.*

—The result is not a perfect frog but a *tadpole*.

O 2

Eay.

Ray.—A black and round substance began to dilate, and after awhile the head, the eyes, the tail to be discernible, and at last become what the ancients called *gyrinus*, we a porwiggle or *tadpole*. *Brown*.

(2.) A *TADPOLE* is a young frog before it has disengaged itself from the membranes that envelope it in its first stage of life. See *RANA*, N° 3, and 9; and *SPALLANZANI*.

TADUAN. See *TADIVAN*, N° 2.

TADWORT, a town of England in Surrey; S. of Banstead.

TÆDIUM VITÆ, [Lat.] Weariness of life. See *ENNUI*, and *SUICIDE*.

TÆL-PE, in zoology. See *TARTARY*, N° III.

* *TA'EN*, the poetical contraction of *taken*.

TENARIA, festivals held in honour of Neptune, at Tænarus.

TENARIUS, a name of Neptune; from

(1.) *TENARUS*, a promontory of Laconia, the most southern point of the Morea, where Neptune had a temple. It is now called *MATAPAN*. It had a large and deep cavern, whence issued a black unwholesome vapour, (probably *FIXED AIR*, or *CARBONIC ACID GAS*), whence the poets feigned that it was one of the entrances to hell, through which Hercules dragged the triple-headed infernal dog, *CERBERUS*, up to the earth. Pausanias says, that this cavern was the resort of a large serpent, whose bite was mortal, and which Hercules killed and carried to Eurytheus; and that this gave rise to the story of his chaining the dog of hell.

(2.) *TENARUS*, a town of Laconia, 40 stadia from the cape, (N° 1.) famous for beautiful green marble.

(3.) *TENARUS*, a son of Neptune, who gave name to the cape, town, and festivals.

(I.) *TÆNIA*, in architecture, a member of the Doric capital, resembling a square fillet, serving instead of a cymatium, being made fast to a capital below the triglyphs, whereof it seems the base.

(II.) *TÆNIA* in entomology, the *TAPE-WORM*, a genus of animals belonging to the class of *vermes*, and order of *intestina*. The body is long, depressed, and jointed like a chain, and contains a mouth and viscera in each joint. According to Cmelin, there are 92 species; all which inhabit the intestines of various animals, particularly of quadrupeds. The *tænia* appears destined to feed on such juices of animals as are already animalized, and is therefore most commonly found in the alimentary canal, and in the upper part, where there is the greatest abundance of chyle; for chyle seems to be the natural food of the *tænia*. As it is thus supported by food which is already digested, it is destitute of the complicated organs of digestion. Seven species of *tænia* are peculiar to man: viz.

1. *TÆNIA CELLULOSA*, which is inclosed in a cartilaginous vesicle, inhabits the cellular substance of the muscles; is about an inch long, half an inch broad, and one fourth of an inch thick, and is very tenacious of life.

2. *TÆNIA DENTATA*, has a pointed head; the large joints are streaked transversely, and the small joints are all dilated; the osculum or opening in the middle of both margins is somewhat raised. It is narrow, 10 or 12 feet long, and broad in the

foreparts; its ovaria are not visible to the naked eye; and the head underneath resembles a heart in shape. It inhabits the intestines.

3. *TÆNIA LATA*, is white with joints very short and knotty in the middle; the osculum is solitary. It is from 18 to 120 feet long; its joints are streaked transversely; its ovaria are disposed like the petals of a rose.

4. *TÆNIA SOLIUM*, has a marginal mouth, one on each joint. This species is most frequent in this country. It is from 3 to 30 feet long, some say 60. It is composed of a head, in which is a mouth adapted to drink up fluids, and an apparatus for giving the head a fixed situation. The body is composed of a great number of distinct pieces articulated together, each joint having an organ whereby it attaches itself to the neighbouring part of the inner coat of the intestine. The joints nearest the head are always small, and they become gradually enlarged as they are farther removed from it; but towards the tail a few of the last joints again become diminished in size. The extremity of the body is terminated by a small semicircular joint, which has no opening in it. The head is composed of the same materials as the other parts of its body; it has a rounded opening at its extremity, which is considered to be its mouth. (See *Plate CCCXXVIII. fig. 1, 2.*) This opening is continued by a short duct into two canals; these canals pass round every joint of the animal's body, and convey the aliment (*fig. 3.*) Surrounding the opening of the mouth are placed a number of projecting radii, which are of a fibrous texture, whose direction is longitudinal. These radii appear to serve the purpose of tentacula for fixing the orifice of the mouth, as well as that of muscles to expand the cavity of the mouth, from their being inserted along the brim of that opening: (See *fig. 1.*) After the rounded extremity or head has been narrowed into the neck, as is represented in *fig. 2.* the lower part becomes flattened, and has 2 small tubercles placed upon each flattened side; the tubercles are concave in the middle, and appear destined to serve the purpose of suckers for attaching the head more effectually. The internal structure of the joints composing the body of this animal is partly vascular and partly cellular; the substance itself is white, and somewhat resembles in its texture the coagulated lymph of the human blood. The alimentary canal passes along each side of the animal, sending a cross canal over the bottom of each joint, which connects the two lateral canals together. See *fig. 3.* The *tænia* seems to be one of the simplest vascular animals in nature. The way in which it is nourished is singular; the food being taken in by the mouth, passes into the alimentary canal, and is thus made to visit in a general way the different parts of the animal. As it has no excretory ducts, it would appear that the whole of its alimentary fluid is fit for nourishment; the decayed parts probably dissolve into a fluid which transudes through the skin, which is extremely porous. This animal has nothing resembling a brain or nerves, and seems to have no organs or sense but that of feeling. It is most probably propagated by ova, which may easily pass along the circulating vessels of other animals.

We cannot otherwise explain the phenomena of worms being found in the eggs of fowls, and in the intestines of a fœtus before birth, except by supposing their ova to have passed through the circulating vessels of the mother, and thus been conveyed to the fœtus. Another mode of increase possessed by tænia (if we may call it *increase*), is a species of vegetation, by an addition to the number of their joints. If we consider the individual joints as distinct beings, it is so; and when we reflect upon the power of generation given to each joint, it makes this conjecture the more probable. We can hardly suppose that an ovum of a tænia, which at its full growth is 30 feet long and composed of 400 joints, contained a young tænia composed of this number of pieces; but we have seen young tænia not half a foot long, and not possessed of 50 joints, which still were entire worms. We have also many reasons to believe, that when a part of this animal is broken off from the rest, it is capable of forming a head for itself, and becoming an independent being, like the polypus. (See POLYPUS, § II. N^o 1—8.) Plate 328. *fig. 1.* shows the head of the tænia magnified; the mouth is in the middle of the circular plane, where the body becomes flatted and broad; there are two hollow tubercles represented by the two dark shaded spots. *Fig. 2.* is the same head of its natural bigness, and which belonged to a tænia 20 feet in length. *Fig. 3.* shows the alimentary canals, in a portion of the same tænia, of their natural bigness. The dark shaded undulating lines are the alimentary canals, which are seen to their full extent in this portion of the worm. *Fig. 4.* shows the middle system of vessels, in two joints, which are represented by the dark lines. *Fig. 5.* shows two joints, from one side of which a slip was torn down to show the vessels underneath, and also the direction of the fibres in the slip, which are accumulated into little fasciculi like muscular fibres. *Fig. 6.* exhibits three joints, having the ducts leading from the lateral oscula injected; the dark transverse lines leading from each osculum show the size, direction, and extent of these ducts. *Fig. 7.* shows the edge of two joints turned forwards, and the appearance of the oscula in this point of view. *Fig. 8.* represents the whole of these canals in their relative situations. See Mr Carlisle's ingenious account of the tænia, in the *Linnæan Transactions*.

5. *TANIA TRUTÆ*, which chiefly inhabits the liver of the trout, is also to be found in the intestines of the human species.

6. *TANIA VISCERALIS*, which is inclosed in a viticæ broad in the fore-part, and pointed in the hinder part, inhabits the liver, the placenta uterina, and the sack which contains the superfluous fluid of dropical persons.

7. *TANIA VULGARIS*, or common *tape-worm*, has two lateral mouths in each joint; it attaches itself so firmly to the intestines, that it can scarcely be removed by the most violent medicines; it is slender, and has the appearance of being membranaceous; it is somewhat pellucid, from 10 to 16 feet long, and about 4 and a half lines broad at one end.

TENIAS, a part of lake MOEOTIS. *Strabo*.

TÆNSA, a town and settlement of W. Florida,

on the E. channel of the Mobile, on the side of an ancient Indian town. The wax tree abounds near it. See MYRICA.

TAFAL. See *TAFU*.

TAFALA, or *TAFALLA*, a city of Spain, in Navarre; with a palace, built in the 15th century by Charles II. king of Navarre. It has also an university, and a castle; and is pleasantly situated on the banks of the Cidazzo, in a fertile country, famous for good wine. It lies 15 miles NW. of Sanguesa, and 15, 12, or 22 miles S. of Pampluna. Lon. 1. 36. W. Lat. 42. 29. N.

TAFALÉ, a river of Africa, which runs into the sea, between the rivers Senegal and Nunez.

TAFALIOGA, a town of Africa, in Calam.

TAFALISGA, a town of Africa, in Senegal.

TAFALIA. See *TAFALA*.

TAFAR, a town of Arabia, in Yemen; 80 miles NE. of Sanaa.

TAFFAREL. *n. f.* in ship-building, the uppermost part, frame, or rail, abaft over the poop. See *SHIP-BUILDING*, Part II.

TAFFAROWY, a mountain of Africa, in Algiers; 15 miles SE. of Oran.

TAFFAREL. See *TAFFEREL*.

(1.) *TAFFETA*. *n. f.* [*taffetas*, Fr. *tafetar*, Spanish.] A thin silk.—

Beauties no richer than rich *taffeta*. *Sbak.*

Taffeta phrases, silken terms precise. *Sbak.*

—The changeable *taffety*, whose colours the philosophers call not real but apparent. *Boyle.*

(2.) *TAFFETA*, or } in commerce, a fine
TAFFETY, } smooth silken stuff, remarkably glossy.

There are taffeties of all colours, some plain, and others striped with gold, silver, &c. others chequered, others flowered, &c. according to the fancy of the workmen.

TAFFI, Andrew, an eminent Italian artist, born at Florence in 1213. Having learned the art of designing in MOSAIC, from some Greek artists, employed in decorating the church of St Mark in Venice, the chief of whom was *Apollonius*, he introduced it into Italy. His chief work is a Mosaic piece of our Saviour dead, in a chapel at Florence. He died in 1294.

(1.) *TAFILET*, a kingdom of Africa, in Barbary, belonging to the emperor of Morocco, lying along the E. side of Mount Atlas; bounded on the N. by the kingdoms of Fez and Tremesen; E. by Desiberies; S. by the Desert of Barbary; and W. by Fez, Morocco, and Sus. It is mountainous, and is divided into three provinces, viz. *Dras*, *Sarro*, and *Tuet*; which contain about 2000 scattered houses, some of them with towers, and each in the midst of an inclosure of gardens, palm tree plantations, and cultivated grounds; forming a beautiful and variegated appearance, and intersected by many rivers and rivulets flowing from Mount Atlas and fertilizing the whole. Their dates are very small but excellent, and like our OATS, are a principal food both of the people and their horses. They also make a very strong brandy from them, of which their sheriffs drink to such excess, though prohibited by the Koran, that wine has no effect on them. They likewise feed upon camels flesh. The country abounds with ostriches and dromedaries.

(2.) *TAFILET*, the capital of the above kingdom.

dom, is a good trading city, and has a castle, and manufactures of stuffs and carpets. It is seated on the river (N° 3.), 275 miles SE. of Morocco, but Cruttwell makes it only 140 ESE. and 340 S. of Fez. Lon. 5. 45. W. Lat. 28. 2. N.

(3.) **TAFILET**, a river of Africa, which rises in Mount Atlas, passes the city of Taflet, and falls into a lake, 149 miles S. of that city.

TAFNA, a river of Africa, in Algiers, which runs into the Mediterranean near Tackumbreet.

TAFU, a town of Africa, on the Gold Coast.

* **TAG**. *n. f.* [*tag*, Mandick, the point of a lance.] 1. A point of metal put to the end of a string. 2. Any thing paltry and mean.—If *tag* and *rag* be admitted, learned and unlearned, it is the fault of some, not of the law. *Whigifite*.—

Will you hence

Before the *tag* return, whose rage doth rend

Like interrupted waters. *Shak.*

—The *tag*-*rag* people did not clap him and hiss him. *Shak.*—He invited *tag*, *rag*, and bob-tail, to the wedding. *L'Estrange*. 3. A young sheep.

* **To TAG**. *v. a.* [from the noun.] 1. To fit any thing with an end, or point of metal: as, *to tag a lace*. 2. To fit one thing with another appended.—

His courteous host

Tags every sentence with some fawning word,

Such as my king, my prince. *Dryden.*

'Tis *tagg'd* with rhyme. *Dryden.*

3. The word is here improperly used.—

Compell'd by you to *tag* in rhymes. *Swift.*

4. To join. This is properly to *task*.—Resistance, and the succession of the house of Hanover, the whig writers perpetually *tag* together. *Swift.*

TAGADEMPT, } or **TIGEDENT**, a town of
TAGADEONT, } Africa, in Algiers, 63 miles
ESE. of Oran, and 315 SW. of Algiers.

TAGAL, a town of Russia, in Simbirskoe, 48 miles W. of Simbirsk. Lon. 64. 40. E. Ferro. Lat. 54. 20. N.

TAGANROG, a town and fort of Russia, on the sea of Azoph, built by Peter the Great in 1696. In 1711 the fort was demolished by treaty, but rebuilt in 1769. It is 32 miles WNW. of Azoph.

TAGAOST, or **TAGAST**, or **TAGAOAST**, a town of Morocco, in Sus, where a great number of Jews reside and carry on a considerable trade. It is defended by a garrison of 400 men. The Rev. Mr Cruttwell makes it the birth-place of St Augustine; others place that town in Algiers. (See **TAGASTA**.) It is seated on a fertile plain, 37 miles S. of Tarudant, 50 from the sea-coast, and 140 SW. of Morocco. Lon. 8. 5. W. Lat. 29. 23. N.

TAGAPIPE, a fort of Brazil, on a point of land, in the bay of All Saints, near St Salvadore.

TAGARA, a city of ancient India, the metropolis of a large district called *Ariaca*, which comprehended the greatest part of the Subah of Aurengabad, and the S. part of CONCAN. Arrian says that it was situated about ten days journey to the E. of Pultanah; which, according to the rate of travelling in that country with loaded carts, might be about 100 British miles. This fixes its situation at *Deogbir*, a place of great antiquity, and famous through all India on account of the pagodas of Elousa. It is now called *Dowlat-abad*.

See **AMEDNAGUR**, **AURENGABAD**, and **DOWLAT-ABAD**, N° 2.

TAGASTA, a town of Africa, in Fez, on a river, 9 miles from the Mediterranean, and 60 W. of Melilla.

TAGAST. See **TAGAOST**.

TAGASTA, a town of Algiers, in the province of Constantia, formerly considerable, but now much reduced. It is famous for having been the birth-place of St AUGUSTINE.

TAGASTE, an ancient town of Numidia. *Plin. v. c. 4.*

TAGAVOST. See **TAGAOST**.

TAGAZONTE, a town of Algiers, 45 miles SE. of Oran.

TAGE, a large town of Arabia Felix, on the road from Mecca to Yemen, with a castle on a mountain which commands the town. Lon. 42. 5. E. Lat. 21. 50. N.

TAGES, in the mythology, a son of GENIUS, and grandson of Jupiter, who first taught the Etrurians augury. He was found by a Tuscan plowman in the form of a *clod*, and immediately assumed a human shape to teach them augury. (*Cicero*.) Had this *divine clod* taught them *agriculture* instead of *augury*, it would have been a better allegory.

TAGETES, **MARIGOLD**, in botany, a genus of plants belonging to the class of *syngenesia*, and order of *polygamia superflua*; and in the natural system ranging under the 49th order, *Compositæ*. The receptacle is naked; the pappus consists of five erect awns or beards; the calyx is monophyllous, quinqueadentate, and tubular; and there are four persistent florets of the ray. There are three species; viz.

1. **TAGETES ERRECTA**, the *African marigold*, is a native of Mexico, but has been cultivated in British gardens since 1596. It has a stem subdivided and spreading. There are many varieties: 1. *Pale yellow*, or brimstone colour, with single, double, and fistulous flowers. 2. *Deep yellow*, with single, double, and fistulous flowers. 3. *Orange-coloured*, with single, double, and fistulous flowers. 4. *Middling African*, with orange coloured flowers. 5. *Sweet-scented African*. These are all very subject to vary; so that unless the seeds are very carefully saved from the finest flowers, they are apt to degenerate: nor should the same seeds be too long sown in the same garden. Those who wish to have these flowers in perfection should exchange their seeds with some person of integrity at a distance, where the soil is of a different nature, at least every other year. If this is done, the varieties may be continued in perfection. They flower from the beginning of July till the frost sets in.

2. **TAGETES MINUTA**, the *small marigold*.

3. **TAGETES PATULA**, the *French marigold*, has a simple erect stem, and the peduncles are scaly and multiflorous. It has been cultivated in the British gardens since 1596. There are several varieties: some have larger flowers than others, and their colour varies greatly: some are beautifully variegated, and others quite plain: but all these are accidents arising from culture, for seeds saved from the most beautiful flowers will degenerate, if they are sown in the same garden for several years together, without changing the seed. These plants

plants have a strong disagreeable scent, especially when handled; for which reason they are not planted near habitations: the flowers of the sweet-scented sort being preferred, especially for small gardens.

PAGGIA, a town of Italy, in the ci-devant republic of Genoa, and late Ligurian republic, now annexed to the French empire; 14 miles NE. of Ventimiglia.

TAGHAIRM. See **NECROMANCY**, § 2.

TAGHMON, a town of Ireland, in Wexford, Leinster; 7 miles W. of Wexford. It sent two members to the ci-devant Irish parliament.

TAGIE, a river of Algiers, which runs into the Mediterranean, 24 miles E. of Oran.

TAGIDOG, a river of N. Wales, which runs into the **ALEN**, 4 miles N. of Wrexham, in Flintshire.

TAGIL, a river of Russia, which runs into the Tura, 48 miles W. of Turinsk.

TAGILSKOI, **VERSCHEI** and **NIZNEI**, or *Old and New*, two towns of Russia, in Ekaterinenburg; the former 52, and the latter 60 miles N. of Ekaterinenburg.

TAGLARET, a town of the French empire, in the dep. of the Po, and late province of the Four Valleys; 7 miles W. of Ligueroles.

TAGLESSE, a town of Morocco; 120 miles W. of Morocco.

TAGLIACIOCI, Gaspar. See **TALIACTIUS**.

TAGLIACCOZZO, a town of Naples, in Abruzzo Ultra; 18 miles SW. of Aquila, and 33 ENE. of Rome.

TAGLIAMENTO, a river which rises in Friuli, and falls into the Adriatic, 16 miles SSE. of Concordia. On its banks Bonaparte, in 1797, defeated and killed a party of 3000 Austrians. This river, on the 12th November 1805, was the scene of a brisk cannonade across it, between the French and Austrians, who were posted on each side of it, and which lasted the whole day; but was attended with such loss to the latter, that the archduke Charles retreated with his whole troops early on the morning of the 13th, when the French troops crossed it, but found their enemies fled.

TAGLIO DEL PO, a district of Austria, in the Dogado, containing 2300 souls.

TAGNON, a town of France, in the dep. of the Ardennes; 6 miles SW. of Rethel.

TAGO, **ST TAGO**, or **POINT TIAGO**, a town of New Mexico, on the W. coast, near Salagua.

TAGOAST. See **TAGAOST**.

TAGODAST, or **ISADAGAS**, a town of Morocco, near the foot of Mount Atlas; 60 miles NE. of Morocco.

TAGOMAGO, an island in the Mediterranean, near the E. coast of the Isle of Yvica.

TAGONIUS, a river of Hispania Tarraconensis. *Lempriere*.

TAGOVAST. See **TAGAOST**.

TAGOURIE, a town of Chinese Tartary, in Hami; 50 miles NNE. of Ham-tamtam.

TAGRIN, or **SIERRA**. See **SIERRA**, N° 5.

* **TAG-TAIL**. *n. f.* [*tag* and *tail*.] A worm which has the tail of another colour.—They feed on *tag* worms and lugges. *Carew*.—There are other worms, as the marsh and *tag tail*. *Walton*.

TAGVA. See **TAGUVA**.

(1.) **TAGUMADERT**, a town of Africa, in Darah; 20 miles S. of Tattah.

(2.) **TAGUMADERT**, a town of Morocco, in Taflet, on the Dras, with a strong castle on a mountain. Lon. 6. 43. W. Lat. 27. 10. N.

TAGUS, in ancient geography, a river of Spain, which, after crossing Lusitania, falls into the Atlantic. Its sands abound with gold dust. *Mela*, iii. c. 1. *Sil. Ital.* iv. 234. It is now called **TAJO**.

TAGUVA, a town of Africa, in Gaoga.

TAHAL, a town of Spain, in Granada; 8 miles NNE. of Purchena.

TAHATE, a town of Arabia, in Yemen.

TA-HEAN, a town of China, of the 2d rank, in Yun-nan; 1130 miles SW. of Peking. Lon. 119. 36. E. Ferro. Lat. 25. 52. N.

TAHEJ, a town of Hindostan, 150 miles W. of Amedabad, and 400 S. of Moultan. Lon. 69. 58. E. Lat. 43. 16. N.

TAHIAO, a town of Asia, in Corea; 35 miles SSE. of Long-Kouang.

TAHMURAS. See **MYTHOLOGY**, § 24.

TAHOERWA, one of the Sandwich islands. It is small, destitute of wood, and its soil sandy and unfertile. See **COOK**, N° III. and **SANDWICH ISLANDS**. Lon. 203. 27. E. Lat. 20. 38. N.

TAHOORA, one of the Sandwich islands, in the South Sea. It is uninhabited. See **SANDWICH ISLANDS**. Lon. 199. 36. E. Lat. 21. 43. N.

TAHOOROWA. See **TAHOERWA**.

TAHPANHES, or **TENAPHNEHES**, or *Hanes*, an ancient city of Egypt, supposed to be the same with *Daphne*, about 16 miles S. of **PELUSIUM**, on the E. bank of the Nile. To this city the remnant of the Jews left by Nebuchadnezzar retired, after the murder of Gedaliah. It was afterwards taken by Nebuchadnezzar. Jer. xliii. 1—11. Ezek. xxx. 18.

TAHTA, a town of Egypt, on the Nile; 32 miles S. of Siut, and 187 S. of Cairo. Lon. 49. 8. E. Ferro. Lat. 26. 57. N.

(1.) **TAI**, a large lake of China, 150 miles in circumference, in the provinces of Kiang-nan and Tche-kiang; 75 miles SE. of Nan-king.

(2.) **TAI**, a town of China, of the 2d rank, in Chan-fi; 175 miles WSW. of Peking. Lon. 130. 16. E. Ferro. Lat. 39. 6. N.

(3.) **TAI**, a town of China, of the 2d rank, in Kiang-nan; 22 miles E. of Yang-tcheou. Lon. 137. 22. E. Ferro. Lat. 31. 30. N.

TAJACU, **TAJASSU**, or **PECARY**, in zoology, a species of hog. See **SUS**, § III. N° 4.

TAJAMENTA, a river which rises in the NW. part of Friuli, and falls into the Gulf of Venice, 16 miles SSE. of Concordia.

TAJASSU. See **SUS**, § III. N° 4.

TAI-CHAN, a town of China, of the 3d rank, in Tche-kiang; 60 miles SW. of Ouen-tcheou.

TAJE-ELT, a town of Algiers, 35 miles SSE. of Bona.

TAIEF, or **TAIF**, a town of Arabia Felix, in the province of Hedjas, abounding in fruits. It was a strong town in the time of Mahomet, who besieged it for 20 days in vain. It is seated on the S. of Mount Gazuan, 48 miles E. of Mecca.

TAIEZA, a town of Croatia, 44 miles E. of Bihacz.

TAJF. See **TAIEF**.

TAI-HO,

TAI-HO, two towns of China, of the 3d rank: 1. in Kiang nan, 17 miles NW. of Hing: 2. in Kiang-si, 20 miles S. of Kingan.

TAI-KANG, a town of China, in Ho-nan; 30 miles E. of Hlu.

(1.) * **TAIL**. *n. f.* (*tegl*, Sax.) 1. That which terminates the animal behind; the continuation of the vertebrae of the back hanging loose behind.—

Of't have I seen a hot o'erweening cur,

Who, having suffer'd with the bear's fell paw,

Hath clapt his tail betwixt his legs. *Shak.*

Men and boats his active tail confounds.

Waller.

—The lion will strike such a stroke with his tail, that will break the back of his encounterer. *Mare.*

Rou'd by the lash of his own stubborn tail,

Our lion now will foreign foes assail. *Dryden.*

—The tail fin is half a foot high, but underneath, level with the tail. *Grew.* 2. The lower part.—

The Lord shall make thee the head, and not the tail. *Deut. xxviii. 13.* 3. Any thing hanging long; a catkin.—Durtius writes a great praise of the distilled water of those tails that hang upon willow trees. *Harvey.* 4. The hinder part of any thing.—

With the helm they turn and steer the tail.

Butler.

5. To turn **TAIL**. To fly; to run away.—Would she turn tail to the heron? *Sidney.*

(2.) **TAIL**, in anatomy, is the train of a beast, bird, or fish; which in land animals serves to drive away flies, &c. and in birds and fishes to direct their course, and assist them in ascending or descending in the air or water.

(3.) **TAIL**, or **FREE-TAIL**, in law, is a conditional estate or fee, opposed to *fee-simple*. See **FREE**, § II. N° 1.; and **TAILLE**. A conditional fee, at the common law, was a fee restrained to some particular heirs exclusive of others; as to the heirs of a man's body, by which only his lineal descendants were admitted, in exclusion of collateral heirs; or to the heirs male of his body, in exclusion both of collaterals and lineal females also. It was called a *conditional fee*, by reason of the condition expressed or implied in the donation of it, that if the donee died without such particular heirs, the land should revert to the donor. For this was a condition annexed by law to all grants whatsoever, that on failure of the heirs specified in the grant, the grant should be at an end, and the land return to its ancient proprietor. With regard to the condition annexed to these fees by the common law, it was held, that such a gift (to a man and the heirs of his body) was a gift upon condition that it should revert to the donor if the donee had no heirs of his body; but if he had, it should then remain to the donee. They therefore called it a *fee-simple* on condition that he had issue. So that as soon as the grantee had any issue born, his estate was supposed to become absolute by the performance of the condition; for these three purposes: 1. To enable the tenant to alienate the land, and thereby to bar the donor of his interest in the reversion. 2. To subject him to forfeit it for treason. 3. To empower him to charge the land with rents, commons, and other encumbrances, so as to bind his issue. But if the tenant did not alienate the land, the course of descent was not

altered; for if the issue had afterwards died, and then the tenant or original grantee had died, without making any alienation, the land, by the terms of the donation, could descend to none but the heirs of his body, and therefore must have reverted to the donor. To subject the lands therefore to the ordinary course of descent, the donees of these conditional fee-simples took care to alienate as soon as they had issue; and afterwards repurchased the lands, which gave them a fee-simple absolute, that would descend to the heirs-general, according to the common law. And thus stood the old law with regard to conditional fees: which things, says Sir Edward Coke, are necessary to be known, for the sake of annuities, and such like inheritances as are not within the statutes of entail, and therefore remain as the common law. The inconveniences which attended these fettered inheritances induced the judges to give way to this subtle *finess*, to shorten the duration of these conditional estates. But, on the other hand, the nobility, who wished to perpetuate their possessions in their own families, procured the statute of Westminster the 2d, *de donis conditionalibus*, to be made; which paid a greater regard to the intentions of a donor, than to the propriety of such intentions. This restraint revived the ancient feudal restraints originally laid on alienations, by enacting, that from thenceforth the will of the donor be observed; and that the tenements so given (to a man and his heirs) should at all events go to the issue, or if none, should revert to the donor. Upon this act the judges determined that the donee had no longer a conditional fee-simple, but they divided the estate into two parts, leaving in the donee a new kind of particular estate, which they denominated a *fee tail*; and vesting in the donor the ultimate fee-simple of the land, *expectant* on the failure of issue; which expectant estate is what we now call a *reversion*. And hence Littleton says, that tenant in fee-tail is by virtue of this statute. We now proceed to consider what things may or may not be entailed under the above statute. "*Tenements*" is the only word used in the statute; and this Sir Edward Coke expounds to mean all *corporeal* hereditaments; and also all *incorporeal* hereditaments which issue out of corporeal ones, or may be exercised within them; as rents, advowsons, commons, &c. Also offices and dignities, which concern lands, may be entailed. But mere personal chattels, which favour not at all of the *reality*, cannot be entailed. Neither can an office, which relates to such chattels; nor an annuity, which charges only the person of the granter. But in these last, if granted to a man and his heirs, the grantee hath still a fee conditional at common law, and by his alienation may bar the heir or reversioner. An estate to a man and his heirs for another's life cannot be entailed. Neither can a copyhold estate be entailed; but, by the special custom of the manor, a copyhold may be limited to the heirs of the body. As to the several species of estates tail, and how they are respectively created; they are either general or special. *Tail-general* is where lands and tenements are given to one, and the heirs of his body begotten: which is so called, because, how often soever such do-

nee in tail be married, his issue in general, by all such marriages, is, in successive order, capable of inheriting the estate tail, *per formam doni*. Tenant in tail-special is where the gift is restrained to certain heirs of the donee's body, and does not go to all of them in general. Here no issue can inherit but such special issue as is engendered between the two persons specially mentioned: and therefore it is called *special tail*. The words of inheritance, to him and his heirs, give him an estate in fee; but they being heirs to be by him begotten, this makes it a *fee-tail*; and the person being also limited, on whom such heirs shall be begotten (*viz.* Mary his present wife) this makes it a *fee-tail special*. Estates in general and special tail are farther diversified by the distinction of *sexes*, for both of them may either be in tail male or tail female. If lands be given to a man, and his heirs male, this is an estate in tail male general; but if to a man, and his heirs female, this is an estate in tail female special. And in case of an entail male, the heirs female shall never inherit, nor any detail from them; nor the heirs male in case of a gift in tail female. If the donee in tail male hath a daughter, who dies leaving a son, such grandson in this case cannot inherit the estate tail. And as the heir male must convey his descent *wholly by males*, so must the heir female *wholly by females*. And therefore if a man hath two estates tail, the one in tail male, and the other in tail female, and he hath issue a daughter, which daughter hath issue a son; this grandson can succeed to neither of the estates, for he cannot convey his descent *wholly* either in the male or female line! As the word *heirs* is necessary to create a fee, so the word *body* is necessary to make it a *fee-tail*, and ascertain to what heirs in particular the fee is limited. If, therefore, either the words of inheritance or words of procreation be omitted, this will not make an estate tail. As if the grant be to a man and the issue of his body, or his *seed*, his children or offspring; all these are only estates for life, there wanting the words of inheritance, *his heirs*. So a gift to a man, and his heirs male or female, is an estate in fee-simple and not in fee-tail; for there are no words to ascertain the *body* out of which they shall issue. But in last wills and testaments, wherein greater indulgence is allowed, an estate tail may be created by a devise to a man and his *seed*, or his heirs male, or by other irregular modes of expression. There is still another species of entailed estates, now indeed grown out of use, yet still capable of subsisting in law; which are estates in *libero maritagio*, or FRANK MARRIAGE. See FRANK, § 1. N. 6. The incidents to a tendency in tail, under the stat. Westminster 2. are chiefly these: 1. That a tenant in tail may commit waste on the estate tail, by selling timber, pulling down houses, or the like, without being impeached or called to account for the time. 2. That the wife of the tenant in tail shall have her dower, or thirds, of the estate tail. 3. That the husband of a female tenant in tail may be tenant by the curtesy of the estate tail. 4. That an estate tail may be barred, or destroyed, by a fine, by a common recovery, or by lineal warranty descending with assets to the heir. See ASSETS. Such is the nature of estates tail:

the establishment of which *family law* (as it is properly styled by Pigott) occasioned infinite difficulties and disputes. Children grew disobedient when they knew they could not be set aside: farmers were ousted of their leases made by tenants in tail; creditors were defrauded of their debts; innumerable latent entails were produced to deprive purchasers of the lands they had fairly bought; of suits in consequence of which, our ancient books are full: and treasons were encouraged, as estates were not liable to forfeiture longer than for the tenant's life. So that they were justly branded as the source of new contentions and mischiefs unknown to the common law; and almost universally considered as the common grievance of the realm. But as the nobility were always fond of this statute, because it preserved their family estates from forfeiture, there was little hope of procuring a repeal by the legislature; and therefore, by the connivance of an active and politic prince, a method was devised to evade it. About 400 years intervened between the making of the statute *de donis*, and the application of common recoveries to this intent, in the 12th of Edward IV.; which were then openly declared by the judges to be a sufficient bar of an estate tail. For though the courts had, so long before as the reign of Edward III. very often hinted that a bar might be effected upon these principles, yet it was never carried into execution; till Edward IV. observing (in the disputes between the houses of York and Lancaster) how little effect attainders for treason had on families whose estates were protected by the sanctuary of entails, gave his countenance to this proceeding, and suffered Taltarum's case to be brought before the court; wherein, in consequence of the principles then laid down, it was in effect determined, that a common recovery suffered by tenant in tail should be an effectual destruction thereof. These common recoveries are *filitious* proceedings, introduced by a kind of *pin fraud*, to elude the statute *de donis*, which was found so intolerably mischievous, and which yet one branch of the legislature would not then consent to repeal; and that these recoveries are now become by long use a most common assurance of lands; and are looked upon as the legal mode of conveyance, by which a tenant in tail may dispose of his lands and tenements; so that no court will suffer them to be shaken or reflected on, and even acts of parliament have by a *side-wind* countenanced and established them. This expedient having greatly abridged estates tail with regard to their duration, others were soon invented to strip them of other privileges. The next that was attacked was their freedom from forfeitures for treason. For, notwithstanding the large advances made by recoveries, in the compass of about 60 years, towards unfettering these inheritances, and thereby subjecting the lands to forfeiture, the rapacious prince then reigning, finding them frequently reflected in a similar manner to suit the convenience of families, had address enough to procure a statute, whereby all estates of inheritance (under which estates tail were covertly included) are declared to be forfeited to the king upon any conviction of high-treason. The next attack which they suffered, was by statute 32 Hen. VIII. c. 28. whereby

certain leases made by tenants in tail, which do not tend to the prejudice of the issue, were allowed to be good in law, and to bind the issue in tail. But they received a more violent blow in the same session of parliament, by the construction put upon the statute of fines, by stat. 32. Hen. VIII. c. 36. which declares a fine duly levied by tenant in tail to be a complete bar to him and his heirs, and all persons claiming under such entail. This was agreeable to the intention of Henry VII. whose policy it was to lay the road as open as possible to the alienation of landed property, to weaken the overgrown power of his nobles. But as they were not easily brought to consent to such a provision, it was couched, in his act, under obscure expressions. And the judges, though willing to construe that statute as favourably as possible for the defeating of entailed estates, yet hesitated at giving fines so extensive a power by mere implication, when the statute *de donis* had expressly declared that they should not be a bar to estates tail. But the stat. Hen. VIII. when the doctrine of alienation was better received, and the king's will more implicitly obeyed, established that intention. Yet, to preserve the property of the crown from infringement, all estates tail created by the crown are excepted. And the same was done with regard to common recoveries, by stat. 34. and 35. Hen. VIII. c. 20. which enacts, that no feigned recovery had against tenants in tail, where the estate was created by the crown, and the reversion continues in the crown, shall be of any force and effect; which is allowing, indirectly, their full force and effect with respect to ordinary estates tail, where the royal prerogative is not concerned. Lastly, by stat. 36 Hen. VIII. all estates tail are rendered liable to be charged for payment of debts due to the king by record or special contract; as since, by the bankrupt laws, they are also subjected to be sold for the debts contracted by a bankrupt. And, by the construction put on the stat. 43 Eliz. c. 4. an appointment by tenant in tail of the lands entailed to a charitable use is good without fine or recovery. Estates tail being thus by degrees unfettered, are now reduced again to almost the same state, even before issue born, as conditional fees were in at common law, after the condition was performed by birth of issue. For, 1. The tenant in tail is now enabled to alienate his lands and tenements by fine, by recovery, or by certain other means; and thereby to defeat the interest as well of his own issue, though unborn, as also of the reversioner, except in the case of the crown: 2. He is now liable to forfeit them for high treason; and, lastly, He may charge them with reasonable leases, and also with such of his debts as are due to the crown on specialties, or have been contracted with his fellow subjects in a course of extensive commerce.

* *TO TAIL*. *v. n.* To pull by the tail.—

First Trulla flay'd and Cerdon tail'd. *Hudib.*

* *TAILED*. *adj.* [from *tail*.] Furnished with a tail.—Snouted and *tailed* like a boar. *Greiv.*

* *TAILLAGE*. *n. s.* [tailleur, French.] *Taillage* originally signified a piece cut out of the whole; and, metaphorically, a share of a man's substance paid by way of tribute. In law, it signifies a roll or tax. *Cowel.*

(L.) * *TAILLE*. *n. s.* *Taille*, the fee which is opposite to fee-simple, because it is so minced or parcel, that it is not in his free power to be disposed of who owns it; but is, by the first giver, cut or divided from all other, and tied to the issue of the donee. This limitation, or *taille*, is either general or special. *Cowel.*

(2.) *TAILLES*. See *TAIL*, § 3; and *TAILZIE*.

TAILLEBURG, a town of France, in the dep. of Lower Charente, and ci-devant prov. of Saintonge; memorable for a victory obtained by Lewis IX. over the count of Marche, in 1242. It is seated on the Charente, 6 miles N. of Saintes, 74 SSW. of Saint Jean d'Angely, and 30 SE. of Rochelle. Lon. 0. 40. W. Lat. 45. 46. N.

TALOOR, a town of Hindostan, in the Mysore, 10 miles NNW. of Venicatighery.

* *TAILOR*. *n. s.* [tailleur, from *tailer*, French, to cut.] One whose business is to make clothes.—I'll entertain a score or two of *tailors*. *Shak.*—Here's an English *tailor* come for stealing out of a French house; come, *tailor*, you may roast your goose. *Shak.*—The knight came to the *tailor's*. *Camden.*—The *tailor* and shoemaker may cut out what religion they please. *Howel.*—It was prettily said by Seneca, that friendship should not be unript, but unlight, though somewhat in the phrase of a *tailor*. *Collier.*

In Covent-Garden did a *tailor* dwell. *King.*

TAILZIE. *n. s.* in Scots law, the same with *TAIL*. See *LAW*, Part. III. Chap. II. S. 3. XX. § 3—14.

TAIMURSKAIA, a gulf of Russia, in the Frozen Ocean, between the capes Sievero Vostochno, and Sievero Zapadno. Lon. 112. to 116. E. Ferro. Lat. 75° to 77° N.

(1.) *TAIN*, a town of France, in the dep. of the Drome, 9 miles N. of Valence, and 9 WNW. of Romans.

(2.) *TAIN*, or *TAYNE*, a district of Scotland in Ross-shire, comprehending the greater part of that county. See *ROSS*, N° 1. and *TAYNE*, N° 1.

(3.) *TAIN*, *TAYNE*, or *THANE*, an ancient royal borough of Scotland, in the above district, (N° 2.) seated on the S. bank of the FRITH of *TAIN*. It is irregularly built, but has many new and elegant houses, for public assemblies, &c. lately erected towards the E. The church is an elegant ancient building, erected in 1471, and dedicated to St Duthus. It has a large square tower, with 5 spires. *Tain* joins with Dingwall, Dornoch, Kirkwall, and Wick, in electing delegates to choose a representative in the British parliament. It contained 1250 inhabitants in 1791.

(4.) *TAIN*, a parish of Scotland, in the above district, extending 8 miles along the Frith of *Tain* or Dornoch in length, and 2 in breadth. The surface is mostly level, but rises into small eminences towards the W. coast, which is flat and sandy; about one 5th of it is arable, and the soil various but fertile. The chief seats are *Ankerville*, the seat of David Ross, late lord of session by that title, and *Little Turrel*, the seat of Mr Baillie. The population, in 1791, was 2100; increase 230, since 1755.

(5.) *TAIN*, or *TAYNE*, FRITH OF, or the *Frith* of Dornoch. See *TAYNE*, N° 3.

TAINACH, a river of Germany, which runs

1810

into the Nagold, 2 miles S. of Caw, in the duchy of Württemberg.

TAI-NGAN, a town of China, of the 2d rank in Chantong, 235 miles SSE. of Pekin. Lon. 134. 35. E. Ferro. Lat. 36. 15. N.

TAI-NHING, a town of China, of the 3d rank, in Fo-kien, 32 miles SSW. of Shaf-ou.

TAINING, a town of China, of the 3d rank, in Se-tchuen, on the Tong-ki-ho, 20 miles N. of Kwei-tcheou.

* **TAINT**. *n. s.* [*teinte*, Fr. from the verb.]
1. A tincture; a stain. 2. An insect.—There is found in the summer a spider called a *taint*, of a red colour, and so little that ten of the largest will hardly outweigh a grain. *Brown*—

As killing as the canker rofe,
Or *taint* worm to the weaning herds. *Milton*.

3. Infection; corruption; depravation.—
Your forevouch'd affection

Fall'n into *taint*. *Shak.*

Man's polluting sin with *taint* hath shed
On what was pure. *Milton*.

—A father that breeds his son at home, can keep him better from the *taint* of servants than abroad. *Locke*—

But is no rank, no station, no degree,
From this contagious *taint* of sorrow free? *Prior*.

4. A spot; a soil; a blemish.—

The *taints* and blames I laid upon myself.

Shak.

(1.) * **To TAINT**. *v. a.* [*teindre*, Fr.] 1. To imbue or impregnate with any thing.—

The spaniel struck
Stiff by the *tainted* gale. *Thomson*.

2. To stain; to soil.—

We come not by the way of accusation,
To *taint* that honour. *Shak.*

Sirens *taint*
The minds of all men. *Chapman*.

They the truth

With superstitions and traditions *taint*. *Milton*.

Those pure immortal elements

Beet him *tainted* now. *Milton*.

3. To infect; to poison; to disease.—Nothing
taints found lungs sooner than inspiring the breath

of consumptive lungs. *Harvey*.—The *tainted* air
may affect the lungs by its heat. *Arbuthnot*.—

Vegetable venom *taints* the plain. *Pope*.

4. To corrupt.—A sweet-bread you found it
tainted. *Swift*.—

The yellow tingling plague

Internal vision *taints*. *Thomson*.

5. A corrupt contraction of *attaint*.

(2.) * **To TAINT**. *v. n.* To be infected; to be touched with something corrupting.—

Till Birnam wood remove to Dunsinane
I cannot *taint* with fear. *Shak.*

* **TAINTLESS**. *adj.* [from *taint*.] Free from infection; pure.—

No humours grofs, or frowzy steams,
Could from her *taintless* body flow. *Swift*.

TAINTON, a small town of Gloucestershire, 4 miles SE. of Newent, and 7 W. of Gloucester.

There is a mine near it, which contains some gold.

* **TAINTURE**. *n. s.* [*teinture*, Lat. *teinture*, Fr.] Taint; tinge; defilement.—

See here the *tainture* of thy nest. *Shak.*

TAJO, the largest river of Spain; which rises on the confines of Arragon, runs SW. through New Castile and Estremadura; and passing by the cities of Aranjuez, Toledo, Talavera, and Alcantara, enters Portugal at Montalva, forms the harbour of Lisbon, where it is about 3 miles over; and crossing Portuguese Estremadura, passes Abrantes, Santarem, &c. and falls into the Atlantic ocean 10 miles below Lisbon. It was anciently called **TAGUS**.

TA-JOH, a town of China, in Kiang-si, famous for its magnificent temples, and two very high towers. Lon. 114. 41. E. Lat. 27. 38. N.

(1.) **TAI-OUAN**, or **TAY-OUAN**, the Chinese name of the island of Formosa. See **FORMOSA**, N° 1.

(2.) **TAI-OUAN**, or **TAY-OUAN**, the capital of the island of **FORMOSA**, is seated on the W. coast. The streets are regular, in straight lines; and are covered, during the 7 or 8 hot months of the year, with bamboos and straw, to keep off the rays of the sun. They are from 30 to 40 feet broad, and some of them near 3 miles long. They abound with elegant shops, where silks, China wares, and other goods, made chiefly in China, are sold. This city is neither fortified nor walled. The harbour is well sheltered from all winds, but the entrance into it becomes daily more difficult. It had formerly 2 entries, but the best, called **TA-KIANG**, where large vessels floated easily, is now almost useless, there being often hardly 5 feet water in it, and at no tide above 8; and the other, called *Louthmen*, having a rocky bottom, and never above 10 feet at high water. Lon. 3. 30. E. of Pekin. Lat. 23. 0. N.

TAI-PIN, a town of China, in Tchekiang.

(1.) **TAI-PING**, a city of China, of the first rank, in Kiang-nan, on the Yang-tse, 525 miles S. of Pekin. Lon. 136. 0. E. Ferro. Lat. 31. 38. N.

(2.) **TAI-PING**, a city of China, of the first rank in Quang-li, on a peninsula, nearly surrounded by a river, and fortified by a wall on the land-side, besides many forts, as it is near the kingdom of Ton-king. The whole territory is fertile and very populous. It is 1175 miles SSW. of Pekin. Lon. 124. 20. E. Ferro. Lat. 22. 25. N.

(3—6.) **TAI-PING**, 4 towns of China, of rank 3d, in Chan-fi, Kiang-nan, Nankin, and Se-tchuen.

TAI-SANG, a town of Corea, 17 miles SSE. of Hoang-tcheou.

TAI-TCHEOU, a city of China, of the 1st rank, in Tchekiang, in a mountainous country. It has 6 cities of the 2d rank in its district. The people have a great trade in scabbards for cutlasses, which they make of the skins of a peculiar species of thornback, and export through the whole empire. It is 712 miles SSE. of Pekin. Lon. 138. 48. E. Ferro. Lat. 28. 55. N.

TAI-TCHIN, a town of China, of the 3d rank, with a fine harbour, 260 miles SE. of Nankin. Lon. 121. 16. E. Lat. 29. 10. N.

TAI-TCHING, 2 towns of China, of the 3d rank, in the provinces of Pe-tche-li and Se-tchuen.

TAI-TING, a city of the 2d rank, in Kwei-tcheou, 967 miles SSW. of Pekin. Lon. 123° E. Ferro. Lat. 27. 5. N.

TAI-TONG, a city of China, of the 1st rank, in Chan-fi, in a mountainous country; abounding

with medicinal and other plants. As it is the only city of the empire that is exposed to the Tartars, it is very well fortified, and has a strong garrison. It has 4 cities of the 2d rank, and 7 of the 3d in its jurisdiction. Its territories abound with lapis lazuli, and a particular kind of jasper called *gyieck*, which is as white and beautiful as agate; marble and porphyry are also common; and a great revenue is produced from the skins which are dressed here. Lon. 130. 30. E. Ferro. Lat. 40. 5. N.

TAI-TSANG, a city of China of the 2d rank, in Kiang-nan; 567 miles SSE. of Peking. Lon. 138. 40. E. Ferro. Lat. 31. 30. N.

TAJUNA, a river of Spain, which rises in the N. part of New Castile; and runs into the Xarantina above its junction with the Tajo.

TAI-Y, a city of China of the 2d rank, in Quang-si, on the S. bank of the Pofoi: 1125 miles SSW. of Peking. Lon. 124. 4. E. Ferro. Lat. 23. 4. N.

TAI-YUEN, a city of China, of the 1st rank, in Chan-li: 130 miles WSW. of Peking. Lon. 129. 42. E. Ferro. Lat. 37. 54. N.

(1.) * **To TAKE**. *v. a.* [preterite *took*, part. pass. *taken*, sometimes *took*; *taka*, Islandick; *cy tek*, I take; *cy took*, I took.] 1. To receive what is offered; correlative to *give*; opposed to *refuse*.—Then *took* I the cup at the Lord's hand. *Jer. xxv. 17.*—

Death, or this counsel, from Leucippus *take*. *Waller.*

An honest man may *take* a knave's advice. *Dryden.*

Madam, were I as you I'd *take* her counsel. *Philips.*

Distress'd myself, like you, confin'd I live,
And therefore can compassion *take* and give. *Dryden.*

2. To seize what is not given,—
In fetters one the barking porter ty'd,
And *took* him trembling. *Dryden.*

3. To receive.—No man shall *take* the netlier or upper millstone to pledge. *Deut. xxiv. 6.* 4. To receive with good or ill will.—

Why should we, in our peevish opposition,
Take it to heart. *Shak.*

—Let them *take* it as they list. *Shak.*—If you speak ill of the devil, how he *takes* it to heart! *Shak.*—Damasco yielded unto the Turks; which the bassa *took* in for good part, that he would not suffer his soldiers to enter it. *Knolles.*—The king being in a rage *took* it grievously that he was mocked. 2. *Mac. vii. 39.*—The queen *took* it so ill as she would never after bear of the other's suit. *Bacon.*—A following hath ever been a thing civil, and well *taken* in monarchies. *Bacon.*—The diminution of the power of the nobility they *took* very heavily. *Clarendon.*—I hope you will *take* it well that I should offer at a new thing. *Graunt.*—If I have been a little pilfering, I *take* it bitterly of thee—*to tell me of it.* *Dryden.*—The sole advice I could give him in conscience, would be that which he would *take* ill. *Swift.* 5. To lay hold on; to catch by surprise or artifice.—Who will believe a man that hath no house, and lodgeth wheresoever the night *takes* him? *Exclus. xxxvi. 26.*—They silenced those who opposed them, by *taking* ad-

vantage against them in the house. *Clar.*—Wife men are overborn when *taken* at a disadvantage. *Collier.*—

Men in their loose unguarded hours they *take*. *Pope.*

6. To snatch; to seize.—I am contented to dwell on the Divine Providence, and *take* up any occasion to lead me to its contemplation. *Hale.* 7. To make prisoner.—

Appoint a meeting with this old fat fellow,
Where we may *take* him. *Shak.*

King Lear hath lost, he and his daughter
to 'em. *Shak.*

—This man was *taken* of the Jews. *Acts. xxii. 27.*—They entering with wonderful celerity, flew and *took* 300 Janizaries. *Knolles.* 8. To captivate with pleasure; to delight; to engage.—

More than history can pattern, tho' devis'd
And play'd to *take* spectators. *Shak.*

To hear the story of your life, which must
Take the ear strangely. *Shak.*

—Let her not *take* thee with her eyelids. *Prev. vi. 25.*—*Taken* by Perkin's amiable behaviour, he entertained him. *Bacon.*—

His song was partial, but the harmony
Suspended hell, and *took* with ravishment

The thronging audience. *Milton.*

—I do it yet more, when she is thus beautified on purpose to allure the eye and *take* the heart. *Decay of Piety.*—This beauty shines through some men's actions, sets off all that they do, and *takes* all they come near. *Locke.*—Cleombrotus was *taken* with this prospect, that he had no patience.

Wake. 9. To entrap; to catch in a snare.—*Take* us the foxes, that spoil the vines. *Cant. ii. 15.* 10. To understand in any particular sense or manner.—

The words are more properly *taken* for the air or ether than the heavens. *Raleigh.*—You *take* me right Eupolis; for there is no possibility of an holy war. *Bacon.*—I *take* it, and iron brags, called white brags, hath some mixture of tin to help the lustre. *Bacon.*—

Why, now you *take* me; these are rites
That grace love's days, and crown his nights;—
These are the motions I would see. *Ben Jonson.*

—Give them one simple idea, and see that they *take* it right, and perfectly comprehend it. *Locke.*

—Charity *taken* in its largest extent, is nothing else but the sincere love of God and our neighbour. *Wake.* 11. To exact.—*Take* no usury of him. *Lev. xxv. 36.* 12. To get; to have; to appropriate.—*Take* the goods to thyself. *Gen. xiv. 21.* 13. To use; to employ.—This man always *takes* time. *Watts.* 14. To blast; to infect.—

Strike her young bones,
You *taking* airs, with lameness. *Shak.*

15. To judge in favour of; to adopt.—
The nicest eye could no distinction make,
Where lay the advantage or what side to *take*. *Dryden.*

16. To admit any thing bad from without.—
I ought to have a care
To keep my wounds from *taking* air. *Hudibras.*

17. To get; to procure.—Striking stones they *took* fire out of them. 2. *Mac. x. 3.* 18. To turn to; to practise.—If any be subject to vice, or *take* ill courses, they are reprov'd. *Bacon.* 19. To close in with; to comply with.—

Old as I am, I take thee at thy word. *Dryd.*
 You, kind lover, took her at her word. *Dryd.*
 I take thee at thy word. *Rowe.*
 20. To form; to fix.—Resolutions taken upon full debate, were seldom prosecuted. *Clarendon.*
 21. To catch in the hand; to seize.—He took me by a lock of my head. *Ezek. viii. 3.*

I took not arms till urg'd by self defence.

Dryden.

22. To admit; to suffer.—

Now take the mould.

Dryden.

23. To perform any action.—Peradventure we shall take our revenge on him. *Jer. xx. 10.*—Uzzah put forth his hand to the ark, and took hold of it. *2 Sam. vi. 6.*—Taking my leave of them, I went into Macedonia. *2 Cor.*—Before I proceed, I would take some breath. *Bacon.*—His wind he never took whilst the cup was at his mouth. *Hakewill.*

A long sigh he drew,

And his voice failing, took his last adieu. *Dryd.*

The Sabine Clausus came,

And from afar, at Dryops took his aim. *Dryden.*

Her lovers names in order to run o'er,

The girl took breath full thirty times. *Dryden.*

Highten'd revenge he should have took.

Prior.

—The husband's affairs made it necessary for him to take a voyage to Naples. *Speñ.*—I took a walk in Lincoln's Inn Garden. *Tatler.*—The Carthaginian took his fest. *Taylor.*—I can gratify my favourites, and take vengeance on my enemies. *Swift.* 24. To receive into the mind.—They took knowledge of them that they had been with Jesus. *Matt. iv.*—He took great contentment in this our question. *Bacon.*—Dr Moore reckons this particular inclination, to take a prejudice against a man for his looks, among the smaller vices in morality, and names it a propoleptia. *Speñator.*—A student should never satisfy himself with bare attendance on lectures, unless he clearly takes up the sense. *Harris.* 25. To go into.—He posted to the sea-coast to take ship. *Gardner.*—Tigers and lions are not apt to take the water. *Hale.* 26. To go along; to follow; to pursue.—

The joyful short-liv'd news soon spread around,

Took the same train.

Dryden.

Observing still the motions of their flight,

What course they took.

Dryden.

27. To swallow; to receive.—Consider the insatiation of several bodies, and of their appetite to take in others. *Bacon.*—Turkeys take down stones, having found in the gizzard of one no less than 700. *Brown.* 28. To swallow as a medicine.—Tell an ignoramus in place to his face that he has a wit above all the world, and as fullsome a dose as you give him he shall readily take it down. *South.*—Upon this assurance he took physic. *Locke.* 29. To choose one of more.—

Take to thee from among the cherubim

Thy choice of flaming warriors. *Milton.*

—Either but one man, or all men are kings: take which you please. *Locke.* 30. To copy.—

Beauty alone cou'd beauty take so right.

Dryden.

31. To convey; to carry; to transport.—

Take all his company along with him. *Shak.*

—No man took them into his house to lodging. *Judges, xix. 15.* 32. To fatten on; to seize.—Wherefore he taketh him he teareth him. *Mark. ix. 18.*—No temptation hath taken you, but such as is common. *1 Cor. x. 13.*—When the frost and rain have taken them, they grow dangerous. *Temple.*

At first they warm, they scorch, and then they take.

Dryden.

—No beast will eat four grafs till the frost hath taken it. *Mortimer.*—In burning of stubble, take care that the fire may not take the hedges. *Mortimer.* 33. Not to refuse; to accept.—Take no satisfaction for the life of a murderer. *Num. xxxv. 31.*

Thou tak'st thy mother's word too far. *Dryd.*

—We are to take his word for this. *Locke.*—Who will not receive clipped money whilst he sees the bank and goldsmiths will take it of him? *Locke.* 34. To adept.—I will take you to me for a people. *Exod. vi. 7.* 35. To change with respect to place.—He took out twopence, and gave them to the host. *Luke, x. 35.*—When he took it out, it was leprous. *Exod. iv. 6.*—The artery will not beat below the ligature; yet do but take it off, and it will beat immediately. *Roy.*—Lovers flung themselves from the top of the precipice into the sea, where they were sometimes taken up alive. *Addison.* 36. To separate.—Still there remains as much to be added as if none were taken out. *Locke.*

The living fabrick now in pieces take,

Blackmore.

37. To admit.—Let not a widow be taken into the number under threescore. *1 Tim. v. 9.*

The foulest impressions I easily take. *Swift.*

38. To pursue; to go in.—

He alone,

To find where Adam shelter'd, took his way.

To the port she takes her way. *Milton.*

Injur'd Nifas takes his airy course. *Dryden.*

Let eternal justice take the way. *Dryden.*

It was her fortune once to take her way

Along the sandy margin of the sea. *Dryd.*

39. To receive any temper or disposition of mind.—

They shall not take shame. *Mic. ii. 6.*—Thou hast taken pity on me. *Tob.*—They take delight in approaching to God. *Isaiah, lviii. 2.*—Take a good heart, O Jerusalem. *Bar. iv. 30.*—Men die in desire of some things which they take to heart. *Bacon.*

Few are so wicked as to take delight

In crimes unprofitable. *Dryden.*

—Children take a pride to behave themselves prettily, perceiving themselves esteemed. *Locke.* 40.

To endure; to bear.—I can be as troublesome as another when I meet with those that will take it.

L'Estrange.—Won't you then take a jest? *Speñator.*

—He met with such a reception as those only

deserve who are content to take it. *Swift.* 41.

To draw; to derive.—The firm belief of a future

judgment, is the most forcible motive to a good

life; because taken from this consideration of the

most lasting happiness and misery. *Tillotson.* 42.

To leap; to jump over.—

To cudgel you, and make you take the hatch.

Shak.

43. To assume.—

Fit you to the custom.

And *take* t'ye, as your predecessors have,

Your honour with your form. *Shak.*

—I *take* liberty to say, that these propositions to a great part of mankind are not known. *Locke.*

44. To allow; to admit.—*Take* not any term to stand for any thing till you have an idea of it. *Locke.*—Chemists *take* something for granted, which they ought to prove. *Boyle.*—

I *took* your weak excuses. *Dryden.*

45. To receive with fondness.—

I lov'd you still, and

Took you to my bosom. *Dryden.*

46. To carry out for use.—They should *take* nothing for their journey save a staff. *Mark* vi. 8.

47. To suppose; to receive in thought; to entertain in opinion.—

This I *take* it

Is the main motive of our preparations. *Shak.*

—The spirits that are in all tangible bodies are scarce known; sometimes they *take* them for vacuum. *Bacon.*—He *took* himself to have deserved as much as any man. *Clarendon.*—He was deceived; and so *took* that for virtue and affection which was nothing but vice in a disguise. *South.*—Depraved appetites cause us often to *take* that for true imitation of nature which has no resemblance of it. *Dryden.*—

So soft his tresses, fill'd with trickling pearl,

You doubt his sex and *take* him for a girl. *Tate.*

—Time is *taken* for so much of infinite duration as is measured out by the great bodies of the universe. *Locke.*—They who would advance in knowledge, should lay down this rule, not to *take* words for things. *Locke.*—Few will *take* a proposition which amounts to no more than this, that God is pleased with the doing of what he himself commands. *Locke.*—Some stories will *take* you for a whig, some whigs will *take* you for a tory. *Pope.*—As I *take* it, the two principal branches of preaching are, to tell the people what is their duty, and then to convince them that it is so. *Swift.* 48. To separate for one's self from any quantity; to remove for one's self from any place.—I will *take* of them for priests. *Isaiah* lxvi. 21.—Hath God assayed to *take* a nation from the midst of another? *Deut.* iv. 34.—I might have *taken* her to me to wife. *Gen.* xii. 19.—Enoch was not, for God *took* him. *Gen.* v. 24.—

Four heifers from his female store he *took.* *Dryd.*

49. Not to leave; not to omit.—The discourse here is about ideas, which he says are real things; in *taking* this along with me, to make it prove any thing to his purpose, the argument must stand thus. *Locke.*—Young gentlemen ought not only to *take* along with them a clear idea of the antiquities on medals and figures, but likewise to exercise their arithmetic in reducing the sums of money to those of their own country. *Arbutnot.*

50. To receive payments.—Never a wife leads a better life than she does; do what she will, *take* all, pay all. *Shak.* 51. To obtain by mensuration.—The knight coming to the tailor's to *take* measure of his gown, perceived the like gown cloth lying there. *Camden.*—With a two foot rule he *took* the dimensions of the room. *Swift.* 52. To withdraw.—Honeycomb, on the verge of thinesters, *took* me aside, and asked me, whether

I would advise him to marry! *Spellator.* 53. To seize with a transitory impulse; to affect so as not to last.—Tiberius, noted for his niggardly temper, only gave his attendants their diet; but once he was taken with a fit of generosity. *Arb.* 54. To comprise; to comprehend.—We always *take* the account of a future state into our schemes about the concerns of this world. *Atterbury.*—Had those who would persuade us that there are innate principles, not *taken* them together in gross, but considered separately the parts, they would not have been so forward to believe they were innate. *Locke.* 55. To have recourse to.—A sparrow *took* a bull just as an eagle made a stoop at an hare. *L'Estr.*—The cat presently *takes* a tree, and sees the poor fox torn to pieces. *L'Estrange.* 56. To produce; or suffer to be produced.—No purposes whatsoever which are meant for the good of that land will prosper, or *take* good effect. *Spenser.* 57. To catch in the mind.—These do best who *take* material hints to be judged by history. *Locke.* 58. To hire; to rent.—

If three ladies, like a luckless play,

Take the whole house upon the poet's day. *Pope.*

59. To engage in; to be active in.—

Imagine me *taking* your part,

And in your pow'r to silencing your son. *Shak.*

60. To incur; to receive as it happens.—

In streams, my boy, and rivers, *take* thy chance. *Addison.*

Now *take* your turn. *Dryden.*

61. To admit in copulation.—

Five hundred asses yearly *took* the horse
Producing mules of greater speed. *Sandys.*

62. To catch eagerly.—

Drances *took* the word. *Dryden.*

63. To use as an oath or expression.—Thou shalt not *take* the name of the Lord in vain. *Exodus.*

64. To seize as a disease.—They that come abroad after these showery, are commonly taken with sickness. *Bacon.*—I am *taken* on a sudden with a swimming in my head. *Dryden.* 65. To *TAKE* away. To deprive of.—If any *take* away from the book of this prophecy; God shall *take* away his part out of the book of life. *Rev.* xxii. 19.—The bill for *taking* away the votes of bishops was called a bill for *taking* away all temporal jurisdiction. *Clarendon.*—Many dispersed objects breed confusion, and *take* away from the picture that grave majesty which gives beauty to the piece. *Dryden.*—

By your own law I *take* your life away. *Dryd.*

The fun'ral pomp which to your kings you pay,

Is all I want, and all you *take* away. *Dryden.*

—One who gives another any thing, has not always a right to *take* it away again. *Locke.*—

Not does nor fortune *takes* this power away. *Pope.*

66. To *TAKE* away. To set aside; to remove.—If we *take* away consciousness of pleasure and pain, it will be hard to know wherein to place personal identity. *Locke.* 67. To *TAKE* care. To be careful; to be solicitous for; to superintend.—Doth God *take* care for oxen? 1 Cor. ix. 9. 68. To *TAKE* care. To be cautious; to be vigilant. 69. To *TAKE* care. To have recourse to measures.—They meant to *take* a course to deal with particulars by reconciliations. *Bacon.*—The violence

violence of storming is the *course* which God is forced to *take* for the destroying of sinners. *Hammond*. 70. To *TAKE* down. To crush; to reduce; to suppress.—Do you think that it is so hard to *take him down* as some suppose? *Spenser*.—*Take down* their mettle: keep them lean.

Dryden.

—Lacqueys were never so saucy as now, and he should be glad to see them *taken down*. *Addison*. 71. To *TAKE* down. To swallow; to take by the mouth.—We cannot *take down* the lives of living creatures, which some of the Paracelsians say, if they could be *taken down*, would make us immortal. *Bacon*. 72. To *TAKE* from. To derogate; to detract.—It *takes* not from you, that you were born with principles of generosity. *Dryden*. 73. To *TAKE* from. To deprive of.—Conversation will add to their knowledge, but be too apt to *take* from their virtue. *Locke*.—

Gentle gods *take* my breath from me. *Shak*.—I will smite thee, and *take* thine head from thee. 1 Sam. 74. To *TAKE* heed. To be cautious; to beware.—*Take heed* of a mischievous man. *Ecclesiast*. xi. 33.—

Take heed lest passion
Sway thy judgment to do ought. *Milton*.
Take heed what doom against yourself you give. *Dryden*.

75. To *TAKE* heed to. To attend.—*Take heed* unto the commandments of the Lord. *Ecclesiast*. xliii. 27. 76. To *TAKE* in. To inclose.—Upon the sea coast are parcels of land that would pay him well for the *taking in*. *Mortimer*. 77. To *TAKE* in. To cheat; to gull; as, the cunning ones were *taken in*. A low vulgar phrase. 79. To *TAKE* in hand. To undertake.—Nothing would prosper that they *took in hand*. 80. To *TAKE* in. To comprise; to comprehend.—These heads are sufficient for the explication of this whole matter; *taking in* some additional discourses. *Burnet*.—This love of our country *takes in* our families, friends, and acquaintance. *Addison*.—The disfigure of the tucker has enlarged the neck of a fine woman, that at present it *takes in* almost half the body. *Addison*.—Of these matters no satisfactory account can be given by any mechanical hypothesis, without *taking in* the superintendence of the great Creator. *Derham*. 81. To *TAKE* in. To admit.—An opinion brought into his head by *course*, because he heard himself called a father, made him *take in*. *Sidney*.—A great vessel full being drawn into bottles, and then the liquor put again into the vessel, will not fill the vessel again so full as it was, but that it may *take in* more. *Bacon*.—Porter was *taken in* as a bed-chamber servant. *Watson*.—

Let fortune empty her whole quiver on me,
I have a soul, that, like an ample shield,
Can *take in* all. *Dryden*.

—The sight and touch *take in* from the same object different ideas. *Locke*.—I *take in* none that do not naturally rejoice in the soil. *Spektator*. 82. To *TAKE* in. To win by conquest.—He sent Alabaga with the Janizaries, to *take in* the other cities of Tunis. *Knolles*.—Should a great beauty resolve to *take me in* with the artillery of her eyes, it would be as vain as for a thief to set upon a new robbed passenger. *Suckling*.—Open places are

easily *taken in*. *Felton*. 83. To *TAKE* in. To receive, locally.—We failed unto Affos, there intending to *take in* Paul. *Acts*, xx. 13.—That which men *take in* by education is next to that which is natural. *Tillotson*.—As no acid is in an animal body but must be *taken in* by the mouth, so if it is not subdued it may get into the blood. *Arbuthnot*.

84. To *TAKE* in. To receive mentally.—A created understanding can never *take in* the fulness of the divine excellencies. *Hale*.—The idea of extension joins itself so inseparably with all visible qualities, that it suffers to see no one without *taking in* impressions of extension too. *Locke*.—It is not in the power of the most enlarged understanding to frame one new simple idea in the mind, not *taken in* by the ways afore-mentioned. *Locke*.—A man can never have *taken in* his full measure of knowledge before he is hurried off the stage. *Addison*.—Let him *take in* the instructions you give him in a way suited to his inclination. *Watts*.—Some genius can *take in* a long train of propositions. *Watts*. 85. To *TAKE* notice. To observe. 86. To *TAKE* notice. To shew by any act that observation is made.—At that time they *took little notice* of it. *Clarendon*. 87. To *TAKE* oath. To swear.—The king of Babylon hath *taken* of the king's feed, and of him *taken* an oath. *Exek*.—We *take* all oath of secrecy, for the concealing of those inventions which we think fit to keep secret. *Bacon*. 88. To *TAKE* off. To invalidate; to destroy; to remove. When it is immediately to be followed by *from*, without an accusative, it may be considered either as elliptically suppressing the accusative, or as being neutral.—

Your power and your command is *taken off*,
And Cassio rules in Cyprus. *Shak*.

The cruel ministers
Took off her life. *Shak*.
—If the heads of the tribes can be *taken off*, and the misled multitude return to their obedience, such an extent of mercy is honourable. *Bacon*.—Subtle or windy spirits are *taken off* by incension or evaporation. *Bacon*.—To stop schisms, *take off* the principal authors by winning and advancing them, rather than enrage them by violence. *Bacon*.—What *taketh off* the objection is, that in judging scandal we are to look to the cause whence it cometh. *Sanderfon*.—All force of these is *taken off* by this doctrine. *Hummond*.—It will not be unwelcome to these worthies, who endeavour the advancement of learning, as being likely to find a clear progression when so many untruths are *taken off*. *Brown*.—This *takes not off* the force of our former evidence. *Still*.—The melting pot can easily *take it off*. *Locke*.—A man's understanding failing him, would *take off* that presumption most men have of themselves. *Locke*.—It shews virtue in the fairest light, and *takes off* from the deformity of vice. *Addison*.—When we would *take off* from the reputation of an action, we ascribe it to vanity. *Addison*.—This *takes off* from the elegance of our tongue, but expresses our ideas in the readiest manner. *Addison*.—The justices decreed, to *take off* a halfpenny in a quart from the price of ale. *Saunders*.—How many lives have been lost in hot blood, and how many likely to be *taken off* in cold. *Blount*.—Favourable names are put upon ill ideas, to *take off* the odium. *Watts*. 89. To *TAKE*

off. To withhold; to withdraw.—He in great courtesy *took us off*, and condescended to ask us questions. *Bacon.*—Your present ditterper is not so troublesome, as to *take you off* from all satisfaction. *Wake.*—There is nothing more ungo-vernable than our thoughts: they will not be directed what objects to pursue, nor be *taken off* from those they have once fixed on. *Locke.*—Keep foreign ideas from *taking off* our minds from its present pursuit. *Locke.* He has *taken you off*, by his mercy, from the vanities and temptations of the world. *Wake.* 9. To *TAKE off.* To swallow.—Were the pleasure of drinking accompanied, the moment a man *takes off* his glass, with that sick stomach which, in some men, follows not many hours after, no body would ever let wine touch his lips. *Locke.* 92. To *TAKE off.* To purchase.—Corn the labourer will have at his own rate, else he'd not *take it off* the farmer's hands for wages. *Locke.*—The Spaniards have no commodities that we will *take off*, above the value of 100,000*l.* per annum, cannot pay us. *Locke.*—There is a project on foot for transporting our best wheat straw to Dunstable, and obliging us to *take off* yearly so many ton of straw hats. *Savist.* 92. To *TAKE off.* To copy.—*Take off* all their models in wood. *Addison.* 93. To *TAKE off.* To find place for.—The multiplying of nobility brings a state to necessity; and, in like manner, when more are bred scholars than preferments can *take off.* *Bacon.* 94. To *TAKE off.* To remove.—When Moses went in, he *took the veil off.* *Exod.* xxiv. 34.—If any would reign and *take up* all the time, let him *take them off* and bring others on. *Bacon.* 95. To *TAKE order with.* To check; to take course with.—Though he would have turned his teeth upon Spain, yet he was *taken order* with before it came to that. *Bacon.* 96. To *TAKE out.* To remove from within any place.—

All thy friends which thou must make thy friends

Have but their stings and teeth newly *ta'en out.*

Shak.

97. To *TAKE part.* To share.—*Take part* in rejoicing for the victory over the Turks. *Pope.*

98. To *TAKE place.* To prevail; to have effect.—

Where arms *take place*, all other pleas are vain.

Dryden.

—The debt a man owes his father *takes place*, and gives the father a right to inherit. *Locke.* 99. To *TAKE up.* To borrow upon credit or interest.—The smooth pates now wear nothing but high shoes; and if a man is through with them in honest *taking up*, they stand upon security. *Shak.*

—We *take up* corn for them. *Neb.*—

She to the merchant goes,

Rich crystals of the rock she *takes up* there,

Huge agat vases, and old china ware. *Dryden.*

—I have *taken up* from Boccaccio before I come to him. *Dryden.*—Men, for want of due payment, are forced to *take up* the necessities of life at almost double value. *Savist.* 100. To be ready for; to engage with.—

One power against the French,

And one against Giendowr, perforce a third. Must *take up* us. *Shak. Henry IV.*

101. To *TAKE up.* To apply to the use of.—

We *loop up* arms not to revenge ourselves,

But free the commonwealth. *Addison.*

102. To *TAKE up.* To begin.—They shall *take up* a lamentation for me. *Beck.* xxv. 17.—Princes friendship, which they *take up* upon the accounts of judgment and merit, they most times lay down out of humour. *South.* 103. To *TAKE up.* To fasten with a ligature passed under. A term of chirurgery.—A large vessel opened by incision must be *taken up* before you proceed. *Sharp.* 104. To *TAKE up.* To engross; to engage.—Over much anxiety in worldly things *takes up* the mind. *Duppa.*—

Take my esteem;

If from my heart you ask, or hope for more,

I grieve is *taken up* before. *Dryden.*

—I intended to have left the stage, for a work which would have *taken up* my life in the performance. *Dryd.*—To understand fully his particular calling in the commonwealth, and religion *takes up* his whole time. *Locke.*—Countries stored with mines are poor; the digging and refuse of these metals *taking up* the labour, and wasting the number of the people. *Locke.*—Most of my fellow soldiers were *taken up* with the same imaginations. *Addison.*—An artist, now *taken up* with this invention. *Addis.*—There is so much *taken up* in the ceremony, that before they enter on their subject the dialogue is half ended. *Addis.*—The affairs of religion and war *took up* Constantine so much, that he had not time to think of trade. *Arb.*—The compass of 12 books is *taken up* in these. *Pope.* 105. To *TAKE up.* To have final recourse to.—Arnobius asserts, that men of the finest parts and learning, rhetoricians, lawyers, physicians, despising the sentiments they had been once fond of, *took up* their rest in the Christian religion. *Addison.* 106. To *TAKE up.* To seize; to catch; to arrest.—Though the sheriff had this authority to *take up* all such stragglers, and imprison them; yet shall he not work that terror in their hearts that a marshal will. *Spenser.*—

I was *taken up* for laying them down. *Shak.*

You have *taken up*,

Under the counterfeited zeal of God,

The subjects of his substitute. *Shak.*

107. To *TAKE up.* To admit.—The ancients *took up* experiments upon credit. *Bacon.* 108. To *TAKE up.* To answer by reproving; to reprimand.—

One of his relations *took him up* roundly. *L'Estrange.* 109. To *TAKE up.* To begin where the former left off.—The plot is purely fiction; for I *take it up* where the history has laid it down.

Dryden's Don Sebast.—

Soon as the evening shades prevail,

The moon *takes up* the wondrous tale. *Spens.*

110. To *TAKE up.* To lift.—

Take up these cloaths here quickly. *Shak.*

—The least things are *taken up* by the thumb and forefingers; when we would *take up* a greater quantity, we would use the thumb and all the fingers. *Ray.*—Milo *took up* a calf daily on his shoulders, and at last arrived at firmness to bear the bull. *Watts.* 111. To *TAKE up.* To occupy locally.—

The chambers which opened towards the scaffold were *taken up.* *Hayward.* All vicious enormous practices are regularly consequent, where the other bath *taken up* the lodging. *Hammond.*—Com-

mittees for the convenience of the common council.

cil who *took up* the Guild-hall, sat in Grocer's-hall. *Clarendon*.—When my concernment *takes up* no more than myself, then I know where to be happy. *South*.—Notwithstanding the room that mountains *take up* on the dry land, there would be at least eight oceans required. *Burnet*.—When these waters were annihilated, so much other matter must be created to *take up* their places. *Burnet*.—Princes were so *taken up* with wars, that few could write or read besides those of the long robes. *Temple*.—The buildings about *took up* the whole space. *Arbutnot*. 112. To *TAKE up*. To manage in the place of another.—I have his horse to *take up* the quarrel. *Shak*.—The greatest empires have had their rise from the pretence of *taking up* quarrels. *L'Estrange*. 113. To *TAKE up*. To comprise.—I prefer in our countrymen the noble poem of Palemon and Arcite, which is perhaps not much inferior to the *Iliad*, only it *takes up* seven years. *Dryden*. 114. To *TAKE up*. To adopt; to assume.—God's decrees of salvation and damnation have been *taken up* by some of the Romish and reformed churches, affixing them to men's particular entities. *Ham*.—The command in war is given to the bravest, and in peace *taken up* by the boldest. *Temple*.—Assurance is properly that confidence which a man *takes up* of the pardon of his sins. *South*.—

The French and we still change.

They *take up* our old trade of conquering,
And we are taking theirs to dance and sing.

Dryden.

—He that will observe the conclusions men *take up*, must be satisfied they are not all rational. *Locke*.—Celibacy, in the church of Rome, was commonly forced, and *taken up* under a bold vow. *Atterbury*.—Lewis Baboon had *taken up* the trade of clothier. *Arbutnot*.—Every man *takes up* those interests in which his humour engages him. *Pope*.—If those proceedings were observed, morality and religion would soon become fashionable, and be *taken up* as the only methods to get or keep employments. *Swift*.—

Take up no more than you by worth may claim,

Left soon you prove a bankrupt.

Young.

115. To *TAKE up*. To collect; to exact a tax.—This great battle was born in a poor country village, and in his childhood taken from his Christian parents, by such as *take up* the tribute children. *Koolen*. 116. To *TAKE upon*. To appropriate to; to assume; to admit to be imputed to.—If I had no more wit than he, to *take a fault upon* me that he did, he had been hang'd for't. *Shak*.—He *took not on him* the nature of angels. *Heb. ii. 16*.—I will *not take upon me* the knowledge how the princes of Europe stand affected towards Spain. *Bacon*.—

Would I could your sufferings bear,

To *take upon myself* your punishment.

Dryden.

She loves me, even to suffer for my sake,

And on herself would my refusal *take*.

Dryden.

117. To *TAKE upon*. To assume; to claim authority. The sense sometimes approaches to neutral.

He must be told on't, and he shall; the office
Becomes a woman best: I'll *take't upon me*.

Shak.

Look that you *take upon you* as you should.

Shak.

—This every translator *taketh upon himself* to do. *Felton*.—The parliament *took upon* them to call an assembly of divines, to settle some church controversies. *Sanderfon*. 118. This verb, like *prendre* in French, is used with endless multiplicity of relations. Its uses are so numerous, that they cannot easily be exemplified; and its references to the words governed by it so general and lax, that they can hardly be explained by any succedaneous terms. But commonly that is hardest to explain which least wants explication. I have expanded this word to a wide diffusion, which, I think, is all that could be done.

(2.) * To *TAKE*. *v. n.* 1. To direct the course; to have a tendency to.—The inclination to goodness, if it issue not towards men, it will *take* unto other things. *Bacon*.—The king began to be troubled with the gout; but the defluxion *taking* also into his breast, wasted his lungs. *Bacon*.—All men being alarmed with it, some *took* towards the park. *Dryden*.—

To flun thy lawless lust thy dying bride,

Unwary, *took* along the river's side.

Dryden.

2. To please; to gain reception.—An apple of Sodom, with a florid white and red, yet fills the hand with stench and foulness: fair in look and rotten in heart, as the gayest and most *taking* things are. *South*.—Words and thoughts, which cannot be changed but for the worse, must of necessity escape the transient view upon the theatre; and yet without these a play may *take*.

Each wit may praise it for his own dear sake,

And hint he writ it, if the thing should *take*.

Addison.

—The work may be well performed, but will never *take* if it is not set off with proper scenes. *Addison*.—May the man grow wittier and wiser by finding that this stuff will not *take* nor please. *Bentley*. 3. To have the intended or natural effect.—In impressions from mind to mind, the impression *taketh*. *Bacon*.—

Putrid earth will best in vineyards *take*.

4. To catch; to fix.—When flame *taketh* and openeth, it giveth a noise. *Bacon*. 5. To *TAKE after*. To learn of; to resemble; to imitate.—

Beasts, that converse

With man, *take after* him, as hogs

Get pigs all th' year, and litches dogs.

Hudib.

—He has *taken after* a good pattern. *Atterbury*.

6. To *TAKE in with*. To resort to.—Men once placed *take in with* the contrary faction. *Bacon*.

7. To *TAKE on*. To be violently affected.—Your husband to *take on* yonder with my husband, that any madnets I ever yet beheld seemed but tamenets to this distemper. *Shak*.—In horses, the smell of a dead horse maketh them fly away, and *take on* as if they were mad. *Bacon*. 8. To *TAKE on*. To claim a character.—

I *take not on me* here as a physician.

Shak.

9. To *TAKE on*. To grieve; to pine.—

How will my mother, for a father's death,

Take on with me, and ne'er be satisfy'd?

Shak.

10. To *TAKE to*. To apply to; to be fond or.—

Have him understand it as a play of older people, and he will *take to* it of himself.

Locke.—

Miss Betty won't *take to* her book.

Swift.

—The heirs to titles and large estates could never *take to* their books. *Swift*. 11. To *TAKE to*. To betake

betake

betake to; to have recourse.—If I had *taken* to the church, I should have had more sense than to have turned myself out of my benefice by writing libels. *Dryden*.—

The callow storks with lizzard and with snake

Are fed; as soon as e'er to wing they *take*,

At light these animals for food pursue. *Dryden*.—Men of learning who *take* to business discharge it generally with greater honesty than men of the world. *Addison*. 11. To *TAKE* up. To stop.—The mind of man being naturally timorous of truth, and yet averse to that diligent search necessary to its discovery, it must needs *take up* short of what is really so. *Gloucester*.—This grated harder upon the hearts of men than the strangeness of all the former articles they *took up* chiefly in speculation. *South*.—Sinners at last *take up*, and settle in a contempt of all religion. *Tillotson*. 13. To *TAKE* up. To reform.—This rational thought made him *take up*, and from that time prove a good husband. *Locke*. 14. To *TAKE* up with. To be contented with.—The is *takes up* with that for his satisfaction, which he reckoned upon before for his misfortune. *L'Estrange*.—

The law and gospel call aloud for active obedience, and such a piety as *takes not up* with idle imaginations. *South*.—I could as easily *take up* with that senseless assertion of the Stoicks, that virtues and vices are real bodies and distinct animals, as with this of the atheists, that they can all be derived from the power of mere bodies. *Bentley*.—A poor gentleman ought never to be curate of a parish, except he be cunninger than the devil. It will be difficult to remedy this, because whoever had half his cunning would never *take up* with a vicarage of 10*l*. *Swift*.—In affairs which may have an influence on our future happiness, we should not *take up* with probabilities. *Watts*. 15. To *TAKE* up with. To lodge; to dwell.—Who would not rather *take up* with the wolf in the woods, than make such a clutter in the world? *L'Estrange*.—Are dogs such desirable company to *take up* with? *South*. 16. To *TAKE* with. To please.—Seasonable mementos may be useful; and being discreetly used, cannot but *take well* with him. *Bacon*.

* *TAKEN*, the participle pass. of *take*.—Thou art *taken* in thy mischief. 1 *Sam*. xvi. 7.—He who letteth will let, until he be *taken* out of the way. 2 *Thess*. ii. 7.—It concerns all who think it worth while to be in earnest with their immortal souls, not to abuse themselves with a false confidence: a thing so easily *taken* up, and so hardly laid down. *South*.—Sealiger, comparing the two great orators, says, that nothing can be *taken* from Demosthenes, nor added to Tully. *Denham*.—His auditors are perhaps as much *taken* up with themselves. *Grov. of the Tongue*.—

The object of desire once *ta'en* away,
'Tis then not love, but pity, which we pay.

Dryden.

* *TAKER*. *n. f.* [from *take*.] He that takes.—

He is sooner caught than the pestilence,
And the *taker* runs presently mad. *Shak*.

—The dear file beyond the seas increased the number of *takers*; and the *takers* jarring and brawling one with another, and foreclosing the

fishes, decreased the number of the taken. *Carew*.—The far distance of this county from the court hath afforded it a superfluity from *takers* and purveyors. *Carew*.—Berry coffee and tobacco, of which the Turks are great *takers*, condense the spirits. *Bacon*.—

Few like the Fabii or the Scipios are

Takers of cities, conquerors in war. *Denham*.

At once the *taker*, and at once the prey.

Denham.

Seize on the king, and him your prisoner make,

While I, in kind revenge, my *taker* take. *Dryd*.

'Tis prodigality that buys deceit,

Where both the giver and the *taker* cheat. *Dryd*.

TA-KIANG. See TAI-OUAN, N° 2.

TA KIA-TCHE, a town of Formosa, on the W. coast. Lon. 137. E. Ferro. Lat. 24. 22. N.

* *TAKING*. *n. f.* [from *take*.] Seizure; distress of mind.—What a *taking* was he in, when your husband asked who was in the basket? *Shak*.

See *law* in what a *taking*

The knight was by his furious quaking. *Butler*.

TAKLACOT, a town of Asia, in Thibet; 60 miles NE. of Koniou.

TAKMITZKAIA, a town of Russia, in Tobolsk, on the Irtysh; 36 miles S. of Tara.

TAKTANG, a river of Russia, which runs into the Lis, in Lon. 107. 30. E. Ferro. Lat. 62. 24. N.

TAL, a town of Asiatic Turkey, in Curdistan; 240 miles SW. of Berlis.

TALAFERA. See TALAVERA.

TALAHASOCHTE, a large town of the SEMINOLE Indians, on the E. banks of Little St John's River, near the bay of Apalache, in the Gulf of Mexico.

TALAMANKA, a town of Spain, in New Castile; 14 miles NW. of Guadalaxara.

TALAMONE, a sea port of Etruria, 15 miles N. of Orbitello. Lon. 11. 6. E. Lat. 42. 30. N.

TALAN, an island of Russia, in the sea and province of Ochotsk. Lon. 167. 0. E. Ferro. Lat. 59. 30. N.

TALANT, a town of France, in the department of Cote d'Or; 1½ miles NW. of Dijon.

TALANTA, two towns of European Turkey. 1. in Livadia. 18 miles NE. of Livadia; 2. in the isle of Negropont, 34 miles NW. of Negropont.

TALAO-ON, a town of Chinese Tartary, in Hami; 28 miles ESE. of Hatamtam.

TALAPINS, *n. f. plur.* See TALAPOINS.

TALAPOIN, *n. f.* in zoology. See SIMIA N° 21.

TALAPOINESSES, *n. f.* nuns of Siam. See the next article.

TALAPOINS, or TALAPINS, *n. f.* priests of Siam.—They enjoy great privileges, but are enjoined celibacy and austerity of life. They live in monasteries contiguous to the temples; and no one may enter into the priesthood, and after a certain age may quit it to marry, and return to society. There are TALAPOINESSES too, or nuns who live in the same convents, but are not admitted till they have passed their 40th year. The talapoins educate children; and at every new full moon explain the precepts of their religion in their temples; and during the rainy season they preach from 6 a. m. till noon, and from

P.

p. m. till 5. They dress in a very mean garb, go bareheaded and barefooted; and no person is admitted among them who is not well skilled in the Bafy language. (See MYTHOLOGY, § 14.) They believe that the universe is eternal; but admit that certain parts of it, as this world, may be destroyed and again regenerated. They believe in a universal pervading spirit, and in the immortality and transmigration of the soul; but they extend this last doctrine, not only to all animals, but to vegetables and rocks. They have their good and evil genii, and particular local deities, who preside over forests and rivers, and interfere in all sublimary affairs. Their morality is said to be very pure. It not only forbids its followers to do ill, but enjoins the necessity of doing good, and of stifling every improper thought or criminal desire.

TALAPOOSEE, a river of W. Florida, which is the great NE. branch or rather head water, of the Alabama and Mobile. In most maps, the lower part of it is called *Oakfuskee*. See **MOBILE**, N° 1; and **OKAFUSKEE**, N° 1.

TALARHO, a town of Chinese Tartary, in the country of the Eluths; 715 miles NW. of Pekin. Lon. 110. 40. E. Ferro. Lat. 47. 34. N.

TALASEE, or } a county of Georgia, bound-
(1.) **TALASSEE**, } ed on the N. by the Alata-
mah, E. by Glynn and Camden counties, S. by E. Florida, and W. by a line from the W. part of Ekanfanoka swamp, in the NE. direction till it joins the **OAKMULGEE** at its mouth, where it forms the S. great branch or head water of the **ALATAMAHA**. See these articles.

(2.) **TALASSEE**, BIG, and } Two towns of
(3.) **TALASSEE**, LITTLE, } Georgia, belong-
ing to the Greek or Muskogulge Indians, on the S. bank of the Talaposee. They are regularly built, with a square in the middle of each. See **MUSKOGULGE**.

TALAVAN, a town of Spain, in Estremadura; 25 miles S. of Placentia.

(1.) **TALAVERA**, a town of Spain, in New Castile, with a fort, seated on the Tajo, in a valley, abounding in corn, fruits and vines, which afford excellent wine. It has ancient fortifications by walls, towers, and breast-works. It was formerly appropriated to the Queen's revenue, whence, it is called **TALAVERA LE REYNA**. It is famous for earthen wares; and lies 35 miles W. of Toledo, and 38 SW. of Madrid. Lon. 4. 1. W. Lat. 39. 41. N.

(2.) **TALAVERA LA REAL**, a town of Spain, in Estremadura; 13 miles SE. of Badajoz.

(3.) **TALAVERA LA REYNA**. See N° 1.

(4.) **TALAVERA LA VIEJA**, or *Old Talavera*, a town of Spain in New Castile; 6 miles WSW. of Toledo.

TALAUERUELA, a town of Spain, in Estremadura, on the Guadiana; 14 miles E. of Badajoz. Lon. 6. 34. W. Lat. 38. 34. N.

TALAU, the son of Bias and Pero; one of **ARGONAUTS**, and father of **ADRASTUS**.

TALAYRA, or *Hilaria*, wife of *Castor*, and sister of *Phœbe*. See **PHOEBE**.

TALBERT'S ISLAND, an island of Georgia, near the coast. In Lat. 30. 44. N.

(1.) **TALBOT** William. B. D. an eminent English prelate, born in 1659, and educated at

Oxford. In the reign of James II. he preached with great courage and zeal against Popery; for which after the revolution, he was promoted to be dean of Worcester, and afterwards bishop of Salisbury. In 1712, he was made bishop of Durham; published several Sermons; and died in 1730.

(2.) * **TALBOT**, *n. f.* [It is borne by the house of *Talbot* in their arms] A hound. It is so used in *Waller's* translation of *Grotius*.

(3.) **TALBOT**, in geography, a rich and populous county of Maryland, on the Eastern Shore, bounded N. by Queen Anne county; E. by the Choptank and Caroline county; S. by the Choptank and Dorchester county; and W. by Chesapeake Bay. It is 24½ miles long, from N. to S. and 15½ broad, from E. to W. In 1795, it contained 8,397 citizens, and 4,777 slaves. **EASTON** is the capital.

(4.) **TALBOT**, a town of Maryland in the above county; 77 miles SSW. of Philadelphia. Lon. 76. 12. W. Lat. 38. 49. N.

(5.) **TALBOT**, an island in the Atlantic, on the coast of E. Florida; 8 miles long, and a broad. Lon. 81. 41. W. Lat. 30. 36. N.

(1.) **TALC**, or **TALK**, *n. f.* in the old system of mineralogy, a species of fossil formerly arranged under the magnesian earths; and in Magellan's edition of *Cronstedt's Mineralogy*, ranked as a species of **MICA**. See **MICA**, N° 1, and II. There are two varieties, viz.:

1. **TALC**, **MUSCOVY**, called also *lapis specularis*, is very common in Russia, and Cyprus; and in the Alps, the Apennines, and many mountains of Germany. It is imported in large quantities into England, and is used by the lantern-makers instead of horn in their nicer works; by the painters to cover miniature pictures; and by the microscope-makers to preserve small objects for viewing by glasses. The ancients used it instead of glass in their windows. It differs from plaster stone in this, that it does not, after being calcined and wetted with water, swell and concrete into a hard stony substance. Muscovy talc and lapis specularis were long considered as the same, but a distinction is now discovered between them. See **MINERALOGY**, Part II. Chap. IV. Class I. Ord. I. Gen. VII. Sp. 6, 7. Talc is employed, in places where it is found in considerable quantity, in compositions for earthen vessels, tests and cupels, &c. From its smoothness, unctuousity, and brightness, it has been celebrated as a cosmetic; and former chemists submitted it to a variety of operations, for procuring from it oils, salts, tinctures, magisteries, &c. But all their labours proved in vain.

2. **TALC**, **VENETIAN**, is not so named from being a production of the territories of Venice, (for it is seldom met with in that country,) but as an article of Venetian commerce. It abounds in England, Norway, Hungary, Bohemia, Spain, and in many countries of Asia. With half its weight of alkaline salt, it may in a strong fire, be brought into perfect fusion, though not to perfect transparency; with equal weight, or less, of borax, it runs into a beautiful, pellucid, greenish yellow glass. Talc does not melt with any other earth, nor even bake or cohere with any but the argillaceous; Mixtures of it with them all are nevertheless brought into fusion by a remarkably

less quantity of saline matter than the ingredients separately would require. Thus equal parts of talc and chalk, with only one 4th their weight of borax, melt in a moderate heat into a fine transparent greenish glass, of considerable hardness and great lustre. On substituting gypseous earths to chalk, the fusion is as easy, and the glass as beautiful; in colour not green, but yellow like the topaz. Talc, with half its weight of sand, and a quantity of nitre equal to both, yields also a transparent topaz yellow glass. See other experiments by Mr Port, in *Mém. de l'Acad. de Berlin*, 1746.

(II.) TALC, in the new system of mineralogy, is reckoned by Dr Thomson, a species quite distinct from MICA; and is subdivided into 3 varieties; viz. 1. *The SCALY TALC*; 2. *The VENETIAN of Common TALC*; and 3. *The SHISTOSE TALC*. See MINERALOGY, Part II. Chap. IV. Cl. I. Ord. I. Gen. VII. Sp. 7.

(1.) TALCAGUAMA, CAPE, a cape of Peru; on the coast of Chili: 6 miles N. of Port St Vincent and 33 NE. of St Mary Isle.

(2.) TALCAGUAMA PORT, a port or harbour of Chili, in Concepcion Bay; 6 miles within the above Cape. *Morse*.

TALCAN, a town of Asia, in Tokaristan; taken by Jenghis khan in 1221, after a siege of 7 months. It is 100 miles SE. of Termed. Lon. 84. 55. E. Ferro. Lat. 36. 45. N.

TALCAQUANO, a sea port town of Peru, in Chili, with good anchorage in 4 fathoms water; 6 miles from Concepcion. (*Cruisevell*.) Perhaps it is the same with TALCAGUAMA.

TALCITE. *n. s.* a name given by Kirwan to *Scaly Talc*. See MINERALOGY, Part II. Chap. IV. Cl. I. Ord. I. Gen. VII. Sp. 7.

* TALE. *n. s.* [*tale*, from *tallen*, to tell, Sax.] 1. A narrative; a story. Commonly a slight or petty account of some trifling or fabulous incident; as, a tale of a tub. This story prepared their minds for the reception of any tales relating to other countries. *Watts*. 2. Oral relation.—

My conscience hath a thousand several tongues.

And ev'ry tongue brings in a sev'ral tale,
And every tale condemns me for a villain. *Shak.*

Life is a tale

Told by an idiot, full of sound and fury,
Signifying nothing. *Shak.*

Hermia, for aught I could read,

Could never hear by tale or history
The course of true love never did run smooth. *Shak.*

—We spend our years as a tale that is told. *Pis.*
g. [*Talan*, to count, Saxon.] Number reckoned.—
Number may serve your purpose with the ignorant,
who measure by tale and not by weight. *Hooker*.

For ev'ry bloom his trees in Spring afford,
An autumn apple was by tale restor'd. *Dryden*.

Once he takes the tale of all the lambs. *Dryd.*

The herald for the last proclaims,
The tale was ju'd. *Dryden*.

—Reasons of things are rather to be taken by weight than tale. *Collier*. 4. Reckoning; numeral account.—In picking, they keep a just tale of the number that every hoghead containeth. *Carew*.—

Money being the common scale

Of things by measure, weight and tale. *Butler*.

—Twelve returned upon the principal pannel, or the tales are sworn to try according to their evidence. *Hale*. 5. Information; disclosure of any thing secret.—

From hour to hour we ripe and ripe,

And then from hour to hour we rot and rot;
And thereby hangs a tale. *Shak.*

Birds live in the air free, and are aptest by their voice to tell tales what they find. *Bacon*.

* TALEBEARER. *n. s.* [*tale* and *bear*.] One who gives officious or malignant intelligence.—The liberty of a common table is a tacit invitation to all intruders; as buffoons, spies, talebearers, flatterers. *L'Estrange*.—In great families, some one false, paltry talebearer, by carrying stories, shall discompose the quiet of the whole family. *South*.

* TALEBEARING. *n. s.* [*tale* and *bear*.] The act of informing officious or malignant intelligence. Timothy was extremely officious about their mistress's person, endeavouring, by flattery and talebearing, to set her against the rest of the servants. *Arbuthnot*.

TALEKAN, 2 towns of Persia; 1. in Chorasán, with a fort, 195 miles NE. of Herat; 2. in Irac, 30 miles NE. of Amadan.

(1.) * TALENT *n. s.* [*talentum*, Lat.] 1. A talent signified so much weight, or a sum of money, the value differing according to the different ages and countries. *Arbuthnot*.—

Five talents in his debt. *Shak.*

Two great talents of the finest gold. *Dryden*.
2. Faculty; power; gift of nature. A metaphor borrowed from the talents mentioned in the holy writ. It is used sometimes seriously, and sometimes lightly.—Miry, who knew the treasurer's talents in removing prejudice, believed the loss of the duke was unfeignable. *Clarendon*.—He is chiefly to be considered in his three different talents, as a critic, satyrist, and writer of odes. *Dryden*.—

'Tis not my talent to conceal my thoughts.

Addison.

—Logick is none of their talents. *Baker*.—Persons who possess the true talent of raillery are like comets; they are seldom seen, and all at once admired and feared. *Female Quixote*.—Algeius, though otherwise a very worthy man, yet having no talent for disputation, recommended Sifinius, his lecturer. *Waterland*. 3. Quality; disposition. An improper and mistaken use.—The nation generally was without any ill talent to the church in doctrine or discipline. *Clarendon*.—It is the talent of human nature to run from one extreme to another. *Swift*.

(2.) TALENTS, ATTIC. The common Attic talent of weight contained 60 Attic minæ, or 6000 Attic drachmæ; and weighed, according to Dr Arbuthnot, 56lbs. 11 oz. 17½ gr. English troy weight. There was another Attic talent, by some said to consist of 80, by others of 100 minæ. See § 4.

(3.) TALENTS, EGYPTIAN AND ANTIOCHIAN. The Egyptian talent was 80 minæ; the Antiochian also 80; the Ptolemæic of Cleopatra 86½; that of Alexandria 96; and the Insular talent 120.

(4.) TALENTS, GRECIAN, SYRIAN, TYRIAN, &c. In the valuation of money, the Grecian talent, according to Dr Arbuthnot, was equal to 60 minæ, or, reckoning the mina at L. 3: 4: 7, equal to L. 193, 15.

L.193, 15: The Syrian talent in this valuation consisted of 15 Attic minæ; the Ptolemaic of 20; the Antiochian of 50; the Euboic of 60; the Babylonian of 70; the Greater Attic of 80; the Tyrian of 80; the Egeian of 100; the Rhodian of 100; and the Egyptian of 80 minæ. There is another talent much more ancient, which Dr Arbuthnot calls the *Homerian talent* of gold, which seems to have weighed six Attic drachmas of three darics, a daric weighing very little more than a guinea.

(5.) **TALENTS, JEWISH.** Talents, as a species of money, among the Hebrews, was sometimes used for a gold coin, the same with the shekel of gold, called also *ater*, and weighing only four drachms. The Hebrews reckoned by these talents as we do by pounds, &c. Thus a million of gold, or million of talents of gold, among them, was a million of shekels or nummi; the nummus of gold, being the same weight with the shekel, viz. four drachms. But the Hebrew talent weight of silver, which they called *CICAR*, was equivalent to that of 3000 shekels, or 113lb. 10oz. 1dwt. 104 gr. English Troy weight, according to Arbuthnot.

(6.) **TALENTS, ROMAN.** Among the Romans there were two kinds of talents, the *little* and the *great talent*; the little was the common talent; and whenever they say simply *talentum*, they are to be understood of this. The little talent was 60 minæ or Roman pounds; the mina or pound estimated at 100 drachmæ or denarii; it was also estimated at 24 great sesterces, which amounted to 60 pounds. The great talent exceeded the less by one 3d part. Budæus computes, that the little talent of silver was worth L.75 Sterling, and the great L.99 : 6 : 8 Sterling. The greater of gold was worth L.1125 Sterling.

TALASSE. See **TALASSEE**, N° 1—3.

TALÆUM, a town of Laconia, on mount Taygetus, famous for its temple of Apollo. Horfes were sacrificed in it. *Paus.*

TALGARTH, a town of S. Wales, in Brecknockshire, on the Lleveny, 8 or 10 miles NE. of Brecknock, and 160 W. of London. It has a college, established by the late countess of Huntingdon, as a seminary for young divines. (See *SHIRLEY*, N° 1.) It has fairs March 12, May 31, July 10, Sept. 23, Nov. 3, and Dec. 3.

TALGAUTPORAM, a town of Hindostan, in the Myfore; 6 miles S. of Bangalore.

TALGUL, a town of Hindostan, in the Myfore; 10 miles SSW. of Sirpy.

TALHAIARN, a celebrated bard of Wales, who flourished in the middle of the 7th century. He composed among other poems a poetical prayer, which became a general formula among the bards.

TALHAM, a town of Germany, in Austria; 5 miles SSW. of Voglabruck.

(1.) **TALI**, a city of China, of the first rank, in Yun-nan, famous for its beautiful marble, obtained from Mount TIEN-SUNG, naturally ornamented with figures of trees, flowers, rivers, mountains, &c. and of which they make tables and other articles. It has 4 cities of the second rank under its jurisdiction, and 3 of the third; and is 1205 miles SW. of Peking. Lon. 117. 40. E. Ferro, Lat. 25. 45. E.

(2.) **TALI**, a town of Formosa on the W. coast. Lon. 137. 27. E. Ferro. Lat. 23. 36. N.

TALIACOTIUS, Gaspar, chief surgeon to the great duke of Tuscany, was born at Bononia, in Italy, in 1553. He wrote a Latin treatise entitled *Chirurgia Notæ de Curtis Membriis*, in which he teaches the art of engraving *noses, ears, lips, &c.* giving representations of the instruments and proper bandages.

TALIESSIN, the most famous of the ancient bards of Wales. He flourished in the sixth century, under princes *Elphin* and *Urien*. About 80 of his *Poems* are preserved, and published in the *Welsh Archaeology*.

TALIGONG, a town of Hindostan, in the Carnatic; 7 miles N. of Terriore.

TALIGOV, a town of Russia, in Riga.

TALIHOU, a small island of France, on the coast of the department of the Channel, and cédant prov. of Normandy; 3 miles N. of Hoguc. At low water the channel between it and the continent is dry. It has a lazaretto.

TA-LIN-HO, a town of Chinese Tartary. Lon. 138. 38. E. Ferro. Lat. 14. 10. N.

TALIO, *n. s. lex talionis*, or the law of retaliation, a species of punishment in the Mosaic law, whereby an evil is returned similar to that committed against us by another; as an "Eye for eye, tooth for tooth." This law was first inserted in the XII. tables amongst the Romans; but afterwards set aside, and a power given to the prætor to fix upon a sum of money for the damage.

(1.) * **TALISMAN**, *n. s.* [I know not whence derived; *ταλίσμα*, *Skinner*.] A magical character. —If the physicians would forbid us to pronounce gout, rheumatism, and stone, would that serve like so many *talismans* to destroy the diseases? *Swift*.

Of *talismans* and figils knew the power. *Pope*.

(2.) **TALISMANS** are magical figures cut or engraved with superstitious observations on the characters and configurations of the heavens, to which some astrologers have attributed wonderful virtues, particularly that of calling down celestial influences. The talismans of Samothrace, so famous of old, were pieces of iron formed into certain images, and set in rings; these were esteemed preservatives against all kinds of evils. There were likewise talismans taken from vegetables, and from minerals.

* **TALISMANICK**, *adj.* [from *talisman*.] Magical.—The figure of a heart bleeding upon an altar, or held in the hand of a Cupid, has always been looked upon as *talismanick* in dresses of this nature. *Addison*.

(1.) * **TALK**, *n. s.* [from the verb.] 1. Oral conversation; fluent and familiar speech.—

We do remember; but our argument

Is all too heavy to admit much *talk*. *Shak.*
—Perceiving his soldiers dismayed, he forbade them to have any *talk* with the enemy. *Knolles*.—How can he get wisdom that driveth oxen, and whose *talk* is of bullocks? *Eccles. xxxviii.*—This ought to weigh with those whose reading is designed for much *talk*. *Locke*.—

In various *talk* th' instructive hours they pass,
Who gave the ball, or paid the visit last. *Pope*.
2. Report;

2. Report; rumour.—I hear a *talk* up and down of raising our money. *Locke*. 3. Subject of discourse.—

What delight to be by such extoll'd,
To live upon their tongues and be their *talk*,
Of whom to be despis'd were no small praise?
Milton.

(2.) **TALK*. *n. s.* [*tale*, Fr.] A kind of stone.—Stones composed of plates are generally parallel, and flexible, and elastic: as, *talk*, cat-fliver or glimmer, of which there are three sorts, the yellow or golden, the white or silvery, and the black. *Woodward*.—Venetian *talk* kept in a heat of a glass furnace, had not lost much of its bulk, and seemed nearer of kin to *talk* than mere earth. *Boyle*.

(3.) *TALK*, or *TALC*, § 2. See MINERALOGY, Part II. Chap. IV. Class I. Order I. Gen. VII. Sp. 7. and *TALC*, § 1—II.

(4.) *TALK*, in geography, or *TALK ON THE HILL*, a town of England, in Staffordshire, seated on a hill, N. of Newcastle under Line, near the source of that river, on the road from London to Carlisle, 154 miles from London.

* *To TALK*. *v. n.* [*tsalen*, Dutch.] 1. To speak in conversation; to speak fluently and familiarly; not in set speeches; to converse.—I will buy with you, sell with you, *talk* with you; but I will not eat with you. *Shak*.—Now is this vice's dagger become a squire, and *talks* as familiarly of John of Gaunt as if he had been sworn brother to him. *Shak*.—The princes refrained *talk*ing. *Job*, xxix. 9.—The children of thy people still *talk* against thee. *Book*.—

With himself, his best adviser *talks*. *Walker*.—God remembers that we are but flesh, unable to bear the nearer approaches of divinity, and so *talks* with us, as once with Moses, through a cloud. *Decay of Piety*.—Mention the king of Spain, he *talks* very notably. *Addison*. 2. To prattle; to speak impudently.—

Hypocrites austere *talk*

Of purity. *Milton*.

My heedless tongue has *talk'd* away this life.

—Consider well the time when Petavius first began to *talk* in that manner. *Waterland*. 3. To give account.—

The crystalline sphere, whose balance weighs
The trepidation *talk'd*. *Milton*.

—The natural histories of Switzerland *talk* much of the fall of these rocks. *Addison*.—We will consider whether Adam had any such heir as our author *talks* of. *Locke*. 4. To speak; to reason; to confer.—Let me *talk* with thee of thy judgments. *Jer.* xii. 1.—Will ye *talk* deceitfully for him? *Job*, xiii. 7.—It is a difficult task to *talk* to the purpose. *Collier*.—*Talking* over the things which you have read with your companions fixes them upon the mind. *Watts*.

* *TALKATIVE*. *adj.* [from *talk*.] Full of prate; loquacious.—If I have held you overlong, lay the fault upon my old age, which in its disposition is *talkative*. *Sidney*.—This may prove an instructive lesson to the disaffected, not to build hopes on the *talkative* zealots of their party. *Add*.—I am ashamed I cannot make a quicker progress

in the French, where every body is so courteous and *talkative*. *Addison*.—

The coxcomb bird so *talkative* and grave,
That from his cage cries cuckold, whore, and knave;

Though many a passenger he rightly call,
You h'd him no philosopher at all. *Pope*.

* *TALKATIVENESS*. *n. s.* [from *talkative*.] Loquacity; garrulity; fulness of prate.—We call this *talkativeness* a feminine vice. *Gow. of Tongue*.—Learned women have lost all credit by their impertinent *talkativeness* and conceit. *Swift*.

TALKEAVE, a town of Persia in Segestan, 21 miles SW. of Kin.

TALKER. *n. s.* [from *talk*.] 1. One who talks.—Let me give for instance some of those writers or *talkers* who deal much in the words Nature or Fate. *Watts*. 2. A loquacious person; a pratter.—

Farewell, I'll grow a *talker* for this jeer. *Shak*.—If it were desirable to have a child a more brisk *talker*, ways might be found to make him so. *Locke*. 3. A boaster; a bragging fellow.—The greatest *talkers* in the days of peace, have been the most pusillanimous in the day of temptation. *Taylor*.

* *TALKY*. *adj.* [from *talk*.] Consisting of talk; resembling talk.—The *talky* flakes in the strata were all formed before the subsidence, along with the sand. *Woodward*.

* *TALL*. *adj.* [*tâl*, Welsh.] 1. High in stature. Bring word how *tall* the is. *Shak*.

Two of nobler shape, *Milton*.

Erect and *tall*.

2. High; lofty.—

Winds rush'd abroad
On the vast wilderness, whose *tallest* pines,
Though rooted deep as high, and sturdiest oaks,
Bow'd their stiff necks. *Milton*.

—They lop, and lop, on this and that hand, cutting away the *tall*, sound, and substantial timber, that used to shelter them from the winds. *Darwin*.—

May he live long enough to see them all

Dark shadows cast, and as his palace *tall*! *Wall*. 3. Sturdy; lusty.—I'll swear thou art a *tall* fellow of thy hands, and that thou wilt not be drunk; but I know thou art no *tall* fellow of thy hands, and that thou wilt be drunk; but I would thou wouldst be a *tall* fellow of thy hands. *Shak*.

(1.) * *TALLAGE*. *n. s.* [*tailage*, Fr.] Impost; excise.—The people of Spain were better affected unto Philip than to Ferdinand, because he had imposed upon them many taxes and *tallages*. *Bac*.

(2.) *TALLAGE*, [*tallagium*,] from the French *taille*, is metaphorically used for a part or share of a man's subsistence carried out of the whole, paid by way of tribute, toll, or tax.

(1.) *TALLACH*, a town of Ireland, in Waterford, Munster, 104 miles from Dublin.

(2.) *TALLAGH*, a small town of Ireland, in Dublin county, Leinster, 3 miles SW. of Dublin.

(3.) *TALLAGH HILL*, a hill of Ireland, in Dublin county, near Tallagh, (N^o 2.) which affords a very beautiful and extensive prospect of the surrounding country, the city, harbour, and bay of Dublin, with the peninsula of Howth, and the Irish Channel.

(1.) *TAL-*

(1.) **TALLAND**, a town of England, in Cornwall, a mile from West Looe.

(2.) **TALLAND POINT**, a promontory on the coast of Cornwall, between Fowey and the two Looes.

(3.) **TALLANO**, a town of the French empire, in the island and dep. of Corfica; capital of a late district, and seated on the Gulf (N^o 2.), 30 miles SW. of Corte, and 24 N. of Bonifacio.

(4.) **TALLANO, GULF OF**, a bay of the Mediterranean, on the coast of Corfica.

TALLAPOOSEE. See **TALAPOOSEE**.

TALLARAPESCET, a town of Perfia, in the province of Mezanderan; 21 miles S. of Ferabad.

(1.) **TALLARD**, a town of France, in the dep. of the Upper Alps, and ci-devant province of Dauphiny; seated on the Durance; 9 miles S. of Gap, 15 N. of Sisteron, and 47 S. of Grenoble. Lon. 6. 10. E. Lat. 44. 28. N.

(2.) **TALLARD**, Camillus d'Hottun, Count of, a celebrated French general, born at Provence in 1651. He commanded the army on the Rhine in 1704, and in 1705 was made a marshal; when he defeated the Prince of Hesse-Cassel, and took Landau. In 1704 he was sent with an army of 40,000 men against the Duke of Marlborough and Prince Eugene; but was defeated and taken prisoner at the battle of Hochstet, and brought over to England, where he was detained seven years. Upon his return to Paris he was created a duke, and made secretary of state in 1726. He died in 1728.

TALLASSEE. See **TALASER**, N^o 1—3.

TALLEMONT. See **TALMONT**.

TALLEVENDE, a town of France, in the dep. of Calvados, containing about 3000 citizens, whose chief manufacture is earthen ware; 2 miles SW. of Vire.

TALLIER, *n. f.* [from *tally*.] An officer in the exchequer, now called *teller*. See **TALLY**, § 2; **TILLER**, § 1. *def.* 3. and § 2.

TALLIS, Thomas, an English musician of the 16th century, reckoned one of the most eminent that ever England bred. But his abilities were wholly devoted to sacred music. He is said to have been organist of the chapel royal to Henry VIII. Edward VI. Mary I. and Elizabeth. It is certain, he was organist along with Bird under Elizabeth; and these two published an admired collection of *Hymns for the Church Service*. He composed the Morning, Evening, and Communion Services, in 4 parts, with the preces, responses, and litany; and several anthems. He died 23d November 1585, and was buried in Greenwich church.

(1.) * **TALLOW**. *n. f.* [*talge*, Danish.] The grease or fat of an animal; coarse suet.—I warrant her rags, and the *tallow* in them, will burn a Lipland winter. *Shak.*—The Spaniards kill thousands of them yearly, for their *tallow* and hides. *Bayly*.—Snuff the candles close to the *tallow*. *Swift*.

(2.) **TALLOW**, in commerce, is the fat of certain animals melted and clarified. It is procured from most animals, but chiefly from bullocks, sheep, hogs, and bears. Some kinds of tallow are used as unguents in medicine, some for making soap and dressing leather, and some for making

candles. See **ANATOMY** and **CHEMISTRY**, *Indexes*, and **FAT**.

(3.) **TALLOW**, in geography, a borough of Ireland, in Waterford, which sent two members to the late Irish parliament. It is seated on the *Bride*, which is navigable by boats up to it; 23 miles WNW. of Cork, and 32 WSW. of Waterford.

(4.) **TALLOW TREE**. See **CHINA**, § 31; and **CROTON**, § III. N^o 3. Sir George Staunton says, that the candles made of the vegetable tallow are *firmer* than those made of animal tallow, and free from all offensive *smell*. They are not, however, equal to those of wax or spermaceti; but the latter is not within the reach of the Chinese, and the art of blanching the former is little known to them. The tallow tree has been transplanted to Carolina, and flourishes there as well as in China.

* **To TALLOW**. *v. a.* [from the noun.] To grease; to smear with tallow.

* **TALLOWCHANDER**. *n. f.* [*tallow* and *chandelier*, Fr.] One who makes candles of tallow, not of wax.—Several nasty trades, as *tallowchandlers*, butchers, and neglect of cleaning of gutters, are great occasions of a plague. *Harvey*.

TALL-WATER, a river of Ireland, in Armagh, which joins the Cullen, and falls into the Black-water near Charlemont.

(1.) * **TALLY**. *n. f.* [from *tailleur*, to cut, Fr.] 1. A stick notched or cut in conformity to another stick, and used to keep accounts by.—

So right his judgment was cut fit,

And made a *tally* to his wit.

Hudibras.

—The only talents in esteem are those of Exchange-alley; one *tally* is worth a grove of bays. *Garth*.—

Have you not seen a baker's maid

Between two equal panniers sway'd?

Her *tallies* useless lie and idle,

If plac'd exactly in the middle.

Prior.

From his rug the skew'r he takes,

And on the stick ten equal notches makes;

There, take my *tally* of ten thousand pound.

Swift.

2. Any thing made to suit another.—

They were fram'd the *tallies* for each other.

Dryden.

(2.) The **TALLY** is used by bakers, brewers, &c. And this was the ancient way of keeping all accounts, one part being kept by the creditor, the other by the debtor, &c. Hence the **TALLIER** of the exchequer, whom we now call the *teller*.

(3.) **TALLY COURT**, a court where the two deputy chamberlains of the exchequer and the *tally-cutter* attend; and a tally is generally the king's acquittance for money paid or lent, and has written on it words proper to express on what occasion the money is received.

(1.) * **To TALLY**. *v. a.* [from the noun.] To fit; to suit; to cut out, so as to answer any thing.—

They seem'd just *tally'd* for each other.

Prior.

—They are not so well *tally'd* to the present juncture. *Pope*.

(2.) * **To TALLY**. *v. n.* To be fitted; to conform; to be suitable.—I found pieces of tiles that exactly *tallied* with the channel. *Addison*.

TALLY-CUTTER. *n. f.* [*tally* and *cutter*.] An officer

officer in the court of Exchequer, who cuts or marks the tally. See TALLY, § 3.

TALLY-MAN, *n. f.* [*tally* and *man.*] a person that sells or lets goods, clothes, &c. to be paid by so much a week.

TALLYOOR, a town of Hindoostan, in the Mysore : 8 miles NW. of Dindigul.

TALMAS, a town of France, in the department of the Somme : 9 miles S. of Dowlons.

TALMAY, a town of France, in the department of the Cote d'Or, at the junction of the Vienne and Saone : 18 miles NE. of Dijon.

TALMOND, or } a town of France, in the
(1.) TALMONT, } dep. of Lower Charente,
and late prov. of Saintonge, with a harbour, on a peninsula on the right bank of the Gironde : 18 miles SW. of Saintes, as M. Cruttwell has it, or 20 SE. as Brookes says ; 42 N. of Bourdeaux, and 260 SW. of Paris. Lon. o. 50. W. Lat. 45. 32. N.

(2.) TALMONT, a town of France, in the dep. of the Vendee ; 7½ miles ESE. of Sable d'Olonne, and 18 W. of Luçon.

(1.) * TALMUD, THALMUD. *n. f.* The book containing the Jewish traditions, the rabbinical constitutions and explications of the law.

(2.) TALMUD is the name of two Jewish works, the *Talmud of Jerusalem* and the *Talmud of Babylon*. Each of these is composed of two parts ; the Mishna, which is the text, and is common to both, and the Gemara or commentary. See GEMARA and MISHNA. The Mishna, which comprehends all the laws, institutions, and rules of life, which, besides the ancient Hebrew scriptures, the Jews thought themselves bound to observe, was composed, according to their own unanimous testimony, about the close of the 2d century. It was the work of Rabbi Juda Hakkadosh, who was the ornament of the school at Tiberias, and is said to have occupied him 40 years. The commentaries and additions which succeeding Rabbis made were collected by Rabbi Johanan Ben Eliezer, in the 5th, 6th, or 7th century, under the name of Gemara, that is, *completion* ; because it completed the Talmud. A similar addition was made to the Mishna by the Babylonish doctors in the 6th or 7th century. The Talmud of Babylon is most valued by the Jews ; and this is the book which they mean, when they talk of *the Talmud* in general. An abridgment of it was made by Maimonides in the 12th century, in which he rejected some of its greatest absurdities. The last edition of the Talmud of Babylon, printed at Amsterdam, is in 12 vols folio. The Talmud of Jerusalem is in one large folio.

* TALNESS. *n. f.* [*from tall.*] Height of stature ; procerity.—

An heinous giant, horrible and high,
That with his *talness* seem'd to threat the sky.

Spenser.

—The eyes behold so many naked bodies, as for *talness* of stature could hardly be equalled in any country. *Hayward.*

TALO-CHAN, an island near the coast of China. Lon. 139. 50. E. Ferro. Lat. 29. 57. N.

TALOIRE, a town of France, in the dep. of Mont Blanc, and late duchy of Savoy ; 8 miles SSE. of Annecy.

* TALON. *n. f.* [*talas*, Fr.] The claw of a

bird of prey.—It may be tried, whether birds may not be made to have greater or longer talons. *Bacon.*—

Upward the noble bird directs his wing,

Lifts his fierce talon high.

Prior.

TALOO, a sea-port on the N. coast of Eimeo, one of the SOCIETY ISLANDS, in the South Sea. Lon. 150° W. or 210°, as Cruttwell says. Lat. 17. 30. S.

TALOOK, *n. f.* an Arabic word, which signifies literally attachment, connection, dependence. In Bengal, however, where it occurs perpetually in the enumeration of the districts and subdivisions of that province contained in the infinitives of Akber, it signifies a tenure of land. Hence the *talook* of Calhinaat, the *talook* of Meheys the headman, the *talook* of Ahmed Khan, &c. See *A Dissertation concerning the Landed Property of Bengal*, by Sir Charles Roufe Boughton.

TALOOKDAR, *n. f.* the possessor of a talook.

TALOOKDARY, *n. f.* tenure of a talookdar.

TALOVKA, a river of Russia, which joins the Analick, and the joint waters fall into the Irgis, 32 miles E. of Volk, in Saratov.

TALPA, in zoology, the MOLE ; a genus of quadrupeds belonging to the order of *feræ* and class of *mammalia*. It has six unequal foreteeth in the upper jaw, and 2 in the lower ; one tusk on each side in each jaw ; 7 grinders on each side above, and 6 below. There are 7 species, viz.

1. TALPA AUREA, the gilded mole, or Siberian mole of Pennant, has 3 toes on the fore feet, with very large claws ; 5 on the hind, with weak claws ; but no tail. The snout is shorter than that of the European, (Nº 3.) the nose naked ; the head and body 4 inches ; the fur above varied with glossy green, golden, and reddish copper colour ; the lower a cinereous brown. They inhabit the Cape of Good Hope and Siberia.

2. TALPA CRISTATA, the crested mole, or *Sorex cristatus* of Gmelin, has 5 toes on each foot ; a short tail ; and the nose long and surrounded at the point with 10 or 15 short radiated tendrils forming a star ; the body is thick and round, and covered with a fine short dusky fur. They feed on roots, and inhabit N. America.

3. TALPA EUROPEA, the European mole, is the only species found in Britain. They inhabit the whole of Europe, except Ireland, where no moles are found. They are also common in the N. of Asia and Africa. They chiefly frequent moist fields exposed to the sun, meadows, and gardens ; through which they form subterraneous roads in every direction in search of worms, on which and the larvae of insects they feed, and not on vegetables, though they do great damage by loosening the roots of plants. They are most active before rain, as the worms are then in motion. The penis of the male is exceedingly long in proportion ; they pair and propagate in spring, the female bringing 4 or 5 young at a birth, which are placed in nests made of moss, leaves, and dried grass, under the largest hillocks of the field ; these are constructed with wonderful ingenuity, consisting of an interior hillock, surrounded with a ditch which communicates with several galleries, or purpose to carry off the moisture ; and the ne

is covered over with a dome of earth, like the flat arch of an oven. Moles are destroyed by a paste composed of palma christi and white hellebore, or by flooding the fields which they infest; though, in the latter case, they sometimes escape by ascending trees. This species is $5\frac{1}{2}$ inches in length, and its tail about one inch. It has a large head, without any external ears, and eyes so very small and so completely hid in the fur, as to make it vulgarly believed that it has none. As they live entirely below ground, they have certainly no occasion for eyes; and as they probably find their food by the smell, which is acute, eyes may serve merely to warn them when they happen to emerge from the ground to return to their subterraneous dwelling. There are 4 varieties, viz.

i. *TALPA EUROPEA ALBA*, the white mole, with fur uniformly white.

ii. *TALPA EUROPEA CINEREA*, the grey mole, has narrow fore paws; the fur is of a cinereous colour.

iii. *TALPA EUROPEA NIGRA*, the black mole, has fur uniformly black.

iv. *TALPA EUROPEA VARIEGATA*, the variegated mole, has fur variegated with white spots.

4. *TALPA FLAVA*, the yellow or American mole, has 5 toes on each foot; the fur is of a yellowish brown colour at the tips, and dark grey at the roots; the head is brightest; the rump dark; the belly deep brown; the feet and tail white. They inhabit N. America.

5. *TALPA FUSCA*, the Brown Mole, the *Sorex Aquaticus*, or *Aquatic Sorex*, of Gmelin, has 5 toes on all the feet, which are palmated; the tail and feet short and white; 4 foreteeth in the upper and 4 in the lower jaw. The head and body are $5\frac{1}{2}$ inches long; the tail not an inch; the nose is slender; the upper jaw longer than the under. They inhabit N. America. This and the *CRISTATA*, N° 2, were formerly ranked under the genus *Sorex*; but as they have the manners and figure of the Moles, they are very properly referred to this genus by Mr Pennant.

6. *TALPA LONGICAUDATA*, the long tailed Mole, of Pennant, has 5 toes on all the feet, which are broad, naked, and palmated; the fore feet have strong short claws; the hind feet long and slender ones, and are scaly. The head and body are from 4 to 6 inches long; the tail 2, sometimes 3. They inhabit N. America.

7. *TALPA RUBRA*, the red American Mole, has 3 toes on the fore feet, 4 on the hind, and a short tail. It is of a pale red colour, and in form resembles the European (N° 3); but is larger, and the root of the tail is thicker. They inhabit America. *Kerr's Animal Kingd.* vol. 1. p. 199—203.

TALPIA, a town of Chinese Tartary, in Hami; 28 miles NE. of Hatanam.

TALPINA, in zoology, a species of *MYOTALPA*, or *Mole-Rat*, is nearly allied to the *TALPA*, but is arranged with the other species, under *Mus*. See *Mus*, § III. N° 45, i. and ii.

TALSARNE, a town of S. Wales, in Cardigan-shire.

TALTHYBIUS, a celebrated herald in the Grecian camp, during the Trojan war, the friend and minister of Agamemnon, who sent him to

bring away Briseis from Achilles. He died at Zeigium, in Achaia. *Hom. Il. i. v.* 320, &c. *Paus.* vii. c. 23.

TALITZ, a town of Germany, in Upper Saxony, in the Vogtland; 4 miles S. of Pauen.

TALVAR, a town of Persia, in the province of Irac; 9 miles NW. of Amadan.

TALUD, or } *n. s.* in architecture, the incline (1.) *TALUS*, } nation or slope of a work; as of the outside of a wall, when its thickness is diminished by degrees, as it rises in height, to make it the firmer.

(2.) *TALUS*, in fortification, the slope of a work, whether of earth or masonry.

(3.) *TALUS*, in history, partly fabulous, the nephew of Dædalus, and, like his uncle, a great mathematical genius, having invented the saw, compasses, and other mechanical instruments. But this merit occasioned his murder. See *DÆDALUS*. The poets fabled, that he was turned into a partridge.

TALYA, or } a town of Hungary, 3 miles N. *TALZA*, } of Tokay.

TAM, a town of the 3d rank, and a river of China, in Pe-tche-li; 27 miles WSW. of Pao-tung. The latter runs into the Ta.

TAMACH, a river of Suabia, which rises near Neuweiler, and runs into the Nagold, 2 miles S. of Calw, in Baden.

TAMALAMECA, or } a town of Terra Firma, *TAMALAMEQUE*, } in St Martha, on the Magdalena. Lon. 71. 45. W. Lat. 8. 52. N.

TAMAMES, a town of Spain, in Leon.

(1.) *TAMAN*, a town of Circassia, on the N. coast of the Black Sea; 240 miles SSW. of Azoph.

(2, 3.) *TAMAN*, a strait and island between the Black Sea, and the Sea of Azoph; the island was anciently called *PHANAGORIA*.

TAMANAH, a sea port town of Indostan, on the coast of Malabar, in Concan; 54 miles N. of Goa.

TAMANDUA, or } in zoology. See *MYRME-* *TAMANOIR*, } *CORHAGA*, N° 6.

(1.) *TAMAR*, a river of England, which rises in the NW. part of Devonshire near Cornwall; and running S. separates the 2 counties, except a small part of Devonshire on the W. side; after which it falls into the sea below Plymouth.

(2—4.) *TAMAR*, in Scripture history, a name common among the Israelitish women, as, 1. The wife of Er and Onan, Judah's sons, and mother of Pharez and Zarah by himself; 2. A daughter of David and full sister of Absalom, ravished by her brother Amnon. See *ABSALEM* and *AMNON*. 3. A daughter of Abshalom.

(1.) *TAMARA*, a river of Naples, which rises at the foot of the Apennines, and falls into the Adriatic.

(2.) *TAMARA*, or *TAMARY*, a sea port town on the NW. coast of Socotora, the royal residence, and capital of the island. It is seated near the mouth of the Red Sea. Lon. 52. 25. E. Lat. 11. 30. N.

(3.) *TAMARA* ISLS, a cluster of islands of Africa in Guinea; near the coast of Sierra Leona.

TAMARAC, a river of Brazil, which runs into the sea at Tamaraia.

R

(1.) TAM-

(1.) **TAMARACA**, a pleasant and fertile island of Brasil, near the mouth of the Tamarac, on the coast of the district to which it gives name, and from which it is divided by a small strait. It produces Brasil-wood, cocoa nuts, cotton, sugar, citrons, melons, and wood in great plenty. It is 9 miles long, 3 broad, and 21 in circuit. Lon. 35. 5. W. Lat. 7. 56. S.

(2.) **TAMARACA**, or } a district of Brasil, in the
TAMARIKA, } jurisdiction of Fernambuco, which, besides including the above island, extends 120 miles within the continent; being bounded N. by Parayba, E. by the Ocean, S. by part of Fernambuco, and W. by the country of the S. American Indians.

TAMARIL, a town of Spain, in Catalonia; 2 miles NE. of Tarragona.

(1.) * **TAMARIND TREE**. *n. s.* [*tamarindus*, Lat.] The flower of the *tamarind-tree* consists of several leaves. *Miller*.—Lenitives are cassia, *tamarindi*, manna. *Wiseman*.

Lay me reclind

Beneath the spreading *tamarind*. *Thomson*.

(2.) **TAMARIND TREE**, } in botany, a genus of
TAMARINDUS, } plants arranged by Linnaeus under the class of *triandria* and order of *monogynia*; but Woodville, Schreber, and other late botanists, have found that it belongs to the class of *monadelphia* and order of *triandria*. In the natural system it is ranked under the *lamiaceae*. There is only one species, viz.

TAMARINDUS INDICA, a native of both Indies, of America, of Arabia, and Egypt. It was cultivated in Britain before 1633. It rises to 30 or 40 feet, sending off numerous large branches, which spread to a considerable extent, and have a beautiful appearance; the trunk is erect, and covered with rough bark, of a greyish or ash colour; the leaves are small and pinnated, and of a yellowish green colour; the flowers resemble the papilionaceous kind, and grow in lateral clusters; the calyx consists of 4 leaves, and the corolla of 3 petals, of a yellowish hue, and beautifully diversified with red veins; the fruit is a pod of a roundish compressed form, from 3 to 5 inches long, containing 2, 3, or 4 seeds, in a dark pulpy matter. The flowers appear, according to Jacquin, in Oct. and Nov.; but, according to Dr Wright, during the whole of June and July. The pulp of the tamarind, with the seeds connected together by numerous tough strings or fibres, are brought to us freed from the outer shell, and commonly preserved in syrup. The fruit produced in the East Indies is more esteemed than that of the West, and is distinguished by the greater length of the pods, and the pulp being dryer and of a darker colour. This fruit, the use of which was first learned of the Arabians, contains a large proportion of acid, with the saccharine matter, and is therefore not only employed as a laxative, but also for abating thirst and heat in various inflammatory complaints, and putrid disorders, especially those of a bilious kind; in which the cathartic, antiseptic, and refrigerant qualities of the fruit have been found equally useful. When intended merely as a laxative, it may be joined with manna, or purgatives of a sweet kind, by

which it is rendered safer and more effectual. Three drachms of the pulp are usually sufficient to open the body; but to prove moderately cathartic, 1 or 2 oz. are required. It is an ingredient in *electuarium e cassia*, and *electuarium e senna* or lenitive electuary. See **MATRIA MEDICA** and **PHARMACY**, *Index*.

TAMARIS, a river of Spain. *Lempr.*

(1.) * **TAMARISK**. *n. s.* [*tamariscus*, Lat.] The flowers of the *tamarisk* are spicaceous. *Miller*.—*Tamarisk* is a tree that grows tall, and its wood is medicinal. *Mortimer*.

(2.) **TAMARISK**, } in botany, a genus of plants
TAMARIX. } belonging to the class of *pentandria*, and order of *tryginia*; and in the natural system ranking under the 15th order. *Succulente*. The calyx is quinquepartite; the petals are five; the capsule is unilocular and trivalvular, and the seeds pycnopous. There are only two species known; viz.

1. **TAMARIX GALLICA**. *French tamarisk*, which grows upon the sea coasts. When burnt it affords sulphat of soda. See **CHEMISTRY**, *Index*.

2. **TAMARIX GERMANICA**. *German tamarisk*.

TAMARUS, a mountain of Epirus. *Strabo*.
TAMARY. See **SOCOTORA**, and **TAMARA**, No 2.

TAMASA, a river of Asia, in Mingrelia.

TAMASCAL, *n. s.* the name given in California to a kind of sand-bath employed by the natives in the cure of the venereal disease. It is prepared by scooping a trench in the sand, two feet wide, one foot deep, and of a length proportioned to the size of the patient; a fire is then made through the whole extent of it, as well as upon the sand which was dug out of the hollow. When the whole is thoroughly heated, the fire is removed, and the sand stirred about, that the warmth may be equally diffused. The sick person is then stripped, laid down in the trench, and covered up to his chin with heated sand. In this position a very profuse sweat soon breaks out, which gradually diminishes according as the sand cools. The patient then rises and bathes in the sea, or the nearest river. This process is repeated till a complete cure is obtained. While the patient is undergoing the operation of the tomascal, he drinks a considerable quantity of a warm sudorific, prepared by the decoction of certain herbs, chiefly of the shrub called by the Spaniards **GOVERNANTE**.

TAMASEA, a plain of Cyprus, sacred to **Venus**. *Plin.* 5.

TAMATMA, a town of Africa, in Bornou.

TAMBA, a town of Indostan, in Vissapour.

TAMBAC, *n. s.* See **EXCOECARIA**, and **XYLO**.

TAMBACH, a town of Upper Saxony, in the duchy of Saxe Gotha; 9 miles S. of Gotha.

(1.) * **TAMBARINE**. *n. s.* [*tambourin*, Fr.] A tabor; a small drum. It should be *tambourin*.—

Calliope with mules moe,

Their ivory lutes and *tambarines* forego. *Spens.*

(2.) **TAMBARINE**. See **TAMBOURIN**.

TAMBERCHERY, a town of Hindoostan, in Calicut; 18 miles NE. of Calicut.

TAMBOV, a city of Russia, the capital of

TAM-

TAMBOYSKOE; 228 miles SE. of Moscow, and 572 SE. of Petersburg. Lon. 58. 50. E. Ferro. Lat. 52. 48. N.

(1.) **TAMBOUR**. *n. s.* in architecture, a term applied to the Corinthian and Composite capitals, as bearing some resemblance to a drum which the French call *tambour*. Some choose to call it the *vase*, and others *campana* or the bell.

(2.) **TAMBOUR** is also used for a little box of timber work, covered with a ceiling, within the porch of certain churches; both to prevent the view of persons passing by, and to keep off the wind, &c. by means of folding doors, &c.

(3.) **TAMBOUR** also denotes a round course of stone, several whereof form the shaft of a column, not so high as a diameter.

(4.) **TAMBOUR**, in the manufactures, is a species of embroidery. The tambour is an instrument of a spherical form, upon which is stretched, by a string and buckle, a piece of linen or thin flannel stuff; which is wrought with a needle of a particular form, and by means of flannel or gold and silver threads, into leaves, flowers, or other figures.

To TAMBOUR. *v. a.* To embroider by the tambour.

TAMBOURER. *n. s.* a girl who works at the tambour.

TAMBOURIN. *n. s.* a tabor or small drum; also a dance performed on the French stage. The air is lively, and the movements are quick. See Music, § 252.

TAMBOYSKOE, a government of Russia, bounded N. by that of Ussimir; E. by those of Nizogorod, Penza, and Saratov; S. by Saratov, and W. by those of Riazan and Voronez. It is 200 miles long, and from 80 to 100 broad. TAMBOV is the capital. Lon. 56° 20' to 61° E. Ferro. Lat. 51° 36' to 55° 20' N.

TAMBRA, a river of Spain, which runs into the Atlantic, near Muros in Galicia.

TAMBUCCO, a town on the E. coast of Celebes, seated on a bay to which it gives name. Lat. 2. 50. S.

(1.) * **TAME**. *adj.* [*tame*, Saxon; *taem*, Dutch; *tam*, Danish.] 1. Not wild; domestic.—Thales the Milesian said, That of all wild beasts a tyrant is the worst, and of all tame beasts a flatterer. *Addison*. 2. Crushed; subdued; depressed; dejected; spiritless; heartless.

If you should need a pin,

You could not with more *tame* a tongue desire it. *Shak.*

Their courage with hard labour *tame*. *Shak.*

A most poor man made *tame* to fortune's blows. *Shak.*

Tame slaves of the laborious plough. *Roscom.* 2. Spiritless; unanimated: as a *tame poem*. A low phrase.

(3.) **TAME**, in geography, a town of England, in Oxfordshire, with a free school, an hospital, and a market on Tuesday. It is seated on the TAME, (N° 3.) 12 miles E. of Oxford, and 45 W. by N. of London. Lon. 0. 55. W. Lat. 51. 46. N.

(3.) **TAME**, or **THAME**, a river of England, which rises near Wintlow in Buckinghamshire, and runs into the Thames, above Wallingford, at Dorchester in Oxfordshire; and hence has been

often erroneously supposed to give name to that famous river. See THAMES.

(4.) **TAME**, another river of England, which rises in Staffordshire, and runs into the Trent, 7 miles above Burton.

* **To TAME**. *v. n.* [*gatamgon*, Gothic; *temean*, Saxon; *tammen*, Dutch.] 1. To reduce from wildness; to make gentle.—

Those that *tame* wild horses

Stop their mouths with stubborn bits. *Shak.*

2. To subdue; to crush; to depress; to conquer.

If the Heavens do not their visible spirits
Send quickly down to *tame* the offences,
Humanity must perforce prey on itself. *Shak.*

They cannot *tame*

Or overcome their riches! *Ben Jonson.*

A puting cuckold, would drink up

The lees and dregs of a flat *tamed* piece. *Shak.*

A race unconquer'd, by their clime made bold,

The Caledonians arm'd with want and cold,
Have been for ages kept for you to *tame*. *Wall.*

* **TAMEABLE**. *adj.* [from *tame*.] Susceptive of taming.—Gargas are great fowls, of a strong flight, and easily *tameable*. *Wilkins.*

TAMEGA, a river of Portugal, which runs into the Duero, 10 miles S. of Amarante.

TAMEGAN, a town of Ceylon, 48 miles S. of Candi.

* **TAMELY**. *adv.* [from *tame*.] Not wildly; meanly; spiritlessly.—

Stoop *tamely* to the foot of majesty. *Shak.*

What courage *tamely* could to death consent?

Dryden.

So *tamely* can you bear the ravish'd crown?

Dryden.

Did he look *tamely* on and let them pass?

Addison.

—Can you love your prelate, whom you *tamely* suffer to be abused? *Swift.*

* **TAMENESS**. *n. s.* [from *tame*.] 1. The quality of being tame; not wildness. 2. Want of spirits; timidity.—Such a conduct must appear rather like *tameness* than beauty. *Rogers.*

* **TAMER**. *n. s.* [from *tame*.] Conqueror; subduer.—

He, great *tamer* of all human art. *Pope.*

TAMERLANE, or **TIMUR BUK**, a celebrated prince and conqueror. As he very early exhibited uncommon courage, he had at the age of 25 attained the highest dignities. He spent 9 years in different countries, travelling for improvement. He conquered the 3 great empires of Persia, India, and Egypt; plundered BAGDAD, DELHI, CAIRO, and other rich cities; and took prisoner BAJAZET I. emperor of the Turks; so that his power, riches, and magnificence became immense. There remain vast monuments of his grandeur in the cities, towns, castles, and walls, which he built; in the rivers and canals which he dug, as well as in the bridges, gardens, palaces, hospitals, mosques, and monasteries, which he erected in the various parts of Asia. Timur, according to the historian Arabshah, was very corpulent and yet tall. He had a large forehead, and a big head. His countenance was agreeable, and his complexion fair. He had a large beard, was very strong, and well limbed; had broad shoulders,

R 2 thick

thick fingers, and long legs. His constitution was amazingly vigorous; but he was maimed in one hand, and lame of the right side. His eyes appeared full of fire; his voice was loud and piercing; and when far advanced in years, his understanding was found, his body vigorous and robust. He died on the first of April 1405, aged 71, in the 35th year of his reign. See BAGDAD, § 5; BAZET I.; HISTORY, Part I. *Sett.* XI.; INDIA, § 11; MOGULS, § 5, 6; PERSIA, § 18; and SYRIA, § 17.

TAMESIS, in ancient geography, a river of S. Britain, now called the THAMES. *Cæs. de Bel. Gal.* v. c. ii.

TAMIEH, a town of Egypt, on a canal, which runs between the Nile and the Birket; 12 miles NE. of Fayoum.

TAMINGA, a town of China, in Pekin, in a pleasant country, abounding with lakes and rivers. Lon. 114. 35. E. Lat. 36. 56. N.

TAMINIS, a river of Carniola, about 4 miles long, which has no visible communication with any other water. It is about 4 miles SE. of Veit.

TAMINO, a river of Switzerland, which runs into the Rhine, 1½ miles from Sargans.

*TAMINY. *n. s.* A woollen stuff.

*TAMKIN. *n. s.* The topple of the mouth of a great gun.

TAMMESBRUCK, or } a town of Thuringia,
TAMMISBROOK, } on the Unstruth; built
by king Pepin of France.

TAMMOWISCHKEN, a town of Prussian Lithuania; 3 miles E. of Iuterburg.

TAMMTOUL, or TOMANTOUL, a village of Scotland, in Banffshire, in the middle of the Highlands; seated on the banks of the Aven, on the great road to Inverness. It is in the parish of Kirkmichael. In 1792, it contained 37 families, consisting of 220 persons. It has a well frequented annual fair.

TAMMUZ, a name of ANONIS. See MYSTERIES, § 8.

TAMOU, an island in the S. Pacific Ocean, near ULIETEA.

* To TAMPER. *v. a.* [of uncertain derivation, derived by Skinner from *tempero*, Lat.] 1. To be busy with physic.—

'Tis in vain

To tamper with your crazy brain,

Without trepanning of your skull

As often as the moon's at full. *Hudibras.*

—He tried waxes to give him a better complexion, but the very tampering cast him into a discase. *L'Estrange.* 2. To meddle; to have to do without fitness or necessity.—That key of knowledge, which should give us entrance into the recesses of religion, is by so much tampering and wrenching made useless. *Decay of Piety.*—

'Tis dang'rous tampering with a muse. *Rosc.*
—Earl Waltheof being overtaken with wine, engaged in a conspiracy; but repenting next morning, repaired to the king, and discovered the whole matter; notwithstanding which he was beheaded upon the defeat of the conspiracy, for having but thus far tampered in it. *Addison.* 3. To deal; to practise secretly.—

Others tamper'd

For Fleetwood, Desborough, and Lambert.

TAMPICE, or TANXICE, a town of Mexico, in Guafiteca, 60 miles NNW. of Panuco.

TAMSWEG, a town of Bavaria, in Saltzburg, 12 miles W. of Muchrau, and 48 SSE. of Saltzburg.

TAMTALLAN, a high rocky peninsular promontory of Scotland, in E. Lothian, projecting over the sea, which washes it on 3 sides. It has the ruins of an ancient castle on its top, and is 2 miles E. of North Berwick. The castle was destroyed by the Covenanters, in 1639.

TAMTAM. *n. s.* a flat drum used by the Hindoos, resembling a tabor, but it is larger, and sounds louder.

TAMUS, BLACK BRIONY, in botany, a genus of plants belonging to the class of *diazia*, and order of *hexandria*; and in the natural system ranking under the 11th order, *Sarmentacea*. The male and female flowers are both sexpartite; there is no corolla; the style is trifid; the berry is trilocular and inferior, and contains 2 seeds. There are only 2 species known:

1. TAMUS COMMUNIS, the common black briony, is a native of England, but has not been observed growing wild in Scotland. It has a large root, which sends forth several long slender stems: the leaves are large, heart-shaped, dark green, and grow on long footstalks: the flowers are greenish, and the berry red. It flowers from May to August, and is common in hedges.

2. TAMUS ELEPHANTIPES is a native of the Cape of Good Hope, and was first described by L'Heritier.

TAMWORTH, an ancient borough of England, seated near the grand canal, at the conflux of the Anker and Tame, partly in Staffordshire, and partly in Warwickshire. It was the residence of the Anglo-Saxon kings of Mercia, during the Heptarchy. It was destroyed by the Danes, but rebuilt by queen Ethelfleda, who added a castle for its defence in 914. It is large and well built; and has manufactures of narrow cloth, with a market on Saturday. It sends two members to the imperial parliament, who are returned by the sheriffs of both counties. It lies 8 miles SE. of Lichfield, and 114 NW. of London. Lon. 1. 38. W. Lat. 36. 56. N.

TAMYRAS, a river of Phœnicia, between Tyre and Sidon.

(1.) TAN, *n. f.* the bark of the oak after it has been ground and used by the tanner. The smaller sort is generally made up in little square cakes called *turf*, and sold for firing. The coarser sort is sometimes dried in the sun, and used by bakers for heating their ovens, &c. but its chief use is for hot-beds, to raise pine apples and other plants. William III. introduced the use of it from Holland, for raising orange-trees; after which it was discontinued till about 1719, when *ananas* were first brought into England. It came into general use, and has ever since been much used by gardeners for forcing, &c. by its strong and lasting fermentation. The smaller the tan, the quicker it heats; but the larger fort acquires heat more gradually and retains it longer: gardeners therefore

fore use the one or the other, or a mixture of both, according to the purpose for which it is wanted. It is some time after the tan comes out of the pit before it begins to heat; but having lain a week or two, it ferments, and if put into hot beds properly prepared, will retain a moderate heat for three or four months. When uselets for the hot-house it is still an excellent manure.

(2.) TAN is sometimes, though improperly, used for the bark itself, which is the chief ingredient in the tanning of leather. Oak bark, on account of its great astringency and gummy refinous properties, is preferred to all other substances for the purpose of tanning, as it not only preserves the leather from rotting, but also, by condensing the pores, renders it impervious to water. See TANNING.

(3.) TAN, in chemistry, is a substance found in most vegetables, which, not having hitherto been resolved into component parts, is therefore considered as simple.

* To TAN. *v. a.* [*tannen*, Dutch; *tanner*, Fr.] 1. To impregnate or imbue with bark.—A human skull covered with the skin, having been buried in some limy soil, was *tanned* or turned into a kind of leather. *Grew*.—The greatest part of the hides are exported raw for want of bark to *tan* them. *Swift*.—They sell us bark at a good price for *tanning* our hides into leather. *Swift*. 2. To embrown by the sun.—

His face all *tann'd* with scorching sunny ray.

Such is thy *tann'd* skin's lamentable state.

A brown for which Heaven would disband
The galaxy, and stars be *tann'd*! *Cleaveland*.

TANACETUM, TANSY, in botany, a genus of plants belonging to the class of *syngenesia*, and order of *polygamia superflua*; and in the natural system ranging under the 49th order, *Compositæ*. The receptacle is naked; the pappus somewhat emarginated; the calyx imbricated and hemispherical; the florets of the radius are trifid, and scarcely distinguishable. Gmelin has enumerated seven species, of which only one is a native of Britain, viz.

TANACETUM VULGARE, common *tansy*, grows three or four feet high; the leaves are bipinnated and ferrated; the flowers yellow, and terminate the branches in flat umbels. It is found on the borders of fields and dry banks; it abounds at Wark, and Ford-castle near Kelso; on the side of Gareloch on the west coast of Ross-shire; and in Breaddalbane. It flowers generally in August. There is a variety with curled leaves, called *curled tansy*. It has a bitter taste, and an aromatic smell disagreeable to many people. It is good for warming and strengthening the stomach; the young leaves are therefore used as an ingredient in puddings, &c. It is rarely used in medicine, though extolled as a good emmenagogue. A drachm of the dried flowers has been found beneficial in hysterical disorders arising from suppression. The seeds and leaves were formerly in esteem for destroying worms in children, and are reckoned good in colics and flatulencies. In some parts of Sweden and Lapland, a bath with a decoction of *tansy* is used to assist parturition. See MATERIA MEDICA.

TANÆCIUM, in botany, a genus of the *auxispermia* order, belonging to the *didynamia* class of plants; and in the natural method ranking under the 25th order, *Putamineæ*. The calyx is monophyllous, tubulated, truncated, and entire; the corolla long, monopetalous, and white; the tube cylindrical; the limb erect, spreading, and nearly equal; the fruit a berry covered with a thick bark, large, oblong, internally divided into two parts; in the pulp are contained a number of seeds. There are only two species, viz.

1. TANÆCIUM JAKOBA, and } both natives
2. TANÆCIUM PARASITICUM, } of Jamaica.
They grow by the sides of rivers, and climb on trees and bushes. This genus is omitted by Mr Lee.

TANAËM, or TENAËM, a town of Arabia, in Yemen, which was long the chief seat of the Arabian Jews, who had many synagogues in it, but it is now much deserted. It is 30 miles SE. of Sana.

TANAGA, one of the FOX ISLANDS, in the N. Pacific Ocean, about 40 miles in circumference. Lon. 200. 6. E. Ferro. Lat. 53. 20. N.

(1.) TANAGER, in ornithology. See TANAGRA, N° 2.

(2.) TANAGER, in ancient geography, a river of Italy, in Lucania, remarkable for its beautiful cascades and meanders, through a fine picturesque country. (*Virg. Geor.* iii. v. 151.) It is now called *Negro*.

(1.) TANAGRA, an ancient town of Boeotia, near the Euripus, between the Alopus and Thermodon, famous for cock-fighting.

(2.) TANAGRA, TANAGER, in ornithology, a genus of birds belonging to the order of *passeres*. The beak is conical, acuminate, emarginated, almost triangular at the base, and inclining a little towards the point. Dr Latham has described 44 species, all of which are of foreign extraction.

TANAGRUS, or TANAGER. See TANAGER, N° 2.

(1.) TANAIS, in ancient geography, a river of Scythia, which divides Europe from Asia, and after a rapid course falls into the Palus Mæotis. It is now called *Don*. See DON, N° 4.

(2.) TANAIS, a town at the mouth of the above river. *Mela*, i. 19. *Strabo*, 11.

(4.) TANAIS, a deity of the ancient Persians and Armenians, supposed to be the same with the VENUS of the Greeks, as her rites were equally shameful; the noblest ladies prostituting themselves in her temple. *Strabo*, 11.

TANAQUIL, the wife of Tarquin I. king of Rome, who is said, from her skill in augury, to have foretold his promotion. After his death, she raised Servius Tullius to the throne. See ROME, § 10, 11.

TANAR, a river of Scotland, in Aberdeenshire, which falls into the sea near the church of Aboyne. It gives name to the parish of Glentanar, through which it runs, and its banks are adorned with the forest of Glentanar. See GLENTANAR, N° 1. and 2.

(1.) TANARO, a river of Italy, in the cleavant principality of Piedmont, now included in the French empire. It rises in the mountains near Tenda, passes by Coni, Cherasco, Alba, Asti, Alexandria,

Alexandria, &c. and falls into the Po, 3 miles E. of Valentia, or Valenza.

(2.) **TANARO**, a department of the French empire, so named from the above river, one of the six into which the king of Sardinia's ci-devant dominions were divided, by a decree of the French conservative senate, in September 1802. (See **PIEDMONT**.) It comprehends the ci-devant duchy of **MONTFERRAT**; and sends three deputies to the legislative body. **ASTI** is the capital.

TANAS, a river of Numidia. *Sail. Jug.* 90.

TANASSEE. See **TENASSEE**.

TANASSERIM, or **TENASSERIM**, a city of Asia, in Siam, capital of a province so named; 220 miles SW. of Siam. (See **SIAM**, § 4.) Lon. 98. 0. E. Lat. 11. 50. N.

TANAT, a river of N. Wales, in the counties of Montgomery and Denbigh.

TANAVELLE, a town of France, in the department of the Cantal; 4½ miles WSW. of St Flour.

TANBANTY, a bay of S. America, on the coast of Brazil; with a good road for ships, between Point Negro and Point Luena.

TANBOF. See **TAMBOF**.

TANCARVILLE, a town of France; in the department of the Lower Seine; 10 miles SE. of Montivilliers.

TANCO BANCA, a river of Persia, running into the Indian Sea, 69 miles WSW. of Port Jaques.

TANCOS, a town of Portugal, in Estremadura, seated on the Tago, at its junction with the Zerrara, 60 miles NE. of Lisbon. Lon. 8. 30. W. Lat. 39. 26. N.

TANCRED, a natural son of Roger II. king of Sicily, who became king on the death of William II. his nephew. See **SICILY**, § 11.

TANCREY, an island on the coast of Kent.

TANCROWALL, a town of Africa, in Negroland, where the British have a fort. It is divided into two parts; the one inhabited by Portuguese, consisting of large square houses; the other by Mandingoes, consisting of round huts, 3 feet high, and 20 in diameter, covered with straw and palmetto leaves. It lies 30 miles E. of James Fort.

TANDA, or **TANRAH**, a town of Hindostan, in Bengal, of which it was anciently the capital. It is much reduced; and is seated on the E. bank of the Ganges, 120 miles NW. of Dacca. Lon. 87. 56. E. Lat. 23. 35. N.

TANDAYE, one of the most easterly of the **PHILIPPINE ISLANDS**, separated from **MANILLA** by a broad strait. It is 125 miles long, and 100 broad; and has a volcano on the N. coast, which constantly throws out fire. Lon. 124. 56. E. Lat. 12. 36. N.

TANDERAGEE, a town of Ireland, in Armagh, one mile from Newry Canal, 8 W. of Armagh, and 61 from Dublin. It has an extensive linen manufactory.

TANDLA, a town of Hindostan, in Malwa; 72 miles W. of Ougain, and 130 NE. of Surat. Lon. 74. 30. E. Lat. 23. 5. N.

TANDORF, a town of Bohemia, in Konigin-gertz; 20 miles E. of Konigingratz.

* **TANE**, for *taken*, *ta'en*. Ill. spelt.—

Two trophies *sane* from th' east and western shore.

TANELA, or **TONELA**, a district of Mexico, on the W. coast of the N. Pacific Ocean; extending from Sugar-loaf Hill. 6 miles within land, NE. of the volcano, *Lacatecolula*, about 18 miles up the banks of the river Limpia.

TANETUM, an ancient town of Italy, in Mutina, now called **TONDO**.

TANFANE LUCUS, a sacred grove in Germany, in the country of the Marh, between the Ems and Lippe. *Tac. An.* i. c. 51.

TANFIELD, three small towns of England: 1. in Durham, NW. of Lumley Castle; 2. and 3. East and West, in Yorkshire, E. of Malham.

(1.) * **TANG**. *n. f.* [*tangbe*, Dutch, acid.] 1. A strong taste; a taste left in the mouth.—Although the body of the liquor should be poured out again, yet still it leaves that *tang* behind it. *South*.—It is strange that the soul should never once recal ever any of its pure native thoughts, before it borrowed any thing from the body; never bring into the waking man's view any other ideas but what have a *tang* of the cask. *Locke*. 2. Relish; taste. A low word.—There was not the least *tang* of religion. *Atterbury*. 3. Something that leaves a sting or pain behind it.—

She had a tongue with a *tang*.

Would cry to a tailor go hang. *Shak. Tempest*.

4. Sound; tone: this is mistaken for *tone* or *tswang*.—There is a pretty affectation in the Almain, which gives their speech a different *tang* from ours. *Holder*

(2.) **TANG**, a town of China, of the 3d rank, in Ho-nan; 25 miles SE. of Yang-nan.

* **To TANG**. *v. n.* [This is, I think, mistaken for *tswang*] To ring with.—Let thy tongue *tang* arguments of fate. *Shak*.

TANGA, a silver coin used by the **USBECK TARTARS**, worth about 1s. 3d. It is round, and has on one side the name of the country, and on the reverse that of the khan, and the year of the hegira.

TANGALE, a town of Ceylon, 92 miles S. of Candi.

TANGATABOO, the principal of the **FRIENDLY ISLANDS**, and the residence of the sovereign and chiefs.

TANGE, a town of Sweden, in W. Gothland; 21 miles N. of Gotheburg.

TANGEN, a town of Norway, in Aggerhuus; 2 miles E. of Stromsloe.

TANGENE, a town of Sweden, in W. Gothland; 26 miles E. of Uddevalla.

(1.) * **TANGENT**. *n. f.* [*tangent*, French; *tangens*, Latin.] *Tangent*, in trigonometry, is a right line perpendicularly raised on the extremity of a radius, and which touches a circle so as not to cut it; but yet intersects another line without the circle called a secant that is drawn from the centre, and which cuts the arc to which it is a *tangent*. *Trevoux*.—Nothing in this hypothesis can retain the planets in their orbs, but they would immediately desert them and the neighbourhood of the sun, and vanish away in *tangents* to their several circles into the mundane space. *Bentley*.

(2.) **TANGENT OF AN ARCH** is a right line drawn perpendicularly from the end of a diam-

ter

ter, passing to one extremity of the arch, and terminated by a right line drawn from the centre through the other end of that arch, and called the *secant*. See GEOMETRY, and Plate CCCXXXI.

TANGER, a river of Germany, in Upper Saxony; which runs into the Elbe, at TANGERMUNDE.

TANGERMUNDE, a populous town of Brandenburg, seated on the Tanger, at its junction with the Elbe; 24 miles NW. of Brandenburg. Its chief trade is brewing. Lon. 13. 30. E. Lat. 52. 46. N.

TANGHOO, or **TENHOA**, or *Cuabang*, a town of Asia, in Tonquin, capital of a province so named, abounding in cattle and rice. The city is situated on a rivulet, near the W. coast of Cochinchina. Lat. 19. 40. N.

* **TANGIBILITY**. *n. f.* [from *tangible*.] The quality of being perceived by the touch.

* **TANGIBLE**. *adj.* [from *tango*, Latin.] Perceptible by the touch.—*Tangible* bodies have no pleasure in the comfort of air. *Bacon*.—By the touch, the *tangible* qualities of bodies are discerned, as hard, soft, smooth. *Locke*.

(1.) **TANGIER**, a sea-port town of Morocco, in the kingdom of Fez, at the W. entrance of the Straits of Gibraltar; anciently called **TANGIS**. In 1662, this place belonged to the Portuguese, and was given to king Charles II. upon his marriage with the Infanta of Portugal; but he, grudging the charge of keeping it, caused its mole and fortification to be blown up in 1684. It has still some batteries, which are occupied by Moorish pirates. Had Britain still kept it, it might have proved useful during the sieges of Gibraltar. It is 108 miles NNW. of Fez, and 38 WSW. of Gibraltar. Lon. 5. 50. E. Lat. 38. 49. N.

(2.) **TANGIER**, **BAY OF**, a bay on the coast of Tangier, peculiarly favourable to Moorish pirates, who from this, the narrowest part of the strait, can easily surprise merchant ships while passing. It is a safe harbour nine months in the year, but in winter, or when the wind is in the west it is dangerous. The best anchorage is in the east point.

TANGIERS, an erroneous spelling of **TANGIER**. *Crutt*.

* **TANGLE**. *n. s.* [from the verb.] A knot of things interwoven in one another, or different parts of the same thing perplexed.—

He leading swiftly rowl'd

In tangles. *Milton's Par. Lost.*

Sport with Amaryllis in the shade,

Or with the tangles of Nezara's hair. *Milton.*

(1.) * **To TANGLE**. *v. a.* [See *entangle*.]—1. To implicate; to knit together. 2. To ensnare; to entrap.—

She means to tangle mine eyes too. *Shak.*

My king is tangl'd in affection to

A creature of the queen's. *Shak.*

You must lay lime to tangle her desires. *Shak.*

If thou retire, the dauphin, well appointed,

Stands with the snares of war to tangle thee. *Shak.*

Not willingly, but tangl'd in the fold

Of dire necessity. *Milton's Agonistes.*

Skill'd to retire, and in retiring draw

Hearts after them, tangl'd in am'rous nets. *Milt.*

They're catch'd in knotted law-like nets;
In which when once they are entangl'd,
The more they stir, the more they're tangl'd.

Hudibras.

3. To embroil; to embarrass.—

Tangled in forbidden ways;

He, my shepherd! is my guide. *Crashaw.*

(2.) * **To TANGLE**. *v. n.* To be entangled.—

Shrubs and *tangling* bushes had perplex'd

All path of man or beast. *Anon.*

TANGLEY, a town of England, in Hampshire, near Andover; with a fair April 15.

TANGOLA, or, } an island in the N. Pa-

TANGOLA-TANGE, } cific Ocean, on the W.

coast of New Mexico; affording good anchorage,

wood, and water; 60 miles of Guatemala.

TANGROLIPIX, sultan of the Turks, in the 11th century, a barbarous but not ungenerous conqueror, and the first of the Turks who made inroads upon the Eastern empire. He and his nephew, Cutlu-Mofes, ravaged Iberia. Tangrolipix also conquered Persia, in 1030, and founded a new dynasty of Turkish sultans, who reigned there for a century. See PERSIA, § 17.

TANGU, a city of Asia, and capital of a ci-devant kingdom, situated considerably N. of Pegu, but now included in that empire.

TANGUEY, or **TONGUEY**, a town of Peru, on the coast of Chili; 30 miles from Limari. Lat. 30. 30. N.

TANGUIA, a river of Chinese Tartary, which rises in Mount Isha, runs nearly S. and falls into the river, Yalou-kiang.

TANG-YANG, a lake of China, in Kiangnan; 32 miles N. of Hoai-ngan; and 30 in circuit.

TAN-HOLE. *n. s.* [*tan* and *bole*.] See **TAN-PIT**.

TANING, a town of China, of the third rank, in Chan-si; 15 miles SSE. of Si-tchecu.

TANINGE, a town of the French empire, in the department of Mont Blanc, ci-devant duchy of Savoy, and late lordship of Faucigny; 24 miles SE. of Geneva, and 26 NE. of Annecy.

(1.) **TANJORE**, or **TANJOUR**, a province of Hindostan, on the coast of Coromandel, included in the Carnatic, but governed by its own rajah, who pays an annual subsidy of 160,000l. Sterling to the English E. India Company. It is 95 miles long from N. to S. and 50 broad from E. to W. and is bounded on the E. and S. by the Gulf of Bengal; and N. and W. by the rest of the Carnatic. It is watered by the various branches of the Cauvery.

(2.) **TANJORE**, or } the capital of the above

(2.) **TANJOUR**, } province, is a large city,

six miles in circumference, seated between two branches of the Cauvery, and defended by a double wall and a large ditch. The palace is a grand square, defended also by a wall and a ditch, frequented by crocodiles. It is 205 miles SW. of Madras, 145 Brookes, or 156 fays Cruttwell; and 176 SE. of Seringapatam. Lon. 79. 12. E.

Lat. 10. 46. N.

(1.) **TANIS**, in ancient geography, a large lake of Egypt, now called *Menzaleh*. See **MENZALEH**, N° 1.

(2.) **TANIS**, an ancient city of Egypt, seated near the lake, on one of the Eastern mouths of the Nile.

* **TANIST**.

* **TANIST.** *n. s.* [an Irish word; an *tanister*, Erse.] Presently after the death of any of their captains, they assemble themselves to chuse another in his stead, and nominate commonly the next brother, and then next to him do they chuse next of the blood to be *tanist*, who shall next succeed him in the said captaincy. *Spenser.*

* **TANISTRY.** *n. s.* [from *tanist*.] The Irish hold their lands by *tanistry*, which is no more than a personal estate for his life-time that is *tanist* by reason he is admitted thereunto by election. *Spenser.*—If the Irish be not permitted to purchase estates of freeholds, which might descend to their children, must they not continue their custom of *tanistry*? *Davies.*—By the Irish custom of *tanistry*, the chieftains of every country, and the chief of every sept, had no longer estate than for life in their chiefteries; and when their chieftains were dead, their sons, or next heirs, did not succeed them, but their *tanists*, who were elective, and purchased their elections by strong hand. *Davies.*

(1.) * **TANK.** *n. s.* [*tanque*, Fr.] A large cistern or basin.—Here's plentiful provision, rascal; falling in the garden and water in the *tank*; and in holidays, the licking of a platter of rice when you deserve it. *Dryden.*

(2.) **TANK**, in the language of Hindostan, is a place inclosed for receiving and retaining the rain. During the periodical rains the tanks are filled, and thus in the dry season furnish water for the rice fields and cattle. Some of them are of great extent, measuring 300 or 400 feet on the side; they are of a quadrangular form, and lined with granite, descending in regular steps from the margin to the bottom.

* **TANKARD.** *n. s.* [*tanquard*, Fr. *tanquaerd*, Dutch; *tancaird*, Irish.] A large vessel with a cover, for strong drink.—

Hath his *tanquard* touch'd your brain?

Ben Jonson.

—Marius was the first who drank out of a silver *tanquard*. *Arbutnot.*—When any calls for ale, fill the largest *tanquard* cup top full. *Saunders.*

TANKERDSONG, a town of Thibet, 548 miles E. of Lassa. Lon. 117. 42. E. Ferro. Lat. 29. 56. N.

TANKERSLEY, a town of England, in Yorkshire, between Barnsley and Sheffield; 2 miles E. of Wortley.

TANKIA, or **TINKIA LING**, a town and fort of Thibet, at the foot of Mount Lingur, which exhales sulphur; 232 or 275 miles SW. of Lassa. Lon. 87. 22. E. Lat. 29. 5. N.

TANKROWAL. See **TANCROWAL**. Its chief trade is in wax. Lon. 2. 19. E. Ferro. Lat. 13. 10. N.

TANLAY, a town of France, in the department of Young, 6 miles E. of Tonnere, and 19 W. of Chatillon.

(1.) **TANNA**, a town of Germany, in Upper Saxony, and county of Reussen; 9 miles ENE. of Lobenstein, and 17 SW. of Greitz.

(2.) **TANNA**, a town of Hindostan, in the island of Salsette; 15 miles NE. of Bombay.

(3.) **TANNA**, an island in the South Sea, near Auatoom. See **COOK**, § III. 9. Lon. 169. 44. 35. E. Lat. 19. 32. 25½. S.

(1.) **TANNADICE**, or } a parish of Scotland.

(1.) **TANNADYCE**, } in Forfarshire, 12 miles long, and from 4 to 10 broad. It is watered by the **SOUTH ESK** and the *Noran*. The surface is hilly and in some parts mountainous; and these with the banks of the rivers, exhibit a great variety of beautiful and romantic scenes. The soil is clay and sand, and produces good crops of all the usual grain and green crops. The chief mountain is *St Andrew's seat*, which has a large cairn on its top. On the banks of the S. Esk stands the house of *Luchewan*, the ci-devant seat of Sir John Ogilvy, bart. Near the E. extremity is a valley which abounds with *martial pyrites*, and other sulphurous matters, about 2 feet below the surface; which sometimes, by spontaneous combustion, throw out large masses of earth. The population in 1775 and 1791 was the same—14701; but, in 1801, it had decreased 118. On the N. bank of the S. Esk stood the castle of *Queich*, the residence of the ancient Earls of Buchan; but there are now no relics of it. It stood on the summit of a romantic precipice almost insulated by the S. Esk. There are also relics of ancient castles at Auchlowrie and Burn-yards.

(2.) **TANNADYCE**, or } a village in the above

(2.) **TANNADYSE**, } parish, on the banks of the S. Esk.

TANNASER, a town of Hindostan in Delhi, famous for its Indian idols; 45 miles NE. of Hissar, and 62 ESE. of Sirhind.

TANNAY, a town of France, in the department of the Nievre; 6 miles SSE. of Clamecy, and 15 SW. of Avalon.

TANNEBERG, a town of Austria; 8 miles S. of Aigen.

(1.) **TANNENBERG**, a town of Prussia, in Oberland; 6 miles SSW. of Hohenstein; famous for an obstinate battle fought between the Poles and the Teutonic Knights, wherein the latter were so completely defeated, that they declined ever after.

(2.) **TANNENBERG**, a town of Upper Saxony, in Erzgebürg; 6 miles SW. of Wolkstein.

(1.) **TANNER**, Dr Thomas, an English prelate and celebrated antiquarian, born in 1674. He was admitted of Queen's College Oxford. In 1697, he was chosen fellow. In 1712, he was made archdeacon of Norwich; and in 1731, Bp. of St Asaph. He died at Oxford in 1735; and after his death was published an elaborate work, said to have employed him for 40 years, entitled, *Bibliotheca Britannica Hibernica, Jace, de Scripturis qui in Anglia, Scotia, et Hibernia, ad seculi XVII. initium floruerunt*, &c.

(2.) * **TANNER.** [*n. s.* from *tan*.] One whose trade is to tan leather.—*Tanners* use that lime which is newly drawn out of the kiln, and not slacked with water or air. *Moxon.*

TANNERY, *n. s.* [from *Tanner*.] A tan-work; a piece of ground laid out for tanning leather; with tan-pits, oak bark, and all other apparatus necessary for that operation. See **TANNING**.

(1.) **TANNING**, *part. n. s.* [from *Tan*.] the art of manufacturing leather from raw hides and skins. These being composed of minute fibres intersecting each other in every direction, the ge

neia

neral operation of tanning consists chiefly in expanding the pores, and dissolving a sort of greasy substance contained in them; and then, by the astringency and gummy resinous properties of oak bark, to fill and reunite them, so as to give firmness and durability to the whole texture. But this theory has been controverted by some chemists, who suppose that the animal jelly contained in the skin is not dissolved, but unites during the process with the astringent principle of the bark, and forms a combination insoluble in water. The process of tanning varies considerably, not only in different countries, but even in different parts of the same country. The following is the method most approved and practised in London and its vicinity, where the best leather is generally allowed to be manufactured. The leather tanned in England consists chiefly of three sorts, called *butts* or *backs*, *hides*, and *skins*.

I. TANNING OF BUTTS. *Butts* are generally made from the stoutest and heaviest ox hides, and are managed as follows: After the horns are taken off, the hides are laid smooth in heaps for one or two days in the summer, and for five or six in the winter; they are then hung on poles, in a close room called a *smoke-house*, in which is kept a smouldering fire of wet tan; this occasions a small degree of putrefaction, by which means the hair is easily got off, by spreading the hide on a sort of wooden horse or beam, and scraping it with a crooked knife. The hair being taken off, the hide is thrown into a pit or pool of water to cleanse it from the dirt, &c. which being done, the hide is again spread on the wooden beam, and the grease, loose flesh, extraneous filth, &c. carefully scrubbed out or taken off; the hides are then put into a pit of strong liquor called *ooze* or *wooze*, prepared in pits called *lutins* or *taps* kept for the purpose, by infusing ground bark in water; this is termed *colouring*; after which they are removed into another pit called a *scowering*, which consists of water strongly impregnated with vitriolic acid, or with a vegetable acid prepared from rye or barley. This operation (called *raising*), by distending the pores of the hides, causes them more readily to imbibe the *ooze*, and thus to astringe and condense the fibres, and give firmness to the leather. The hides are then taken out of the *scowering*, and spread smooth in a pit commonly filled with water, called a *binder*, with a quantity of ground bark strewed between each. After lying a month or six weeks, they are taken up; and the decayed bark and liquor being drawn out of the pit, it is filled again with strong *ooze*, when they are put in as before, with bark between each hide. They now lie 2 or 3 months, at the end of which the operation is repeated; they then remain 4 or 5 months, when they again undergo the same process; and after being 3 months in the last pit, are completely tanned, unless the hides are so remarkably stout as still to need an additional pit.—The whole process requires from 11 to 12 months, and sometimes two years, according to the substance of the hide, and skill of the tanner. When taken out of the pit to be dried, they are hung on poles; and after being compressed by a steel pin, and beat out

smooth by wooden hammers called *beetles*, the operation is complete; and when thoroughly dry, they are fit for sale. *Butts* are chiefly used for the soles of stout shoes.

II. TANNING OF HIDES. The leather which is named *hides* is generally made from cow hides, or the lighter ox hides, which are thus managed: After the horns are taken off, and the hides washed, they are put into a pit of water saturated with lime, where they remain a few days, when they are taken out, and the hair scraped off on a wooden beam, as before described; they are then washed in a pool of water, and the loose flesh, &c. being taken off, they are removed into a pit of weak *ooze*, where they are taken up and put down (which is technically termed *handling*) 2 or 3 times a-day for the first week; every 2d or 3d day they are shifted into a pit of fresh *ooze*, somewhat stronger than the former; till at the end of 5 or 6 weeks, they are put into a strong *wooze*, in which they are handled once or twice a-week with fresh bark for 2 or 3 months. They are then removed into another pit, called a *layer*, in which they are laid smooth, with bark ground very fine strewed between each hide. After remaining there 2 or 3 months, they are generally taken up, when the *ooze* is drawn out, and the hides put in again with fresh *wooze* and fresh bark; where, after lying 2 or 3 months more, they are completely tanned, except a few very stout hides, which may require an extra layer; they are then taken out, hung on poles, and being hammered and smoothed by a steel pin, are, when dry, fit for sale. These hides are called *crop hides*; they are from 10 to 12 months in tanning, and are used for the soles of shoes.

III. TANNING OF SKINS. *Skins* is the general term for the skins of calves, seals, hogs, dogs, &c. These, after being washed in water, are put into lime-pits, where they are taken up and put down every 3d or 4th day, for 2 or 3 weeks, to dilate the pores and dissolve the gelatinous parts. The hair is then scraped off, and the flesh and excrescences being removed, they are put into a pit of water impregnated with pigeon dung (called a *grainer* or *mastring*), forming a strong alkaline ley, which in 8 or 10 days soaking out the lime, grease, and saponaceous matter (during which period they are several times scraped over with a crooked knife to work out the dirt,) softens the skins, and prepares them for the reception of the *wooze*. They are then put into a pit of weak *wooze*, in the same manner as the hides, and being often handled, are by degrees removed into a stronger and still stronger liquor, for a month or six weeks, when they are put into a very strong *wooze*, with fresh bark ground very fine, and at the end of 2 or 3 months, according to their substance, are sufficiently tanned; when they are taken out, hung on poles, dried, and fit for sale. These skins are afterwards dressed and blacked by the currier; and are used for the upper leathers of shoes, boots, &c. The lighter sort of hides, called *dressing hides*, as well as horse hides, are managed nearly in the same manner as skins; and are used for coach-work, harness work, &c. &c.

(2.) TANNING, IMPROVEMENTS OF, PROPOSED.

As the method of tanning above described, and all others in general use, are tedious and expensive, various schemes have been suggested to shorten the process and lessen the expence. But most of these have ultimately proved unsuccessful, and a description of them need not therefore swell our limited pages.

TANNIS, a small town of England, in Hertfordshire; NW. of Buntingford.

TANNRODA, a town of Germany, in Upper Saxony, and duchy of Weimar; 9 miles SSW. of Weimar.

TANORE, a sea port town of Hindoostan, on the coast of Malabar, in Calicut; 25 miles SSE. of Calicut. Lon. 75. 54. E. Lat. 10. 58. N.

TANOT, and two rivers of N. Wales, **TANOT GREATER**, which rise in Montgomeryshire; and after running several miles separate, join their waters, and fall into the Severn, 7 miles below Welsh Pool.

(1.) * **TANPIT**. *n. f.* [from *tan* and *pit*.] A pit where leather is impregnated with bark.

(2.) **TAN-PITS**. See **TANNING**.

TANRAH. See **TANDA**.

TANSE, a town of Brazil, in St Paul's.

TANSEY. See **TANACETUM**, and **TANSY**.

TANSIF, a river of Morocco, which rises in mount Atlas, and runs into the Atlantic, 24 miles SSW. of Sakh.

TANSILLO, Lewis, a celebrated Italian poet, born at Nola, about 1510. His poem, entitled *Il Vendemiatore*, i. e. *the Vintager*, being very indecent, all his poems were proscribed. To make some reparation for this error, he wrote *La Lagrime de S. Pietro*, i. e. *The Tears of St Peter*; which being presented to Pope Paul IV. he took off the interdiction from all his poems, except the *Vintager*. He died about 1569.

TRANSITARO, a town of Mexico, in the province of Mechoacan.

TANSOR, a town of Fez, 30 miles N. of Fez. (1.) * **TANSY**. *n. f.* [*tanacetum*, Latin.] An odoriferous plant. *Miller*.

(2.) **TANSY**. See **TANACETUM**.

(3.) **TANSY**, **WILD**. See **POTENTILLA**.

TANTALIDES, in fabulous history, the descendants of **TANTALUS**, as **ATREAS**, **AGAMEMNON**, **MENELAUS**, &c.

* **TANTALISM**. *n. f.* [from *tantalise*.] A punishment like that of **Tantalus**.—A lively representation of a person lying under the torments of such a *tantalism*, or platonick hell. *Addison*.

* To **TANTALIZE**. *v. a.* [from **TANTALUS**, whose punishment was to starve among fruits and water which he could not touch.] To torment by the shew of pleasures which cannot be reached.—

Thy vain desires, at strife

Within themselves, have *tantaliz'd* thy life.

Dryden.

—The maid once sped was not suffered to *tantalize* the male part of the commonwealth. *Addison*.

TANTALIAN. See **TAMTALLAN**.

(1.) **TANTALUS**, in fabulous history, king of Phrygia and Paphlagonia, was the son of Jupiter and the nymph *Plota*. He one day entertained the gods at his table; when, to prove their divinity, he served up his son **PELOUS** cut in pieces.

All the deities except **Ceres** perceived his cruelty and impiety, and would not touch his provisions. That goddess inadvertently eat a part of his left shoulder. **Pelops**, however, was restored to life; and an ivory shoulder given him in the room of that which had been eaten; but **Tantalus** was thrown into **Tartarus**, where he was punished with perpetual hunger and thirst. He was chained in a lake; the water of which reached up to his chin, but retired when he attempted to drink. The branch of a tree loaded with fruit hung down even to his lips, but on his attempting to pluck the fruit, the branch sprung upwards.

(2.) **TANTALUS**, a son of **Thyestes**, the first husband of **Cytemnestra**. *Pauf.* 2.

(3.) **TANTALUS**, in ornithology, a genus of birds belonging to the order of grallæ. The bill is long, subulated, and somewhat crooked; the face naked; the tongue short; and the feet have four toes palmed on the under part. There are, according to Dr Latham, 23 species; of which the most remarkable is the

TANTALUS IBIS, *the ibis*, the bird so much valued by the ancient Egyptians for its utility in freeing the country from serpents, but now no longer found in Egypt. Mr Bruce found a bird in Abyssinia, which, after comparing it with the description of the ancient writers, and the embalmed ibis of Egypt, he concludes is the same with the Egyptian ibis. It is minutely described by Mr Bruce. It has a beak shaped like that of a curlew, two thirds straight, and the remaining third crooked; the upper part of a green horny substance, and the lower part black. It measures four inches and an half from the occiput to the place where it joins the beak. The leg, from the lower joint of the thigh to the foot, is six inches; the bone round and very strong; and from the lower joint of the thigh to where it joins the body, is five inches and an half. The height of the body from the sole to the middle of the back is 19 inches; the aperture of the eye one inch; the feet and legs black; three toes before armed with sharp and straight claws; and a toe behind. The head is brown, and the plumage of the same colour down to the back, or the place where the neck and back are joined. The throat is white, as well as the back, breast, and thighs; the largest feathers of the wing are of a deep black for 13 inches from the tail; and six inches up the back from the extremity of the tail is black likewise.

TANTALUS'S CUP. See **HYDROSTATICS**.

* **TANTAMOUNT**. *n. f.* [French.] Equivalent.—If one third of our coin were gone, and men had equally one third less money than they have, it must be *tantamount*. *Locke*.

TANTANEH, a mountain of Africa, which is the S. bound of the desert of Berdoa.

TANTCHONG, a town of Asia, in Corea.

TAN TCHOU TCHING, a town of Formosa, or the W. coast. Lon. 138. 35. E. Ferro. Lat. 25 8. N.

TAN TIE KAN, a town of China, of the 3d rank, in the province of Kiang nan; 25 mile NW. of Non-kong.

* **TANTIVY**. *adv.* [from the note of a hunting horn]

horn, so expressed in articulate sounds. From *Tanta vi*, says *Skinner*. To ride *tantivy* is to ride with great speed.

* **TANTLING**. *n. f.* [from *Tantalus*.] One seized with hopes of pleasure unattainable.—

To be fill hot Summer's *tantlings*, and
The shrinking slaves of Winter. *Shak.*

TANTUMQUERI, a town of Africa, in the country of Pantin, on the Gold Coast. The British and Dutch have each a fort in it.

TANUM, a town of Sweden, in W. Gothland: 31 miles NW. of Uddevalia.

TANUO, a town of Peru, in Lima.

TANUSIUS GERMINUS, a Latin historian, of the Augustan age; intimate with Cicero. *Seneca*. His works are lost.

TANXIPE. See **TAMPICE**.

TAN-YANG, a town of China, of the 3d rank, in the prov. of Kiang-nan; 12 miles S. of Tching-kiang.

TAN-YARD, *n. f.* [*tan* and *yord*.] The ground where a tannery is erected. See **TANNERY** and **TANNING**.

TANZY. See **TANACETUM**, and **TANSY**.

TAO, a town of China, of the 2d rank, in the province of Hou-quang; 920 miles S. of Peking.

TAOLOUSAC. See **TA**, N^o 4.

TANEROA. See **POVERTY BAY**.

TAOO, the most Southern of the **FRIENDLY ISLANDS**, in the S. Pacific Ocean. It is 30 miles in circuit, and so high as to be visible 36 miles distant. It has good anchorage on the NW. side. The water on the coast is brackish, but there are several springs of pure water within the island, and one rivulet. The SE. side is rocky, but the NW. abounds with plantations of trees, &c. and exhibits a beautiful landscape.

TAORMINA, a town of Sicily, in the valley of Demona, on a rock considerably above the sea level, surrounded by other rocks, the height of which is still greater. It is 88 miles S. of Messina, and was founded by a colony from Naxos, who chose it for the security which it would afford. It is also very salubrious. The road to it, up the N. side of the hill on which it stands, is very steep. The colony settled at the foot of *Ætina*, near the shore, about 3 or 4 miles from the present situation of Taormina. Dionysius I. attacked this colony, and took their city. The inhabitants retired to the rocks of Mount Taurus; among which they found a tract of ground sufficiently level, and of sufficient extent to build upon, where they might be secure from every attack. Here, therefore, they built a city; which, after mount *Taurus*, they named **TAUROMINIUM**. It was at length raised to a very flourishing state by trade, and became celebrated as a seat of the arts; of which there are still many relics; particularly a spacious theatre, a tomb, and a large natural grotto. The grotto appears to have been anciently adorned within with artificial ornaments. It was probably consecrated by the Greeks to the **NYMPHS**, or to **PALES**, the protectress of flocks. After the inhabitants of Taormina embraced Christianity, they still continued to visit this grotto with devout veneration; but they substituted St Leonard for the sportive nymphs. But this grot-

to is now black and smoky; and few remains of the Greek paintings with which it was once ornamented can be distinguished. There are also to be seen near it, a variety of tombs, the remains of a gymnasium, with a number of other monuments.

TAOSANLU, a town of Asiatic Turkey, in Natolia: 20 miles NW. of Kiutaja.

TAOUKA, one of the Society Islands, in the S. Pacific Ocean. Lon. 145. 9. W. Lat. 14. 30. S.

TAO-YUEN, two towns of China, of the 3d rank; 1. in Hou-quang, on the Yuen, 15 miles W. of Tchang-te; 2. in Kiang-nan, on the Hoang, 25 miles NW. of Hoai-gan.

* **TAP**. *n. f.* [from the verb.] 1. A gentle blow. —This is the right fencing grace, *tap* for *tap*. *Shu*. —Each shakes her fan with a smile, then gives her right hand woman a *tap* upon the shoulder. *Spectator*.

As at hot cockles once I laid me down,
And felt the weighty hand of many a clown,
Buxoma gave a gentle *tap*. *Gay*.

So Hiron leeches, when their patient lies
In feverish restlessness with unclos'd eyes,
Apply with gentle strokes their softer rod,
And *tap* by *tap* invite the sleepy god. *Hartie*.

2. A pipe at which the liquor of a vessel is let out. —A gentleman was inclined to the knight of Gascogne's distemper, upon hearing the noise of a *tap* running. *Derbam*.

* **To TAP**. *v. a.* [*tappen*. Dutch; *tapper*, Fr.] 1. To touch lightly, to strike gently. 2. [*Tappen*, Dutch.] To pierce a vessel; to broach a vessel, It is used likewise of the liquor.—

That blood already like the pelican,
Hast thou *tapt* out. *Shak.*

—He has been *tapping* his liquors. *Addison*. —Wait till the tumour becomes troublesome, and then *tap* it with a lancet. *Sharp*.

TAPACRI, a province of Peru.

TAPANA TEPEQUE, a town of Mexico, in Guaxaca, at the foot of Mount Quelenos, on a bay of the S. Pacific Ocean. The adjacent country abounds with orange, lemon, citron, fig, and other fruit trees.

TAPARICA, a long island on the W. coast of Brasil, at the entrance into All-Saints bay.

TAPAROOPLY, a town of Sumatra, with an English factory. It was taken by the French, during the German war; but restored at the peace in 1763.

TAPATACSO, a town of Thibet; 45 miles NE. of Lassa.

TAPAYO, a town of Peru, on the S. bank of the Amazon, E. of the mouth of the Madeira.

* **TAPE**. *n. f.* [*tappan*, Saxon.] A narrow fillet or band of linen.—

Will you buy any *tape*, or lace for your cap? *Shak.*

This pouch that's ty'd with *tape*
I'll wager that the prize shall be my due. *Gay*.
Once on a stock bed, but repair'd with straw,
With *tape* ty'd curtains. *Pope*.

(1.) * **TAPER**. *adj.* [from the form of a taper.] Regularly narrow from the bottom to the top; pyramidal; conical.—

Her *taper* fingers, and her panting breast. *Dryd*.
S 2 —From

—From the beaver, the otter differs in his tail, which is feline, or a long *taper*. *Creux*.

(2.) *TAPER*, or *TAPERING*, is understood of a piece of timber, or the like, when thick at one end and gradually diminishing to the other; as is the case in pyramids, cones, &c.

(3.) * *TAPER*. *n. f.* [*taper*, Saxon.] A wax candle; a light.—

Get me a *taper* in my study, Lucius. *Shak.*

My daughter and my little son we'll dress

With rounds of waxen *tapers* on their heads. *Shak.*

—If any snatch the pure *taper* from my hand, and hold it to the devil, he will only burn his own fingers. *Taylor*.—

There the fair light,

Like Hero's *taper* in the window plac'd. *Wall.*

Heav'n, as if there wanted lights above,

For *tapers* made two glaring comets rise. *Dryd.*

(4.) *TAPER* also denotes a kind of tall wax candle, placed in a candlestick, and burnt at funeral processions, and in other church solemnities. *Tapers* are made of different sizes; in some places, as Italy, &c. they are cylindrical; but in most other countries, as England, France, &c. they are conical or taper; whence the name; unless we derive it in the adjective sense, from the substantive *taper*, Saxon, *taper* or *tapon*, *ceruus*, wax candle. Both kinds are pierced at bottom for a pin in the candlestick to enter.—There are two ways of making tapers, the first with the ladle, the second by hand; for which, see *CANDLE*, § 8.

(5.) *TAPER*, *PASCHAL*, among the Romanists, is a large taper, whereon the deacon applies 3 bits of frankincense, in holes made for the purpose, in form of a cross; and which he lights with new fire in the ceremony of Easter Saturday. The Pontifical makes Pope Zosimus the author of this usage; but Baronius will have it more ancient, and quotes a hymn of Prudentius to prove it. F. Papebroch gives the original of the paschal taper, in his *Conatus Chronico-Historicus*, &c. Though the council of Nice regulated the day whereon Easter was to be celebrated, it enjoined the patriarch of Alexandria to make a yearly canon thereof, and to send it to the pope. As all the other moveable feasts were regulated by that of Easter, a catalogue of them was made every year; and this was written on a consecrated taper, *ceruus*. This taper, according to the abbot Chastelain, was not made to be burnt; it had no wick, and was only a column of wax, made to write the list of moveable feast; on, for a year. For the ancients, when any thing was to be written to last for ever, engraved it on marble or steel; when it was to last a long while, they wrote it on Egyptian paper; and when it was only to last a short time, they wrote it on wax. They came at last to write the moveable feasts on paper, but they still fastened it to the paschal taper.

• (6.) *TAPER*, *TIMBER*, &c. TO MEASURE. See *SLIDING RULE*.

* *To TAPER*. *v. n.* To grow gradually smaller, —The back is made *tapering* in form of a pillar, the lower vertebrae being the broadest and largest.

Ray.—

Such be the dog,
With *tapering* tail.

Tichel.

TAPER-BORED, *adj.* [*taper* and *bored*.] is applied to a piece of ordnance when it is wider at the mouth than towards the breech.

(1.) * *TAPESTRY*. *n. f.* [*tapestrie*, *tapisserie*, *tapis*, Fr. *tapetum*, Lat.] Cloth woven in regular figures.—

In the desk

That's cover'd o'er with Turkish *tapestry*.

There is a purse of ducats. *Shak.*

Horses' hoofs, for earth, on filken *tapestry* tread. *Dryden.*

—One room is hung with *tapestry*. *Addison*.

(2.) *TAPESTRY* is a kind of cloth made of wool and silk, adorned with figures of different animals, &c. and formerly used for lining the walls of rooms, churches, &c.

(3.) *TAPESTRY*, *HISTORY OF THE ART OF WEAVING*. The art of weaving tapestry is borrowed from the Saracens; accordingly the workmen employed in this manufacture in France were formerly called *Saracens* or *Saracinois*. Guicciardini ascribes the invention of tapestry hangings to the inhabitants of the Netherlands; but he has not mentioned at what time the discovery was made. This art was brought into England by William Sheldon, near the end of Henry VIII.'s reign. In 1619 a manufacture was established at Mortlake, in Surrey, by Sir Francis Crane, who received L. 2000 from King James to encourage it. The first manufacture of tapestry at Paris was set up under Henry IV. in 1606 or 1607, by several artists whom that monarch invited from Flanders. Under Lewis XIV. the manufacture of the Gobelins was instituted, which introduced very beautiful cloths, remarkable for strength, for elegance of design, and a happy choice of colours. The finest paintings are copied, and eminent painters have been employed in making designs for the work.

(4.) *TAPESTRY*, *KINDS OF*. Tapestry is distinguished by the workmen into two kinds, viz. *high* and *low warp*; though the difference is rather in the manner of working than in the work itself; which is in effect the same in both; only the looms, and consequently the warps are differently situated, those of the low warp being placed flat and parallel to the horizon, and those of the high warp erected perpendicularly. The English anciently excelled all the world in the tapestry of the high warp; and they still retain their former reputation, though with some little change; their low warps are still admired; but the high ones are quite laid aside by the French. The French, before the Revolution, had three considerable tapestry manufactures besides that of the Gobelins; the first at Aubusson in Ouvergne, the 2d at Felletin in the Upper Marche, and the 3d at Beauvais. They were all equally established for the high and the low warp; but they had all laid aside the high warp excepting the Gobelins. There were admirable low warps likewise in Flanders, generally exceeding those of France; the chief and almost only Flemish manufactures were at Brussels, Antwerp, Oudenard, Lille, Tournay, Bruges, and Valenciennes. The usual widths of tapestry are from 2 to 3 ells Paris measure.

(5.) *TAPESTRY OF THE HIGH WARP*, *MANUFACTURE OF*. The loom on which it is wrought

is

is placed perpendicularly : it consists of 4 principal pieces ; 2 long planks or cheeks of wood, and two thick rollers or beams. The planks are set upright, and the beams across them, one at the top and the other at the bottom, or about a foot from the ground. They have each their trunnions, by which they are suspended on the planks, and are turned with bars. In each roller is a groove, from one end to the other, capable of containing a long round piece of wood, fastened with hooks, to tie the ends of the warp to. The warp, which is a kind of worsted, or twisted woollen thread, is wound on the upper roller ; and the work, as fast as wove, is wound on the lower. Within side the planks, which are 7 or 8 feet high, 14 or 15 inches broad, and 3 or 4 thick, are holes pierced from top to bottom, in which are put thick pieces of iron, with hooks at one end serving to sustain the coatstave : these pieces of iron have also holes pierced, by putting a pin in which the stave is drawn nearer or set farther off ; and thus the coats or threads are stretched or loosened at pleasure. The coatstave is about 3 inches diameter, and runs all the length of the loom ; on this are fixed the coats or threads, which make the threads of the warp cross each other. It has much the same effect as the spring-stave and treddles have in the common looms. The coats are little threads fastened to each thread of the warp with a kind of sliding knot, which forms a sort of *math* or *ring*. They serve to keep the warp open for the passage of broaches wound with silks, woollens, or other matters used in the piece of tapestry. In the last place, there are a number of little sticks of different lengths, but all about an inch in diameter, which the workman keeps by him in baskets, to make the threads of the warp cross each other, by passing them across ; and, that the threads thus crossed may retain their proper situation, a packthread is run among them above the stick. The loom being thus formed, and mounted with its warp, the first thing the workman does is to draw on the threads of this warp the principal lines and strokes of the design to be represented on the piece of tapestry ; by applying cartoons made from the painting he intends to copy to the side that is to be the wrong side of the piece, and then, with a black lead pencil, following and tracing out the contours thereof on the thread of the right side ; so that the strokes appear equally both before and behind. The original design of the work is hung up behind the workmen, and wound on a long staff, from which a piece is unrolled from time to time as the work proceeds. Besides the loom, &c. here described, there are three other principal instruments required for working the silk or the wool of the woff within the threads of the warp ; these are a *broach*, a *reed*, and an *iron needle*. The broach is made of hard wood, 7 or 8 inches long, and two 3ds of an inch thick, ending in a point with a little handle. This serves as a shuttle ; the silks, woollens, gold, or silver, to be used in the work being wound on it. The reed or comb is also of wood, 8 or 9 inches long, and an inch thick on the back, whence it grows less and less to the extremity of the teeth, which are more or less apart, according to the greater or less degrees

of fineness of the intended work. Lastly, the needle, is made in form of the common needle, only bigger and longer. Its use is to press close the wool and silks when there is any line or colour that does not fit well. All things being prepared for the work and the workman ready to begin, he places himself on the wrong side of the piece, with his back towards the design : so that he works as it were *blindfold*, seeing nothing of what he does, and being obliged to quit his post, and go to the other side of the loom whenever he would view and examine the piece, to correct it with his pressing-needle. To put silk, &c. in the warp, he first turns and looks at the design ; then, taking a broach full of the proper colour, he places it among the threads of the warp, which he brings cross each other with his fingers, by means of the coats or threads fastened to the staff ; this he repeats every time he has to change his colour. Having placed the silk or wool, he beats it with his reed or comb ; and when he has thus wrought in several rows over each other, he goes to see the effects they have, in order to reform the contours with his needle, if there be occasion. As the work advances, it is rolled upon the lower beam, and they unroll as much warp from the upper beam as suffices them to continue the piece : the like they do of the design behind them. When the pieces are wide, several workmen may be employed at once. The high warp tapestry goes on much more slowly than the low warp, and takes up almost twice the time and trouble. All the difference that the eye can perceive between the two kinds, consists in this, that in the low warp there is a red fillet, about one 14th of an inch broad, running on each side from top to bottom, which is wanting in the high warp.

(6.) TAPESTRY OF THE LOW WARF, MANUFACTURE OF. The loom or frame, whereon the low warp is wrought, is much like that of the weavers : the principal parts are two strong pieces of wood forming the sides of the loom, and bearing a beam or roller at each end : they are sustained at bottom with other strong pieces of wood in manner of trestles ; and, to keep them firm they are fastened to the floor with a kind of buttresses, which prevent any shaking, though there are sometimes 4 or 5 workmen leaning on the fore-beam at once. The rollers have each their trunnions, by which they are sustained : they are turned by large iron pins, 3 feet long. Along each beam runs a groove, wherein is placed the wick, a piece of wood about two inches diameter, and almost the length of the roller : this piece fills the groove entirely, and is fastened therein, from space to space, by wooden pins. To the two wicks are fastened the two extremities of the warp, which is wound on the farther roller, and the work, as it advances, on the nearer. Across the two sides, almost in the middle of the loom, passes a wooden bar, which sustains little pieces of wood, not unlike the beam of a balance : to these pieces are fastened strings, which bear certain spring-staves, wherewith the workman, by two treddles under the loom whereon he sets his feet, gives a motion to the coats, and makes the threads of the warp rise and fall alternately. Each loom has more or fewer of these spring-staves, and each staff more or fewer coats,

as the tapestry consists of more or fewer threads. The design or painting the tapestry worker is to follow is placed under the warp; where it is sustained from space to space with strings, by which the design is brought nearer the warp. The loom being mounted, two instruments are used in working it, viz. the *reed* and the *flute*. The flute does the office of the weaver's shuttle; it is made of hard polished wood, 3 or 4 lines thick at the ends, and somewhat more in the middle, and 3 or 4 inches long. On it are wound the filks or other matters to be used as the wool of the tapestry. The comb or reed is of wood or ivory; it has usually teeth on both sides; it is about an inch thick in the middle, but diminishes each way to the extremity of the teeth: it serves to beat the threads of the wool close to each other, as fast as the workman has passed and placed them with his flute among the threads of the warp. The workman is seated on a bench before the loom, with his breast against the beam, only a cushion or pillow between them; and, in this posture, separating, with his fingers, the threads of the warp, that he may see the design underneath, and taking a flute, mounted with a proper colour, he passes it among the threads, after having raised or lowered them, by the treddles moving the spring-slaves and coats. Lastly, To press and close the threads of the silk or yarn, &c. thus placed, he strikes each course (i. e. what the flute leaves in its passing and coming back again) with the reed.

• **TAPET.** *n. s.* [*tapetia*, Lat.] Worked or figured stuff.—

To their work they fit, and each doth chuse
What story she will for her *tapet* take. *Spenser*.

TAPE-WORM. See *TENIA*.

TAPHIÆ, in ancient geography, islands in the Ionian Sea, between Achaia and Leucadi, called also *TELEBOIDES*; from *TAPHIUS* and *TELEBOUS*. The Taphians made war against Electryon, king of Mycenæ, and killed all his sons. Upon this he promised his daughter, Alcmena, with his kingdom, to any man, who should avenge him of the Taphians. This was accomplished by Amphitryon. (*Hom. Od. i. 181. &c.*) See *ALCMEANA*.

TAPHIANS, the natives of the *TAPHIÆ*. They were expert sailors, but addicted to piracy. *Plin. iv. c. 12.*

TAPHIASSUS, or } a mountain of Locris, on
(1.) **TAPHIUS**, } the confines of Ætolia.
Lempr.

(2.) **TAPHIUS**, and **TELEBOUS**, in fabulous history, the sons of Neptune, by Hippothoe, the daughter of Nestor: they reigned in the *TAPHIÆ*, and gave their names to them. *Strabo*, 10.

TAPHIUSA, a town near Leucas, famous for a particular stone, called

TAPHIUSIUS. See *Plin. 36. c. 12.*

TAPHRÆ, an ancient town on the isthmus of Taurica Cherfoneus; now called *PREKOP*, *MELA ii. c. 1. Plin. iv. c. 12.*

TAPHROS, the strait between Corsica, and Sardinia; now called *BONIFACIO*.

TAPIA, a town of S. America, in New Grenada, and province of St Martha.

TAPIAN, a town of Prussia, in Samland; 16 miles E. of Königsberg.

TAPINAMBOES, a nation of S. American Indians, in Brazil.

TAPIOCA. *n. f.* a species of starch, which the Brazilians make from the roots of the *Cassia* plant. See *JATROPHA*.

TAPIR, in zoology, the *ELEPHANT HOG*, a genus of quadrupeds of the order of *bellue*, resembling the hippopotamus. The fore feet have each 4 hoofs; the hind feet 3. There is only one species: viz.

TAPIR AMERICANUS, the *American tapir*. The nose of the male extends far beyond the lower jaw, is slender, and forms a sort of proboscis; it is capable of being contracted or extended at pleasure, and its sides are fulcated. The extremities of both jaws end in a point, and there are ten cutting teeth in each. Between them and the grinders there is a vacant space; and there are ten grinders in each jaw. The ears are erect, the eyes small, and the body is shaped like that of a hog. The back is arched; the legs are short; and the hoofs small, black, and hollow. The tail is very small. The animal grows to the size of a hester half a year old. The hair is short: when young, it is spotted with white; when old, of a dusky colour. They inhabit the woods and rivers of the E. side of S. America, from the isthmus of Darien to the Amazon. They sleep during day in the darkest and thickest forest adjacent to the banks, and go out in the night-time in search of food. They feed on grass, sugar-canes, and fruits. If disturbed, they run to the water; and swim very well; or sink below, and, like the hippopotamus, walk on the bottom as on dry ground. They make a sort of hissing noise.—This is the largest of the American animals. See *MEXICO*, § 1, 13.

TAPIRTALA, a town of Chinese Tartary, in Lon. 138. 25 E. Ferro. Lat. 43. 15 N.

TAPLAKEN, a town of Prussia, in Samland, on the Pregel, 24 miles E. of Königsberg.

TAPLOE, or } a small town of England, in
TAPLOW. } Bucks, seated on a hill, on the banks of the Thames, one mile from Maidenhead, and 25 W. by N. of London.

TAPOAMANAO, the name given by the natives to *SIR CHARLES SAUNDERS'S ISLAND*.

TAPOOKAS, a town of the United States, in Georgia, on the Yazoo. Lon. 89. 51 W. Lat. 33. 37 N.

(1.) **TAPOOR**, a river of Hindoostan, which runs into the Cauvery, 4 m. N. of Coveriporum.

(2.) **TAPOOR**, a town of Hindoostan, in the Myfore, 15 miles SSW. of Darampoory, and 8 ESE. of Srīngapam.

TA-POU, a town of China, of the 3d rank, in Quang-ton; 57 miles N. of Tchao-cheou.

TAPPAHANNOCK, or **HOBBS'S HOLE**, a post town and seaport of Virginia, the capital of Essex county; seated on a fertile plain on the SW. bank of the Rappahannock. It is regularly built, and contains about 100 houses, an episcopalian church a court-house, &c. and a court is held the 3d Mon of every month. It exports wheat, flour, Indian corn, tobacco, &c. These amounted, Sept 30. 1794, to 160,673 dollars. It is 30 miles SE of Fredericksburg, 43 NE. of Richmond, and 26 from

from Philadelphia. Lon. 76. 25. W. Lat. 37. 58. N.

(1.) **TAPPAN**, a town of New York, in Orange County, at the S. end of the Bay (N^o 2), where Major Andre was hanged as a spy by the Americans. See AMERICA, § 31; and ANDRE.

(2.) **TAPPAN BAY**, or } a bay of New York, adjoining to Haverstraw Bay on the N. and 35 miles N. of New York. It is 20 miles long, and 4 broad.

(3.) **TAPPING**, *part. n. f.* in general, the act of piercing a hole in a vessel, and applying a tube or canula in the aperture, for the commodious drawing off the liquor contained therein.

(4.) **TAPPING**, in surgery. See SURGERY, *Ind.* **TAPRE**, a valley of Thibet, abounding with borax. See BORAX, § II.

TAPROBANE, an island in the Indian Ocean, now called Ceylon. (See CEYLON.) The ancient inhabitants were rich and long-lived. *Strabo*, 2.

* **TAPROOT**. *n. f.* [*tap* and *root*.] The principal stem of the root.—Some put under the trees raised of seed, about four inches below the place where they sow their seeds, a small piece of tile to stop the running down of the *taproot*, which occasions it to branch when it comes to the tile. *Martiner*.

TAPSON, a town of Aña, in Thibet; 50 miles E. of Tchoutari.

* **TAPSTER**. *n. f.* [*from tap*.] One whose business is to draw beer in an alehouse.—The oath of a lover is no stronger than the word of a *tapster*; they are both the confirmers of false reckonings. *Shak.*—I'll be your *tapster* still. *Shak.*—The vintner and *tapster* may broach what religion they please. *Hazael*.—

The house will never lose its trade:
Nay, though the treacherous *tapster* Thomas
Hangs a new angel two doors from us. *Swift*.

TAPSUS: 1. A maritime town of Africa: (*Sil. Ital.* 3.) 2. A peninsula on the E. coast of Sicily.

TAPTEE, or } a river of Hindostan, formed by the union of several rivulets in Candeish, at Maltoy, 84 miles NW. of Nagpour, and falling into the Gulf of Cambay, 10 or 12 miles below Surat.

(1.) **TAPUYAS**, a river of Brazil which runs into the Amazon.

(2.) **TAPUYAS**, or } a nation of S. Americans.

(3.) **TAPUYES**, } in Brazil, the most considerable who have not been conquered by the Portuguese.

TAPYRI, an ancient nation, who resided near Hyrcania. *Dionys. Perieg.*

(2.) * **TAR**. *n. f.* [*tarre*, Saxon; *tarre*, Dutch; *tiere*, Danish.] Liquid pitch; the turpentine of the pine or fir drained out by fire.—

Then, foaming *tar*, their bridles they would champ. *Spenser*.

—A man will not lose a hog for a halfpennyworth of *tar*. *Camden*.

(2.) * **TAR**. *n. f.* [*from tar* used in ships.] A sailor; a seaman; in contempt.—

In senates bold, and fierce in war,
A land commander, and a *tar*. *Swift*.

(3.) **TAR** (§ 1.) is a thick, black, unctuous substance, obtained chiefly from old pine and fir trees,

by burning them with a close smothering heat. It is prepared in great quantities in Norway, Sweden, Germany, Russia, and North America, and in other countries where the pine and fir abound. For the method of obtaining it, see PINUS, N^o 9. Becher, the celebrated chemist, first proposed to make tar from pit-coal. Manufactures for this purpose have been established many years ago in the ci-devant bishopric of Liege, and in several parts of England. In 1781, the earl of Dundonald obtained a patent for extracting tar from pit-coal by a new process of distillation. (See CHEMISTRY, *Index*, and COAL, § IV.; also Sir J. Sinclair's *Stat. Account*, Vol. IX. p. 278, 279.) Tar, which is well known for its economical uses, is properly an empyreumatic oil of turpentine, and has been much used as a medicine both internally and externally. See MATERIA MEDICA, and PHARMACY, *Index*.

(4.) **TAR, BARBADOES**. See MATERIA MEDICA, under *Petroleum*, and PETROLEUM, § 2. N^o 1.

(5.) **TAR LAKE**, a bituminous lake or plain in the island of Trinidad.

(6.) **TAR, MINERAL**. See MINERALOGY, *Part II. Chap. VI. Class III. Gen. III. Sp. 3*.

(7.) **TAR RIVER**. See PAMlico, N^o 1.

(8.) **TAR WATER**, or water impregnated with the soluble parts of tar, was about a century ago a very popular remedy; but is now almost entirely out of use.

* *To Tar. v. a.* [*from the noun*.] 1. To smear over with tar. 2. To tease; to provoke. [*rag. arru*.] The nation holds it no sin to *tar* them on to controversy. *Shak.*—

Two curs shall tame each other; pride alone
Must tar the mastiffs on. *Shak.*

(1.) **TARA**, a town of Russia, in Tobolskoi, on the Irtysh; 210 miles E. of Tobolsk, and 264 WNW. of Kolivan. Lon. 92. 19. E. Ferro. Lat. 57. 0. N.

(2.) **TARA**, a mountain of Ireland, in Wexford, near the coast; 4 miles NE. of Newborough.

TARABILIS. See TRIPOLI, N^o 2.

TARABLUS, or } ancient names of Tripoli in

TARABOLUS, } Syria. See TRIPOLI, N^o 3.

TARABOSAN. See TREBISOND.

TARACASSA, a district of BUENOS AYRES.

TARACON, a city of Spain, in Arragon, anciently called Tyriafona, seated at the foot of Mount Moncayo, on the Chiles.

TARAGA, a town of Spain, in Catalonia.

TARAGALA, a town of Africa, in Tafilet, on the Dras, with a castle, 275 miles SW. of Tafilet. Lon. 6. 3. W. Lat. 27. 40. N.

TARAGALE, or } a town of Africa, in the

TARAGOK, } kingdom of Darah.

TARAH, a town of Ireland, in Meath, 19 miles from Dublin. Triennial parliaments were anciently held in it.

TARAHUMARY, a province of Mexico, 1200 miles from Mexico.

TARAKLI, a town of European Turkey, in Bessabia; 24 miles SSW. of Bender.

TARAMA, a district of Peru, in Ljma.

TARAMEH, a town of Egypt, 2 m. NE. Tineh.

TARAMUND, a town of Spain, in Asturia; 45 miles W. of Oviedo.

TARANIS,

TARANIS, a name of Jupiter, among the ancient Gauls. *Lucan*, i. 146.

TARANNON, a river of N. Wales, in Montgomeryshire, which runs into the Severn, 5 miles N. of Newton.

TARANSA, or } one of the WESTERN
TARANSAY, } ISLANDS of Scotland, in the cluster called the *Harris Islands* (See **HARRIS**, N° 3.) It is high and rocky, 4 miles long, and from 1 to 3 broad. Having little soil, the natives are chiefly employed in fishing and making kelp. It has relics of religious houses, and is 5 miles NE. of Toe Head. Lon. 5. 48. W. of Edinburgh. Lat. 58. 2. N.

TARANTA, a high mountain of Abyssinia. On the top is the village HALAI, inhabited by shepherds, who keep the flocks of the rich people of the town of Dixan below.

TARANTO, the ancient **TARENTUM**, a sea port town of Naples, in Otranto. It is a strong and populous place, with an archbishop's see, and the title of a principality. It is seated on a peninsula, and is defended by a strong castle; but the harbour is choked up. It is 50 miles SE. of Bari, 55 NW. of Otranto, and 14 E. by S. of Naples. Lon. 17. 20. E. Lat. 40. 35. N.

TARANTOLA, a town of Naples, in Abruzzo Citra; 10 miles ENE. of Solmona.

(1.) * **TARANTULA**. *n. f.* [Italian; *tarentule*, French.] An insect whose bite is only cured by music.—This word, *lover*, did no less pierce poor Pyrocles, than the right tune of music toucheth him that is sick of the *tarantula*. *Sidney*.—He that uses the word *tarantula*, without having any idea of what it stands for, means nothing at all by it. *Locke*.

(2.) **TARANTULA**, a species of aranea, so called from Taranto, where they abound. See **ARANEA**, § I. 5. N° 12.

TARAPACA, a town of Peru, in Arequipo, seated on a river which runs into the Pacific Ocean, in Lat. 20. 10. S.

TARARE, a town of France, in the dep. of the Rhone and Loire, and ci-devant province of Lyonnois: "seated on the Tordive, at the foot of a mountain (says Dr Brooks) of the same name;" but which name he means (*Tordive* or *Turare*), we know not. Lon. 4. 43. E. Lat. 45. 32. N.

(1.) **TARAS**, a son of Neptune, who built TARENTUM.

(2.) **TARAS**, an ancient name of TARENTUM.

TARASCO, an ancient town of Gaul, now *Tarascon*. See **TARASCON**, N° 2.

(1.) **TARASCON**, a city of France, in the department of Arriège, and ci-devant province of Foix; famous for its manufactures of iron. It is seated on the Arriège, 7 miles SE. of Foix, 42 SW. of Carcassonne, and 48 SW. of Toulouse. Lon. 19. 16. E. Ferro. Lat. 42. 50. N.

(2.) **TARASCON**, an ancient, populous, and handsome town of France, in the department of the Mouths of the Rhone, and late province of Provence, with a well-built castle, seated on the Rhone, opposite Beaucaire, with which it communicates by a bridge of boats. It contains about 7000 citizens. Its commerce is in oil, brandy, starch, and fluffs of coarse silk, and of silk and

wool. It is 10 miles N. of Arles, and 375 S. by E. of Paris. Lon. 4. 45. W. Lat. 43. 46. N.

(3.) **TARASCON**, a town of Spain, in New Castile; 22 miles SW. of Huete.

TARASOVA, a town of Russia, in Irkutskoi, on the Lena; 12 miles S. of Turtura.

TARASSO, a sea port town of Asiatic Turkey, in Caramania, anciently called *Tarsus*. (See **TARSUS**, N° 3.) It is a large town, and is surrounded with a double wall. It is inhabited by Turks, Greeks, and Armenians; and is the see of a Jacobite bishop and a Nestorian archbishop. It lies 105 miles W. of Alexandretta.

TARATATO, a town on the E. coast of Fortaventura, one of the CANARY ISLANDS.

TARAXACUM, in botany, *Dandelion*. See **LEONTODON**, and **MATERIA MEDICA**.

TARAXIPPUS, a deity worshipped in Elis, who superintended the races and other games. His statue was placed near the race ground, and his protection implored to the horses and their riders. *Pauf.* vi. 20.

TARAZ. See **TURKESTAN**, N° 2.

(1.) **TARAZONA**, a strong town of Spain, in Arragon, near Old Castile, with a bishop's see. It is seated partly on a rock, and partly in a fertile plain, on the river Chiles. It was taken and razed by the Moors in 724, rebuilt by them afterwards, but retaken by the Spaniards in 1110. It is 127 miles NE. of Madrid, and 43 NW. of Saragossa. Lon. 1. 26. W. Lat. 42. 10. N.

(2.) **TARAZONA**, a town of Spain, in New Castile; 15 miles S. of Alarcon.

(1.) **TARBAT**, a parish of Scotland, partly in Ross-shire, and partly in Cromarty, comprehending the extremity of the peninsula, formed by the Friths of Cromarty and Dornoch. It is 7½ miles long, and 4½ where broadest, extending 15 miles along the coast, which is mostly bold and rocky, and abounds with numerous caves, lined with stalactitical incrustations. It has a safe harbour at *Port Mahalmack*, where there was a pier, but it is now become ruinous. The surface is irregular, though not billy; the soil is fertile, varying from a rich to a sandy loam. The parish comprehends 5081 acres, of which 2998 are arable, 709 in pasture, 113 moor, 82 muirs, and 165 planted. Marl and free-stone abound. The population, in 1791, was 1370; decrease 214 since 1755. The only feat is that of Mr Macleod of *Geanies*.

(2.) **TARBAT**, or **TARBERT**, a town in the above parish, and county of Cromarty; 6 miles E. of Tain.

(3.) **TARBAT**, *AST*, a town of Scotland, in Argyllshire, on the bay (N° 4.); 25 miles N. of Campbeltown.

(4.) **TARBAT**, *LDCH*, a bay on the N. extremity of Kintyre.

(5.) **TARBAT NESS**, a cape of Scotland, on the E. coast of Ross-shire, between the Friths of Dornoch, Cromarty, and Murray. Lon. 0. 28. W. of Edinburgh. Lat. 57. 50. N.

TARBE. See **TARBES**.

TARBELLE, a name of the PYRENEES, from **TARBELL**, an ancient people of Gaul, at the foot of the Pyrenees. *Cass. de Bell. Gall.*

(1.) **TARBERT**, a town of Ireland, in the county

county of Kerry and province of Munster, 124 miles from Dublin.

(2.) **TARBERT**, a small island, near the above town; between which and the island there is a safe and commodious road for vessels, either bound up the Shannon or outwards.

(3.) **TARBERT**, another island of Ireland, near the W. coast, and county of Galway; 2 miles S. of St. Omey island.

(4.) **TARBERT**, in Scotland. See **TARBAT**, N° 2.

TARBES, a populous city of France, capital of the department of the Upper Pyrenees, as it was of the ci-devant county of Bigorre. It is built on the ruins of the ancient Bigorre; and before the revolution was a bishop's see, and had a magnificent episcopal palace, with a handsome college and an ancient castle, seated on the Adour; 42 miles SW. of Auch, and 112 S. by E. of Bourdeaux. Lon. o. 9. E. Lat. 43. 14. N.

TARBET. See **TARBAT**, and **TARBERT**.

TARBIDO, a river of Naples, which runs into the Mediterranean, 13 miles SW. of Cosenza.

(1.) **TARBOLTON**, a parish of Scotland, in Ayrshire, in the district of Kyle, 8 miles long and 6 broad. Its surface is interperfed with heath-covered hills and marshes; yet great part of it is well cultivated. The population, in 1769, was 1200; the decrease 165, since 1755. The number of sheep was 500; of cows 1600, and of horses, 386.

(2.) **TARBOLTON**, a small but neatly built town in the above parish, containing 450 inhabitants, in 1796, and 2 mason lodges; 9 miles E. of Ayr.

TARBON, a town of Hungary, on the Theye; 14 miles NNE. of Kiswarda.

TARBOROUGH, or } a town of N. Carolina,
TARBURGH, } capital of Edgcombe
county, seated on the W. bank of **TAR RIVER**, 25 miles from its influx into Pamlico Sound. It has a court house, post office, &c. and quarterly courts are held in it. Great quantities of pork, beef, Indian corn, tobacco, &c. are exported. It is 40 miles NW. of Washington, 110 NE. by E. of Fayetteville, and 419 SW. of Philadelphia. Lon. 2. 46. W. of the city. Lat. 35. 47. N.

TARCHON, an Etrurian chief, who assisted *Jæneas* against the Rutuli; and built **TARQUINI**. *Virg. Æn. viii. 603.*

TARCHONANTHUS, FLEA-BANE, in botany: A genus of plants belonging to the class of *syngenesia*, and to the order of *polygamia aqualis*, and in the natural system ranging under the 49th order *Compositæ*. The receptacle is villous, and the pappus plumy; the calyx is monophyllous, turbinate, and half divided into seven segments. There are only 3 species; viz.

TARCHONANTHUS CAMPHORATUS, ERICIBES, and GLABER.

TARCOA, a town of Abyssinia, in Gojam.

* **TARDATION**. *n. s.* [*tardo*, Latin.] The act of hindering or delaying.

TARDETS, a town of France, in the department of the Lower Pyrenees; 6 miles S. of Maubelon, and 12 SW. of Oleron.

* **TARDIGRADOUS**. *adj.* [*tardigradus*, Lat.]

Moving slowly.—It is but a slow and *tardigradous* animal. *Brown.*

* **TARDILY**. *adv.* [from *tardy*.] Slowly; sluggishly.—

Those that could speak slow and *tardily*,
Would turn their own perfection to abuse.

To seem like him. *Shak.*

* **TARDINESS**. *n. s.* [from *tardy*.] Slowness; sluggishness; unwillingness to action or motion.

A *tardiness* in nature,

Which often leaves the history unspoke.

Shakespeare

* **TARDITY**. *n. s.* [*tarditas*, from *tardus*, Lat., *tardivette*, Fr.] Slowness; want of velocity.—Suppose some observable *tardity* in the motion of light. *Digby*.—Our explication includes time in the notions of velocity and *tardity*. *Digby*.

TARDOIRE, a river of France, which runs into the Charente, near Rochefoucault.

TARDOU, a town of Spain, in the province of Cordova; 28 miles SW. of Cordova.

TARDOUERE. See **TARDOIRE**.

TARDSONG, a town of Tibet; 192 miles SSE. of Lassa. Lon. 113. 20. E. Ferro. Lat. 29. 54. N.

* **TARDY**. *adj.* [*tardus*, Lat. *tardif*, French.]

1. Slow; not swift.—

Soule, more swift than motion, climb,

And check the *tardy* flight of time. *Sandys*

2. Sluggish; unwilling to action or motion.—

Behold that navy which a while before

Provok'd the *tardy* English close to fight;

Now draw their beaten vessels close to shore,

As larks lie dar'd to shun the hobbies. *Dryden.*

Tardy to vengeance, and with mercy brave.

Prior.

3. Distort; late; tedious.—

I not ta'en *tardy* by unwise delay. *Shak.*

Death be as oft accus'd

Of *tardy* execution. *Milton.*

The *tardy* plants in our cold orchards plac'd,

Reserve their fruit for the next age's taste.

Wallr.

Tardy of aid, unseal thy heavy eyes. *Dryden.*

—You may censure him for being *tardy* in his payments. *Arbutnot.* 4. Unwary. A low word.—

If thou think'st I took thee *tardy*,

And dar'st presume to be so hardy,

To try thy fortune o'er a-fresh,

I'll wave my title to thy flesh. *Hudibras.*

5. Criminal; offending. A low word.—If they take them *tardy*, they endeavour to humble them by way of reprisal. *Collier.*

* To **TARDY**. *v. a.* [*tarder*, Fr. from the adjective.] To delay; to hinder.—

The good mind of Camillo *tardied*

My swift command. *Shak.*

(1.) * **TARE**. *n. s.* [from *terren*, Dutch, to consume. *Skinner*.] A weed that grows among corn.—Through hatred of *tares*, the corn in the field of God is plucked up. *Hooker*.—Their feed-time was their harvest, and by sowing *tares* they reaped gold. *Decay of Piety*.—My country neighbours begin not to think of the *tares* in their corn. *Locke.*

(2.) **TARE**, or **VETCH**, in botany. See **RURAL ECONOMY**, Part I. *Scd.* VI, and *Vicia*.

T

(3.) * **TARE**.

(3.) * **TARE**, *n. s.* [French.] A mercantile word denoting the weight of any thing containing a commodity; also the allowance made for it.

(4.) **TARE**, in commerce, is an allowance for the outside package that contains such goods as cannot be unpacked without detriment; or for the papers, threads, bands, &c. that inclose or bind any goods, imported loose; or though imported in casks, chests, &c. yet cannot be unpacked and weighed neat.

(5.) * **TARE**, preterite of *tear*.—

The women beat their breasts, their cheeks they *tare*. *Dryden.*

(6.) **TARE**, *VETCH*. See **TARGONIA**.

TARLEFF, a town of Arabia Felix, in Hedsjas; 40 miles NE. of Medina.

TERENGASONG, a town of Asia, in Thibet; 192 miles SSE. of Lassa.

TARENT, a river of England in Dorsetshire, which rises in Stubbhampton, runs through Dorsetshire, where it gives name to 7 villages; See **TARENT CRANFORD**, &c. and falls into the Stour, 3 miles SE. of Blandford.

TARENTEISE, a ci-devant county and province in the late duchy of SAVOY, now included in the French empire, and department of MONT BLANC. It was bounded on the N. by the late lordship of Faucigny, E. by the ci-devant duchy of Aosta; S. by the ci-devant county of Maurienne, and W. by Savoy Proper. It was made a bishopric in the 5th century, and an archbishopric in the 8th. The kings of Burgundy made it a county, and in the end of the 11th century, Humbert II. Earl of Savoy and Maurienne took it, and his descendants and successors held it till 1793, when the whole of Savoy was annexed to the French republic. The soil is barren, and the whole surface mountainous, rugged and full of dreadful precipices. The Isère crosses it from E. to W. **MONSTIER** was the capital.

TARENT-CRANFORD, **TARENT-GUNVIL**, **TARENT-HINTON**, **TARENT-KAINSTON**, **TARENT-LAUNSTON**, **TARENT-MONKTON**, and **TARENT-RUSHTON**, 7 small towns and villages of England, in Dorsetshire, on the banks of the **TARENT**, all NE. of Blandford.

TARENTEZIA. See **TARENTEISE**.

(1.) **TARENTINE**, *adj.* [from *Tarentum*.] Of or belonging to **TARENTUM**.

(2.) **TARENTINES**, *n. s.* the ancient inhabitants of **TARENTUM**, long famous for their bravery, and afterwards equally infamous for their luxury and effeminacy.

(3.) **TARENTINE WAR**, a war which lasted 10 years, between the Tarentines assisted by Pyrrhus, and the Romans. See **EPICURUS**, **ROME**, § 25; **SYRACUSE**, § 17; and **TARENTUM**.

TARENTO, or **TARANTO**, the modern name of the ancient **TARENTUM**.

(1.) **TARENTUM**, } or **TARAS**, an ancient

(2.) **TARENTUS**, } city of Italy, in Calabria, seated near the mouth of the Gaietus, and capital of a republic. It was founded by a colony of Spartans, under Phalanthus, about A. A. C. 707. The government was democratical, though they had occasionally some monarchs. It was for some time the residence of Pythagoras, who taught the citizens his philosophy, inspired them

with the love of virtue, and rendered them superior to their neighbours, both in the cabinet and the field. They were long independent, and maintained their superiority over 13 tributary cities; when they could arm 100,000 foot and 3000 horse. Becoming rich, they grew voluptuous and indolent; so that the *delights of Tarentum* became proverbial. In the pride of their prowess, however, they quarrelled with the Romans, and invited Pyrrhus into Italy. (See **ROME**, § 25.) But the war ended, after 10 years, in the total conquest of their republic, its annexation to that of Rome, and the capture of 30,000 prisoners.

(2.) **TARENTUS**, or **TARENTUM**, BAY OF, a large, beautiful, and capacious bay and harbour of Italy on the coast of Tarentum, greatly celebrated by ancient historians; but now almost entirely choked up. See **TARANTO**.

TAREZA, a river of Hungary, which runs into the Sámos; 20 miles SW. of Tokay.

TARF, a river of Scotland in Kirkcudbrightshire, which rises from **LOCH WIKNOCH**, in the parish of Girthon; and after running 11 miles along the W. side of the parish of Tongland, falls into the Dee, at the S. end of that parish.

TARFE, a town of Egypt; 7 miles W. of Cairo.

(1.) **TARFF**, a river of Scotland in Invernessshire, which rises from **LOCH TARRF**; and, after running about 8 miles, falls into **LOCH NESS**, near the estuary of the Orch, and not far from Fort Augustus.

(2.) **TARFF, LOCH**, a lake of Invernessshire, about 3 miles in circumference, in which are several beautiful woody islands.

TARGA, a town of Fez; 90 miles SE. of Tangiers; near an oyster fishery, with a castle on a rock, in a plain surrounded by mountains and forests, abounding with monkeys, and with good wells and pastures. Lon. 4. 46. W. Lat. 35. 20. N.

* **TARGE**. } *n. s.* [*targa*, Saxon; *targe*,

(1.) * **TARGET**. } Italian; *targe*, French; *tarian*, Welsh, which seems the original of the rest; an *taargett*, Erse.] A kind of buckler or shield born on the left arm. It seems to be commonly used for a defensive weaponless in circumference than a shield.—

An open gash therein, were't not his *targe*

That broke the violence. *Spenser.*

I took all their seven points in my *target*. *Shak.*

Henceforward will I bear

Upon my *target* three fair shining furs. *Shak.*

—The arms the sixth most is the *target*. *Howel.*—

Those leaves

They gather'd, broad as Amazonian *targe*. *Milt.*

The Greeks the gates approach'd, their *targets* cast

Over their heads. *Derham.*

(2.) **TARGET**, in war. See **SHIELD**.

(3.) **TARGET**, in geography, a town of France, in the dep. of Allier; 4½ miles S. of Montmarault.

* **TARGETIER**, *n. s.* [from *target*.] One armed with a *target*.—

For horsemen and for *targetiers* none could
with him compare. *Chapman.*

TARGIONIA, in botany; a genus of plants belonging to the class of *cryptogamia*, and natural order

order of *alge*. The calyx is bivalved, including a globular body. There is only one species; viz.

TARGIONIA HYPOPHYLLA, the *Vetch Tare*, a native of Great Britain. It has leaves about a quarter of an inch long, of a heart-shape, inverted and growing prostrate in a clump together; their upper surface is green, covered with whitish papillæ, and their lower surface is black. The fructification grows at the great end of the leaf on the lower side, and consists of two concave valves of a reddish black colour, inclosing a chocolate coloured globule, resembling the seed of a tare or vetch, full of a yellow powder. The leaves increase by shooting out young offsets from their sides like the polyposus. This plant is found in the N. of England, and near Tarbat of Kintyre in Scotland.

TARGON, a town of France in the dep. of Gironde, and district of Cadillac; 6 miles NE. of Cadillac.

TARGOROD, a town of European Turkey in Moldavia; 50 miles SW. of Jassy. Lon. 26. 29. E. Lat. 46. 49. N.

TARGOVISCO, or **TERGOTISCO**, a city of European Turkey, capital of Walachia; seated on the Launitz, 70 miles SE. of Hermanstadt, and 188 NE. of Belgrade. Lon. 25. 26. E. Lat. 45. 45. N.

TARGOWISKA, a town of the ci-devant republic of Poland, in the palatinate of Volhynia, 9 miles S. of Lucko; now annexed to Russia.

(1.) * **TARGUM**. *n. s.* [Heb.] A paraphrase on the pentateuch in the Chaldee language.

(2.) **TARGUM** signifies *paraphrases* or *expositions*, because they are rather comments and explications than literal translations of the text. They are written in the Chaldee tongue, which became more familiar to the Jews after their captivity in Babylon, than the Hebrew itself. But though the custom of making these expositions in the Chaldee language be very ancient among the Hebrews, yet have they no targums before the era of Jonathan and Onkelos.

i. *The TARGUM OF JERUSALEM* is only upon the Pentateuch; nor is that entire or perfect.

ii. *The TARGUM OF JONATHAN*, the son of Uziel is upon the greater and lesser prophets. He flourished under Herod the Great, about A.A.C. 30.

iii. *The TARGUM OF JOSEPH THE BLIND* is upon the Hagiographa. This author is much more modern; and less esteemed than those above-mentioned.

iv. *The TARGUM OF ONKELOS* is the most of all esteemed, and copies are to be found in which it is inserted verse for verse with the Hebrew. It is so short and so simple, that it cannot be suspected of being corrupted. This paraphrast wrote only upon the books of Moses; and his style approaches nearly to the purity of the Chaldee, as it is found in Daniel and Ezra. This targum is cited in the Mishna, but was not known either to Eusebius, St Jerome, or Origen. See **ONKELOS**.

TARI, a river of Africa, on the Slave Coast, which runs through the kingdom of Popo.

TARICHÆUM, a fortified town of Judæa. *Cicero ad Div. xii. c. 14.*

(1.) * **TARIF**. *n. s.* [perhaps a Spanish word; *tarif*, Fr.] A cartel of commerce.—This branch

of our trade was regulated by a *tariff*, or declaration of the duties of import and export. *Addis.*

(2.) **TARIF** is a table or catalogue containing the names of different sorts of merchandize, with the duties to be paid as settled by authority among trading nations.

TARIFFA, a sea port town of Spain, in Seville, on a bay so named, on the N. side of the Straits of Gibraltar; fortified with walls, towers, and a castle. By the Romans it was called **JULIA TRADUCTA**, and *Julia Jozza*; and afterwards *Tariffa* by the Moors. It is 27 miles SSE. of Medina Sidonia, and 17 WSW. of Gibraltar. Lon. 5. 40. W. Lat. 30. 0. N.

TARIN, Peter, a French physician and author, born at Courtenai, about the end of the 17th century. He published, 1. *Adversaria Anatomica*, 4to. 2. *An Anatomical Dictionary*, 4to. 3. *Osteographia*, 4to. 4. *Anthropomia*, or the Art of Dissecting: 2 vols. 12mo. 5. *A Treatise on Ligaments*; 6. *Observations on Medicine and Surgery*; 3 vols. 12mo; and 7. *A Description of the Muscles*; 4to. He died in 1761.

TARINGASONG, a town of Thibet, 17 miles SSE. of Lassa, and 106 N. of Ghergong. Lon. 93. 0. E. Lat. 28. 6. N.

TARINURAK, a river of Russia, which runs into the Lena; in Lon. 142° E. Ferro. Lat. 61° N.

TARITO, a town of Asia, in Thibet; 33 miles SE. of Tchontori.

TARKA, a mountain of Transylvania; 28 miles NNE. of Udvarhely.

TARKI, } 2 towns of Hungary; 1st. 15 miles
TARKO, } NNW. of Topolitzau; 2d. 6 miles
ESE. of Szeben.

TARKU, a city of Asia, capital of Daghestan; on the W. coast of the Caspian Sea; 52 miles SE. of Derki, 130 N. of Schamachie, 260 S. of Astracan and 300 NE. of Tauris. Lon. 47. 5. E. Lat. 45. 50. N.

(1.) **TARLAND**, a parish of Scotland, in the W. part of Aberdeenshire; united with that of *Migvie*. Excepting the lands surrounding the village, which are level, the greater part of the surface is mountainous, and the climate cold. The mountains are mostly covered with heath, and afford good pasture for sheep, and in some places good grafs for black cattle. They also abound with game. The population, in 1792, was 1100; decrease 200, since 1755. The parish is watered by the *Deskry*, and a part of it lying in that of Strathdon is watered by the *Don*.

(2.) **TARLAND**, a borough of barony in the above parish, nearly in the centre of the district of Cromar, seated on the banks of the *Deskry*. It has a weekly market, and 6 annual fairs, and contained 150 inhabitants in 1792.

TARLETON, Richard, a celebrated English actor, born about the beginning of the 16th century at Condover, in Shropshire; whence he was brought to London, and patronized by Robert Earl of Leicester. Stowe says he was one of the 12 whom, in 1583, Q. Elizabeth appointed her players at Barn-Elms; allowing them wages and liveries as grooms of the chambers. He wrote a dramatic piece, called *The Seven Deadly Sins*. He died about 1589.

(1.) **TARMA**, a town of Africa, in Egypt, on the isthmus of Suez. It was taken by the Saracens, under Amru. See **SARACENS**, § 3.

(2.) **TARMA**, a province or jurisdiction of Peru, situated on the N. of Atun-Xauxa, 90 miles from Lima, to which diocese it belongs. The climate is temperate and the soil fertile, except towards the mountains, where it is cold. It abounds with black cattle and silver mines.

TARMON, a mountain of Ireland, in Mayo.

TARMON-BARRY, a town of Ireland, in the county of Roscommon, in Connaught, with a bridge; 64 miles from Dublin.

(1.) * **TARN**. *n. s.* [*tiorn*, Islandick.] A bog; a fen; a marsh; a pool; a quagmire.

(2.) **TARN**, in geography, a department of France, formed out of the ci-devant province of **LANGUEDOC**. It is bounded on the N. and NE. by the dep. of the Aveyron; SE. by that of Hérault; S. by that of the Aude; and W. by those of Upper Garonne and Lot. It extends 47 miles from N. to S. and about as far from E. to W. besides a mountainous tract 7 miles broad, from Caune to St Gervais, which extends 15 miles farther East. **CASTRES** is the capital.

(3.) **TARN**, a river of France which rises in the mountain and department of Lozère, runs through the above department (N° 2,) to which it gives name, from E. to W. passes by Florac, Ispahac, St Emirie, Compyre, Milhaud, St Rome, Lisle, Gaillac, Rabastens, Villemer, Montauban, and other towns, and falls into the Garonne near Moissac, in the dep. of the Lot.

TARNAK, a town of France, in the dep. of Correze; seated on the Vienne, 25 miles E. of Limoges, and 25 N. of Tulle.

TARNAVAY, a town of Hindoostan, in Calicut; 20 miles NE. of Paniany.

(1.) * **To TARNISH**. *v. a.* [*ternir*, French.] To fully; to soil; to make not bright.—Let him pray for reformation, that he may discover nothing that may *tarnish* the glory of the suffering. *Collier*.

Low waves the rooted forest, vex'd, and sheds
What of its *tarnish'd* honours yet remain. *Thom.*

(2.) * **To TARNISH**. *v. n.* To lose brightness.—A fine object should *tarnish* by having many see it. *Collier*.

TARNOGROD, a town of the ci-devant republic of Poland, in the palatinate of Belz and late province of Red Russia, now in the new Austrian province of GALICIA.

TARNOWITZ, a town of Silesia, in Oppeln, near a silver mine; 6 miles N. of Beuthen, and 38 SE. of Oppeln. At this town Augustus II. on his election to the crown of Poland, in 1697, gave audience to the ambassadors sent to him on that occasion; and in 1734, a similar interview upon a similar occasion was held by Augustus III. with a splendid embassy from Poland.

(1.) **TARO**, a river of Italy, which rises in the S. part of the ci-devant duchy of Parma, and runs into the Po, 9 miles E. of Russeto.

(2.) **TARO**, or **VAL DI TARO**, a valley in the late duchy of Parma, on the banks of the above river, now annexed to the Italian kingdom, or ci-devant republic.

(3.) **TARA**, a borough in the above valley, of

which it is the capital; seated on the **TARO**; 25 miles SW. of Parma. Lon. 10. 9. E. Lat. 44. 40. N.

TARODANT, or **TARUDANT**, a city of Morocco, capital of the province of Sus; seated near the Atlantic Ocean, 120 miles S. of Morocco. (See **SUS**, N° 1.) Lon. 8. 10. W. Lat. 30. 0. N.

TAROGA, or **TARAGA**, a town of Spain, in Catalonia, seated on a hill, near the Cervera; 5 miles W. of Cervera, 15 from Lerida, and 30 N. of Tarragona.

TAROM, a town of Persia, in the province of Laristan; 69 miles NW. of Lar.

TARON, a town of Persia, in the province of Adirbeizzen; 129 miles SE. of Tauris.

TAROONCHI, a town of Hindoostan, in the Mysore, now belonging to Great Britain; 15 miles SSW. of Chinna Balabaram.

TAROUC YAMPSON, a lake of Thibet, 53 miles in circuit. Lon. 102. 44. E. Ferro. Lat. 30. 31. N.

TAROUT, a town of Arabia, in the province of Hadjar; 32 miles SE. of Catif.

TARPA, Spurius Martius, a Latin critic in the time of Julius Cæsar and Augustus. He had his tribunal in the temple of Apollo, where, with four assistants, he passed sentence on the works of the poets, which, after his approbation, were deposited in the temple of the muses. Cicero and Horace make honourable mention of this critic. He also reviewed the plays.

TARPAULIN. See the next article.

* **TARPAWLING**. *n. s.* [from *tar*.] 1. Hempen cloth smeared with tar.—

Searchcloth matts with strong *tarpawling* coats. *Dryden*.

2. A sailor, in contempt.—Was any thing wanting to the extravagance of this age, but the making a living *tarpawlin* and the swabber the hero of a tragedy? *Dennis*.

TARPEIA, a vestal virgin, who betrayed the citadel of Rome to the Sabines; for which, by a voluntary mistake, they rewarded her with death. See **ROME**, § 6.

TARPEIAN ROCK, in Roman antiquity, a steep rock in Rome; whence, by the law of the XII. tables, those guilty of certain crimes were precipitated. It took its name from **TARPEIA**, who was burned near it.

TARPEIUS MOWS, the **TARPEIAN bill**, on which stood the **TARPEIAN ROCK**. (See last article.) It was 80 feet perpendicular in height. It was also called **CAPITOLINUS**, from the **CAPITOL** being built on it.

TARPOUJA, a large lake of Thibet; 66 miles in circuit. Lon. 99. 40. E. Ferro. Lat. 30. 31. N.

TARQUIN I. king of Rome, succeeded Ancus Martius A. A. C. 615. See **ROME**, § 10.

TARQUIN II. furnished the *Proud*, a tyrant and usurper. See **ROME**, § 12—16.

TARQUINIA, the daughter of **TARQUIN I.** and the wife of Servius Tullius. After the murder of her husband, (see **ROME**, § 11.) she buried his body, and died of grief the night following. Others say that she was poisoned by the parricide Tullia.

TARQUINIENSES, the ancient inhabitants of **TAR-**

TARQUINI. They endeavoured to restore Tarquin II. See **ROME**, § 14.

TARQUINI, an ancient city of Etruria, built by **TARCHON**, an ally of **Æneas**. **LUCUMO**, the Corinthian, was educated in it, took his surname *Tarquinus* from it; and after he became king of Rome, by the name of **TARQUIN I.** made it a Roman colony. (*Strabo*. 5.) It is now called **TARCHINA**.

(1, 2.) **TARQUINIUS I. & II.** See **TARQUIN**.

(3.) **TARQUINIUS**, **LUCIUS**, **COLLATINUS**, one of the two first consuls of Rome, the husband of **LUCRETIA** and colleague of **BRUTUS**. See **COLLATINUS**, and **ROME**, § 12—14.

TARQUITUS, a son of **Faunus** and **Dryope**; who assisted **Turnus** against **Æneas**, and was killed by the latter. *Virg. Æn.* x. v. 550.

TARRACINA, or **ANXUR**, an ancient city of the Volsci, between Rome and Naples; (see **ANXUR**;) now called **TERRACINA**.

TARRACO, in ancient geography, a city of **HISPANIA TARRACONENSIS**, of which it was the capital, founded by the Phœnicians; and planted with a Roman colony by the two **Scipiones Africanus**, and seated on the coast of the Mediterranean. It is now called **TARRAGONA**.

TARRACONENSIS HISPANIA, an ancient Roman province of Spain, called also *Hispānia Citra*, or *Citerior*, in respect of its situation as to Rome. (See **HISPANIA**.) It was bounded on the N. by the Pyrenees and the Cantabrian Sea, now the Bay of Biscay; on the E. by the Mediterranean; S. by Lusitania, and Hispania Bætica; and W. by the Atlantic Ocean. (See **BÆTICA**.) It was famous for its wines. **TARRACO** was the capital. It comprehended Catalonia, and some adjacent districts. See **CATALONIA**.

(1.) * **TARRAGON**. *n. f.* A plant called herb-dracō.

(2.) **TARRAGON**. See **ARTEMISIA**, § III, N° 4.

TARRAGONA, an ancient city of Spain, in Catalonia, of which province it is the *metropolis*, and the see of an archbishop. It is seated on a rising ground, on the coast of the Mediterranean, at the mouth of the river **Francoli**. It has many relics of Roman antiquity, though much defaced; is surrounded with walls built by the Moors, and defended by regular bastions, but not in good repair. It has a grand Gothic cathedral, of vast dimensions, and elegant architecture; with a magnificent chapel, built with marble and jasper, dedicated to *S^t Tóclea*. But the city is neither so large nor so populous as it was anciently; for, by its dimensions within the walls, it might contain 2000 houses, whereas there are not above 500. But they are all built with large square stones; and it has an university; with a considerable trade in corn, wine, oil, flax, &c. It is 35 miles NE. of Tortosa, 38 SW. of Barcelona, 98 ESE. of Saragossa, and 220 E. by N. of Madrid. *Lon.* 1. 13. E. *Lat.* 41. 8. N.

TARRANTIUS, **LUCIUS**, an ancient Roman mathematician and philosopher, who was cotemporary with Cicero, and was one of his friends. He has been styled the *Prince of Astrologers*. He made two famous *Horoscopes*; the one of *Romulus*, the other of *Rome*.

TARRAS, a river of Scotland, in Dumfries-

shire, which rises in the parish of Ewes, and falls into the *Esk* 3 miles below Langholm. It is remarkable for its precipitous channel and beautiful romantic scenery.

TARRASA, a town of Spain in Catalonia; 13 miles N. of Barcelona.

TARRATZ POINT, a cape on the N. coast of St Vincent. *Lon.* 65. 16. W. *Lat.* 13. 24. N.

TARREGA, or **TAROGA**. See **TAROGA**.

* **TARRIANCE**. *n. f.* [from *tarry*.] Stay; delay; perhaps sojourn.—

I am impatient of my *tarrance*. *Shak.*

(1.) * **TARRIER**. *n. f.* [This should be written *terrier*, from *terre*, French, the earth.] 1. A sort of small dog, that hunts the fox or otter out of his hole.—The fox is earthed; but I shall send two *tarriers* in after him. *Dryden*, 2. One that tarries or stays.

(2.) **TARRIER**, or **TERRIER**, in zoology. See **CANIS**, § I, IV, N° 12.

TARRING, a town of England, in Suffex; with a market on Sat. 17 miles W. of Brighton, and 57 S. of London.

TARRACK, *n. f.* in ornithology. See **LARUS**, N° 11.

(1.) * *To TARRY*. *v. a.* [*targir*, French.] 1. *To stay*; to continue in a place.—

Tarry I here, I but attend on death. *Shak.*

I dare not die, but fain would *tarry* here.

Dryden.

2. *To delay*; to be long in coming.—Make no *tarrying*, O God! *Psal.*—They that *tarry* long at the wine. *Prov.* xxiii. 30. 3. *To wait*; to expect attending.—*Tarry* ye here for us. *Exod.* xxiv. 14.

(2.) * *To TARRY*. *v. a.* *To wait for*.—I cannot *tarry* dinner. *Shak.*

TARRY-TOWN, a town of New York, where major André was apprehended. See **ANDRE**.

(1.) * **TARSEL**. *n. f.* A kind of hawk.—

Hilt! Romeo, hilt! O for a falconer's voice,

To lure this *tarsel* gentle back again. *Shak.*

Of *tarsels* and of lures he talks. *Prior.*

(2.) **TARSEL**. See **FALCO**, and **FALCON**, § 2.

TARSHISH, or **TARTESSUS**, a town frequently mentioned by ancient authors, the situation of which it is difficult to ascertain. See **INDIA**, § 3.

TARSIA, a town of Naples, in Calabria *Citra*; 7 miles N. of Bisignano.

TARSUS, a river of Troas. *Strabo*.

(1.) * **TARSUS**. *n. f.* [*ταρσος*; *tarsé*, Fr.] The space betwixt the lower end of the fossil bones of the leg, and the beginning of the five long bones that are jointed with, and bear up the toes; it comprises 7 bones and the 3 *ossa cuneiformia*. *Dis.*—An obscure motion where the conjunction is called *synarthrosis*; as, in joining the *tarsus* to the metatarsus. *Wifeman*.

(2.) **TARSUS**. See **ANATOMY**, § 159.

(3.) **TARSUS**, in ancient geography, a celebrated city of Cilicia, seated on the Cydnus. It was founded according to some, by **SARDANAPALUS**, king of Assyria; or as others say, by **TRIPTOLEMUS** and a colony of Argives; while a 3d set of authors ascribe its foundation to **PERSEUS**. It was at one period the capital of all Cilicia, and became a rival to Alexandria and Athens in the arts and sciences. The inhabitants having, in the time

time of Julius Cæsar, showed themselves friendly to the Romans, they were endowed with all the privileges of Roman citizens. Hence St Paul claimed being a Roman. It is now called TARASSO.

(1.) * TART. *adj.* [*tart*, Saxon; *taertig*, Dutch.] 1. Sour; acid; acidulated; sharp of taste. 2. Sharp; keen; severe.—

Why for *tart* a favour

To trumpet such good tidings? *Shak.*

—When his humours grow *tart* they break forth into certain sudden excesses. *Wotton.*

(2.) * TART. *n. f.* [*tarte*, French; *tarta*, Italian; *taart*, Danish.] A small pie of fruit.—Figures, with divers coloured earths, be but toys: you may see as good lights in *tarts*. *Bacon.*

TARTAGLIA, Nicholas, a celebrated Italian mathematician, born at Brescia, where he became a famous teacher of the mathematical sciences. He published several works which are esteemed. His chief tract is on number and measure, entitled *Traité di Numeri et Misura*, 1556, folio. He died about 1558.

TARTAK, an idol of the Avites. See SAMARITANS.

TARTALA, a town of Hindoostan, in Calicut: 21 miles E. of Panaiy.

(1.) TARTAN, *adj.* [from the substantive.] Variegated with red, blue, green, and black colours; striped like tartan.

(2.) TARTAN, *n. f.* or TARTAN CLOTH, a kind of cloth, made generally of woollen, sometimes of linen, and often of silk, of various colours; as blue, red, green, white, black, and yellow, &c. running in parallel lines, and crossing each other; and thus forming various coloured squares, parallelograms and parallelepipeds. This dress is much worn by the Scottish HIGHLANDERS. The tartan dress is said to have been derived from the ancient GAULS, or CELTS; the *Galli non-braccati*. The tartan is made into plaids, coats, and phibegs. The most elegant form of this dress is when the coat is made of that kind of tartan in which the red stripes chiefly prevail: the vest entirely white; the phibeg, drawers, or trowsers, of that in which the green or blue chiefly predominates; and the plaid, with either the green or blue predominant, but differing from that of the phibeg. See PHIBEG.

(3.) TARTAN PLAID. See PLAID.

(1.) * TARTANE. *n. f.* [*tartana*, Italian; *tartane*, Fr.] A vessel much used in the Mediterranean, with one mast and a three cornered sail.—I fet out from Marfeilles to Genoa in a *tartane*. *Addison.*

(2.) TARTANE, in sea language, a small coasting vessel navigated in the Mediterranean sea, and having only one mast and a bowsprit, the principal sail, which is extremely large, being extended by a lateen-yard. When tartanes put up a square sail it is called a *fail of fortune*.

(1.) * TARTAR. *n. f.* [*tartarus*, Lat.] 1. Hell. A word used by the old poets, now obsolete.—

With this the damned ghosts he governeth,
And furies rules, and *tartars* tempereth. *Spens.*

He's in *tartar* limbo worse than hell. *Shak.*

2. [*Tartre*, Fr.] Tartar is what sticks to wine casks, like a hard stone, either white or red, as the colour of the wine from whence it comes:

the white is preferable, as containing less dross or earthy parts: the best comes from Germany, and is the *tartar* of the Rhenish wine. *Quincy.*—The fermented juice of grapes is partly turned into liquid drops or lees, and partly into that crust or dry feculency that is commonly called *tartar*; and this *tartar* may by the fire be divided into five differing substances, four of which are not acid, and the other not so manifestly acid as the *tartar* itself. *Boyle.*

(2.) TARTAR, (§ 1. *def.* 1.) in the mythology. See HELL, § 3; and TARTARUS.

(3.) TARTAR, *n. f.* [from *Tartary*; or perhaps rather *Tartary* from *Tartar*.] A native of Tartary. See TARTARS, and TARTARY.

(4.) TARTAR, (§ 1. *def.* 2.) in chemistry and pharmacy. See CHEMISTRY, and PHARMACY, *Indexes*.

(5.) TARTAR, CREAM OF. See CHEMISTRY, *Index*, and *Vocab.* I.; also MATERIA MEDICA. It is now called SUPER-TARTRITE OF POTASS. See TARTRITE, N° 12.

(6.) TARTAR, CRUDE. See CHEMISTRY, § 1196.

(7.) TARTAR, CRYSTALS OF. See TARTRITE, N° 12.

(8.) TARTAR, EMETIC. See CHEMISTRY, and PHARMACY, *Indexes*.

(9.) TARTAR OF THE TEETH, a bony crust which often attaches itself to the teeth. Dr Thomson and Fourcroy say it is composed of SULPHAT OF LIME.

(10.) TARTAR, PHENOMENA AND PROPERTIES OF. See CHEMISTRY, *Index*, and TARTRITE, N° 12.

(11.) TARTAR, SALTS OF. See CHEMISTRY, *Index*; and TARTRITE, N° 1—24.

(12.) TARTAR, VARIOUS OBSOLETE NAMES AND DISTINCTIONS OF, with the new names. See CHEMISTRY, *Vocab.* I. & II.

(13.) TARTAR, VITRIOLATED. See SULPHAT, N° 12.

* TARTAREAN. *adj.* [*tartarus*, Lat.]: Hellish.

His throne mix'd with *tartarean* sulphur. *Milt.*

(1.) * TARTAREOUS. *adj.* [from *tartar*.] 1. Consisting of tartar.—In fruits, the *tartareous* parts of the sap are thrown upon the fibres designed for the stone, and the oily upon the seed within it. *Crew.* 2. Hellish.—

The spirit of God downward purg'd

The black *tartareous* cold infernal dregs. *Milt.*

(2.) TARTAREOUS, in modern chemistry, like SULPHUREOUS for SULPHUROUS, is now entirely dropped for TARTAROUS.

(3.) TARTAREOUS ACID. See CHEMISTRY, *Index*; and TARTAROUS.

(1.) TARTARIAN, *adj.* Of or belonging to TARTARY.

(2.) TARTARIAN SEA, a part of the Eastern Ocean, which bounds Eastern Tartary on the E. and S.

TARTARIS, } *n. f.* [from *Tartar*.] The
TARTARITE, } names first given by modern
chemists, to the salts now called TARTRITES.
See CHEMISTRY, *Index*; and TARTRITE.

* To TARTARIZE. *v. a.* [from *tartar*.] To impregnate with tartar.

(1.) TARTARIZED, *part. adj.* [from *tartarize*,] impregnated with tartar.

(6.) TAR-

(2.) TARTARIZED ANTIMONY. See CHEMISTRY, § 2069.

(3.) TARTARIZED IRON. See PHARMACY. Ind.

(4.) TARTARIZED TARTAR, &c. See CHEMISTRY, § 2069.

(1.) *TARTAROUS. *adj.* [from *tartar*.] Containing tartar; confusling of tartar.

(2.) TARTAROUS is now universally used by modern chemists for what was formerly written *Tartareus*: as

(3.) TARTAROUS ACID. See CHEMISTRY, § 924—932. As the account of this acid there given is defective, we add the following particulars from the ingenious Dr Thomson's *System of Chemistry*, vol. II. p. 109.—“Scheele (says he) was the first who obtained this acid in a separate state. He communicated his process to Retzius, who published it in the *Stockholm Transactions* for 1770. It consisted in boiling tartar with lime, and decomposing the TARTRITE OF LIME thus formed by sulphuric acid. The process now employed is the same with Scheele's:—Dissolve tartar in boiling water, and add to the solution powdered chalk till all effervescence ceases, and the liquid ceases to redden vegetable blues. Let the liquid cool, and pass it through a filter. A quantity of tartrite of lime, which is an insoluble white powder, remains upon the filter. Put this tartrite, well washed, into a glass cucurbit, and pour on it a quantity of sulphuric acid, equal to the weight of the chalk employed, which must be diluted with water. Let it digest for 12 hours, stirring it occasionally. The sulphuric acid displaces the tartarous: sulphat of lime remains at the bottom, while the tartarous acid is dissolved in the liquid. Decant off this last, and try if it contains any sulphuric acid. This is done by dropping in a little acetite of lead; a precipitate appears, which is insoluble in acetic acid if sulphuric acid be present, but soluble if it be absent. If sulphuric acid be present, the liquid must be digested again on some more tartrite of lime; if not, it is to be slowly evaporated, and about one third of the weight of the tartar employed is obtained of crystallized tartarous acid. The form of its crystals is so irregular, that every chemist who has treated of them has given a different description. Bergman says, they consist of divaricating lamellæ; Van Packer, that they assume the form of long pointed prisms; Spielman and Corvinus obtained them in groups, lance-shaped, needle-formed, and pyramidal; Morveau obtained them needle-formed. Their specific gravity is 1.5962. Crystallized tartarous acid suffers no change in the open air, but heat decomposes it altogether: in the open fire it burns without any residuum but a spongy charcoal, containing some lime. When distilled in close vessels, it is converted into carbonic acid gas, and carbonated hydrogen gas, a coloured oil, and a reddish acid liquor, which was formerly named *pyro tartareous acid*; (see CHEMISTRY, Index;) but which Fourcroy and Vauquelin have ascertained to be merely acetic acid impregnated with oil.—Tartarous acid dissolves readily in water. Bergman obtained a solution, of the specific gravity of 1.230. Morveau observed, that crystals formed spontaneously in a solution were 1.084. It is not liable to

spontaneous decomposition when dissolved in water, unless greatly diluted. It oxidates iron, zinc, and even mercury; but does not act upon antimony, bismuth, tin, lead, copper, silver, gold, nor platinum. It combines with alkalis, earths, and metallic oxides, and forms salts, named *tartrites*.—Hermstadt has ascertained that it may be converted into oxalic acid, by distilling it often with six times its weight of nitric acid. By this process he obtained 560 parts oxalic acid from 360 parts of tartarous. Fourcroy and Vauquelin ascertained its ingredients to be 70.5 oxygen, 19 carbon, and 10.5 hydrogen. Its affinities are the same with those of the oxalic acid. Pure tartarous acid has scarcely been put to any use; but some of its compounds are much used in medicine. It has the property of combining in two different proportions with many bases. With potash it forms a salt pretty soluble in water, (see TARTRITE, N° 1—24.); but when added in a greater proportion it forms TARTAR.

(1.) TARTARS, *n. f. plur.* The natives of Tartary. (See TARTARY, § 1, 2. I.—IV.) Although widely dispersed, and very different in their customs and manners, they are descended from one common stock, and are generally considered as the descendants of the ancient SCYTHIANS. All the Tartars claim to be descended from TURK, the eldest son of JAPHETH. Although from the time that Jenghiz Khan subdued all Tartary, and a great part of Asia, and made irruptions into Europe, they have been known by the name of TARTARS, to which that of MONGOLS or MOGULS, of whom he was properly the prince, appeared inferior; nevertheless, the Tartars preserve among themselves the name of TURKS. Those who are Mahometans bordering on Russia, but independent of that crown, are added to robbing their neighbours: the KALMUCKS and MONGOLS are very different in their behaviour, living quietly on the produce of their soil, without doing injury to others. The Tartars of Asiatic Russia are likewise a quiet inoffensive people, living chiefly by hunting and fishing.

(2.) TARTARS, CRIM, or KRIM, the natives of the Crimea. See TARTARY, N° III.

(3.) TARTARS, CRIM, is also the name of a people of Asia, so called because they originally came from Crimea. They rove from place to place in search of pastures, their houses being drawn on carts. There are a great number of them about Afracan, to which place they flock in the winter time; but they are not permitted to enter the city: for this reason, they erect butts up and down in the open fields, which are made either of bull-rushes or reeds, being about 12 feet in diameter, of a round form, and with a hole at the top to let out the smoke. Their fuel is turf or cow-dung; and, when the weather is very cold, they cover the hut with a coarse cloth, and sometimes pass several days without stirring out. They are generally of small stature, with large faces, little eyes, and of an olive complexion. The men are generally so wrinkled in their faces, that they look like old women. Their common food is fish dried in the sun, which serves them instead of bread; and they eat the flesh of horses as well as camels. Their drink is water and milk, especially mare's milk.

milk, which they carry about in nasty leathern bags. Their garments are of a coarse grey cloth, with a loose mantle made of a black sheep's skin, and cap of the same. The women are clothed in white linen, with which likewise they dress their heads, hanging a number of Muscovian pence about them; and there is likewise a hole left to stick feathers in. As for their religion, they are a sort of Mahometans; but do not coop up their women like the Turks.

(4.) TARTARS, KALMUCK, or CALMUCK. See KALMUCKS: and TARTARY, N^o I. § ii.

(5.) TARTARS, MOGUL, or MONGUL. See MOGULS, § 1—7; and TARTARY, N^o I. § ii.

(6.) TARTARS, USBECK, a nation of Independent Tartars. The name of *Ubecks*, which the ruling tribe of the Tartars of Karafm and Great Bukharia bear, is derived from one of their khans. The Ubecks of Karafm are divided into several hordes, and live for the most part by rapine; resembling in all respects those of Great Bukharia, excepting that they are much more rude and uncivilized. The government of Karafm, the Ubecks being masters, is commonly vested in divers princes of that tribe of the same house; of whom, notwithstanding, only one has the title of *khan*, with a superiority over the others. This *khan* has no dependence on any other prince. *Bukharia* is the name given to all that region or tract of land lying between Karafm and the Great Kobi, or Sandy Desert, bordering on China. It is divided into the Great and Little Bukharia. See BUKHARIA, N^o 1—3.

(7.) TARTARS, YUPI. See TARTARY, N^o I. § i.

(8.) TARTARS, LANGUAGE OF THE. Their language is singular in this respect, that the verb differs as often as the substantive governed by it; or, to every different substantive they use a different verb. Another singularity is the copiousness of it; for besides names for each species of animals, they have words to express their several ages and qualities.

TARTARUM. See MATERIA MEDICA.

TARTARUS, in the mythology, the infernal regions, or the hell of the ancient Greeks, Romans, and Egyptians; which consisted of two divisions, the one called *Elysium*, for the reception of the virtuous; the other *Tartarus*, for that of the wicked. (See ELYSIUM, and HELL, § 3.) Tartarus was surrounded with a brazen wall, and its entrance was continually hidden from the sight by a cloud of darkness three times more gloomy than the obscurest night. Hesiod says (*Theog.* 710.) it was a prison, at a greater distance from the earth than the earth is from the heavens. Virgil says (*Æn.* vi.) it was surrounded by three impenetrable walls, and by the impetuous burning streams of the river PHLEGETHON. The entrance was by a large lofty tower, whose gates were supported by columns of adamant, which neither gods nor men could open. In Tartarus (he adds) were punished all who had been disobedient to parents, traitors, adulterers, barbarous conquerors, who undertook unjust and cruel wars, faithless ministers, &c. It was the place where TANTALUS, IXION, SISYPHUS, the DANAIDES, and other heinous offenders, were punished; (*Ovid. Met.* iv. *fab.* 13. *Hom. Odys.* xi.) and was frequented by

the FURIES, the HARPIES, and other monsters of the heathen mythology.

(1.) TARTARY, a very large country of Asia, situated between 57° and 160° Lon. E. of Ferro, and between 37° and 55° of Lat. N. It is bounded on the N. by Siberia, or that part of Asia which belongs to Russia; on the W. by the Don, Volga, and Kama, which separate it from Russia; on the S. by the Euxine and Caspian Seas, Karafm, the two Bukharias, China, and Korea; and on the E. by the Oriental or Tartarian Ocean. It extends from E. to W. 104° in lon. or 4145 geographical miles; but its breadth is not proportionable, being not above 960 miles where broadest, and where narrowest 330. Tartary, in its most extensive sense, contains all that vast country of Asia which lies between the Frozen Sea to the N. and Persia, Hindostan, and China to the S.; and includes a great variety of nations, to which is applied the general name of TARTARS or TARTARS, with a particular one often from their local situation.

(2.) TARTARS, CLASSES AND DIVISIONS OF. Mr Strahlenberg, a Swedish officer, who resided some years in Siberia, divides all Tartary into 6 classes; the first containing 7 different nations, all in the dominions of Russia; viz. the *Mordvines*, who dwell in the government of Nizhegorod; the *Tischeremisses*, or *Czeremisses*, in that of Kasan; the *Permians*, in that of Perm; the *Votiaks*, in the government of Viatka; the *Vogouls*, who dwell on both sides of the mountains which formed a separation between Russia and Siberia; the *Ostjacks*, who dwell on the coasts of the Oby; and the *Barabintzi*, who inhabit the country between Tara and Tomsk. The 2d class of Tartars includes the *Budziacks*, who dwell on the coasts of the Black Sea; the *Crim Tartars*, who inhabit the province of Taurida; the *Kuban Tartars*, on the banks of the Kuban; and the Tartars of Daghestan; the *Nogais*, or Tartars of Astracan, or Kazan, and Upha; the *Basirs*, and the Tartars about Tiumen, Tara, Tobolsk, and Tomsk; the *Ubeck Tartars*, the *Turcomans*, the *Kurguis*, the *Karakalpas*, the *Sagantzi*, who dwell near the head of the Enisei; the *Kirgis*, who occupy the mountains S. of Lake Baikal; the *Burats*; the *Arintzi*, who also inhabit near the same mountains; and the *Yabli*, more to the N. on the banks of the Lena. The 3d class includes the *Samoiedes*, on the coast of the Frozen Sea, from Archangel to the Lena. The 4th class includes the *Kalmucks* and *Monguls*, who were formerly but one people. The 5th class includes the *Mantchews* and *Tungusci*. The 6th class contains the savage nations on the NE. coast of Asia, as the *Tschuktsi*, &c. with the inhabitants of Kamtschatka and the Kurile Islands. Of these, the 1st, 3d, and 6th classes are subject to Russia; but a small part of the 2d is independent. The 4th is partly independent and partly subject to China. The 5th class is wholly subject to China. All Tartary may be divided into three parts, viz. Chinese Tartary, Independent Tartary, and Russian Tartary.

I. TARTARY, CHINESE, is bounded on the N. by Siberia, E. by the Gulf of Kamtschatka and the Eastern Sea, S. by China, and W. by the country of the Kalmucks, which lies between the

Caspian

Caspian Sea and Kashgar. The different tribes which at present inhabit it were formerly comprehended under the general name of *Mongul* or *Mogul Tartars*, a warlike and formidable nation, who, on the one hand, conquered Hindostan, under the monster JENGHIZ KHAN, (see *MOGULS*, § 1—7; *MONGULS*, and *CHINA*, § 9.) and on the other subdued China. In the 13th century the Monguls took possession of the latter empire; but after having reigned there for 100 years, they were expelled by the Chinese in 1368. (See *CHINA*, § 12.) The fugitives took different routs; some went towards the Eastern Sea, and established themselves between China and the river Saghalian; the rest returned westward to their former country, where, intermixing with the Moguls that remained, they soon resumed their ancient manner of living; those who settled towards the east, having found the country almost a desert, and without inhabitants, retained the same customs which they had brought from China: hence these two Mogul nations differ at present in language, government, religion, and customs. Those of the east retain their ancient name of *Mongul* or *Mogul Tartars*; the rest are named *Manchew* or *Eastern Tartars*. Chinese Tartary is therefore divided into two parts, *Eastern* and *Western*.

I. **TARTARY, EASTERN CHINESE**, extends N. and S. from 41° to 55° of lat. N., and E. and W. from about 137° of lon. as far as the Eastern Sea. It is bounded on the N. by Siberia, S. by the Gulf of Leao-tong and Corea, E. by the Eastern Sea, and W. by the country of the Monguls. The Tartars who retired hither after their expulsion from China, in 1368, immediately began to build cities, towns, and villages, and to cultivate the earth, after the manner of the Chinese, among whom they had lived: hence the greater part of them have remained fixed, and are much more civilized than the rest of the Monguls. They were at first governed by particular khans, each independent of the other; but since that of Ninguta (who was the most powerful among them) took possession of China, about the middle of the 17th century, the late emperor, Kien Long, who was his descendant, reduced under his dominion all the other khans of this part of Tartary. The present emperor governs it immediately by himself, and sends thither governors and officers, as into all the other provinces of the empire. The country of the Manchew Tartars is divided into three grand departments: CHINYANG or *Shin-yang*, KIRIN, and TCHITCAR or *Tschitar*. 1. The government of *Shin-yang*, containing all the ancient Lyau-tong or Quan-tong, is bounded on the S. by the great wall of China and the Yellow Sea; on the E. N. and W. it is inclosed by a wooden palisade, 3 feet high. The lands of this province are very fertile, producing plenty of wheat, millet, roots, and cotton; with pasture to great numbers of sheep and oxen; also plenty of apples, pears, nuts, filberds, and chestnuts. The principal places are Shin-yang or Mugden, Fong-whang, Inden, Ichew, and King-chew. This country was the original seat of the Tartar tribe of the Manchews, who have been masters of China above 100 years. 2. The government of *Kirin* is bounded W. by Lyau-tong, E.

by the Eastern Ocean, S. by the Corea, and N. by the Saghalian; so that it extends no fewer than 12° and almost 20° in lon. being 750 miles long and 600 broad. This vast country abounds in millet and oats, with an excellent grain unknown in Europe, called *may-sem-mi*, of a middle kind between wheat and rice. It is much used. The banks of the rivers are adorned with a variety of flowers common in Europe: the yellow lilies are of a most lively colour, resembling our white lilies, but of a much weaker scent. But the plant most esteemed is the *gin-feng*, called by the Manchews *orbota*, or the *queen of plants*. (See *PANAX*, N° 3.) It is highly valued for its virtues in curing several diseases, and has always been the principal riches of Eastern Tartary. This country abounds also in fine fables, grey ermines, and black foxes. The manners of the YUPI TARTARS, one of the tribes inhabiting this country, are somewhat extraordinary. All the summer they spend in fishing: one part of what they catch is laid up to make oil for their lamps; another serves for their daily food; and the rest, which they dry in the sun, without salting, is laid up for their winter's provisions, for both men and cattle. Their raiment consists of the skins of fish, which, after dressing and dyeing of three or four colours, they shape and sew in a very delicate manner, with an exceeding fine thong, cut out of a thin skin. In winter, their sledges are drawn by dogs trained for the purpose. This country contains only four cities, viz. *Kirimula*, *Petuna*, *Ninguta*, and *Putayula*, which are ill built, and encompassed with mud walls. The first stands on the river Songari, and is the residence of the Manchew general, who acts as viceroy. Ninguta, which the family now reigning in China considers as its ancient patrimony, is situated on the *Hukapira*, which runs N. into the *Songari*. The government of TCHITCAR is 740 miles long and 600 broad, and belongs partly to China and partly to Russia. The people are great hunters, dexterous archers, and pay their tribute in fable-skins. This province is inhabited by three tribes, the *Manchews*, the *Solons*, and *Tuguri*, of whom the first are masters. The *Tuguri* are a large robust people, but not very numerous. They live in houses or huts, and cultivate barley, oats, and millet. Their cattle are principally horses, dromedaries, oxen, cows, and sheep. They use their oxen to ride on. The *Solons* also are a brave robust people. Their dress is a short jacket and cap of wolves skins, and long cloaks made of fox or tigers skins. The women ride on horseback, drive the plough, hunt fags, &c. There are three cities in Tschitar, viz. Tschitar, the capital, Merghen, and Saghalian Ula. The garrison of Tschitar consists of Manchews; but the inhabitants are mostly Chinese.

ii. **TARTARY, WESTERN CHINESE, or MONGUL TARTARY**, is bounded on the N. by Siberia, E. by Eastern Chinese Tartary, S. by the great wall and Leao-tong, and W. by Independent Tartary. It was partly from the bosom of these dry deserts that those bloody conquerors issued who made all Asia tremble. The Mongul nation is subdivided into a multitude of others, who all speak the same language, generally called the Mongul

Mongol language, though they have several different dialects, but which they all understand. These Tartars have neither towns, villages, nor houses; they form themselves into wandering hordes, and live under plain tents, which they transport from one place to another, according as the temperature of the seasons, or the wants of their flocks require: they pass the summer on the banks of their rivers, and the winter at the bottom of some mountain or hill, which shelters them from the sharp north wind. Each of these tribes has its respective limits, and it would be an act of hostility towards their neighbours to go beyond them; but they are at full liberty to encamp wherever they choose within the circumference assigned them. The Moguls are free, open, and sincere. They pride themselves chiefly on their dexterity in handling the bow and arrow, mounting on horseback, and hunting wild beasts. Polygamy is permitted among them; but they generally have only one wife. The skins which they use for clothing are generally those of their sheep: they wear the wool inmost, and the skin on the outside. They are very well acquainted with the art of preparing and whitening these skins. Some of the higher ranks use the skins of stags, dogs, or wild goats, of which they make dresses for spring; but these skins always exhale a disagreeable smell, on which account they are called by the Chinese *Tsing-fu-tse, Sinking Tartars*. The religion of the Mogul Tartars is confined to the worship of Fo. They have the most superstitious veneration for the lamas. All the Moguls are governed by khans, or particular princes, independent one of the other, but all under the authority of the emperor of China, whom they consider as the grand khan of the Tartars. When the Manchews subdued China, they conferred on the most powerful of the Mogul princes the titles of *vang, peilé, peiré, and cong*, which answer to our titles of *king, duke, count, and marquis*: each of them had a revenue assigned him, but far inferior to the appointments of the Manchew lords at Peking: the emperor settled the limits of their respective territories, and appointed them laws, according to which they are at present governed: these tributary khans have not the power of condemning their subjects to death, nor of depriving them of their possessions; these two cases of death and confiscation are reserved for the supreme tribunal established at Peking for the affairs of the Moguls, to which every individual may appeal from the sentence of his prince, who is obliged to appear in person whenever he is cited. All the Mogul nations under the Chinese government may be divided into four principal tribes, which are the Moguls, properly so called, the Kalkas, Ortous, and the Tartars of Kokonor. According to the map of Chinese Tartary, the country of the Moguls extends more than 900 miles from E. to W. and 600 from N. to S. It is inclosed between the country of the Ortous, the great wall, Eastern Tartary, and the country of the Kalkas. These people compose 49 *ti*, or standards; every standard comprehends a number of companies, each of which consists of 150 heads of families; and as these families are generally numerous, each company may contain 5000 individuals. Besides these 49 standards, there

are five others, under the immediate government of the emperor of China, and commanded by officers whom he sends thither. The *Kalkas* (who formerly composed a numerous tribe, consisting of more than 600,000 families), inhabit N. of the Mogul Tartars. Their country stretches as far as the kingdom of the Eluths, is near 900 miles in extent from E. to W. In this region was formerly situated, in 45° lat. N. the city of Karakun, the seat of the empire of Jenghiz khan, and that of his successors. The Kalkas live under tents, on the banks of the rivers which water their country; that of Kalka-pira (though one of the smallest, and at present one of the least frequented) has given its name to the whole nation. The most considerable of these rivers are the Kenlon, Toulou, and Selengué. The vast desert which the Chinese call *Chamo*, and the Tartars *Cobi*, occupies almost all the S. part of the country of the Kalkas. A war which the king of the Eluths carried on in 1628 against the Kalkas, almost destroyed the whole nation. To avoid the pursuit of a superior enemy, they begged the assistance of the Chinese, and offered to submit to the emperor. Kang-hi undertook their defence, conquered the king of the Eluths, and kept the Kalka Tartars under his dominion, after having conferred upon their princes different titles of honour. These people have among them one of those grand lamas called *hou toulou*, whom they consider as so many living Foes: he is lodged under a large tent, and shows himself to the public, lying on a kind of altar, where he receives the adoration of all the Tartars. The *hou toulou* is however but a lama of the second order; for the lama who resides in Thibet is acknowledged his superior, (see LAMA, N° 1.): the latter is generally considered as the high priest and supreme chief of the Tartar religion. The country of the Ortous (who inhabit to the north of the great wall, and to the Moguls, properly so called) is 210 leagues in extent from E. to W. and 70 from N. to S. These people are divided into six standards, which comprehend 166 companies, each composed of 150 heads of families. The *Ortous* are of a free disposition, extremely lively, and never subject to melancholy; they may be justly called the *French of Tartary*. The Tartars of Kokonor (who are Eluths or Kalmucks by nation, and who are at present subjects of the emperor) occupy an extensive country to the W. of China and the province of Chen-si, whence they are separated by lofty mountains. They take their name from a lake in this country, called in their language *Kokonor* or *Kokonor*, which is one of the largest of Tartary. They are subject to eight princes, who are each independent of the other, and who are all of the race of the khan of the Eluth Tartars. These people derive their principal riches from the gold which is found mixed with the sand of their rivers, and above all, with that of Altangkol, or the Golden River. The gold dust which it furnishes is the principal revenue of the princes of Kokonor, who employ their vassals during summer in collecting it. One of the principal articles of the trade of Kokonor is a kind of napped woollen stuff, called *pos-hu*. It is manufactured by these Tartars, who have the art of dyeing it of different colours. The Chinese empire

empire has been lately extended into Tartary, by the celebrated conquest of the kingdom of the Eluths, made in 1759, by the emperor Kien-long. The whole nation of the Eluths, who in Europe and Russia are named KALMUCKS, may be divided into 3 branches, which have all proceeded from the same stem. (See KALMUCKS.) The most westerly (who at present are most powerful and numerous) occupy the country contained between the Caspian Sea, Russia, Samarcand, and Kashgar. The 2d division of the Eluths inhabit to the E. The country is bounded on the N. by Russia, and on the S. by the territories of the Usbeck Tartars. These are the people whom Tien-long obliged to submit to the Chinese government. The 3d branch of the Eluths inhabit to the W. of China, named the *Tartars of Kokonor*, who, for a long time have been subjects of the empire. (See KOKONOR.) Besides these tribes, there are others, who possess that part of Western Tartary called TURKESTAN, the original country of the Turks and Turkmans, on the N. of Great Bukharia and Karazm, between those countries and the dominions of the Eluths. Under Western Tartary also is comprehended TIBET, THIBET, or Tobbut, subjected to the Dalay Lama, or great high-priest of the Pagan Tartars and Chinese. In all the vast region of Western Tartary, there are but few towns, most of the inhabitants living under tents, especially in summer, moving from place to place with their flocks and herds, and generally encamping near some river. The air is temperate, wholesome, and pleasant, being equally removed from the extremities of heat and cold.

II. TARTARY, INDEPENDENT, includes all the country between Chinese Tartary and the Caspian Sea, and contains TURKESTAN, GREAT and LITTLE BUKHARIA, TURCOMANIA, KARAZM, THIBET, and some other countries and provinces, inhabited by the USBECKS and KALMUCKS. See these articles.

III. TARTARY, RUSSIAN, or CRIM TARTARY, or the CRIMEA, the ancient TAURICA CHERSONESUS, a peninsula of Asia, bounded on the S. and W. by the Black Sea; on the N. by the province of Catharinenslaß, with which it communicates by the isthmus of Perekop; and on the S. by the sea of Asoph and the strait of Caffa. It was early distinguished by its extraordinary fertility and commercial advantages. Long before the time of Herodotus, its S. coast was occupied by Greek settlers, who built several towns in it. These Greeks became tributary to the Scythians, who were afterwards driven from the country by Mithridates VII. king of Pontus. On his defeat and death, it became tributary to the Romans. It was successively ravaged by the Sarmatæ, the Alani, the Goths (who made an establishment in the mountains to the S.), the Huns, and the Khazari. Toward the end of the 11th century, the Genoese settled in this country; but they were expelled by the Tartars in 1474. These Tartars had been settled in the Crimea above two centuries before the expulsion of the Genoese. They were subjects of Batu Khan, grandson of Jenghis; and their conquest was annexed to the kingdom of Kafan, till the death of Tamerlane, in 1405,

when Edegai Khan, an officer of that prince, took possession of it, and was succeeded by Deulet Gherai, in whose family the sovereignty continued till the 18th century. The khans, however, were vassals, or tributary to the Turks, till 1774, when their independence was stipulated in the treaty of Caimargi. In 1783 the Russians took possession of the country with an army; in 1784 it was ceded to them by the Turks; and the peaceable possession of the whole was secured to them in 1791, by the cession of the fortrefs of OCZAKOW. The Crimea is divided into two parts, by mountains which run E. and W. The N. division is flat, poor, and fit for pasturage only. In the S. parts, the valleys are astonishingly productive, and the climate extremely mild, from the exclusion of the violent winds by which the N. division is frequently incommoded. The lower hills, extending from CAFFA to the E. extremity of the country, are principally used in gardening, and produce excellent fruit. Achmetfied was made the capital in 1785. Beside the ports of Kerth and Jenikalé, the road of Caffa, and the harbour of Baluclava, there is, near Sebastapol, one of the finest harbours of the world, secured from all winds, sufficiently capacious to admit large fleets, with a depth of water for ships of any burden. The Crimea now forms one of the two provinces of the government of CATHARINENSLE, under the name of TAURIDA. In some late maps it is called TAURICA. See these articles.

IV. TARTARY, USBECK, is a part of Independent Tartary. On the N. and NE. of Persia lie the countries of Karafin, and Great and Little Bukharia, which being mostly subject to and inhabited by the tribe of Usbeck Tartars, are commonly named *Usbeck Tartary*. The kingdom of Karafin was known to the ancient Greeks, as appears from Herodotus, Ptolemy, and others, by the name of *Khorasmia*. At present it is bounded on the N. by the countries of Turkestan, and of the Eluths or Kalmucks; on the E. by Great Bukharia, from which it is separated partly by the mountains of Irdar, and the deserts of Karak and Gaznah; on the S. by the Persian provinces of Astarabad and Khorasan, from which it is divided by Jihun or Amu, and extensive deserts; and on the W. by the Caspian. It is about 440 miles long from S. to N. and 300 broad from W. to E.; being situated between 39° and 46° lat. N. and 71° and 77° lon. E. It consists of vast sandy plains, some of which are barren deserts, but others afford excellent pasture. In several provinces vines grow, and wine is made; but water is scarce. It owes all its fertility to 3 rivers and a lake. The rivers are the AMU, *Khefil*, and SIR. The Amu, as it is called by the Usbecks and Persians, is the JIHON of the Arabs, and OXUS of the ancient Greeks. It rises in those high mountains which separate Little Bukharia from the dominions of the Great Mogul; and, after passing through Great Bukharia and Karafin, divides into two branches, one of which falls into Khefil, and the other into the Caspian Sea, towards the province of Astarabad. The Amu abounds with excellent fish, and along its banks grow those excellent melons and other fruit trees so much esteemed in Persia, the Indies, and Russia. The

Khefil rises in the mountains NE. of Samarkand, and falls into the lake of Aral or Bagles, 50 or 60 miles below its junction with the Amu. Its banks are exceedingly fertile. The *Sir* or *Daria* rises in the mountains E. of Little Bukharia, and after a long course W. along the borders of Bukharias and Karafin, falls into the lake Aral. See *SIR*, N° 5. Karafin is inhabited by the Sarts, TURKMANS, and Usbecks Tartars. 1. The Sarts are the ancient inhabitants of the country, who were settled there before the Usbecks became masters of it; and they live by their cattle and husbandry. The Turkmans or Turkomans came originally from TURKESTAN, in the 11th century.

(3.) TARTARY, MOUNTAINS OF. The principal mountains, or rather chains of mountains, found in the W. part of Great Tartary, may be divided into 3 classes: 1. Those which run along the N. borders of it, and go under the general name of *Ulag Tag*, or *Dag*, that is, the *Great Mountain*. 2. Those which make the S. bounds, and are called *Kichug Tag*, or the *Lesser Mountain*. The 3d great chain is called *Altai*, lying nearly in the middle, between the Caspian Sea and Eastern Tartary, and extending between the other two, in about 110° lon. (See MOUNTAIN, § 2.)

(4.) TARTARY, PRODUCTIONS, ANTIQUITIES, MANUFACTURES, &c. OF. In the middle of a desert, on the banks of the Irtysh, is a remarkable piece of antiquity called *Sedmy Palaty*, or the *seven palaces*. Above Sedmy Palaty, towards the source of the Irtysh, grows the best rhubarb in the world, without any culture. In the plain of this country also, about 8 or 10 days journey from Tomsky in Siberia, are found many tombs and burying-places of ancient heroes who are supposed to have fallen in battle. These tombs are easily distinguished by the mounds of earth and stone raised over them. For the manners and customs of these Tartars, See KALMUCKS.

(5.) TARTARY, RIVERS, LAKES, &c. OF. The principal rivers besides the Dnieper, Don, and Volga, are the *Jaik* or *Yaik*, and *Yem*, both descending from the *Ulag Tag*, and falling into the Caspian Sea on the N. side of the river *Ili* or *Kheuglis*, which rises out of the *Kichug Tag*, on the borders of Little Bukharia, and runs NW. into the lake Palkasi, which is about 40 miles long, and 30 broad, in lat. 48°, lon. 97°, E. of Ferro: on this river the khan of the Eluths or Kalmucks usually resides; the Irtysh, which rises in the Altaic Mount, and runs W. inclining to the N. between 2 branches of it, into the lake *Sayfan*, *Saflan*, or *Ijan*, called also *Ilanhotu-Nor*, 90 miles long from W. to E. and 40 broad, in lat. 47° 30', lon. 104°; whence issuing again, it runs NW. through part of Siberia, and falls into the Oby. (See OBY.) On the NE. rises the *Kren* or *Jenfa*, which runs W. for 7° or 8°, and then turning N. enters Siberia. The next river of note is the *SELENGA*, which rises out of the lake *Kosogol*, or *Klyutku*, which is 70 miles long from S. to N. and 20 broad, in lat. 52°, lon. 118°, near the source of the *Jenfa*, and taking a sweep southward, round by the E. falls northward into lake Baykal, in Siberia, about 90 miles NW. of the city Selinghinskoy, which stands upon it. Into the Selenga runs the Orkon, from the

SW.; and into the Orkon the Tula, rising E. in Mount-Kentey; on which rises also two other rivers, viz. the *Onon*, called also by the Tartars *SAGHALIAN ULA*, or the *Dragon river*, and by the Russians *AMUR*; which runs NE. and then taking a large sweep by the S. rolls along the bounds of Eastern Tartary, and falls into the Eastern Ocean. On its banks stand two cities; *Nerchinskoy*, or *Nipkelew*, a frontier of the Russians, almost due N. of Pekin in China; and *Saghalian Ula*, possessed by the Chinese. Another large river is the *Kerlen*, or *Kirelen*, which running NE. falls into the lake *Kulon*, or *Isalay*, which is 60 miles long from SW. to NE. and 27 broad, in lat. 48° 30', longitude 135°, and issuing out again under the name of *Ergona* or *Argun*, joins the Saghalian Ula, about 170 miles beyond Nerchinskoy. (See ARGUN, N° 2.) The *Kalka*, from whence, though small, the *Kalka Moguls*, or MONGOLS, take their name, rises in the mountains, separating Eastern from Western Tartary, and, running E. falls into the lake Puir, and then into that of Kulon.

(6.) TARTARY, SOIL, PRODUCE, QUADRUPEDS, BIRDS, FISH, &c. OF. Though there are many mountains, lakes, and deserts in it, yet the banks of the rivers, and the plains, some of which are of great extent, and exceedingly fertile. The mountains, woods, and deserts, abound with venison, game, and wild fowls; and the rivers and lakes with fish and fowls. There are also wild mules, or *hamoni*, (see EQUUS, N° IV.) horses, and dromedaries, wild boars, several kinds of deer, a species of goats with yellow hair, squirrels, foxes; an animal called *kauchan*, resembling an elk; another called *chulen*, or *chelson*, a sort of lynx; and a creature called *TAELE*, as small as an ermine, of whose skins the Chinese make mantles to keep out the cold. Among other birds of extraordinary beauty, bred in this country, there is one called the *Jenkor*, which is all over white except the beak, wings, and tail, which are a very fine red. Notwithstanding the soil in many parts of Tartary is so luxuriant, yet it does not produce a single wood of tall trees of any kind whatever, excepting in some few places towards the frontiers; all the wood that is found in the country consisting of shrubs, which never exceed the height of a pike, and even these are rare.

(1.) TARTAS, a town of France, in the dep. of Landes, and ci devant prov. of Gascony. The Midouze runs through it. The part on the right bank of this river is in the form of an amphitheatre. The other part is a plain. It is 12 miles NE. of Dax, 15 WSW. of Mont de Marfan, and 36 NE. of Bayonne. Lon. o. 48. W. Lat. 43. 50. N.

(2.) TARTAS, a river of Russia, which runs into the Om, near Tartaskoi.

TARTASKOI, a town of Russia, in Tobolskoi, at the junction of the Om and the Tartas; 49 miles WSW. of Kainak.

(1.) TARTESSUS. See TARSHISH.

(2.) TARTESSUS, an ancient town of Spain, near the pillars of Hercules; afterwards called *Cartia*, and *Gades*.

(3.) TARTESSUS, a name of Gades. See GADES.

(4-6.) TARTESSUS, a town, island, and river of Iberia, near Gades. *Lemp.*

TARTINI, Joseph, a celebrated Italian musician born at Piasco, in Istria, in 1692. He became so capital a performer on the violin, that he was appointed master of the band in the famous church of St Anthony. He published several valuable tracts on music; and is styled by Dr Burney the *Admirable*. He died 1770.

* **TARTLY**, *adv.* [from *tart.*] 1. Sharply; sourly; with acidity. 2. Sharply; with poignancy; with severity.—Seneca was by Caligula tartly called *arena sine calce*, sand without lime. *Walker*. 3. With founts of aspect—

How tartly that gentleman looks.

* **TARTNESS**, *n. f.* [from *tart.*] 1. Sharpness; sourness; acidity.—Of these sweets put in three gallons, more or less as the tartness of your cyder requires. *Mortimer*. 2. Sourness of temper; poignancy of language.—They cannot be too sweet for the king's tartness. *Shak.*

TARTRIS, } *n. f.* in chemistry, a salt formed by the combination of the

TARTAROUS ACID, with an alkaline, earthy, or metallic basis. "Though Tartarous Acid."

(says the ingenious Dr Thomson, in his *Syst. of Chem.* vol. II. p. 411.) "was first obtained by Scheele in a separate state, several of the tartrites had been previously examined, having been formed partly by decomposing tartar, and partly by combining it with other bases. Since the discovery of pure tartarous acid, they have been examined by Retzius, Von Pachen, and Thenart. They have the following properties: 1. When exposed to a red heat, the acid is decomposed, and the base remains, generally in the state of carbonate. 2. The earthy tartrites are nearly insoluble in water; the alkaline are soluble; but they combine with an excess of acid, and are converted into *Super-tartrites*, much less soluble than the tartrites. 3. When boiled with sulphuric acid, the tartarous acid is separated, and may be detected, by dropping in a solution of potash. Tartar precipitates in small gritty crystals like sand. 4. All the tartrites are capable of combining with another base, and forming *TRIPLE SALTS*." Of these salts Dr Thomson enumerates 16 species, besides those with bases of metallic oxides, in the following order: Tartrites, 1. of lime; 2. barytes; 3. strontian; 4. potash; 5. super-tartrite of potash; 6. tartrite of potash and lime; 7. of potash and barytes; 8. of potash and strontian; 9. of soda; 10. of potash and soda; 11. of ammonia; 12. of potash and ammonia; 13. of magnesia; 14. of potash and magnesia; 15. of alumina; 16. of potash and alumina. These, with a few of the metallic tartrites, we shall describe in their order.

1. "**TARTRITE OF ALUMINA** does not crystallize, but forms by evaporation a clear transparent gummy mass. Its taste is astringent. It is soluble in water. It does not deliquesce in the air."

2. "**TARTRITE OF AMMONIA**. The crystals are polygonous prisms. It has a cooling bitter taste like that of nitre. It is very soluble in water. Heat decomposes it. It combines with an excess of acid, and forms a super-tartrite almost insoluble in water as tartar."

3. "**TARTRITE OF BARYTES** may be formed

by the same process as **TARTRITE OF LIME**, (No. 6.) and, like it, is an insoluble white powder."

4. "**TARTRITE OF COPPER**. Tartarous acid has but little action on copper, but dissolves its oxide; and when poured into the sulphat or muriat of copper, it precipitates a tartrite in the form of blue crystals. Leonhardi says, this salt forms the best kind of the pigment called *Bruswick Green*."

5. "**TARTRITE OF COPPER, TRIPLE**, may be obtained by boiling together oxide of copper and tartar in water. The solution yields by evaporation blue crystals, which have a sweetish taste, and contain a great proportion of metal."

6. "**TARTRITE OF LIME** may be formed by dissolving lime in tartarous acid; or by dissolving tartar in boiling water, and adding to the solution lime in powder, till it ceases to produce effervescence, and to redden vegetable blues. It precipitates in the form of a white powder; tasteless, insoluble in water, but soluble in an excess of tartarous acid. It is decomposed by sulphuric, nitric, and muriatic acids, but by no earths or alkalies."

7. "**TARTRITE OF MAGNESIA**, is insoluble in water, unless there be an excess of acid present. It then affords by evaporation small crystals in the form of hexangular truncated pyramids. It has a more saline taste, and is more soluble than tartrite of lime, (No. 6.) Heat first melts, and then decomposes it."

8. **TARTRITE OF MANGANESE**. See *CHEMISTRY*, § 835.

9. "**TARTRITE OF MERCURY**. Tartarous acid does not attack mercury, but it dissolves its oxide, and forms with it an insoluble white salt; which soon becomes yellow, when exposed to the air. This salt precipitates also when tartarous acid is poured into nitrate of mercury."

10. "**TARTRITE OF MERCURY, TRIPLE**, first described by Monnet, may be formed by boiling in water 6 parts of tartar, and one of oxide of mercury. The liquid, when evaporated, yields small crystals of Tartrite of Potash and Mercury. Thenart has ascertained, that the same triple salt may be formed, by mixing together the solutions of tartar and mercurial nitrat. This salt is decomposed by the alkalies, the alkaline carbonates, the hydro-sulphurets, the sulphats, and the muriats."

11. "**TARTRITE OF POTASS**, formerly named *Soluble Tartar*, is usually prepared by adding at intervals tartar in powder to a hot solution of carbonate of potash, till all effervescence ceases. The solution is then boiled, and afterwards evaporated, till a pellicle forms on its surface. On cooling, the tartrite crystallizes in flat four-sided rectangular prisms, terminated by dihedral summits. It has an unpleasant bitter taste. Its specific gravity is 1.5567. It is soluble in four parts cold water, and still more so in hot. When heated it melts, swells up, blackens, and is decomposed."

12. "**Super-TARTRITE OF POTASS, or TARTAR**," is the original *Tartar*, which gives name to the whole class. "This salt is obtained, in a state of impurity, incruited on the bottom and sides

sides of casks in which wine has been kept. It is afterwards purified by dissolving it in boiling water, and filtering it while hot. On cooling, it deposits the pure salt in very irregular crystals. In this state it is sold under the name of *CRYSTALS OF CREAM OF TARTAR*. This salt attracted the peculiar attention of chemists, probably in consequence of the extravagant encomiums and invectives bestowed on it by PARACELSUS. It is called *tartar*, says he, because it produces the oil, water, tincture, and salt, which burn the patient as *bell* does. According to him, it is the principle of every disease and every remedy, and all things contain the germ of it. This ridiculous theory was combated by Van Helmont, who gives a pretty accurate account of the formation of tartar in wine casks. It was known to Van Helmont, and even to his predecessors, that POTASS could be obtained from tartar; but it was long a disputed point, whether that alkali existed ready formed. Dubamel, Margraff, and Rouelle, at last established that point beyond a doubt; but the other component parts of tartar were unknown or very imperfectly known, till Scheele pointed out the method of extracting it. The crystals of tartar are very small and irregular. According to Monnet, they are prisms somewhat flat, and mostly with 6 sides. Tartar has an acid, and rather unpleasant taste. It is very brittle, and easily reduced to powder. Its specific gravity is 1.953. It is soluble in about 60 parts of cold water, and in about 30 of boiling water. It is not altered by exposure to the air, but when its solution in water is allowed to remain for some time, the salt is gradually decomposed, a mucous matter is deposited, and there remains in solution carbonate of potash, coloured with a little oil. This decomposition was first accurately described by Berthollet in 1782. When tartar is heated, it melts, swells, blackens, and the acid is entirely decomposed. The same changes take place, when the salt is distilled in close vessels. The phenomena of this distillation have been described with great care, and its products very attentively examined by chemists; because, before the discovery of the tartarous acid by Scheele, distillation was the only method thought of, for obtaining any knowledge of the acid part of tartar. These products are an enormous quantity of gas, consisting of carbonic acid, and carbonic hydrogen, an oil, and an acid; and according to some chemists, *Carbonat of Ammonia*. The acid obtained was long considered as a peculiar body, and was denominated *PYRO-TARTAROUS ACID* by the French chemists, in 1787. (See *CHEMISTRY, Index*.) But Fourcroy and Vauquelin have lately demonstrated, that it is no other than *acetic acid* contaminated with a little *empyreumatic oil*. TARTAR, says Bergman, is composed of 77 acid, 23 potash; or of 56 tartrite of potash, 44 tartarous acid. Thenart's analysis makes its component parts, 57 acid, 35 potash, and 8 water."

13. "TARTRITE OF POTASS AND ALUMINA. This triple salt is formed by saturating tartar with alumina. It bears a very striking resemblance to the TARTRITE OF ALUMINA. (See N° 1.) Thenart observed, that no precipitate is produced in

this salt, either by the addition of alkalies or their carbonats."

14. "TARTRITE OF POTASS AND AMMONIA. This triple salt may be formed by pouring ammonia into *acidulous Tartrite of Potash*." (See *CHEMISTRY, Index*.) "Its crystals, says Macquer, are prisms with 4, 5, or 6 sides; according to the Dijon Academicians, parallelopipeds, with 2 alternate sloping sides. It has a cooling taste; is soluble in water; effloresces in air. Heat decomposes it."

15. "TARTRITE OF POTASS AND BARYTES. This triple salt may be formed in the same way" with the following:

16. "TARTRITE OF POTASS AND LIME. This salt was first pointed out by Thenart. It may be formed by pouring lime water into the solution of tartrite of potash till a precipitate begins to appear, and then allowing the liquid to evaporate spontaneously. The triple salt gradually attaches itself to the sides of the vessel in crystals."

17. "TARTRITE OF POTASS AND MAGNESIA. This triple salt, first examined by the Dijon Academicians, may be formed by dissolving magnesia, or its carbonate in tartar. The solution, according to them, yields, by evaporation, needle-form crystals; but, according to Thenart, it does not crystallize; and when evaporated to dryness, it deliquesces."

18. TARTRITE OF POTASS AND MERCURY. See N° 10.

19. "TARTRITE OF POTASS AND SODA. This salt is usually prepared by putting one part of tartar in 5 parts of boiling water, and adding gradually carbonate of soda in powder, as long as it produces an effervescence. The tartar gradually dissolves. When the saturation is complete, the solution is filtered and evaporated to the consistence of a syrup. On cooling, the tartrite of potash and soda crystallizes. This salt has been distinguished by the name of *Salt of Seignette*, because it was first formed and introduced into medicine by M Seignette, an apothecary at Rochelle. This gentleman recommended it in a tract published in 1672. It was soon after introduced into practice at Paris by LEMERY, and, becoming a fashionable medicine, made the fortune of the discoverer. For some time its composition was kept secret; but Boulduc and Geoffroy discovered its component parts in 1731. Its prisms are crystals of 8 or 10 unequal sides, having their ends truncated at right angles. They are generally divided into two in the direction of their axes; and the base on which they stand is marked with 2 diagonal lines, so as to divide it into 4 triangles. It has a bitter taste. It is almost as soluble as TARTRITE OF POTASS." (See N° 11.) It effloresces when exposed to the air. Heat decomposes it. According to the analysis of Vauquelin, it is composed of 54 parts tartrite of potash, and 46 tartrite of soda."

20. "TARTRITE OF POTASS AND STRONTIAN. This triple salt may be formed the same way with the tartrite of potash and barytes," and the tartrite of potash and lime. (See N° 15 and 16.) They have been all pointed out by Thenart, but their properties are still undescribed."

21. TARTRITE

21. **TARTRITE OF SILVER.** See **SILVER**, § 16, N° xviii.

22. **TARTRITE OF SILVER, TRIPLE.** See **SILVER**, § 16, N° xix.

23. " **TARTRITE OF SODA** may be formed by dissolving soda in tartarous acid. It crystallizes in fine needles. Its specific gravity is 1.7437. This salt is also capable of combining with an excess of acid, and forming a *Super-tartrate of Soda*, which is nearly as insoluble in water as tartar." See **SALT**, § 1, 21.

24. " **TARTRITE OF STRONTIAN.** This salt, first examined by Dr HOPE, and afterwards by Vauquelin, may be formed by dissolving strontian in tartarous acid, or by mixing together solutions of nitrat of strontian and tartrate of potash. Its crystals are small regular triangular tables, having the edges and angles sharp and well defined. It is insipid. It dissolves in 320 parts of boiling water. It is composed of 47.12 parts acid and water, and 51.88 strontian."

TARTURA, a town of Palestine, near the coast of the Mediterranean; 10 miles S. of Acre.

TARUANA, an ancient town of Gaul, now called **TERROUEN**.

(1.) **TARUDANT**, a city of Morocco, the capital of Sus. See **SUS**, N° 1, and **TARODANT**. It is 43 miles ESE. of Santa Cruz, and 110 SSW. of Morocco.

(2.) **TARUDANT**, a district of Morocco, in Sus, at the extremity of the empire, of which the above city is the capital. It contains several other towns, which are well built with stone.

TARVES, a parish of Aberdeenshire, 9 miles long, and 6 broad, watered by the Ythan. The surface is mostly level, with a few low hills. The soil is partly deep, partly shallow, but in general fertile. About 100 acres are under plantations, in 1793, the population was 1690: the decrease 666, since 1755. The only mansion house is *Shives*, the seat of Hugh Middleton, Esq.

TARUFFI, Emilius, an eminent Italian painter, born at Brescia, in 1632. His landscapes and historical pieces were much admired, as well as his choice of scenery. He died in 1694.

TARVIS, or **TARWIS**, a town of Germany, in Carinthia; 28 miles WSW. of Clagenfurt, and 46 NNW. of Treft. It was taken by the French republicans, after a bloody battle, in which the Austrians were defeated, on the 23d March, 1797.

TARVISIUM, an ancient town of Italy, now called **TREVISO**.

TARNTIUS, SPURINA, Lucius, a celebrated mathematician, who flourished about A. A. C. 61. *Gr. ad div. iii. c. 47.*

TARURAW, a town of the United States, in Georgia; 14 miles N. of Tugeloo.

TARUS, a river of Gaul, running into the Po.

TARUSA, a town of Russia, in Kaluga.

TARUSATES, an ancient people of Gaul, who inhabited the country now called Turfan. *Ces. de Bel. Gal. iii. 23.*

TARUSCUM, an ancient town of Gaul.

TASCHOW, a town of Bohemia, in Leitmeritz; 5 miles of Leitmeritz.

TASCHTER, in the mythology of the Hindoos and Persians. See **DELUGE**, § 6.

TASHKUND, or **THASHKAND**, a town of Tur-

kestan, on the Sir, 210 miles N. of Samercand. It has been often destroyed and rebuilt. Lon. 64. 45. E. Lat. 42. 40. N.

TASHKUPRI, a town of Asiatic Turkey, in Natolia; 14 miles SE. of Castamena.

TASIEVA, a river of Russia, which runs into the Tchiума; 20 miles NW. of Tasievskoi.

TASIEVSKOI, a town of Russia, in Tobolskoe; 820 miles E. of Tobolsk, and 448 ENE. of Koli-van.

* **TASK.** *n. f.* [*tasche*, French; *taska*, Italian.]

1. Something to be done imposed by another.—
Relieves me from my *task* of servile toil.

Milton.

2. Employment; business.—His mental powers were equal to greater *tasks*. *Atterbury.*—
No happier *task* these faded eyes pursue. *Pope.*

3. To take to **TASK**. To reprove; to reprimand;—A holy man took a soldier to *task* upon his profession. *L'Estrange.*—He discovered some remains of his nature, for which Sir Roger took him to *task*. *Addison.*

* To **TASK**. *v. a.* [from the noun.] To burthen with something to be done.—
Like to a harvestman, that's *tasked* to mow.

Shak.

Some things of weight,
That *task* our thoughts? *Shak.*

—I dare not *task* my weakness any more. *Shak.*—
Divert thy thoughts at home,

There *task* thy maids. *Dryden.*

* **TASKER.** } *n. f.* [*task* and *master*. One

* **TASKMASTER.** } who imposes tasks.—

Ever in my great *taskmaster's* eye. *Milton.*
—The service of sin is perfect slavery; and he who will pay obedience to it, shall find it an unreasonable *taskmaster*. *South.*—

Hear, ye *taskers* of the dead. *Dryd. and Lee.*

TAS-KUJE, a town of Persia, in Laristan; 84 miles NE. of Lar.

TASLUI, a river of European Turkey, which runs into the Sirek, near Adzud, in Moldavia.

TASPOULSAEN, a town of Chinese Tartary, in Hami. Lon. 113. 40. E. Ferro. Lat. 40. 12. N.

TASSACORTA, or } a sea-port town of the
TASSACRODA, } Canary Islands on the
W. coast of Palma. Lon. 17. 58. W. Lat. 28. 37. N.

TASSASUDON, a city of Asia, capital of Bootan; 206 miles SW. of Lassa, and 242. NE. of Patna. Lon. 89. 12. E. Lat. 27. 45. N.

(1.) * **TASSEL.** *n. f.* [*taffe*, French; *tassellus*, low Latin.] An ornamental bunch of silk, or glittering substances.—

Then took the squire an horn of bugle small,
Which hung adown his side in twisted gold,

And *tassels* gay. *Spenser.*

—Their heads are tricked with *tassels*. *Sandys.*

(2.) * **TASSEL.** *n. f.* [*carduus*, *fullonius*.] An herb. See **TEAZEL**. *Ainsworth.*

(3.) **TASSEL** or **TEAZEL**, in botany. See **DIPSACUS**.

(4.) **TASSELS**, in building, are those pieces of board that lie under the ends of the mantlet trees.

* **TASSELLED.** *adj.* [from *tassel*.] Adorned with tassels.—

Early

Early, ere the odorous breath of morn
Awakes the slumb'ring leaves, or tassel'd horn
Shakes the high thicket, haste I all about. *Milt.*

* TASSES. *n. f.* Armour for the thighs. *Ainsl.*

TASSIE, James, modeller, was born near Glasgow, of obscure parents; and began his life as a country stone mason. Going to Glasgow, he acquired a knowledge of drawing in the academy instituted by the Fowlises; while, at same time, he was obliged to labour at stone cutting for his support. Referring to Dublin for employment, he became known to Dr Quin, who was amusing himself with trying to imitate the precious stones in coloured pastes, and take impressions of the engravings that were on them. Dr Quin soon discovered Tassie to be one in whom he could place perfect confidence. He was endowed with fine taste; modest, unassuming, patient, and possessed the highest integrity. The Doctor committed his laboratory and experiments to his care. The associates were fully successful; and found themselves able to imitate all the gems, and take accurate impressions of the engravings. The Doctor, when the discovery was completed, encouraged Mr Tassie to repair to London, and to devote himself to the preparation and sale of those pastes as his profession. In 1766, he arrived in the capital; and, until his death in 1799, he continued acquiring eminence and wealth. In addition to this elegant art, he practised the modelling of portraits in wax, which he afterwards moulded and cast in paste. See PASTE, § 11.

(1.) TASSO, Bernard, an illustrious Italian lawyer, descended of the ancient and noble family of Torreggiani. He was author of several ingenious compositions in verse and prose. He was sent to accompany the prince of Salerno, upon a deputation from Naples, to the emperor Charles V. to remonstrate against the erection of an *Inquisition* there. He was afterwards employed by William Gonzago, duke of Mantua, as his principal secretary, who at last promoted him to be governor of Ostiglia, upon the Po; where he died in 1585. He was father to the celebrated Torquato.

(2.) TASSO, Torquato, the son of Bernard, a justly celebrated Italian poet, born at Sorrento in Naples, in 1549, the son of Bernard, by Portia di Rossi, a lady of an illustrious family of Naples. At 9 he and his father were condemned to death for treason, but escaped; and 3 years after, they went from Rome to Mantua: Tasso had then completed his knowledge of the learned languages. He was soon after sent to the university of Padua; and, in his 18th year, published his *Rinaldo*. He next went to Bologna, by the invitation of the city and college; but soon returned to Padua at the request of Scipio Gonzago, who had been elected prince of the academy then established by the name of the *Etherei*, of which Tasso was made a member. Here he formed the plan of his *Jerusalem Delivered*. Being pressed by the duke, and his brother Card. Lewis, to reside with them at Ferrara, he consented, and the duke gave him an apartment in his palace, where he lived in affluence, and prosecuted his work; which he dedicated to the duke. When he was about 27, he published a pastoral comedy

called *Aminta*. In his 30th year, he finished his *Jerusalem*, and the whole being reprinted and published together, its success was astonishing, and it was immediately translated into Latin, French, Spanish, and even the Oriental languages. But it was Tasso's fate to become wretched as soon as he gained the summit of reputation. Soon after his *Jerusalem* was published, he lost his father; his *Jerusalem* was attacked by invidious critics; and the perfidy of a friend drew upon him greater misfortunes. In consequence of a rencontre, in which he behaved very bravely, the duke put him in prison, under pretence of securing him from any future attacks. But Tasso within a year escaped, and retired to Turin, where he was recommended to the duke of Savoy: but Tasso, fearing that the duke of Ferrara would require him to be delivered up, set out for Rome: there he was visited by princes, cardinals, prelates, and all the learned in the city. But being impatient of exile, he made his peace with the duke, who gave him fresh marks of his esteem. But Tasso, having made some attempts on the duke's sister, princess Leonora, whom he had celebrated in his verses, the duke caused him to be confined in the hospital of St Anne, as a person deranged. Tasso applied to the duke, by every friend he had, to release him, but without effect; for Tasso was certainly disordered in his mind. At last, after he had been a prisoner seven years, Vincent Gonzago, prince of Mantua, came to Ferrara, during the festivals, procured his liberty, and took him to Mantua, he being then in the 42d year of his age. At Mantua he lived about a year in great favour with the prince, but he became weary of a state of dependence, and therefore resolved to go to Naples, and endeavour to recover his mother's jointure, which had been seized by her relations when he went into exile. Finding his law-suit not likely to be soon determined, he went from Naples to Rome, where he continued about a year in high favour with Pope Sixtus V. and then went to Florence, at the invitation of Ferdinand, grand duke of Tuscany. Having spent another year at Florence, he returned to Naples, and published his *Jerusalem Delivered*. Soon after this Sixtus V. died, and was succeeded by Clement VII. and his nephews, Cynthio and Peter Aldrobandini, were created cardinals. Cynthio, who was a patron of learning, prevailed with him to leave Naples, and live with him in Rome. He returned again to Naples, but came back to Rome, in order to be crowned with laurels in the capital. While they were waiting for fair weather, Cynthio fell sick; and, before he recovered, Tasso was taken ill, and died on the 15th day, aged 51. His poems had acquired him an immortal reputation. His works were printed together at Florence in 1714, in 6 vols folio, with the criticisms. His *Aminta* and *Giernsalemme Liberata* have been translated into English.

(3.) TASSO, an island on the W. coast of Africa, in the mouth of the Sierra Leona.

TASSONI, Alexander, an Italian poet, born at Modena, in 1565. He was a member of the academy of Uccisiti; and, among other works, published *Scythia Raptiva*, or *the Rape of the Bucket*: which

which was the first model of a Mock Heroic poem in the Italian language. He died in 1635.

TASSOW, a town of Persia in Aderbeitzan; 24 miles W. of Tauris.

* **TASTABLE**. *adj.* That may be tasted; savoury; relishing.—Their distilled oils are fluid, volatile and *tastable*. *Boyle*.

(1.) * **TASTE**. *n. f.* [from the verb.] 1. The act of tasting; gustation.—

Best of fruits, whose taste gave elocution. *Milt.*

2. The sense by which the relish of any thing on the palate is perceived.—Bees delight more in one flower than another, and therefore have *taste*.

Bacon.—

Delicacies of *taste*, sight, smell. *Milton*.

The tardy plants in our cold orchards plac'd,

Reserve their fruit for the next age's *taste*. *Wal.*

3. Sensibility; perception.—

I have almost forgot the *taste* of fears. *Shak.*

Musick in the close,

As the last *taste* of sweets is the sweetest last.

Shak.

4. That sensation which all things taken into the mouth give particularly to the tongue, the papillæ of which are the principal instruments hereof.

Quincy.—The *taste* of it was like wafers made with honey. *Exod. xvi. 31*.—Though there be a great variety of *tastes*, yet, as in smells, they have only some few general names. *Locke*.

5. Intellectual relish or discernment.—Seeing they pretended no quarrel at other psalms, why do these so much offend and displease their *tastes*. *Hooker*.—

Sions songs to all true *tastes* excelling,

Where God is prais'd aright. *Milton*.

I have no *taste*

Of popular applause. *Dryden*.

—As he had no *taste* of true glory, we see him equipped like an Hercules. *Addison*.—This metaphor would not have been so general, had there not been a conformity between the mental *taste* and that sensitive *taste* which gives us a relish of every flavour. *Addison*.—Your way of life, in my *taste*, will be the best. *Pope*.—How ill a *taste* for wit and sense prevails in the world. *Swift*.—Pleasure results from a sense to discern, and a *taste* to be affected with beauty. *Scud.*—It is true in *taste*, that many little things will not make a great one. *Reynolds*.

6. An essay; a trial; an experiment.

Not in use.—I hope he wrote this as an essay or *taste* of my virtue. *Shak.*

7. A small portion given as a specimen.—They thought it not safe to resolve, till they had a *taste* of the people's inclination.

Bacon.—Besides the prayers mentioned, I shall give only a *taste* of some few recommended to devout persons. *Stillingfleet*.

(2.) **TASTE** is a certain sensation, or class of sensations, excited in the mind by certain bodies, which are called *sapida*, applied to the tongue and palate, and moistened with the saliva. This is the original and proper meaning of the word *taste*; (see *METAPHYSICS*;) but as the qualities of bodies which produce these sensations are unknown, they have in all languages got the names of the sense of themselves, by that figure of speech which substitutes the cause for the effect. Hence we talk of the *tastes* of sugar, wormwood, honey, vinegar, &c.; and say, that the one is sweet and the

other four, &c. *Tastes* have been divided into simple and compound; and philosophers have to very little purpose endeavoured to ascertain the number of each species. See *Phil. Transf.* N^o 280, 299; and *Abercromb. Nov. M.d. Clavis*.

(3.) **TASTE** is likewise used in a figurative sense, to denote that faculty of the mind by which we perceive and enjoy whatever is beautiful or sublime in the works of nature or of art. Like the taste of the palate, this faculty relishes some things, is disgusted with others, and to many is indifferent; and from these obvious analogies between it and the external sense it has obtained its name. It has likewise been called an internal *sense*, and by Dr Hutcheson, a *reflex sense*; whilst others have considered it, not as a distinct faculty or sense, but as the joint exertion of perception and judgment in some cases, and as a play of the imagination in others.

(1.)* **TO TASTE**. *v. a.* [*taster*, to try, French.]

1. To perceive and distinguish by the palate.—The ruler of the feast *tasted* the water made wine. *John ii.*

2. To try by the mouth; to eat at least in a small quantity.—

Bold deed to *taste* it under ban to touch.

Milton.

3. To essay first.—Roscetes was seldom permitted to eat any other meat but such as the prince before *tasted* of. *Knolles*.—

Thou and I marching before our troops

May *taste* fate to them. *Dryden*.

4. To obtain pleasure from.—

So shalt thou be despised, fair maid,

When by the fated lover *tasted*. *Carew*.

5. To feel; to have perception of.—He should *taste* death for every man. *Heb. ii. 9.*

6. To relish, intellectually; to approve.—

Thou, Adam, wilt *taste* no pleasure. *Milton*.

(2.)* **TO TASTE**. *v. n.* 1. To try by the mouth to eat.—

Of this tree we may not *taste* nor touch.

Milton.

2. To have a smack; to produce on the palate a particular sensation.—When the mouth is out of *taste*, it maketh things *taste* bitter and loathsome, but never sweet. *Bacon*.—When kine feed upon wild garlick, their milk *tasteth* of it. *Bacon*.—If your butter *tastes* of brags, it is your matter's fault, who will not allow a silver saucepan. *Swift*.

3. To distinguish intellectually.—

Scholars, when good sense describing,

Call it *tasting* and imbibing. *Swift*.

4. To be tainted, or receive some quality or character.—

Ev'ry idle, nice, and wanton reason

Shall, to the king, *taste* of this action. *Shak.*

5. To try the relish of any thing.—

The soul doth use the *tasting* pow'r

In veins, which through the tongue and palate

spread. *Davies*.

6. To have perception of.—

The valiant never *taste* of death but once. *Sh.*

—The *tasting* of death touched the righteous also. *Wisd.*

7. To take to be enjoyed.—

What hither brought us? not hope here to

taste

Of pleasure. *Milton*.

Of

Of nature's bounty men forbore to *taste*.

Waller.

2. To enjoy sparingly.—

Age but *tastes* of pleasures, youth devours. Dry.

* **TASTED.** *adj.* [from *taste*.] Having a particular relish.—Coleworts are better *tasted*, if watered with salt water. Bacon.

* **TASTEFUL.** *adj.* [*taste* and *full*.] High relished; savoury.—

Musick of sighs thou shalt not hear,

Nor drink one lover's *tasteful* tear. Cowley.

Tasteful herbs that in thick gardens rise. Pope.

(1.) * **TASTELESS.** *adj.* [from *taste*.] 1. Having no power of perceiving taste. 2. Having no relish or power of stimulating the palate; insipid.—By depriving chemical oils, they could never be made *tasteless*. Boyle. 3. Having no power of giving pleasure; insipid.—The corruption of our will and affections renders them *tasteless* and insipid to us. Rogers.—If by his manner of writing a critic is heavy and *tasteless*. I throw aside his criticisms. South. 4. Having no intellectual gust.

(2.) **TASTELESS EARTH**, (*agust erde*), the name given by Professor Tremmadorff to a new simple earth, which he discovered in the Saxon beryl. It is distinguished (he says) from other earths by being white, and totally insoluble in water. In a fresh state, when moistened with water, it is somewhat ductile. In the fire it becomes transparent and very hard, so as to scratch glass, but remains insipid and insoluble in water. The burnt earth dissolves very easily in acids, and produces with them peculiar salts, which are entirely devoid of taste; and hence he gave it the name of *tasteless earth*. Fixed alkalies do not dissolve this earth, either in the dry or in the wet way; and it is equally insoluble with the carbonic acid and with caustic ammonia. It has a greater affinity to the oxalic than to the other acids.

* **TASTELESSNESS.** *n. f.* [from *tasteless*.] 1. Insipidity: want of relish. 2. Want of perception of taste. 3. Want of intellectual relish.

* **TASTER.** *n. f.* [*taster*, Fr. from *taste*.] 1. One who takes the first essay of food.—

Young time is *taster* to eternity. Crashaw.

—Says the fly, Am not I the *taster* to princes in all their entertainments? L'Estrange.—

Thy tutor be thy *taster*, ere thou eat. Dryd.

Apicius, here, the *taster* of the town,

Feeds twice a week.

Young.

2. A dram cup. *Ainsworth*.

TATA, or *Dotu*, a town of Hungary, with a castle, seated among swamps. In 1543, it was taken by the Turks, but retaken soon after; in 1548, the Turks took it again; in 1566, it was retaken by the imperialists; who lost it in 1594, but took it in 1597; but within 6 months, the Turks again took it, and kept it. It is 18 miles S. of Raab, and 20 W. of Gran.

TATACUL, a town of Hindoostan, in Myfore; 11 miles N. of Vencatgherry.

(1.) **TATAR BASSARDSCHIH**, a town of European Turkey, in Romania, on the Mariza; 16 miles W. of Philippopoli.

(2.) **TATAR BUNAR**, a town of European Turkey, in Bessarabia; 30 miles SW. of Akernan.

TATAKS, or **TAKTARS**. See **TARTARY**, § 2.

TATARSKOI, a town and fort of Russia, in Kolivanfkoï, on the E. bank of the Irtysh. Lon. 93. 20 E. Ferro. Lat. 53. 44 N.

TAT-CHOU, a town of China, in Set-tchuen.

TATE, Nahum, an eminent poet, born at Dublin, where he received his education, in 1651. He was made poet laureat to K. William III. upon the death of Shadwell, and held that place until the reign of George I. whose first birth-day ode he wrote, with unusual spirit. He died in the mint in 1716. He wrote 9 dramatic performances, a great number of poems, and a version of the *Psalms* in conjunction with Dr. Nicholas Brady.

TATIAMBETTY, a town of Hindoostan, in Myfore; 5 miles NW. of Wombinellore.

TATIAN, a writer of the primitive church, in the 2d century, born in Assyria, and trained up in the heathen religion and learning. He became Christian and disciple of Justin Martyr, whom he attended to Rome; and while Justin lived, continued orthodox; but after his death made a schism, and founded a new sect, condemning marriage, enjoining abstinence from wine and animal food, and suffering only water to be used in the holy mysteries; whence his followers were called *Encratites* and *Hydroparastates*. None of his works are extant but his piece against the Gentiles, entitled, *his Oration to the Greeks*.

TATIANITES, the followers of **TATIAN**. See **PATRICIANS**, N° 6; and the last article.

TATIANSKAIA, a town and fort of Russia, in Saratov, on the Volga; 22 miles NE. of Tazritzin.

TATIEN, a town of Chinese Tartary, 55 miles NE. of Tamsin.

TATIENSES, a name given by Romulus to a tribe of the Roman people, in honour of his colleague, K. **TATIUS**, to whom part of them had been subjects. They lived on the mounts Capitoline and Quirinalis.

TATISCHEVA, a town and fort of Russia, in Upha, on the Ural; 28 miles W. of Orenburg.

(1.) **TATIUS**, Titus, king of the Sabines and Romans. See **ROME**, § 5 and 6; and **SABINES**.

(2.) **TATIUS**, Achilles, a native of Alexandria was the author of a book on the sphere. There is also attributed to him a Greek romance on the lives of *Leucippe* and *Clitophon*, of which Salmassius has given a beautiful edition in Greek and Latin with notes. Suidas says, that **Tatius** was a Pagan, but afterwards became a Christian, and a bishop. **Plinius** mentions him in his *Bibliotheca*.

TATOBIT, a town of Bohemia, in Bolestau 5 miles E. of Turnau.

TATONNEUR, in zoology. See **LEMUR**.

TATONN TREE. See **BENGAL**, § 11.

TATOUCHÉ, a town on the W. coast of Fomosa. Lon. 13. 44 E. Ferro. Lat. 24. 8 N.

TA-TSIN, a river of China, which runs into the East Sea; in Lon. 136. 5 E. Lat. 37. 46 N.

(1.) **TATTA**, a city of Hindoostan, the capital of **SINDY**. It is built on the site of the ancient **PATALA** on the Indus. In the 17th century the city was very extensive and populous; abounding in manufactures of silk, woollen, cotton, iron, cabinet wares, &c. all of which are now decayed, and its limits reduced. But it has been

of iron, and rock salt near it, with a manufacture of saltpetre. It is 136 miles WNW. of Amedabad, and 340 SSW. of Moultan, and 740 NW. of Bombay. Lon. 67. 38. E. Lat. 24. 54. N.

(2.) **TATTA**, a name of SINDY.

(3.) **TATTA**, in ancient geography, a large lake of Phrygia, near Pisidia.

TATTAH, a town of Africa on the frontiers of Darah and Morocco, on the road from Morocco to Tombuctou; 150 miles SSE. of Morocco. Lon. 10. 55. E. Lat. 24. 54. N.

TATTAMUNG, a town of Hindoostan, in Calicut; 5 miles S. of Policanderry.

* **TATTER**: *n. s.* [from the verb.] A rag; a fluttering rag.—This fable holds, from him that fits upon the throne to the poor devil that has scarce a tatter. *L'Estrange*.

* *To TATTER*. *v. a.* [*totaran*, Saxon.] To tear; to rend; to make ragged. *Tattered* is perhaps more properly an adjective.—

Thro' tatter'd cloaths small vices do appear,
Robes and furr'd gowns hide all. *Shak.*

An apothecary late I noted
In tatter'd weeds. *Shak.*

Where wav'd the tatter'd ensigns of Ragfair,
A yawning ruin hangs. *Pope.*

Little tyrants rag'd,
Tore from cold wintry limbs the tatter'd weed. *Thomson.*

Now, the treasure found, and matron's store,
Sought other objects than the tatter'd poor. *Harte.*

* **TATTERDEMALION**. *n. s.* [*tatter* and *I know not what*.] A ragged fellow.—A spark that was warm clad called to this *tatterdemalion*, how he could endure this weather? *L'Estrange*.

TATTERED. *adj.* See **TATTER**.

TATTER-SHALL, a town of England, in Lincolnshire, seated on the Bane, near its conflux with the Witham, among fens. It had a castle, which was destroyed during the civil wars in the 17th century. It has a market on Friday, and is 20 miles S. of Louth, 20 SE. of Lincoln, and 127 N. of London. Lon. 0. 8. W. Lat. 53. 6. N.

TATTICOMBA, a town of Hindoostan, in Myfore, 4 miles N. of Dindigul.

* **TATTLE**. *n. s.* [from the verb.] Prate; idle chat; trifling talk.—

They ask'd her how the lik'd the play?
Then told the *tattle* of the day. *Swift.*

Such *tattle* often entertains,
My lord and me as far as Staines. *Swift.*

—Persons well skilled in those different subjects bear the impertinent *tattle* with a just contempt. *Watts.*

* *To TATTLE*. *v. n.* [*tateren*, Dutch.] To prate; to talk idly; to use many words with little meaning.—

Ne after every *tattling* fable fly. *Spenser.*

—Like my lady's eldest son, evermore *tattling*. *Shak.*—Excuse it by the *tattling* quality of age, which is always narrative. *Dryden*.—The world is forward enough to *tattle* of them. *Locke*.—The French language is extremely proper to *tattle* in; it is made up of so much repetition and compliment. *Addison*.

* **TATTTLER**. *n. s.* [from *tattle*.] An idle talk-

er; a prater.—Going from house to house, *tattlers*, busy bodies, are reproved by the apostle. *Taylor*.

* **TATOO**. *n. s.* [from *tapotex toas*, Fr.] The beat of drum by which soldiers are warned to their quarters.—

All those whose hearts are loose and low,
Start if they hear but the *tattoo*. *Prior.*
TATTOOING, or } *n. s.* an operation in the
TATTOOWING, } among the islanders in the South-Sea for marking their bodies with figures of various kinds which they consider as ornamental. It is performed by puncturing the skin, and rubbing a black colour into the wounds. See **OTAKEITES**, § 15.

TATTUBET, a town of Algiers, anciently called *Tadutti*, and then a very considerable city, but now almost in ruins, 25 miles from Constantia. Some beautiful granite pillars were lately dug up in it, and placed in a mosque at Constantia.

TATZO, a town of Hungary, 40 miles E. Munkacz.

TAUA, a town of Egypt, in the Delta.

(1.) **TAVAI**, an island in the Indian Ocean, near the coast of SIAM; 20 miles long and 3 broad. Lon. 97. 53. E. Lat. 13. 0. N.

(2.) **TAVAI**, a town of Siam, 124 miles N. of Mergui, and 148 S. of Martaban. Lon. 98. 12. E. Lat. 14. 10. N.

(3.) **TAVAI POINT**, the extreme point of a peninsula on the coast of Siam. Lon. 98. 0. E. Lat. 13. 40. N.

TAVAI-POENAMMOO, the name given by the natives, to the W. island of New Zealand. The inland part is full of very high and rugged mountains, whose tops are covered with snow but the sea coast abounds with trees, among which is the true spruce. Though much rain fell, it was attended with no bad effects on Captain Cook's voyage. The natives lead a wandering life, without seeming united in society or friendship. The island is 600 miles long, and 150 broad.

TAVARONE, Lazarus, a celebrated Italian painter of history and portraits, born at Genoa in 1556. He was a disciple of Luke Cangiagio, and succeeded him as painter to the king of Spain. He died in 1631.

TAVASTERORG, } or **TAVASTUS**, a city of
TAVASTERHUS, } Sweden in Finland, the
TAVASTEHUS, } capital of Tavastland; built in 1650, by Count Peter Brahe, on a pleasant spot, and endowed with many privileges. It was taken by the Russians in 1713, and in the last war was burnt by them. It has a strong castle, with a magazine; and is seated on a river that runs to lake Wana; 44 or 62 m. NE. of Abo.

TAVASTLAND, a province of Sweden, in the middle of Finland, about 150 miles long, and 100 broad. The soil is very fertile, and the surface chiefly consists of fine plains, diversified with arable and meadow lands and watered by many lakes and rivers abounding with fish. It likewise abounds in cattle and wild game. Yet it is but poorly cultivated, and hence the peasants are very poor. The N. part of this province is mountainous and woody, and abounds with iron ore. The people are chiefly employed in husbandry, and fishing. They also export corn, flax, hemp,
X2 dried

dried fish, cattle, leather, butter, tallow, lime and bark.

TAVASTUS. See **TAVASTEHUS**.

TAVAVIS, a town of Asia, in Great Bukharia: 15 miles NE. of Bukharia.

TAUBE, a river of Brandenburg, which runs into the Aland, near Seehausen.

(1.) **TAUBER**, a river of Franconia, in Anspach, which runs NW. by Mergentheim, and falls into the Maine at Wertheim.

(2.) **TAUBER**, a lake of Bavaria, in Berchtesgaden: 6 miles W. of Berchtesgaden.

TAUBMAN, Frederic, a learned German critic, born in Franconia, about 1365. He became professor of poetry and belles lettres at Wirtemberg. He published *Commentaries on Virgil and Plautus*. He died in 1633.

TAUCHA, a town of Upper Saxony, in the circle of Leipzig; built in 1221 by Albert Abp. of Magdeburg; but destroyed in 1279, by Dietric, marg. of Meissen. It was rebuilt and possessed by different lords, till it fell under the jurisdiction of Leipzig; but in 1431, it was again destroyed by the Hussites and Bohemians; when most of the inhabitants fled to Leipzig. It is 6 miles NE. of Leipzig, and 7 SSW. of Eulenburg.

TAUCHEL, a town of Prussian Pomerelia, 44 miles SSW. of Dantzic. In 1310, it was taken and burnt by the Teutonic Knights. It was rebuilt, but has since suffered much in the Polish wars. It is seated on the Verd, 30 miles NW. of Culm, and 55 SW. of Magdeburg. Lon. 18. 5. E. Lat. 53. 38. N.

TAUD, a river of England, in Lancashire.

TAVDA, a river of Russia, which rises from Lake Pelim, and falls into the Tobol; 40 miles S. of Tobolsk.

TAUDECONDA, a town of Hindostan, in Coiconda; 25 miles SW. of Warandele.

TAUDENY, a town of Africa, in Ziara, 270 miles NNW. of Tombuctou. Lon. 14. 45. E. Ferro. Lat. 23. 30. N.

(1.) **TAVE**, a river of France, which runs into the Rhone; 6 miles below Loudon.

(2.) **TAVE**, a river of S. Wales, in Caermarthen-shire; which runs into the Britol Channel, near Llanghorth.

(3.) **TAVE**, or **TAAFE**. See **TAAFE**.

(1.) **TAVERA**, a town of the French empire, in the island and department of Corfica; 14 miles NNE. of Ajazzo.

(2.) **TAVERA DI ORTA**, a town of Naples, in the prov. of Capitanata; 14 miles SSW. of Ascoli.

* **TAVERN**. *n. s.* [*taverna*, Fr. *taberna*, Lat.] A house where wine is sold, and drinkers are entertained.—

Enquire at London, 'mong the *taverns* there. *Shak.*

—You shall fear no more *tavern* bills. *Shak.*—To reform the vices of this town, all *taverns* and ale-houses should be obliged to dismiss their company by twelve at night, and no woman suffered to enter any *tavern* or alehouse. *Swift.*

TAVERNA, a town of Naples, in Calabria Ultra, 15 miles N. of Squillace, 20 E. of Nicastro, and 70 NE. of Reggio. Lon. 16. 44. E. Lat. 39. 31. N.

* **TAVERNER**. **TAVERNKEEPER**. **TAVERN-**

MAN. *n. s.* [from *tavern*, *man*, or *keep*; *tabernarius*, Lat. *tavernier*, Fr.] One who keeps a tavern.—After local names, the most in number have been derived from occupations; as *taylor*, *archer*, *taverner*. *Camden.*

TAVERNES, a town of France, in the dept. of the Var; 3 miles N. of Barjois.

(1.) **TAVERNIER**, John Baptist, a famous French traveller, born at Paris in 1605. In the course of 40 years he travelled six times to Turkey, Persia, and the East Indies; and visited all the countries in Europe, travelling mostly on foot. His *TRAVELS* have been often printed. He died on his journey, at Moscow, in 1699.

(2.) **TAVERNIER KEY**, one of the *TORTUGA* Islands; 2 miles from the S. end of Largo, and 5 NE. of Old Matacombe.

* **TAVERNKEEPER**. } See **TAVERNER**.

* **TAVERNMAN**, }

TAVERNY, a town of France, in the dept. of Seine and Oise; 6 miles E. of Pontoise.

(1.) **TAVETCH**, or , a district of Switzerland,

(1.) **TAVETSCH**, in the ci-devant Grisons territories, near Uri; now in the Italian kingdom.

(2.) **TAVETSCH**, a town and mountain in the above district; the former 13 miles SW. of I-lantz, the latter 5.

TAVEY, or **TAAFE**. See **TAAFE**.

TAUFKIRCHEN, a town in the empire of Austria; 2 miles SW. of Grickirchen, and 8 SW. of Esslingen.

(1.) * **TAUGHT**, preterite and part. pass. of *teach*.—All thy children shall be *taught* of the Lord. *Isa.* liv. 13.

How hast thou satisfy'd me, *taught* to live.

Milton.

(2.) **TAUGHT**, *adj.* in sea language, tight. See **NAVY**, § 6.

TAUGIA, a town of Arabia, in Hedjas; 200 miles ENE. of Mecca.

TAVIANO, a town of Naples, in Otranto; 11 miles WNW. of Alexano.

TAVIGNANO, a river of the French empire, in Corfica, which runs into the sea, 15 miles S. of Cervione.

TAVILA. See **TAVIRA**.

(1.) **TAUILE**, a town of Arabia, in Yemen; 24 miles W. of Tana.

(2.) **TAUILE**, a town of Egypt, on the Nile; 2 miles N. of Mansora.

TAVIRA, or **TAVILA**, a city of Portugal, and capital of the province of Algarve, with a handsome castle, and one of the best harbours in the kingdom, defended by a fort. It is seated in a pleasant fertile country, at the mouth of Gilaon, between Cape Vincent and the Straits of Gibraltar, 100 miles W. by N. of Cadiz. Lon. 7. 46. W. Lat. 37. 18. N.

TAVISTOCK, a borough of England, in Devonshire, seated on the Tave, over which it has a bridge of 5 arches. It gave birth to Sir F. DRAKE; and sends 2 members to parliament. It has a market on Saturday; and is 14 miles N. of Plymouth, 32 W. by S. of Exeter, and 206 WSW. of London. Lon. 4. 12. W. Lat. 50. 37. N.

TAULANTIL, an ancient nation of Illyricum, on the Adriatic. *Liv.* 45. c. 26. *Lucan*, vi. 16.

TAULE, a town of France, in the dept. of Finisterre

Finisterre, 3 miles NW. of Morlaix, and 6 SSE. of St. Pol.

TAULIGNAN, a town of France, in the dep. of the Drome, 9 miles NW. of Nions, and 12 SE. of Montelimart.

TAUMACO, a town of European Turkey, in Thessaly, 18 miles NW. of Zeiton.

TAUMAGO, an island in the S. Pacific Ocean. Lon. 207. 0. E. Ferro. Lat. 15. 0. S.

TAUME, a river of England, which rises in Yorkshire, and runs into the Mersey in Lancashire, opposite Stockport.

TAUNA, a town of Egypt, on the canal of Joseph, which runs between the Nile and the Birket el Kerum, 5 miles SW. of Askmunein.

* **TAUNT**, *n. s.* [from the verb.] Insult; scoff; reproach; ridicule.—

With scoffs and scorns, and contumelious taunts,

In open market-place produc'd they me,
To be a public spectacle. *Shak.*

—Julian thought it more effectual to persecute the Christians by taunts and ironies, than by tortures. *Government of the Tongue.*

Send them flowing round his drunken feast,
With sciliciteous taunt. *Prior.*

* To **TAUNT**, *v. a.* [tauser, Fr. Skinner. *Tanden*, Dutch, to shew teeth. *Minshew.*] 1. To reproach; to insult; to revile; to ridicule; to treat with insolence and contumelies.—

When I had at my pleasure taunted her,
She in mild terms begg'd my patience. *Shak.*

The bitterness and stings of taunting jealousy,
Hath driven him forth. *Rocue's Jane Shore.*

2. To exprobate; to mention with upbraiding.—
Rail thou in Fulvia's phrase, and taunt my faults

; With such full licence. *Shak.*

* **TAUNTER**, *n. s.* [from taunt.] One who taunts, reproaches, or insults.

* **TAUNTINGLY**, *adv.* [from taunting.] With insult; scoffingly; with contumely and exprobatum.—

It tauntingly replied
To th' discontented members. *Shak.*

The wanton goddess view'd the warlike maid
From head to foot, and tauntingly she said.

Prior.

(1.) **TAUNTON**, a large, elegant, and well built borough of Somersetshire, 146 miles W. by S. of London. It consists principally of 4 streets paved and lighted; the market-place is spacious, and has a handsome market-house, with a town-hall over it, finished in 1773. It has an extensive woolen manufactory; and in 1780 a silk manufactory was introduced. Its castle, the ruins of which remain, was in 1645 defended for the parliament by colonel Blake against an army of 10,000 men under lord Goring, but was dismantled by Charles II. In 1605 the duke of Monmouth made it his head-quarters. Its church, which is large and beautiful, is a fine specimen of the florid Gothic architecture. The tower, which is lofty, is of excellent workmanship, crowned at the top with 4 stately pinnacles, 32 feet high. Taunton is pleasantly seated on the Tone, which is navigable to Bridgewater; and sends two members to parliament. It has markets on Wednesday and Satur-

day, and lies 31 miles NE. of Exeter. Lon. 3. 17. W. Lat. 50. 59. N.

(2.) **TAUNTON**, a river of Massachusetts, formed of several streams which rise in Plymouth county; it then runs a SW. course, and falls into Narraganset Bay, at Tiverton, opposite the N. end of Rhode Island. It is navigable in small vessels as far as TAUNTON, (N^o 3.) where the tide rises 4 feet.

(3.) **TAUNTON**, a town of Massachusetts, the capital of Bristol county, seated on the W. bank of the river (N^o 2.) It has a church, an academy, a court-house, &c. and is 43 miles S. of Boston, and 330 from Philadelphia. Lon. 3. 53. E. of that city. Lat. 41. 55. N.

(4.) **TAUNTON DEAN**, a very fertile valley of England, in Somersetshire, 30 miles long. TAUNTON (N^o 1.) is the chief town.

TAUNUS, in ancient geography, a mountain of Germany (*Taici*. 1. *Ann. c. 56.*); now called *Hericke*, or *Hoche*, opposite Mentz.

TAVOLA, a river of ancient Corsica.

(1.) **TAVORA**, a river of Portugal, which runs into the Duero; 5 miles E. of Lamego.

(2.) **TAVORA**, a town of Portugal, in the province of Beira; 6 miles E. of Lamego.

TAURE, in zoology, [Lat. from *taurus*, a bull, literally a *female bull*, differing from *vacca*, a cow], the name given by the Romans to that hermaphrodite kind of ox, which is neither bull nor cow, and which British farmers call a *FREE-MARTIN*. See *HERMAPHRODITE*, § 2.

TAURANIA, a town of Italy, in the country of the Bruttii. *Lempriere.*

TAURANTES, an ancient people of Armenia, who dwelt between Artaxata and Tigranocerta. *Tacit. Ann. 14. c. 24.*

TAURASI, a town of Naples, in Principato Citra; 11 miles SE. of Benevento.

TAURAT, a town of the island of Cuba; 38 miles NNE. of St Jago.

TAUREAU, an island of France, in the dept. of Finisterre, and ci-devant province of Bretagne, at the mouth of the Morlaix. There is a castle upon it, to defend the port of Morlaix. Lon. 3. 51. W. Lat. 48. 40. N.

TAURI, an ancient nation of European Sarmatia, who inhabited TAURICA CHERSONESUS, and sacrificed all strangers to Diana. The statue of this goddess, which they believed to have fallen down from heaven, was carried off to Sparta by IPHIGENIA and ORESTES. (See these articles.) *Hecodot. iv. c. 99. Eurip. Iphig. &c.*

(1.) **TAURIC**, *adj.* [from *Taurica*.] Of or belonging to, or produced in, TAURICA, or TAURICA CHERSONESUS. The term is chiefly applied to animals, natives of that country; particularly the *Tauric Goats*, from the skins of which the celebrated MOROCCO LEATHER is manufactured at *Karafubazar*, a town in Taurica.

(2.) **TAURIC GOAT'S LEATHER**, or MOROCCO LEATHER, is the staple of an ancient manufacture, in Karafubazar, where they make large quantities from the skins of the numerous flocks of Tauric goats. They begin the process by cleaning the skins in the following manner: After having steeped some raw hides in cold water for 24 hours, to free them from blood and other impurities, the fleshy parts are

are scraped off with proper instruments. They are next macerated for ten days in cold lime-water, to loosen the hair, which is likewise scraped off as clean as possible. For 15 days they lie in clean cold water, and then are worked under foot in a succession of clean water; the last being impregnated with dog's dung to loosen the hair still more, when they receive a 2d scraping, and are drained of their humidity; which finishes the cleaning process. They now proceed to what they call *feeding the skins*, by steeping them 4 days in a cold infusion of wheat bran; then in a decoction of honey and water, 28 lb. to 5 pails, cooled down to the temperature of new milk; out of which they are put under pres in a vessel with holes at the bottom to let the liquor escape. They are, lastly, steeped 4 days in a light solution of salt and water, one lb. to 5 pails; this finishes the preparation, and the leather is now ready to receive the dye. A strong decoction of ARTEMISIA ANNUA, or *southern-wood*, in the proportion of 4 lb. to 10 pails of water, seems to be the basis of all the different colours that they give to Morocco in Taurica, Afracan, and the other cities formerly belonging to the Tartar empire, where the secret has remained till now. When a red colour is intended, a pound of cochineal in powder is gradually stirred into ten pails of fine yellow decoction of artemisia, and boiled up in it for half an hour, with 5 or 6 drachms of alum, and poured on the leather in a proper vessel. They are next worked under feet in an infusion of oak leaves in warm water, till they become supple and soft; when they are finally rinsed in cold water, then rubbed over with olive-oil and calendered with wooden rollers; which finishes the manufacture. The yellow Morocco is dyed with the decoction of artemisia alone; only stronger; 20 lb. of it to 15 pails, being the proportion when used without other admixture; but a lb. of alum in fine powder is gradually added, by half a table spoonful at a time; and with this each skin is twice stained before the last operation of oiling and calendering. It is proper to remark, that there is a little difference in the preparation of the skins for receiving the pure yellow dye described above, as neither honey nor salt are used; but, instead of them, the hides are steeped for 2 days in an infusion of oak-leaves; and immediately after being taken out of the infusion of bran wherein they must have lain 4 days, and then be worked under foot for a few hours of these 4 days, next rinsed in cold water, and placed one above another on poles, to drain off the water and make them ready for staining.

(1.) TAURICA, in the mythology, a surname of DIANA, because she was worshipped by the inhabitants of TAURICA CHERSONESUS.

(2.) TAURICA CHERSONESUS, in ancient geography, a large peninsula of Europe, at the SW. end of the PALUS MÆOTIS joined to Scythia, by an isthmus, and bounded by the Cimærian Bosphorus, the Euxine Sea, and the PALUS MÆOTIS. The inhabitants were called TAURI, and were very savage. (*Strabo*, iv. *Plin.* iv. 12.) Its modern name, till lately, was CRIMEA, or CRIM TARTARY. (See TARTAR, N° 2 and 3; and TARTARY, N° III.) The inland country was anciently possessed by the SCYTHIANS, who extended

themselves on the N. beyond the Perekop, W. to the Dnieper, and E. as far as the Don. The W. and S. coasts were inhabited by some Greek colonies, of which the town of CHERSONESUS became the most powerful. The E. side, on the Don and the opposite country, or the tract from the Don along the sea of Azoph to the Black Sea and Mount Caucasus, was under the kings of the *Bosphoric Greeks*, so called from the Strait of BOSPHORUS. The Scythians proving troublesome neighbours to the Greeks, they asked the assistance of Mithridates VII. K. of Pontus, who drove the Scythians out of the peninsula, and formed the kingdom of Bosphorus, which comprehended the whole peninsula, and the country facing it on the E. towards Mount Caucasus. In the reign of Dioclesian, the SARMATÆ were in sole possession of this kingdom, except that the Goths had seized a part of it, on the W. side of the peninsula, and the whole tract lying N. of it, along the Don. The peninsula afterwards fell under the emperors of the East, though partly shared with the Huns; who were succeeded by the Cozars, and these by the Polawzers. About the end of the 12th century, the Genoese, having made themselves masters of the Euxine or Black Sea, with all its harbours, settled also in the Crimea. In the 13th century the TARTARS expelled the Polawzers out of the Crimea; but the strength of the Genoese ports and castles baffled their undisciplined fury; and held out till 1475, when the Turks reduced the whole Crimea and placed a khan over it. In 1698, the Russians made an attempt on the Crimea, but took only Perekop. In 1736, they were more successful under Count Munich, who again took Perekop, and opened a passage into the Crimea, though garrisoned by 100,000 men in a great number of strong towers. In 1737, 1738, and 1759, the Russians renewed their invasion with such success, that they ravaged one half of the Crimea, while the Tartars ravaged the other; and vast numbers of the people perished by famine. The khan, however, continued after this to govern the greater part of it; and assumed the title of *Khan of Lesser Tartary*, though he was only a vassal of the Ottoman Porte, till 1774, when he was declared independent. But in 1783, from the farther successes of the Russians, under Catherine II. he abdicated his government, and ceded the whole country to Russia.

(3.) TAURICA CHERSONESUS, in modern geography, is the ancient name restored to the CRIMEA, by the late empress of Russia, CATHERINE II. after her complete conquest of the whole country. It is also called TAURIDA, TAURIS, and RUSSIAN TARTARY, and simply TAURICA. In the Russian language, it is called

TAURICHESKAYA, i. e. the province of Taurica or Tauris. It is included in the extensive government of CATHERINOSLAV, or EKATERINOSLAV; and is bounded on the N. by the Dnieper and the Koskija; on the E. by the sea of Azoph; on the S. and W. by the Black Sea; and thus this new Russian province comprehends a greater extent of territory, than either the ancient TAURICA CHERSONESUS, or the modern CRIMEA.

* TAURICORNOUS. *adj.* [*taurus* and *cornu*, Lat.] Having horns like a bull.—Their descrip-

tions must be relative, or the *tauricornus* picture of the one the same with the other. *Brown.*

TAURTNI, the ancient inhabitants of
TAURINUM, a town of Gallia Cisalpina;
(*Sil. Ital. iii. 646. Plin. iii. 17.*) now called **TURIN**.

(1.) **TAURIS**, or **TEBRIS**, a town of Persia, a capital of Adirbeitzan. It was formerly the capital of Persia, and is still the most considerable next to Isfahan; for it contains 15,000 houses, many shops, and about 100,000 inhabitants. It is about 5 miles in circumference, and carries on a prodigious trade in cotton, cloth, silks, gold and silver brooches, fine turbans, and shagreen leather. There are 300 caravanseras, and 250 mosques. Some travellers suppose it to be the ancient **EC-BATANA**. It is seated in a delightful plain, surrounded with mountains, whence a stream issues, which runs through the city. Lon. 47. 50. E. Lat. 38. 18. N.

(2.) **TAURIS**. See **TAURICA**, N° 3.

TAURIUM, a town of Peloponnesus. *Polyb.*

TAVRO-CASTRO, a town of European Turkey, in Livadia; 20 miles NNE. of Setines or Athens.

TAUROMENIUM, or } an ancient town of
TAUROMINIUM, - } Sicily, between Mes-
sana and Catania; built by the Zancleans, Sicilians and Hybleans, by order of **TIMOLEON**, in the age of Dionysius II. tyrant of Syracuse. The hills adjacent were famous for their grapes and wines; and for the extent and beauty of their prospects. (*Diodor.*) It was built on the site of **Naxos**, and is now called **Taormina**. See **NAXUS**, N° 4; and **TAORMINA**.

TAUROMINIUS, a river near Taurominium.

(1.) **TAURUS**, in astronomy, one of the 12 signs of the zodiac.

(2.) **TAURUS**, a great chain of mountains in Asia, which begin at the eastern parts of Little Carmania, and extend very far into the India. In different places they have different names.

(3.) **TAURUS**, in zoology, the bull. See **BOS**, N° IV, § xi, 1—7; **BULL-FIGHTING**, § 1—3; **CALF**, § 2; and **Ox**, § 1, 2.

TAUS, a town of Bohemia, in Pilsen; 26 miles SSW. of Pilsen, and 60 S. of Saatz.

TAUSA, a town of Upper Saxony, in the circle of Neustadt; 2 miles N. Ziegenbruck.

TAUSTE, a town of Spain, in Arragon.

TAAT, or **TAAUT**. See **TAAT** and **THOTH**.

TAUTENBURG, a town and fort of Thuringia; 3 miles S. of Camburg, and 1 ESE. of Dornburg.

* **TAUTOLOGICAL**. *adj.* [*tautologique*, Fr. from *tautology*.] Repeating the same thing.

* **TAUTOLOGIST**. *n. f.* [from *tautology*.] One who repeats tediously.

* **TAUTOLOGY**. *n. f.* [*ταυτολογία*; *tauto* and *logos*; *tautologie*, Fr.] Repetition of the same words, or of the same sense in different words.—All science is not *tautology*. *Glanville*—

Though they in numbers as in sense excel,

So just, so like *tautology*, they fell. *Dryden.*

—Every paper addressed to our beautiful incen-
diaries, hath been filled with different considera-
tions, that enemies may not accuse me of *tautology*.
Addison.

TAUVES, a town of France, in the department

of Puy de Dome; 15 miles W. of Besse, and 24 SW. of Clermont.

TAVUS, an ancient name of the **TAV**.

TAVY, a river of England, in Devonshire, which joins the Tamar, two miles above Saltash.

(1.) **TAW**, in geography, a river of Devonshire, which rises in the centre of the county, 3 miles SE. of Oakhampton, runs W. joins the Towridge, and falls into the Bristol Channel, at Barnstaple, below Appledore, forming a large bay at its mouth, called **BARNSTAPLE BAY**.

(2.) * **TAW**. *n. f.* A marble to play with.—

Trembling I've seen thee

Mix with the children as they play'd at *tauw*;
Nor fear the marbles as they bounding flew,
Marbles to them, but rolling rocks to you.

Swift.

* **To TAW**. *v. a.* [*toawen*, Dutch; *topian*, Sax.] To dress white leather commonly called alum leather, in contradistinction from *tan* leather, that which is dressed with bark.

TAWAS, two tribes of N. American Indians, in the North Western Territory, on the banks of the Miami; the one dwelling 18 miles up that river; the other several miles higher at the Rajuds.

* **TAWDRINESS**. *n. f.* [from *taudry*.] Tinsel finery; finery too ostentatious; without elegance.—A clumsy beau makes his ungracefulness appear the more ungraceful by his *taudriness* of dress. *Clarissa.*

(1.) * **TAWDRY**. *adj.* [from *Stawdery*, Saint Audrey, or Saint Etheldred, as the things bought at Saint Etheldred's fair. *Henshaw, Skinner.*] Meantly shewy; splendid without cost; fine without grace; shewy without elegance. It is used both of things and of persons wearing them.

Gird in your waste,

For more fineness, with a *taudrie* lace. *Spenser.*
—He has a kind of cockcomb upon his crown, and a few *taudry* feathers. *L'Estrange.*—

Your herdman primitive, your homely clown.
Is turn'd a beau in a loose *taudry* gown. *Dryd.*
—He rails from morning to night at effenced fops and *taudry* courtiers. *Addison.*—Her eyes were wan and eager, her dress thin and *taudry*, her mein genteel and childish. *Addison.*

(2.) * **TAWDRY**. *n. f.* A light ornament.—

With white pebbles makes her *taudries* for her neck. *Drayton.*

* **TAWER**. *n. f.* [from *tauw*.] A dresser of white leather,

TAWING, *part. n. f.* the art of dressing skins in white, for divers manufactures, particularly gloves, &c. All skins may be tawed; but those chiefly used for this purpose are lamb, sheep, kid, and goat skins. The method is this: Having clear ed the skins of wool or hair by lime, they are laid in a large vat of wood or stone, set on the ground full of water, in which quicklime has been slacked; wherein they are allowed to lie 4 or 6 weeks according as the weather is more or less hot, or as the skins are required to be more or less pliant. While they are in a vat, the water and lime is changed twice, and the skins are taken out and put in again every day; and when they are taken out for the last time, they are laid all night to soak in a running water, to get out the greatest part of the lime; and in the morning
are

are laid together by fixes one upon another, upon a wooden leg, and are scraped stoutly one after another, to get the flesh off from the fleshy side, with a cutting two handed instrument called a *knife*; and then they cut off the legs (if they are not cut off before) and other superfluous parts about the extremities. Then they are laid in a vat or pit with a little water, where they are filled with wooden pebbles for a quarter of an hour; and then the vat is filled up with water, and they are rinsed in it. They are then thrown on a clean pavement to drain, and afterwards cast into a fresh pit of water, out of which they are rinsed well, and are laid again on the wooden leg, 6 at a time, with the hair side outermost; over which they rub a kind of whetstone very briskly, to soften and fit them to receive 4 or 5 more preparations, given them on the leg both on the flesh-side and the hair-side, with the knife as before. After this they are put into a pit of water and wheaten-bran and stirred about in it with wooden poles, till the bran is perceived to stick to them and then they are left; as they rise of themselves to the top of the water by a kind of fermentation, they are plunged down again to the bottom; and at the same time fire is set to the liquor, which burns as easily as if it were brandy, but goes out the moment the skins are all covered. They repeat this operation as often as the skins rise above the water; and when they have done riling they take them out, lay them on the wooden leg, the fleshy side outwards, and scrape off the bran, with the knife. They then lay the skins in a large basket, and load them with huge stones to promote their draining; and when they have drained sufficiently, they give them their *feeding*; which is performed thus:—For 100 large sheep skins, and so in proportion, they take 8 lb. of alum and 3 of sea-salt, and melt the whole with water in a vessel over the fire, pouring the solution out, while yet lukewarm, into a trough, in which is 20 lb. of the finest wheat-flour, with the yolks of 8 dozen of eggs; of all which is formed a kind of paste, a little thicker than children's pap; which is put into another vessel, to be used thus:—They pour a quantity of hot water into the trough in which the paste was prepared, mixing two spoonfuls of the paste with it; to do which they use a wooden spoon, which contains just as much as is required for a dozen of skins; and when the whole is well diluted, 2 dozen of the skins are plunged into it; but the water must not be too hot, which would spoil the paste and burn the skins. After they have lain some time in the trough they take them out, one after another, with the hand, and stretch them out; this they do twice, and after they have given them all their paste, they put them into tubs, and there fill them afresh with wooden pebbles. Then they put them into a vat, where they lie 5 or 6 days, or more; then they take them out in fair weather, and hang them to dry on cords or racks; and the quicker they are dried the better; for if they be too long a-drying, the salt and alum within them are apt to make them rise in a grain, which is an essential fault. When the skins are dry, they are made up into bundles, just dipt in fair water, and taken out and drained; they are then thrown into an empty tub; and

after having lain some time are taken out and trampled under foot. Then they draw them over a flat iron instrument, the top of which is round like a battledore, and the bottom fixed into a wooden block, to stretch and open them; and having been opened, they are hung in the air upon cords to dry; and when dry, they are opened a second time, by passing them again over the same instrument. Lastly, they are laid on a table, pulled out and laid smooth, and are then fit for sale.

TAWIXTWI, a town of the United States in the North Western Territory; seated on the Miami. Lon. 84. 4. W. Lat. 40. 33. N.

* **TAWNY**, *adj.* [*tanc, tanne, Fr.*] Yellow, like things tanned.—

In high bora words, the worth of many a knight

From *tawny* Spain, lost.

Shak.

—Eurus his body must be drawn the colour of the *tawny* Moor. *Peacham.*

The *tawny* lion pawing to get free. *Milton.*

—Whilst they make the river Senaga to bound the Moors, so that on the south side they are black, on the other only *tawny* they seem not to derive it from the sun. *Brown.*—

Where's the worth that fets this people up

Above your own Numidia's *tawny* sons? *Addis.*

TAWY, a river of S. Wales, which rises in Brecknockshire; runs parallel to the Neath, and falls into the sea at Swaney Bay.

(1.) * **TAX**, *n. f.* [*tāg, Welsh; taxe, Fr. taxe, Dutch.*] 1. An impost; a tribute imposed; an excise; a tallage.—He, says Horace, being the son of a *tax* gatherer or collector, smells every where of the meanness of his birth. *Dryden.*—

With wars and *taxes* others waste their own,
And houses burn, and household gods deface.

Dryden.

—The *tax* upon tillage was two shillings in the pound in arable land, and four in plantations; this *tax* was often levied in kind upon corn, and called *decumæ* or *tithes*. *Arbutnot.* 2. [*Taxo, Lat.*] Charge; censure.—He could not without some *tax* upon himself and his ministers for executing the laws, look upon the bold licence of some pamphlets. *Clarendon.*

(2.) **TAX**, [*Taxa*, from the Greek *ταξις*, i. e. *ordo tributum*.] is an imposition laid upon the subject for the support of government. See **REVENUE**. It is the ancient indisputable privilege and right of the HOUSE OF COMMONS, that all grants of subsidies or parliamentary aids do begin in their house, and are first bestowed by them; although their grants are not effectual to all intents and purposes until they have the assent of the other two branches of the legislature. See **COMMONS**. But so reasonably jealous are the commons of this valuable privilege, that herein they will not suffer the other house to exert any power but that of rejecting. The commons, when they have voted a supply to his majesty, and settled the *quantum* of that supply, usually resolve themselves into what is called a *committee of ways and means*, to consider the ways and means of raising the supply so voted. And in this committee every member (though it is looked upon as the peculiar province of the chancellor of the exchequer) may propose

propose such scheme of taxation as he thinks will be least detrimental to the public. The taxes which are raised upon the subject are either *annual or perpetual*.

1. **TAXES, ANNUAL**, are usually those upon land and malt. See **LAND** and **MALT**.

II. **TAXES, PERPETUAL**, are the customs, the excise-duty, the salt-duty, the post-office, the stamp-duty, the assessed taxes, &c. See **CUSTOMS**, **EXCISE**, **HOUSE**, **HACKNEY**, **OFFICES**, **PENSIONS**, **POST**, and **STAMP**. As to the application of all these, see **CIVIL LIST**, **FUNDS**, **NATIONAL DEBT**, and **REVENUE**.

* **To TAX**, *v. a.* [*taxer*, Fr. from the noun.] 1. To load with imposts.—Jehoiakim *taxed* the land to give the money. 2 *Kings*, xxiii. 35. 2. [*Taxo*, Lat.] To charge; to censure; to accuse. It has *of or with*, and sometimes *for*, before the fault imputed, and is used both of persons and things. —I promised to eat all of his killing.—Niece; you *tax* signior Benedick too much. *Shak.*—I am not justly to be *taxed with* any presumption for meddling with matters wherein I have no dealing.

Raleigh.—

Tax not divine disposal. *Milton.*
—They cannot *tax* others omissions towards them without a tacit reproach of their own. *D. of Piety.*
—He *taxed* not Homer nor Virgil for intertesting their gods in the wars of Troy and Italy; neither would he have *taxed* Milton for his choice of a supernatural agent. *Dryden.*—Men's virtues I have commended as freely as I have *taxed* their crimes. *Dryden.*—

He call'd him back aloud, and *tax'd* his fear. *Dryden.*

Like some rich and mighty murderer,
Who fresher for new mischief does appear,
And dares the world to *tax* him *with* the old.

Dryden.
—If this be chance, it is extraordinary; and I dare not call it more, for fear of being *taxed with* superstition. *Dryden.*—

If he *taxes* both of long delay
My guilt is less, who sooner came away. *Dryd.*
This salutation cannot be *taxed with* flattery. *Addison.*

* **TAXABLE**, *adj.* [from *tax*.] That may be taxed.

(1.) * **TAXATION**, *n. s.* [*taxation*, French; *taxatio*, Lat. from *tax*.] 1. The act of loading with taxes; *impost*; *tax*.—The subjects could taste no sweeter fruits of having a king than grievous *taxations*. *Sidney.*—I bring no overture of war, no *taxation* of homage. *Shak.*—

He daily such *taxations* did exact,
As were against the order of the state. *Daniel.*
Various news I heard,

Of old mismanagements, *taxations* new. *Pope.*
2. Accusation; scandal.—You'll be whipt for *taxation* one of these days. *Shak.*

(2.) **TAXATION**. See **FEODAL SYSTEM**, **REVENUE**, and **TAX**.

* **TAXER**, *n. s.* [from *tax*.] He who taxes.—These rumours begot scandal against the king, taxing him for a great *taxer* of his people. *Bacon.*

TAXILA, in ancient geography, an extensive country of India, between the Indus and the Hydaspes. *Strabo*, &c.

VOL. XXII. PART I.

TAXILES, or } a king of Taxila, called also
TAXILUS. } *Omphis* in the age of Alexander. He submitted to the conqueror, who rewarded him liberally. See **MACEEDON**, § 14.

TAXIMACHILUS, a king in the S. part of Britain, contemporary with Julius Cæsar. *Cæs. de Bel. Gal. c. 22.*

TAXIS, *n. s.* in ancient architecture, the ordonnance; the disposition. *Ash.*

TAXUS, the **YEW TREE**, in botany, a genus of plants belonging to the class of *diazia*, and order of *monodelphia*; and in the natural system ranging under the 51st order, *Coniferae*. The male calyx is triphyllous, gemmaceous, and imbricated; there is no corolla; the stamina are numerous; the antheræ peltate and obovate. The female calyx resembles the male; there is no corolla nor style, and only one seed with a calycle resembling a berry very entire. There are 5 species:

1. **TAXUS BACCATA**, the common yew tree, is a native of Britain, France, Switzerland, &c. and of North America. It is distinguished from the other species by linear leaves which grow very close, and by the receptacles of the male flowers being subglobose. The wood is reddish, full of veins, and flexible, very hard and smooth, and almost incorruptible. Its hardness renders it very proper for turners and cabinet-makers. It produces berries which are red, mucilaginous, and have a sweet mawkish taste. They are often eaten by birds, and are therefore not poisonous: But it is a common opinion that the leaves are poisonous to cattle, and many facts are mentioned of horses and cows having died by eating them. But others deny this.

2. **TAXUS CAPENSIS**, a native of the Cape of Good Hope, is mentioned by Mr Sonnerat.

3. **TAXUS MACROPHYLLA** is described by Sir Charles Thunberg, in his *Flora Japonica*, as a native of Japan.

4. **TAXUS NUCIFERA**, the *nut-bearing yew*, is the only other species mentioned by Linnaeus.

5. **TAXUS VERTICILLATA**, another species growing in Japan, is described by Sir C. Thunberg.

(1.) **TAY**, called by the Romans **TAVUS** or **Taus**, a river in Scotland, which contributes a greater quantity of water to the ocean than any river in Great Britain. It rises in Breadalbane, on the frontiers of Lorn; and having augmented its stream by several small rills, spreads itself in to a lake called *Loch Duichart*; out of which having run but a little space, it expands again. Leaving this second lake, it rolls some miles with a considerable body of water, and then diffuses itself into the spacious Loch Tay; which is 16 miles long. Almost as soon as it issues from this lake, which it does under a handsome bridge, it receives the river **LYON**; and pursuing a course due E. it receives, 10 miles farther on, the **TUMMEL**, which conveys the united rivulets of Athol into its channel. Bending them to the S. for 6 miles, it reaches Dunkeld; where an elegant bridge was built in 1806. Declining still to the SE. with a winding course, for above 22 miles, the Tay receives the **ISLA**, and a large supply of waters from the county of Angus; and then running SW. for 8 miles more, is joined in that space by several rivers, the most considerable of which is the **AY**.

mond. Turning then to the SE. this copious river rolls past PERTH, the capital of the county. The Tay, continuing still a SE. course, receives, a few miles below Perth, the river Earn. (See EARN and EARNIE.) Swelled by the waters of this last river, the Tay, running next directly E. enlarges itself till it becomes about 3 miles broad; but contracts again before the town of Dundee; soon after which it opens into the German ocean. At the entrance of the frith, there are sands both on the N. and S. side: the former styled *Gaa*, the latter *Aberlay* and *Drumlan*: and before these, in the very mouth of the frith, those which are called the *Cross Sands*. At Buttonness, which is the northern promontory, there are two light-houses. The space between the N. and the S. sands may be near a mile, with about 3 fathoms water; but being within the frith, it grows deeper, and in the road of Dundee is full 6 fathoms. The frith of Tay is not indeed so large or so commodious as that of Forth, but from Buttonness to Perth it is not less than 40 miles; and the whole may be, without any great impropriety, styled a harbour, which has five on one side, and the shires of Perth and Angus on the other.

(2.) TAY, a river of Ireland, in Waterford, which runs into the sea; 7 miles WNW. of Dun-carvon Bay.

(3.) TAY, a town of China, of the 3d rank, in the prov. of Setchuen; 10 miles N. of Xun.

(4.) TAY, FRITH OF, an arm of the sea, at the mouth of the TAY, (N^o 1.) which divides the county of Fife from those of Perth and Forfar.

(5.) TAY, LOCH, a lake of Perthshire, through which the river Tay runs, 16 miles long, and in many parts above one broad. (See N^o 1.) The banks of this lake are finely shaded with trees; and it has an island, on which are the ruins of a priory built by Alexander I.

TAYA, a river of Austria, which rises near Schweigers; passes by Drosendorf and enters Moravia; then runs past Zams, Laab, &c. and joins the March, 4 miles NE. of Hockenau.

TAYAO, a town of China, of the 3d rank, in the province of Yun-nan; 15 m. N. of Yao-ngan.

TAYGETA, or } in the mythology, a daughter
TAYGETE, } ter of Atlas and Pleione, and
mother of LACEDÆMON by Jupiter. She became one of the PLEIADES.

TAYGETUS, a mountain of Laconia, W. of the Eurotas. It hung over Lacedæmon, and a part of it once fell down and destroyed the suburbs. The Spartan women celebrated the BACCHANALIA upon it. *Paus.* iii. 1. *Strabo*, 8.

(1.) TAYLOR, Dr Jeremy, was the son of a barber at Cambridge, where he was educated. He became divinity lecturer of St Paul's in London; and was, by the interest of Abp. Laud, elected fellow of All-soul's college, Cambridge, in 1636. In 1638, he became chaplain to the archbishop, who made him rector of Uppingham in Rutlandshire. In 1642 he was chaplain to the king; and a frequent preacher before him at Oxford. He afterward attended his army as chaplain. Upon the declining of his cause, he retired into Wales, where he officiated as minister, and kept a school. Having spent several years there, he lost 3 sons of great hopes in 3 months. This made him leave

the country, and go to London, where he officiated in a private congregation of loyalists. At length Edward lord Conway carried him over into Ireland, and settled him at Portmore. Upon the Restoration he returned to England; soon after he was advanced to the bishopric of Down and Connor in Ireland. He was likewise made a privy-counsellor and vice-chancellor of the University of Dublin; which he held till his death. He died of a fever at Lisnegarvy in 1657. He was the author of several works on divinity.

(2.) TAYLOR, Dr Brook, was born at Edmington, August 12, 1685. He was the son of John Taylor, Esq. of Bifro's house in Kent, by Olivia, daughter of Sir Nicholas Tempett, of Durham, Bart. His grandfather, Nathaniel Taylor, was one of those puritans whom "Cromwell appointed by letter, June 14, 1653, to represent Bedford in parliament. In 1701 he was entered a Fellow Commoner of St John's College, Cambridge. In 1708 he wrote his treatise *On the Centre of Oscillation*, in the *Phil. Trans.* In 1709, he took his degree of A. B. In 1712, he was chosen F. R. S. In 1712, he presented to the Royal Society three papers: 1. On the Ascent of Water between two Glass Planes; 2. On the Centre of Oscillation; and, 3. On the Motion of a stretched String. In 1713, he presented a paper on Music. In 1714 he was elected secretary: some year he took at Cambridge his degree of LL.D. and sent to Sir Hans Sloane, *An Account of some curious Experiments relative to Magnetism*; which was printed in the *Trans.* In 1715 he published in Latin his *Methodus Incrementorum*; also a curious essay preserved in the *Philos. Trans.* entitled *An Account of an Experiment for the Discovery of the Locus of Magnetic Attraction*; likewise a treatise *On the Principles of Linear Perspective*. In the same year he conducted a controversial correspondence with the Count Raymond de Montmort, on the *Tenets of Malbranche*; which occasioned his being particularly noticed in the eulogium pronounced by the French academy, on that eminent metaphysician. The new philosophy of Newton engaged the attention of mathematicians and philosophers both at home and abroad. In 1716, he went to Paris, where his society was very much courted. In 1717 he returned to London, and wrote 3 treatises, which were published in the *Phil. Trans.* vol. 30. His intense application having impaired his health, he went to Aix-la-Chapelle, and resigned his secretaryship in 1718. After his return in 1719, he applied to subjects of a very different kind, such as *A Treatise on the Jewish Sacrifices*, and a dissertation on the Lawfulness of eating Blood. He also revised his treatise on *Linear Perspective*. Drawing continued also to be his favourite amusement to his last hour. In 1721, he published his last paper in the *Philos. Trans.* entitled, *An Experiment to ascertain the Proportion of Expansion of Liquor in the Thermometer, with regard to the degree of Heat*. In 1721, he also married Miss Bridges of Wallington in Surry. She died in 1725, and he united himself to Miss Sawbridge of Olantigh, in Kent. In 1729, on the death of his father, he succeeded to the family estate of Bifrons. In 1730, he lost his wife in child bed. In the interval between 1721 and 1730, he wrote a

Treatise

Treatise of Logarithms. The essay entitled *Compendiosa Philosophica*, published by Sir William Young in 1793, appears to have been written about this time. Having survived his second wife little more than a year, Dr Brook Taylor died of a decline, aged 40, December 29, 1731. He was a finished Christian, gentleman, and scholar.

(3.) TAYLOR, Dr John, a learned dissenting minister, born in Lancashire. He settled first at Kirkstead in Lincolnshire, where he preached to a small congregation, and taught a grammar-school for near 20 years. Afterwards he removed to Norwich, where he preached many years, until he went to superintend the academy at Warrington in Lancashire. He died in 1761; and among several other performances, was the author of an *Hebrew and English Concordance*, 2 vols. folio.

TAYLOR BIRD. See MOTACILLA.

TAY-MING, a city of China, of the 1st rank, in Pe-tche-li; 242 miles SSW. of Pekin.

TAYMOUR CAPE, the utmost extremity of Russia, on the N. See RUSSIA. § I. N° 1.

(1.) TAYNE, an extensive district of Scotland, in Ross-shire, comprehending the greater part of that county. See ROSS, N° 1.

(2.) TAYNE, a town of the above district. See TAIN, N° 3.

(3.) TAYNE, FRITH OF, a bay on the E. side of Tayne or Ross-shire, which runs up 25 miles from the sea, as far as Cape TARBAT, and divides Ross from Sutherland. It is 7 miles broad at the mouth, but is not navigable, as it abounds with quicksands.

TAYNG, a town of Corea, 25 miles S. of Haimen.

TAYNUILT, a village of Scotland, in Argyllshire, on the S. bank of Loch Etive; 6 miles from Bunaw.

TAYOAN. See TAI-OUAN.

TAY-OUAN. See FORMOSA, and TAI-OUAN.

TAYRA, in zoology. See MUSTELA, N° 2.

TAYVAN, an ancient, large, and strong city of China, formerly an imperial residence, agreeably seated among mountains. Lon. 111. 55. E. Lat. 38. 5. N.

TAZ, a river of Russia, which rises from two lakes, Tu and Din, and runs into the Gulf of Tazovskaia. Lon. 98. 0. E. Ferro. Lat. 67. 35. N.

(1.) * TAZEL. See TASSEL, N° 2.

(1.) TAZEL, or TEASEL. See DIPSACUS.

(1.) TAZLE, a town of Asiatic Turkey, in Caramania; 28 miles N. of Cogni.

(1.) TAZLE, a lake of Asiatic Turkey, in Caramania, 36 miles long and 2 broad; 30 miles N. of Cogni.

TAZOVSKAIA, a gulf or bay of Russia, formed by the waters of several rivers in Siberia, and connected with the gulf of Obkskaia. It is 140 miles long, and 3 broad. Lon. 94° to 98° E. Ferro. Lat. 67° 40' to 69° N.

TCENG, a town of China, in Quang-tong.

TCEOU, a town of China, in Chan-tong.

TCHABAR, a river of Chinese Tartary.

TCHABISCH, a town of Russia, in Irkutskoi, on the Amur; 40 miles NNE. of Strctenk.

TCHAC, a mountain of Asia, in Thibet.

TCHAGODO, a town and river of Russia, in Novgorod. The river runs into the Mologa.

TCHANG-TCHA, a city of China, of the 1st rank, in Hou-quang, on the Heng; 742 miles S. of Pekin. Lon. 130. 11. E. Ferro. Lat. 28. 11. N.

TCHANG-TCHEOU, two cities of China, of the 1st rank: 1. In Fo-kien, 950 miles S. of Pekin. Lon. 135. 20. E. Ferro. Lat. 24. 32. N. 2. In Kiang-nan, 525 miles SSE. of Pekin. Lon. 137. 15. E. Ferro. Lat. 31. 50. N.

(1.) TCHANG-TE, a city of China, of the 1st rank, in Hou-quang; 717 miles SSW. of Pekin. Lon. 118. 48. E. Ferro. Lat. 29. 2. N.

(2.) TCHANG TE, a city of China, of the 1st rank, in Ho-nan, the most northern in the province. It has a fish resembling a crocodile, the fat of which, when kindled, cannot be put out. It has also a mountain too steep and inaccessible, that in time of war the citizens retire to it, and bid defiance to their foes. It comprehends one city of the 2d class, and six of the 3d in its district; and is 255 miles SSW. of Pekin. Lon. 131. 44. E. Ferro. Lat. 36. 6. N.

TCHANI, a lake of Russia, in Kolivan, above 200 miles in circuit; 100 miles W. of Kolivan.

TCHAO, a town of China, in Pe-tche-li.

TCHAO-KING, a town of China, of the 1st rank, on the Si; 1062 miles SSW. of Pekin.

TCHARONDA, a town of Russia, in Novogorod, on the Sula; 188 miles ENE. of Novogorod.

TCHASTIJA, an island of Russia, in the Lena, in Irkutskoi; 112 miles NE. of Kirensk.

TCHAUSSI, a town of Russia, in Mogilev.

TCHE-KIANG, or } a province of China,
TCHE-KIENG, } bounded NW. and N.

by Kiang-nan, E. by the sea, S. by Fo-kien, and SW. by Kiang-si. It is 200 miles long, and from 120 to 180 broad. It is one of the chief provinces in the empire, for climate, situation, population, and riches. It abounds with lakes and rivers; and the people are cheerful and polite. Its chief trade is in silk, which may be purchased as cheap as the coarsest woollen cloth in France. The tallow tree, gold fish, excellent hams, and other produce, are exported. It contains 11 cities of the 1st class, and 72 of the 2d, and 18 forts.

TCHOU CHEN, an island of China, 60 miles from Ning-po, where the British embassy first landed.

TCHOU-KONG, a celebrated Chinese astronomer, who flourished above 1000 years before the Christian era, and is said to have invented the MARINER'S COMPASS. He erected a tower in the city of Ho-nan, for an observatory; and there is still to be seen in it an instrument which he made and used for finding the shadow at noon, and determining the latitude.

TCHERA, a town of Ethiopia. See ETHIOPIA, § 8.

TCHERNIGOF, a province of Russia, in the Ukraine. Tchernigof, its capital, is seated on the right bank of the Dnieper.

TCITICAR. See TARTARY, § I. N° I. i.

(1.) * TEA. *n. f.* [A word, I suppose, Chinese: *thé*, Fr.] A Chinese plant, of which the infusion has lately been much drunk in Europe.—

The muses' friend, *tea*, does our fancy aid.

Waller.

—One has a design of keeping an open tea table. *Addison*.—I have filled a tea pot. *Addison*.—He

Y 2

swept

Swept down a dozen *tea* dishes. *Speliator*.—Nor will you encourage the common *tea* table talk. *Speliator*.—Green leaves of *tea* contain a narcotick juice. *Arbutnot*.—

A living *tea* pot stands.

Pope.

—The mistress of the *tea* shop may give half an ounce. *Swift*.—The fear of being thought pedants hath taken many young divines off from their studies, which they have exchanged for plays, to qualify them for *tea* tables. *Swift*.—When you sweep, never stay to pick up *tea* spoons. *Swift*.

(2.) *TEA*, the dried leaves of the *tea* plant.—The *tea* plant is a native of Japan, China, and Tonquin. Linnæus arranged it under the class of *polyandria*, and order of *monogynia*. But several British botanists refer it to the order of *trigynia*; deriving their authority from a plant in the duke of Northumberland's gardens at Sion-house, which had three styles. Linnæus says that there are two species of the *tea* plant; the *bohea*, the corolla of which has six petals; and the *viridis* or green *tea*, which has nine petals. Thunberg makes only one species, the *bohea*, consisting of two varieties; the one with broad and the other with narrow leaves. This botanist's authority is decisive respecting the Japanese *tea* plants; but as China has not yet been explored, we cannot determine what number of species there are in that country. Of the *bohea* plant we have given a figure on *Pl.* 330. *Calyx*. K, *fig.* 1, 2, 3, 10, a perianthium quinquepartite, very small, flat, the segments round, obtuse, permanent, *fig.* 1; K. *Corolla*. C, *fig.* 1, 3, 4, 5, 7, 8, the petals six, roundish, concave; two exterior, *fig.* 4, 7, CC; less, unequal, inclosing the flower before fully blown, *fig.* 3, C; four interior, *fig.* 5, 6, CCCC; large, equal, before they fall off recurvate, *fig.* 8, CC. *Stamina*. f, *fig.* 6, 9, 10, 11, the filaments numerous, *fig.* 6, 9, f; about 200; filiform, white, shorter than the corolla, and inserted in the receptacle, a; the antheras cordate and didymous, *fig.* 10, 11, magnified. *Pistillum*. Fig. 1, 10, 12, magnified; g, the germen, three globular bodies joined in a triangular form; j, the styles, three, connected at their base, *fig.* 12; subulate, recurvate, of the length of the stamens, pressed together, and as if united in one by the thickest surrounding stamens, *fig.* 6, 9, 10; but after the petals and stamens have fallen off they part, spread open, increase in length, and wither on the germen, *fig.* 1, 12; the stigmas simple, t, *fig.* 1, 9, 10, 12. *Pericarpium*. P, *fig.* 1, 13, 14, a capsule in the form of three globular bodies united, *fig.* 13; trilobular, *fig.* 14; gaping at the top in three directions, *fig.* 13. *Seeds*. S, *fig.* 14, single, globose, angulate on the inward side. *Trunk*. T, *fig.* 1, ramose, ligneous, round; branches alternate, vague, stiffish, inclining to ash colour, towards the top reddish; the peduncles axillary, p, *fig.* 1; alternate, single, curved, uniflorous, incrassate, *fig.* 1, 2, 7; stipulate, the stipula single; subulate, erect, d, *fig.* 1, 2, 7, 9. *Leaves*. F, *fig.* 1, 15, 16, 17, alternate, elliptical, obtusely serrated, with the edges between the teeth recurvate, with the apex emarginate, magnified, *fig.* 15, e; at the base very entire, *fig.* 16, 17; the surface smooth, glossy, bullate, venose on the under side, of a firm texture, petiolate; the petioles very short, b, *fig.* 1, 16, 17; round on the

under side, gibbous, *fig.* 16, b, magnified; on the upper side flattish and slightly channelled, *fig.* 17, b. The *tea* plant, which is an evergreen, grows to the height of 5 or 6 feet; Le Compte says 10 or 12. The leaves, which are the only valuable part of it, are about an inch and a half long, narrow, indented, and tapering to a point like those of the sweet briar, and of a dark green colour. The root is like that of the peach tree, and its flowers resemble those of the white wild rose. The stem spreads into many irregular branches. The wood is hard, of a whitish green colour, and the bark is of a greenish colour, with a bitter, nauseous, and astringent taste. The fruit is small, and contains several round blackish seeds, about the bigness of a bean or large pea.

(3.) *TEA*, CULTIVATION, SOIL, &c. PROPER FOR. The *tea* plant delights in valleys, is frequent on the sloping sides of mountains and the banks of rivers, where it enjoys a southern exposure. It flourishes in the N. latitudes of Pekin as well as round Canton, but attains the greatest perfection in the mild temperate regions of Nankin. It is said only to be found between 50° and 45° lat. N. In Japan it is planted round the borders of fields, without regard to the soil; but as it is an important article of commerce with the Chinese, whole fields are covered with it, and it is by them cultivated with care. It is propagated by seeds; from 6 to 12 are put into a hole about 5 inches deep, at certain distances from each other. The reason why so many seeds are sown in the same hole is said to be, that only a fifth part vegetate. Being thus sown, they grow without any other care.

(4.) *TEA*, GATHERINGS AND CROPS OF. The leaves are not fit for being plucked till the shrub be of three years growth. In seven years it rises to a man's height; but as it then bears but few leaves, it is cut down to the stem, and this produces a new crop of fresh shoots the following summer, every one of which bears nearly as many leaves as a whole shrub. Sometimes the plants are not cut down till they are ten years old. We are informed by Kämpfer, that there are three seasons in which the leaves are collected in the isles of Japan, from which the leaves derive different degrees of perfection. The first gathering commences at the end of February or beginning of March. The *tea* is then small, tender, and unfolded, and not above three or four days old: these are called *sicki tsaa*, or "tea in powder," because it is pulverised; it is also called *imperial tea*, being generally reserved for the court and people of rank; and sometimes also it is named *bloom tea*. It is sold in China for 20d. or 2s. per pound. The labourers employed in collecting it do not pull the leaves by handfuls, but pick them one by one, and take every precaution that they should not break them. However long and tedious this labour may appear, they gather from 4 to 10 or 15 pounds a-day. The second crop is gathered about the end of March or beginning of April. At this season part of their leaves have attained their full growth, and the rest are not above half their size. This difference does not, however, prevent them from being all gathered indiscriminately. They are afterwards picked and assorted into different

ferent parcels, according to their age and size. The youngest, which are carefully separated from the rest, are often sold for leaves of the first crop, or for imperial tea. Tea gathered at this season is called *100 shan*, or *Chinse tea*, because the people of Japan infuse it, and drink it after the Chinese manner. The 3d crop is gathered in the end of May or in June. The leaves are then very numerous and thick, and have acquired their full growth. This kind of tea, which is called *Benshaa*, is the coarsest of all. Some of the Japanese collect their tea only at two seasons of the year, which correspond to those already mentioned; others confine themselves to one general gathering of their crop, in June; but they always form afterwards different assortments of their leaves. The finest and most celebrated tea of Japan is that which grows near *Uo-si*, a village near *Meaco* on the coast. In the district of this village is a delightful mountain of the same name, the climate of which is said to be extremely favourable to the culture of tea; it is therefore inclosed by a hedge, and surrounded with wide ditches, which prevent all access to it. The tea shrubs that grow on this mountain are planted in regular order, and are divided by avenues and alleys. The care of this place is entrusted to people who guard the leaves from dust, and defend them from the inclemency of the weather. The labourers who are appointed to collect the tea abstain from every kind of gross food for some weeks before they begin, that their breath and perspiration may not in the least injure the leaves. They gather them with the most scrupulous nicety, and never touch them but with very fine gloves. When this choice tea has undergone the process necessary for its preparation, it is escorted by the superintendent of the mountain and a strong guard to the emperor's court, and reserved for the use of the imperial family.

(5.) **TEA, METHOD OF DRYING AND PRESERVING.** When the tea leaves have been collected, they are exposed to the steam of boiling water; after which they are put upon plates of copper, and held over the fire until they become dry and shrivelled, and appear such as we have them in Europe. *Kœmpfer*, says tea is prepared in the same manner in the isles of Japan. The people of Japan and China generally keep their tea a year before using it, because, when fresh and newly gathered, it possesses a narcotic quality which hurts the brain. Imperial tea is generally preserved in porcelain vases, or in leaden or tin canisters covered with fine mats made of bamboo. Common tea is kept in narrow-mouthed earthen pots; and coarse tea, the flavour of which is not so easily injured, is packed up in baskets of straw.

(6.) **TEA, METHODS OF INFUSING AND DRINKING.** The Chinese pour boiling water over their tea, and leave it to infuse, as we do in Europe; but they drink it without any mixture, and even without sugar. The people of Japan reduce theirs to a fine powder, which they dilute with warm water until it has acquired the consistence of thin soup.

(7.) **TEA, PERIOD OF INTRODUCING INTO EUROPE.** Tea was introduced into Europe in 1610 by the Dutch East India Company. It is generally

said, that it was first imported from Holland to England, in 1666, by the lords Arlington and Ossory, who brought it into fashion among people of quality. But it was used in Coffee-houses before this period, as appears from an act of parliament made in 1660; in which a duty of 2d. was laid on every gallon of the infusion sold in these places. In 1666 it was sold in London for 60s. per pound, though it did not cost more than 2s. 6d. or 3s. 6d. at Batavia. It continued at this price till 1707. In 1715 green tea began to be used; and as great quantities were then imported, the price was lessened, and the practice of drinking tea descended to the lower ranks. In 1720 the French began to send it to us by a clandestine commerce. Since that period the demand has been encreasing yearly, and it has become almost a necessary of life in several parts of Europe, and among the lowest as well as the highest ranks.

(8.) **TEA, QUANTITY OF, IMPORTED INTO EUROPE.** The quantity of tea imported annually into Great Britain and Ireland since 1717, is as follows:

From 1717 to 1736	-	700,000 lbs.
1732 to 1742	-	1,200,000
1755 near	-	4,000,000
1766	-	6,000,000
1785 about	-	12,000,000
1794 from	16 to	20,000,000

Besides these immense quantities imported into Britain and Ireland, much has been brought to Europe by other nations. In 1766 the whole tea imported into Europe from China amounted to 17 millions of pounds; in 1794 it was computed to be about 19 millions of pounds.

(9.) **TEA, RAISING OF PLANTS OF.** Many attempts have been made to introduce this valuable plant into Europe; but from want of proper precautions most of these attempts have miscarried. The seeds, being of an oily nature, are apt to grow rancid during a long voyage, unless proper care is taken to preserve them. The finest tea-plant known in England was raised in Kew gardens; but the first that ever flourished in Europe was one belonging to the Duke of Northumberland at Sion. The plants which are cultivated in the gardens near London thrive well in the green-houses during winter, and some stand that season in the open air. *Linnaeus*, who obtained this shrub in its growing state, contrived to preserve it in the open air in the northern latitude of Sweden. France has also procured some plants. There can be no doubt but they would succeed in many countries of Europe, if proper care were paid to their cultivation till they became inured to the climate.

(10.) **TEA, VARIOUS KINDS OF.** In this country, teas are generally divided into three kinds of *green*, and 5 of *bohea*: The former are, 1. *Imperial* or *bloom tea*, with a large loose leaf, light green colour, and a faint delicate smell. 2. *Hysen*, so called from the merchant who first imported it; the leaves of which are closely curled and small, of a green colour, verging to a blue: And, 3. *Singlo* tea, from the name of the place where it is cultivated. The *bohreas* are, 1. *Souchong*, which imparts a yellow green colour by infusion. 2. *Cambo*, so called from the place where it is made; a fragrant tea, with a violet smell: its infusion pale

pale. 3. *Congo*, which has a larger leaf than the following, and its infusion somewhat deeper, resembling common bohea in the colour of the leaf. 4. *Pekoe tea* is known by the appearance of small white flowers mixed with it. 5. Common *bohea*, whose leaves are of one colour. There are other varieties, particularly a kind of green tea, done up in roundish balls, called *gunpowder tea*.

(II.) **TEA**, in geography, a river of England, in Buckinghamshire; which runs into the Ouse near Stony Stratford.

TEA-BOARD. *n. f.* [*tea and board*.] The board on which the cups are placed. *Ash.*

TEA-CANISTER. *n. f.* A canister to keep tea in. *Ash.*

(1.) * **TEACH**. *v. a.* pret. and part. pass. taught, sometimes *teached*, which is now obsolete. [*teacan*, Saxon.] 1. To instruct; to inform.—

To *teach* a teacher ill becometh me. *Shak.*
—The Lord will *teach* us of his ways. *Isa.* ii. 3.—

Teach us by what means to shun
Th' inclement seasons. *Milton.*

1. To deliver any doctrine or art, or words to be learned.—Moses wrote this song, and *taught* it. *Deut.* xxxi. 22.—*Teaching* for doctrines the commandments of men. *Mat.* xv. 9.—

They *teach* all nations what of him they learn'd. *Milton.*

3. To show; to exhibit so as to impress upon the mind.—I can easier *teach* twenty what were good to be done, than to be one of the twenty to follow my own *teaching*. *Shak.*—If some men *teach* wicked things, it must be that others should practice them. *South.* 4. To tell; to give intelligence.

Huswives are *teach'd*, instead of a clock,
How winter night passeth. *Tupper.*

(2.) * **TEACH**. *v. n.* To perform the office of an instructor.—

I have labour'd,
And with no little study, that my *teaching*,
And the strong course of my authority,
Might go one way. *Shakepeare.*

—The priests *teach* for hire. *Mic.* iii. 11.

* **TEACHABLE**. *adj.* [from *teach*.] Docile; susceptible of instruction.—'Tis sufficient that matters of faith and religion be produced in such a way, as to render them highly credible, so as an honest and *teachable* man may willingly and safely assent to them. *Wilkins.*—We ought to bring our minds free, unbiassed, and *teachable*, to learn our religion. *Watts.*

* **TEACHABLENESS**. *n. f.* [from *teachable*.] Docility; willingness to learn; capacity to learn.

TEACHE. *n. f.* in the sugar manufacture, the 4th copper used. See **SUGAR**, § 10.

* **TEACHER**. *n. f.* [from *teach*.] 1. One who teaches; an instructor; preceptor.—Nature is no sufficient *teacher* what we should do that may attain unto life everlasting. *Hooker.*

I went into the temple, there to hear
The *teachers* of our law. *Milton.*

—These were notions born with us; such as we were taught without the help of a *teacher*. *South.*
Imperious with a *teacher's* air. *Blackmore.*

2. One who without regular ordination assumes the ministry.—Dissenting *teachers* are under no incapacity of accepting civil and military employments. *Swift.* 3. A preacher; one who is to de-

liver doctrine to the people.—The *teach* the churches assembled themselves. *R.*
lecture men, whom precise people fit *teachers*, do seldom honour it. *White.*

Wolves shall succeed for *teachers*.
—He may *teach* his diocese by appoint

South.

TEACHES, an island of Virginia, c of Northampton county.

TEA-CHEST. *n. f.* A cabinet in v brought to table. *Ash.*

TEA-CUP. *n. f.* A cup for drinking

* **TEAD**. or *tede*. *n. f.* [*tada*, Lat.] a flambeau. Not in use.—

A bushy *tead* a groom did light.
Hymen is awake,

With his bright *tead* that flames.

TEA-DISH. *n. f.* See **TEA-CUP**.

TEAGUE. *n. f.* A name of content an Irishman.

TEAK wood. See **TECTONA**.

TEA-KETTLE. *n. f.* A kettle for boiling water for tea.

TEAKI, an island in the Mediterranean, 20 miles long, and 4 broad; anciently called **ITHACA**, the kingdom of **ULYSSES**.

(1.) * **TEAL**. *n. f.* [*teelingb*, Dutch.] A wild fowl.—Some serve for food to us, and some but to feed themselves; among the first sort we reckon the dip-chick, coots, *teal*, wigeon. *Carew.*

(2.) **TEAL**, in ornithology. See **ANAS**, N° 12. and 21.

TEALING, a parish of Scotland, in Forfarshire, on the S. side of the Sidlaw hills, about 8 miles from Dundee, on the road to Glamis. It is 3 miles long, not quite a broad, and is watered by the Fithie. The surface slopes gradually from the hills towards the S. The soil varies from a light loam to a rich black mould, very retentive of moisture. Agriculture is much improved. The population, in 1791, was 802, increase 67 since 1755; but of these, 47 had decreased in 1801, owing to the war. *Craig Owl*, the highest of the Sidlaw hills is in this parish. It is 1100 feet above the sea level. About 380 acres are under plantations. There are several relics of Druidical and Roman antiquity.

* **TEAM**. *n. f.* [*temo*, the team of a carriage, Latin *tyme*; Sax. a yoke.] 1. A number of horses or oxen drawing at once the same carriage.—

Thée a ploughman all unweeting found,
As he his toilsome *team* that way did guide.

Spenser.

We fairies that do run
By the triple Hecate's *team*,
Now are frolic. *Shak.*

The hour before the heavenly harness'd *team*
Begins his golden progress in the East. *Shak.*

—I am in love; but a *team* of horse shall not pluck that from me, nor who it is I love. *Shak.*—

Home with the weary *team* they took their way. *Roscommon.*

A weighty stone, the labour of a *team*. *Dryden.*

—In stiff clays they may plow one acre of wheat with a *team* of horse. *Mortimer.* 2. Any number passing in a line.—

Like a lo g *team* of snowy swans on high.

Dryden.

TEANUM,

TEANUM, two ancient towns of Italy, 1. in Campania, on the Appian road, on the E. bank of the Liris, called also *Sidicinum*, to distinguish it from, 2. another town in the W. of Apulia, on the coast of the Adriatic. *Cic. Cluent.* 9, 69. *Plin.* 31. c. 2.

TEA-PLANT. *n. f.* See **TEA**, and **THÆA**.

TEA-POT. *n. f.* a pot for making tea. Tea-pots are made of various substances and patterns; of silver, pewter, japanned iron, &c. besides China and other earthen wares.

(1.) * **TEAR.** *n. f.* [*ea* in this word is pronounced *e*; *tear*, Saxon; *taaro*, Danish; *tear* rhymes to *cheer*.] 1. The water which violent passion forces from the eyes.—

She comes; and I'll prepare

My *tear-brain'd* eyes to see her miseries. *Shak.*

The pretty vaulting sea refus'd to drown me,
Knowing that thou would'st have me drown'd
on shore

With *tears* as salt as sea, through thy unkind-
ness. *Shak.*

Cromwell, I did not think to shed a *tear*
In all my miseries; but thou hast forc'd me.

Shak.
—*Tears* are the effects of compression of the moisture of the brain. *Bacon.*—

She silently a gentle *tear* let fall. *Milton.*

3. Any moisture trickling in drops.—

Let Araby extol her happy coast,

Her fragrant flow'rs, her trees with precious
tears,

Her second harvests. *Dryden.*

(1.) * **TEAR.** *n. f.* [from the verb.] A rent; a fissure.

(3.) **TEARS** are a lymph or aqueous humour, which is limpid, and a little saltish: it is separated from the arterial blood by the lachrymal glands and small glandulous grains on the inside of the eyelids.

(1.) * **To TEAR**, pret. *tore*, anciently *sare*; part. pass. *torn*; *teran*, Saxon; *tara*, Swedish; *ea* is pronounced as *a*; *tear* rhymes to *square*.] 1. To pull in pieces; to lacerate; to rend; to separate by violent pulling.—

Come, feeling night,

Cancel and *tear* to pieces that great bond
Which keeps me pale. *Shak.*

—Surely he is *torn* in pieces. *Gen.* xlv. 28.—

John *tore* off lord Strutt's servants cloaths. *John Bull.*—Ambassadors sent to Carthage were like to be *torn* to pieces. *Arbutnot.* 2. To laniate; to wound with any sharp point drawn along.—

The women beat their breasts, their cheeks
they *tare*. *Shak.*

—Neither shall men *tear* themselves for them. *Jer.* xvi. 7. 3. To break or take away by violence.—

As storms the skies, and torrents *tear* the
ground,

Thus rag'd the prince. *Dryden.*

4. To divide violently; to shatter.—Is it not as much reason to say, that God destroys fatherly authority, when he suffers one in possession of it to have his government *torn* in pieces. *Locke.* 3. To pull with violence; to drive violently.—

He roar'd, he beat his breast, he *tore* his hair.
Dryden.

On rough seas from their foundations *tore*,
Got by the winds, and in a tempest born. *Dryd.*
Blush rather, that you are a slave to passion,
Which, like a whirlwind, *tears* up all your virtues. *A. Philips.*

6. To take away by sudden violence.—

Solyman

Rhodes and Buda from the Christians *tore*. *Wal.*

The hand of fate

Has *torn* thee from me. *Addison.*

7. To make a violent rent.—

In the midst a *tearing* groan did break. *Shak.*

(2.) * **To TEAR.** *v. n.* [*tieren*, Dutch.] To fume; to rave; to rant turbulently.—All men transported into outrages for small trivial matters, fall under the innuendo of this bull, that ran *tearing* mad for the pinching of a mouse. *L'Estrange.*

* **TEARER.** *n. f.* [from *to tear*.] He who rends or tears.

* **TEARFALLING.** *adj.* [*tear* and *fall*.] Tender; shedding tears.—

Tearfalling pity dwells not in this eye. *Shak.*

* **TEARFUL.** *adj.* [*tear* and *full*.] Weeping; full of tears.—

Is't meet that he

With *tearful* eyes add water to the sea? *Shak.*

This clears the cloudy front of wrinkled
care,

And drives the *tearful* juices of despair. *Pope.*

TEARN, a town of England, in Shropshire and Staffordshire.

TEARUS, a river of ancient Thrace, rising in the same rock from 38 different sources; some of which were hot, and others cold. Darius raised a column on its banks when he marched against the Scythians. *Plin.* iv. c. 11.

* **To TEASE.** *v. a.* [*tejan*, Saxon.] 1. To comb or unravel wool or flax. 2. To scratch cloth in order to level the nap. 3. To torment with importunity; to vex with assiduous importuneness.

Not by the force of carnal reason,

But indefatigable *teasing*. *Butler.*

—My friends always *tease* me about him. *Spett.*—
He was *teased* by his mother to inform her of what
had passed. *Addison.*—

We system makers can sustain,

And with remarks and comments *tease* ye,
In case the thing before was easy. *Prior.*

(1.) * **TEASEL.** *n. f.* [*teaf*, Saxon; *dipsacus*, Lat.] A plant. The species are three; one is called carduus fullonum, and is of singular use in raising the knap upon woollen cloth. *Miller.*

(2.) **TEASEL** is cultivated in the W. of England for the use of clothiers. See **DIPSACUS**.

* **TEASER.** *n. f.* [from *tease*.] Any thing that torments by incessant importunity.—You must take off his little *teaser*, which holds his reason at bay. *Collier.*

* **TEAT.** *n. f.* [*teth*, Welsh; *tit*, Saxon; *tette*, Dutch; *teton*, French.] The dug of a beast; anciently the pap of a woman.—

Even of thy *teat* thou hadst thy tyranny. *Shak.*

—The earth sucks it out of the *teat*. *Bacon.*—
When we perceive that bats have *teats*, we infer,
that they suckle their younglings with milk.
Brown.—

It more pleas'd my sense,
Than smell of sweetest fennel, or the *teats*

Of

Of ewe or goat dropping with milk at even.

Milton.

—Infants are seldom awake but when hunger calls for the *teat*. *Locke.*—

Kind Amalthea reach'd her *teat* dissent

With milk, thy early food.

Prior.

TEA-TABLE, *n. f.* A well known piece of furniture for holding tea (quipage).

TEATE, } or TEGATE, an ancient town of
TEATEA, } Italy in Latium. *Sil Ital.* 8. v. 522.

TEATH, or TEITH, a river of Scotland, in Perthshire; which rises from *Loch Catharine*, in Biquhiddy, whence it runs E. through the lake *Fannachair* and *Loch Achray*, and falls into *Loch Lubnaig*, amidst stupendous rocks and mountains. After issuing from its S.E. extremity, it dashes over many rocks and precipices, in beautiful cataracts, till it reaches the romantic scenery of *CALLANDER*, where it receives a considerable stream from NW. After meandering some miles, it becomes rapid; runs past the church of *Kilmadock*, and the town and castle of *DOUNNE*, where it is joined by the *Ardoch*. After this it runs gently through the valleys of *Blair-Drummond*, and joining the *ALLAN*, falls into the *FORTH*, 3 miles NW. of *Stirling*. It abounds with salmon and trouts; and gives name to *Monteath*, or *MONTEITH*.

TEA-TREE, *n. f.* A moveable board, with a raised border, generally pierced, made of metal, mahogany, or other wood; for holding the tea apparatus.

TEA-TREE of New Zealand, a species of myrtle, of which an infusion was drunk by Captain Cook's people in their voyages round the world. Its leaves were finely aromatic, astringent, and had a particular pleasant flavour at the first infusion; but this went off at the next filling up of the tea-pot, and a great degree of bitterness was then extracted; for which reason it was never suffered to be twice infused. In a fine soil in thick forests this tree grows to a considerable size; sometimes 30 or 40 feet in height, and one foot in diameter. On a hilly and dry exposure it degenerates into a shrub of 5 or 6 inches; but its usual size is about 8 or 10 feet high, and 3 inches in diameter. In that case its stem is irregular and unequal, dividing very soon into branches, which rise at acute angles, and only bear leaves and flowers at top. The flowers are white, and very ornamental to the whole plant. Mr White in his *Journal of a Voyage to New South Wales*, mentions a shrub which he calls a *tea-tree*, merely from its being used by the convicts as a succedaneum for tea; for he had not seen the flower, nor did he know to what genus it belonged. It is a creeping kind of a vine, running to a great extent along the ground: the stalk slender; the leaf not so large as the common bay leaf; the taste sweet, exactly like the liquorice root of the shops.

TEAZEL. See *DIPSACUS*, and *TEASEL*.

TEBALA, a town of Arabia, in Hedejas; 128 miles SSE. of Mecca.

TEBECRIT, a town of Algiers, 2 miles from Ned-Roma, on the coast of the Mediterranean.

TBREEN, a town of Egypt on the Nile; 16 miles N. of Cairo.

TEBELBELT, a town of Africa, in Taflet; 100 miles S. of Sugulmeffa.

TEBESSA, or } an ancient town of Tunis, at
TEBESTA, } the foot of a mountain, on the borders of Algiers, which has several beautiful ruins, and other relics of antiquity. It was anciently very strong, but was taken and ravaged by Muley Mahomet, in 1057. It abounds with wood and water, nuts, almonds, and other fruits; and lies 130 miles SSW. of Tunis, and 125 from the sea coast. Lon. 8. 5. E. Lat. 34. 51. N.

TEBETH, the 10th month of the Jewish ecclesiastical year, and 4th of the civil. It answers to December.

TEBRIS. See *TAURIS*, N° 1.

TEBZA, a strong town of Morocco, capital of a province so named; seated on the side of mount Atlas. It has a good trade. Lon. 4. 55. W. Lat. 32. 50. N.

TECALETH, a town of Morocco, 121 miles WNW. of the city of Morocco.

TECEUT, or } one of the 4 chief towns of Sus,

TECHEIT, } (see *Sus*, N° 1.) seated in a fertile district, on the Sus, abounding with corn, dates, figs, grapes, sugar-canes, &c. It has a manufacture of Morocco leather; and lies 150 miles SW. of Morocco. Lon. 8. 25. E. Lat. 29. 10. N.

TECH, a river of France, which rises in the Pyrenees, and runs into the Mediterranean near Elne, in the dep. of the Eastern Pyrenees.

TECHERNIGOF. See *TCHERNIGOF*.

TECHES, a mountain of Pontus, from the top of which Xenophon and his 10,000 Greeks first saw the sea. *Xenophon* 4.

TECHIA, a town of Asiatic Turkey, in the Arabian Irak; 160 miles N. of Bagdad.

* TECHILY. *adv.* [from *techy*] Peevishly; fretfully; frowardly.

* TECHINESS. *n. f.* [from *techy*.] Peevishness; fretfulness.

TECHMESSA, the daughter of Teuthras, king of PHYRGIA, who was carried captive by Ajax, and became mother of his son *Erysiac* by him. She afterwards prevented him from killing himself; which forms the subject of a scene in one of Sophocles's tragedies.

(1.) * TECHNICAL. *adj.* [*τεχνικός*; *technique*, Fr.] Belonging to arts; not in common or popular use.—In *technical* words, or terms of art, they refrain not from calling the same substance sometimes the sulphur, and sometimes the mercury of a body. *Locke*.

(2.) TECHNICAL, expresses somewhat relating to arts and sciences. It is also particularly applied to a kind of verses wherein are contained the rules or precepts of any art, thus digested to help the memory to retain them.

* TECHY. *adj.* Peevish; fretful; irritable; easily made angry; froward.—

He is as *techy* to be woo'd to wooe,

As he is stubborn-chaffe against all suite. *Shak.*—Pretty fool, to see it *techy*, and fall out with the dug. *Shak.*—

TECK, a ci-devant county of Suabia, in the duchy of Wirtemberg, to which it is now annexed. It is 12 miles SE. of Stutgard.

(1.) TECKLENBURG, a county of Germany, in Westphalia, bounded on the N. and E. by the billicpie

bishopric of Osnaburg, and on the S. and W. by the ci-devant bishopric of Munster; about 20 miles long and 10 broad. It was anciently more extensive, and included the county of Lingen and part of Munster. The soil is fertile in corn and pasture; the rivers abound in fish; linen is the chief manufacture. It had formerly counts of its own; but they failing, it fell to the house of Solms-Braunfels, who sold it to the king of Prussia in 1707.

(2.) **TECKLENBURG**, the capital of the above county, has a castle built on a hill. It was bought by the king of Prussia in 1707. Lon. 8. 2. W. Lat. 53. 20. N.

TECLUT. See **TECEUT**.

TECMESSA. See **PHRYGIA**, N^o I. and **TECHMESSA**.

TECOMON, an ancient town of Epirus. *Liv.*

TECANTAPEQUE, a sea port town of Mexico, in Guaxaca, at the foot of a volcano, near the coast of the Pacific Ocean; 160 miles SE. of Acapulco. Lon. 99. 10. W. Lat. 15. 2. N.

TECORT, an ancient and strong town of Morocco, capital of a kingdom so named, in Biledalgerid, seated on a mountain. The people are kind to strangers. Lon. 7. 55. E. Lat. 29. 35. N.

TECRIT, a town of Asiatic Turkey, in Mosul; built on a rock, near the W. bank of the Tigré, bordering on Arabian Irak; 130 miles S. of Mosul, and 360 NW. of Bagdad.

TECTAMUS, the son of Dorus, grandson of Helen, and great-grandson of DEUCALION. He went to Crete at the head of a body of Ætoliens and Pelasgi; was made king of Crete, and married a daughter of king Cretheus, by whom he had a son named Aferius.

TECTONA, in botany, a genus of plants belonging to the class of *pentandria*, and order of *monogynia*. The stigma is dentate; the fruit a dry spongy plum within an inflated calyx; and the nucleus is trilocular. There is only one species, viz.

TECTONA GRANDIS, *Indian oak*, or **TEAK WOOD**, which is a native of India.

* **TECTONICK**. *adj.* [*τεκτονικος*.] Pertaining to building. *Bailey*.

TECTOSAGÆ, or) an ancient nation of Gal-

TECTOSAGES, } lia Narbone: tis, so named because *sagis tegerentur*, they were protected by *furera*. They were among those Gauls who pillaged Rome under Brennus, (see **ROME**, § 22.); and afterwards attempted to plunder the temple of Apollo at Delphi. On their return home, they were attacked by a pestilence; and to stop it, were ordered to throw into the river all the plunder. Some of them went into Germany and settled in the Hercynian forest; another colony passed into Asia, and conquered Phrygia, Cappadocia, and Paphlagonia. *Cæs. de Bel. Gal. vi. 23. Strabo 4. Liv. 38. c. 16.*

TECUCZI, or **TECUTSCH**, a town of European Turkey, in Moldavia, on the Berbecz; 70 miles WNW. of Galatz.

TECULET, a sea port town of Morocco, on the side of a mountain, at the mouth of a river so named, on the coast of the Atlantic. In 1514 it was taken and sacked by the Portuguese, and great numbers of the Moors sold for slaves. It

VOL. XXII. PART I.

has been since repeopled; and lies 45 miles W. of Morocco. Lon. 9. 5. W. Lat. 30. 45. N.

TECUM, a river of ancient Gaul, running down from the Pyrenees into the Mediterranean.

TECUTSCH. See **TECUCZI**.

* *To TED*. *v. a.* [*teadan*, Saxon, to prepare.] To lay grass newly mown in rows.—

The smell of grain, or *tedded* grass. *Milton*.—Haymakers following the mowers, and casting it abroad, they call *tedding*. *Mortimer*.—

Prudent his fallen heaps

Collecting, cherish'd with the tepid wreaths—

Of *tedded* grass.

Philips.

TEDANUS, a river of Liburnia. *Plin. 3.*

TEDBURY. See **TETBURY**.

* **TEDDER**, or *tether*. *n. f.* [*tudder*, Dutch; *tindt*, a rope, Islandick.] 1. A rope with which a horse is tied in the field that he may not pasture too wide. *Teigber*, Erle. 2. Any thing by which one is restrained.—We lived joyfully, going abroad within our *tedder*. *Bacon*.—We know the length of their *tedder*. *Chibol*.

TEDDINGTON, a small town of England, in Middlesex, on the Thames; 12 miles WSW. of London.

TEDELEZ, a strong town of Algiers, in a province so named, on the coast of the Mediterranean, with a castle, and a great fishery; 50 miles NE. of Algiers. Lon. 3. 5. E. Lat. 47. 5. N.

(1.) * **TE DEUM**. *n. f.* An hymn of the church, so called from the two first words of the Latin.—

The choir

Together sung *te Deum*.

Shak.

—*Te Deum* was sung at Saint Paul's after the victory. *Bacon*.

(2.) **TE DEUM** is sung in the Romish church with great pomp and solemnity upon the gaining of a victory, or other happy event; and is believed to be the composition of St AMBROS bishop of Milan.

TEDIEN, a river of Persia, which runs into the Caspian Sea, 20 miles W. of Zaveh.

TEDIÉ, a town of Asiatic Turkey, in Aleppo; 21 miles E. of Aleppo.

TEDINGHAUSEN, a town of Germany, in Westphalia, in the duchy of Bremen; 9 miles S. of Otterberg.

* **TEDIOUS**. *adj.* [*tediosus*, Fr. *tedium*, Lat.]

1. Wearisome by continuance; troublesome; *irksome*.—

The one intense, the other still remiss,

Tedious alike.

Milton.

Pity only on fresh objects stays,

But with the *tedious* sight of woes decays.

Dryden.

2. Wearisome by prolixity. Used of authors or their performances.—They unto whom we shall seem *tedious* are in nowise injured by us. *Hooker*.—That I be not further *tedious* unto thee, hear us. *Alb. xxiv. 4.*—

Chief mastery to dissect

With long and *tedious* havock fabled knights.

Milton.

3. Slow.—

What men thought a *tedious* course to run,
Was finish'd in the hour it first begun. *Harte*.

7. * **TEDIOUSLY**

* **TEDIOUSLY.** *adv.* [from *tedious*.] In such a manner as to weary.

* **TEDIOUSNESS.** *n. f.* [from *tedious*.] 1. Wearisomeness by continuance.—

She distastes them all within a while,
And in the sweetest finds a *tediousness*. *Dorries*.
2. Wearisomeness by prolixity.—In vain we labour
to persuade them that any thing can take away
the *tediousness* of prayer. *Hooker*. 3. Prolixity;
length.—

Since brevity's the soul of wit,
And *tediousness* the limbs and outward flourishes,

I will be brief. *Shak.*

4. Unenfranchisement; tiresomeness; quality of wearying.
—*Tediousness* cannot fall into those operations that
are in the state of bliss when our union with God
is complete. *Hooker*.—

Thus friends absent speak: this ease con-
trouls

The *tediousness* of my life. *Donne*.
TEDLA, a province of Morocco, extending
along the E. side of Mount Atlas to the borders
of Fez and Algiers.

TEDNEST, or } a city of Morocco, capital of
TEDOEST, } the province of Hea, seated
on a river which surrounds it. In 1517 it was
taken and destroyed by the Portuguese; but re-
built soon after, partly by the Jews. The inha-
bitants are very hospitable. Lon. 8. 35. W. Lat.
30. 30. N.

TEDSI, a town of Morocco, in Sue, seated on
a plain abounding in corn; 17 miles from Mount
Atlas. 20 E. of Tarodant, and 90 SW. of Mo-
rocco.

(1.) * **To TEEM.** *v. n.* [*team*, Sax. offspring.]
1. To bring young.—

If the must *teem*,
Create her child of spleen, that it may live,
And be a thwart dissatur'd torment to her.

Shak.

2. To be pregnant; to engender young.—
Is not my *teeming* date drunk up with time?

Shak.

Teeming buds and cheerful greens appear.
Dryden.

—These are *teeming* truths, rich in store. *Locke*.

3. To be full; to be charged as a breeding ani-
mal.—We live in a nation where there is scarce
a single head that does not *teem* with politicks.
Addison.

(2.) * **To TEEM.** *v. a.* 1. To bring forth; to
produce.—

What's the newest grief?

Each minute *teems* a new one. *Shak.*

Common mother, thou

Whose womb unmeasurable, and infinite breast,

Teems and feeds all. *Shak.*

The earth obey'd; and strait

Op'ning her fertile womb, *teem'd* at a birth

Innumerable living creatures. *Milton*.

—The deluge wrought such a change, that the
earth did not then *teem* forth its increase as for-
merly. *Woodward*. 2. To pour. A low word,
imagined by Skinner to come from *tommen*, Da-
nish, to draw out; to pour. The Scots retain it;
as, *teem* that water out; hence *Swift* took this

word.—*Teem* out the remainder of the ale into
the tankard. *Swift*.

* **TEEMER.** *n. f.* [from *teem*.] One that brings
young.

* **TEEMFUL.** *adj.* [*teamful*, Saxon.] 1. Preg-
nant; prolific. 2. Raimful. *Sinsworth*.

* **TEEMLESS.** *adj.* [from *teem*.] Unfruitful;
not prolific.—

Such a *teemless* earth. *Dryden*.

* **TEEN.** *n. f.* [*tinan*, Saxon, to kindle; *teen*,
Flemish, to vex; *teonan*, Saxon, injuries.] Sorrow;
grief. Not in use.—

That barehead knight, for dread and doleful
teen,

Would fain have fled. *Spenser*.

Fry not in heartless grief and doleful *teen*.
Spenser.

My heart bleeds
To think o' th' *teen* that I have turn'd you to.

Shak.

Eighty odd years of sorrow have I *teen*,
And each hour's joy wreck'd with a week of
teen. *Shak.*

* **To TEEN.** *v. a.* [from *tinan*, to kindle, Saxon.]
To excite; to provoke to do a thing. Not in use.
Spenser.

* **TEENS.** *n. f.* [from *teen* for *ten*.] The years
reckoned by the termination *teen*; as, thirteen
fourteen.—

Our author would excuse these youthful
scenes,

Begotten at his entrance in his *teens*. *Grave*.

TEERAH, a province of Asia, in Cabul, W. of
Paislawar.

TEERRAWHITTE, a cape on the SW. point
of the northernmost island of New Zealand, N.
of Cook's Straits.

TEES, a river of England, which rises on the
confines of Cumberland, and running eastward
divides the county of Durham from Yorkshire
and falls into the German Sea below Stockton.

TEESTA, a river of Thibet, which runs into
the Ganges by two streams; the one 25 miles
N. of Moorshedabad, the other 80 miles ESE
of it.

(1.) * **TEETH**, the plural of *tooth*.—His *teeth*
are terrible round about. *Job* xli. 14.

(2.) **TEETH**, the bones placed in the jaws for
chewing food, that it may be the more easily di-
gested in the stomach. For the anatomical struc-
ture of these, see *ANATOMY* and *ZOOLOGY*.
The diseases to which they are liable, with the
most successful remedies, are fully detailed under
MEDICINE and *SURGERY*. Quacks and mount-
banks use various washes for teeth, the sudden
effects of which, in cleaning and whitening of
teeth, surprise and please people; but the effects
are very pernicious. All the strong acid spirits
will do this. The best mixture is the following:
Take plantane-water an ounce, honey of roses two
drams, muriatic acid ten drops; mix the whole
and rub the teeth with a piece of linen rag dipped
in this every day till they are whitened. The
mouth ought to be well washed with cold water
after the use of this or any other acid liquor; and
indeed the best of all washes is cold water, with
or without a little salt; the constant use of the

will keep them clean and white, and prevent them from aching.

(3.) **TEETH**, of various sorts of machines as of mill wheels, &c. These are often called *cogs* by the workmen; and by working in the pinions, rounds, or trundles, the wheels are made to turn one another. Mr Emerson (in his *Mechanics*, prop. 25.) treats of the theory of teeth, and shews that they ought to have the figure of epicycloids, for properly working in one another.

* **To TEETH**, *v. n.* [from the noun.] To breed teeth; to be at the time of dentition.—When the symptoms of *teething* appear, the gums ought to be relaxed. *Arbuthnot.*

TEETHING, *part. n. f.* See **MEDICINE**, *Index*.
TEFELSDORF, a town of Transylvania.

TEFEN, a town of Asiatic Turkey, in Natolia, 28 miles SW. of Amaseh.

TEFESSAD, a town of Algiers, anciently called *Tifa*. It has mines along the coast of the Mediterranean, for three miles. It is 32 miles SW. of Algiers. Lon. 2. 54. E. Lat. 36. 32. N.

TEFETHNE, a town and river of Morocco. The town is 60 miles W. of Morocco; the river runs into the sea at Mogador.

TEFEZARA, an ancient, large, and strong town of Barbary, in Tremesen, 12 miles from Tremesen; famous for its mines of iron.

TEFF, in botany, a kind of grain, sown all over Abyssinia, from which is made the bread commonly used throughout the country. Mr Bruce says it is herbaceous; and that from a number of weak leaves surrounding the root proceeds a stalk of about 28 inches in length, not perfectly straight, smooth, but jointed or knotted at particular distances. This stalk is not much thicker than that of a carnation or julyflower. About five inches from the top, a head is formed of a number of small branches, upon which it carries the fruit and flowers; the latter of which are small, of a crimson colour, and scarcely perceptible by the naked eye but from the opposition of that colour. The pistil is divided into two, seemingly attached to the germ of the fruit, and has at each end small capillaments forming a brush. The stamina are 3; two on the lower side of the pistil, and one on the upper. These are each of them crowned with two oval stigmata, at first green, but afterwards crimson. The fruit is formed in a capsula, consisting of two conical hollow leaves, which, when closed, seem to compose a small conical pod, pointed at the top. The fruit or seed is oblong, and is not so large as the head of the small-ed pin; yet it is very prolific, and produces these seeds in such abundance, as to yield a very great quantity of meal. Of this teff bread the natives make a liquor. When well toasted, it is broken into small pieces, which are put into a large jar, and have warm water poured upon them. It is then set by the fire, and often stirred for several days, the mouth of the jar being close covered. After being allowed to settle 3 or 4 days, it acquires a sourish taste, and is what they call *bouza*, or the common beer of the country. The bouza in Athara is made in the same manner, only instead of teff, cakes of barley-meal are employed. Both are very bad liquors, but the worst is that made of barley.

TEFFEREG, a town of Bohemia, in Salzburg.

TEFFLIS, or **TIFFLIS**, a city of Asia, the capital of Georgia, one of the 7 principalities between the Black Sea and the Caspian. It is the residence of the sovereign, and is called by the inhabitants *Thilis Cabar*, i.e. *warm town*, from the warm baths in its neighbourhood. Though its circumference does not exceed two English miles, it contains 20,000 inhabitants, of which more than half are Armenians; the remainder are chiefly Georgians, with some Tartars. Major Rennel says, it has 20 Armenian and 15 Greek churches, and 3 *metheeds*. But Mr Cox, on the authority of Prof. Guldenstaedt, says, there are one Roman Catholic, 13 Greek, and 7 Armenian churches. There are some magnificent caravanseras, bazars, and palaces in the city, but no mosques. The houses are neatly built; the rooms are waincotted, and the floors spread with carpets. The streets are very narrow and filthy. Teflis is a place of considerable trade, especially in furs, which are sent hence to Constantinople by Erzerum. The silks are bought up on the spot by the Armenians, and exported to Smyrna and other ports of the Mediterranean, but the greatest part is first sent to Erzerum to be manufactured. Great quantities of a root called *baya* are also sent to Erzerum and Idofan for the use of the linen dyers. Here is likewise a foundry, at which are cast cannons, mortars, and balls. The gunpowder made here is very good. The Armenians have likewise established in this town all the manufactures carried on by their countrymen in Persia; the most flourishing is that of printed linens. Teflis is seated on the river Kur, at the foot of a mountain; and on the S. side of it stands a large castle or fortress, built by the Turks in 1576, when they made themselves masters of the city and country, under the command of the famous Mustafa Pacha. It is 125 miles W. of Terki. Lon. 63. 3. E. Lat. 41. 59. N.

TEFUT, a town of Africa in Durah.

TEFZA, a town of Morocco, on the side of a mountain, with walls of marble; 70 miles NE. of Morocco.

TEFZRA, a town of Algiers; 55 miles SSW. of Oran.

TEGADOO, a bay on the E. coast of the N. island of New Zealand.

TE-GAN, a city of China, of the first rank, capital of the province of Hou-quang; famous for worms which make white wax, like bees. Lon. 112. 31. E. Lat. 31. 0. N.

TEGAZA, a town of Africa, in Zaara, capital of a district so named, containing mountains of rock salt. It lies E. of Senegal, 300 miles from the Atlantic. Lon. 6. 30. E. Lat. 21. 40. N.

TEGEA, an ancient town of Peloponnesus, where Orestes's gigantic bones were found. It was famous for its temples to Apollo, Pan, Ceres, Proserpine, and Venus.

(1.) **TEGEATES**, a son of Lycaon, the founder of **TEGEA**.

(2.) **TEGBATES**, the people of **TEGEA**.

TEGEGET, or } a town of Africa, in Fez;
TEGEGILT, } 120 miles SSW. of Fez.

TEGERHY, a principal town of Fezzan, about

80 miles SW. of the capital. Dates and Indian corn are its chief produce.

TEGEUT. See TECEUT.

TEGLIO, a town of the Italian kingdom, in the Valteline, capital of a ci-devant district so named. The town is seated on a mountain, 9 miles from Tirano, and 12 from Sondrio. In 1620, all the Protestants in this town and throughout the Valteline, were barbarously massacred. It is 20 miles SW. of Bormio, and 20 ENE. of Morbegno.

TEGOMAN, a town of Africa, in Soudan; 550 miles S. of Mourzook.

* TEGUMENT. *n. f.* [tegmentum, Latin.] Cover; the outward part. This word is seldom used but in anatomy or physics.—Trim those tender strings in the fashion of beard, or other hairy teguments. *Brocon*.—Proceed by section, separating the teguments. *Wifeman*.—In the nutmeg another tegument is the mace. *Ray*.

TEGYRA, a town of Æthiopia, memorable for a battle fought between the Thebans and Peloponnesians. It had a temple of Apollo. It is now called *Mekbia*.

TEGYRÆUS, a surname of Apollo.

TEHAMA, a barren sandy belt or district which surrounds the peninsula of ARABIA, from Suez to the mouth of the Euphrates. Its breadth varies, but in general, it is about two days journey from the sea coast to the rise of the hills.

* To TEH-HE. *v. n.* [a cant word made from the found.] To laugh with a loud and more insolent kind of cachinnation; to titter.—

They laugh'd and *teh-he'd* with derision.

Hudibras.

TE HING, a town of China, in Kiang-fi.

TEIA, the last king of the OSTROGOTHS, in Italy. See ITALY, § 13.

(1.) TEICHEL, a town of Upper Saxony; 6 miles N. of Rudolstadt, and 20 E. of Arnstadt.

(2.) TEICHEL, or } a river of Germany, in CA-
TEICHL, } rinthia, which runs into the
Moli, near Naplach.

TEIGN, a river of England, in Devonshire, formed by two rivulets, which rise in the centre of the county; and after uniting, run into the English Channel at Teignmouth.

TEIGNMOUTH, a sea-port town of Devonshire, which carries on a great coasting trade, sending pipe clay, &c. to Liverpool, and importing coals, salt, earthen wares, &c. It also sends many vessels to the Newfoundland fishery. At this port the Danes first landed. It is seated on the mouth of the *Teign*, 12 miles S. of Exeter, and 280 W. by S. of London. Lon. 3. 29. W. Lat. 50. 32. N.

(1.) TEIL, a town of France, in the department of the Ille and Vilaine; 7½ miles S. of Guerche, and 15 SE. of Rennes.

(2.) * TEIL TREE. *n. f.* [*tilia*, Lat.] The same with linden or lime tree; which see.—A *teiltree* and an oak have their substance in them. *Ips*. vi. 13.

(3.) TEIL TREE, in botany. See TILIA.

TEILLEUL, a town of France, in the department of the Channel; 6 miles S. of Mortain, and 21 ESE. of Avranches.

TEIN, a towns of Bohemia; 1. in Bechin, 4

miles S. of Bechin, and 51 S. of Prague; 2. in Pilsen, 6 miles NE. of Tachau.

(1.) TEIND. *n. f.* in Scots Law. See LAW, Part III. Chap. II. Sect. X.

(2.) TEINDS, COMMISSION OF. See COMMISSION, § VI.

TEINITZ, a town of Bohemia, in Pilsen.

(1.) * TEINT. *n. f.* [*teinte*, Fr.] Colour; touch of the pencil.—The different *teints* are simply laid on, each in its place. *Dryden*.

(2.) TEINTS, and SEMITEINTS, in painting, denote the several colours used in a picture, considered as more or less high, bright, deep, thin, or weakened and diminished, &c. to give the proper relieve, softness, or distance, &c. of the several objects.

TEIN-YUEN, a town of China, of the third rank, in Chan-fi; 20 miles SSW. of Tai.

TEIOS. See TEOS.

TEISBACH, a town of Bavaria, 13 miles ENE. of Landshut.

TEISENDORF, a town of Bavaria, 12 miles WNW. of Saltzburg.

TEITH. See TEATH. This river gives name to the district of MONTEITH, which it runs through.

TEIUM, a town of Paphlagonia, on the Euxine Sea.

TEKAT, a town of Asiatic Turkey in Natolia; 10 miles N. of Kiangari.

TEKAWY, in the language of Bengal, money advanced by government to the proprietors of lands, to assist them under circumstances of distress.

TEKEBI, a town of Egypt; 22 miles WSW. of Damietta.

TEKIN, a town of Asiatic Turkey, in Caramania; 10 miles W. of Tocat.

TEKKIUR, mountains of European Turkey, in Romania; 32 miles SSE. of Adrianople.

TEKLA, a town of Bohemia, in Chrudim.

TELA, an ancient town of Spain.

TELACH, an island of Russia, in the Penzinskoi Sea. Lon. 177. 0. E. Ferro. Lat. 61. 35. N.

TELAMON, a celebrated Grecian hero, the son of ZEACUS and Endeis; brother of PLEUS and PHOCUS; and father of TEUCER and AJAX. Having accidentally killed his brother Phocus, he fled from Megara, his birth-place; and arriving at SALAMIS, married Glaucé, the daughter of king Cychreus, whom he succeeded. He was one of the ARGONAUTS, and accompanied Hercules, when he took Troy, who gave him the princely HESIONE to wife.

TELAMONE, a town of Naples, the chief port of the Presidii, 10 miles N. of Orbitello. It is famous for the victories obtained by the Romans, under the consuls C. A. Regulus and Æmilii Lepidus over the Gauls.

* TELARY. *adj.* [*tela*, a web, Lat.] Spinning webs.—The pictures of *telary* spiders, and their position in the web, are commonly made lateral. *Brocon*.

TEICHINES, an ancient people of Rhodes, originally from Crete. They were the inventors of many useful arts, whence the poets fabled that they could change themselves into whatever shapes they pleased. *Died*.

TEL CHINIA,

TELCHINIA, a territory of Crete, whence the Telchines emigrated to Rhodes.

TELGCHIS, the son of Europus, and grandson of *Ægialeus*; one of the first kings of Peloponnesus.

TELEBOIDES. See **TAPHIÆ**.

TELEBOUS. See **TAPHIUS**.

TELEGONUS, a son of Ulysses, by *CIRCE*, born in *Ætea*. He went to Ithaca, to seek his father, but being shipwrecked on the coast, he got into a quarrel with the people after landing, and killed his father in the squabble without knowing him, to his great grief, upon the discovery. He afterwards founded *Tusculum* in Italy, and left a daughter, named *Mamilia*, from whom the Roman family of *Mamilii* claimed their name and descent.

(1.) **TELEGRAPH**. *n. f.* [from *τῆλε*, *far off*, and *γραφω*, *to write*,] the name very properly given to an instrument by means of which information may be almost instantaneously conveyed to a considerable distance.

(2.) **TELEGRAPH, ANCIENT ATTEMPTS TO DISCOVER THE**. The telegraph, though it has been generally known and used by the moderns only for a few years, is perhaps not entirely a modern invention. There is reason to believe that amongst the Greeks there was some sort of telegraph in use. The burning of Troy is said to have been known in Greece very soon after it happened, and before any person had returned from thence. But we have no certainty of this. The Chinese, when they send couriers on the great canal, or when any great man travels there, make sign: by fire from one day's journey to another, to have every thing prepared; and most of the barbarous nations used formerly to give the alarm of war by fires lighted on the hills or rising grounds. Polybius calls the different instruments used by the ancients for communicating information *πυροὶ*, *πυρρῆ*, because the signals were always made by fire. At first they communicated information of events merely by torches; but this method was of little use, because it was necessary before hand to fix the meaning of every particular signal. *Æneas*, a contemporary of Aristotle, who wrote a treatise on the duties of a general, endeavoured to correct those imperfections, but by no means succeeded. His method was defective, because it could not convey any other intelligence except what was written on the sticks, and even that not exactly. With regard to all unforeseen events, it was quite useless. A method was invented by *Cleoxenus*, or *Democritus*, and very much improved by *Polybius*, as he himself informs us. This was by the letters of the Greek alphabet, divided into five parts. But neither this nor any other method mentioned by the ancients seems ever to have been brought into general use.

(3.) **TELEGRAPH, DISCOVERY OF THE**. The most ingenious of the moderns had not thought of such a machine as a *telegraph* till 1663, when the Marquis of Worcester, in his *CENTURY OF INVENTIONS*, affirmed that he had discovered "a method by which, at a window, as far as eye can discover black from white, a man may hold discourse with his correspondent, without noise made or notice taken; being according to occa-

sion given, or means afforded *ex re nata*, and no need of provision before hand; though much better if foreseen, and course taken by mutual consent of parties." This could be done only by means of a telegraph, which in the next sentence is declared to have been rendered so perfect, that by means of it the correspondence could be carried on "by night as well as by day, though as dark as pitch is black."

(4.) **TELEGRAPH, IMPROVEMENT OF THE**. About 40 years after this, M. Amontons proposed a telegraph. His method was this: Let there be people placed in several stations, at such a distance from one another, that by the help of a telescope a man in one station may see a signal made in the next before him; he must immediately make the same signal, that it may be seen by persons in the station next after him, who are to communicate it to those in the following station, and so on. Amontons tried this method in a small tract of land before several persons of the highest rank at the court of France.

(5.) **TELEGRAPH, PERFECTION OF THE, IN FRANCE**. It was not till the French revolution that the telegraph was applied to useful purposes. M. Chappe invented the telegraph first used by the French about the end of 1793. On principles nearly similar, to those of Amontons. The manner of using this telegraph was as follows: At the first station which was on the roof of the palace of the Louvre at Paris, M. Chappe, the inventor, received in writing, from the committee of public safety, the words to be sent to Lille, near which the French army then was. An upright post was erected on the Louvre, at the top of which were two transverse arms, moveable in all directions by a single piece of mechanism, and with inconceivable rapidity. He invented a number of positions for these arms which stood as signs for the letters of the alphabet; and these, for the greater celerity and simplicity, he reduced in number as much as possible. The intermediate operators were only instructed generally in sixteen signals; which were so distinct, so marked, so different the one from the other, that they were easily remembered. The construction of the machine was such, that each signal was uniformly given in precisely the same manner at all times. M. Chappe having received at the Louvre the sentence to be conveyed, gave a known signal to the 2d station, which was Mont Martre, to prepare. At each station there was a watch tower, where telescopes were fixed, and the person on watch gave the signal of preparation which he had received, and this communicated successively through all the line, which brought them all into a state of readiness. The person at Mont Martre then received, letter by letter, the sentence from the Louvre, which he repeated with his own machine; and this was again repeated from the next height, with inconceivable rapidity, to the final station at Lille. The first description of the telegraph was brought from Paris to Frankfurt on the Maine by a ci-devant member of the parliament of Bourdeaux, who had seen that which was erected on the mountains of Belville. As given by Dr Hutton from some of the English papers, it is as follows. AA is a beam or mast

of wood placed upright on a rising ground, (*Plate CCCXXXI. fig. 1.*) which is about 15 or 16 feet high. BB is a beam or balance moving upon the centre AA. This balance-beam may be placed vertically or horizontally, or any how inclined, by means of strong cords, which are fixed to the wheel D, on the edge of which is a double groove to receive the two cords. This balance is about 11 or 12 feet long, and 9 inches broad, having at the ends two pieces of wood CC, which likewise turn upon angles by means of four other cords that pass through the axis of the main balance, otherwise the balance would derange the cords; the pieces C are each about 3 feet long, and may be placed either to the right or left, straight or square, with the balance-beam. By means of these three, the combination of movement is very extensive, remarkably simple, and easy to perform. Below is a small wooden hut, in which a person is employed to observe the movements of the machine. In the mountain nearest to this another person is to repeat these movements, and a 3d to write them down. The time taken up for each movement is 20 seconds; of which the motion alone is 4 seconds, the other 16 the machine is stationary. Two working models of this instrument were executed at Frankfort, and sent by Mr W. Playfair to the Duke of York; and hence the plan and alphabet of the machine came to England.

(6.) TELEGRAPH, STILL FARTHER IMPROVED IN ENGLAND. Various experiments were in consequence tried upon telegraphs in this country; and one was soon after set up by government in a chain of stations from the admiralty-office to the sea coast. It consists of six octagon boards, each of which is poised upon an axis in a frame, in such a manner that it can be either placed vertically, so as to appear with its full size to the observer at the nearest station, as in *fig. 2.* or it becomes invisible to him by being placed horizontally, as in *fig. 3.* so that the narrow edge alone is exposed, which narrow edge is from a distance invisible. *Fig. 2.* is a representation of this telegraph, with the parts all shut, and the machine ready to work. T, in the officer's cabin, is the telescope pointed to the next station. *Fig. 3.* is a representation of the machine not at work, and with the ports all open. The opening of the first port (*fig. 2.*) expresses *a*, the 2d *b*, the 3d, *c*, the 4th *d*, the 5th *e*, and the 6th *f*, &c. Six boards make 36 changes, by the most plain and simple mode of working; and they will make many more if more were necessary.

(7.) TELEGRAPH, STILL FARTHER IMPROVEMENTS OF THE PROPOSED. Several other improvements have been proposed; but none, perhaps, of the telegraphs hitherto offered to the public exceeds the following, either in simplicity, cheapness, or facility in working, and it might, with a few trifling additions, be made exceedingly distinct. It is thus described in the *Repertory of Arts*, vol. I. p. 382. For a nocturnal telegraph, let there be four large patent reflectors, lying on the same plane, parallel to the horizon, placed on the top of an observatory. Let each of these reflectors be capable, by means of two winches, either of elevation or depression to a certain degree. By elevating or depressing one or two of

the reflectors, 18 very distinct arrangements may be produced, each reflector, after every arrangement, being restored to its place, as the following scheme will explain.

A	B	D	E	F	G
o oo	o oo	o oo	o ooo	ooo o	oo o
I	K	L	M	N	O
oo o	ooo o	oo oo	oo oo	oo oo	oo oo
P	R	S	T	U	Y
oo oo	oo oo	oo oo	o co	oo oo	o oo

For the sake of example, the above arrangements, are made to answer to the most necessary letters of the alphabet; but alterations may be made at will, and a greater number of changes produced, without any addition to the reflectors. In the first observatory there need only be a set of *single* reflectors; but in the others each reflector should be double, so as to face both the preceding and subsequent observatory: and each observatory should be furnished with two telescopes. The proper diameter of the reflectors, and their distance from each other, will be ascertained by experience. To convert this machine into a diurnal telegraph, nothing is necessary but to insert, in the place of the reflectors, gilt balls, or any other conspicuous bodies.

TELEMACHUS, the son of Ulysses and Penelope, was in the cradle when his father went with the rest of the Greeks to the Trojan war. When a child, he fell into the sea, but was brought ashore by a dolphin. At the end of that war, Telemachus went to seek his father; and as the place of his residence, and the cause of his long absence, were unknown, he visited the courts of Menelaus and Nestor to obtain information; accompanied by Minerva in the form of Mentor. He afterwards returned to Ithaca, where the suitors of Penelope had conspired to murder him, but he avoided their snares; and by means of Minerva he discovered his father, who had arrived in the island two days before him, and was then in the house of Eumæus. With this faithful servant and Ulysses Telemachus concerted how to deliver his mother from the importunities of her suitors, and it was effected with great success. After his father's death, he went to the island of Ææa, where he married Calypso the daughter of Circe, by whom he had a son called *Latinus*. He some time after had the misfortune to kill his mother in law Circe, and fled to Italy, where he founded Clusium. From these stories, collected from Homer and the other poets, the celebrated Fenelon Abp. of Cambray composed his well known *Adventures of Telemachus*; which, though not in verse, is justly esteemed a poem.

TELEPHASSA,

TELEPHASSA, the wife of Agenor, and mother of CADMUS, PHOENIX, CILIX, and EUROPA. She died in Thrace, seeking her daughter Europa.

TELEPHIUM, TRUE ORPINS, in botany, a genus of plants belonging to the class of *pentandria*, and order of *trigynia*; and in the natural system ranging under the 54th order, *Miscellaneæ*. The calyx is pentaphyllous; there are five petals, which are inserted into the receptacle; the capsule is unilocular and trivalvular. There are two species:

1. **TELEPHIUM IMPERATI**; and

2. **TELEPHIUM OPOSITIFOLIA**.

TELEPHUS, a son of Hercules by Auge, the daughter of Aleus. He was exposed as soon as born, on mount Parthenis, but was preserved by a she-goat and her shepherd. Auge, to avoid her father's rage, fled to TEUTHRAS king of Mysia, and was by him adopted as his daughter. Mean time Telephus grew up, and on consulting the oracle as to his parentage, was advised to go to Mysia. Teuthras, being harassed by the depredations of Idas the son of Aphareus, offered his daughter Auge, and the succession to his crown, to any man who would repel Idas. Telephus undertook the task, and at the head of the Mysian troops conquered Idas, and claimed his reward. But as he was just going to marry Auge, a monstrous serpent interrupted the ceremony; upon which Auge imploring the aid of Hercules, the god appeared, and told her that Telephus was her own son. After this Telephus became king of Mysia, married a daughter of Priam king of Troy, and assisted him in his war against the Greeks, a party of whom he defeated; but was mortally wounded by Achilles, who, however, was ordered by the oracle to cure him with the same spear that had wounded him. This Achilles did by the rust of the spear; and Telephus, in gratitude, joined the Greeks against the Trojans. *Pauf. 8. c. 48. Diod. 4. &c.*

(1.) **TELESCOPE**. *n. f.* [*telescope*, Fr. *telescope* and *oculus*.] A long glass by which distant objects are viewed.—The telescope discovers to us distant wonders in the heavens. *Watts.*

(2.) **TELESCOPE** is derived from the Greek, *tele*, far off, and *σκοπεω*, to look at. This name is commonly appropriated to the larger sizes of the instrument, while the smaller are called **PERSPECTIVE GLASSES**, **SPY GLASSES**, or **OPERA GLASSES**. A particular kind, which is thought to be much brighter than the rest, is called a **NIGHT GLASS**.

(3.) **TELESCOPE, ACCOUNT OF THE INVENTION OF THE**. To what has been said on the invention of this most noble instrument in the article **OPTICS**, we may add the following: Mr Leonard Digges, a gentleman of the 17th century, of great and various knowledge, asserts in his *Stratopicos*, and in another work, that his father, a military gentleman, had an instrument which he used in the field, by which he could bring distant objects near, and could know a man at the distance of three miles. He says, that when his father was at home he had often looked through it, and could distinguish the waving of the trees on the opposite side of the Severn. Mr Digges resided near Bristol. Francis Fontana, in his *Celestial*

Observations, published at Naples in 1646, says, that he was assured by a Mr Hardy, advocate of the parliament of Paris, a person of great learning and undoubted integrity, that on the death of his father there was found among his things an old tube, by which distant objects were distinctly seen; and that it was of a date long prior to the telescope lately invented, and had been kept by him as a secret. From the table and scheme which Sirturus has given us of the tools or dishes in which the spectacle-makers fashioned their glasses, that they had convex lenses formed to spheres of 24 inches diameter, and of 11 inferior sizes. He has given us a scheme of a set which he measured belonging to a spectacle-maker of the name of *Regette* at Corunna in Spain; who, he says, had tools of the same sizes for concave glasses. It also appears, that it was a general practice to use a convex and concave glass together. If any person should put together a 24 inch convex and a 12 inch concave (wrought on both sides) at the distance of 6 inches, he would have distinct vision, and the object would appear of double size. Concaves of 6 inches were not uncommon; and one such combined with the convex of 24, at the distance of 9 inches, would have distinct vision, and objects would be quadrupled in diameter. When such a thing occurred, it was natural to keep it as a curiosity, although the *rationale* of its operation was not understood. It is plain that GALILEO's first telescope was of this kind, made up of such spectacle-glasses as he could procure; for it magnified only three times in diameter; a thing easily procured by such glasses as he could find with every spectacle-maker. And he could not but observe, in his trials of their glasses, that the deeper concaves and flatter convexes he employed, he produced the greater amplification; and then he would find himself obliged to provide a tool not used by the spectacle-makers, viz. either a much flatter tool for a convex surface, or a much smaller sphere for a concave. His next telescope magnified but five times. But he groped his way with such spectacle-glasses as he could get, till he at last made tools for very flat object-glasses and very deep eye-glasses, and produced a telescope which magnified about 25 times. Sirturus saw it, and took the measures of it. He afterwards saw a scheme of it which Galileo had sent to a German prince at Inspruck, who had it drawn (that is, the circles for the tools) on a table on his gallery. The object-glass was a plano-convex, a portion of a sphere, of 24 inches diameter; the eye-glass was a double concave of 2 inches diameter: the focal distances were therefore 24 inches and 1 inch nearly. This must have been a very lucky operation, for Sirturus says it was the best telescope he had seen; and we know that it requires the very best work to produce this magnifying power with such small spheres. Telescopes continued to be made in this way for many years; and Galileo never made them of any other form. Kepler published his *Dioptrics* in 1611; in which he tells us all that he or others had discovered of the law of refraction, viz. that in very small obliquities of incidence, the angle of refraction was nearly $\frac{3}{4}$ of the angle of incidence. This was indeed enough to have pointed out, with sufficient exactness,

exactness, the construction of every optical instrument that we are even now possessed of; for this proportionality of the angles of incidence and refraction is assumed in the construction of the optical figure for all of them; and the deviation from it is still considered as the *refinement* of the art, and was not brought to any rule till 50 years after by HUYGHENS, and called by him *ABERRATION*. Yet even the sagacious Kepler seems not to have seen the advantage of any other construction of the telescope; he just seems to acknowledge the possibility of it; and we are surprised to see writers giving him as the author of the astronomical telescope, or even as hinting at its construction. It is true, in the last proposition he shows how a telescope may be made *apparently* with a convex eye-glass: but this is only a frivolous fancy; for the eye-glass is directed to be made convex externally, and a very deep concave on the inside; so that it is, in fact, a meniscus with the concavity prevalent. In the 86th proposition, he indeed shows that it is possible to place a convex glass behind another convex glass, that an eye shall see objects distinct, magnified, and inverted; and he speaks very sagaciously on the subject. After having said that an eye placed behind the point of union of the first glass will see an object inverted, he shows that a small part only will be seen; and then he shows that a convex glass, duly proportioned and properly placed, will show more of it. But in showing this, he speaks in a way which shows evidently that he had formed no distinct notions of the manner in which this effect would be produced, only saying vaguely that the convergency of the second glass would counteract the divergency beyond the focus of the first. Had he conceived the matter with any tolerable distinctness, after seeing the great advantage of taking in a field greater in almost any proportion, he would have eagerly caught at the thought, and enlarged on the immense improvement. Had he but drawn one figure of the progress of the rays through two convex glasses, such as *fig. 3. Pl. CCLX*, the whole would have been open to his view. This step, so easy and so important, was reserved for SCHEINER, as has been observed under *OPTICS*; and the construction of this author, together with that of JENSEN, are the models on which all refracting telescopes are now constructed; and in all that relates to their magnifying power, brightness, and field of vision, they may be constructed on Kepler's principle, that the angles of refraction are in a certain given proportion to the angles of incidence. But after Huyghens had applied his elegant geometry to the discovery of SNELLIUS, viz. the proportionality, not of the angles, but of the sines, and had ascertained the aberrations from the foci of infinitely slender pencils, the reasons were clearly pointed out why there were such narrow limits naturally affixed to the performance of optical instruments, in consequence of the indistinctness of vision which resulted from constructions where the magnifying power, the quantity of light, or the field of vision, were extended beyond certain moderate bounds. The theory of aberrations, which that most excellent geometer established, has enabled us to diminish this indistinctness arising from all these causes;

and this diminution is the sole aim of all the different constructions which have been contrived since the days of Galileo and Scheiner.

(4.) TELESCOPE, CONSTRUCTION OF THE. The general aim in the construction of a telescope is, to form, by means of mirrors or lenses, an image of the distant object, as large, as bright, and as extensive as is possible, consistently with distinctness; and then to view the image with a magnifying glass in any convenient manner. This gives us an arrangement of our subject. We shall first show the principles of construction of the object-glass or mirror, so as that it shall form an image of the distant object with these qualities; and then show how to construct the magnifying glass or eye-piece, so as to preserve them unimpaired. This indistinctness which we wish to avoid arises from two causes; the spherical figures of the refracting and reflecting surfaces, and the different refrangibility of the differently coloured rays of light. The first may be called the *SPHERICAL*, and the second the *CHROMATIC* indistinctness; and the deviations from the foci, determined by the elementary theorem (see *OPTICS, Index*), may be called the *SPHERICAL* and the *CHROMATIC* aberrations. The limits of our work will not permit us to give any more of the doctrine of aberrations than is absolutely necessary for the construction of achromatic telescopes; and we refer the reader for a general view of the whole to Euler's *Dioptrics*, and other works of that kind. Dr Smith has given as much as was necessary for the comparison of the merits of different glasses of similar construction, and in a very plain and elegant manner. His improvement of the fundamental theorem of that most elegant geometer Huyghens is as follows.

(5.) TELESCOPE, DR SMITH'S FUNDAMENTAL THEOREM OF THE. I. IN REFLECTION. Let AVB (*Fig. 1. Plate CCCCXXI.*) be a concave spherical mirror, of which C is the centre, V the vertex, CV the axis, and F the focus of an infinitely slender pencil of parallel rays passing through the centre. Let the ray *aA*, parallel to the axis, be reflected in AG, crossing the central ray CV in *f*. Let AP be the line of the semi-aperture AV, AD its tangent, and CD its secant. The aberration Ff from the principal focus of central rays is equal to $\frac{1}{2}$ of the excess VD of the secant above the radius, or very near equal to $\frac{1}{2}$ of VP, the versed sine of the semi-aperture. For because AD is perpendicular to CA, the points C, A, D, are in a circle, of which CD is the diameter; and because Af is equal to Cf, by reason of the equality of the angles fAC, fCA, and CAa, f is the centre of the circle thro' C, A, D, and fD is $=\frac{1}{2}$ CD. But FC is $=\frac{1}{2}$ CV. Therefore Ff is $\frac{1}{2}$ of VD. But because DV:VP=DC:VC, and DC is very little greater than VC when the aperture AB is moderate, DV is very little greater than VP, and Ff is very nearly equal to $\frac{1}{2}$ of VP. COR. 1. The longitudinal aberration is $=\frac{AV^2}{4CN^2}$ for PV is very nearly

$=\frac{AV^2}{2CV}$. COR. 2. The lateral aberration FG is $=\frac{AV^3}{2CV^2}$. For FG:Ff=AP:Pf= $AV:\frac{1}{2}CV$

nearly.

nearly, and therefore $FG = \frac{AV^3}{4CV} \times \frac{2}{CV} =$

$\frac{AV^3}{2CV^2}$. II. In REFRACTIONS. Let ABV (Fig.

2 or 3, Plate CCCXXXII.) be a spherical surface separating two refracting substances, C the centre, V the vertex, AV the semi-aperture, AP its line, PV its versed line, and F the focus of parallel rays infinitely near to the axis. Let the extreme ray a A, parallel to the axis, be refracted into AG, crossing CF in f, which is therefore the focus of extreme parallel rays. The rectangle of the sine of incidence, by the difference of the sines of incidence and refraction, is to the square of the sine of refraction, as the versed sine of the semi-aperture is to the longitudinal aberration of the extreme rays. Call the sine of incidence i, the sine of refraction r, and their difference d. Join CA, and about the centre f describe the arch AD. The angle ACV is equal to the angle of incidence, and CA f is the angle of refraction. Then, since the sine of incidence is to the sine of refraction as VF to CF, or as A f to C f, that is, as D f to C f, we have

CF : FV = C f : f D
by conversion CF : CV = C f : CD

altern. convers. CF - C f : CV - CD = CF : CV
or F f : VD = CF : CV, r : d.

Now PV = $\frac{AP^2}{CF + CV} = \frac{AP^2}{2CV}$ nearly, and

PD = $\frac{AP^2}{fP + fV} = \frac{AP^2}{2fV}$ nearly, = $\frac{AP^2}{2FV}$

nearly. Therefore PV : PD = FV : CV, and DV : PV = CF : FV nearly.

We had above F f : VD = r : d;
and now VD : PV = CF : FV, = r : i;

therefore F f : PV = r² : d i,

and F f = $\frac{r^2}{d i} \times PV$. Q. E. D. The aberration will be different according as the refraction is made towards or from the perpendicular; that is, according as r is less or greater than i. They are in the ratio of $\frac{r^2}{d i}$ to $\frac{i^2}{d r}$, or of r³ to i³. The

aberration therefore is always much diminished when the refraction is made from a rare into a dense medium. The proportion of the sines for air and glass is nearly that of 3 to 2. When the light is refracted into the glass, the aberration is nearly $\frac{4}{9}$ of PV; and when the light passes out of glass into air, it is about $\frac{2}{9}$ of PV. Cor. 1. F f = $\frac{r^2}{d i} \times \frac{AP^2}{2CV}$ nearly, and it is also = $\frac{r^2}{d^2} \times \frac{AF^2}{2FV}$, be-

cause PV = $\frac{AP^2}{2CV}$ nearly, and i : d = FV : CV.

Cor. 2. Because f P PA = F f : FG
or FV : AV = F f : FG nearly.

we have FG, the lateral aberration, = F f $\times \frac{AV}{FV} = \frac{r^2}{d^2} \times \frac{AV^3}{2FV^3} = \frac{r^2}{i^2} \times \frac{AV^3}{2CV^3}$. Cor. 3. Be-

cause the angle F A f is proportional to $\frac{FG}{FV}$ very

nearly, we have the angular aberration F A f = $\frac{r^2}{d^2} \times \frac{AV^3}{2FV^3} = \frac{r^2}{i^2} \times \frac{AV^3}{2CV^3}$. In general, the longitudinal aberrations from the focus of central pa-

ral rays are as the squares of the apertures directly, and as the focal distances inversely; and the lateral aberrations are as the cubes of the apertures directly, and the squares of the focal distances inversely; and the angular aberrations are as the cubes of the aperture directly, and the cubes of the focal distances inversely. To simplify the investigation, some small errors are admitted. PV and PD are not in the exact proportion that we assumed them, nor is D f equal to FV. But in the small apertures which suffice for optical instruments, these errors may be disregarded. This spherical aberration produces an indistinctness of vision, in the same manner as the chromatic aberration does, viz. by spreading out every mathematical point of the object into a little spot in its picture; which spots, by mixing with each other, confuse the whole. We must now determine the diameter of the circle of diffusion. Let a ray $\beta \alpha$ (fig. 4. pl. 332.) be refracted on the other side of the axis, into $\alpha H \phi$, cutting A f G in H, and draw the perpendicular EH. Call AV α , $\alpha V \alpha$, V f (or VF, or V ϕ , which in this comparison may be taken as equal) = f, F f = b, and f E = ϕ . $AV^2 : \alpha V^2 = F f : F \phi$ (already demonstrated) and $F \phi = \frac{\alpha^2}{a^2} b$, and F f - F ϕ , (or

$f \phi$) = $b - \frac{\alpha^2}{a^2} b = \frac{a^2 b - \alpha^2 b}{a^2} = \frac{b}{a^2} \times a^2 - \alpha^2$,

= $\frac{b}{a^2} \times a + \frac{b}{a^2} \times a - \alpha^2$. Also P f : PA = f E : EH;

or f : $\alpha = x : \frac{a x}{f} = EH$. And P π : P $\phi = EH$:

E ϕ , or $\alpha : f = \frac{a x}{f} : \frac{a x}{a} = E \phi$. Therefore f $\phi =$

$\frac{a x}{a} + x = \frac{a + x}{a} x = \frac{x}{a} \times a + x$. Therefore $\frac{x}{a}$

$\times a + x = \frac{b}{a^2} \times a + \frac{b}{a^2} \times a - \alpha^2$, and $\frac{x}{a} = \frac{b}{a^2} \times$

$a - \alpha$, and $x = \frac{b}{a^2} \times a(a - \alpha)$. Therefore π

is greatest when $\alpha \times a - \alpha^2$ is greatest; that is, when $\alpha = \frac{1}{2} a$. Therefore EH is greatest when P π is equal to the half of AP. When this is the

case, we have at the same time $\frac{b}{a^2} \times a(a - \alpha) =$

$\frac{b}{a^2} \times \frac{1}{4} a^2$, and $x = \frac{1}{4} b$, or EH = $\frac{1}{4}$ FG. That

is, the diameter of the circle of aberration, through which the whole of the refracted light must pass, is $\frac{1}{4}$ of the diameter of the circle of aberration at the focus of parallel central rays. In the chromatic aberration it was $\frac{1}{2}$; so that in this respect the spherical aberration does not create so great confusion as the chromatic. We are now able to compare them, since we have now the measure of both the circles of aberration. It has not been found possible to give more than four inches of aperture to an object glass of 100 feet focal distance, so as to preserve sufficient distinctness. If we compute the diameter of the circle EHH corresponding to this aperture, we shall find it not

much to exceed $\frac{1}{120,000}$ of an inch. If we re-

duce this to the diameter of the circle of diffusion, we shall find it not

much to exceed $\frac{1}{120,000}$ of an inch. If we re-

duce this to the diameter of the circle of diffusion, we shall find it not

much to exceed $\frac{1}{120,000}$ of an inch. If we re-

duce this to the diameter of the circle of diffusion, we shall find it not

much to exceed $\frac{1}{120,000}$ of an inch. If we re-

duce this to the diameter of the circle of diffusion, we shall find it not

much to exceed $\frac{1}{120,000}$ of an inch. If we re-

duce this to the diameter of the circle of diffusion, we shall find it not

much to exceed $\frac{1}{120,000}$ of an inch. If we re-

duce this to the diameter of the circle of diffusion, we shall find it not

strict the circle of chromatic dispersion to $\frac{1}{10}$ of the aperture, which is hardly the fifth part of the whole dispersion in it, it is $\frac{1}{62\frac{1}{2}}$ of an inch, and is about 1900 times greater than the other. The circle of the spherical aberration of a plano-convex lens, with the plane side next the distant object, is equal to the circle of chromatic dispersion when the semi-aperture is about 15° . For we saw formerly that EL is $\frac{1}{2}$ of FG , and that EG is $= \frac{1}{2} \frac{AP^2}{AC^2}$, and therefore $EG = \frac{r^2}{f^2} \times \frac{AP^2}{8AC^2}$. This

being made $= \frac{AP}{55}$, gives us $AP = \sqrt{\frac{8r^2 AC^2}{55 r^2}}$, which is nearly $\frac{AC}{4}$, and corresponds to an aper-

ture of 30° diameter, if r be to f as 3 to 2. Sir Isaac Newton was therefore well entitled to say, that it was quite needless to attempt figures which should have less aberration than spherical ones, while the confusion produced by the chromatic dispersion remained uncorrected. Since the indistinctness is as the squares of the diameters of the circles of aberration, the disproportion is quite beyond our imagination, even when Newton has made such a liberal allowance to the chromatic dispersion. But it must be acknowledged, that he has not attended to the distribution of the light in the circle of spherical aberration, and has hastily supposed it to be like the distribution of the coloured light, indefinitely rare in the margin, and denser in the centre. We are indebted to Abbe Boscovich for the elegant determination of this distribution, which we have given in the article OPTICS. From this it appears, that the light in the margin of the circle of spherical aberration, instead of being incomparably rarer than in the spaces between it and the centre, is incomparably denser. The indistinctness, therefore, produced by the intersection of these luminous circumferences is vastly great, and increases the whole indistinctness exceedingly. By a gross calculation, it appears to be increased at least 500 times. The proportional indistinctness therefore, instead of being 1900² to 1, is only $\frac{1900^2}{500}$, or near-

ly 7210 to 1; a proportion still sufficiently great to warrant Newton's preference of the reflecting telescope of his invention. And we may now observe, that the reflecting telescope has even a great advantage over a refracting one of the same focal distance with respect to its spherical aberration: For we have seen (Cor. 2.) that the lateral aberration is $\frac{r^2}{f^2} \times \frac{AV^2}{2CV^2}$. This for a plano-convex glass

is nearly $\frac{2}{4} \frac{AV^2}{2CV^2}$. And the diameter of the circle

of aberration is one fourth of this, or $\frac{2}{16} \times \frac{AV^2}{2CV^2}$.

In like manner, the lateral aberration of a concave mirror is $\frac{AV^2}{2CV^2}$; and the diameter of the cir-

cle of dispersion is $\frac{AV^2}{8CV^2}$; and therefore if the surfaces were portions of the same sphere, the dia-

meter of the circle of aberration of refracted rays would be to that of the circle of aberration of reflected rays as $\frac{2}{8}$ to $\frac{1}{2}$, or as 9 to 4. But when the refracting and reflecting surfaces, in the position here considered have the same focal distance, the radius of the refracting surface is four times that of the reflecting surface. The proportion of the diameters of the circles of spherical aberration is that of 9×4^2 to 4, or of 144 to 4, or 36 to 1. The distinctness therefore of the reflector is 36×36 , or 1296 times greater than that of a plano-convex lens (placed with the plane side next the distant object) of the same breadth and focal distance, and will therefore admit of a much greater magnifying power. This comparison is indeed made in circumstances most favourable to the reflector, because this is the very worst position of a plano-convex lens. But we have not as yet learned the aberration in any other position. In another position the refraction and consequent aberration of both surfaces are complicated. Before we proceed to the consideration of this very difficult subject, we may deduce from what has been already demonstrated several general rules and maxims in the construction of telescopes, which will explain (to such readers as do not wish to enter more deeply into the subject), and justify the proportion which long practice of the best artists has sanctioned. Indistinctness proceeds from the commixture of the circles of aberration on the retina of the eye. For any one sensible point of the retina, being the centre of a circle of aberration, will at once be affected by the admixture of the rays of as many different pencils of light as there are sensible points in the area of that circle, and will convey to the mind a mixed sensation of as many visible points of the object. This number will be as the area of the circle of aberrations, whatever be the size of a sensible point of the retina. Now, in vision with telescopes, the diameter of the circle of aberration on the retina is as the apparent magnitude of the diameter of the corresponding circle in the focus of the eye-glass; that is, as the angle subtended by this diameter at the centre of the eye-glass; that is, as the diameter itself directly, and as the focal distance of the eye-glass inversely. And the area of that circle on the retina is as the area of the circle in the focus of the eye-glass directly, and as the square of the focal distance of the eye-glass inversely. And this is the measure of the apparent indistinctness. Cor. In all sorts of telescopes, and also in compound microscopes, an object is seen equally distinct when the focal distance of the eye-glasses are proportional to the diameters of the circles of aberration in the focus of the object-glass. Here we do not consider the trifling alteration which well constructed eye-glasses may add to the indistinctness of the first image. In refracting telescopes, the apparent indistinctness is as the area of the object-glass directly, and as the square of the focal distance of the eye-glass inversely. For it has been shown, that the area of the circle of dispersion is as the area of the object-glass, and that the spherical aberration is insignificant when compared with this. Therefore, to make reflecting telescopes equally distinct, the diameter of the object-glass must be proportional to the focal

cal distance of the eye-glass. But in reflecting telescopes, the indistinctness is as the sixth power of the aperture of the object-glass directly, and as the fourth power of the focal distance of the eye-glass and square of the focal distance of the object-glass inversely. This is evident from the dimensions of the circle of aberration, which was found proportional to $\frac{AV^3}{CV^3}$. Therefore, to have

them equally distinct, the cubes of the apertures must be proportional to the squares of the focal distance multiplied by the focal distance of the eye-glass. By these rules, and a standard telescope of approved goodness, an artist can always proportion the parts of any instrument he wishes to construct. Mr Huyghens made one, of which the object-glass had 30 feet focal distance and 3 inches diameter. The eye-glass had 3.3 inches focal distance. And its performance was found superior to any which he had seen: nor did this appear owing to any chance goodness of the object-glass, because he found others equally good which were constructed on similar proportions. This has therefore been adopted as a standard. We should now proceed to the most difficult part of our subject, the compound aberrations of different surfaces. But our limits will not permit us to enlarge on this deep subject. We must therefore refer to what we have said upon it under the article OPTICS. We may also recommend to the curious reader, *Clairault's dissertations*, in the *Memoirs of the Academy of Paris*, 1756, &c.; those of *Bojéovich* in the *Memoirs of the Academy of Bologna*, and in his 5 volumes of *Opuscula*, published at Bassano in 1785, and those of D'Alembert and Euler. The only treatise in our language is the translation of a very imperfect work by Scherzer. In what follows, we shall, however, give a general view of it.

(6.) TELESCOPE, ESTIMATE OF THE DISPERSIVE POWER OF THE REFRACTING SUBSTANCE OF. The separation of the red, violet, and intervening rays, is called *dispersion*; and although this arises merely from a difference of the refractive power in respect of the different rays, it is convenient to distinguish this particular modification of the refractive power by a name, and we call it the *DISPERSIVE POWER* of the refracting substance. It is susceptible of degrees; for a piece of flint-glass will refract the light, so that when the sine of refraction of the red ray is 77, the sine of the refraction of the violet ray is nearly 78½; or if the sine of refraction of the red ray, measured on a particular scale, is 1.54, the sine of refraction of the violet ray is 1.57. The dispersion of this substance, being measured by the difference of the extreme sines of refraction, is greater than the dispersion of the other glass, in the proportion of 1 to 2. But this alone is not a sufficient measure of the absolute dispersive power of a substance. Although the ratio of 1.54 to 1.56 remains constant, whatever the real magnitude of the refractions of common glass may be; and though we therefore say that its dispersive power is constant, we know, that by increasing the incidence and the refraction, the absolute dispersion is also increased. Another substance shows the same prop-

erties, and in a particular case may produce the same dispersion; yet it has not for this sole reason the same dispersive power. If indeed the incidence and the refraction of the mean ray be also the same, the dispersive power cannot be said to differ; but if the incidence and the refraction of the mean ray be less, the dispersive power must be considered as greater, though the actual dispersion be the same; because if we increase the incidence till it becomes equal to that in the common glass, the dispersion will now be increased. The proper way of conceiving the dispersion therefore is, to consider it as a portion of the whole refraction; and if we find a substance making the same dispersion with half the general refraction, we must say that the dispersive quality is double; because, by making the refraction equal, the dispersion will really be double. If therefore we take m as a symbol of the separation of the extreme rays

from the middle ray, $\frac{m}{m-1}$ is the natural measure of the dispersive power. We shall express this in the Leibnitzian notation, thus $\frac{dm}{m-1}$ that

we may avoid the indistinctness which the Newtonian notation would occasion when m is changed for m' or m'' . It is not unusual for optical writers to take the whole separation of the red and violet rays for the measure of the dispersive power, and to compare this with the refracting power, with respect to one of the extreme rays. But it is surely better to consider the mean refraction as the measure of the refracting power; and the deviation of either of the extremes from m as mean is a proper enough measure of the dispersion, being always half of it. It is attended with this convenience, that being introduced into our computations as a quantity infinitely small, and treated as such for the ease of computation, while it is really a quantity of sensible magnitude; the errors arising from this supposition are diminished greatly, by taking one half of the deviation and comparing it with the mean refraction. This method has, however, this inconvenience, that it does not exhibit at once the refractive power in all substances respecting any particular colour of light; for it is not the ray of any particular colour that suffers the mean refraction. In common glass it is the ray which is in the confines of the yellow and blue; in flint glass it is nearly the middle blue ray; and in other substances it is a different ray. These circumstances appear plainly in the different proportions of the colours of the prismatic spectrum exhibited by different substances. This is a great bar to the perfection of achromatic instruments.

(7.) TELESCOPE, METHOD OF CONSTRUCTING AN ACHROMATIC LENS FOR THE. The way in which an *achromatic lens* is constructed, is to make use of a contrary refraction of a second lens to destroy the dispersion or spherical aberration of the first. The first purpose will be answered if $\frac{dm}{n}$ be equal to $\frac{dm'}{n'}$. For, in order that the different coloured rays may be collected into one point by

two lenses, it is only necessary that $\frac{1}{f}$ the reciprocal of the focal distance of rays refracted by both, may be the same for the extreme and mean rays, that is, that $\frac{m + d m - 1}{n} + \frac{m' + d m' - 1}{n'}$

$+\frac{1}{r}$ be of the same value with $\frac{m-1}{n} + \frac{m'-1}{n'}$ $+\frac{1}{r}$; which must happen if $\frac{d m}{n} + \frac{d m'}{n'} = 0$, or $\frac{d m}{n} = -\frac{d m'}{n'}$. This may be seen in another way, more comprehensible by such as are not versant in these discussions. In order that the extreme colours which are separated by the first lens may be rendered parallel by the second; we have shown already that n and n' are proportional to the radii of the equivalent isosceles lenses, being the halves of these radii. They are therefore (in these small refractions) inversely proportional to the angles formed by the surfaces at the edges of the lenses; n' may therefore be taken for the angle of the first lens, and n for that of the second. Now the small refraction by a prism,

whose angle (also small) is n' , is $m-1 \times n'$. The dispersive power being now substituted for the refractive power, we have for this refraction of the prism $d m \times n'$. This must be destroyed by the opposite refraction of the other prism $d m' \times n$. Therefore $d m \times n' = d m' \times n$, or $\frac{d m}{n} = -\frac{d m'}{n'}$. In like manner, this effect will be produced by three lenses if $\frac{d m}{n} + \frac{d m'}{n'} + \frac{d m''}{n''} = 0$, &c. Lastly, the errors arising from the spherical figure, which we expressed by $-R^2(q+q')$ will be corrected if $q+q' = 0$.

(8.) TELESCOPE, METHOD OF CONSTRUCTING A DOUBLE ACHROMATIC OBJECT-GLASS FOR THE. Here we have to determine four radii, $a, b, a',$ and b' . Make $n = 1$. This greatly simplifies the calculus, by exterminating it from all the denominators. This gives for the equation $\frac{d m}{n} +$

$\frac{d m'}{n'} = 0$, the equation $d m + \frac{d m'}{n'} = 0$, or $d m = -\frac{d m'}{n'}$, and $\frac{1}{n'} = -\frac{d m}{d m'} = -u$. Also we have

r' , the focal distance of the light incident on the second lens, the same with the principal focal distance p of the first lens (neglecting the interval, if any.) Now $\frac{1}{p} = \frac{m-1}{n}$, which in the present case

is $m-1$. Also $\frac{1}{p'} = -u(m'-1)$, and $\frac{1}{p} = m-1-u(m'-1) = u'$. Make these substitutions in the values of $\frac{q}{m-1}$ and $\frac{q'}{m'-1}$,

and we obtain the following equation; $c m^2 - \frac{c(2m+1)}{a} + \frac{c(m+2)}{m a^2} - u^3 m^2 - \frac{u^2(2m'+1)}{a}$

$$- \frac{u(m'+2)}{m' a'^2} + u^2(3m'+1)(m-1) + \frac{4u(m'+1)(m-1)}{m a'} - \frac{u(3m'+2)(m-1)}{m} = 0.$$

Arrange these terms in order, according as they are factors of $\frac{1}{a^2}$, $\frac{1}{a}$, $\frac{1}{a'}$, $\frac{1}{a'^2}$, or independent quantities. It puts on this form: $\frac{c(m+2)}{m} \times$

$$\frac{1}{a^2} - c(2m+1) \times \frac{1}{a} - \frac{u(m'+2)}{m'} \times \frac{1}{a'} - (u^2(2m'+1) - \frac{4u(m'+1)(m-1)}{m'}) \times \frac{1}{a'} + \frac{c m^2 + u^2(3m'+1)(m-1) - u^3 m^2 - u(3m'+2)(m-1)}{m'} = 0.$$

Let A be the coefficient of $\frac{1}{a^2}$, B that of $\frac{1}{a}$, C that of $\frac{1}{a'}$, D that of $\frac{1}{a'^2}$, and E the sum of the independent quantities: that is, let A be $\frac{c(m+2)}{m}$, B = $c(2m+1)$,

$$C = \frac{u(m'+2)}{m'}, D = u^2(2m'+1) - \frac{4u(m'+1)(m-1)}{m'}, \text{ and } E = c m^2 + u^2(3m'+1)(m-1) - u^3 m^2 - \frac{u(3m'+2)(m-1)}{m'}.$$

Our final equation becomes $\frac{A}{a^2} - \frac{B}{a} - \frac{C}{a'} - \frac{D}{a'^2} + E = 0$.

The coefficients of this equation and the independent quantity are all known, from our knowledge of $m, m', d m, d m'$; and we are to find the values of a and a' , and from them and $n = 1$, to find the values of b and b' . But it is evidently an indeterminate equation, because there are two unknown quantities; so that there may be an infinity of solutions. It must be rendered determinate by means of some other conditions to which it may be subjected. These conditions must depend on some other circumstance which may direct our choice. One circumstance occurs which we think of very great consequence. In the passage of light from one substance to another, there is always a considerable portion reflected from the posterior surface of the first and from the anterior surface of the last; and this reflection is more copious in proportion to the refraction. This loss of light will therefore be diminished by making the internal surfaces of the lenses to coincide; that is, by making $b = d$. This will be attended with another advantage. If we put between the glasses a substance of nearly the same refracting power, we shall not only completely prevent this loss of light, but we shall greatly diminish the errors which arise from an imperfect polish of the surfaces. We have tried this and find the effect very surprising. The lens, being polished immediately after the figure has been given it, and while it was almost impervious to light by reason of its roughness, which was still sensible to the naked eye, performed as well as when finished in the finest manner. This condition, by taking away one refraction, obliges us to increase those which remain,

remain, and therefore increases the spherical aberrations. And since our formulæ do not fully remove those (by reason of the small quantities neglected in the process), it is uncertain whether this condition be the most eligible. We have, however, no direct argument to the contrary. By comparing this object-glass with the former, we may remark, that diminishing a a little increases b , and in this respect improves the lens. It indeed has diminished b' , but this being already considerable, no inconvenience attends this diminution. But we learn, at the same time, that the advantage *must* be very small; for we cannot diminish a much more, without making it as small as the smallest radius of the object-glass. This proportion is therefore very near the maximum, or best possible; and we know that in such cases, even considerable changes in the radii will make but small changes in the result: for these reasons we are disposed to give a strong preference to the first construction, on account of the other advantages which we showed to attend it. As another example, we may take a case which is very nearly the general practice of the London artists. The radius of curvature for the anterior surface of the convex crown-glass is $\frac{2}{3}$ ths of the radius of the posterior surface, so that $b = \frac{2}{3}$. This being introduced into the determinate equation, gives

$$a = -0.2938 \quad a' = -0.3443$$

$$b = -0.3526 \quad b' = -1.1474$$

(9.) TELESCOPES, METHOD OF CONSTRUCTING A TRIPLE ACHROMATIC OBJECT-GLASS FOR. It is plain that there are more conditions to be assumed before we can render this a determinate problem, and that the investigation must be more intricate. At the same time, it must give us a much greater variety of constructions, in consequence of our having more conditions necessary for giving the equation this determinate form. Our limits will not allow us to give a full account of all that may be done in this method. We shall therefore content ourselves with giving one case which will sufficiently point out the method of proceeding. We shall then give the results in some other eligible cases, as rules to artists by which they may construct such glasses. Let the first and second glasses be of equal curvatures on both sides; the first being a double convex of crown-glass, and the second a double concave of flint-glass. Still making n the unit of our calculation, we have in the first place $a = -b$, $= -a'$,

$$= b'. \text{ Therefore } \frac{1}{a'} - \frac{1}{b'} = -\left(\frac{1}{a} - \frac{1}{b}\right), \text{ or } \frac{1}{n} =$$

$$-\frac{1}{n} = -1. \text{ Therefore the equation } \frac{d m}{n} + \frac{d m'}{n'} =$$

$$+\frac{d m''}{n''} = 0 \text{ becomes } u - 1 + \frac{u}{n''} = 0, \text{ or } \frac{1}{n} = \frac{1}{u}$$

$$-1. \text{ Let us call this value } u'. \text{ We have } \frac{1}{p} =$$

$$m - 1; \frac{1}{p'} = -(m' - 1); \frac{1}{p''} = u'(m - 1); \frac{1}{p}$$

$$= \frac{1}{p} + \frac{1}{p'} + \frac{1}{p''} = m - m' + u'(m - 1). \text{ And if}$$

$$\text{we make } m' - m = C', \text{ we shall have } \frac{1}{p} = -C,$$

+ $u'(m - 1)$. Also $\frac{1}{p'} = m - 1; \frac{1}{p''} = m - 1 - (m' - 1) = m - m' = -C'$. The equality of the two curvatures of each lens gives $\frac{1}{a} = \frac{1}{2n}$.

Therefore $\frac{1}{a} = -\frac{1}{b} = -\frac{1}{a'} = \frac{1}{b'} = \frac{1}{2}$; and

$\frac{1}{b''} = \frac{1}{a''} - \frac{1}{n''} = \frac{1}{a''} - u'$. Substituting these values in the equation, we obtain the three formulæ:

$$1. \quad c m^2 - \frac{1}{2} c (2 m + 1) + \frac{c (m + 2)}{4 m}$$

$$2. \quad -m' + \frac{1}{2} (2 m' + 1) - \frac{m' + 2}{4 m'} + (3 m' + 1) (m - 1) - \frac{2 (m' + 1) (m - 1)}{m'} - \frac{(3 m' + 2) (m - 1)^2}{m'}$$

$$3. \quad c u' 3 m^2 - \frac{c u' (2 m + 1)}{a''} + \frac{c u' (m + 2)}{m a''^2} - c' u' (3 m + 1) + \frac{4 c' u' (m + 1)}{m a''} + \frac{c' u' (3 m + 2)}{m} = 0.$$

Now arrange these quantities according as they are coefficients of $\frac{1}{a^2}$ and of $\frac{1}{a}$, or independent quantities. Let the coefficient of $\frac{1}{a^2}$ be A ,

that of $\frac{1}{a}$ be B , and the independent quantity

be C , we have $A = \frac{c u' (m + 2)}{m}$; $B = c u' (2 m + 1)$

$$- \frac{4 c' u' (m + 1)}{m}, \text{ and } C = c m^2 + \frac{c (m + 2)}{4 m}$$

$$+ \frac{1}{2} (2 m' + 1) + (3 m + 1) (m - 1) + c u' m^2$$

$$+ \frac{c' u' (3 m + 2)}{m} - \frac{1}{2} c (2 m + 1) - m' -$$

$$\frac{m' + 2}{4 m'} - \frac{2 (m' + 1) (m - 1)}{m'} - \frac{(3 m' + 2) (m - 1)^2}{m'}$$

$$- c' u' (3 m + 1). \text{ Our equation now becomes}$$

$$\frac{A}{a^2} - \frac{B}{a} + C = 0. \text{ This reduced to numbers,}$$

by computing the values of the coefficients, is $\frac{1.312}{a^2}$

$$- \frac{1.207}{a} - 0.3257 = 0. \text{ This, divided by } 1.312,$$

$$\text{gives } s = -0.92; \text{ and } t = -0.2482; -\frac{1}{2} s =$$

$$0.46; \frac{1}{2} s^2 = 0.2116; \text{ and } \sqrt{\frac{1}{2} s^2 - t} = \pm 0.6781.$$

And, finally, $\frac{1}{a''} = 0.46 \pm 0.6781$. This has

two roots, viz. 0.2181 and -1.1381. The last would give a very small radius, and is therefore

rejected. Now, proceeding with this value of $\frac{1}{a''}$

and the $\frac{1}{n''}$, we get the other radius b'' , and then,

by means of u' , we get the other radius which is

common to the four surfaces. Then, by $\frac{1}{p} =$

$\frac{x}{p'}$. — c' , we get the value of P . The radii being all on the scale of which n is the unit, they must be divided by P to obtain their value on the scale which has P for its unit. They will give us

$$\begin{aligned} a &= -b, = -a', = b', = 0.530 \\ a'' &= 1.215 \\ b'' &= -0.3046 \\ P &= 1 \end{aligned}$$

(10.) TELESCOPE, METHODS ADOPTED TO IMPROVE THE. Upon the whole, an amateur has little chance of succeeding in these attempts. The diversity of glasses, and the uncertainty of the workman's producing the very curvatures which he intends, is so great, that the object-glass turns out different from his expectation. The artist who makes great numbers acquires a pretty certain guess at the remaining error; and having many lenses, intended to be of one form, but unavoidably differing a little from it, he tries several of them with the other two, and finding one better than the rest, he makes use of it to complete the set. The great difficulty in the construction is to find the exact proportion of the disperse powers of the crown and flint glass. The crown is pretty constant; but there are hardly two pots of flint glass which have the same disperse power. Even if constant, it is difficult to measure it accurately; and an error in this greatly affects the instrument, because the focal distances of the lenses must be nearly as their disperse powers. The best method of examining this circumstance is as follows: The sun's light, or that of a brilliant lamp, passed through a small hole in a board, and fell on another board pierced also with a small hole. Behind this was placed a fine prism A (fig. 5.), which formed a spectrum ROV on a screen pierced with a small hole. Behind this was placed a prism B of the substance under examination. The ray which was refracted by it fell on the wall at D , and the distance of its illumination from that point to C , on which an unrefracted ray would have fallen, was carefully measured. This showed the refraction of that colour. Then, in order that we might be certain that we always compared the refraction of the same precise colour by the different prisms placed at B , we marked the precise position of the prism A when the ray of a particular colour fell on the prism B . This was done by an index AG attached to A , and turning with it, when we caused the different colours of the spectrum formed by A to fall on B . Having examined one prism B with respect to all the colours in the spectrum formed by A , we put another B in its place. Then bringing A to all its former positions successively, by means of a graduated arch HGK , we were certain that when the index was at the same division of the arch it was the very ray which had been made to pass through the first prism B in a former experiment. We did not solicitously endeavour to find the very extreme red and violet rays; because, although we did not learn the whole dispersions of the two prisms, we learned their proportions, which is the circumstance wanted in the construction of achromatic glasses. It is in vain to attempt this by measuring the spectrums themselves; for we

cannot be certain of selecting the very same colours for the comparison, because they succeeded in an insensible gradation. We have hitherto proceeded on the supposition, that when, by means of contrary refractions, we have united the extreme red and violet rays, we have also united all the others. But this is quite gratuitous. Sir Isaac Newton would, however, have made the same supposition; for he imagined that the different colours divided the spectrum formed by all substances in the proportions of a musical canon. This is a mistake. When a spectrum is formed by a prism of crown-glass, and another of precisely the same length is formed by the side of it by a prism of flint-glass, the cosine between the green and blue will be found precisely in the middle of the first spectrum, but in the second it will be considerably nearer to the red extremity. In short, different substances do not disperse the colours in the same proportion. The effect of this *irrationality* (so to call it) of dispersion, will appear plainly. Let A (fig. 6. *Pl.* 332.) represent a spot of white solar light falling perpendicularly on a wall. Suppose a prism of common glass placed behind the hole through which the light is admitted, with its refracting angle facing the left hand. It will refract the beam of light to the right, and will at the same time disperse this heterogeneous light into its component rays, carrying the extreme red ray from A to R , the extreme orange from A to O , the extreme yellow from A to Y , &c. and will form the usual prismatic spectrum $ROYGBPVC$. If the whole length RC be divided into 1000 parts, we shall have (when the whole refraction AR is small) RO very nearly 125, $RY = 200$, $RC = 333$, $RB = 500$, $RP = 667$, $RV = 778$, and $RC = 1000$; this being the proportion observed in the differences of the lines of refraction by Sir Isaac Newton. Dr Blair has found that certain fluids, particularly such as contain the muriatic acid, when formed into a prism, will refract the light from H (on the lower line) so as to form a spectrum $R'C'$ equal to RC , and as far removed from A' as RC is from A , but having the colours more dilated toward R' , and more condensed toward C , than is observed in RC ; so that the ray which was carried, by the prism of common glass to the middle point B' , considerably nearer to C' . Let us now suppose that, instead of a white spot at A , we have a prismatic spectrum AB (fig. 7. *Pl.* 332.), and that the prism of common glass is applied as before, immediately behind the prism which forms the spectrum AB . We know that this will be refracted sideway, and will make a spectrum $ROYGBFC$, inclined to the plane of refraction in an angle of 45° ; so that drawing the perpendicular RC' , we have $RC' = CC$. We also know that the prism of flint glass would refract the spectrum formed by the first prism on EHF , in such a manner that the red ray will go to R , the violet to C , and the intermediate rays to points o, y, g, b, p, v , so situated that $O'o$ is $R'O'$ of the other figure: Yy is RY , &c. These points must therefore lie in a curve $Ro y g b p v C$, which is convex toward the axis RC' . In like manner we may be assured that Dr Blair's fluid will form a spectrum $R d y' g' b' p' v' C$, concave

cave towards R'C. This is a very good method for discovering whether a medium disperses the light in the same proportion, with the prism which is employed for forming the first spectrum AB or EF. It disperses in the same or in a different proportion, according as the oblique spectrum is straight or crooked; and the exact proportion corresponding to each colour is had by measuring the ordinates of the curves R b C or R b C. Having formed the oblique spectrum RBC by a prism of common glass, an equal prism of the same glass, placed in a contrary position, will bring back all the rays from the spectrum RBC to the spectrum AB, laying each colour on its former place. In like manner, having formed the oblique spectrum R b C by a prism of flint-glass, we know that another prism of flint-glass, placed in the opposite direction, will bring all the rays back to the spectrum EHF. But having formed the oblique spectrum RBC by a prism in common glass, if we place the flint-glass prism in the contrary position, it will bring the colour R back to E, and the colour C to F; but it will not bring the colour B to H, but to a point *h*, such that B *h* is equal to *b* H, and *b* B to *h* H. In like manner, the other colours will not be brought back to the straight line EHF, but to a curve E *h* F, forming a crooked spectrum. In like manner, the fluids discovered by Dr Blair when employed to bring back the oblique spectrum RBC formed by common glass, will bring its extremities back to E and F, and form the crooked spectrum E *h* F lying beyond EHF. This experiment evidently gives us another method for examining the proportionality of the dispersion of different substances. Having, by common glass, brought back the oblique spectrum formed by common glass to its natural place AB, suppose the original spectrum at AB to contract gradually (as Newton has made it do by means of a lens), it is plain that the oblique spectrum will also contract, and so will the second spectrum at AB; and it will at last coalesce into a white spot. The effect will be equivalent to a gradual compression of the whole figure, by which the parallel lines AR and BC gradually approach, and at last unite. In like manner, when the oblique spectrum formed by flint glass is brought back to EHF by a flint-glass prism, and the figure compressed in the same gradual manner, all the colours will coalesce into a white spot. But when flint-glass is employed to bring back the oblique spectrum formed by common glass, it forms the crooked spectrum E *h* F. Now let the figure be compressed. The curve E *h* F will be doubled down on the line H *h*, and there will be formed a compound spectrum H *h*, quite unlike the common spectrum, being purple or claret coloured at H by the mixture of the extreme red and violet, and green edged with blue at *h* by the mixture of the green and blue. The fluid prisms would in like manner form a spectrum of the same kind on the other side of H. This is precisely what is observed in achromatic object-glasses made of crown-glass and flint; for the refraction from A to R corresponds to the refraction of the convex crown-glass; and the contrary refraction from R to E corresponds to the contrary refraction of the con-

cave flint-glass, which still leaves a part of the first refraction, producing a convergence to the axis of the telescope. It is found to give a purple or wine coloured focus, and within this a green one, and between these an imperfect white. Dr Blair found, that when the eye-glass was drawn out beyond its proper distance, a star was surrounded by a green fringe, by the green end of the spectrum, which crossed each other within the focus; and when the eye-glass was too near the object-glass, the star had a wine coloured fringe. The green rays were ultimately most refracted. Dr Blair very properly calls these spectrums, H *h* and H *h*, *secondary spectrums*, and seems to think that he is the first who has taken notice of them. But Mr Clairault was too accurate a mathematician, and too careful an observer, not to be aware of a circumstance which was of primary consequence to the whole inquiry. He could not but observe that the success rested on this very particular, and that the proportionality of dispersion was indispensably necessary. This subject was touched on by Clairault; and fully discussed by Boscovich, first in his *Dissertations* published at Vienna in 1759; then in the *Comment. Bononiensis*; and, lastly, in his *Opuscula*, 1785. Dr Blair read an ingenious Dissertation on Achromatic Glasses, to the Royal Society of Edinburgh in 1793. Boscovich shows how to unite the two extremes with the most outstanding colour of the secondary spectrum, by means of a third substance. When we have done this, the aberration occasioned by the secondary spectrums must be prodigiously diminished; for it is evidently equivalent to the union of the points H and *h* of our figure. Whatever cause produces this must diminish the curvature of the arches E *h* and *h* F; but even if these curvatures were not diminished, their greatest ordinates cannot exceed $\frac{1}{16}$ th of H *h*; and we may say, without hesitation, that by uniting the mean or most outstanding ray with the two extremes, the remaining dispersion will be as much less than the uncorrected colour of Dolland's achromatic glass, as this is less than four times the dispersion of a common object-glass. It must therefore be altogether insensible. Boscovich asserts, that it is not possible to unite more than two colours by the opposite refraction of two substances, which do not disperse the light in the same proportions. Dr Blair makes light of this assertion, as he finds it made in general terms in the extract made by Priestly from Boscovich in his *Essay on the History of Optics*; but had he read this author in his own dissertations, he would have seen that he was perfectly right. Dr Blair, however, has hit on a very ingenious and effectual method of producing this union of three colours. In the same way as we correct the dispersion of a concave lens of crown-glass by the opposite dispersion of a concave lens of flint-glass, we may correct the secondary dispersion of an achromatic convex lens by the opposite secondary dispersion of an achromatic concave lens. But this union does not contradict the assertion of Boscovich, because it is *necessarily* produced by means of three refracting substances. The most essential service which the public has received from Dr BLAIR is the discovery of fluid mediums of a proper dis-

dispersive power. By composing the lenses of such substances, we are at once freed from the irregularities in the refraction and dispersion of flint-glass, which the chemists have not been able to free it from. In whatever way this glass is made, it consists of parts which differ both in refractive and dispersive power; and when taken up from the pot, these parts mix in threads, which may be disseminated through the mass in any degree of fineness. But they still retain their properties; and when a piece of flint-glass has been formed into a lens, the eye, placed in its focus, sees the whole surface occupied by glistening threads or broader veins running across it. Great rewards have been offered for removing this defect, but hitherto to no purpose. We would propose the following method: Let the glass be reduced to powder, and then melted with a great proportion of alkaline salt, so as to make a liquor silicium. When precipitated from this by an acid, it must be in a state of very uniform composition. If again melted into glass, we should hope that it would be free from this defect; if not, the case seems to be desperate. But by using a fluid medium, Dr Blair was free from all this embarrassment; and he acquired another immense advantage, that of adjusting at pleasure both the refractive and dispersive powers of his lenses. In solid lenses, we do not know whether we have taken the curvatures suited to the refractions till our glass is finished; and if we have mistaken the proportions, all our labour is lost. But when fluids are used, it is enough that we know nearly the refractions. We suit our focal distances to these, and then select our curvatures, so as to remove the aberration of figure, preserving the focal distances. Thus, by properly tempering the fluid mediums, we bring the lens to agree precisely with the theory, perfectly achromatic, and the aberration of figure as much corrected as is possible. Dr Blair examined the refractive and dispersive powers of a great variety of substances, and found great varieties in their actions on the different colours. This was indeed to be expected. There is no doubt now among naturalists about the mechanical connection of the phenomena of nature; and all agree that the chemical actions of the particles of matter are perfectly like in kind to the action of gravitating bodies; that all these phenomena are the effects of forces like those which we call *attractions* and *repulsions*, and which we observe in magnets and electrified bodies; that light is refracted by forces of the same kind, but differing chiefly in the small extent of their sphere of activity. One who views things in this way will expect, that as the actions of the same acid for the different alkalies are different in degree, and as the different acids have also different actions on the same alkali, in like manner different substances differ in their general refractive powers, and also in the proportion of their action on the different colours. Nothing is more unlikely, therefore, than the proportional dispersion of the different colours by different substances. Common glass disperses the rays in such a manner, that the ray which is in the centre of the green and blue occupies the middle of the prismatic spectrum; but in glasses, and many other substances, which are more dis-

persive, this ray is nearer to the ruddy extremity of the spectrum. While therefore the straight line RC' (fig. 7.) terminates the ordinates $O\delta$, YY , Gg' , &c. which represent the dispersion of common glass, the ordinates which express the dispersions of these substances are terminated by a curve passing through R and C' , but lying below the line RC' . When therefore parallel heterogeneous light is made to converge to the axis of a convex lens of common glass, as happens at F in fig. 5. C , the light is dispersed, and the violet rays have a shorter focal distance. If we now apply a concave lens of greater dispersive power, the red and violet rays are brought to one focus F ; but the green rays, not being so much refracted away from F , are left behind at e , and have now a shorter focal distance. But Dr Blair afterwards found that this was not the case with the muriatic acid, and some solutions in it. He found that the ray which common glass caused to occupy the middle of the spectrum was much nearer to the blue extremity when refracted by these fluids. Therefore a concave lens formed of such fluids which united the red and violet rays in F , refracted the green rays to f . Having observed this, it was an obvious conjecture, that a mixture of some of these fluids might produce a medium, whose action on the intermediate rays should have the same proportion that is observed on common glass; or that two of them might be found which formed spectra similarly divided, and yet differing sufficiently in dispersive power to enable us to destroy the dispersion by contrary refractions, without destroying the whole refraction. Dr Blair accordingly found a mixture of solutions of ammoniacal and mercurial salts, and also some other substances which produced dispersions proportional to that of glass, with respect to the different colours. And thus has the result of this intricate and laborious investigation corresponded to his utmost wishes. He has produced achromatic telescopes which seem as perfect as the thing will admit of; for he has been able to give them such apertures, that the *incorrigible* aberration arising from the spherical surfaces becomes a sensible quantity, and precludes farther amplification by the eye-glasses. We have examined one of his telescopes: The focal distance of the object-glass did not exceed 17 inches, and the aperture was fully $3\frac{1}{2}$ inches. We viewed some single and double stars and some common objects with this telescope; and found that in magnifying power, brightness, and distinctness, it was manifestly superior to one of Mr Dollond's of 42 inches focal length. It also gave us an opportunity of admiring the dexterity of the London artists, who could work the glasses with such accuracy. We had most distinct vision of a star when using an erecting eye-piece, which made this telescope magnify more than a hundred times; and we found the field of vision as uniformly distinct as with Dollond's 42 inch telescope magnifying 46 times. The intelligent reader must admire the nice figuring and centering of the very deep eye-glasses which are necessary for this amplification. It is to be hoped that Dr Blair will extend his views to *glasses* of different compositions, and thus give us object-glasses which are solid; for those composed of fluids have un-

conveniences which will hinder them from coming into general use, and will confine them to the museums of philosophers. Antimonial glasses bid fair to answer this purpose, if they could be made free of colour, so as to transmit enough of light. We recommend this differtation to the careful perusal of our readers. Those who have not made themselves much acquainted with the delicate and abstruse theory of aberrations, will find it exhibited in such a popular form as will enable them to understand its general aim; and the well informed reader will find many curious indications of inquiries and discoveries yet to be made.

(II.) TELESCOPES, METHODS OF CONSTRUCTION, AND CORRECTING EYE-GLASSES FOR. The proper construction of an eye-piece is not less essential than that of the object-glass. But our limits will not allow us to treat this subject in the same detail. We have already extended this article to a great length, because we do not know of any performance in the English language which will enable our readers to understand the construction of achromatic telescopes; an invention which reflects honour on our country, and has completed the discoveries of our illustrious NEWTON. Our readers will find abundant information in *Dr Smith's Optics* concerning the eye-glasses, chiefly deduced from Huyghens's fine theory of aberration. At the same time, we must again pay Mr Dollond the merited compliment of saying, that he was the first who made any scientific application of this theory to the compound eye-piece for erecting the object. His eye-pieces of 3 and 6 glasses are very ingenious reduplications of Huyghens's eye-piece of two glasses, and would probably have superseded all others, had not his discovery of achromatic object-glasses caused opticians to consider the chromatic dispersion with more attention, and pointed out methods of correcting it in the eye-piece without any compound eye-glasses. They have found that this may be more conveniently done with four eye-glasses, without sensibly diminishing the advantages which Huyghens showed to be the result from employing many small refractions instead of a lesser number of great ones. As this is a very curious subject, we shall endeavour to make our readers fully acquainted with it and content ourselves with merely mentioning the principles of the other rules for constructing an eye-piece. Such readers as are less familiarly acquainted with optical discussions, may consult our article, OPTICS. If AB , Fig. 8. *Pl.* 331. be a lens, R , a radiant point of focus of incident rays, and a the focus of parallel rays coming from the opposite side; then, 1. Draw the perpendicular aa' to the axis, meeting the incident ray in a' , and a' A to the centre of the lens. The refracted ray BF is parallel to $a'A$: for $Ra'a$ A ($= Ra : aA$) $= RB : BF$ ($= RA : AF$), which is the focal theorem. 2. An oblique pencil BPb proceeding from any point P which is not in the axis, is collected to the point f , where the refracted ray BF cuts the line PAf drawn from P through the centre of the lens: for $P a' : a' A$ $= Pb : bf$, which is also the focal theorem. The simple ACHROMATIC TELESCOPE is represented in Fig. 9. *Plate* 332. The beam of parallel rays, inclining to the axis, is made to converge to

a point G , where it forms an image of the lowest point of a very distant object. These rays, de-cussating from G fall on the eye-glass; the ray from the lowest point B of the object glass falls on the eye-glass at b ; and the ray from A falls on a ; and the ray from the centre O falls on O . These rays are rendered parallel, or nearly so, by refraction through the eye-glass, and take the direction $b'i, oI, aI$. If the eye be placed so that this pencil of parallel rays may enter it, they converge to a point of the retina, and give distinct vision of the lowest point of the object. It appears inverted, because the rays by which we see its lowest point come in the direction which in simple vision is connected with the upper point of an object. They come from above, and therefore are thought to proceed from above. We see the point as if situated in the direction Io . In like manner the eye placed at I , sees the upper point of the object in the direction IP , and its middle in the direction IE . The proper place for the eye is I : if brought much nearer the glass, or removed much farther from it, some, or the whole, of this extreme pencil of rays will not enter the pupil. It is therefore of importance to determine this point. Because the eye requires parallel rays for distinct vision, it is plain that F must be the principle focus of the eye-glass. Therefore, by the common focal theorem (OPTICS) $OF : OE = OE : OI$, or $OF : FE = OE : EI$. The magnifying power being measured by the magnitude of the visual angle, compared with the magnitude of the visual angle with the naked eye, we have $\frac{oIp}{oOp}$, or $\frac{oIF}{oOF}$ for the measure of the magnifying

power. This is very nearly $= \frac{OE}{EI}$, or $\frac{OF}{FI}$. As the line OE , joining the centres of the lenses, and perpendicular to their surfaces, is called the axis of the telescope, so the ray OG is called the axis of the oblique pencil, being really the axis of the cone of light which has the object-glass for its base. This ray is through its whole course the axis of the oblique pencil; and when its course is determined, the amplification, the field of vision, the apertures of the glasses are all determined. For this purpose we have only to consider the centre of the object glass as a radical point, and trace the process of a ray from this point through the other glasses; this will be the axis of some oblique pencil. It is evident therefore, that the field of vision depends on the breadth of the eye-glasses. Should we increase this, the extreme pencil will pass through I , because O and I are still the conjugate foci of the eye-glass. On the other hand, the angle reserved on for the extent of field of vision gives the breadth of the eye-glass. For all optical instruments there must be two optical figures considered. The first shows the progress of a pencil of rays coming from one point of the object. The various foci of this pencil show the places of the different images, real or virtual. Such a figure is formed by the three rays $AG a'$, $OG oI$, $BG bi$. The second shows the progress of the axis of the different pencils proceeding through the centre of the object-glass. The foci of this pencil of axes show the places

B b

where

where an image of the object-glass is formed; and this pencil determines the field of vision, the apertures of the lenses, and the application or magnifying power. The three rays OQ , OL , OEI , OIM , form this figure. See also Fig. 12, where the progress of both sets of pencils is more diversified. The perfection of a telescope is to represent an object in its proper shape, distinctly magnified, with a great field of vision, and sufficiently bright. But there are limits to all these qualities; and an increase of one of them, for the most part, diminishes the rest. The brightness depends on the aperture of the object-glass, and will increase in the same proportion, because it will always be to AB in the proportion of EF to FO , till the diameter of the emergent pencil is equal to that of the pupil of the eye. Increasing the object-glass any more, can send no more light into the eye. But we cannot make the emergent pencil nearly so large as this when the telescope magnifies much, for the great aperture of the object-glass produces an indistinct image at GF , and its indistinctness is magnified by the eye-glass. A great field of vision is incompatible with the true shape of the object; for since the angles of the marginal parts are enlarged by the aberration of the eye-glass, the marginal parts themselves will appear enlarged, or the object appear distorted. Thus a chess board viewed through a reading glass appears drawn out at the corners, and the straight lines are all changed into curves, as is represented in Fig. 10. Plate 331. The circumstance which most perceptibly limits the extent of field is the necessary indistinctness. If the vision be indistinct, it is useless, and no other quality can compensate this defect. The distortion is very inconsiderable in much larger angles of vision than we can admit, and it is unworthy of the attention paid to it by optical writers. They have been induced to take notice of it, because the means of correcting it, in a considerable degree, are attainable, and afford an opportunity of exhibiting their knowledge; whereas the indistinctness which accompanies a large field is a subject of most difficult discussion, and has hitherto baffled all their efforts to express by any intelligent or manageable formulae. This subject must, however, be considered. The image at GF (Fig. 9. Plate 332.) of a very moderate object is not a plain surface perpendicular to the axis of the telescope, but is nearly spherical, having O for its centre. If a number of pencils of parallel rays crossing each other in I fall on the eye-glass, they will form a picture on the opposite side, in the focus F . But this picture will by no means be flat, nor nearly so, but very concave towards E . Its exact form is of most difficult investigation. The elements of it are given by Dr Barrow; and we have given the chief of them in the article OPTICS, when considering the foci of infinitely slender pencils of oblique rays. Therefore it is impossible that the picture formed by the object-glass can be seen distinctly in all its parts by the eye-glass. Even if it were flat, the points G and H (Fig. 9.) are too far from the eye-glass when the middle F is at the proper distance for distinct vision. When, therefore, the telescope is so adjusted that we have distinct vision of the

middle of the field, in order to see the margin distinctly we must push in the eye-glass; and having so done, the middle of the field becomes indistinct. When the field of vision exceeds 12 or 15°, it is not possible by any contrivance to make it tolerably distinct all over; and we must turn the telescope successively to the different parts of the field that we may see them agreeably. The cause of this indistinctness is the shortness of the lateral foci of lateral and oblique pencils refracted by the eye-glass. We have shown (in OPTICS) how to determine these in all the cases which occur. But the determination is not complete, and relates only to those rays which are in a plane passing through the axis of the lens. But the oblique pencil bGa (Fig. 9.) by which an eye placed at I sees the point G of the image, is a cone of light having a circular base on the eye-glass, of which circle ab is one of the diameters. There is a diameter perpendicular to this, which, in this figure, is represented by the point a . Fig. 11. Plate 331. represents the base of the cone as seen by an eye placed in the axis of the telescope, with the object-glass as appearing behind it. The point b is formed by a ray which comes from the lowest point B of the object-glass, and the point a is illuminated by a ray from A . The point c at the right hand of the circular base of this cone of light came from the point C on the left side of the object-glass; and the light comes to d from D . Now the laws of optics demonstrate, that the rays which come through the points c and d are more convergent after refraction than the rays which come through a and b . The analogies, therefore, which ascertain the foci of rays lying in planes passing through the axis do not determine the foci of the others. Of this we may be sensible by looking through a lens to a figure on which are drawn concentric circles crossed by radii. When the telescope is so adjusted that we see distinctly the extremity of one of the radii, we shall not see distinctly the circumference which crosses the extremity with equal distinctness, and *vice versa*. This difference, however, between the foci of the rays which come through a and b , and those which come through c and d , is not considerable in the fields of vision, which are otherwise admissible. But the same difference of foci obtains also with respect to the dispersion of light, and is more remarkable. Both d'Alembert and Euler have attempted to introduce it into their formulae; but they have made them useless for any practical purpose by their inextricable complication. This must serve as a general indication of the difficulties which occur in the construction of telescopes, even although the object-glasses were perfect, forming an image without the smallest confusion or distortion. There is yet another difficulty. The rays of the pencil aGb (Fig. 9. Plate 332.) when refracted through the eye-glass, are also separated into their component colours. The edge of the lens must evidently perform the office of a prism, and the white ray Gb will be so dispersed that if b be the parh of its red ray, the violet ray, which makes another part of it, will take such a course bn that the angle ibn will be nearly $\frac{1}{4}$ th of Gbb' . The ray Ga

G a passing through a part of the lens whose surfaces are less inclined to each other, will be less refracted, and will be less dispersed in the same proportion very nearly. Therefore the two violet rays will be very nearly parallel when the two red rays are rendered parallel. Hence it must happen, that the object will appear bordered with coloured fringes. A black line seen near the margin on a white ground, will have a ruddy and orange border on the outside, and a blue border within; and this confusion is altogether independent on the object glass, and is so much the greater as the visual angle bIE is greater. Such are the difficulties; they would be unfurmountable were it not that some of them are so connected that, to a certain extent, the diminution of one is accompanied by a diminution of the other. In the article OPTICS we gave some account of what are called the *Cautic curves*, (See OPTICS, *Index*;) and showed that these curves are the geometrical foci of the foci of infinitely slender pencils. Consequently the point **G** is very nearly in the caustic formed by a beam of light consisting of rays parallel to **IO**, and occupying the whole surface of the eye-glass, because the pencil of rays which are collected at **G** is very small. Any thing therefore that diminishes the mutual inclination of the adjoining rays, puts their concurrence farther off. Now this is precisely what we want, for the point **G** of the image formed by the object-glass is already beyond the focus of the oblique slender pencil of parallel rays ia and fb ; and therefore, if we could make this focus go a little farther from a and b , we shall bring it nearer to **G**, and obtain more distinct vision of this point of the object. Now let it be recollected, that in moderate refractions through prisms, two rays which are inclined to each other in a small angle are, after refraction, inclined to each other in the same angle. Therefore, if we can diminish the aberration of the ray $a i$, or $o I$, or $b f$, we diminish their mutual inclination; and consequently the mutual inclination of the rays $G a$, $G b$, $G b'$, and therefore lengthen the focus, and get more distinct vision of the point **G**. Therefore we at once correct the distortion and the indistinctness; and this is the aim of Mr Huyghens's great principle of dividing the refractions. (See OPTICS, *Index*.) The general method is as follows: Let o be the object glass (Fig. 12. Plate 332.) and **E** the eye-glass of a telescope, and **F** their common focus, and **FG** the image formed by the object glass. The proportion of their focal distances is supposed to be such as gives as great a magnifying power as the perfection of the object-glass will admit. Let **BI** be the axis of the emergent pencil. It is known by focal theorem that **GE** is parallel to **BI**; therefore **BGE** is the whole refraction or deflection of the ray **OIB** from its former direction. Let us diminish the aberrations by dividing this into two parts by means of two glasses **D** and e , so as to make the ultimate angle of vision $b i e$, equal to BIE , and thus retain the same magnifying power and visible field. Let us divide it into the parts **BGC** and **CGE**. From **G** draw any line **GD** to the axis towards **O**; and draw the perpendicular **DH**, cutting **OG** in **H**; draw $H e$ parallel to **GC**, cutting **GD** in g ; draw $g f$ perpen-

dicular to the axis, and $g e$ parallel to **GE**; draw $e b$ perpendicular to the axis; draw **D d** parallel to **GC**, and $d e$ perpendicular to the axis. Then if there be placed at **D** a lens whose focal distance is **D d**, and another at e whose focal distance is $e f$, the thing is done. The ray **OIB** will be refracted into **II b, and this into $b i$ parallel to **BI**. The demonstration of this construction is so evident by means of the common focal theorem, that we need not repeat it, nor the reasons for its advantages (see OPTICS.—) We have the same magnifying power, and the same field of vision; we have less aberration, and therefore less distortion and indistinctness; and this is brought about by a lens **HD** of a smaller aperture and a greater focal distance than **BE**. Consequently, if we are contented with the distinctness of the margin of the field with a single eye-glass, we may greatly increase the field of vision; for if we increase **DI** to the size of **EB** we shall have a greater field, and much greater distinctness in the margin; because **HD** is of a longer focal distance, and will bear a greater aperture, preserving the same distinctness at the edge. On this account the glass **HD** is commonly called the *Field glass*. It must be observed here, however, that although the distortion of the object is lessened, there is a real distortion produced in the image $f g$. But this, when magnified by the glass e , is smaller than the distortion produced by the glass **E**, of greater aperture and shorter focus, on the undistorted image **GF**. But because there is a distortion in the second image $f g$, this construction cannot be used for the telescopes of astronomical quadrants, and other graduated instruments; because then equal divisions of the micrometer would not correspond to equal angles. But the same construction will answer in this case, by taking the point **D** on that side of **F** which is remote from **O** (Fig. 13.) This is the form now employed in the telescopes of all graduated instruments. The great refractions which take place on the eye-glasses occasion very considerable dispersions, and disturb the vision by fringing every thing with colours. To remedy this, achromatic eye-glasses may be employed, constructed by the rules already delivered. This construction, however, is incomparably more intricate than that of object-glasses; for the equations must involve the distance of the radiant point, and be more complicated; and this complication is immensely increased on account of the great obliquity of the pencils. Fortunately the Huyghenian construction of an eye-piece enables us to correct this dispersion to a great degree of exactness. By it we may free the eye-glasses from the greatest part of the effect of dispersion. We may do it entirely by pushing the eye-glass a little nearer to the field-glass. This will render the violet rays a little divergent from the red, so as to produce a perfect picture from the bottom of the eye. But by doing so we have hurt the distinctness of the whole picture. We remedy this by drawing both glasses out a little, and the telescope is made perfect.**

(12.) TELESCOPES, STILL FARTHER IMPROVEMENTS OF. Presuming that the reader is now pretty familiar with the different circumstances which must be considered in the construction of

an eye piece, we proceed to consider those which must be employed to erect the object. This may be done by placing the lens which receives the light from the object-glass in such a manner, that a second image (inverted with respect to the first) may be formed beyond it, and this may be viewed by an eye-glass. But, besides many other defects, it tinges the object prodigiously with colour. But the common day telescope, invented by P. RHUTIA, has, in this respect, greatly the advantage of the above. See *OPTICS Index*. The rays of compound light are dispersed at e and f . (Plate 266. Fig. 4.) The violet ray proceeding from f , falls without the red ray at g , but is accurately collected with it at the focus E , as we shall demonstrate by and by. Since they cross each other in E , the violet ray must fall within the red ray at i , and be less refracted than if it had fallen on the same point with the red ray. Had it fallen there it would have separated from it; but by a proper diminution of its refraction, it is kept parallel to it, or nearly so. And this is one excellence of this telescope; when constructed with three eye-glasses perfectly equal, the colour is sensibly diminished, and by using an eye-glass somewhat smaller, it may be removed entirely. This telescope may be improved, by substituting for the eye-glass i k (Fig. 7.) the Huyghenian double eye-glass, or field glass and eye-glass, Fig. 12 and 13; and the first of these may be improved and rendered achromatic. This will require the two glasses a f and g b to be increased from their present dimensions to the size of a field-glass, suited to the magnifying power of the telescope, supposing it an astronomical telescope. Thus we shall have a telescope of 4 eye-glasses. The three first will be of a considerable focal distance, and two of them will have a common focus. But this is considerably different from the eye piece of four glasses which are now used, and are far better. We are indebted for them to Mr DOLLOD, who was a mathematician as well as an artist, and in the course of his research discovered resources which had not been thought of. He had not then discovered the achromatic object-glasses, and was busy in improving the eye-glasses by diminishing their spherical aberration. His first thought was to make the Huyghenian addition at both the images of the day telescope. This suggested to him the following eye-piece of five glasses. Fig. 14. Plate 332. represents this eye-piece, but there is not room for the object-glass at its proper distance. A pencil of rays coming from the upper point of the object is made to converge (by the object-glass) to G , where it would form a picture of that part of the object. But it is intercepted by the lens A a , and its axis is bent towards the axis of the telescope in the direction ab . At the same time, the rays which converged to G converge to g , and there is formed an inverted picture of the object at g f . The axis of the pencil is again refracted at b , crosses the axis of the telescope in H , is refracted again at c , at d , and at e , and at last crosses the axis in I . The rays of this pencil, diverging from g , are made less diverging, and proceed as if they came from g' , in the line B g g' . The lens c C causes them to converge to g , in the line G' C g' . The lens d D

makes them converge still more to G' , and there they form an erect picture G' F' ; diverging from G' , they are rendered parallel by the refraction at e . At H the rays are nearly parallel. Had the glass B b been a little farther from A , they would have been accurately so, and the object-glass, with the glasses A and B , would have formed an astronomical telescope with the Huyghenian eye-piece. The glasses C , D , and E , are intended merely for bending the rays back again till they again cross the axis in I . The glass C tends chiefly to diminish the great angle BHb ; and then the two glasses D and E are another Huyghenian eye-piece. The art in this construction lies in the proper adjustment of the glasses, so as to divide the whole bending of the pencil pretty equally among them, and to form the last image in the focus of the eye-glass, and at a proper distance from other-glass. Bringing B nearer to A would bend the pencil more to the axis. Placing C farther from B would do the same thing; but this would be accompanied with more aberration, because the rays would fall at a greater distance from the centres of the lenses. The greatest bending is made at the field-glass D ; and we imagine that the telescope would be improved, and more distinct at the edges of the field, by employing another glass of great focal distance between C and D . There is an image formed at H of the object-glasses, and the whole light passes through a small circle in this place. It is usual to put a plate here pierced with a hole which has the diameter of this image. A real image of the object glass is formed at I , and indeed wherever the pencils cross the axis. A lens placed at H makes no change in any of the angles, nor in the magnifying power, and affects only the place where the images are formed. And, on the other hand, a lens placed at f , or F' , where a real image is formed makes no change in the places of the images, but affects the mutual inclination of the pencils. This affords a resource to the artist, by which he may combine properties which seem incompatible. The aperture of A determines the visible field and all the other apertures. We must avoid forming a real image, such as f , g , or F' G' , on or very near any glass. For we cannot see this image without seeing along with it every particle of dust and every scratch of on the glass. We see them as making part of the object when the image is exactly on the glass, and we see them confusedly, and so as to confuse the object, when the image is near it. For when the image is on or very near any glass, the pencil of light occupies a very small part of its surface, and a particle of dust intercepts a great proportion of it. This construction will not do for the telescope of graduated instruments, because the micrometer cannot be applied to the second image f , g , on account of its being a little distorted. Also the interposition of the glass C makes it difficult to correct the dispersion. By proper reasoning from the correction in the Huyghenian eye-piece, we are led to the best construction of one with three-glasses. Let PA (Fig. 15.) be the glass which first receives the light proceeding from the image formed by the object-glass, and let OP be the axis of the extreme pencil. This is refracted into PK , which is again refracted into R r by the next

next lens B. Let b be the focus of parallel rays of the second lens. Draw PB . We know that $Ab : bB = PB : Br$, and that rays of one kind diverging from P will be collected at r . But if PR , PV be a red and a violet ray, the violet ray will be more refracted at V , and will cross the red ray in some intermediate point g of the line Rr . If therefore the first image had been formed precisely on the lens P , we should have a second image at fg free from all coloured fringes. If the refractions at P and R are equal (as in the common day telescope), the dispersion at V must be equal to that at P , or the angle $vPr = VPR$. But we have ultimately $RPV : RrV = BC : AB$, ($= Bb : Ab$ by the focal theorem). Therefore $gVr : grV$ (or $gr : gV$, or $Cf : fB$) $= Bb : Ab$, and $AB : Ab = Rr : Rg$. This shows the advantage of the common day telescope. In this $AB = 2Ab$, and therefore f is the place of the last image which is free from coloured fringes. But this image will not be seen free from coloured fringes through the eye-glass C , if f be its focus: For had gr , gv been both red rays, they would have been parallel after refraction; but gv being a violet ray, will be more refracted. It will not indeed be so much deflected from parallelism as the violet ray, which naturally accompanies the red ray to r , because it falls nearer the centre. By computation its dispersion is diminished about one 9th. That gv may be made parallel to gr after refraction, the refraction at r must be such that the dispersion corresponding to it may be of a proper magnitude. Let the dispersion at g be to the dispersion produced by the refraction at r (which is required for producing the intended magnifying power) as 1 to 9. Make $g : 1 = ff' : f'C$, $= fC : CD$, and draw the perpendicular Dr' meeting the refracted rr' in r' . Then we know by the common focal theorem, that if f' be the focus of the lens C , red rays diverging from g will be united in r' . But the violet ray gv will be refracted into vv' parallel to rr' . For the angle $v'r' : vgr =$ (ultimately) $fC : CD$, $= g : 1$. Therefore the angle $v'r'$ is equal to the dispersion produced at r , and therefore equal to $r'vv'$, and vv' is parallel to rr' . But by this we have destroyed the distinct vision of the image formed at fg , because it is no longer at the focus of the eye-glass. But distinct vision will be restored by pushing the glasses nearer to the object-glass. This makes the rays of each particular pencil more divergent after refraction through A , but scarcely makes any change in the directions of the pencils themselves. Thus the image comes to the focus f' , and makes no sensible change in the dispersions. In the common day telescope, the first image is formed in the anterior focus of the first eye-glass, and the second image is at the anterior focus of the last eye-glass. If we change this last for one of half the focal distance, and push in the eye-piece till the image formed by the object-glass is half way between the first eye-glass and its focus, the last image will be formed at the focus of the new eye-glass, and the eye-piece will be achromatic. This is easily seen by making the usual computations by the focal theorem. But the visible field is diminished, because we cannot give the same aperture as before to the

new eye-glass; but we can substitute for it two eye-glasses like the former, placed close together. This will have the same focal distance with the new one, and will allow the same aperture that we had before. On these principles may be demonstrated the correction of colour in eye-pieces with three glasses of the following construction. Let the glasses A and B be placed so that the posterior focus of the first nearly coincides with the anterior focus of the second, or rather so that the anterior focus of B may be at the place where the image of the object-glass is formed, by which situation the aperture necessary for transmitting the whole light will be the smallest possible. Place the third C at a distance from the second, which exceeds the sum of their focal distances by a space which is a third proportional to the distance of the first and second, and the focal distance of the second. The distance of the first eye-glass from the object-glass must be equal to the product of the focal distance of the first and second divided by their sum. Let Oo , Aa , Bb , Cc , the focal distances of the glasses, be O , a , b , c . Then make $AB = a + b$ nearly; $BC = b + c + \frac{b^2}{b+c}$; $OA = \frac{bc}{b+c}$. The amplification or magnifying power will be $= \frac{ob}{ac}$;

the equivalent eye-glass $= \frac{ac}{b}$; and the field of vision $= 3438' \times \frac{\text{Aperture of } A}{\text{foc. dist. ob. gl.}}$. These eye-pieces will admit the use of a micrometer at the place of the first image, because it has no distortion. Mr Dollond was anxious to combine this achromatism of the eye-pieces with the advantages which he had found in the eye-pieces with five glasses. This eye-piece of three glasses necessarily has a very great refraction at the glass B , where the pencil which has come from the other side of the axis must be rendered again convergent, or at least parallel to it. This occasions considerable aberrations. This may be avoided by giving part of this refraction to a glass put between the first and second, in the same way as he has done by the glass B put between A and C in his five glass eye-piece. But this deranges the whole process. His ingenuity, however, surmounted this difficulty, and he made eye-pieces of four glasses, which seem as perfect as can be desired. If we make the rays of different colours unite on the surface of the field-glass, the thing will be done, because the dispersion from this point of union will then unite with the dispersion produced by this glass alone; and this increased dispersion may be corrected by the last eye-glass in the way already shown. Therefore let A , B , (fig. 16. *Pl. CCCXXXII.*) be the stations which we have fixed on for the first and second eye-glasses, in order to give a proper portion of the whole refraction to the second glass. Let b be the anterior focus of B . Draw PB through the centre of B . Make $Ab : bB = AB : BK$. Draw the perpendicular Kr , meeting the refracted ray in r . By the focal theorem, red rays diverging from P will converge to r ; but the violet ray PV , being more refracted, will cross Rr in some point g . Drawing the perpendicular fg , we get f for the proper place of the field-glass,

glass. Let the refracted ray Rr , produced backwards, meet the ray OP coming from the centre of the object-glass in O . Let the angle of dispersion RPV be called p , and the angle of dispersion at V , that is, rVv , be v , and the angle VrR be r . It is evident that $OR : OP = p : v$, because the dispersions are proportional to the sines of the refractions, which, in this case, are very nearly as

the refractions themselves. Let $\frac{OP}{OR} \left(\text{or } \frac{op}{pB} \text{ or } \frac{pB}{bB} \right)$

be made $= m$. Then $v = mp$; also $p : r =$

$BK : AB :: bB : Ab$, and $r = p \cdot \frac{Ab}{bB}$, or, making

$\frac{Ab}{bB} = n$, $r = np$; therefore $v : r = m : n =$

$\frac{pB}{bB} : \frac{Ab}{bB} :: pB : Ab$. The angle $RgV = gVr +$

$gVv = p \cdot m + n$; and $RgV : Rrv = Rr : Rg$,

or $m + n : n :: Rr : Rg$, and $Rg = Rr \cdot \frac{n}{m+n}$.

But Rr is ultimately $= BK = AB \cdot \frac{bB}{Ab} = \frac{AB}{n}$.

Therefore $Rg = \frac{AB}{n} \times \frac{n}{m+n} = \frac{AB}{m+n}$, and $Bf =$

$\frac{AB}{m+n}$. This value of Bf is evidently $= bB \times$

$\frac{AB}{pB + Ab}$. Now bB being a constant quantity

while the glass B is the same, the place of union

varies with $\frac{AB}{pB + Ab}$. If we remove B a little

further from Δ , we increase AB , and pB , and Ab ,

each by the same quantity. This evidently diminishes Bf .

On the other hand, bringing B nearer to A increases Bf . If we keep the distance

between the glasses the same, but increase the focal distance bB , we augment Bf , because

this change augments the numerator and diminishes the denominator of the fraction $\frac{bB \times AB}{pB + Ab}$.

Thus we can unite the colours at what distance we please, and consequently in the place of the intended field-glass, from which they will diverge

with an increased dispersion, viz. with the dispersion competent to the refraction produced there,

and the dispersion $p \times m + n$ conjoined. It only

remains to determine the proper focal distances of the field-glass and eye-glass, and the place of the

eye-glass, so that this dispersion may be finally corrected. This is an indeterminate problem,

admitting of an infinity of solutions. We shall limit it by an equal division of the two remaining

refractions, which are necessary to produce the intended magnifying power. This construction

has the advantage of diminishing the aberration. Thus we know the two refractions, and the dispersion

competent to each; it being nearly $\frac{1}{17}$ th of the refraction. Call this q . The whole dispersion

at the field-glass consists of q , and of the angle KgV of fig. 16. which we also know to be $= p \times$

$m + n$. Call their sum s . Let fig. 17. represent this addition to the eye-piece. Cg is the field-

glass coming in the place of fg of fig. 19. and Bg is the red ray coming from the glass BR .

Draw gs parallel to the intended emergent pencil from the eye-glass; that is making the angle Cgs with the axis correspond to the intended magnifying power. Bisect this angle by the line gK .

Make $sg : gq :: s : q$, and draw gK , cutting Cg in t . Draw td and Dr perpendicular to the axis.

Then a lens placed in D , having the focal distance Dd , will destroy the dispersion at the lens gc , which refracts the ray g into gr . Let

gv be the violet ray, making the angle $vgv ::$. By the common optical theorem, gr will be refracted into r' parallel to td .

Draw gD' red rays grg will be united in r' . But the violet ray gv will be more refracted, and will take the path

v' , making the angle of dispersion $r'v'v :: q$, very nearly, because the dispersion at v does not sensibly differ from that at r .

Now, in the small angles of refraction which obtain in optical instruments, the angles $r'r'v'$, $r'gv'$, are very nearly as

gr and rr' , or as gD and Dr' , or as CD and DT ; which, by the focal theorem, are as Cd and dD ; that is, $Dd : dc :: r'gv' : r'r'v'$. But

$Dd : dC :: Dt : st :: sg : gq :: s : q$. But gr is parallel to td , and the whole dispersion at g is corrected by the lens D .

The focal distance Cc of Cg is had by drawing Cx parallel to Kg , meeting Rg in x , and drawing xc perpendicular to the axis.

It is easy to see that this elegant construction is not limited to the equality of the refractions vgv , Krr' .

In whatever proportion the whole refraction vgv is divided, we always can tell the proportion of the dispersions which

the two refractions occasion at g and r , and can therefore find the values of s and q . Indeed this solution includes the problem above stated. In it

some quantities and ratios are assumed as equal which are not strictly so, in the same manner as in all the elementary optical theorems. The parallelism, however, of gv' and rr' may be made accurate, by pushing the lens D nearer to Cg , or retreating it from it.

We may also, by pushing it still nearer, induce a small divergency of the violet ray, so as to produce accurate vision in the eye, and may thus make the vision through a telescope more perfect than with the naked eye, where dispersion is by no means avoided. It would therefore be an improvement to have the eye-glass in a sliding tube for adjustment. Bring the telescope to distinct vision; and if any colour be visible about the edges of the field, shift the eye-glass till this colour is removed. The vision may now become indistinct; but this is corrected by shifting the place of the whole eye-piece. In examining the progress of a red and a violet ray through many eye-pieces of Dollond's and Ramsden's best telescopes, in all of them the colours are united on or very near the field-glass. We meet with many made by other artists, where a considerable degree of colour remains, sometimes in the natural order, and often in the contrary order. This must happen in the hands of mere imitators, ignorant of principle. Fig. 18. Plate CCCXXXIII. represents the eye-piece of a very fine spy glass by Mr Ramsden: the focal length of its object-glass is $8\frac{1}{2}$ inches, with $\frac{1}{17}$ th of aperture, $2^\circ 05'$ of visible field, and $15\frac{1}{4}$ magnifying power. The distances

stances and focal lengths are of their proper dimensions, but the apertures are $\frac{1}{4}$ larger, that the progress of a lateral pencil might be more distinctly drawn. The dimensions are as follow; Foc. lengths $Aa=0.775$ $Bb=1.025$ $Cc=1.01$ $Dd=0.79$ Distances. $AB=1.18$ $BC=1.83$ $CD=1.05$. It is perfectly achromatic, and the colours are united, not precisely, at the lens C g, but about $\frac{1}{15}$ th of an inch nearer the eye-glass. This combination of glasses may be used as a microscope; for, if, instead of the image formed by the object-glass at FG, we substitute a small object, illuminated from behind, as in compound microscopes; and if we draw the eye-piece a very small way from this object, the pencils of parallel rays emergent from the eye-glass D will become convergent to very distant points, and will there form an inverted and enlarged picture of the object, which may be viewed by a Huyghenian eye-piece; and we may thus get high magnifying powers without using very deep glasses. The eye-piece, of which we have given the dimensions in this way, might be made to magnify 180 times with very great distinctness. When used as the magnifier of a solar microscope, it surpasses every thing we have seen. The picture formed by a SOLAR MICROSCOPE is generally very indistinct; but with this magnifier it seemed perfectly sharp. The only thing which remains to be considered in the theory of refracting telescopes is the forms of the different lenses. Hitherto we have had no occasion to consider any thing but their focal distances; but their aberration depends greatly on the adjustment of their forms to their situations. When the conjugate foci of a lens are determined by the service which it is to perform, there is a certain form or proportion between the curvatures of their anterior and posterior surfaces, which will make their aberrations the smallest possible. We obtain this formula for a , the radius of curvature for the anterior surface of a lens.

$$\frac{1}{a} = \frac{2m^2 + m}{2m + 4} + \frac{4m + 4}{2m} r$$
, where m is the ratio of the sine of incidence of the line of refraction, and r is the distance of the focus of incident rays, positive or negative, according as they converge or diverge, all meeting $r r'$ and join $r r'$. By the focal theorem 2 measured on a scale of which the unit is n , = half of the radius of the equivalent isosceles lens. It will be sufficiently exact for our purpose to suppose $m = \frac{3}{2}$, though it is more nearly $\frac{31}{20}$. In this

case $\frac{1}{a} = \frac{b}{7} + \frac{10}{7r} = \frac{42r + 70}{49r}$. Therefore $a = \frac{49r}{42r + 70}$. And $\frac{1}{b} = \frac{1}{a} - 1 = \frac{1-a}{a}$. For example let it be required to give the radii of curvature in inches for the eye-glass b , Fig. 12, Pl. 332. which we shall suppose of $\frac{1}{15}$ inches focal distance, and that $cc (=r)$ is $\frac{3}{15}$ inches. The radius of curvature for the equivalent isosceles lens is 1.5 , and its half is 0.75 . Therefore $r = \frac{3}{0.75} = 5$ and our formula is $a = \frac{49 \times 5}{42 \times 5 + 70} = \frac{245}{280} = 0.875$; and $\frac{1}{b} =$

$\frac{1-a}{a} = \frac{0.125}{0.875}$, and $b = \frac{0.875}{0.125} = 7$. These values are parts of a scale, of which the unit is 0.75 inches. Therefore

$$a, \text{ in inches, } = 0.875 \times 0.75 = 0.65625$$

$$b, \text{ in inches, } = 7 \times 0.75 = 5.25.$$

And here we must observe that the posterior surface is concave: for b is a positive quantity, because $1-a$ is a positive quantity as well as a ; therefore the centre of sphericity of both surfaces lies beyond the lens. And this determination is nearly the same with the usual practice, which commonly makes this lens a plane convex with its flat side next the eye; and there will not be much difference in the performance of these two lenses; for in all cases of maxima and minima, even a pretty considerable change of the best dimensions does not make a sensible change in the result. The same consideration leads to a rule which is very simple, and sufficiently exact for ordinary situations. This is to make the curvature such, that the incident and emergent pencils may be nearly equally inclined to the surfaces of the lens. Thus in the eye-piece with 5 glasses, A and B should be most convex on their anterior sides; C should be most convex on the posterior side; D should be nearly isosceles; and E nearly plano-convex. But this is not so easy as it appears at first sight. The lenses of an eye-piece have not only to bend the several pencils of light to and from the axis of the telescope; they have also to form images on the axis of these pencils. These offices frequently require opposite forms. Thus the glass A of fig. 18 should be most convex on the side next the object, that it may produce little distortion of the pencils. But it should be most convex next the eye, that it may produce distinct vision of the image FG, which is very near it. This image should have its concavity turned towards A, whereas it is towards the object-glass. We must therefore endeavour to make the vertical image fg flatter, or even convex. This requires a glass very flat before and convex behind. For similar reasons the object-glass of a microscope and the simple eye-glass of an astronomical telescope should be formed the same way. This is a subject of most difficult discussion, and requires a theory which few of our readers would relish; nor does our limits afford room for it. The artists are obliged to grope their way. The proper method of experiment would be, to make eye-pieces of large dimensions, with extravagant apertures to increase the aberrations, and to provide for each station A, B, C, and D, a number of lenses of the same focal distance, but of different forms; and we would advise making the trial in the way of solar microscope, and to have two eye-pieces on trial at once. Their pictures can be formed on the same screen, and accurately compared; whereas it is difficult to keep in remembrance the performance of one eye-piece, and compare it with another. We have now treated the theory of refracting telescopes with considerable minuteness. We cannot add any thing to what Dr SMITH has delivered on the theory of reflecting telescopes. There appears to be the same possibility of correcting the aberration of the great speculum.

lum by the contrary aberration of a convex small speculum that we have practised in the compound object-glass of an achromatic refracting telescope. But this cannot be, unless we make the radius of the convex speculum exceedingly large, which destroys the magnifying power and the brightness. This therefore must be given up. Indeed their performance, when well executed, does already surpass all imagination. Dr Herschel has found great advantages in what he calls the *front view*, not using a plane mirror to throw the pencils to one side. But this cannot be practised in any but telescopes so large that the loss of light, occasioned by the interposition of the observer's head, may be disregarded. Nothing remains but to describe the mechanism of some of the best.

(13.) TELESCOPES. THE MOST CONVENIENT FORMS OF. To describe all the varieties of shape and accommodation which may be given to a telescope, would be a task as trifling as prolix. The artists of London and of Paris have racked their inventions to please every fancy, and to suit every purpose. We need only give a few general maxims, deduced from the scientific consideration of a telescope, as an instrument by which the visual angle subtended by a distinct object is greatly magnified. The chief consideration is to have a steady view of the distant object. This is unattainable, unless the axis of the instrument be kept constantly directed to the same point of it; for when the telescope is gently shifted from its position, the object *seems to move* in the same or in the opposite direction, according as the telescope inverts the object or shows it erect. This is owing to the magnifying power, because the apparent angular motion is greater than what we naturally connect with the motion of the telescope. This does not happen when we look through a tube without glasses. All shaking of the instrument therefore makes the object dance before the eye; which prevents us from seeing it distinctly. But a tremulous motion, however small, is infinitely more prejudicial to the performance of a telescope, by making the object quiver before us. A person walking in the room prevents us from seeing distinctly; nay, the very pulsation in the body of the observer sufficiently agitates the floor to produce this effect, when the telescope has a great magnifying power, and every part of the object is diffused over the whole space of the angular tremor. The more rapid this motion is, the indistinctness is the more complete. Therefore the more firm, elastic and well bound together the frame-work and apertures of the telescope is, the more hurtful will this consequence be. A mountain of lead, were it practicable, would be preferable to wood, iron, or brass. This is one great cause of the indistinctness of the very finest reflecting telescopes of the usual constructions, and can never be totally removed. In the Gregorian form, it is hardly possible to damp the elastic tremor of the small speculum, carried by an arm supported at one end only, even though the tube were motionless. A great improvement has been made on a four-feet reflecting telescope, by supporting the small speculum, by a strong plate of lead placed across the tube, and led by an adjusting screw at each end. But

even the great mirror may vibrate enough to produce indistinctness. Refracting telescopes are free from this inconvenience, because a small angular motion of the object-glass round one of its own diameters has no sensible effect on the image in its focus. They are affected only by an angular motion of the axis of the telescope or of the eyeglasses. This consideration enables us to judge of the merits of any particular apparatus. We should study whether its form makes the tube readily susceptible of such tremulous motions. If it does, the firmer and the more elastic it is, the worse. All forms therefore where the tube is supported only near the middle, or where the whole immediately or remotely depend on one narrow joint, are defective. We therefore affirm with confidence, that of all the forms of a telescope apparatus, the old-fashioned simple stand, represented in *fig. 19. plate 331.* is by far the best, and that others are superior according as the disposition of the points of support of the tube approaches to this. Let the pivots A, B, be fixed in the lintel and sole of a window. Let the four braces terminate very near to these pivots. Let the telescope lie on the pin F *f*, resting on the shoulder round the eye-piece, while the far end of it rests on one of the pins 1, 2, 3, &c.; and let the distance of these pins from F very little exceed the length of the telescope. The trembling of the axis, even when considerable, cannot affect the position of the tube, because the braces terminate almost at the pivots. The tremor of the brace CD does as little harm, because it is nearly perpendicular to the tube. And if the object-glasses were close at the upper supporting pin, and the focus at the lower pin F, even the bending and trembling of the tube will have no effect on its optical axis. The instrument is only subject to horizontal tremors. These may be almost annihilated by having a slender rod coming from a hook's joint in the side of the window, and passing through such another joint close by the pin F. There is an instrument of this form, having AB parallel to the earth's axis. The whole apparatus did not cost 50 shillings, and it is not in the least sensible manner affected by a storm of wind. It was by observations with this instrument that the tables of the motions of the Georgium Sidus, published in the Edinburgh Transactions, were constructed, and they are as accurate as any that have yet appeared. This is an excellent equatorial. But this apparatus is not portable, and it is sadly deficient in elegance. The following is the best method we have seen of combining these circumstances with the indispensable requisites of a good telescope. The pillar VX (*fig. 20. Plate CCCXXXIV.*) rises from a firm stand, and has a horizontal motion round a cone which completely fills it. This motion is regulated by a rack-work in the box at V. The screw of this rack-work is turned by the handle P, of a convenient length, and the screw may be disengaged by the click or detent V, when we would turn the instrument a great way at once. The telescope has a vertical motion round the joint Q placed near the middle of the tube. The lower end of the tube is supported by the stay OT. This consists of a tube RT, fastened to the gillars

pillar by a joint T, which allows the stay to move in a vertical plane. Within this tube slides another, with a stiff motion. This tube is connected with the telescope by another joint O, also admitting motion in a vertical plane. The side M of this inner tube is formed into a rack, in which works a pinion fixed to the top of the tube RT, and turned by the flat finger-piece R. The reader will readily see the advantages and the remaining defects of this apparatus. It is very portable, because the telescope is easily disengaged from it, and the legs and stay fold up. If the joint Q were immediately under A, it would be much freer from all tremor in the vertical plane. But nothing can hinder other tremors arising from the long pillar and the three springy legs. These communicate all external agitations with great vigour. The instrument should be set on a stone pedestal, or, what is better, a *cask* filled with *wet sand*. This pedestal, which necessity perhaps suggested to our scientific navigators, is the best that can be imagined. *Fig. 2. plate CCCXXXI.* is the stand usually given to reflecting telescopes. The vertical tube FBG is fastened to the tube by finger screws, which pass through the slits at F and G. This arch turns round a joint in the head of the divided pillar, and has its edge cut into an oblique rack, which is acted on by the horizontal screw, furnished with the finger-piece A. This screw turns into a horizontal square frame. This frame turns round a horizontal joint in the off-side, which cannot be seen in this view. In the side of this frame next the eye there is a finger-screw *a*, which passes through the frame, and presses on the round horizontal plate D. By screwing down this finger-screw, the frame is brought up, and presses the horizontal screw to the rack. Thus the elevation of the telescope is fixed and may be nicely changed by the finger applied to A and turning this screw. The horizontal round plate D moves stiffly round on another plate of nearly equal diameter. This under plate has a deep conical hollow socket, which is nicely fitted by grinding to a solid cone formed on the top of the great upright pillar, and they may be firmly fixed in any position by the finger-screw E. To the under plate is fastened a box *e*, containing a horizontal screw C, which always works in a rack, cut in the edge of the upper plate, and cannot be disengaged from it. When a great vertical or horizontal motion is wanted, the screws *a* and E are slackened, and by tightening them the telescope may be fixed in any position, and then any small movements may be given it by the finger plates A and C. This stand is very subject to brisk tremor, either from external agitation of the pedestal, or from the immediate action of the wind; and we cannot see distinctly through telescopes mounted in this manner, till one end of the tube is pressed against something very steady and unelastic. It is astonishing what a change this produces. The tube of a very fine telescope, made by James Short, was laid on a great lump of soft clay, pressing it firmly down into it. Several persons looked through it, and read a table of logarithms at the distance of 310 yards. The telescope was then put on its

stand, and pointed to the same object; none of the company could read at a greater distance than 235 yards, although they could perceive no tremor. They thought the vision as sharp as before; but the incontrovertible proof of the contrary was, that they could not read at such a distance. If the round plates were of much greater dimensions; and if the lower one, instead of being fixed to the pillar, were supported on 4 stout pillars standing on another plate; and if the vertical arch had a horizontal axis turning on two upright frames firmly fixed to the upper plate, the instrument would be much freer from tremor. Such stands were made formerly; but being much more bulky and inconvenient for package, they had gone into disuse. The high magnifying powers of Dr HERSCHTEL's telescopes made all the usual apparatus for their support extremely imperfect. But his judgment, ingenuity, and fertility in resource, are as eminent as his philosophical ardour. He has contrived for his reflecting telescopes stands, which have every property that can be desired. The tubes are all supported at both ends. The motions, both vertical and horizontal, are contrived with the utmost simplicity and firmness. We cannot more properly conclude this article than with a description of his 40 feet telescope, the noblest monument of philosophical zeal and of princely munificence that the world can boast of. *Fig. 22. plate CCCXXXIII.* represents a view of this instrument in a meridional situation, as it appears when seen from a convenient distance by a person placed to the south west of it. The foundation in the ground consists of two concentric circular brick walls, the outermost of which is 42 feet in diameter, and the inside one 22 feet. They are 2 feet 6 inches deep under ground; 2 feet 3 inches broad at the bottom, and 1 foot 2 inches at the top; and are capped with paving stones about 3 inches thick, and 12½ broad. The bottom frame of the whole apparatus rests upon these two walls by 20 concentric rollers H, and is moveable upon a pivot, which gives a horizontal motion to the whole apparatus, as well as to the telescope. The tube of the telescope A, tho' very simple in its form, which is cylindrical, was attended with great difficulties in the construction. This is not to be wondered at, when its size, and the materials of which it is made, are considered. Its length is 39 feet 4 inches; it measures 4 feet 10 inches in diameter; and every part of it is of iron. Upon a moderate computation, the weight of a wooden tube must have exceeded an iron one at least 3000 pounds; and its durability would have been far inferior. It is made of rolled or sheet iron, which has been joined together without rivets, by a kind of seaming well known to those who make iron funnels for stoves. Very great mechanical skill is used in the contrivance of the apparatus by which the telescope is supported and directed. To command every altitude, the point of support is moveable: and its motion is effected by mechanism, so that the telescope may be moved from its most backward point of support to the most forward, and, by means of the pulleys G G, suspended from the great beam H, be set to any altitude.

titude, up to the very zenith. The tube is also made to rest with the point of support in a pivot, which permits it to be turned sidewise. The concave face of the great mirror is 48 inches of polished surface in diameter. The thickness, which is equal in every part of it, remains now about 3½ inches; and its weight, when it came from the cast was 2118 pounds, of which it must have lost a small quantity in polishing. To put this speculum into the tube, it is suspended vertically by a crane in the laboratory, and placed on a small narrow carriage, which is drawn out, rolling upon planks, till it comes near the back of the tube; here it is again suspended and placed in the tube by a peculiar apparatus. The method of observing by this telescope is by what Dr Herschel calls the *front view*; the observer being placed in a seat C, suspended at the end of it, with his back towards the object he views. There is no small speculum, but the magnifiers are applied immediately to the first focal image. From the opening of the telescope, near the place of the eye-glass, a speaking pipe runs down to the bottom of the tube, where it goes into a turning joint; and after several other inflections, it at length divides into two branches, one going into the observatory D, the other into the work-room E. By means of the speaking pipe the communications of the observer are conveyed to the assistant in the observatory, and the workman is directed to perform the required motions. In the observatory is placed a valuable fiducial time-piece, made by Mr Shelton. Close to it, and of the same height, is a polar distance-piece, which has a dial-plate of the same dimensions with the time-piece: this piece may be made to show polar distance, zenith distance, declination or altitude, by setting it differently. The time and polar distance-pieces are placed so that the assistant sits before them at a table, with the speaking-pipe rising between them; and in this manner observations may be written down very conveniently. This noble instrument, with proper eye-glasses, magnifies above 6000 times, and is the largest that has ever been made. Such of our readers as wish for a full account of the machinery attached to it, viz. the ladders, ladders, and platform B, may have recourse to the second part of the Transactions of the Royal Society for 1795; in which, by means of 18 plates and 63 pages of letter press, an ample detail is given of every circumstance relating to joiner's work, carpenter's work, and smith's work, which attended the formation and erection of this telescope. It was completed Aug. 28th 1789, and on the same day was the sixth satellite of SATURN discovered.

* **TELESCOPICAL**, *adj.* [from *telescope*.] Belonging to a telescope; seeing at a distance.

TELESE, a town of Naples, in Lavora, 18 miles ENE. of Capua.

(1.) **TELESIA**, in ancient geography, a town of Italy, in Campania. It was taken by Hannibal. *Liv.* 21. c. 13. &c. It is now called **TELESE**.

TELLICHERRY, or } a sea-port town of Hind-
TELLICHERY, } dohan, on the coast of
Malabar; with an English factory, 30 miles N. of Calicut, and 246 SSE. of Goa. Lon. 75. 50. E. Lat. 11. 48. N.

TELLICO, a town of Tennessee, 30 miles SW. of Knoxville. Lon. 84. 18. W. Lat. 35. 57. N.

TELLIGT, a town of Germany, in Westphalia, and ci-devant bishopric of Munster, with a rich abbey; allotted, in 1801, to the K. of Prussia; 3 miles from Munster.

TELLIGUO MOUNTAINS, mountains of Hindoostan. S. of *Tellicherry*.

TELLINA, in zoology, a genus of animals belonging to the class of *vermes*, and order of *testacea*. The animal is a tethys; the shell is bivalve, generally sloping to one side, with three teeth at the hinge. *Gmelin* reckons about 90 species. The tethys bury themselves in the mud or sand

at the bottom of the sea, keeping a communication with the water above by means of short tubes or pipes.

TELLINGANA, an ancient province of Hindoostan, now called *GOLCONDA*.

TELLINGSTEDE, a town of Germany, in Holstein, 11 miles SE. of Lunden.

TELLIPOLI, a town of Ceylon, 9 miles N. of Jaffnapatana.

TELLIUS. See *TELLIAS*.

(1.) * *TELLTALE*. *n. s.* [from *tell* and *tale*.] One who gives malicious information; one who carries officious intelligence.—

You speak to Casca, and to such a man

That is no hearing *telltale*.

Shak.

What, shall these papers lie like *telltales* here?

Shakefp.

Let not the Heav'n's hear these *telltale* women
Rail on the Lord's anointed.

Shak.

Report displays her *telltale* wings. *Fairfax*.

And to the *telltale* fan descry

Our conceal'd solemnity.

Milton.

This *telltale* ghost

Perhaps will clear them both.

Dryden.

A *telltale* out of school

Is of all wits the greatest fool.

Swift.

(2.) *TELL-TALE*, is also a name sometimes given to the PERPETUAL LOG. See *LOG*. N° 2.

TELLUS, [Lat. *i. e.* the Earth.] in the mythology, one of the Roman names of the goddess *CYBELLE*, and which in common language signified the same with *terra*, the *earth*; but, in the mythology, *TERRA* was the name appropriated to the *mother*, the wife of *COELUS*, and *TELLUS* to the daughter, the wife of *SATURN*. See *OPS*.

TELMES, a town of Africa, in Morocco, 15 miles from Safi.

TELTOW, a town of Brandenburg, 10 miles S. of Berlin.

TELTSCHE, a town of Moravia, on the frontiers of Bohemia, at the source of the Teya, 12 m. N. of Zlabings. Lon. 16. 0. E. Lat. 49. 0. N.

TEMA, a town of Mingo, on the Gold Coast.

TEMANIK, a town of Persia, in Segestian, 165 miles SW. of Zareng.

TEMATHEA, a mountain of Messenia.

TEMBLEQUE, a town of Spain in New Castile, 23 miles ESE. of Toledo.

TEMDE, a river of England in Shropshire, which runs into the Severn, 2 m. above Ludlow.

TEME, a river of England, in Radnorshire, Salop, and Worcestershire, which runs into the Severn, a mile below Worcester.

TEMELET, a town of Morocco, 70 miles WSW. of Morocco.

TEMENDEFUST, a town of Algiers, on the coast of the Mediterranean, 10 m. E. of Algiers.

TEMENEH, a town of Asiatic Turkey, in Natolia, 52 miles WNW. of Sinop.

TEMENI, a town of Candia, 6 miles S. of Candia.

TEMENIUM, a town of MESSENE.

TEMENOS, a town of Syracuse.

TEMENUS, a leader of the HERACLIDE, who became king of ARGOS. He was succeeded by Deiphon, who had married his daughter Hymetho.

* *TEMERARIOUS*. *adj.* [temeraire, Fr. temerarius,

C c 2

rarius,

varius, Lat.] 1. Rash; heady; unreasonably adventurous; unreasonably contemptuous of danger.—Resolution without foresight is but a *temerarious* folly. *L'Estrange*. 2. Careless; heedless; done at random.—Should he find upon one single sheet of parchment, an oration written full of profound truths, adorned with elegant phrase, the wit of man could not persuade him that this was done by the *temerarious* dashes of an unguided pen. *Ros*.

TEMERARIOUSLY, *adv.* [from *temerarious*.] Rashly; in a rash manner.

* **TEMERITY**, *n. f.* [*temeritas*, Lat.] Rashness; unreasoned contempt of danger.—

The figures are bold even to *temerity*. *Cowley*.

TEMES, a river of Hungary, which rises in a mountain, and runs into the Danube, opposite Belgrade.

TEMESA, 1. a town of Cyprus: 2. a town of Cantabria in Italy, famous for copper mines.

(1.) **TEMESVÁR**, or } a county of Upper Hun-
(1.) **TEMESWAR**, } gary, or *bannat* as it is
styled in the Hungarian language.

(2.) **TEMESWAR**, or **TEMESVÁR**, the capital of the above county. It is a strong city, and formerly passed for impregnable; having been besieged in vain by the Turks in 1551; and by the Transylvanians, in 1596 and 1597. In 1690, it was also blockaded by the imperialists. But in 1716, it was taken by prince Eugene, after throwing in several thousand bombs. It is seated on the Beg, which forms a morass round it, 60 miles NE. of Belgrade, 150 SE. of Buda, and 250 SE. of Vienna. Lon. 33. 20. E. Lat. 45. 37. N.

TEMETVIN, a fortified town of Hungary, 14 miles W. of Topolztan.

TEMIAM, a town of Africa, in Bornou.

TEMISCHBERG, a town and fort of Russia, 3n Caucasus, 60 miles W. of Stauropol.

TEMISSA, the capital of Fezzan, about 120 miles ENE. of Mourzouk. Here the pilgrims from Bernou and Nigritia, who depart from Mourzouk, and travel by Cairo to Mecca, usually provide the stores of corn and dates, and dried meat, that are requisite for their dreary passage.

TEMITZ, a town of Bohemia, in Chrudim.

TEMNIKOV, a town of Russia, in Tambovskoi, 116 miles NNE. of Tambov.

TEMPE, in ancient geography, a valley of Thessaly, in Phthiotis, between Mount Olympus on the N. and Ossa on the S. through which the Peneus runs into the Ægean Sea. All the poets celebrate this valley as the most delightful spot on earth; with verdant walks, cool shady groves, and the melodious singing of birds, &c. and hence the name *Tempe* became proverbial for a pleasant spot. It was 5 miles long, but in some places not above 1½ acres broad. But Livy gives a quite different account of it, and says the Roman army were struck with horror in passing over the precipitous rocky chasm. Strabo accounts for the difference by the depredations of an earthquake. See *Strabo* ix. and *Livy*.

(1.) * **TEMPER**, *n. f.* [from the verb.] 1. Due mixture of contrary qualities.—Nothing better proveth the excellency of this soil and *temper* than the abundant growing of the palm trees. *Baileigh*.—Health itself is but a kind of *temper*,

gotten and preserved by a convenient mixture of contraries. *Arbutnot*. 2. Middle course; mean or medium.—The present clergy's wishes reach no further than that some reasonable *temper* had been used. *Swift*. 3. Constitution of body.—Having done growing, it would become more dry by degrees, and of a *temper* of greater consistency. *Burnet*. 4. Disposition of mind.—This evangelical *temper* is far from being natural. *Hammond*.—

Remember with what mild

And gracious *temper* he both heard, and judg'd,
Without wrath or reviling. *Milton*.

—This will keep their thoughts easy and free, the only *temper* wherein the mind is capable of receiving new informations. *Locke*.—All irregular *temper*s in trade and business, are but like irregular *temper*s in eating and drinking. *Low*. 5. Constitutional frame of mind.—The brain may devise laws for the blood, but a hot *temper* leaps o'er a cold decree. *Shak*.—

Our hearts,

Of brothers *temper*, do receive you in. *Shak*.

6. Calmness of mind; moderation.—

Restore yourselves unto your *temper*s. *B. Jon*.

To fall with dignity, with *temper* rise. *Pope*.

7. State to which metals are reduced, particularly as to hardness.—

A sword, whose *temper* I intend to stain

With the best blood that I can meet. *Shak*.

Ithuriel with his spear,

Touch'd lightly; for no falsehood can endure

Touch of celestial *temper*. *Milton*.

—These needles should have a due *temper*. *Sharp*.

(2.) **TEMPER**, in mechanics. See **TEMPERING**.

* **TO TEMPER**, *v. a.* [*tempero*, Lat. *temperer*, Fr.] 1. To mix so as that one part qualifies the other.—

I shall *temper* so

Justice with mercy, as may illustrate most

Them fully satisfied, and Thee appease. *Milt*.

2. To compound; to form by mixture.—

If you could find out but a man

To bear a poison, I would *temper* it. *Shak*.

3. To mingle.—Prepare the sixth part of an ephal and the third part of an hin of oil, to *temper* with the fine flour. *Ezek* xlvi. 14.—The good old knight *tempered* the inquiries after his own affairs with kind questions relating to themselves. *Addison*. 4. To beat together to a proper consistence.—

Th' uncivil kerns of Ireland are in arms,

And *temper* clay with blood. *Shak*.

—The potter *tempering* soft earth, fashioneth every vessel. *Wisd* xv. 7. 5. To accommodate; to modify.—Thy sustenance leaving to the appetite of the eater, *tempered* itself to every man's liking. *Wisd* xvi. 21. 6. To bring to due proportion; to moderate excess.—

These soft fires with kindly heat

Temper or nourish. *Milton*.

7. To soften; to mollify; to assuage; to soothe; to calm.—Solon, in his laws to the Athenians, laboured to *temper* their warlike courages with sweet delights of learning and sciences. *Spenser*.—

With this she wants to *temper* angry Jove.

Spenser.

Now will I to that old Andronicus,
And *temper* him with all the art I have. *Shak*.
Lovely

Lovely Woman ! Nature form'd thee
To temper man : we had been brutes without
you. *Osway.*

3. To form metals to a proper degree of hardness.
The sword

Of Michael from the armoury of God
Was given him, *temper'd* so that neither keen
Nor solid might resist that edge. *Milton.*

—In the *tempering* of steel, by holding it but a
minute or two longer or lesser in the other com-
petent heat, gives it very different tempers as to
brittleness or toughness. *Boyle.*

Redd'ning the skies, and glitt'ring all around,
The *temper'd* metals clash. *Dryden.*

9. To govern. A Latinism.—

With which the damned ghosts he governeth,
And furies rules, and Tartare *tempereth*. *Spens.*

(1.) * TEMPERAMENT. *n. f.* [*temperamentum*, Latin ; *temperament*, Fr.] 1. Constitution ;
state with respect to the predominance of any qua-
lity.—Bodies are denominated hot and cold, in
proportion to the present *temperament* of that part
of our body to which they are applied. *Locke.* 2.
Medium ; due mixture of opposites.—The com-
mon law reduced the kingdom to its just state and
temperament. *Hale.*

(2.) TEMPERAMENT, among physicians, (§ 1.
def. 1.) is a certain disposition of the solids and
fluids of the human body, by which it may be
properly denominated strong, weak, lax, &c. In
every person there is perhaps a temperament pecu-
liar to himself, though the ancients only took
notice of four, which indeed seem to have a real
existence, and are capable of receiving an expla-
nation. The two that are most distinctly marked
are the sanguineous and melancholic, viz. the
temperaments of youth and age. 1. *Sanguineous*.
Here there is laxity of solids, discoverable by the
softness of hair and succulency ; large system of
arteries, redundancy of fluids, florid complexion ;
sensibility of the nervous power, especially to
pleasing objects ; irritability from the plethora ;
mobility and levity from lax solids. 2. *Melancho-
lic Habit*. Here greater rigidity of solids occurs,
discoverable by the hardness and crispature of the
hair ; small proportion of the fluids, hence dry-
ness and leanness ; small arteries, hence pale co-
lour ; venous plethora, hence turgescency of these,
and lividity ; sensibility, frequently exquisite ; mo-
derate irritability, with remarkable tenacity of
impressions ; steadiness in action and slowness of
motion, with great strength ; for excess of this
constitution in maniacs gives the most extraordi-
nary instance of human strength we know. This
temperament is most distinctly marked in old age,
and in males. 3. The *Choleric* temperament takes
place between youth and manhood. In this the
distribution of the fluids is more exactly balanced ;
there is less sensibility, and less obesity, with more
irritability, proceeding from greater tension, less
mobility and levity, and more steadiness in the
strength of the nervous power. As to the—4.
Phlegmatic, it cannot be distinguished by any
characters of age or sex. It agrees with the san-
guineous in laxity and succulency. It differs from
that temperament and the melancholic, by the
more exact distribution of the fluids. Again, it dif-
fers from the sanguineous, by having less sensibility,

irritability, mobility, and perhaps strength, though
sometimes indeed this last is found to be great.
These are the ancient temperaments. The tem-
peraments, indeed, are much more various ; and
very far from being easily marked and reduced to
their genera and species, from the great variety
which is observable in the constitutions of diffe-
rent men. But the late Dr Brown, among other
bold assertions, insisted, that there is no natural
difference of constitution but what is occasioned
by habit and accident.

(3.) TEMPERAMENT, in music, is defined by
Roussau to be an operation, which, by a slight
alteration in the intervals, causes the difference
between two contiguous sounds to disappear,
makes each of these sounds seem identical with
the other, which, without offending the ear, may
still preserve their respective intervals or distances
one from the other. By this operation the scale
is rendered more simple, and the number of sounds
which would otherwise be necessarily retrenched.
Had not the scale been thus modified, instead of 12
sounds alone, which are contained in the octave,
more than 60 would be indispensably required to
form what we properly call *modulation* in every
tone. See MUSIC, Part I, Chap. VII.

* TEMPERAMENTAL. *adj.* [from *tempera-
ment*.] Constitutional.—That *temperamental* digno-
tion, and conjecture of prevalent humours, that
may be collected from spots in our nails, we con-
cede. *Brown.*—Intellectual representations are
received with as unequal a fate upon a bare *tem-
peramental* relish or disgust. *Glanville.*

(1.) * TEMPERANCE. *n. f.* [*temperantia*, Lat.]
1. Moderation ; opposed to *gluttony* and *drunken-
ness*.—

By *temperance* taught
In what thou eat'st and drink'st. *Milton.*
—*Temperance*, tranquillity of mind. *Temple.*

Make *temperance* thy companion. *Dodley.*
2. Patience ; calmness ; sedateness ; moderation
of passion.—

He calm'd his wrath with goodly *temperance*.
Spenser.

Ask God for *temperance*. *Shak.*
(2.) TEMPERANCE is often used in a much more
general sense, as synonymous with moderation,
and is then applied indiscriminately to all the
passions.

* TEMPERATE. *adj.* [*temperatus*, Lat.] 1.
Not excessive ; moderate in degree of any qua-
lity.—Use a *temperate* heat, for they are ever *tem-
perate* heats that digest and mature ; wherein we
mean *temperate* according to the nature of the
subject ; for that may be *temperate* to fruits and
liquors which will not work at all upon metals.
Bacon.

His sleep
Was airy, light, from pure digestion bred,
And *temperate* vapours bland. *Milton.*
2. Moderate in meat and drink.—I advised him
to be *temperate* in eating and drinking. *Wise man.*
3. Free from ardent passion.—

Such *temperate* order in so fierce a course
Doth want example. *Shak.*

She is not hot, but *temperate* as the morn. *Shak.*
—From *temperate* inactivity we are unready to
put in execution the suggestions of reason. *Brown.*

* TEM.

* **TEMPERATELY.** *adv.* [from *temperate*.]

1. Moderately; not excessively.—
By winds that *temperately* blow,
The bark should pass secure and slow. *Addison*.
2. Calmly; without violence of passion.—
Temperately proceed to what you would
Thus violently redress. *Shak.*
3. Without gluttony or luxury.—God esteems it
a part of his service if we eat or drink; so it be
temperately. *Taylor*.

* **TEMPERATENESS.** *n. f.* [from *temperate*.]
1. Freedom from excesses; mediocrity. 2. Calm-
ness; coolness of mind.—

Langley's mild *temperateness*. *David.*
Did tend into a calmer quietness.

(1.) * **TEMPERATURE.** *n. f.* [*temperatura*, *temper*, Lat. *temperature*, Fr.] 1. Constitution of nature; degree of any qualities.—It is of no other *temperature* than Guinea. *Abbot*.—Birds that change countries at certain seasons, if they come earlier, shew the *temperature* of weather. *Bacon*.—There may be as much difference as to the *temperature* of the air, in one mile, as in ten degrees of latitude. *Brown*.—Memory depends upon the *temperature* of the brain. *Watts*. 2. Mediocrity; due balance of contraries.—

Here Autumn's *temperature*. *Davies*.
—If we suppose a constant *temperature* before the deluge, the case would be much altered. *Woodward*. 3. Moderation; freedom from predominant passion.—

In that proud port which her so goodly graceth,
Most goodly *temperature* you may descry. *Spens.*

(2.) **TEMPERATURE OF THE AIR, OR ATMOSPHERE.** See AIR; ATMOSPHERE, § 9; ELECTRICITY, *Index*; HEAT, § 16, and 17; and METEOROLOGY, *Sec.* V.

* **TEMPERED.** *adj.* [from *temper*.] Disposed with regard to the passions.—

When was my lord so much ungently *tempered*? *Shak.*

TEMPERING. *part. n. f.* in the mechanic arts, the preparing of steel and iron, so as to render them more compact, hard, and firm; or more soft and pliant, according to their respective occasions. See IRON, § 12; and STEEL.

(1.) * **TEMPEST.** *n. f.* [*tempeste*, Fr. *tempestas*, Lat.] 1. The utmost violence of the wind; the names by which the wind is called according to the gradual increase of its force seems to be, a breeze; a gale; a gulf; a storm; a tempest.—

I have seen *tempests*, when the seething winds
Have rivid the knotty oaks. *Shak.*
—Some have been driven by *tempest* to the south.
Abbot.—

What at first was called a gulf, the same
Hath now a storm's, anon a *tempest's* name.

We, caught in a fiery *tempest*, shall be hurl'd
Each on his rock transfix'd. *Milton*.

With clouds and storms
Around thee thrown, *tempest* o'er *tempest* roll'd,
Thou humblest nature with thy northern blast. *Thomson*.

2. Any tumult; commotion; perturbation.—

The *tempest* in my mind
Doth from my senses take all feeling else,
—Save what beats there. *Shak.*

(2.) **TEMPEST.** See HURRICANE, SAMIEL, SIMOON, WHIRLWIND, and WIND.

* **TO TEMPEST.** *v. a.* [from the noun.] To disturb as by a tempest.—

Part huge of bulk,
Wallowing unwildly, enormous in their gait,
Tempest the ocean. *Milton*.

(1.) **TEMPESTA.** See MOLYN.

(2.) **TEMPESTA**, Antony, an Italian painter, born at Florence, in 1555. He studied under Strada, and excelled in landscapes with figures. He also engraved some prints. He died in 1630.

* **TEMPEST-BEATEN.** *adj.* [*tempest* and *beat*.]
Shattered with storms.—

In the calm harbour of her gentle breast,
My *tempest-beaten* soul may safely rest. *Dryden*.

* **TEMPESTIVITY.** *n. f.* [*tempestivus*, Lat.] Seasonableness.—Since their disposition, the constitutions of countries admit not such *tempestivity* of harvest. *Brown's Vulgar Errors*.

* **TEMPEST-TOST.** *adj.* [*tempest* and *tost*.]
Driven about by storms.—

'Tis though his bark cannot be lost,
Ye' shall it be *tempest-tost*. *Shak.*

* **TEMPESTUOUS.** *adj.* [*tempestuosus*, French, from *tempest*.] Stormy; turbulent.—

Tempestuous fortune hath spent all her spight,
And thrilling sorrow thrown his utmost dart.

Which of them rising with the sun, or falling,
Should prove *tempestuous*. *Milton*.

Her looks grew black as a *tempestuous* wind,
Some raging thoughts are rowling in her mind. *Dryden*.

—Pompey, when dissuaded from embarking because the weather was *tempestuous*, replied, My voyage is necessary, my life is not so. *Collier*.

TEMPI, a town of Sardinia; 25 miles E. of Castello Arragonese.

(1.) * **TEMPLAR.** *n. f.* [from the *Temple*, an house near the Thames, anciently belonging to the knights *templars*, originally from the temple of Jerusalem.] A student in the law.—

Wits and *templars* ev'ry sentence raise,
And wonder with a foolish face of praise. *Pope*.

(2.) **TEMPLARS, TEMPLERS, or Knights of the Temple**, a religious order instituted at Jerusalem in the beginning of the 12th century, for the defence of the holy sepulchre, and the protection of Christian pilgrims. They were first called *The poor of the Holy City*, and afterwards assumed the appellation of *Templars*, because their house was near the temple. The order was founded by Baldwin II. king of Jerusalem, with the concurrence of the pope; and the principal articles of their rule were: That they should hear the holy office throughout every day; or that, when their military duties should prevent this, they should supply it by a certain number of pater nosters: that they should abstain from flesh 4 days in the week, and on Fridays from eggs and milk-meats: that each knight might have 3 horses, and one esquire: and that they should neither hunt nor fowl. After the ruin of the kingdom of Jerusalem about 1186, they spread themselves through Germany and other countries of Europe, to which they were invited by the liberality of the Christians. In 1218, this order acquired stability, by

by being confirmed in the council of Troyes, and subjected to a rule of discipline drawn up by St Bernard. In every nation they had a particular governor, called *master of the Temple*, or of the *militia of the Temple*. Their grand-master resided at Paris. The order flourished for some time, and acquired, by the valour of its knights, immense riches and an eminent degree of military renown: but as their prosperity increased, their vices multiplied, and their arrogance, luxury, and cruelty, rose at last to such a monstrous height, that their privileges were revoked, and their order suppressed with the most terrible circumstances of intamy and severity. Their accusers were two of their own body, and their chief prosecutor Philip the Fair of France, who addressed his complaints to Clement V. The pope, though at first unwilling to proceed against them, was under a necessity of complying with the king's desire; so that, in 1307, upon an appointed day, and for some afterwards, all the knights who were dispersed throughout Europe, were seized and imprisoned, and many of them, after trials for capital crimes, were convicted and put to death. In 1312, the whole order was suppressed by the council of Vienne. A part of the rich revenues they possessed was bestowed upon other orders, especially on the knights of St John, now of MALTA, and the rest confiscated to the respective treasuries of the sovereign princes in whose dominions their possessions lay.

(1.) TEMPLE, Sir William, an eminent statesman, born in London, in 1628. His family was ancient, and assumed the surname of *Temple* from the manor of Temple, in the hundred of Sparken Hall, Leicestershire. He was first sent to Penshurst, in Kent, under his uncle, Dr Hammond; but at ten he was removed to Bishop's Stortford, in Hertfordshire. In his 17th year, he went to Cambridge, where he was placed under the tuition of Dr CUDWORTH. After acquiring a competency of French and Spanish, he was sent abroad to finish his education. Having resided two years in France, Mr Temple made a tour through Holland, Flanders, and Germany. In 1654, he returned home, and married Miss Osborn, daughter of Sir Peter Osborn of Chicksand. He rejected all offers of employment under Cromwell; but at the Restoration, in 1660, being chosen a member of the Irish convention, while others were trying to make their court to the king, Mr Temple opposed the poll-bill with so much spirit, that his conduct soon attracted the attention of the public, and brought him into notice. In the next parliament, in 1661, he was elected with his father for the county of Carlow; and, in 1661, was chosen one of the commissioners from that parliament to the king. Soon after he went back to Ireland, where he met with a very favourable reception from the duke of Ormond. In 1665, he was sent with a secret commission to the Bp. of Munster, which he executed so much to the satisfaction of Charles II. that, on his return to Brussels, he appointed him resident there, and created him a baronet. In April 1666 he sent for his family; but, before their arrival, he had been again obliged to depart upon business to the prelate's court. Having finished his business at Mun-

ster, he returned to Brussels, where he passed a year. In spring 1667, a new war breaking out between France and Spain, which exposed Brussels to danger, Sir William sent his lady and family to England; but he himself remained there with his sister till Dec. 25, when he was ordered by the king to come over privily to London. Taking the Hague in his way, he paid a visit to De Witt, and proposed those overtures which produced the triple alliance. Soon after his arrival at the British court, he returned, on the 16th Jan. 1668, with the character of envoy extraordinary and plenipotentiary to Holland; where a conference being opened, he brought that treaty to a perfect conclusion in 5 days. The ratifications of this alliance being exchanged on the 15th Feb. he repaired to Brussels; and a treaty being set on foot between France and Spain at Aix-la-Chapelle, he set out for that place on the 24th April in quality of his majesty's ambassador extraordinary. He arrived on the 27th; and it was chiefly owing to his assistance that the Spaniards were brought to sign the articles of that peace on the 2d of May. He then returned to Brussels, with a view of remaining there in his former station of resident; but he received letters from the earl of Arlington, with the king's order to be his ambassador. Sir William upon this returned to England, and was received with every possible token of favour by the king. Setting out again for Holland, in his new character of ambassador, he arrived at the Hague in August 1668; where he enjoyed the confidence of that great minister De Witt, and lived in great intimacy with the prince of Orange, then only 18 years of age; but in Sept. 1669, he was hurried back to England by lord Arlington, and pressed to return to the Hague, and pave the way for a war with Holland. This, however, he refused to have any hand in; which so much provoked the lord treasurer Clifford, that he refused to pay him an arrear of 2000 l. due from his embassy. Disgusted with Arlington's behaviour, Sir William returned to his house at Sheen, near Richmond, in Surry. About the end of summer, however, 1673, the king wishing to put an end to the war, sent for Sir William, to negotiate a peace; but powers having been sent from Holland to the Marq. de Presno, the Spanish ambassador at London, Sir William was ordered to confer with him; and a treaty was concluded in 3 days, and the point carried respecting the *superiority of the British flag*, which had been so long contested. In June 1674, he was again sent ambassador to Holland to offer the king's mediation between France and the confederates, then at war, which was accepted soon after; Lord Berkeley, Sir William Temple, and Sir Leoline Jenkins being declared ambassadors and mediators; Nimeguen, which Sir William had proposed, was at length agreed upon by all parties to be the place of treaty. During his stay at the Hague, the prince of Orange, who was fond of the English language, constantly dined and supped once or twice a-week at his house; and by this familiarity he so much gained the prince's confidence and esteem, that he had a considerable hand in his marriage with the Princess Mary, daughter of James II. In July, 1676, he removed his family to Nimeguen, and in 1677, his

his son was sent over with letters, ordering him to return, and succeed Mr Coventry as secretary of state. In consequence of this order, Sir William came over to England in spring 1677; and though the affair of the secretaryship was dropped at his desire, he did not return to Nimeguen that year. About this time, the prince of Orange came over, and married the Princess Mary; and this gave occasion for a new coolness between lord Arlington and Sir William, as he and the lord treasurer Osborn, who was related to Sir William's lady, were only privy to that affair. After the prince and princess were gone to Holland, as the court seemed inclined to favour France, the king wished to engage Sir William in some negotiations with that crown; but he was so ill satisfied with this proposal, that he offered to give up all pretensions to the office of secretary; and desiring the lord treasurer to acquaint his majesty with his intentions, retired to Sheen, in hopes of being taken at his word. Upon a discovery, however, of the French designs not to evacuate the Spanish towns agreed by the treaty to be delivered up, the king commanded him to go upon a 3d embassy to the states; with whom he concluded a treaty; by which England engaged, in case France refused to evacuate the towns in 40 days, to declare war immediately against that nation; but before half that time was elapsed, one Du Crois was sent from the English court to Holland upon a business which damped all the good humour excited by the treaty there, and which produced such sudden changes here, as gave Sir William a distaste for all public employments. In 1679 he went back to Nimeguen, where the French delayed to sign the treaty till the last hour; but having concluded it, he returned to the Hague, whence he was soon after sent for to enter upon the secretary's office, which Mr Coventry at length resolved to resign. He accordingly came over, and went to court, with a full intention of assuming his office; but he started a difficulty, that he had not a seat in the house of commons; and notwithstanding the king's repeated intreaties, refused to accept, but advised him to choose a council in whom he could confide, and upon whose abilities he could depend. This advice was followed, and the choice of the persons being concerted between the king and Sir William, the old council was dissolved four days after, and the new one established, of which Sir William was a member. In 1680 the councils began again to be changed, on the king's illness, at the end of summer, and the duke of York returned privately to court. In this juncture Sir William, endeavouring to restore to the king's favour some persons to whom he had taken a dislike, he met with such treatment as gave him a fresh distaste to the court; so that he resided principally at Sheen. Soon after this the king sent for him again; and having proposed that he should go as ambassador into Spain, Sir William consented; but when his equipage was almost ready, and part of the money paid down for it, the king proposed to defer his journey till the end of the session of parliament, in which he was chosen a member for the university of Cambridge. In this session the spirit of party ran so high that

it was impossible to bring the house to any temper. The duke was sent into Scotland; but nothing would satisfy them, but a bill of exclusion; which Sir William strenuously opposed. Not long after this period, the parliament being dissolved by the king, without the advice of his privy council, and contrary to his promise, Sir William made a bold speech against it; for which he was very ill used by some of those who had been most earnest in promoting the last change in the ministry. Upon this he grew quite tired of public business, declined the offer he had of again serving for the university in the next parliament, that soon after met at Oxford; and seeing the king resolved to govern without his parliament, and to supply his treasury through another channel, he retired to Sheen, resolving never more to meddle with public affairs. From that time Sir William lived at this place, till having purchased a seat, called *Moor-Park*, near Farnham in Surry, which he conceived a great fondness for, he resolved to spend the remainder of his life in this agreeable retreat. At the time of the happy revolution, in 1688, Moor-Park becoming unsafe, as it lay in the way of both armies, he went back to the house at Sheen, which he had given up to his son. When the Prince reached Windsor, he went thither to wait upon his highness, and carried his son along with him. The prince pressed him to enter into his service, and to be secretary of state; but his age and infirmities confirming him in the resolution he had made not to meddle any more with public affairs, he was satisfied that his son alone should enjoy his majesty's favour. Mr John Temple was appointed secretary at war; but he had hardly been a week in that office, when he drowned himself. In 1694 Sir William lost his lady. After this he lived 4 years, very much afflicted with the gout; and died in Jan. 1698. His body was interred in Westminster Abbey, and a marble monument erected in 1722. Sir William's principal works are, 1. *Memoirs from 1672 to 1692.* 2. *Remarks upon the State of the United Provinces.* 3. *An Introduction to the History of England.* 4. *Letters written during his last embassies;* and 5. *Miscellanies, which contain many curious pieces.* He was an accomplished gentleman, a sound politician, a patriot, and a scholar.

(2.) TEMPLE, in geography, a town of France, in the dep. of Lot and Garonne; $7\frac{1}{2}$ miles W. of Villeneuve d'Agen, and 9 E. of Tonniens.

(3.) * TEMPLE, *n. f.* [*temple*, Fr. *templum*, Lat.]

1. A place appropriated to acts of religion.—

The honour'd gods

Throng our large temples with the shews of peace. *Shak.*

—Here we have no temple but the wood, no assembly but horn beasts. *Shak.*

Most sacrilegious murder hath broke open

The lord's anointed temple, and stole thence The life of th' building. *Shak.*

2. [*Tempera*, Latin.] The upper part of the sides of the head where the pulse is felt.—

Her sunny locks

Hang on her temples like a golden fleece. *Shak.*

—We may apply intercipients of malice upon the temples; frontals also may be applied. *Wigm.*

—To procure sleep, he uses the scratching of the temples

temples and ears, that even mollifies wild beasts.
Arbutus.—

The weapon entered close above his ear,
 Cold through his temples glides the whizzing spear.

Pope.

(4.) A TEMPLE (§ 3, *def. 1.*) is a public building erected in honour of some deity, either true or false; and wherein the people meet to pay religious worship. The word is formed from the Latin *templum*, the Greek *temenos*, signifying the same thing; from *temo*, *I separate*, as a temple is a place separated from common uses. Others with more probability derive it from the old Latin word *templare*, to contemplate. It is certain the ancient augurs gave the name *templa* to those parts of the heavens which were marked out for the observation of the flight of birds. Their formula was, *Templa usque sunt*. Temples were originally all open, and hence received their name. See *Phil. Trans.* N^o 471. *sect. 5.* where we have an account of an ancient temple in Ireland of the same sort as STONEHENGE. *Templum*, among the old Romans, signified a place consecrated by the augurs, whether inclosed or open, in the city or in the fields. Clemens Alexandrinus and Eusebius refer the origin of temples to the sepulchres built for the dead. This notion has been lately illustrated and confirmed by Mr Farmer in his *Treatise on the Worship of Human Spirits*, p. 373, &c. Herodotus and Strabo say, the EGYPTIANS were the first who built temples to the gods. The first erected in GREECE is ascribed to Deucalion, by Apollonius, *Argonaut.* lib. iii. The DAVIDS and others of the ancients performed their sacrifices in all places indifferently, from a persuasion that the whole world is the temple of God, and that he required no other. This was the doctrine of the magi, followed by the Persians, the Scythians, the Numidians, and many other nations mentioned by Herodotus, lib. i. Strabo, lib. xv. and Cicero in *Verrem*. 2. The ROMANS had several kinds of temples; whereof those built by the kings, &c. consecrated by the augurs, and wherein the exercise of religion was regularly performed, were called by way of eminence, *templa*. Those that were not consecrated, were called *ades*. The little temples, that were covered or roofed, they called *edicule*. Those open *facella*. Some other edifices, consecrated to particular mysteries, they called *vana* and *delubra*. The most celebrated temples among the Romans were the CAPITOL and PANTHEON. They had also the temple of SATURN, which served for the public treasury; and the temple of JANUS. The INDIAN TEMPLES, or PAGODAS, are sometimes of prodigious a size. They are commonly erected near the banks of the Ganges, Kistna, or other sacred rivers, for the benefit of ablution in the purifying stream. Where no river flows near the foot of the pagoda, there is invariably in the front of it a large tank or reservoir of water. These are, for the most part, of a quadrangular form, are lined with freestone or marble, have steps regularly descending from the margin to the bottom, and Mr Crauford observed many between 3 and 400 feet in breadth. At the entrance of all the more considerable pagodas there is a portico, supported by rows of lofty co-

lums, and ascended by a handsome flight of stone steps; sometimes, as in the instance of Tripetti, to the number of more than a hundred. Under this portico, and in the courts that generally inclose the whole building, an innumerable multitude assemble at the rising of the sun; and, having bathed in the stream below, and, in conformity to an immemorial custom over all the East, having left their sandals on the border of the tank, impatiently await the unfolding of the gates by the ministering brahmin. The gate of the pagoda universally fronts the east, to admit the rays of the solar orb; and, opening, presents to the view an edifice partitioned out, according to Mr Thevenot in his account of Chittanagar, in the manner of the ancient cave temples of Elora, having a central nave or body; a gallery ranging on each side; and, at the farther end, a sanctuary, or chapel of the deity adored, surrounded by a stone balustrade to keep off the populace. Those who wish to peruse a more particular account of the Indian temples may consult *Maurice's Indian Antiquities*. See also PAGODA and SERINGHAM.

(5.) THE TEMPLE AT JERUSALEM was similar in its plan to the TABERNACLE. The first temple was begun by Solomon about A. M. 2992, and A. A. C. 1012, and finished in 8 years. It consisted of the holy of holies, the sanctuary, and a portico. The holy of holies was a square room of 20 cubits; the sanctuary, or holy place, was 40 cubits long, and 20 broad, consequently the length of both these together was 60 cubits. The portico, which stood before the sanctuary, was 20 cubits long, and 10 broad. The whole length of the temple, computing the cubit at 22 inches, did not exceed 110 feet in length, and 36 feet 8 inches in breadth. In the portico stood the two brazen pillars called *Jachin* and *Boaz*, which appear to have been 40 cubits high, and about 4 in diameter. The court about the tabernacle was 100 cubits long, and 50 broad; and as Solomon made every part of the temple about twice as large as the corresponding part in the tabernacle, we may conclude, that the court around the temple was 200 cubits long, and 100 broad. According to this description, the temple of Solomon was by no means so large as it is commonly represented. Still, however, it was very magnificent in size, and splendid in ornament. It was plundered of its treasures in the reign of Rehoboam, and repaired by Joash; it was again spoiled in the time of Ahaz and of Hezekiah; and after being restored by Josiah, was demolished by Nebuchadnezzar in A. M. 3416, after it had stood 476 years according to Josephus, and according to Usher, 428 years. The second temple was built by the Jews, after their return from the Babylonish captivity, under the direction of ZERUBABEL, their governor, and of Joshua the high priest, with the encouragement of Cyrus the Great to whom Judea was become a tributary kingdom. This temple was destitute of five remarkable appendages, which were the chief glory of the first temple; viz. the ark and mercy-seat, the SHECHINAH, the holy fire on the altar, which had been first kindled from heaven, the URIM and THUMMIM, and the spirit of prophecy. This temple was plundered and profaned by Antiochus Epiphanes,

D d

(See

(See *Jews*, § 5. 6.) but afterwards purified by Judas Maccabæus, who restored the divine worship; and, after having stood 500 years, rebuilt by Herod, with a magnificence approaching to that of Solomon's. Tacitus calls it *immense opulentie templum*; and Josephus says, it was the most astonishing structure he had ever seen, as well on account of its architecture as its magnitude, and the richness and magnificence of its various parts and sacred appurtenances. This temple, which Herod began to build about 16 years before the birth of Christ, and so far completed in 93, as to be fit for divine service, was at length destroyed by the Romans on the same month and day of the month on which Solomon's temple was destroyed by the Babylonians.

(6.) *TEMPLES*, in architecture. The ancient temples were distinguished, with regard to their construction, into various kinds; as *Templum in antis*, or *Aedes in antis*. These, according to Vitruvius, were the most simple of all temples, having only angular pilasters, called *ante* or *parastate*, at the corners, and two Tuscan columns on each side of the doors. *Temple*, *TETRASTYLE*, or simply *tetrastyle*, was a temple that had 4 columns in front, and as many behind. Such was the temple of *Fortuna Virilis* at Rome. *Temple*, *PROSTYLE*, that which had only columns in its front or fore side; as that of *Ceres* at Eleusis in Greece. *Temple*, *amphiprostyle*, or *double prostyle*, that which had columns both before and behind, and which was also tetrastyle. *Temple*, *periptere*, that which had 4 rows of insulated columns around, and was hexastyle, *i. e.* had six columns in front; as the temple of Honour at Rome. *Temple*, *diptere*, that which had two wings and two rows of columns around, and was also octostyle, or had 8 columns in front; as that of *DIANA* at Ephesus.

(7.) *TEMPLES*, denote two inns of court in London, thus called, because anciently the dwelling-house of the *KNIGHTS-TEMPLARS*. At the suppression of that order, they were purchased by the professors of the common law, and converted into *hospitia* or inns. They are called the *inner* and *middle temple*, in relation to Essex-house; which was also a part of the house of the templars, and called the *outer temple*, because situated without Temple-Bar. In the middle temple, during the time of the Templars, the king's treasure was kept; as was also that of the kings of France in the house of the Templars at Paris. The chief officer was the master of the temple, who was summoned to parliament in 47 Hen. III.; and from him the chief minister of the temple church is still called *master of the temple*.

(8.) *TEMPLES*, in anatomy, a double part of the head, reaching from the forehead and eyes to the two ears. The temples are chiefly formed of two bones called *os temporis*. These parts, according to physicians, were called *tempora*, from their showing the age or *time* of a man by the colour of the hair, which turns white in this part before any other; which Homer seems to have been aware of, by his calling men *poliocrataphi*, *i. e.* grey templed.

(1.) *TEMPLE BAY*, a bay on the E. coast of Labrador. Lon. 55. 50. W. Lat. 52. 25. N.

(2.) *TEMPLE BAY*, a British settlement on the

Labrador coast, on a part of the above bay, opposite to Belle-Isle. It was destroyed by the French in 1796.

TEMPLEBURG, a town of Germany, in Hinder Pomerania; 19 miles SW. of New Stettin, and 48 ENE. of Stargard.

(1.) *TEMPLEMAN*, Peter, M. D. the son of an eminent attorney at Dorchester, by Mary Haynes, was born 17th March, 1711, and was educated at the Charter-house, whence he proceeded to Trinity-college, Cambridge, where he took his degree of B. A. with great reputation, and studied physic. In 1736, he went to Leyden, where he attended the lectures of Boerhaave, and the other professors of medicine, for two years. In 1739, he returned to London, with a view to enter on the practice of his profession, supported by a handsome allowance from his father, but did not succeed. In 1751 he published the first volume of *Curious Remarks and Observations in Physic, Anatomy, Chirurgery, Chemistry, Botany, and Medicine*; extracted from the History and Memoirs of the Royal Academy of Sciences at Paris; and the 2d volume in 1754. If he had met with proper encouragement, he intended to have extended the work to 12 or 13 volumes. His translation of *Norden's Travels* appeared in 1757, when he was also editor of *Select Cases and Consultations in Physic*, by Dr Woodward, 8vo. On the establishment of the British Museum, in 1753, he was appointed keeper of the reading room, which he resigned on being chosen, in 1760, secretary to the then newly instituted Society of Arts, Manufactures, and Commerce. In 1762, he was elected a corresponding member of the Royal Academy of Sciences of Paris, and of the Oeconomical Society at Berne. Very early in life he was afflicted with an asthma, which continued to harass him till his death, on 23d Sept. 1769. He was esteemed a man of great learning, and a humane, generous, and polite member of society.

(2.) *TEMPLEMAN*, Thomas, was a schoolmaster in St Edmundsbury, Suffolk. He published *Engraved Tables*, containing calculations of the number of people and of square feet on the surface of the several kingdoms in the world. *Watkins.*

TEMPLE-MARTIN, a town of Ireland, in the county of Kilkenny, Leinster.

TEMPLE-MICHAEL, a town of Ireland, in the county of Waterford, Munster.

TEMPLEMORE, a town of Ireland, in the county of Tipperary, and province of Munster.

TEMPLENOR, a town of Ireland, in the county of Kerry, and province of Munster.

TEMPLE PATRICK, two towns of Ireland, in the counties of Antrim and Down, Ulster.

* *TEMPLET. n. f.* A piece of timber in a building.—When you lay any timber on brick-work, as lintels over windows, or *templets* under girders, lay them in loom. *Moxon.*

TEMPLE-THIRTY, a town of Ireland, in the county of Waterford, Munster.

TEMPLE-TOWN, a town of Ireland, in the county of Wicklow, and province of Leinster.

TEMPLEUVE, a town of France, in the dep. of the North, 7½ miles SSE. of Lille, and 9 SW. of Tournay.

TEMPLIN, a town of Brandenburg, between the

the Bodenfee and Dolgenfee. It was burnt in 1735, but rebuilt to very great advantage, with broad streets, elegant houses, &c. It has a great trade in timber, being floated on a canal, recently erected; 15 miles SW. of Prenzlau, and 34 N. of Berlin.

TEMPO, a town of Ireland, in the county of Fermanagh, and province of Ulster.

(1.) * **TEMPORAL**. *adj.* [*temporal*, Fr. *temporalis*, low Latin.] 1. Measured by time; not eternal.—As there they sustain *temporal* life, so here they would learn to make provision for *eternal*. *Hooker*. 2. Secular; not ecclesiastical.—

This sceptre shews the force of *temporal* power,

The attribute to awe and majesty,

Wherein doth sit the dread of kings. *Shak.*

All the *temporal* lands, which men devout

By testament have given to the church,

Would they strip from us. *Shak.*

—All *temporal* power hath been wrested from the clergy, and much of their ecclesiastical. *Swift*.

3. Not spiritual.—There is scarce any of those decisions but gives good light, by way of authority or reason, to some questions that arise also between *temporal* dignities, especially to cases wherein some of our subordinate *temporal* titles have part in the controversy. *Selden*.—Call not every *temporal* end a desiring of the intention, but only when it contradicts the ends of God, or when it is principally intended: for sometimes a *temporal* end is part of our duty; and such are all the actions of our calling. *Taylor*.—Prayer is the instrument of fetching down all good things to us, whether spiritual or *temporal*. *Duty of Man*.—Our petitions to God, with regard to *temporals*, must be that medium of convenience proportioned to the several conditions of life. *Rogers*. 4. [*Temporal*, Fr.] Placed at the temples, or upper part of the sides of the head.—Copious bleedings, by opening the *temporal* arteries, are the most effectual remedies for a phrensy. *Arbutnot*.

(2.) **TEMPORAL ARTERIES**, the arteries of the temples. See **ANATOMY**, **Index**, and **TEMPLES**. § 9.

* **TEMPORALITY**. **TEMPORALS**. *n. s.* [*temporalité*, Fr. from *temporal*.] Secular possessions; not ecclesiastical rights.—Such revenues, lands, and tithes, as bishops have had annexed to their sees by the kings and others from time to time, as they are barons and lords of the parliament. *Cowel*.—The residue of these ordinary finances is casual, as the *temporalities* of vacant bishoprics, the profits that grow by the tenures of lands. *Bacon*.—The king yielded up the point, reserving the ceremony of homage from the bishops, in respect of the *temporalities*, to himself. *Ayliffe*.

* **TEMPORALLY**. *adv.* [from *temporal*.] With respect to this life.—Sinners who are in such a *temporally* happy condition, owe it not to their sins, but wholly to their luck. *South*.

* **TEMPORALS**. See **TEMPORALITY**.

(1.) * **TEMPORALTY**. *n. s.* [from *temporal*.] 1. The laity; secular people.—The pope sucked out inestimable sums of money, to the intolerable grievance of clergy and *temporality*. *Abbot*. 2. Secular possession.

(2.) **TEMPORALTY**. (§ 1. *Def* 2.) Those of BISHOPS are the revenues, lands, tenements, and lay-fees, belonging to bishops, as they are barons and lords of parliament. The custody of the *temporalities* of bishops forms a branch of the king's ordinary revenues. (See **REVENUES**).—These, upon the vacancy of the bishopric, are immediately the right of the king, as a consequence of his prerogative in church matters; whereby he is considered as the founder of all archbishoprics and bishoprics, to whom, during the vacancy, they revert. This revenue of the king, which was formerly very considerable, is now by a customary indulgence almost reduced to nothing: for, at present, as soon as the new bishop is consecrated and confirmed, he usually receives the restitution of his *temporalities* quite entire and untouched from the king; and then, and not sooner, he has a fee-simple in his bishopric, and may maintain an action for the profits.

* **TEMPORANEOUS**. *adj.* [*temporis*, Latin.] **Temporary**. *Dis*.

* **TEMPORARINESS**. *n. s.* [from *temporary*.] The state of being temporary; not perpetuity.

* **TEMPORARY**. *adj.* [*tempus*, Latin.] Lasting only for a limited time.—These *temporary* truces were soon made and soon broken; he desired a stricter amity. *Bacon*.—If the Lord's immediate speaking, uttering, and writing, doth conclude by a necessary inference, that all precepts uttered and written in this manner are simply and perpetually moral; then, on the contrary, all precepts wanting this are merely *temporary*. *White*.—The republic threatened with danger, appointed a *temporary* dictator, who, when the danger was over, retired again into the community. *Addison*.

* **To TEMPORIZE**. *v. n.* [*temporiser*, Fr. *tempus*, Lat.] 1. To delay; to procrastinate.—If Cupid hath not spent all his quiver in Venice, thou wilt quake for this shortly.—

—I look for an earthquake too then.

—Well, you will *temporize* with the hours. *Shak.*

—The earl of Lincoln, deceived of the country's concurrence, in which case he would have *temporized*, resolved to give the king battle. *Bacon*. 2. To comply with the times or occasions.—

They might their grievance inwardly complain,

But outwardly they needs must *temporize*. *Dan.*

3. To comply. This is improper.—

The dauphin is too wilful opposite,

And will not *temporize* with my entreaties:

He flatly says, he'll not lay down his arms. *Shak.*

* **TEMPORIZER**. *n. s.* [*temporiseur*, Fr. from *temporize*.] One that complies with times or occasions; a trimmer.—

I pronounce thee a hovering *temporiser*, that canst with thine eyes at once see good and evil, Inclining to them both. *Shak.*

TEMPSIHE, or *Tamise*, a town of the French empire, in the department of the Two Netbes, and ci-devant province of Austrian Flanders; seated on the Scheldt; 10 miles SW. of Antwerp.

* **To TEMPT**. *v. a.* [*tento*, Lat. *tenter*, Fr.] 1. To solicit to ill; to incite by presenting some pleasure or advantage to the mind; to entice.—

'Tis not the king that lends you to the Tower:

My lady Gray *tempts* him to this haish extremity. *Shak.*

You ever gentle gods! take my breath from me;

Let not my worser spirit *tempt* me again

To die before you please. *Shak.*

—Come together, that Satan *tempt* you not. *1 Cor.*

iii. 5.—He that hath not wholly subdued himself, is quickly *tempted* and overcome in small things. *Taylor.*

Fix'd on the fruit she gaz'd; which to behold Might *tempt* alone. *Milton.*

—The devil can but *tempt* and deceive; and if he cannot destroy so, his power is at an end. *South.*

● O wretched maid!

Whose roving fancy would relieve the same

With him, whonext should *tempt* her easy fame.

Prior.

2. To provoke.—

I'm much too vent'rous

In *tempting* of your patience. *Shak.*

Withhold

Your talons from the wretched and the bold;

Tempt not the brave and needy to despair;

For, though your violence should leave 'em bare

Of gold and silver, swords and darts remain. *Dryden.*

3. It is sometimes used without any notion of evil; *to solicit*; to draw.—

Still his strength conceal'd

Which *tempted* our attempt, and wrought our

fall. *Milton.*

The rowing crew,

To *tempt* a fare, clothe all their tilts in blue. *Gay.*

4. To try; to attempt; to venture on. I know not whether it was not originally *'attempt*, which was viciously written to *tempt*, by an elision of the wrong syllable.—

This from the vulgar branches must be torn,

And to fair Proserpine the present born,

Ere leave be giv'n to *tempt* the nether skies. *Dryden.*

* **TEMPTABLE.** *adj.* [from *tempt*.] Liable to temptation; obnoxious to bad influence. Not elegant, nor used.—If the parliament were as *temptable* as any other assembly, the managers would fail for want of tools to work with. *Swift.*

* **TEMPTATION.** *n. s.* [tentation, Fr. from *tempt*.] 1. The act of tempting; solicitation to ill; enticement.—

All temptation to transgress repel. *Milton.*

2. The state of being tempted.—When by human weakness, and the arts of the tempter, you are led into *temptations*, prayer is the thread to bring you out of this labyrinth. *Duppa.* 3. That which is offered to the mind as a motive to ill.—Set a deep glass of Rhenish wine on the contrary casket; for if the devil be within, and that *temptation* without, he will chuse it. *Shak.*

Dare to be great without a guilty crown;

View it, and lay the bright *temptation* down. *Dryden.*

* **TEMPTER.** *n. s.* [from *tempt*.] 1. One who solicits to ill; an enticer.—

These women are shrewd *tempters*. *Shak.*

Is this her fault or mine?

The *tempter* or the tempted, who sins most? *Shak.*

—Those who are bent to do wickedly, will never

want *tempters* to urge them on. *Tillotson.*

My work is done:

She's now the *tempter* to ensnare his heart. *Dryden.*

2. The infernal solicitor to evil.—The experience of our own frailties, and the watchfulness of the

tempter, discourage us. *Hammond.*

Foretold what would come to pass,

When first this *tempter* cross'd the gulf from hell. *Milton.*

To this high mountain's top the *tempter*

brought

Our Saviour. *Milton.*

TEMROCK, a sea port town of Asia, in Cuban, on the S. coast of the sea of Asoph; 30 miles E. of the Straits of Caffa.

* **TEMSE BREAD.** *n. s.* [temsen, Dutch;

* **TEMSED BREAD.** *n. s.* [temiser, Fr. tamesare, Italian, to sift; tems, Dutch; tamis, French; tamiso, Italian, a sieve] Bread made of flour better

lifted than common.

TEMSENA, a province of Morocco, on the coast of the Atlantic, S. of Saltee. It is rich and fertile, abounding in corn, fruits and provisions.

The forests abound with wood, particularly a very hard and incorruptible kind called *bazar*.

* **TEMULENCY.** *n. s.* [temulentia, Lat.] Inebriation; intoxication by liquor.

* **TEMULENT.** *adj.* [temulentus, Lat.] Inebriated; intoxicated as with strong liquors.

TEMUS, a river of Sardinia, which runs into the Sea, 4 miles NE. of Castello Arragonefe.

* **TEN.** *adj.* [tyn, Saxon; tien, Dutch.] 1. The decimal number; twice five; the number by which we multiply numbers into new denominations.—

Thou shalt have more

Than two *tens* to a score. *Shak.*

—*Ten* hath been extolled as containing even, odd, long, and plain, quadrate and cubical numbers; and Aristotle observed, that Barbarians, as well as Greeks, used a numeration unto *ten*. *Brown.*

With twice *ten* sail I cross'd the Phrygian seas; Scarce seven within your harbour meet. *Dryden.*

From the soft lyre,

Sweet flute, and *ten*-string'd instrument, require Sounds of delight. *Prior.*

2. *Ten* is a proverbial number.—

There's a proud modesty in merit,

Averse from begging, and resolv'd to pay

Ten times the gift it asks. *Dryden.*

—Although English is too little cultivated, yet the faults are nine in *ten* owing to affectation, *Swift.*

* **TENABLE.** *adj.* [tenable, French.] Such as may be maintained against opposition; such as may be held against attacks.—The town was strong of itself, and wanted no industry to fortify and make it *tenable*. *Bacon.*—Sir William Ogle seized upon the castle, and put it into a *tenable* condition. *Clarendon.*—Infidelity has been driven out of all its outworks: the Atheist has not found his post *tenable*, and is therefore retired into Despair. *Addison.*

*TENACIOUS. *adj.* [*tenax*, Lat.] 1. Grasping hard; inclined to hold fast; not willing to let go; with of before the thing held.—A resolute *tenacious* adherence to well-chosen principles, makes the face of a governor shine in the eyes of those that see his actions. *South.*

Gripping, and still *tenacious* of thy hold,
Would'st thou the Grecian chiefs, though largely
foul'd,

Should give the prizes they had gain'd. *Dryd.*
—You reign absolute over the hearts of a stubborn and freeborn people, *tenacious* to madness of their liberty. *Dryden.*

True love's a miser; so *tenacious* grown,
He weighs to the last grain of what's his own.

Dryden.
—Men are *tenacious* of the opinion that first pos-
sels them. *Locke.*—He is *tenacious* of his own prop-
erty, and ready to invade that of others. *Arbutnot.*

2. Retentive.—The memory in some is very *tenacious*; but yet there seems to be a con-
stant decay of all our ideas, even of those which
are struck deepest, and in minds the most reten-
tive. *Locke.* 3. [*Tenace*, French.] Having parts
disposed to adhere to each other; cohesive; vis-
cous; glutinous.—Three equal round vessels filled,
the one with water, the other with oil, the
third with molten pitch, and the liquors stirred
alike to give them a vortical motion; the pitch
by its *tenacity* will lose its motion quickly, the oil
being less *tenacious* will keep it longer, and the
water being less *tenacious* will keep it longest, but
yet will lose it in a short time. *Newton.*

4. Niggardly; close-fisted; meanly parsimonious. *Ainsf.*

*TENACIOUSLY. *adv.* [from *tenacious*.] With
disposition to hold fast.—Some things our juve-
nile reasons *tenaciously* adhere to, which yet our
maturer judgments disallow of. *Glanville.*

*TENACIOUSNESS. *n. f.* [from *tenacious*.]
Unwillingness to quit, resign, or let go.

(1.) TENACITY. *n. f.* [*tenacitas*, Fr. *tenacitas*,
tenax, Latin.] Viscosity; glutinousness; adhe-
sion of one part to another. If many contiguous
vortices of molten pitch were each of them as
large as those which some suppose to revolve
about the sun and fixed stars, yet these and all
their parts would, by their *tenacity* and stiffness,
communicate their motion to one another till
they all rested among themselves. *Newton.*—Sub-
stances, whose *tenacity* exceeds the powers of dis-
section, will neither pass nor be converted into
aliment. *Arbutnot.*

(2.) TENACITY, in natural philosophy, is that
quality of bodies by which they sustain a consider-
able pressure or force of any kind without break-
ing. It is the quality opposite to fragility or brit-
tleness. See *STRENGTH*, § 2, 3.

TENACULUM, in surgery, an instrument used
in amputation, for pulling out bleeding vessels
that are to be tied by ligatures. See *SURGERY*,
Index.

TENAILLES, and } *n. f.* See *FORTIFICATION*,
TENAILLIONS, } *Part I. Sect. VIII.*

*TENANCY. *n. f.* [*tenanche*, old French; *te-
nencia*, law Latin, from *tenant*.] Temporary pos-
session of what belongs to another.—This duke
becomes, seized of favour by descent, though the

condition of that estate be commonly no more
than a *tenancy* at will. *Wotton.*

(1.) *TENANT. *n. f.* [*tenant*, Fr.] 1. One
that holds of another; one that on certain condi-
tions has temporary possession and use of that
which is in reality the property of another; cor-
relative to *landlord*.—

I have been your *tenant*,
And your father's *tenant*, these fourscore years.

Shak.
—The English being only *tenants* at will of the
natives for such convenience of fishing. *Heylyn.*

Such is the mould that the blest *tenant* feeds
On precious fruits, and pays his rent in weeds.

Waller.
—Jupiter had a farm long for want of a *tenant*.
L'Estrange.

His cheerful *tenants* bless their yearly toil,
Yet to their lord owe more than to the soil.

Pope.
—The *tenants* of a manor fall into the sentiments
of their lord. *Watts.*—The father is a tyrant over
slaves and beggars, whom he calls his *tenants*.

Swift. 2. One who resides in any place.—
O fields, O woods, oh when shall I be made
The happy *tenant* of your shade! *Cowley.*

The bear, rough *tenant* of these shades.

Thomson.
(2.) A TENANT, in law, is one who holds lands
or tenements of some lord or landlord, by rent,
fealty, &c. See *TENURE*.

*To TENANT. *v. a.* [from the noun.] To hold
on certain conditions.—Sir Roger's estate is *ten-
anted* by persons who have served him or his an-
cestors. *Addison.*

*TENANTABLE. *adj.* [from *tenant*.] Such
as may be held by a tenant.—The ruins that time,
sickness, or melancholy, shall bring, must be
made up at your cost; for that thing a husband is
but tenant for life in what he holds, and is bound
to leave the place *tenantable* to the next that shall
take it. *Suckling.*—That the soul may not be too
much incommoded in her house of clay, such
necessaries are secured to the body as may keep
it in *tenantable* repair. *Decay of Piety.*

TENANTING, [from the verb.] *To Tenant*,
part. n. f. in carpentry, the forming a strong and
firm joint by the fixture of one piece of wood in
another, so firmly, that like a tenant in law in his
tenure, it is quite immovable. See *SHIPBUILD-
ING*, *Part II.* and *TENON*.

*TENANTLESS. *adj.* [from *tenant*.] Unoc-
cupied; unpossessed.—

O thou, that dost inhabit in my breast,
Leave not the mansion so long *tenantless*;
Lest growing ruinous the building fall. *Shak.*

TENANTRY, *n. f.* [from *tenant*.] the class,
rank, or order of tenants, upon the various estates
and landed property in a country or kingdom,
who constitute a most useful, industrious, and ne-
cessary order in society.

(1.) *TENANT-SAW. *n. f.* [corrupted, I
suppose, from *tenon-saw*.] See *TENON*.

(2.) TENANT-SAW seems rather to be derived
from *TENANT*, as above remarked under *TEN-
ANTING*, and it is a principal instrument used in
that branch of carpentry.

TENAR, or **THENAR**, in anatomy, the muscle, which draws the thumb from the fingers, called, also *Abductor brevis pollicis* and *Abductor pollicis manus*. See **ABDUCTOR**, N° 9; and **ANATOMY**, § 274, N° 1.

TENARUS. See **TENARUS**.

TENASSE. See **TENASSE**.

TENASSERIM, a town, a province, an island, and a river of Siam. See **SIAM**, § 4; and **TENASSERIM**.

TENAW-WIT. See **LOXIA**, N° 2.

TENBIGH. See **TENBY**.

TENBURY, or **TEMBURY**, a town of England in Worcestershire, seated on the Teme near Shropshire, with a market on Tuesday, 19 miles NW. of Worcester and 130 NW. of London. Lon. 2. 13. W. Lat. 52. 16. N.

TENBY, or **TENBIGH**, a sea-port town of S. Wales in Pembrokeshire, with markets on Wed. and Sat. It had a castle, which was demolished during the civil wars, in the 17th century, since which the town has fallen to decay. It is 20 miles E. of Pembroke, and 233 W. of London. Lon. 5. 5. W. Lat. 51. 42. N.

TENCE, a town of France, in the dep. of the Upper Loire, 12 miles SE. of Montfrol, and 18 NE. of Puy.

(1.) * **TENCH**. *n. f.* (since, Saxon; *tenca*, Lat.) A pond-fish.—Having stored a very great pond with carps, *tench*, and other pond-fish, and only put in two small pikes, this pair of tyrants in seven years devoured the whole. *Hale*.

(2.) **TENCH**, in ichthyology. See **CYPRINUS**, N° 10.

TENCH'S ISLAND, an island in the S. Pacific Ocean, discovered in 1790, by Capt. Ball. It is about 2 miles in circumference; is populous, and well cultivated, producing trees in great plenty, particularly the cocoa nut tree. The people are stout and healthy, but go quite naked, and are of a copper colour, their hair resembling that of the people of New Holland. They wear their beards so long as to reach down to the navel; and no small art appeared to have been used in dressing the hair of their beards, as it was formed into ringlets, and nicely combed, curled, and oiled. Some of the men had a bone suspended to a string, which was fastened round their necks. The largest of their canoes appeared to be about 28 feet long, and to have been formed out of one large tree. This island lies in Lon. 151. 31. W. of London. Lat. 1. 39. S.

TENCHTHERI, an ancient nation of Germany, who often changed the place of their residence. *Tacitus*, Ann. xiii. c. 56. H. iv. c. 21.

TENCIN, Claudine Alexandrine Guerin de, sister of Cardinal de Tencin, who died in 1758, was born at Grenoble, and took the veil in the monastery of Montfleury; but afterwards, with the Pope's consent, threw off the religious habit, and entered so completely into the gay world at Paris, that she became noted for her intrigues, for which she was confined first in the Chatelet, and afterwards in the Bastille. Notwithstanding these follies, she was endowed with considerable talents, and wrote several novels and romances which were esteemed, particularly *the Siege of Calais*, or *the*

Misfortunes of Love. She died in 1749. *Nouv. Dict. Hist.*

TENCOA, a town of Mexico, in the province of Honduras.

(1.) * **To TEND**. *v. a.* [contracted from *attend*.] 1. To watch; to guard; to accompany as an assistant or defender.—

Nymphs of Mullia which, with careful heed,
The silver scaly troutsd did *tend* full well. *Spenser*.
Go thou to Richard, and good angels *tend* thee. *Shak.*

Him lord pronounce'd; and, O indignity!
Subjected to his service angels wings,
And flaming ministers to watch and *tend*
Their earthy charge. *Milton*.

He led a rural life, and had command
O'er all the shepherds, who about those vales
Tended their numerous flocks. *Dryden*.

—There is a pleasure in that simplicity, in beholding princes *tending* their flocks. *Pope*.—

Our humbler province is to *tend* the fair. *Pope*.

2. To attend; to accompany.—

Despair
Tended the sick, butick from couch to couch. *Milton*.

Those with whom I now converse
Without a tear will *tend* my herse. *Swift*.

3. To be attentive to.—
Unluck'd of lamb or kid that *tend* their play. *Milton*.

(2.) * **To TEND**. *v. n.* [*tendo*, Lat.] 1. To move towards a certain point or place.—They had a view of the princels at a mask, having overheard two gentlemen *tending* towards that fight. *Wotton*.—

To these abodes our fleet Apollo *tends*;
Here Dardanus was born, and hither *tends*. *Dryden*.

2. [*Tendre*, French.] To be directed to any end or purpose; to aim at.—

Admiration seiz'd
All heav'n, what this might mean and whither *tend*. *Milton*.

—Factions gain their power by pretending common safety, and *tending* towards it in the directest course. *Temple*.—The laws of our religion *tend* to the universal happiness of mankind. *Tillotson*.

3. To contribute.—Many times that which we ask would, if it should be granted, be worse for us, and perhaps *tend* to our destruction. *Hammond*.

4. [From *attend*.] To wait; to expect. Out of use.—

The bark is ready, and the wind at help;
Th' associates *tend*. *Shak.*

5. To attend; to wait as dependants or servants.

She deserves a lord,
That twenty such rude boys might *tend* upon. *Shak.*

Give him *tending*,
He brings great news. *Shak.*

Was he not companion with the riotous knights,
That *tend* upon my father? *Shak.*

6. To attend as something inseparable. In the three last senses it seems only a colloquial abbreviation of *attend*.—

Threefold vengeance *tend* upon your steps. *Shak.*
(1.) **TEN**

(1.) **TENDA**, a ci-devant county and province of the late duchy of Savoy, now annexed to the French empire and included in the department of Mont Blanc. It was bounded on the N. by the province of Coni, on the E. by the late marquisate of Ceva, and the ci-devant territories of Geneva, on the S. by Nice, and on the W. by the late county of Boglio. This county was anciently vested in the family of the *Lascaris*, the descendants of the emperor THEODORE LASCARIS, in the 13th century. In the 16th century it fell to Emmanuel Philibert duke of SAVOY. It is not very fertile, being surmounted on all sides by the Alps, but it affords much wood and good pasture, and its rivers abound with trout.

(2.) **TENDA**, a town of the French empire, ci-devant capital of the above county, seated at the junction of the Rola and the Brogna, with a beautiful church, a castle and towers on a rock, 15 miles N. of Ventimiglia, and 22 NE. of Nice, and 33 S. of Turin. Near this town the French republicans obtained a great victory over the Piedmontese, in May 1794. Lon. 7. 45. E. Lat. 44. 10. N.

* **TENDANCE**. *n. f.* [from *tend.*] 1. Attendance; state of expectation.—

Unhappy wight, born to disastrous end,
That doth his life in so long *tendances* spend.

Spenser.

1. Persons attendant. Out of use.—

His lobbies fill with *tendances*,
Rain sacrificial whisp'rings in his ear. *Shak.*

2. Attendance; act of waiting.—

She purpos'd,
By watching, weeping, *tendances*, to
O'ercome you with her shew. *Shak.*

3. Care; act of tending.—

Nature does require
Her times of preservation, which, perforce,
I her frail son, amongst my brethren mortal,
Must give my *tendances* to. *Shak.*

They at her coming sprung,
And touch'd by her fair *tendances* gladlier grew. *Milton.*

TENDEBA, an ancient town of Caria; *Liv.*

33. c. 18.

TENDEBAR, a town of Africa, in the kingdom of Kaen.

* **TENDENCE**. } *n. f.* [from *tend.*] 1. Direction.

* **TENDENCY**. } rection or course towards any place or object.—It is not much business that distracts any man; but the want of purity, constancy, and *tendency* towards God. *Taylor.*—Writings of this kind, if conducted with candour, have a more particular *tendency* to the good of their country, than any other compositions. *Addison.*—We may acquaint ourselves with the powers and properties, the *tendencies* and inclinations, of body and spirit. *Watts.*—All of them are innocent, and most of them had a moral *tendency* to soften the virulence of parties, or laugh out of countenance some vice or folly. *Swift.* 2. Direction or course toward any inference or result; drift.—The greater congruity or incongruity there is in any thing to the reason of mankind, and the greater *tendency* it hath to promote or hinder the perfection of man's nature, so much greater degrees hath it of moral good or evil; to which we

ought to proportion our inclination, or aversion. *Wilkins.*—These opinions are of so little moment, that like motes in the sun, their *tendencies* are little noticed. *Locke.*

(1.) * **TENDER**. *adj.* [*tendre*, French.] 1. Soft; easily impressed or injured; not firm; not hard.—

The earth brought forth the *tender* grass.

Milton.

From each *tender* stalk she gathers. *Milton.*
—When the frame of the lungs is not so well woven, but is lax and *tender*, there is great danger, that after spitting of blood, they will by degrees putrify and consume. *Blackmore.* 2. Sensible; easily pained; soon sore.—

Unneath may the endure the flinty street,
To tread them with her *tender* feeling feet. *Shak.*
—Our bodies are not naturally more *tender* than our faces; but by being less exposed to the air, they become less able to endure it. *L'Estrange.*
—The face when we are born is no less *tender* than any other part of the body; it is use alone hardens it, and makes it more able to endure the cold. *Locke.* 3. Effeminate; emasculate; delicate.—When Cyrus had overcome the Lydians, that were a warlike nation, and devised to bring them to a more peaceable life, instead of their short warlike coat, he clothed them in long garments, like women; and instead of their warlike music, appointed to them certain lascivious lays, by which their minds were so mollified and abated, that they forgot their former fierceness and became most *tender* and effeminate. *Spenser.* 4. Exciting kind concern.—

I love Valentine;

His life's as *tender* to me as my soul. *Shak.*
5. Compassionate; anxious for another's good.—The *tender* kindness of the church it well becometh to help the weaker sort, although some few of the perfecter and stronger be for a time displeased. *Hooker.*

This not mistrust but *tender* love enjoins. *Milt.*
—Be *tender* hearted and compassionate towards those in want, and ready to relieve them. *Tillotson.*

6. Susceptible of soft passions.—

Your tears a heart of flint
Might *tender* make, yet nought
Herein they will prevail. *Spenser.*

7. Amorous; lascivious.—

What mad lover ever dy'd,
To gain a soft and gentle bride?
Or for a lady *tender* hearted,
In purling streams or hemp departed? *Hudibras.*
8. Expressive of the softer passions. 9. Careful not to hurt; with *of*.—The civil authority should be *tender* of the honour of God and religion. *Tillotson.*—I have been *tender* of every particular person's reputation. *Addison.* 10. Gentle; mild; unwilling to pain.—

Thy *tender* bested nature shall not give
Thee o'er to harshness. *Shak.*

You, that are thus so *tender* o'er his follies,
Will never do him good. *Shak.*

11. Apt to give pain.—In things that are *tender* and unpleasing, break the ice by some whose words are of less weight, and reserve the more weighty voice to come in as by chance. *Bacon.*

12. Young; weak; as *tender* age.—When yet he

was

was but *tender-bodied*, a mother should not sell him. *Shak.*—

Beneath the Dens, where unsleth'd tempests lie,

And infant winds their *tender* voices try. *Cowley.*

(2.) * *TENDER*. *n. f.* [from the verb.] 1. Offer; proposal to acceptance.—

Then to have a wretched pining fool,

A whining mammet, in her fortune's *tender*,
To answer, I'll not wed. *Shak.*

Think yourself a baby,

That you have ta'en his *tenders* for true pay,
Which are not fleeting. *Shak.*

—The earl accepted the *tenders* of my service. *Dryden.*—To declare the calling of the Gentiles

by a free unlimited *tender* of the gospel to all. *South.*—Our *tenders* of duty every now and then miscarry. *Addison.* 2. [From the adjective.] Regard; kind concern. Not used.—

Thou hast shew'd thou mak'st some *tender* of my life,

In this fair rescue thou hast brought to me. *Shak.*

3. A small ship attending on a larger.

(3.) *TENDER*, *n. f.* in shipping, a small ship in the service of men of war, for carrying men, provisions, or any thing else that is necessary.

* To *TENDER*. *v. a.* [*tendre*, French.] 1. To offer; to exhibit; to propose to acceptance.—Some of the chiefest laity professed, with greater stomach than judgment, that such a discipline was little better than popish tyranny, disguised and *tendered* unto them. *Hooker.*—

I'll crave no more than what your highness offer'd;

Nor will you *tender* less. *Shak.*

All conditions, all minds, *tender* down
Their service to lord Timon. *Shak.*

Owe not all creatures, by just right, to thee
Duty and service, not to stay till bid,

But *tender* all their pow'r? *Milton.*

—He had never heard of Christ before, and so more could not be expected of him than to embrace him as soon as he was *tendered* to him. *Duty of Man.* 2. To hold; to esteem.—

Tender yourself more dearly;

Or, not to crack the wind of the poor phrase,
Wringing it thus, you'll *tender* me a fool. *Shak.*

3. [From the adjective.] To regard with kindness. Not in use.—

I thank you, madam, that you *tender* her:
Poor gentlewoman, my master wrongs her much. *Shak.*

* *TENDER-HEARTED*. *adj.* [*tender* and *heart*.]
Of a soft compassionate disposition.

* *TENDERLING*. *n. f.* [from *tender*.] 1. The first horns of a deer. 2. A fondling; one who is made soft by too much kindness.

* *TENDERLY*. *adv.* [from *tender*.] In a tender manner; mildly; gently; softly; kindly; without harshness.—

Tenderly apply to her—

Some remedies for life. *Shak.*

She embrac'd him, and for joy.

Tenderly wept. *Milton.*

—They are the most perfect pieces of Ovid, and the style *tenderly* passionate and courtly. *Preface to Ovid.*—

Marcus with blushes owns he loves,

And Brutus *tenderly* reproves. *Pope.*

* *TENDERNESS*. *n. f.* [*tendresse*, French, from *tender*.] 1. The state of being tender; susceptibility of impressions; not hardness.—Pied cattle are spotted in their tongues, the *tenderness* of the part receiving more easily alterations than other parts of the flesh? *Bacon.*—The difference of the muscular flesh depends upon the hardness, *tenderness*, moisture, or dryness of the fibres. *Arbutnot.* 2. State of being easily hurt; foreness.—A quickness and *tenderness* of sight could not endure bright sunshine. *Locke.*—Any zealous for his country must conquer that *tenderness* and delicacy which may make him afraid of being spoken ill of. *Addison.*—There are examples of wounded persons that have roared for anguish at the discharge of ordnance, though at a great distance: what insupportable torture then should we be under upon a like concussion in the air, when all the whole body would have the *tenderness* of a wound. *Bentley.* 3. Susceptibility of the softer passions.—

Weep no more, lest I give cause

To be suspected of more *tenderness* than doth become a man. *Shak.*

Well we know your *tenderness* of heart. *Shak.*

With what a graceful *tenderness* he loves,
And breathes the softest, the sincerest vows! *Addison.*

4. Kind attention; anxiety for the good of another.—Having no children, she did with singular care and *tenderness* intend the education of Philip and Margaret. *Bacon.* 5. Scrupulousness; caution.—

My conscience first receiv'd a *tenderness*,

Scruple, and prick, on certain speeches utter'd
By th' bishop of Bayon. *Shak.*

—Some are unworthily censured for keeping their own, whom *tenderness* how to get honestly teacheth to spend discreetly; whereas such need no great thriftiness in preserving their own, who assume more liberty in exacting from others. *Watson.*

—True *tenderness* of conscience is nothing else but an awful and exact sense of the rule which should direct it; and while it steers by this compass, and is sensible of every declination from it, so long it is properly tender. *South.* 6. Cautious care.—There being implanted in every man's nature a great *tenderness* of reputation, to be careless of it is looked on as a mark of a degenerate mind. *Government of the Tongue.* 7. Soft pathos of expression.

(1.) * *TENDINOUS*. *adj.* [*tendineux*, Fr. *tendinis*, Lat.] Sinewy; containing tendons; consisting of tendons.—Nervous and *tendinous* parts have worse symptoms, and are harder of cure than fleshy ones. *Wise man.*

(2.) *TENDINOUS FIBRES*. See *ANATOMY*, § 219.

TENDO ACHILLIS, in anatomy, the tendon of Achilles, a large tendon of the heel, so named from the tradition that *ACHILLES* got his mortal wound in that part. See *ANATOMY*, § 217. The celebrated Dr *MONRO* senior made a capital cure of a rupture of this tendon upon himself. See *SURGERY*, Index.

(3.) * *TENDON*. *n. f.* [*tendo*, Lat.] A sinew; a ligature

a ligature by which the joints are moved.—A struma in her instep lay very hard and big amongst the tendons. *Wifeman*.—

The entrails these embrace in spiral strings;
Those clasp th' arterial tubes in tender rings;
The tendons some compacted close produce,
And some thin fibres for the skin diffuse.

Blackmore.

(2.) **TENDONS**, in anatomy, are white, firm, and tenacious parts, contiguous to the muscles, and usually forming their extremities. See **ANATOMY**, § 217, 219, 221.

* **TENDRIL**. *n. f.* [*tendrillon*, Fr.] The clasp of a vine, or other climbing plant.—

In wanton ringlets war'd,

As the vine curls her tendrils; which imply'd
Subjection. *Milton*.

So may thy tender blossoms fear no bite,
Nor goats with venom'd teeth thy tendrils bite.

Dryden.

—The tendrils or clasps of plants are given only to such as have weak stalks, and cannot raise up or support themselves. *Ray*.

TENEÆ, a district of ancient Corinth. *Mela*, 2. c. 3.

* **TENEBRICOSE**. **TENEBOUS**. *adj.* [*tenebricosus*, *tenebrosus*, Lat.] Dark; gloomy.

TENEBRIO, in entomology, a genus of insects belonging to the order of *Coleoptera*. The antennæ are moniliform, the last joint being roundish; the thorax is plano-convex and margined; the head projecting, and the elytra are somewhat stiff. *Gmelin* enumerates about 63 species. The larvæ of some live in damp places under ground among rubbish; of others in flour and different kinds of food, where they undergo their metamorphosis. The perfect insects are very troublesome in houses, eating bread, meat, &c. They precipitately avoid the light; resorting in troops to dark damp cellars, where putrefaction allures and nourishes them. They are all of a very dark gloomy appearance, from which circumstance they take their name.

* **TENEBROSITY**. *n. f.* [*tenebra*, Lat.] Dark; gloom.

* **TENEBOUS**. See **TENEBRICOSE**.

TENEDIA SECURIS, [Lat.] i. e. the axe of *Tenedos*, a proverbial expression for a severe law, derived from a law made by **TENES** the first king of that island, that adulterers should be beheaded with an axe. See **TENEDOS**. This sentence was executed on the king's son. *Aristotle* says that this was commemorated on the coins of *Tenedos*, which on one side had two heads of the king and his son, and on the reverse an axe.

TENEDOS, in ancient geography, an island on the coast of *Troas*, 40 stadia from the continent, and 80 in compass; with a cognominal *Æolian* town, and a temple of *Apollo Smintheus*. Its origin is derived from *Tenes*, who being exposed in a coffer or bog by his father *Cygnus* the *Thracian*, at the instigation of his stepmother, was by fate carried to this island, made king of it, and at length worshipped as a god on account of his virtues. The island was famous for its earthen-ware, for which purpose it had an excellent red clay; and hence *Bochart* would derive the appellation

VOL. XXII. PART I.

from *tinedom*, a red clay. This island still retains its ancient name, and is one of the smallest islands of the *Archipelago*, situated near the coast of *Lesser Asia*, W. of the ruins of *Troy*. It is chiefly rocky, but fertile, being remarkable for producing the best *Muscadine wine* in the *Levant*; and its position, thus near the mouth of the *Hellepont*, has given it importance in all ages; vessels bound toward *Constantinople* finding shelter in its port, or safe anchorage in the road, during the *Ætasian* or contrary winds, and in foul weather. The emperor *Justinian* erected a magazine to receive the cargoes of the corn ships from *Alexandria*, when detained there. This was a lofty building, 280 feet long, and 90 broad. The voyage from *Egypt* was rendered less precarious, and the grain preserved until it could be transported to the capital. Afterwards, during the troubles of the *Greek empire*, *Tenedos* experienced a variety of fortune. The pirates who infested these seas made it for many years their place of rendezvous; and *Othman* seized it in 1302, procured vessels, and thence subdued the other islands of the *Archipelago*. It has continued in the possession of the *Turks* ever since; and on the E. side is a pretty large town, seated at the foot of a mountain, with a fine harbour, commanded by a castle. Lon. 20. 0. E. Lat. 29. 30. N.

* **TENEMENT**. *n. f.* [*tenement*, Fr. *tenementum*, law Lat.] Any thing held by a tenant.—What reasonable man will not think that the *tenement* shall be made much better, if the tenant may be drawn to build himself some handsome habitation thereon, to ditch and inclose his ground? *Spenser*.—

'Tis policy for father and son to take different sides;

For then lands and tenements commit no treason.

Dryden

—Who has informed us, that a rational soul can inhabit no *tenement*, unless it has just such a sort of frontispiece. *Locke*.—

Treat on, treat on, is her eternal note,

And lands and tenements glide down her throat.

Pope.

* **TENENT**. *n. f.* See **TENET**.

TENERIA, a town of *Cuba*, 55 miles NW. of *Principe*.

(1.) **TENERIFFE**, an island of *Africa*, one of the *CANARIES*, and the most considerable for riches, trade, and extent. It lies S. of the island of *Salvages*, W. of the *Grand Canary*, N. of the island of *Gomera*, and E. of *Palma*. It is of a triangular form, being about 45 miles in length and 20 in breadth; and in the centre is the famous peak; called by the natives *El Pico de Teyde*, which in clear weather may be seen at the distance of 120 miles, like a thin blue vapour very little darker than the sky. The most frequented harbour is called *SANTA CRUZ*, which is on the S. side of the island, and where ships with good anchors and cables may be safe in all weathers. At this port is the principal commercial town in the island, called also *SANTA CRUZ*, in the middle of which is a mole, built at a vast expence, for the convenience of landing. *Santa Cruz* is a large town, containing several churches and convents,

E e

aa

an hospital, and the best constructed private buildings of any in the Canary islands. It contains about 7000 inhabitants; it is not fortified on the land side, and all the country near it is dry, stony, and barren. (See SANTA CRUZ, N° 4.) About four miles inland from Santa Cruz stands the city of *St Chrysohal de la Laguna*, which is the metropolis of the island, and contains two parish churches and five convents, but has no trade. Teneriffe contains about 96,000 persons, supposed to be equal to the number of inhabitants of all the rest of the seven islands put together. The peasants in general are wretchedly clothed; when they do appear better, they are habited in the Spanish fashion. The women wear veils: these worn by the lower ranks are of black stuff, those of the higher of black silk. The young ladies wear their hair long black hair plaited, and fastened with a comb or a ribbon on the top of the head. The manufactures carried on here are very few, and the product of them little more than sufficient for their own consumption. They consist of taffeties, gauze, coarse linens, blankets, silk, and curious garters. The principal dependence of the inhabitants is on their wine, which is their staple. Oil, corn, and every kind of stock for shipping, abound; and in their season, the tropical fruits, and the vegetable productions of the European gardens, in great plenty. Teneriffe enjoys an agreeable and healthful mediocrity of climate. Indeed none seems better adapted for the restoration of a viciatudinarian; as, by going into the mountains, he may graduate the air, and choose that state of it which best suits his complaint. The height of the PEAK OF TENERIFFE has been variously estimated by different travellers. Dr Halley allows but two miles and a quarter from the level of the sea to the summit of the SUGAR-LOAF; whilst the Spanish account of the Canary islands, translated by Mr Gias in 1763, makes it no less than five miles. That it is an extinguished volcano is universally known. Teneriffe lies in Lon. 16. 18. W. Lat. 28. 29. N.

(2.) TENERIFFE, a town of N. America, in Terra Firma, in the province of St Martha, seated on the Madelaine, 100 miles S. of St Martha.

* TENERITY. *n. f.* [*tenebras, tener*, Latin.] Tenderness. *Ainsf.*

(1.) TENES, the first king of Tenedos, who acquired his kingdom in consequence of his step-mother Philonome's lust, and his father's credulity. See TENEDIA and TENEDOS.

(2.) TENES, in geography, a district of Algiers, on the N. coast.

(3.) TENES, a sea-port town of Algiers, capital of the above district. It was taken from the Christians by Barbarossa the younger, after his brother's death. It is seated in Lon. 19. 30. E. of Ferro. Lat. 36. 30. N.

(4.) TENES, CAPE, a promontory of Algiers, on the N. coast of the above district, N° 2. near the town, N° 3.

TENESIS, a district of ancient Ethiopia. *Strabo.*

(1.) * TENESMUS *n. f.* The stone shutting up the orifice of the bladder is attended with a *teneismus*, or needing to go to stool. *Arbustnot.*

(2.) TENESMUS, in medicine, a name given by medical writers to a complaint which is a conti-

nual desire of going to stool, but without any stool being ready to be voided. This is properly no primary disease, but merely a symptomatic one, and differs in degree according to the disease on which it is an attendant. See MEDICINE, Index.

* TENET. *n. f.* [from *tenet*, Latin, *he holds*.] It is sometimes written TENENT, or *they hold*. Position; principle; opinion.—That all animals of the land are in their kind in the sea, although received as a principle, is a *tenet* very questionable. *Brown*.—While, in church matters, profit shall be the touch-stone for faith and manners, we are not to wonder if no gainful *tenet* be deposited. *Decay of Piety*.—This favours of something ranker than Socinianism, even the *tenets* of the fifth monarchy, and of sovereignty founded only upon faintship. *South*.—

They wonder men should have mistook
The *tenets* of their master's book. *Prior*.

(1.) TENEZ, a province of Africa, in the kingdom of Tremesen.

(2.) TENEZ, a city of Tremesen, the capital of the above province, with a strong fort, seated on the side of a mountain, 4 miles from the sea-coast. Lon. 1. 0. E. Lat. 39. 10. N.

TENEZA, a town of Morocco, 43 miles WSW. of Morocco.

* TENFOLD. *adj.* [from *ten* and *fold*.] Ten times increased.—

Fire kindled into *tenfold* rage. *Milton*.

TENG, two towns of China, of the 3d rank: 1. in the province of Chan-tong, 37 miles SE. of Tü-ning: 2. in that of Quang-si, 17 miles WSW. of Ou-tcheau.

(1.) TENGAN, a city of China, of the 1st rank, in the province of Hou-quang; 150 miles S. of Pekin. Lon. 131. 3. E. Ferro. Lat. 31. 20. N.

(2.) TE-NGAN, a town of China, of the 3d rank, in the province of Kiang-si, 10 miles SW. of Nankang.

TENG TCHOUEN, a town of China, of the 2d rank, in the province of Yun-nan, 112½ miles SW. of Pekin. Lon. 117. 35. E. Ferro. Lat. 26. 2. N.

(1.) TENIERS, Abraham, son of David (N° 2.), was equal to his father and brother in the expression of his characters, and in the *claire obscure*; though he was inferior in sprightliness of touch and lightness of pencil.

(2.) TENIERS, David, the Elder, a Flemish painter, born at Antwerp in 1582. He received the first rudiments of his art from the famous Rubens, and afterwards finished his studies at Rome. He attached himself to Adam Elsheimer for six years; and formed to himself a peculiar style, which his son cultivated so happily afterwards as to bring it to the utmost perfection. His pictures were small; and his subjects usually shops, laboratories, humorous conversations, and rural festivities. He died at Antwerp in 1649.

(3.) TENIERS, David, the Younger, also an admirable painter, was the son of the former (N° 2.), and was born at Antwerp in 1610. He obtained the name of *Ape of Painting*, from his imitating the manner of different painters with such exactness as to deceive even the nicest judges. His principal talent lay in landscapes adorned with small

small figures. He also painted men drinking and smoking, chemists' laboratories, country fairs and the like. His small figures are superior to his large ones. He died in 1694.

TENIS, a lake of Russian Tartary, 60 miles in circumference. Lon. 91. 50. E. Ferro. Lat. 53. 40. N.

TENISON, Dr Thomas, Abp. of Canterbury, was born at Cottenham in Cambridgeshire in 1636; and studied at Corpus Christi college in Cambridge. In his youth, he applied himself to physic; but afterward went into orders, and became minister of St Andrew's church, Cambridge. He showed himself very active against the growth of Popery, by his writings, both in the reigns of Charles II. and James II. In 1680 he was made vicar of St Martin's in the Fields, London, to which parish he made several donations; and among others, endowed a free school and built a handsome library, which he furnished with useful books. King William and queen Mary, in 1689, appointed him archdeacon of London; in 1691, he was nominated bishop of Lincoln, and in 1694 he succeeded Dr Tillotson as archbishop of Canterbury. He performed all the duties of a good prelate for 20 years, and died in 1715.

TENNA, a river of Italy, which rises in the Apennines, and crossing the marquise of Ancona, runs into the Adriatic about a miles ENE. of Fermo.

(1.) TENNASSEE, or TENNESSEE, one of the UNITED STATES of N. America, extending from 6° 30' to 16° 30' Lon. W. and from 35° to 36° 30' Lat. N. This state was erected and constituted in 1796, and is divided into 3 districts called WASHINGTON, HAMILTON, and NERO or MERO, which are subdivided into the following 13 counties, viz. WASHINGTON, Hawkins, Blount, Robertson, Sullivan, Knox, Grainger, MONTGOMERY, JEFFERSON, Davidson, Carter, Sevier, and Sumner. The 4 first are in Washington district, the next 5 in Hamilton, and the rest in Mero district.

(2.) TENNASSEE, CLIMATE, SOIL, AND PRODUCE OF. The climate of this state is mild and moderate. In the tract between Great Island and the Kanhawa, the summers are cool, and the air rather moist. On the W. side of the mountains the climate is much warmer, and soil better adapted to the production of tobacco, cotton, indigo, &c. In this part of the country, lime-stone abounds.

(3.) TENNASSEE, CONSTITUTION OF. The constitution of this state, which was ratified at Knoxville in Feb. 1796, vests the legislative authority in a general assembly, consisting of a senate and house of representatives, the number to be fixed once in 7 years in proportion to that of the taxable citizens, who are to be numbered septennially; the number of representatives not to exceed 26 to a county, until the taxable citizens shall be 40,000. The senators are never to be less than one 3d, nor more than one half the number of the representatives, and are to be chosen upon principles similar to those for the choice of representatives. The election for members of both houses is biennial. Three years residence in the state and one in the county, with 200 acres of

landed property in it, and being 21 years of age, qualify a citizen to be elected to a seat in either house. Each house chooses its own officers; and makes its own rules. Senators and representatives are free from arrest in all cases, but suspicion of treason or felony. The governor issues writs of election to fill up vacancies. Neither house can adjourn for above 3 days without the other. Bills may originate in either house; shall be read thrice; but if once rejected, shall not be passed into a law in the same session. Doors of both houses shall be kept open. The salaries of the judges, &c. are fixed. The executive power is vested in a governor chosen biennially by the electors of the legislature. A contested election for governor to be decided by both houses. The house of representatives has the sole power of impeaching, and the senate of trying impeachments. The judicial power is vested in courts of law and equity. County officers are sheriffs, coroners, trustees, and constables. Ministers of the gospel are not eligible to a seat in the legislature, or to any civil office. No person who denies the existence of God or a future state can hold any civil office. When two 3ds of the general assembly think it necessary to amend or change the constitution, they are to recommend to the electors at the next election, for members to the general assembly, to vote for a convention, and if there is a majority of votes for it, the general assembly, at their next session, shall call a convention, which shall consist of as many members as the general assembly, and be chosen in the same manner. This constitution is subject to be revised or changed.

(4.) TENNASSEE, MOUNTAINS OF. It would require a volume by itself, to describe particularly the mountains of this state, many of which are of the less importance that they are uninhabitable. The CUMBERLAND MOUNTAINS, or Great Laurel Ridge, are the most stupendous heights in the United States. They occupy the uninhabited country between Washington, Hamilton, and Mero districts, and between these and the state of Kentucky. They abound with ginseng and coal. Cumberland Mountain in its whole extent from the Great Kanhawa, to the Tennessee, consists of the most stupendous pile of craggy rocks of any mountain in the country. Several parts of it for many miles are inaccessible even to the Indians on foot. In one place near the summit, there is a most tremendous ledge of rocks, 30 miles long and 200 feet thick, exhibiting a perpendicular face to the SE. more grand than any artificial fortification, and equal in angularity. *Climb* Mountain is another remarkable mountain. It lies S. of Mero district. *Stone, Yellow, Iron, Bald, and UNAKA* mountains form the E. boundary of the state. Their direction is nearly SW.

(5.) TENNASSEE, POPULATION OF. The total population of this state, by an enumeration made in 1791, was 35,691; of whom 154 were slaves. But besides these, there are great numbers of tribes or nations of Indians dispersed throughout the territories of this state, and settled upon the various banks of its numerous rivers. See MUSKOGULGE, &c.

(6.) TENNASSEE, PRODUCTION AND SOIL OF. The soil of this state is very luxuriant, and produces

duces in great plenty, cotton, tobacco, indigo, Indian corn, wheat, rice, rye, oats, barley, flax, hemp, vines, and all other plants and vegetables that grow in the United States. In some of the mountains gold has been found, and there are mines of iron, to manufacture which, forges and furnaces are erected in various parts. Salt mines, or salt springs called *salt licks*, abound in this state.

(7.) **TENNESSEE, QUADRUPEDS AND BIRDS OF.** Many years ago, this country abounded with large herds of buffaloes and other wild cattle; but the first settlers very imprudently and improvidently hunted them almost to extirpation, so that few are now to be found. Elks and moose deers, however, are still found among the mountains. Bears, panthers, wolves, wild cats, beavers, musk rats, otters, racoons, foxes, squirrels, &c. are also numerous; and pheasants, partridges, swans, wild geese, ducks, wild turkeys, pigeons, &c. are very numerous in the woods, and on the banks of lakes and rivers. The bones of that monstrous large quadruped called the *Mammoth*, are still dug up many feet deep, which shows that these animals, though now extinct, must once have abounded in this territory. See *MAMMOTH*.

(8.) **TENNESSEE, RIVERS OF.** There are few countries better supplied with water than this state. The chief rivers are the *MISSISSIPPI*, which bounds it on the W. the *TENNESSEE*, (see N° 11.) the *CUMBERLAND*, the *Holston*, the *Pelefon*, or *Clinch*, the *Hatchee*, the *Wolf*, the *Redfoot*, &c. The *OHIO* also waters part of this state, also the *GREAT* and *LITTLE KANAWHA*.

(11.) **TENNESSEE, or TENNESSEE**, a large navigable river of the above state, which is the largest head-water of the *OHIO*. It rises in the mountains of Virginia, in Lat. 37°, and runs a course of about 1000 miles to the S. and SW. nearly to Lat. 34°, being increased by a great number of streams which fall into it on both sides. It then turns about to the N. in a circuitous course, and falls into the *OHIO*, about 60 miles above its mouth. From its junction with the *OHIO* to the *Muscle Shoals*, its current is very smooth and gentle for 250 miles. The *Muscle Shoals* are about 20 miles long. Here the *Tennessee* spreads to the breadth of 3 miles and forms a number of small islands, which interrupt the passage of vessels. From these shoals to the *WHIRL*, the river runs 250 miles, and affords excellent navigation all the way, until it breaks through the *Great Ridge* of *Cumberland Mountains*. See *WHIRL*.

TENNEBERG, a mountain of Upper Saxony, in *Saxe-Gotha*; 4 miles SW. of *Gotha*.

TENNELIERES, a town of France, in the dep. of the *Aube*; 4 miles E. of *Troyes*.

TENNESSEE. See *TENNESSEE*, N° I. and II.

(1.) * **TENNIS**. *n. f.* [this play is supposed by *Skinner* to be so named from the word *tenes*, take it, hold it, or there it goes, used by the French when they drive the ball.] A play at which a ball is driven with a racket.—The Barber's man hath been seen with him, and the old ornament of his cheek hath already stuffed tennis balls. *Shak.*—A prince, by a hard destiny, became a tennis ball long to the blind goddess. *Mozel.*—It can be no more disgrace to a great lord to draw a fair pic-

ture, than to play at tennis with his page. *Peach.*—The inside of the uvea is blacked like the walls of a tennis court, that the rays falling upon the retina may not, by being rebounded thence upon the uvea, be returned again; for such a repercussion would make the sight more confused. *Merc.*—We conceive not a tennis ball to think, and consequently not to have any volition, or preference of motion to rest. *Locke.*—We have no exedra for the philosophers adjoining to our tennis court, but there are alehouses. *Arbuthnot and Pope.*

(2.) **TENNIS**, [from *tenes*, Fr. or from *Tennis*, an ancient town of France.] A play at which a ball is driven by a racket. The size of a tennis court is generally about 96 or 97 feet by 33 or 34. A line or net hangs exactly across the middle, over which the ball must be struck. Upon the entrance of a tennis-court, there is a long gallery which goes to the dedans, that is a kind of front gallery, into which, whenever a ball is struck, it tells for a certain stroke. This long gallery is divided into different compartments or galleries, each of which has its particular name, as follows; from the line towards the dedans are the *first gallery door*, *second gallery*, and the *last gallery*, which is called the *service-side*. From the dedans to the last gallery are the figures 1, 2, 3, 4, 5, 6, at a yard distance each, by which the chaces are marked. On the one side of the line are also the *first gallery door*, *second gallery*, and *last gallery*; which is called the *hazard-side*. Every man struck into the last gallery on this side reckons for a certain stroke the same as the dedans. Between the second and this last gallery are the figures 1, 2, to mark the chaces on the hazard side. Over this long gallery, or these compartments, is a covering, called the *pent-house*, on which they play the ball from the *service-side*, in order to begin a set of tennis, from which it is called a *service*. When they miss putting the ball (so as to rebound from the *pent-house*) over a certain line on the *service-side*, it is deemed a fault, two of which are reckoned for a stroke. If the ball rolls round the *pent-house*, on the opposite side of the court, so as to fall beyond a certain line described for that purpose, it is called *passé*, reckons for nothing on either side, and the player must serve again. On the right hand side of the court from the dedans is the *tambour*, a part of the wall which projects, and is so contrived in order to make a variety in the stroke, and render it more difficult to be returned by the adversary; for when a ball strikes the *tambour*, it varies its direction, and requires some extraordinary judgment to return it over the line. The last thing on the right hand side is called the *grill*, wherein if the ball is struck, it is also 15, or a certain stroke. The game of tennis is played by what they call *sets*; a set of tennis consisted of six games; but if they play what is called an *advantage-set*, two above five games must be won successively by one of the parties. When the player gives his service at the beginning of a set, his adversary is supposed to return the ball; and whenever it falls after the first rebound untouched, the chase is called accordingly; for example, if the ball at the figure 1, the chase is called at a yard, that is to say, at a yard from the dedans: this chase

chace remains till a second service is given; and if the player on the service side lets the ball go after his adversary returns it, and if the ball falls on or between any of these figures or chaces, they must change sides, there being two chaces; and he who then will be on the hazard side, must play to win the first chace; which if he wins by striking the ball so as to fall, after its first rebound, nearer to the dedans than the figure 1, without his adversary's being able to return it from its first hop, he wins a stroke, and then proceeds in like manner to win the second chace, wherever it should happen to be. If a ball falls on the line with the first gallery door, second gallery, or last gallery, the chace is likewise called at such or such a place, naming the gallery door, &c. When it is just put over the line, it is called a chace at the line. If the player on the service-side returns a ball with such force as to strike the wall on the hazard-side so as to rebound, after the first hop over the line, it is also called a chace at the line. The chaces on the hazard-side proceed from the ball being returned either too hard or not quite hard enough; so that the ball after its first rebound falls on this side of the blue line, or line which describes the hazard-side chaces; in which case it is a chace at 1, 2, &c. provided there is no chace depending. When they change sides, the player, in order to win this chace, must put the ball over the line anywhere, so that his adversary does not return it. When there is no chace on the hazard-side, all balls put over the line from the service-side, without being returned, reckon for a stroke. This game is marked in a singular manner. The first stroke is called 15, the second 30, the third 40, and the fourth game, unless the players get four strokes each; in that case, instead of calling it 40 all, it is called *deuce*; after which, as soon as any stroke is got, it is called *advantage*; and in case the stroke becomes equal again, *deuce* again, till one or the other gets two strokes following, which win the game. Although but one ball at a time is played with, a number of balls are made use of at this game to avoid trouble, and are handed to the players in baskets for that purpose; by which they can play as long as they please, without ever having occasion to look for a ball.

(3.) **TENNIS**, in geography, a large lake of Egypt, 35 miles long and 7 broad; which extends from Damietta to Tineh, and is separated only by a narrow isthmus from the Mediterranean.

(4.) **TENNIS**, an island in the above lake, 28 miles SE. of Damietta. Lon. 50. 0. E. Ferro. Lat. 31. 2. N.

(5.) **TENNIS**, a town on the above island.

* **To TENNIS**, *v. a.* [from the noun.] To drive as a ball. Not used. Those four garrisons issuing forth from the enemy, will so drive him from one side to another, and *tennis* him amongst them, that he shall find no where safe to keep his feet in, nor hide himself. *Spenser*.

TENNOLTEI, a town of Asia, in Thibet.

TENNUM, an ancient town of Bolia.

TENO, a river of Norway, which runs into the sea, 36 miles WNW. of Wardhuys.

* **TENON**, *n. f.* [French.] The end of a timber cut to be fitted into another timber.—Such

variety of parts, solid with hollow; some with cavities as mortises to receive, others with *tenons* to fit them. *Ray*.—The *tenon-saw* being thin, hath a back to keep it from bending. *Maxon*.

(1.) **TENOR**, or **TENOUR**, *n. f.* the purport or content of a writing or instrument in law, &c.

(2.) **TENOR**, in music, the first mean or middle part, or that which is the ordinary pitch of the voice, when neither raised to a treble nor lowered to a bass. See **TENOUR**.

(1.) **TENOS**, in ancient geography, an island in the Ægean Sea, near Andros, called also *Ophiusa* and *Hydrussa*, from its numerous fountains. It was very mountainous, yet produced vines which afforded excellent wine. It was 15 miles in extent. *Strabo*, 10. *Mela*, 2.

(2.) **TENOS**, the capital of the above island.

* **TENOUR**, *n. f.* [*tenor*, Lat. *tencur*, Fr.] 1. Continuity of state; constant mode; manner of continuity; general currency.—We might perceive his words interrupted continually with sighs, and the *tenor* of his speech not knit together to one constant end, but dissolved in itself, as the vehemency of the inward passion prevailed. *Sidney*.—

When the world first out of chaos frang,
So smil'd the days, and so the *tenor* ran
Of their felicity: a spring was there;
An everlasting spring the jolly year
Led round in his great circle; no winds breath,
As now, did smell of Winter or of death.

Crawshaw.

Still I see the *tenor* of man's woe

Hold on the same, from woman to begin. *Milt*.
—Does not the whole *tenor* of the divine law positively require humility and meekness to all men? *Spratt*.

Inspire my numbers,
Till I my long laborious work complete,
And add perpetual *tenor* to my rhimes,
Deduc'd from nature's birth to Cæsar's times.

Dryden.

—This success would look like chance if it were not perpetual, and always of the same *tenor*. *Dryden*.—

Can it be poison? poison's of one *tenor*. *Dryd*,
—The whole *tenor* of those bodies thus preserved, clearly points forth the month of May. *Woodw*.—

Shunning faults, one quiet *tenor* keep. *Pope*.
1. Sense contained; general course or drift.—

Is't not the *tenor* of his oracle,
That king Leontes shall not have an heir? *Shak*.
It bears an angry *tenor*. *Shak*.

Bid me tear the bond.

—When it is paid according to the *tenor*. *Shak*.
—Reading it must be repeated again and again with a close attention to the *tenor* of the discourse. *Locke*. 3. A sound in music.—The treble cutteth the air too sharp to make the sound equal; and therefore a mean or *tenor* is the sweetest part. *Bacon*.—

Water and air he for the *tenor* chose,
Earth made the base, the treble flame arofe.

Cowley.

(1.) * **TENSE**, *adj.* [*tensus*, Lat.] Stretched; stiff; not lax.—For the free passage of the sound into the ear, it is requisite that the tympanum be *sense* and hard stretched. *Holder*.

(2.) * **TENSE**, *n. f.* [*tempus*, Fr. *tempus*, Lat.] —[In

—[In grammar.] *Tense*, in strict speaking, is only a variation of the verb to signify time. *Clarke*.—As foresight, when it is natural, answers to memory, so when methodical it answers to reminiscence, and may be called forecast; all of them expressed in the *tenses* given to verbs. *Grecu*.—Ladies, without knowing what *tenses* and principles are, speak as properly and as correctly as gentleman. *Locke*.—He should have the Latin words given him in their first case and *tense*. *Watts*.

(3.) **TENSE**, in grammar, an inflection of verbs, whereby they are made to signify or distinguish the circumstance of time in what they affirm. See **GRAMMAR** under **ENGLISH LANGUAGE**.

* **TENSENESS**. *n. f.* [from *tense*.] Contraction; tension; the contrary to *laxity*.—Should the pain and *tenseness* of the part continue, the operation must take place. *Sharp*.

* **TENSIBLE**. *adj.* [*tensibilis*, Lat.] Capable of being extended.—Gold is the closest, and therefore the heaviest of metals, and is likewise the most flexible and *tensible*. *Bacon*.

TENSIFT, a river of Morocco, which runs into the Atlantic near Safi.

* **TENSILE**. *adj.* [*tensilis*, Lat.] Capable of extension.—All bodies ductile and *tensile*, as metals, that will be drawn into wires, have the appetite of not discontinuing. *Bacon*.

* **TENSION**. *n. f.* [*tensio*, Fr. *tensus*, Latin.] 1. The act of stretching; not laxation.—It can have nothing of vocal sound, voice being raised by stiff *tension* of the larynx. *Holder*. 2. The state of being stretched; not laxity.—

Still are the subtle strings in *tension* found.

Blackmore.

TENSITES, a mountain of Morocco, on the borders of Sugulmessa; 60 miles E. of Morocco.

* **TENSIVE**. *adj.* [*tensus*, Lat.] Giving a sensation of stiffness or contraction.—A *tensive* pain from distension of the parts by the fulness of humours. *Floyer*.

TENSTADT, a town of Thuringia, 11 miles NW. of Erfurt, and 14 E. of Mulhausen.

* **TENSURE**. *n. f.* [*tensus*, Lat.] The act of stretching, or state of being stretched; the contrary to laxation or laxity.—This motion upon pressure, and the reciprocal thereof, motion upon *tensure*, we call motion of liberty, which is, when any body being forced to a preternatural extent, restoreth itself to the natural. *Bacon*.

(1.) * **TENT**. *n. f.* [*tente*, Fr. *tentorium*, Lat.] 1. A soldier's moveable lodging-place, commonly made of canvas extended upon poles.—The Turks, the more to terrify Corfu, taking a hill not far from it, covered the same with *tents*. *Knolles*.—By occupation they were *tent*-makers. *Abb*, xviii.

2. A. Any temporary habitation; a pavilion.—

He saw a spacious plain, whereon

Were *tents* of various hue. *Milton*.

There pitch'd his *tents*, and there resolv'd to stay. *Dryden*.

3. [*Tente*, Fr.] A roll of lint put into a fore.—

Modest doubt is called

The beacon of the wife; the *tent* that searches To the bottom of the worst. *Shak*.

—A declining orifice kept open by a small *tent* dipt in some medicaments, and after digestion withdraw the *tent* and heal it. *Wifeman*. 4. [*Tino*

tinto, Spanish.] A species of wine deeply red, chiefly from Galicia in Spain.

(2.) A **TENT**, in war, is a pavilion or portable house. Tents are made of canvas, for officers and soldiers to lie under when in the field. The size of the officers tents is not fixed; some regiments have them of one size and some of another; a captain's tent and marquee is generally 10½ feet broad, 14 deep, and 8 high; the subalterns are a foot less; the major's and lieutenant-colonel's a foot larger; and the colonel's two feet larger. The subalterns of foot lie two in a tent, and those of horse but one. The tents of private men are 6½ feet square, and 5 feet high and hold 3 soldiers each. The tents for horse are 7 feet broad and 9 feet deep; they hold likewise, 5 men and their horse accoutrements.

(3.) **TENT**, in surgery, a roll of lint made into the shape of a nail with a broad flat head, chiefly used in deep wounds and ulcers. They are of service, not only in conveying medicines to the most intimate recesses and sinuses of the wound, but to prevent the lips of the wound from uniting before it is healed from the bottom; and by their assistance grumous blood, serdes, &c. are readily evacuated.

(1.) * **To TENT**. *v. n.* [from the noun.] To lodge as in a tent; to tabernacle.—

The smiles of knaves

Tent in my cheeks. *Shak*.

(2.) * **To TENT**. *v. a.* To search as with a medical tent.—

I'll *tent* him to the quick. *Shak*.

I have some wounds upon me, and they smart.

—Well might they fester 'gainst ingratitude. *Shak*.

And *tent* themselves with death.

—Some surgeons, possibly against their own judgments, keep wounds *tented*, often to the ruin of their patient. *Wifeman*.

* **TENTATION**. *n. f.* [*tentation*, Fr. *tentatio*, Lat.] Trial; temptation.—The first delusion Satan put upon Eve, and his whole *tentation*, when he said ye shall not die, was in his equivocation, you shall not incur present death. *Brown*.

* **TENTATIVE**. *adj.* [*tentative*, effort, Fr. *tento*, Lat.] Trying; essaying.—This is not scientific but *tentative*. *Berkeley*.

* **TENTED**. *adj.* [from *tent*.] Covered with tents.—

These arms of mine till now have us'd

Their dearest action in the *tented* field. *Shak*.

The foe deceiv'd, he pass'd the *tented* plain. *Pope*.

(1.) * **TENTER**. *n. f.* [*tendo*, *tensus*, Lat.]

1. A hook on which things are stretched. 2. *To be on the TENTERs*. To be on the stretch; to be in difficulties; to be in suspense.—

In all my past adventures,

I ne'er was set on the *tenter*s. *Hudibras*.

(2.) **TENTER**, **TRIER**, or **PROVER**, a machine used in the cloth manufactory, to stretch out the pieces of cloth, stuff, &c. or only to make them even and set them square. It is usually about 4½ feet high, and for length exceeds that of the longest piece of cloth. It consists of several long square pieces of wood, placed like those which form the barriers of a manege; so, however, as that the lower cross pieces of wood may be raised or lowered.

ered as is found requisite, to be fixed at any height by means of pins. Along the cross pieces, both the upper and under one, are hooked nails, called *tenter-hooks*, driven in from space to space.

(3.) **TENTER.** TO PUT A PIECE OF CLOTH ON THE. While the piece is yet quite wet, one end is fastened to one of the ends of the tenter; then it is pulled by force of arms towards the other end, to bring it to the length required; that other end being fastened, the upper list is hooked on to the upper cross-piece, and the lowest list to the lowest cross-piece, which is afterwards lowered by force, till the piece have its desired breadth. Being thus well stretched, both as to length and breadth, they brush it with a stiff hair-brush, and thus let it dry. Then they take it off; and, till they wet it again, it will retain the length and breadth the tenter gave it.

(1.) * **To TENTER.** v. a. [from the noun.] To stretch by hooks.—A blown bladder pressed riseth again, and when leather or cloth is *tentered* it springeth back. *Bacon.*

(2.) * **To TENTER.** v. n. To admit extension. —Woollen cloth will *tenter*, linen scarcely. *Bacon.*

TENTERDEN, a town of England in Kent, remarkable for its lofty steeple, upon which a beacon was erected in the time of the Spanish invasion. It was also one of the first towns in which the woollen manufacture was established by the Flemings in the reign of Edward III. It lies 24 miles SW. of Canterbury, and 56 E. by S. of London. Lon. 0. 35. E. Lat. 51. 12. N.

(1.) * **TENTH.** *adj.* [*trōtha*, Saxon.] First after the ninth; ordinal of ten.—It may be thought the less strange if others cannot do as much at the *tenth* or twentieth trial. *Boyle.*

(2.) * **TENTH.** n. f. [from the adjective.] 1. The tenth part.—

We render you the *tenth*. *Shak.*

—Take thou the defin'd *tenth*. *Shak.*

To purchase but the *tenth* of all their store,
Would make the mighty Persian monarch poor.

Dryden.

—That money would be then nine *tenths* less worth in respect of food. *Lake.* 2. Tithes.—

With cheerful heart

The *tenth* of thy increase bestow. *Philips.*

1. *Tenths* are that yearly portion which all livings ecclesiastical yield to the king. *Cowell.*

(3.) **TENTH.** and FIRST FRUITS of *Spiritual Preferments*, a branch of the king's revenue. See *REVENUE*. These were originally a part of the Papal usurpations over the clergy of this kingdom; which were annexed to the revenue of the crown; by statute 26 Hen. VIII. c. 3. (confirmed by stat. 1 Eliz. c. 4.) Q. Anne granted her royal charter, which was confirmed by the statute 4 Ann. c. 11. whereby all the revenue of first fruits and tenths is vested in trustees for ever to form a perpetual fund for the augmentation of poor livings. This is usually called *Queen Anne's bounty*; which has been still farther regulated by subsequent statutes.

* **TENTHLY.** *adv.* [from *tenth*.] In the tenth place.

TENTHREDO, the SAW-FLY, a genus of insects belonging to the order of *hymenoptera*. The mouth is furnished with jaws, which are horny, arched, dentated within; the right jaw being ob-

tuse at the apex; the lip cylindrical, trifid; there are four feelers, unequal and filiform; the wings are plain and turned; the ring consists of two serrated laminae, and the scutellum of two grains placed at a distance. Gmelin mentions 143 species. These insects are not very shy. Some by means of their saw, deposit in the buds of flowers, others on the twigs of trees or shrubs, eggs from which are produced caterpillars. The implement with which they are armed is nowise formidable; as it appears only destined to the purpose of depositing their eggs.

* **TENTIGINOUS.** *adj.* [*tentigo*, Lat.] Stiff; stretched.

TENTOLI, a town in the island of Celebes, near the N. extremity on the W. coast, which gives name to a road for ships. Lat. 1° N.

TENTUGAL, a town of Portugal, in the province of Beira, 7½ miles WNW. of Coimbra.

(1.) * **TENTWORT.** n. f. [*adiantum album*, Lat.] A plant. *Ainsworth.*

(2.) **TENTWORTH** is a species of *ASPLENIUM*, for which see *SPLEENWORT*, § 2.

TENTZELIUS, William Ernest, a learned German, born at Armstadt in Thuringia, in 1659. He wrote, 1. *Saxonia Numismatica*, in 4 vols. and 2. *Supplementum Historiæ Gothana*. 3 tom. 4to. *Morari.*

* **TENUIFOLIOUS.** *adj.* [*tenuis* and *folium*, Lat.] Having thin leaves.

* **TENUITY.** n. f. [*tenuit̃*, Fr. *tenuitas*, from *tenuis*, Lat.] 1. Thinness; exility; smallness; minuteness; not grossness.—Fire and pines mount of themselves in height without side boughs; partly by heat, and partly *tenuity* of juice, sending the sap upwards. *Bacon.*—Consider the divers figurings of the brain; their difference in *tenuity*, or aptness for motion. *Glanville.*—Aliment circulating through an animal body is reduced to an almost imperceptible *tenuity*, before it can serve animal purposes. *Arbuthnot.*—At the height of 4000 miles the æther is of wonderful *tenuity*. *Bentley.* 2. Poverty; meanness. Not used.—the *tenuity* and contempt of clergymen will soon let them see what a poor carcass they are. *King Charles.*

* **TENUOUS.** *adj.* [*tenuis*, Lat.] Thin; small; minute.—Another way of their attraction is by a *tenuous* emanation, or continued effluvia. *Brown.*

(1.) * **TENURE.** n. f. [*teneo*, Lat. *tenure*, Fr. *tenura*, law Latin.] *Tenure* is the manner whereby tenements are holden of their lords. *Cowell.*—The service follows the *tenure* of lands. *Spenser.*—The uncertainty of *tenure*, by which all worldly things are held, ministers very unpleasant meditation. *Raleigh.*

By that *tenure* he holds all of fate. *Dryd.*

(2.) **TENURE**, in the English law, signifies the manner whereby lands or tenements are held, or the service that the tenant owes to his lord. Almost all the real property of England is by the policy of the law supposed to be granted by, dependent upon, and holden of, some superior lord, by and in consideration of certain services to be rendered to the lord by the tenant or possessor of this property. The thing holden is therefore styled a *tenement*, the possessors thereof *tenants*, and the manner of their possession a *tenure*. Thus

all

All the lands of the kingdom are supposed to be holden, mediately or immediately, of the king; who is styled the *lord paramount*, or above all. Such tenants as held under the king immediately, when they granted out portions of the lands to inferior persons, became also lords with respect to those inferior persons, as they were still tenants with respect to the king; and, thus partaking of a middle nature, were called *mesne* or *middle lords*. All tenures being thus derived from the king, those that held immediately under him, in right of his crown and dignity, were called his *tenants in capite*, or *in chief*. "Tenements are of two kinds, *frank-tenement* and *villainage*. And of frank-tenements, some are held freely in consideration of homage and knight-service; others in free-focage, with the service of fealty only. And again, of villainages, some are *pure*, and others *privileged*. He that holds in pure villainage shall do whatsoever is commanded him, and always be bound to an uncertain service. The other kind of villainage is called *villain-focage*; and these villain-focmen do villain-services, but such as are certain and determined." Of which the sense seems to be as follows; first, where the service was free, but uncertain, as military service with homage, that tenure was called the *tenure in chivalry*, *per servitium militare*, or by knight-service. 2dly, where the service was not only free, but also uncertain, as by fealty only, by rent and fealty, &c. that tenure was called *liberum focagium*, or *free focage*. These were the only free holdings or tenements; the others were villainous or servile: as 3dly, where the service was base in its nature, and uncertain as to time and quantity, the tenure was *purum villainagium*, absolute or pure villainage. Lastly, where the service was base in its nature, but reduced to a certainty, this was still villainage, but distinguished from the other by the name of *privileged villainage*, *villanagium privilegiatum*; or it might still be called *SOCAGE* (from the uncertainty of its services), but degraded by their baseness into the inferior title of *villanum focagium*, villain-focage. 1. The military tenure, or that by knight-service, was done away by stat. 12 Car. II. For an account of this species of tenure see *FEODAL SYSTEM*, and *KNIGHT-SERVICE*; and for its incidents, see *RELIEF*, *PRIMER-SEISIN*, *WARDSHIP*, *MARRIAGE*, *FINES*, and *ESCHEAT*. 2. The second species of tenure or free-focage, not only subsists to this day, but has in a manner absorbed and swallowed up (since the stat. of Charles II.) almost every other species of tenure. See *SOCAGE*. The other grand division of tenure, mentioned by Bracton, is that of villainage, as contradistinguished from *liberum tenementum*, or frank-tenure. And this he subdivides into two classes, pure and privileged villainage; from whence have arisen two other species of our modern tenures. 3. From the tenure of pure villainage have sprung the present copyhold-tenures, or tenure by copy of court-roll at the will of the lord. See *MANOR*. Two main principles, are held to be the supporters of a copyhold-tenure, and without which it cannot exist: 1. That the lands be parcel of and situate within that manor under which it is held. 2. That they have been demised, or demisable, by copy of court-

roll immemorably. For immemorial custom is the life of all tenures by copy; so that no new copyhold can, strictly speaking, be granted at this day. In some manors, where the custom hath been to permit the heir to succeed the ancestor in his tenure, the estates are styled *copyholds of inheritance*; in others, where the lords have been more vigilant to maintain their rights, they remain copyholds for life only; for the custom of the manor has in both cases so far superseeded the will of the lord, that, provided the services be performed or stipulated for by fealty, he cannot in the first instance refuse to admit the heir of the tenant upon his death; nor, in the second, can he remove his present tenant so long as he lives, though he holds nominally by the precarious tenure of his lord's will. The fruits and appendages of a copyhold-tenure, that it hath in common with free-tenures, are fealty, services (as well in rents as otherwise), reliefs, and escheats. The two latter belong only to copyholds of inheritance; the former to those for life also. But, besides these, copyholds have also heriots, wardship, and fines. Heriots, which are agreed to be a Danish custom, are a render of the best beast or other good, (as the custom may be) to the lord on the death of the tenant. This is plainly a relic of villain tenure; there being originally less hardship in it, when all the goods and chattels belonged to the lord, and he might have seized them even in the villain's lifetime. These are incident to both species of copyhold; but wardship and fines to those of inheritance only. Wardship, in copyhold estates, partakes both of that in chivalry and that in focage. Like that in chivalry, the lord is the legal guardian, who usually assigns some relation of the infant tenant to act in his stead; and he, like guardian in focage, is accountable to his ward for the profits. Of fines, some are in the nature of primer-seisins, due on the death of each tenant, others are mere fines for alienations of the lands; in some manors, only one of those sorts can be demanded, in some both, and in others neither. They are sometimes arbitrary and at the will of the lord, sometimes fixed by custom; but, even when arbitrary, the courts of law, in favour of the liberty of copyholders, have tied them down to be reasonable in their extent; otherwise they might amount to disinherit of the estate. No fine therefore is allowed to be taken upon descents and alienations (unless in particular circumstances) of more than two years improved value of the estate. From this instance we may judge of the favourable disposition that the law of England (which is a law of liberty) hath always shown to this species of tenants, by removing, as far as possible, every real badge of slavery from them, however some nominal ones may continue. It suffered custom very early to get the better of the express terms upon which they held their lands; by declaring, that the will of the lord was to be interpreted by the custom of the manor; and, where no custom has been suffered to grow up to the prejudice of the lord, as in this case of arbitrary fines, the law itself interposes in an equitable method, and will not suffer the lord to extend his power so far as to disinherit the tenant. 4. There is yet a 4th species of tenure, described

by Bracon, under the name sometimes of *privileged villenage*, and sometimes of *villain-socage*. See **VILLENAGE, PRIVILEGED**. There is still one other species of tenure, reserved by the statute of Charles II. which is of a spiritual nature, and called the tenure in **FRANK ALMOIGN**; see that article.

TEN-YANG, a town of Asia, in Corea, 73 miles ESE. of Kingkitao.

TENZEGEZET, a town of Africa, in the kingdom of Tremezen, seated on a rock at the foot of which the Tefina runs, on the road from Fez to Tremezen; 16 miles S. of Tremezen.

TENZYN, a town of the ci-devant kingdom of Poland in the late palatinate of Cracow, now annexed to Prussia.

TEOPISCAN, a town of Mexico in Chiapa.

TEOS, one of the twelve Ionian cities, was situated on the S. side of the Ionian peninsula, and distinguished by being the place where the poet **ANACREON** and the historian **HECATÆUS** were born.

TEOU PIN, a town of China of the 3d rank, in the prov. of Chang-tong, 40 miles WNW. of Tein.

* **TEPEFACTION**. *n. s.* [*tepefacio*, Lat.] The act of warming to a small degree.

* **TEPID**. *adj.* [*tepidus*, Lat.] Lukewarm; warm in a small degree.—

The *tepid* caves, and fens, and shores,

Their brood as numerous hatch. *Milton.*

He with his *tepid* rays the rose renews. *Dryd.*
—Such things as relax the skin are likewise sudorific: as warm water, friction, and *tepid* vapours. *Arbuthnot.*

* **TEPIDITY**. *n. s.* [from *tepid*.] Lukewarmness.

TEPLITZ, a town of Bohemia, in Leitmeritz, famed for its warm baths; 14 miles NW. of Leitmeritz.

* **TEPOR**. *n. s.* [*tepor*, Lat.] Lukewarmness; gentle heat.—The small pox, mortal during such a season, grew more favourable by the *tepor* and moisture in April. *Arbuthnot.*

TER, a river of Spain in Catalonia, which rises in Cerdagne, and runs into the Mediterranean, 20 miles E. of Gerona.

TERA, a river of Spain in Leon, which runs into the Orbeiga.

TERAH, a patriarch, the son of Nahor, and the 9th in descent from Noah, and the father of **ABRAHAM**. He is said to have been a statuary.

TERAIN, a river of France, which runs into the Oise, near Creil.

TERAMO, a town of Naples, in Abruzzo Ultra, with a bishop's see: 28 miles NNE. of Aquila, and 108 N. of Naples. Lon. 31. 29. E. Ferro. Lat. 42. 37. N.

TERANE, a town of Egypt, situated on the W. mouth of the Nile, in lat. 30° 24'. The buildings are chiefly unburned brick, though there are also some of stone. Great quantities of natrôn (See **NATRUM**) are found in certain lakes about 25 miles from Terane.

TERAPHIM, or **THERAPHIM**, a word in the Hebrew language, which has exercised much the ingenuity of the critics. It occurs 13 or 14 times

in the Old Testament, and is commonly interpreted *idols*.

TERASBURGH, a town of Austria, 2 miles N. of Engenbourg.

TERASSO. See **TARASSO**, and **TARSUS**, N° 3.

* **TERATOLOGY**. *n. s.* [*teratos* and *logos*.] Bombast, affectation of false sublimity. *Bailey.*

(1.) * **TERCE**. *n. s.* [*terce*, Fr. *triens*, Lat.] A vessel containing forty two gallons of wine; the third part of a butt or pipe. *Lincolnworth*.—

In the poet's verse

The king's fame lies, go now deny his *terce*.

Johnson.

(2.) **TERCE**, in Scots law. See **LAW**, Part III. Chap. III. Sect. I. § 25.

TERCEIRA, } one of the largest islands of
TERCERA, or } the Azores, or Western Islands,
TERCERY, } lying in the Atlantic Ocean.

It is about 40 miles in circumference; and surrounded with craggy rocks, which render it almost inaccessible. The soil is fertile, abounding in corn, wine, and fruits; and they have such plenty of cattle, that they supply ships therewith that call there. However, their principal trade is wood. It is subject to Portugal; and Angra is the capital. Lon. 27. 1. W. Lat. 28. 45. N.

TERCHIZ, a town of Persia, in Chorasan. It had anciently a fort, reckoned impregnable. It stood a long siege by Tamerlane, but at last surrendered on honourable terms. Lon. 75. 10. E. Ferro. Lat. 35. 0. N.

TERDOPIO, a river of the kingdom of Italy, which runs into the Po, 12 miles ESE. of Lu-mello.

TEREBELLA, the **PIERCER**, in entomology, a genus of insects belonging to the class of *vermes*, and order of *mollusca*. The body is filiform, the mouth placed before; the prepuce puts forth a pedunculated tubulous gland. There are several capillary tentacula about the mouth. There are ten species.

* **TEREBINTHINATE**. } *adj.* [*terebinthine*.
(1.) * **TEREBINTHINE**. } Fr. *terebinthum*,
Lat.] Consisting of turpentine; mixed with turpentine.—Salt serum may be evacuated by urine, by *terebinthines*; as tops of pine in all our ale. *Floyer*.—

(2.) **TEREBINTHINE ELECTUARY**. See **PHARMACY**, *Index*.

TEREBINTHUS, in botany. See **PISTACIA**.

* **TO TEREBRATE**. *v. a.* [*terebro*, Lat.] To bore; to perforate; to pierce.—Consider the threefold effect of Jupiter's trifork, to burn, discuss, and *terebate*. *Brown*.—Earth-worms are completely adapted to their way of life, for *terebating* the earth, and creeping. *Derham*.

* **TEREBRATION**. *n. s.* [from *terebate*.] The act of boring or piercing.—*Terebration* of trees makes them prosper better; and also it maketh the fruit sweeter and better. *Bacon*.

TEREBRATULÆ, in zoology, or rather ichthyology, a species of *Anomia*, which have been supposed not to exist now but as petrified shells. (See **ANOMIA**, N° I, II.) This, however, is a mistake. The *nomia* is an inhabitant of every region, and has existed in every age. See **Plate**

Rf

CCCXXIX.

CCCXXIX. where *fig. 1.* is a front view of a terebratura of middle size. *Fig. 2.* is a view of the internal structure—A A, laminae of the superior case—B B, laminae of the inferior—C, the stomach—D, the anus—E E, the manteau—F, the ophagus.

TEREDO, in entomology, a genus of *termes* belonging to the order of *testacea*. The animal is a terebella; there are two valves, calcareous, hemispherical, and cut off before, and two lanceolated. The shell is tapering, bending, and capable of penetrating wood. There are only 3 species; viz.

1. **TEREDO CLAVA**, the nail worm.

2. **TEREDO NAVALIS**, the ship worm, has a very slender-smooth cylindrical shell, inhabits the Indian seas, whence it was imported into Europe. It penetrates easily into the roughest oak-planks, and produces dreadful destruction to the ships by the holes it makes in their sides; and it is to avoid the effects of this insect that vessels require sheathing. The head of this creature is coated with a strong armour, and furnished with a mouth like that of the leech; a little above this it has two horns which form a kind of continuation of the shell; the neck is furnished with several strong muscles; the rest of the body is only covered by a very thin and transparent skin, through which the motion of the intestines is plainly seen by the naked eye. This creature is wonderfully minute when newly excluded from the egg, but it grows to the length of 4 or 6 inches, and sometimes more. When the bottom of a vessel, or any piece of wood which is constantly under water, is inhabited by these worms, it is full of small holes; but no damage appears till the outer parts are cut away: Then their shelly habitations come into view; in which there is a large space for inclosing the animal, and surrounding it with water. There is an evident care in these creatures never to injure one another's habitations; by these means each case or shell is preserved entire. Dissection has shown that every individual has the parts of both sexes, and is therefore supposed to propagate by itself.

3. **TEREDO UTRICULUS**, the bottle worm.

TEREDON, in ancient geography, a town on the coast of the Arabic Gulf. *Dion Perieg.*

TERENCE. See **TERENTIUS**.

TERENTIA, 1. the wife of Cicero, and mother of his son Marcus and his daughter Tulliola. While the orator was in Asia, she behaved so ill, that he divorced her. She afterwards married his enemy Sallust. 2. *Terentia*, the wife of Mæcenæ, who behaved equally ill to that great man.

TERENTIANUS. See **MAURUS**.

TERENTIUS AFRÆ, Publius, or **TERENCE**, a celebrated comic poet of ancient Rome, born at Carthage in Africa. He was slave to Terentius Lucanus the senator; who gave him his liberty on account of his wit, his good mien, and great abilities. Terence, on his becoming a freed man, applied himself to the writing of comedies. Terence died while on a voyage into Greece, about the 15th year before the Christian era. There are six of his comedies extant, of which the best editions are the *Æzevii* one 1631, 12mo; that *cum integris notis Donati et selectis variorum*, 1686,

8vo; *Wetterhoviuss's*, in two vols 4to, 1736; and that of Bentley the same year, 4to. A very good English translation was published in 4to, 1768, by Mr Colman.

TERESA, a town of Spain, in Valentia, 10 miles NW. of Segerba.

TERESSA, one of the **NICOBAR** Islands. Lon. 93. 40. E. Lat. 8. 16. N.

TERETES. See **MEDICINE**. § 1187, 1194.

TEREUS, king of Thrace. See **PHILOMELA**, N° 2.

TEREFOWA, a town of Africa, in Tunis, 120 miles S. of Tunis.

TERGA, a town of Morocco, on the *Morbeya*; 90 miles N. of Morocco.

* **TERGEMINUS**. *adj.* [*tergeminus*, Latin.] Threefold.

* **TERGIVERSATION**. *n. s.* [*tergum* and *verso*, Latin.] 1. Shift; subterfuge; evasion.—Writing is to be preferred before verbal conferences, as being freer from passions and tergiversations. *Bramhall.* 2. Change; fickleness.—The colonel, after all his tergiversations, lost his life in the king's service. *Clarendon.*

TERGOES. See **GOES**, N° 1.

TERGOLA, a river of Maritime Austria, in the *Vicentino*, which runs into the *Bachiglione*, and the united streams afterwards fall into the Po.

TERGOSYL, a town of Walachia, on the Syl; 40 miles NW. of Brancovan, and 68 S. of *Hermanstadt*.

TERGOVISTA, a city of European Turkey, the capital of Walachia. The *Waywode* has a palace in it. It is 4 miles SE. of *Hermanstadt*, and 180 NE. of *Belgrade*.

TERHEY, a town of Holland, in the dep. of the Delft, 10 miles W. of Delft.

TERIGUM, an ancient town of Macedonia.

TERINA, an ancient town of Italy, in the country of the *Bruttii*.

TERIOLI, an ancient town of Italy, in Helvetia, now called **TIROL** or **TYROL**.

(1.) **TERKI**, a town of Asia, in Circassia, governed by a prince who is dependent upon Russia; this being one of the chief frontier towns of the Russian empire towards Persia. It is seated on the river (N° 2.) in a marshy soil, one mile from the Caspian Sea, and 125 E. of Teflis. Lon. 47. 50. E. Lat. 43. 22. N.

(2.) **TERKI**, a river of Circassia, near the above town.

TERKIRI, a lake of Asia, in Thibet, 180 miles in circumference. Lon. 109. 0. E. Ferro. Lat. 32. 0. N.

TERKUL, a river of Russia, in the province of Caucasus, which runs into the Ural at Uraisk.

TERLIZZI, a town of Naples, in the province of Bari; 7 miles SE. of Trauni.

TERLON, a river of France, which runs into the Sambre, 3 miles below Landrecy.

(1.) * **TERM**. *n. s.* [*terminus*, Lat.] 1. Limit; boundary.—Corruption is a reciprocal to generation; and they two are as nature's two terms or boundaries, and the guides to life and death. *Bacon.* 2. [*Terme*, Fr.] The word by which a thing is expressed. A word of art.—To apply notions philosophical to plebeian terms, or to lay where

where the notions cannot be fitly reconciled, that there wanteth a *term* or nomenclature for it, be but shifts of ignorance. *Bacon*.—We have expressed in their plain and proper *terms*. *Burnet*.—In painting, the greatest beauties cannot always be expressed for want of *terms*. *Dryden*.—Had the Roman tongue continued vulgar, it would have been necessary, from the many *terms* of art required in trade and in war, to have made great additions to it. *Swift*. 3. Word; language.—

I would invent as bitter searching *terms*.
As curst, as harsh, as horrible to hear. *Shak*.
God to Satan first his doom apply'd,
Though in mysterious *terms*. *Milton*.
4. Condition; stipulation.—
Well, on my *terms* thou wilt not be my heir.
Dryden.
Live though unhappy, live on any *terms*.
Dryden.

—Did religion bestow heaven, without any *terms* or conditions, indifferently upon all, there would be no infidel. *Bentley*.—We flattered ourselves with reducing France to our own *terms* by the want of money. *Addison*. 5. [*Termine*, old Fr.] Time for which any thing lasts; a limited time.—
I am thy father's spirit,
Doom'd for a certain *term* to walk the night.

Shak.
Why should Rome fall a moment ere her time?

No: let us draw her *term* of freedom out
In its full length, and spin it to the last. *Addison*.
6. (In law.) The time in which the tribunals are open to all that list to complain of wrong, or to seek their right by course of law; the rest of the year is called vacation. Of these *terms* there are four in every year, during which matters of justice are dispatched: one is called Hilary *term*, which begins the 23d of January, or, if that be Sunday, the next day following, and ends the 21st of February; another is called Easter *term*, which begins 18 days after Easter, and ends the Monday next after Ascension day; the third is Trinity *term*, beginning the Friday next after Trinity Sunday, and ending the Wednesday fortnight after; the fourth is Michaelmas *term*, beginning the 6th of November, or, if that be Sunday, the next day after, and ending the 28th of November. *Cowley*.
—The *term* suiters may speed their business; for the end of these sessions delivereth them space enough to overtake the beginning of the *terms*.
Carew.—

Too long vacation hasten'd on his *term*.
Milton.

—Those men employed as justices daily, in *term* time, consult with one another. *Hale*.—

What are these to those vast heaps of crimes
Which *terms* prolong? *Dryden*.

(1.) *TERM*, in law (§ 1. *def*. 5), is generally taken for a limitation of time or estate; as, a lease for term of life or years. *Term* is more particularly used for that time wherein our courts of justice are open; in opposition to which, the rest of the year is called *vacation*.

(2.) *TERM*, in grammar, denotes some word or expression in a language. The word *term* [from *terminus*] is borrowed metaphorically, by the gram-

marians and philosophers, from the measurers or surveyors of lands: as a field is defined and distinguished by its *termini* or limits, so is a thing or matter spoken of by the word or *term* it is denoted by.

(4.) *TERM* IN THE ARTS, or *TERM* of *Art*, is a word which, besides the literal and popular meaning which it has or may have in common language, bears a further and peculiar meaning in some art or science.

(5.) The *TERMS* in law above enumerated (§ 1. *def*. 6.) are not observed by the high court of parliament, the chancery, and inferior courts; only the courts of king's bench, common-pleas, and exchequer, which are the highest courts at common law. These *terms* are supposed by Mr Selden to have been instituted by William the Conqueror; but Sir H. Spelman hath shown, that they were gradually formed from the canonical constitutions of the church; being no other than those leisure seasons of the year which were not occupied by the great festivals or fasts, or which were not liable to the general avocations of rural business. Throughout all Christendom, in very early times, the whole year was one continued term for hearing and deciding causes.

(6.) *TERMS, CAMBRIDGE*. Lent term begins January the 14th, and ends Friday before Palm Sunday. Easter term begins the Wednesday after Easter week, and ends the week before Whitsunday. Trinity term begins the Wednesday after Trinity Sunday, and ends the Friday after the commencement, or 2d of July. Michaelmas term begins October the 10th, and ends December the 16th.

(7.) *TERMS, IRISH*. In Ireland the *terms* are the same as at London, except Michaelmas term, which begins October the 12th, and adjourns to November the 3d, and thence to the 6th.

(8.) *TERMS, OXFORD*. Hilary or Lent term begins January 14th, and ends the Saturday before Palm Sunday. Easter term begins the tenth day after Easter, and ends the Thursday before Whitsunday. Trinity term begins the Wednesday after Trinity Sunday, and ends after the 2d, or 5th of July, sooner or later, as the vice-chancellor and convocation please. Michaelmas term begins October the 10th, and ends December the 17th.

(9.) *TERMS, SCOTTISH*. The court of session has two terms, the winter and summer. The winter begins on 11th November, and ends 11th March, only there is a recess of three weeks at Christmas. The summer term commences 12th May, and ends 11th July. The court of exchequer has four terms. 1. Candlemas term begins 15th January, and ends 3d February. 2. Whitsuntide term begins 12th May, and ends 3d June. 3. Lammas term begins 17th June, and ends 5th July. 4. Martinmas term begins 24th November, and ends 20th December.

* To *TERM*. *v. a.* [from the noun.] To name; to call.—Men *term* what is beyond the limits of the universe imaginary space, as if no body existed in it. *Locke*.

* *TERMAGANCY*. *n. f.* [from *termagant*.] Turbulence; tumultuousness.—By a violent *termagancy*

ingenuity of temper, he may never suffer him to have a moment's peace. *Barker.*

(1.) * **TERMAGANT.** *adj.* [*tyr* and *magin*, Saxon, *eminently powerful*] 1. Turbulent; turbulent.—"Twas time to counterfeit, or that hot *termagant* Scut had paid me scot and lot too. *Shak.* 2. Quarrelsome; scolding; furious.—The eldest was a *termagant*, imperious, prodigal, prodigal wench. *Arbutnot.*

(2.) * **TERMAGANT.** *n. f.* A scold; a brawling turbulent woman. It appears in *Shakespeare* to have been anciently used of men. It was a kind of heathen deity extremely vociferous and tumultuous in the ancient farces and puppet-shows.—I could have such a fellow whipt for overdoing *termagant*: it outherods Herod. *Shak.*—

Zeal's a dreadful termagant.

That teaches faints to tear and rant. *Hudibras.*
—She threw his periwig into the fire: Well, said he, thou art a brave *termagant*. *Tatler.*—

The sprites of fiery *termagants* in flame

Mount up. *Pope.*

* **TERMER.** *n. f.* [from *term*.] One who travels up to the term.—

Nor have my title leaf on posts or walls,

Or in cleist sticks, advanced to make calls

For *termers*, or some clerk-like serving man.

Ben Jonson.

TERMES, in entomology, a genus of insects belonging to the order of *aptera*, according to *Linnaeus*; but by others it is arranged more properly under the *neuroptera*. The mouth has two horny jaws; the lip is horny and quadrid, the laciniae being linear and acute; there are four feelers, which are equal and filiform. The antennae are moniliform in most species, and the eyes two. There are eight species, according to *Gmelin*; viz.

1.—8. **TERMES ARDA, CAPENSIS, DESTRUCTOR, DIVINATORIUS, FATALIS, FATIDICUS, MORDAX, and PULSATORIUS.** But as *Gmelin* has followed the classification of *Linnaeus* in arranging the *termes* under the order of *aptera*, it is not improbable that several of those which are mentioned as species of the *termes* may belong to a different genus. It will be sufficient here to describe the *fatalis*, which we are enabled to do from very accurate information.

TERMES FATALIS BELlicosus, or the WHITE ANT, is of a yellow colour above; the wings also yellowish; the costa is ferruginous; the stemmata are near the eyes, the central point being somewhat prominent. Of the white ant we have a very curious, and interesting description in the *Philos. Transf.* for 1781, by Mr Henry Smethman of Clement's Inn. According to this account, the works of these insects surpass those of the bees, wasps, beavers, and other animals, as much as least as those of the most polished European nations excel those of the least cultivated savages. In the interior construction of their habitations, they appear greatly to exceed any work of human construction. The most striking parts of these structures are, the *royal apartments*, the nurseries, magazines of provisions, arched chambers and galleries, with their various communications; the ranges of Gothic-shaped arches, projected, and not formed by mere excavation, some of which are two or three feet high, but which diminish

rapidly, like the arches of aisles in perspective; the various roads, sloping staircases, and bridges, consisting of one vast arch, and constructed to shorten the distance between the several parts of the building, which would otherwise communicate only by winding passages. In some parts near Senegal, their number, magnitude, and closeness of situation, make them appear like the villages of the natives. But these and many other curious instances of the great sagacity and powers of these insects cannot be understood without viewing the plates in which their feeble frames, and comparatively stupendous works, are delineated. See *Phil. Transf.* above referred to. There are three distinct ranks among them. These are, first, the *labourers*, or working insects; next the *soldiers*, or fighting order, who do no kind of labour, and are about twice as long as the former, and equal in bulk to about 15 of them; and lastly, the winged or perfect insects, which may be called the *nobility or gentry* of the state, for they neither labour nor fight, being scarcely capable even of self-defence. These only are capable of being elected *kings or queens*; and nature has so ordered it, that they emigrate within a few weeks after they are elevated to this state, and either establish new kingdoms, or perish within a day or two." The first order, the working insects, are most numerous, being in the proportion of 100 to 1 of the soldiers. In this state they are about $\frac{1}{2}$ of an inch long, and 25 of them weigh about a grain; so that they are not so large as some of our ants. See *Plate CCCXXIX. fig. 1. and 2.* The second order, or *soldiers*, have a very different form from the labourers, and have been by some authors supposed to be the males, and the former neuter; but they are, in fact, the same insects as the foregoing, only they have undergone a change of form, and approached one degree nearer to the perfect state. They are now much larger, being half an inch long, and equal in bulk to 15 of the labourers, (*fig. 3. and 4.*) The third order, or the insect in its *perfect* state, varies its form still more than ever. The head, thorax, and abdomen, differ almost entirely from the same parts in the labourers and soldiers; and besides this, the animal is now furnished with four fine large, brownish, transparent wings, with which it is, at the time of emigration, to wing its way in search of a new settlement. It differs so much from the other two, that they have not hitherto been supposed to belong to the same community. In fact, they are not to be discovered in the nest till just before the commencement of the rainy season; when they undergo the last change, which is preparative to the formation of new colonies. They are equal in bulk to two soldiers, and about 30 labourers (see *fig. 5.*); and by means of the wings with which they are furnished, they roam about for a few hours; at the end of which time they lose their wings, and become the prey of innumerable birds, reptiles, and insects: while probably not a pair out of many millions of this unhappy race get into a place of safety, fulfil the first law of nature, and lay the foundation of a new community. In this state many fall into the neighbouring waters, and are eaten with avidity by the Africans. The author found them delicate, nourishing, and wholesome, with-

out

not fauce or other help from cookery than merely roasting them in the manner of coffee. The few fortunate pairs who happen to survive this annual massacre and destruction, are represented by the author as being casually found by some of the labourers that are continually running about on the surface of the ground, and are elected *kings* and *queens* of new states. Those who are not so elected and preserved certainly perish, and most probably in the course of the following day. By these industrious creatures the king and queen elect are immediately protected from their innumerable enemies, by inclosing them in a chamber of clay, where the business of propagation soon commences. Their "voluntary subjects" then busy themselves in constructing wooden nurseries, or apartments entirely composed of wooden materials, seemingly joined together with gums. Into these they afterwards carry the eggs produced from the queen, lodging them there as fast as they can obtain them from her. After impregnation, a very extraordinary change begins to take place in her person, or rather in her abdomen only. It gradually increases in bulk, and at length becomes of such an enormous size, as to exceed the bulk of the rest of her body 1500 or 2000 times. She becomes 1000 times heavier than her consort, and exceeds 20,000 or 30,000 times the bulk of one of the labourers. In this state, the matrix has a constant peristaltic or undulating motion; the consequence of which is (as the author has counted them) (fig. 8.) the protrusion of 80,000 eggs in 24 hours. Fig. 1. Plate CCCXXIX. represents a labourer. Fig. 2. a labourer magnified. Fig. 3. a soldier. Fig. 4. a soldier, forceps, and part of his head magnified. Fig. 5. a perfect termes bellicosus. Fig. 6. the head of a perfect insect magnified. Fig. 7. a head with Remmata magnified. Fig. 8. a queen. Fig. 9. a king. Fig. 10. is a section of the building raised by these insects, as it would appear on being cut down through the middle from the top a foot lower than the surface of the ground. AA, an horizontal line from A on the left, and a perpendicular line from A at the bottom, will intersect each other at the royal chamber. The darker shades near it are the empty apartments and passages, which it seems are left so for the attendants on the king and queen, who, when old, may require near 100,000 to wait on them every day. The parts which are the least shaded and dotted are the nurseries, surrounded, like the royal chamber, by empty passages on all sides, for the more easy access to them with the eggs from the queen, the provision for the young, &c. N. B. The magazines of provisions are situated without any seeming order among the vacant passages which surround the nurseries. B, the top of the interior building, which often seems, from the arches carrying upward, to be adorned on the sides with pinnacles. C, the floor of the area or nave. DDD, the large galleries which ascend from under all the buildings spirally to the top. EE, the bridges.

* TERMINABLE. *adj.* [from *terminate*.] Limitable; that admits of bounds.

(1.) TERMINALIA, in antiquity, feasts celebrated by the Romans in honour of the god *TERMINUS*.

(II.) TERMINALIA, in botany, a genus of plants belonging to the class of *polygamia*, and order of *monacia*. The male calyx is quinquepartite; there is no corolla; the stamina are 10. The hermaphrodite flower is the same with that of the male; there is one style; the fruit, which is a drupe or plum, is below, and shaped like a boat. There are two species; viz.

1. TERMINALIA AUGUSTIFOLIA, the *narrow-leaved, or benzoin plant*; but though it has this name, it does not yield benzoin. See *STRYAX*, N° 1.

2. TERMINALIA CATAPPA.

(1.) * To TERMINATE. *v. a.* [*termino*, Lat. *terminer*, Fr.] 1. To bound; to limit.—Bodies that are solid, separable, *terminated*, and moveable, have all sorts of figures. *Locke*. 2. To put an end to: as, to terminate any difference.

(2.) * To TERMINATE. *v. n.* To be limited; to end; to have an end; to attain its end.—These are to be reckoned with the heathen, with whom you know we undertook not to meddle, treating only of the scripture-election *terminated* in those to whom the scripture is revealed. *Hammond*.—The greatest argument by which natural reason evinces a God: it being necessary, in such a chain of causes, to ascend to, and *terminate* in, some first; which should be the original of motion, and the cause of all other things, but itself be caused by none. *South*.—The wisdom of this world, its designs and efficacy, *terminate* on this side heaven. *South*.—

Ere I the rapture of my wish renew,

I tell you then, it *terminates* in you. *Dryden*.

* TERMINATION. *n. f.* [from *terminate*.]

1. The act of limiting or bounding. 2. Bound; limit.—Its earthly and salinous parts are so exactly resolved, that its body is left imporous, and not discreted by atomical terminations. *Brown*. 3. End; conclusion. 4. Last purpose.—It is not an idol *ratione termini*, in respect of termination; for the religious observation thereof is referred and subservient to the honour of God and Christ: neither is it such *ratione modi*, for it is kept holy by the exercise of evangelical duties. *White*. 5. [In grammar; *terminatio*, Lat. *terminalison*, Fr.] End of words as varied by their significations.—Those rude heaps of words and terminations of an unknown tongue would have never been so happily learnt by heart without some smoothing artifice. *Watts*. 6. Word; term. Not in use.—She speaks poniards, and every word stabs; if her breath were as terrible as her terminations, there were no living near her; she would infect to the north star. *Shak*.

(1.) TERMINI, in architecture, denotes a kind of statues or columns, adorned on the top with the figure of a man's, woman's, or satyr's head, as a capital; and the lower part ending in a kind of sheath or scabbard. *Suidas* thinks they should rather be called *bermetes* than *termini*, as they originated from the Athenian *bermetes*, which were used as ornaments, and not from the Roman *termini*, which were used as land-marks. See *HERMES*, N° 3.

(2.) TERMINI, in geography, a town of Sicily, in the Valley of Demona, on the N. coast, with a strong castle. It has a fine aqueduct, and several handsome

handsome buildings, and is seated at the mouth of the river (N^o 3.) in a territory abounding with corn and wine, 10 miles SE. of Palermo. Lon. 13. 44. E. Lat. 38. 5. N.

(3.) **TERMINI**, a river of Naples, in the valley of Debona, which runs into the sea at the above town.

(4.) **TERMINI**, or **TERMOLI**, a town of Naples, in the province of Capitanata, with a bishop's see, 57 miles W. of Vicke, 32 SE. of Lanciano, and 70 NE. of Naples. Lon. 15. 20. E. Lat. 41. 59. N.

* **TERMINTHIUS**, *n. f.* [*τεμινθίος*] A tumour. — *Terminthus* is of a blackish colour; it breaks, and within a day the pustule comes away in a scough.

TERMINUS, in Pagan worship, an ancient deity among the Romans, who presided over the stones or land marks, called **TERMINI**, which were held so sacred, that it was accounted sacrilege to move them; and as the criminal became devoted to the gods, it was lawful for any man to kill him. The worship of this deity was instituted by Numa Pompilius, who, to render land marks, and consequently the property of the people, sacred, erected a temple on the Tarpeian mount to **Terminus**.

TERMIOVA, a town of Maritime Austria, in Istria, 18 miles NE. of Pedena.

TERMITES. See **TERMES**.

* **TERMLESS**, *adj.* [from *term*.] Unlimited; boundless. — These betraying lights look not up towards *termless* joys. *Raleigh*. —

* **TERMLY**, *adv.* [from *term*.] Term by term; every term. — The fees or allowances are *termly* given to these deputies. *Bacon*. — The clerks are partly rewarded by that means also, besides that *termly* fee which they are allowed. *Bacon*.

TERMOLI. See **TERMINI**, N^o 4.

TERMUYDEN, a strong town of Holland, in the dep. of the Meuse and ci-devant province of Dutch Flanders, NE. of Sluys.

TERN, in ornithology. See **STERNA**.

TERNAI, the name given by Perouse to a very fine bay which he discovered on the coast of Tartary, in Lat. 45° 13' N. and in Lon. 135° 9' E. of Paris. The bottom is sandy, and diminishes gradually to six fathoms within a cable's length of the shore. The tide rises 5 feet; it is high water at 86. 15m. at full and change; and the flux and reflux do not alter the direction of the current at half a league from the shore.

(1.) * **TERNARY**, *adj.* [*ternaire*, Fr. *ternarius*, Lat.] Proceeding by threes; consisting of three.

(2.) * **TERNARY**. **TERNION**, *n. f.* [*ternarius*, Lat. *ternio*, Lat.] The number three. — These 19 consonants stood in such confused order, some in *ternaries*, some in pairs, and some single. *Holder*.

TERNATE, the most northerly of the **MOLUCCAS**, or *Clove Islands* in the East Indies. It abounds in cocoa nuts, bananas, citrons, oranges, almonds, and other fruits proper to the torrid zone; but cloves are the most valuable produce. It is in the possession of the Dutch. Malava is the capital. Lon. 129. 0. E. Lat. 8. 0. N.

TERNAVASSO, a town of the French empire, in the department of the Po, and ci-devant province of Piedmont, 6 miles NE. of Carmagnola, and 8 S. of Chieri.

TERNBERG, a mountain of Austria, near the Enns, 6 miles S. of Steyr.

TERNEUSE, a strong town and fort of Holland, in the department of the Meuse, seated on the W. branch of the Scheldt, built about 1583, by the Prince of Orange; 12 miles SE. of Flushing, and 25 NW. of Antwerp, and 5 from Axel. Lon. 3. 45. E. Lat. 51. 20. N.

TERNI, a town of Italy, in the Pope's territories, and in the duchy of Spoleto, with a bishop's see. It is but a small place; though there are very beautiful ruins of antiquity, it having been a very considerable Roman colony. It is situated on the top of a high mountain, and on the N. of it are fields which are extremely fertile. Lon. 12. 40. E. Lat. 42. 24. N.

* **TERNION**. See **TERNARY**, § 2.

TERNOIS, a river of France, which runs into the Canche, near Heidin.

TERNOSKAIA, a town of Russia, in the country of the Cossacs, 136 miles ENE. of Azoph.

(1.) **TERNOVA**, a town of European Turkey in Bulgaria, anciently one of the strongest in the country, and the residence of the princes; but now much decayed, thinly peopled, and the fortifications in bad repair. It is the residence of the Greek archbishop of Bulgaria; and is seated on a mountain near the Jenera, 95 miles NE. of Sophia, 200 NW. of Constantinople, and 88 NW. of Adrianople. Lon. 26. 2. E. Lat. 43. 1. N.

(2.) **TERNOVA**, another town of European Turkey in Thessaly, seated on the Peneus, 5 miles WNW. of Larissa. It is a large town, and has a good trade.

TERNSTROMIA, in botany, a genus of plants belonging to the class of *polyandria*, and order of *monogynia*. The calyx is monophyllous and quinquepartite: the corolla is monopetalous, quinquepartite or sixpartite, globular, and bell-shaped: the berry is dry, bilocular, and valveless. There is only one species, viz.

TERNSTROMIA MERIDIONALIS.

TERPANDER, a celebrated Greek poet and musician. The Oxford marbles tell us that he was the son of Dardeneus of Lesbos, and that he flourished in the 38th year of these records; which nearly answers to the 27th Olympiad, and 61st year B. C. The marbles inform us likewise, that he taught the *nomos*, or airs, of the lyre and flute, which he performed himself upon this last instrument, in concert with other players on the flute. Several writers tell us that he added three strings to the lyre, which before his time had but four. See **LYRE**, § 3. Among the many signal services which Terpander is said to have done to music, none was of more importance than the notation that is ascribed to him for ascertaining and preserving melody, which before was traditional, and wholly dependent on memory. The invention indeed, of musical characters has been attributed by Aëpius and Gaudentius, two Greek writers on music, and upon their authority by Boethius, to Pythagoras, who flourished full two centuries after Terpander. But Plutarch gave the invention to Terpander and so does Clemens Alexandrinus. Plutarch says, "no other proof need be urged of the excellence of Terpander in the art of playing upon the cithara, than what is given by the register

register of the Pythic games, from which it appears that he gained four prizes successively at those solemnities. Of the works of this poet only a few fragments are now remaining.

TERPSICHORE, in the mythology, one of the Nine Muses. She presided over DANCING, of which she was reckoned the inventress. In painting, she is drawn with a musical instrument in her hand, and crowned with laurel. *Juv. vii. v. 35.*

(1.) TERRA. [Lat. the *Earth*.] in the mythology, the wife of COELUS, and mother of SATURN and OPS, or TELLUS. See OPS and TELLUS.

(2.) TERRA AUSTRALIS INCOGNITA, a name for a large unknown continent, supposed to lie towards the South Pole, and which for a long time was sought after by navigators. The voyages of Captain Cook seem to have determined that no such continent exists, unless in polar latitudes, to which access is impossible.

(3.) TERRA DEL FUEGO. See FUEGO, N^o 2.

(4.) TERRA DI LAVORA. See LAVORA.

(5.) TERRA FIRMA, in geography, is sometimes used for a continent, in contradistinction to an island.

(6.) TERRA FIRMA, otherwise called NEW CASTLE, or CAST ELLA DEL ORO, a country of America, bounded on the north by the North Sea and part of the Atlantic Ocean, by the same sea and Guiana on the E. by the country of the Amazons and Peru on the S. and by the Pacific Ocean and Veragua on the W. It lies between 62° and 83° of W. lon. and between the equator and 12° of lat. N. being upwards of 1200 miles long from E. to W. and 800 broad from N. to S. It had the name of *Castella del Oro* from the quantities of gold found in the districts of Uraba and other parts; and was first discovered by the celebrated Columbus in his third voyage. The climate is neither pleasant nor healthy, the inhabitants one part of the year being scorched by the most intense and burning heat, and the other almost drowned with perpetual floods of rain, pouring from the sky with such violence as if a general deluge was to ensue. In so large a tract of country the soil must necessarily vary. Accordingly, in some parts it is a barren sand, or drowned mangrove land, that will scarce produce any kind of grain; in others it yields Indian corn, balms, gums, and drugs, almost all manner of fruits as well of Old as of New Spain, sugar, tobacco, Brazil wood, and several other kinds of dyeing woods; a variety of precious stones, particularly emeralds and sapphires; venison and other game. The plantations of cacao, or chocolate nuts, in the district of the Caracacs, are esteemed the best in America. The mountains abound with tigers, and, according to some, with lions, and great numbers of other wild beasts. The rivers, seas, and lakes, teem with fish, and also with alligators; and the bowels of the earth were once furnished with the richest treasures, now almost exhausted. The same may be said of the pearl-fisheries on the coast, which are far from being so profitable now as formerly. Terra Firma is a very mountainous country. Terra Firma Proper, in particular, consists of prodigious high mountains, and deep valleys flooded more than half the year. The

mountains in the provinces of Carthagena and St Martha, according to Dampier, are the highest in the world, being seen at sea 200 miles off; from these run a chain of hills of almost equal height, quite through South America, as far as the Straits of Magellan, called the *Cordilleras des Andes*. (See ANDES and CORDILLERAS.) The province of Venezuela also, and district of Caracacs, the most northerly parts of South America, are almost a continued chain of hills, separated by small valleys, pointing upon the coast of the North Sea. A chain of barren mountains, almost impassable, runs through the province of Papayan from N. to S. some whereof are volcanoes; but towards the shores of the Pacific Ocean it is a low country, flooded great part of the year. The principal rivers of Terra Firma are, the Darien, Chagres, Santa Maria, Concepcion, Rio Grande or Magdalena, Maricaribo, and Oroonoko. Terra Firma contains the provinces of Terra Firma Proper or DARIEN, of Carthagena, St Martha, Rio de la Hacha, Venezuela, Comana, New Andalusia or Paria, New Granada, and Popayan.

(7.) TERRA FIRMA PROPER lies in the form of a crescent, about the spacious bay of Panama, being the isthmus which joins South and North America; and extending in length between the two seas 300 miles, but in breadth, where the isthmus is narrowest, only 60. Here are found gold mines, gold sands, and fine pearls; and though the land is generally rough, there are some fruitful valleys, watered by rivers, brooks, and springs. The chief places are Panama and Porto Bello. See DARIEN.

(8.) TERRA JAPONICA, more commonly called *catechu*, a drug formerly supposed to be an extract from the seeds of the areca catechu, but lately discovered by Mr Kerr, assistant surgeon to the civil hospital at Bengal, to be obtained from the *mimosa catechu*. Mr Kerr gives the following account of the manner in which the extract is made; "After felling the trees, the manufacturer carefully cuts off all the exterior white part of the wood. The interior coloured wood is cut into chips, with which he fills a narrow-mouthed unglazed earthen pot, pouring water upon them until he sees it among the upper chips; when this is half evaporated by boiling, the decoction, without straining, is poured into a flat earthen pot, and boiled to one third part; this is set in a cool place for one day, and afterwards evaporated by the heat of the sun, stirring it several times in the day. When it is reduced to a considerable thickness, it is spread upon a mat or cloth, which has previously been covered with the ashes of cowdung; this mass is divided into square or quadrangular pieces by a string, and completely dried by turning them frequently in the sun until they are fit for sale." This extract is called *cut* by the natives, by the English *cutch*, and by different authors *terra japonica*, *catechu*, *khaath*, *cate*, *cachou*, &c. "In its purest state it is a dry pulverable substance, outwardly of a reddish colour, internally of a shining dark brown, tinged with a reddish hue; in the mouth it discovers considerable astringency, succeeded by a sweetish mucilaginous taste." According to Lewis, "it dissolves almost totally in water, excepting the impurities, which are usually of the sandy kind, and amounting

ing in the specimens I examined to about one 8th of the mass. Of the pure matter, rectified spirit dissolves about 7-8ths into a deep red liquor: the part which it leaves undissolved is an almost insipid mucilaginous substance." CATECHU may be usefully employed for most purposes where an astringent is indicated, provided the most powerful be not required. But it is particularly useful in alvine fluxes; and where these require the use of astringents, we are acquainted with no one equally beneficial. Besides this, it is employed also in uterine profluvia, in laxity and debility of the viscera in general, in catarrhal affections, and various other diseases where astringents are necessary. It is often suffered to dissolve leisurely in the mouth, as a topical astringent for laxities and exulcerations of the gums, for aphthous ulcers in the mouth, and similar affections. This extract is the basis of several fixed formulæ in our pharmacopœias, particularly of a tincture and an electuary; but one of the best forms under which it can be exhibited, is that of a simple infusion in warm water, with a proportion of cinnamon or cassia; for it is thus at once freed from its impurities, and improved by the addition of the aromatic.

(9.) TERRA MAGELLANICA. See MAGELLANIA and PATAGONIA.

(10.) TERRA NUOVA, an ancient town of Sardinia, on the E. coast, at the bottom of a gulf so named. Lon. 9. 35. E. Lat. 51. 3. N.

(11.) TERRA NUOVA, a town of Naples in Calabria Citra, 9 miles N. of Bisignano.

(12.) TERRA NUOVA, a sea-port town of Sicily in the valley of Demona, seated on the coast of a bay of the Mediterranean, on the site of the ancient city of Gela. It was founded about A. D. 1250, by the emp. Frederick II. It contains about 7000 inhabitants, and lies 6 miles NW. of Jaci.

(13.) TERRA PONDEROSA, i. e. *ponderous Earth*, in the old system of mineralogy, the name formerly given to what is now called BARYTES; See CHEMISTRY, *Index*; and MINERALOGY, *Part II. Chap. III. § 1.*

(14.) TERRA POZZOLANA, or } See PUZZOLA-

(14.) TERRA PUZZOLANA, } NA.

(15.) TERRA SIGILLATA LEMNIA. See AD-ANSONIA.

(1.) * TERRACE. *n. s.* [*terrace*, Fr. *terraccia*, Italian.] 1. A small mount of earth covered with grass.—He made her gardens not only within the palaces, but upon *terrasses* raised with earth over the arched roofs, planted with all sorts of fruits.

Temple. 2. A balcony; an open gallery.—

Fear broke my slumbers. I no longer stay,

But mount the terrace, thence the town survey.

Dryden.

(2.) A TERRACE is a walk or bank of earth, raised in a garden or court to a due elevation for a prospect. The name is also given to the roofs of houses that are flat, and whereon we may walk.

* To TERRACE. *v. a.* [from the noun.] To open to the air or light.—The reception of light into the body of the building must now be supplied, by *terracing* any story which is in danger of darkness. *Watson.*

Clermont's *terrac'd* height and Esther's groves.

Thomson.

TERRACINA, an ancient city of Italy, in the Pope's territory, in the Campagna of Rome, with a bishop's see. It was anciently called ANXUR, and was the capital of VOLSCI. See ANXUR and TERRACINA. Its principal church was originally a temple of Jupiter, who was supposed to have a great partiality for the town, and is therefore styled ANXURUS, by Virgil. It is seated on the sea-coast, on the side of a mountain, 46 miles SE. of Rome. Lon. 13. 15. E. Lat. 41. 24. N.

TERRÆ FILIUS, *Son of the Earth*, a student of the university of Oxford, formerly appointed in public acts to make satirical and jesting speeches against the members thereof, to tax them with any growing corruptions, &c.

TERRANTONA, a town of Spain in Arragon; 8 miles SE. of Ainsa.

TERRAON, or TORRAON, a town of Portugal, in the province of Alentejo; 24 miles NW. of Beja.

(1.) * TERRAQUEOUS. *adj.* [*terra* and *aquus*, Lat.] Composed of land and water.—The *terraqueous* globe is, to this day, nearly in the same condition that the universal deluge left it. *Woodward.*

(2.) TERRAQUEOUS GLOBE, a name given to the EARTH, or WORLD we inhabit, as consisting of land and water. To this article we made a reference from the article EARTH, for a view of the various theories that have been formed by men of learning and genius, who have indeed indulged their fancy very much with regard to the work of CREATION. Upon this subject no writer has given more scope to his unbridled fancy, than Dr Burnet in his celebrated *Theory of the Earth*, but as that system is entirely conjectural, and is long ago entirely exploded, we think it quite unnecessary to load our work with any view of it.

TERRAS, or TRAAS, in mineralogy, a species of argillaceous earth. It differs but little in its principles from puzzolana, but is much more compact and hard, porous and spongy. It is generally of a whitish yellow colour, and contains more heterogeneous particles, a spar, quartz, flint, &c. and something more of calcareous earth; it effervesces with acids, is magnetic, and fusible *per se*. When pulverized, it serves as a cement, like PUZZOLANA. It is found in Germany and Sweden. A species of red earth has been found in the parish of St Elizabeth in Jamaica, which turns out to be an excellent substitute for terras or puzzolana earth, and may therefore be of great value to the inhabitants of the West Indies. One measure of this earth, mixed with two of well slackened lime and one of sand form a cement that answers extremely well for building any dam or bridge, or any structure in water, for it will soon harden and become like a stone.

TERASSE, a town of France in the dep. of the Isere, and capital of a canton in the district of Grenoble, 13½ miles NNE. of Grenoble.

(1.) TERRASSON, Andrew, a French divine and priest of the Oratory, born at Lyons, and much admired for his eloquence. His sermons in 4 vols. 12mo are esteemed. He died at Paris in 1723.

(2.) TERRASSON, Abbé John, brother of Andrew, a French writer, born at Lyons in 1669. He distinguished himself in the dispute concerning Homer

Homer, between La Motte and Madam Dacier, by writing a *Dissertation contre l'Iliade*. He wrote a political and moral romance called *Selbos*, full of learning and philosophy; and another capital work of his is a French translation of *Diodorus Siculus*. He died in 1750.

(3.) TERRASSON, Anthony, a relation of the two preceding, was born at Paris in 1705. He was eminent as an advocate, and wrote *The History of Roman Jurisprudence*, in fol. for which he was appointed Cenfor Royal, and a professor in the royal College. He also wrote *Miscellanies of History, Literature, &c.* 12mo. He died in 1782.

(4.) TERRASSON, in geography, a town of France, and seat of a tribunal, in the dep. of the Dordogne, 6 miles NE. of Montignac, and 25½ E. of Périgueux. Lon. 13 58. E. of Ferro. Lat. 45. 7. N.

(1.) TERRE, *n. f.* [Fr. from *terra*, earth,] is used in the names of several minerals, as

(1.) *TERRE-BLUE. *n. f.* [*terre* and *bleu*, Fr.] A sort of earth.—*Terre-blue* is a light, loose, friable kind of lapis armenus. *Woodward.*

(3.) TERRE-PLEIN, or TERRE-PLAIN, in fortification, the top, platform, or horizontal surface of the rampart upon which the cannon are placed, and where the defenders perform their office. It is so called because it lies level, having only a little slope outwardly to counteract the recoil of the cannon. Its breadth is from 24 to 30 feet; being terminated by the parapet on the outer side, and inwardly by the inner talus.

(4.) *TERRE-VERTE. *n. f.* [French.] A sort of earth.—*Terre-verte* owes its colour to a slight admixture of copper. *Woodward.*—*Terre verte*, or green earth is light; it is a mean betwixt yellow ochre and ultramarine. *Dryden.*

(5.) TERRE VERTE, in the colour trade, green earth, is much used by painters, both singly for a good standing green, and in mixture with other colours. It is an indurated clay, of a deep bluish green colour, and is found in the earth, not in continued strata or beds, as most of the other earths are, but in large flat masses of different sizes, imbedded in other strata; these break irregularly in the cutting, and the earth is generally brought out of the pit in lumps of different sizes. It is of a fine regular and even structure, and not very hard. It is of an even and glossy surface, very smooth to the touch, and in some degree resembling the morochthus or French chalk, but adhering firmly to the tongue. It does not stain the hands in touching it; but being drawn along a rough surface, it leaves an even white line, with a greenish cast. It does not ferment with acids, and it burns to a dusky brown colour. It is dug in the island of Cyprus, and in many parts of France and Italy. That from the neighbourhood of Verona has been esteemed the best in the world; but of late there has been some dug in France that equals it. There is also an earth dug on Mendip Hills, in the sinking for coal, which, though wholly unobserved, is nearly, if not wholly, of equal value. When scraped, and the finer parts separated, it is ready to be made up with oil for the use of the painters, and makes the most true and lasting green of any body they use.

VOL. XXII. PART I.

TERRECREPANT. *adj.* Rebuking with severity. *Ash.*

(1.) TERREGLES, [from *terra ecclesie*, the church's land,] a parish of Scotland, in Kircudbrightshire, about 5 miles long and 3 broad, lying along the banks of the Nith, nearly opposite to the town of Dumfries. The surface is level and the soil in general a light loam or sand. It has relic of the castle of Terregles, an ancient seat of the Earls of Nithsdale, on the banks of the Nith at its junction with the Cluden, where are also situated the ruins of the ancient college of Linculneden. The population in 1790 was 510, the increase 113, since 1755.

(2.) TERREGLES, a small town in the above parish, 2 miles W. of Dumfries.

TERRELLA, or little earth, is a magnet turned of a spherical figure, and placed so as that its poles, equators, &c. do exactly correspond with those of the world.

*TERRENE. *adj.* [*terrenus*, Lat.] Earthly; terrestrial.—They think that the same rules of decency which serve for things done unto *terrene* powers, should universally decide what is fit in the service of God. *Hooker.*

Our *terrene* moon is now eclips'd. *Shak.*
—God set before him a mortal and immortal life, a nature celestial and *terrene*. *Raleigh.*

Over many a tract
Of heav'n they march'd, and many a province
wide,

Tenfold the length of this *terrene*. *Milton.*

*TERREOUS. *adj.* [*terreus*, Lat.] Earthy; consisting of earth.—There is but little similitude betwixt a *terreous* humidity and plantal germinations. *Glanville.*—According to the temper of the *terreous* parts at the bottom, variously begin intumescencies. *Brown.*

TERRESCHOW, a town of Bohemia, in the circle of Pilsen, 16 miles NE. of Pilsen.

*TERRESTRIAL. *adj.* [*terrestris*, Lat.] 1. Earthly; not celestial.—

Far passing the height of men *terrestrial*,
Like an huge giant of the Titan race. *Spenser.*
Terrestrial heav'n! danc'd round by other
heav'ns. *Milton.*

Thou brought'st Briareus with his hundred
hands,

So call'd in heav'n; but mortal men below
By his *terrestrial* name Ægeon know. *Dryden.*

2. Consisting of earth; terreous. Improper.—I did not confine these observations to land or *terrestrial* parts of the globe. *Woodward.*

*To TERRESTRIFY. *v. a.* [*terrestris* and *facio*, Lat.] To reduce to the state of earth.—Though we should affirm, that heaven were but earth celestified, and earth but heaven *terrestified*; or, that each part above had an influence on its divided affinity below; yet to single out these relations is a work to be effected by revelation. *Brown.*

*TERRESTRIOUS. *adj.* [*terrestris*, Lat. *terestre*, Fr.] Terreous; earthly; consisting of earth.—This variation proceedeth from *terrestrious* eminences of earth respecting the needie. *Brown.*

(1.) *TERRIBLE. *adj.* [*terribilis*, Fr. from *terribilis*, Lat.] 1. Dreadful; formidable; causing fear.

G g Was

Was this a face to be expos'd.
In the most terrible and nimble stroke

Of quick, crows lightning?

Fit love for gods,

Not terrible, though terror be in love. *Milton.*

Thy native Latium was thy darling care,

Prudent in peace, and terrible in war. *Prior.*

2. Great so as to offend: a colloquial hyperbole.—Being indispos'd by the terrible coldness of the season, he reported himself till the weather should mend. *Clarendon.*—I began to be in a terrible fear of him. *Tillotson.*

(1.) TERRIBLE, MONT, a department of the France, formed out of the ci-devant principality of MONACO and county of NICE; so named from

(3.) TERRIBLE MONT, a most dreadful precipitous mountain of France, in the above department.

* TERRIBLENESS. *n. f.* [from *terrible*.] Formidableness; the quality of being terrible; dreadfulness.—Having quite lost the way of nobleness, he strove to climb to the height of *terribleness*. *Sidney.*—Their *terribleness* is owing to the violent contention and laceration of the parts. *Sharp.*

* TERRIBLY. *adv.* [from *terrible*.] 1. Dreadfully; formidably; so as to raise fear.—

The polish'd steel gleams *terribly* from far.

Dryden.

2. Violently; very much.—The poor man squatted *terribly*. *Swift.*

TERRICOLIST, *n. f.* [from *terra* and *colo*.] One who cultivates or inhabits the earth. *Aph.*

TERRIDON, LOCH, an arm of the sea on the W. coast of Ross-shire, in Scotland, between Apple crofs and Gair-loch. It abounds with many fine bays and creeks.

(1.) * TERRIER, *n. f.* [*terrier*, Fr. from *terra*, earth.] 1. A dog that follows his game under ground.—The fox is earth'd, but I shall send my two *terriers* in after him. *Dryden.* 2. [*Terrier*, Fr.] A survey or register of lands.—King James's canons require that the bishops procure a *terrier* to be taken of such lands. *Ayliffe.* 3. [From *tete-bras*, Lat.] A wimble, auger, or borer. *Ausworth.*

(2.) TERRIER, in zoology. See CANIS, § 1, iv. N° 12.

* TERRIFIC. *adj.* [*terrificus*, Lat.] Dreadful; causing terror.—

The serpent, subtlest beast of all the field,
Of huge extent sometimes, with brazen eyes
And hairy mane *terrific*. *Milton.*

The British navy through the ocean vast
Shall wave her double cross, t' extreme climes
Terrific. *Philips.*

* To TERRIFY. *v. a.* [*terror* and *facio*, Lat.]

To fright; to shock with fear; to make afraid.—

Thou scarest me with dreams, and *terrifiest* me through visions. *Job vii. 14.*—In nothing *terrified*. *Phil. i. 28.*—Neither doth it become this most wealthy state to be *terrified* from that which is

right with any charges of war. *Knoles.*—Though he was an offender against the laws, yet in regard they had treated him illegally, in scourging him and Silas uncondemned, against the privilege of Romans, he *terrifies* them with their illegal proceedings. *Kettleswell.*—The amazing difficulty of his account will rather *terrify* than inform him,

and keep him from setting heartily about such a task as he despairs ever to go through with. *South.*

Meteors for various purposes to form;

The breeze to cheer, to *terrify* the storm.

Blackmore.

TERRIGENOUS, *adj.* [from *terra* and *gigno*, to beget.] Earth-born or earth-begotten. *Aph.*

TERRIMUMGALUM, a town of Hindostan, in the Carnatic, 25 miles N. of Trichinopoly.

TERRING, a town of England, in Suffex, with a market on Sat. seated on the Downs, near the sea coast, 24 miles E. of Chichester, and 53 SW. of London. Lon. 0. 21. W. Lat. 50. 30. N.

TERRIORE, a town of Hindostan, with a fortress, in the Carnatic, 24 miles N. of Trichinopoly, and 87 SW. of Pondicherry.

TERRITORIAL, *adj.* [from *territory*.] Of or belonging to a territory.

(1.) * TERRITORY. *n. f.* [*territorium*, law Latin; *territoire*, Fr.] Land; country; dominion; district.—Linger not in my *territories* longer than swift expedition will give thee time to leave our royal court. *Shak.*—They erected a house within their own *territory*. *Hogward.*—

He saw wide *territory* spread

Before him.

Milton.

Ne'er did the Turk invade our *territory*

But fame and terror doubl'd fill their files.

Denham.

—Arts and sciences took their rise, and flourish'd only in those small *territories* where the people were free. *Swift.*

(2.) TERRITORY NORTH-WEST OF THE OHIO. See NORTH-WESTERN TERRITORY, N° 2. This extensive territory of the United States of America is daily improving and increasing in population, commerce and arts, and will soon add one or more states to the Union.

(3.) TERRITORY SOUTH-WEST OF THE OHIO, the name formerly given to an extensive government of the United States, now erected into the new state of TENNESSEE or TENNASSIE. See TENNASSIE, N° 1, § 1—8.

(1.) TERROR, *n. f.* See TERROR.

(2.) TERROR. See FEAR, FRIGHT, and PAVOR.

TERRORISTS, *n. f. plur.* a name too justly given to that furious party of the French JACOBINS, who during the dictatorship of ROBESPIERRE, supported and applauded all his worst measures, while he murdered the greatest and best men of France, constantly calling out "let *terror* be the order of the day," and thus paved the path of blood, that led to the establishment of the present despotism. See REVOLUTION, N° VI, § 22.

TERROJEN, a town of France, in the dep. of the Straits of Calais, and ci-devant prov. of Artois, seated on the Lys, 6 miles S. of St Omer.

* TERROUR, *n. f.* [*terror*, Lat. *terreur*, Fr.] 1. Fear communicated.—

The thunder when to roll

With *terrou* through the dark aerial hall. *Milt.*

The pleasures of the land and *terrou*s of the main.

Blackmore.

2. Fear received.—

It is the cow with *terrou* of his spirit. *Shak.*

—They shot through both the walls of the town and the bulwark also, to the great *terrou* of the defendants. *Knoles.*—

Amaze.

Amaze and *terror* seiz'd the rebel host. *Milt.*
They with conscious *terrors* vex me round. *Milton.*

O fight

Of *terror*, foul and ugly to behold. *Milton.*

3. The cause of fear.—

Those enormous *terrors* of the Nile. *Prior.*

So spake the grisly *terror*. *Milton.*

TERRUEL, a considerable town of Spain, in Arragon, with a bishop's see, seated in a large, pleasant, and fertile plain, planted with gardens and orchards. It is seated near the conflux of the Guadalquivir and Alhambra, 75 miles SW. of Saragossa, and 112 E. of Madrid. Lon. 1. 0. W. Lat. 40. 25. N.

TERSA, a river of Russia, which runs into the Medveditz, in the country of the Cossacks, in Lon. 63. 20. E. of Ferro. Lat. 50. 30. N.

TERSATZ, a town of Croatia, 14 miles N. of Bibacz.

TERSCHUEREN, a town of Holland, in the department of the Rhine, and ci-devant province of Guelderland; 7 miles E. of Amersfort.

* **TERSE**. *adj.* [*ters*, French; *terfus*, Latin.] 1. Smooth. Not in use.—Many stones precious and vulgar, although *terse* and smooth, have not this power attractive. *Brown.* 2. Cleanly written; neat; elegant without pompousness.—

To raw numbers and unfinished verse,

Sweet found is added now to make it *terse*.

Dryden.

—These accomplishments in the pulpit appear by a quaint, *terse*, florid style, rounded into periods. *Swift.*

Diffus'd, yet *terse*; poetical, tho' plain. *Harte.*

TERSEKAN, a river of Russia, which runs into the Ichim, in Lon. 85. 20. E. of Ferro. Lat. 51. 50. N.

(1.) * **TERTIAN**. *n. f.* [*tertiana*, Lat.] Is an ague intermitting but one day, so that there are two fits in three days.—*Tertians* of a long continuance do most menace this symptom. *Harvey.*

(2.) **TERTIAN FEVER**. See *MEDICINE, Index.*

* To **TERTIATE**. *v. a.* [*tertio*, *tertius*, Lat.] To do any thing the third time.

TERTIUS, a praenomen very common among the Romans, who often distinguished their children by their numbers in the order of their birth, as *Secundus*, *Tertius*, *Quartus*, *Quintus*, *Sexius*, *Septimus*, *Octavius*, *Decimus*, &c.

(1.) **TERTRE**, John Baptist, a learned Dominican, born at Calais in 1610. After having figured as a soldier, he entered into the monastic state, and became a zealous missionary in America, whence he returned in 1658. He wrote a *General History of the French West India Islands*, in 4 vols. 4to, and died at Paris in 1687.

(2.) **TERTRE**, Francis Joachim Duport du, a learned French Jesuit, born at St Malo in 1715. He wrote, 1. *An Abridgement of the History of England*, in 3 vols. 12mo. 2. *An Abridgement of the History of Spain*, in 5 vols. 12mo, and other works. He died in 1759.

TERTULLIAN, or **QUINTUS SEPTIMIUS FLORENS TERTULLIANUS**, a celebrated priest of Carthage, was the son of a centurion in the militia, who served as a praefect of Africa. He was educated in the Pagan religion; but being

convinced of its errors, embraced Christianity, and became a zealous defender of the faith. He married, it is thought, after his baptism. Afterwards he took orders, and went to Rome; where, during the persecution under the emperor Severus, he published his *Apology for the Christians*; and at the beginning of the third century he embraced the sect of the Montanists. He lived to a very great age, and died in the reign of Caracalla, about the year 216. Many of his works are still extant. The best editions are those of Rigault; especially that of Venice in 1746, folio.

TERVERE, a town of Holland, in the dep. of the Meuse, and ci-devant province of Zealand, on the NE. coast of the isle of Walcheren, with a good harbour and arsenal; 4 miles NE. of Middleburg. Lon. 3. 40. E. Lat. 51. 36. N.

TERUNCIOUS, in antiquity, a very small brass coin, in use among the Romans. The inconvenience of such very small pieces being soon found, the *teruncius* became disused, but its name was still retained in reckoning, and thus it became a money of account. The *teruncius* at first was a quarter of the *as* or *libra*: hence, as the *as* contained 12 ounces, the *teruncius* contained three, whence the name, which is formed of the Latin *tres unciæ*. *Teruncius* was also used for the quarter of the *denarius*; so that when the *denarius* was at ten *asses*, the *teruncius* was worth two and a half; and when the *denarius* was risen to 16, the *teruncius* was worth four. See *DENARIUS*.

TESCHEN, a town of Germany, in Upper Silesia, and capital of a duchy so named, belonging to the house of Austria. It was taken by the Prussians in 1757, but restored to Austria at the peace. The people have a good trade in woollen stuffs, leather, wines, &c. It is famed as the scene of a treaty between Joseph II. and Frederick II. of Prussia, in 1779. It is 27 miles SE. of Troppaw, and 66 SW. of Cracow. Lon. 18. 17. E. Lat. 49. 52. N.

TESCHEREMISSES, a nation of Tartars. See *TARTARY, § 1.*

TESCHNA, a town of Bohemia, in Chrudim, 5 miles from Politzko.

TESE, or **TEST**, a river of England, in Hampshire, which runs into the Southampton below Rumsley.

TESEGDELT, a town of Morocco, near the source of the Techubit, seated on and surrounded by a craggy rock, and hence supposed to be impregnable; 60 miles WNW. of Morocco.

TESENI, a town of Asiatic Turkey, in Natolia; 34 miles SE. of Dognizlu.

TESEREN, a town of Africa, in Tafilet, 50 miles NNW. of Tafilet.

(1.) **TESINO**, or **TESSINO**, a river of Italy, which rises in Mount St Gothard, and running through lake Maggiore, falls into the Po at Pavia.

(2.) **TESINO**, a town of Germany, in Tyrol; 24 miles NE. of Trent, and 29 SE. of Bozano.

TESKOWA, a town of the ci-devant republic of Poland, in the palatinate of Volhynia; now annexed to Russia.

TESSE, a town of France, in the dep. of the Sarthe; 15 miles SW. of Mans.

(1.) * **TESSELLA**. *FD. adj.* [*teffela*, Latin.] Variegated

Vaiegated by squares.—Van Helmont produced a stone very different from the *teffellated* pyrites. Woodward.

(2.) TESSELLATED PAVEMENTS, those of rich Mosaic work made of curious square marbles, bricks, or tiles, called *teffela* from their resembling dice.

TESSERA, in Roman antiquity, denoted in its primary sense a cube or dye: so called from the Greek word *τεσσαρα* or *τεσσαρις*, four; respect being had to its number of sides, distinct from the two horizontal planes above and below. And it was thus distinguished from the TALUS, which being round at each end, contained only four planes or faces on which it could stand; and therefore when thrown had no more than two side faces in view. Hence *ludere talis et ludere tessera* are spoken of by Roman writers as two different games. The syllable TES occurs often in Roman inscriptions. The word *tessera* was applied to many other things, not so much from a similitude in the figure, as from the relation they bore to some other thing of which they were the sign or token; as the points on the upper plane of the dye denoted the good or ill success of the cast.

1. TESSERA FRUMENTARIA, was a small tally given by the emperors to the populace at Rome, entitling them to the reception of a quantity of corn from the public at stated seasons. The person who had the inspection of these was called TESSERARIUS. They were made of wood and of stone. There was another kind of tessera which entitled persons to a sight of the public games and other diversions, usually made in the form of an oblong square.

2. TESSERA HOSPITALIS was either public or private. As to the former, we find among the inscriptions published by Gruter, instances of two municipal towns which put themselves under the patronage of the Roman governor; and the reciprocal engagement between them, engraved on two copperplates, in the form of an oblong square, with a pediment at the top, is called in both *tessera hospitalis*. The design of it was to cultivate or maintain a lasting friendship between private persons and their families; and gave a mutual claim to the contracting parties and their descendants of a reception and kind treatment at each other's houses, as occasion offered. For which end those tesserae were so contrived as best to preserve the memory of that transaction to posterity; and one method of doing this was by dividing one of them lengthwise into two equal parts; upon each of which one of the parties wrote his name, and interchanged it with the other. From this custom came the prevailing expression *tesseram hospitalem infringere*, applied to persons who violated their engagements.

3. TESSERA MILITARIS was a signal given by the general, or chief commander of an army, as a direction to the soldiers for executing any duty or service required of them. This, upon urgent occasions, was only vocal; but, in ordinary cases, it was written on a tablet, commonly made of wood. Besides these civil and military tesserae, there are others which relate to religious affairs, and may be called *sacred*.

TESSON, or TESTON. See TESTER,

TESSOUWA, a considerable town in Africa, situated E. of Mowczouk, the capital of the kingdom of Fezzan. Near this town a deep and rapid stream is said to have existed, but was overwhelmed by the moving sands so frequent in Africa.

TESSY, a town of France, in the dep. of the Channel, 9 miles S. of St Lo, and 20 NE. of Arranches.

(1.) * TEST. *n. f.* [*test*, Fr. *testa*, Italian.] 1. The cupel by which miners try their metals. 2. Trial; examination; as by the cupel.—

All thy vexations

Were but mere trials of thy love, and thou

Hast strangely flood the *test*. Shak.

Let there be some more *test* made of my metal. Shak.

—They who thought worst of the Scots, did not think there would be no fruit or discovery from that *test*. *Clarendon*.—

What use of oaths, of promise, or of *test*.

Where men regard no God but interest? *Waller*.

Thy virtue, prince, has flood the *test* of fortune. Addison.

3. Means of trial.—

Whom should my muse then fly to, but the best

Of kings for grace; of poets for my *test*. *B. Jon.*

To be read herself the need not fear;

Each *test*, and every light, her muse will bear. Dryden.

Your noble race

We banish not, but they forsake the place:

Our doors are open: True, but ere they come,

You toss your censuring *test*, and fume the room. Dryden.

4. That with which any thing is compared in order to prove its genuineness.—

One clear, unchang'd and universal light;

Life, force, and beauty, must to all impart.

At once the source, and end, and *test* of art. *Pope.*

5. Discriminative characteristic.—

Our *test* excludes your tribe from benefit.

Dryden.

6. Judgment; distinction.—

Who would excel, when few can make a *test*,
Betwixt indiff'rent writing and the best? *Dryd.*

(2.) The TEST is a vessel used in metallurgy for absorbing the scoria of metallic bodies when melted. See CUPEL. Some of the German writers recommended, both for tests and cupels, a sort of friable opake stone, called *white spath*, which appears to be a species of gypsum, or of the stones from which plaster of Paris is prepared. The spath is directed to be calcined with a gentle fire, in a covered vessel, till the slight crackling which happens at first has ceased, and the stone has fallen in part into powder: the whole is then reduced into subtle powder, which is passed through a fine sieve, and moistened with so much of a weak solution of green vitriol as is sufficient for making it hold together. Geilert, however, finds, that if the stone is of the proper kind, which can be known only by trials, calcination is not necessary. Scheffer observes, that these kinds of tests are liable to soften or fall asunder in the fire, and that this inconvenience may be remedied by the mixing with the uncalcined stone some-
what

what less than equal its weight, as eight-ninths of such as has been already used and is penetrated by the scoria of the lead, taking only that part of the old test which appears of a green grey colour, and rejecting the red crust on the top. Tests or cupels made of the spath are said not to require so much caution in heating and heating them as the common ones; it appears, however, from Scheffer's account, that they are less durable than those made of the ashes of bones, though greatly superior to those of wood-ashes. Vegetable ashes, which stand pretty well the testing of silver, can scarcely bear any great quantity of gold, this metal requiring a considerably stronger fire than the other; but bone-ashes answer so effectually, and are among us so easily procurable, that it is not needful for the refiner to search for any other materials; though those who work off large quantities of lead, in order to gain a little silver or gold contained in it, may possibly, in places remote from populous cities, avail themselves of substances similar to the spath above mentioned. The test, for its greater security, is fixed in the mould in which it was formed; which is sometimes a shallow vessel made of crucible earth or cast-iron, more commonly an iron-hoop, with three bars arched downwards across the bottom, about two inches deep, and of different widths, from three or four inches to fifteen or more, according to the quantity of metal to be tested at once. The ashes or earthy powder, moistened as for making cupels, are pressed down in the mould so as to completely fill it or rise a little above the sides; with care to make the mass equally solid, and to put in at once, or at least after the bottom has been pressed close, as much of the matter as will be sufficient for the whole; for any additional quantity will not unite thoroughly with the test, but be apt to part from it in the fire. The edges are pared smooth, and a portion cut out from the middle with a bent knife, so as to leave a proper cavity, which is smoothed by strewing some dry powder on the surface, and rolling on it a wooden, or rather a glass ball. The process of testing is often performed in the same manner as that of cupellation; but where great quantities of base metal are to be worked off from a little gold, recourse is had to a more expeditious method, that of testing before the bellows. An oval test is placed in a cavity, made in a hearth of a convenient height, and some moistened sand or ashes pressed round it to keep it steady: the nose of a bellows is directed along its surface, in such a manner, that if ashes are sprinkled in the cavity of the test, the bellows may blow them completely out; some have an iron plate fixed before the bellows, to direct the blast downwards. To keep the surface of the test from being injured in putting in the metal, some cloths or pieces of paper are interposed. The fuel consists of billets of barked oak laid on the sides of the test, with others laid crosswise on these; the bellows impel the flame on the metal, clear the surface of ashes or sparks of coal, hasten the scorification of the lead, and blow off the scoria, as fast as it forms, to one end of the test, where it runs out through a notch made for that purpose. About two thirds of the scorified lead may be thus collected; the

rest being partly absorbed by the test, and partly dissipated by the action of the bellows. Care must be taken not to urge the blast too strongly, lest some portion of the gold should be carried away by the fumes impetuously forced off from the lead, and some minute particles of it entangled and blown off with the scoria.

(3.) TEST ACT, in law, in the statute 25 Car. II. cap. 2. which directs all officers, civil and military, to take the oaths, and make the declaration against transubstantiation, in the court of King's Bench or Chancery, the next term, or at the next quarter-sessions, or (by subsequent statutes) within six months after their admission; and also within the same time to receive the sacrament of the Lord's Supper, according to the usage of the church of England, in some public church, immediately after divine service or sermon, and to deliver into court a certificate thereof, signed by the minister and church-warden, and also to prove the same by two credible witnesses, upon forfeiture of 500*l.* and disability to hold the said office. See ENGLAND, § 328.

(4.) TEST FOR ACIDS AND ALKALIES. See CHEMISTRY, *Index*.

(5.) TEST LIQUORS FOR WINES. See LEAD and ARSENIC.

TESTACEA, in the Linnæan system of zoology, the 3d order of vermes. This order comprehends all the shell-fish arranged by Linnæus under 36 genera. Shell-fish are animals with a soft body, covered by or inclosed in a firm, hard, and as it were stony habitation, composed, according to their three separate orders, 1st, Of many parts which are arranged under the name of *multivalve*; 2d, Of two parts which are called *bivalves*; 3d, Of one part or piece only, which we call *univalves*. Those parts, pieces, or valves, are more or less moveable at the animal's pleasure. See SHELLS.

(1.) * TESTACEOUS. *adj.* [*testaceus*, Lat. *testace*, Fr.] 1. Consisting of shells; composed of shells. 2. Having continuous, not jointed shells; opposed to *crustaceous*.—*Testaceous*, with naturalists, is a term only given to such fish whose strong and thick shells are entire, and of a piece; because those which are jointed, as the lobsters, are *crustaceous*; but in medicine all preparations of shells, and substances of the like kind, are thus called. *Quincy*.—Several shells were found upon the shores, of the *crustaceous* and *testaceous* kind. *Woodward*.—The mineral particles in these shells is plainly to be distinguished from the *testaceous* ones. *Woodward*.

(2.) TESTACEOUS, in zoology, is synonymous with TESTACEA.

(3.) TESTACEOUS, in medicine, all preparations of shells, and such like substances, are called *testaceous*. Such are powders of crabs claws and eyes, pearl, &c. Dr Quincy and others suppose the virtue of all testaceous medicines to be alike; that they seldom or never enter the lacteals, but that the chief of their action is in the first passages; in which, however, they are of great use in absorbing acidities. Hence they become of use in fevers, and especially in rectifying the many distempers in children, which generally owe their origin to such acidities.

(1.) * TES-

(1.) • **TESTAMENT.** *n. f.* [testament, Fr. *testamentum*, Lat.] 1. A will; any writing directing the disposal of the possessions of a man deceased. — These, or the like proofs, will convict a *testament* to have that in it which other men can no where by reading find.—

All the temporal lands, which men devout

By *testament* have given to the church,

Would they strip from us.

Shak.

— He ordain'd by his last *testament*, that his *Æneids* should be burnt. *Dryden.* 2. The name of each of the volumes of the holy scripture.

(2.) **TESTAMENT, OR LAST WILL,** according to the old Roman lawyers is, *voluntatis nostræ iusta sententia, de eo quod quis post mortem suam fieri velit*: which may be thus rendered in English, “the legal declaration of a man’s intentions, which he wills to be performed after his death.” It is called *sententia*, to denote the circumspection and prudence with which it is supposed to be made; it is *voluntatis nostræ sententia*, because its efficacy depends on its declaring the testator’s intention, whence in English it is emphatically styled his *will*; it is *iusta sententia*; that is, drawn, attested and published, with all due solemnities and forms of law; it is *de eo quod quis post mortem suam fieri velit*, because a testament is of no force till after the death of the testator. These testaments are divided into two sorts; written, and verbal or nuncupative, being declared by the testator in *extremis*, before a sufficient number of witnesses, and afterwards reduced to writing. But as nuncupative wills and codicils (which were formerly more in use than at present when the art of writing is become more general) are liable to great impositions, and may occasion many perjuries, the statute of frauds, 29 Car. II. c. 3. enacts, 1. That no written will shall be revoked or altered by a subsequent nuncupative one, except the same be in the lifetime of the testator reduced to writing, and read over to him, and approved; and unless the same be proved to have been so done by the oaths of three witnesses at the least, who, by statute 4 & 5 Anne, c. 16. must be such as are admissible upon trials at common law. 2. That no nuncupative will shall in anywise be good, where the estate bequeathed exceeds 30l. unless proved by three such witnesses, present at the making thereof (the Roman law requiring seven), and unless they, or some of them, were specially required to bear witness thereto by the testator himself; and unless it was made in his last sickness, in his own habitation or dwelling-house, or where he had been previously resident ten days at the least, except he be surprised with sickness on a journey, or from home, and dies without returning to his dwelling. 3. That no nuncupative shall be proved by the witnesses after six months from the making, unless it were put in writing within six days. Nor shall it be proved till fourteen days after the death of the testator, nor till process hath first issued to call in the widow, or next of kin, to contest it if they think proper. As to written wills, they need not any witness of their publication. We speak not here of devises of lands, which are entirely another thing, a conveyance by statute, unknown to the feudal or common law, and not under the same jurisdic-

tion as personal estates. But a testament of chattels, written in the testator’s own hand, though it has neither his name nor seal to it, nor witnesses present at its publication, is good; provided sufficient proof can be had that it is his hand-writing; and though written in another man’s hand, and never signed by the testator, yet if proved to be according to his instructions, and approved by him, it hath been held a good testament of the personal estate. No testament is of any effect till after the death of the testator; *Nam Omne testamentum morte consummatum est, et voluntas testatoris est ambulatoria usque ad mortem.* And therefore, if there be many testaments, the last will overthrows all the former; but the republication of a former will revokes one of a later date and establishes the first again. Regularly, every person hath full power and liberty to make a will that is not under some special prohibition by law or custom; which prohibitions are principally upon three accounts; for want of sufficient discretion; for want of sufficient liberty and free-will; and on account of criminal conduct. 1. In the first species are to be reckoned infants, under the age of 14 if males, and 12 if females; which is the rule of the civil law. Madmen, or otherwise *non compos*, idiots or natural fools, persons grown childish by reason of old age or disemper, such as have their senses befogged with drunkenness. 2. Such persons as are intestate for want of liberty or freedom of will, by the civil law, are of various kinds; as prisoners, captives, and the like. But the law of England does not make such persons absolutely intestate; but only leaves it to the discretion of the court to judge upon the consideration of their particular circumstances of duress, whether or no such persons could be supposed to have *liberum animum testandi*. A married woman is not only utterly incapable of devising lands, being excepted out of the statute of wills, 34 & 35 Hen. VIII. c. 5. but also she is incapable of making a testament of chattels, without the licence of her husband. The queen-sort is an exception to this general rule, for she may dispose of her chattels by will, without the consent of her lord; and any feme-covert may make her will of goods which are in her possession *in avoer droit*, as executrix or administratrix; for these can never be the property of her husband; and if she has any pin-money, or separate maintenance, it is said she may dispose of her savings thereout by testament, without the controul of her husband. But if a feme sole make her will, and afterwards marries, such subsequent marriage is esteemed a revocation in law, and entirely vacates the will. 3. Persons incapable of making testaments on account of their criminal conduct, are, in the first place, all traitors and felons, from the first of conviction; for then their goods and chattels are no longer at their own disposal, but forfeited to the king. Neither can a *fel de se* make a will of goods and chattels, for they are forfeited by the act and manner of his death; but he may make a devise of his lands, for they are not subject to any forfeiture. Outlaws also, though it be but for debt, are incapable of making a will so long as the outlawry subsists, for their goods and chattels are forfeited during that time.

time. As for persons guilty of other crimes, short of felony, who are by the civil law precluded from making testaments (as usurers, libellers, and others, of a worse stamp), at the common law their testaments may be good. And, in general, the rule is, and has been so at least ever since Glanvil's time, *quod libera sit cujusque ultima voluntas*. Testaments may be avoided three ways: 1. If made by a person labouring under any of the incapacities before-mentioned; 2. By making another testament of a later date; and, 3. By cancelling or revoking it. For though I make a last will and testament irrevocable in the strongest words, yet I am at liberty to revoke it.

(3.) TESTAMENT, in Scots law. See LAW, Part III. Chap. II. Sect. XXI. § 7.

(4, 5.) TESTAMENT, OLD and NEW. See BIBLE and SCRIPTURE.

* TESTAMENTARY. *adj.* [*testamentaire*, Fr. *testamentarius*, Lat.] Given by will; contained in wills.—How many testamentary charities have been defeated by the negligence or fraud of executors? *Atterbury*.

* TESTATE. *adj.* [*testatus*, Latin.] Having made a will.—By the canon law, the bishop had the lawful distribution of the goods of persons dying testate and intestate. *Ayliffe*.

* TESTATOR. *n. s.* [*testator*, Lat. *testateur*, Fr.] One who leaves a will.—He bringeth arguments from the love or good will which always the testator bore him. *Hooker*.—The fame is the case of a testator giving a legacy by kindness. *Tayl*.

* TESTATRIX. *n. s.* [Latin.] A woman who leaves a will.

* TESTED, *adj.* [from *test*.] Tried by a test.—Not with fond cheeks of the tested gold. *Shak*.

(1.) * TESTER. *n. s.* [*teste*, Fr. a head: this coin probably being distinguished by the head stamped upon it.] 1. A sixpence.—Come manage me your caliver: hold, there is a tester for thee. *Shak*.—A crown goes for sixty pence, a shilling for twelve pence, and a tester for sixpence. *Locke*.

Those who bore bulwarks on their backs,
And guarded nations from attacks,
Now practice every pliant gesture,
Op'ning their trunk for every tester. *Swift*.
Plums and directors, Shylock and his wife,
Will club their testers now to take thy life. *Pope*.
1. The cover of a bed.

(2.) TESTER, TESTON, the name of a coin struck in France by Lewis XII. in 1513, and in Scotland in the time of Francis II. and Mary queen of Scotland, so called from the head of the king, which was engraved upon it. The silver it contained was 11 deniers 18 grains, its weight 7 deniers 13½ grains, and its value 10 sols. The coinage of it was prohibited by Henry III. in 1575, when the value of it was augmented to 14 sols six deniers. The teston or tester among us was rated at 12d in the reign of Henry VIII. and afterwards reduced to 6d.

TESTES, in anatomy, the testicles. See TESTICLE, and ANATOMY, Index.

(1.) * TESTICLE. *n. s.* [*testiculus*, Lat.] Stone.—That a beaver, to escape the hunter, bites off his testicles or stones, is a tenet very ancient. *Bro*.—The more certain sign from the pains reaching to the groins and testicles. *Wiseman*.

(2.) The TESTICLE (*testis*) is a double part in animals of the male kind, serving for the office of generation. See ANATOMY, Index. They are called testicles, by diminution of *testes*, witnesses; as giving testimony of virility. The Greeks call them *didymi*, or twins. In man and most animals, the testicles are exterior; in some, as fowls, interior. Some men have only one, ordinarily they have two; some have naturally had three; nay, anatomists assure us they have known four.

* TESTIFICATION. *n. s.* [*testificatio*, Latin; from *testify*.] The act of witnessing.—When together we have all received those heavenly mysteries wherein Christ imparteth himself unto us, and giveth visible testification of our blessed communion with him, we should declare ourselves openly united. *Hooker*.—In places solemnly dedicated for that purpose, is a more direct service and testification of our homage to God. *Saunders*.

* TESTIFICATOR. *n. s.* [from *testifico*, Lat.] One who witnesses.

* TESTIFIER. *n. s.* [from *testify*.] One who testifies.

(1.) * To TESTIFY. *v. n.* [*testifico*, Lat.] To witness; to prove; to give evidence.—Jesus needed not that any should testify of man. *John*. ii. 25.—One witness shall not testify against any, to cause him to die. *Numb*. xxxv. 30.—Heaven and earth shall testify for us. *1 Mac*. ii. 47.—

Th' event was dire,
As this place testifies. *Milton*.

—The appeals to their closets, to their books of devotion, to testify what care she has taken to establish her children in a life of solid piety and devotion. *Law*.

(2.) * To TESTIFY. *v. a.* To witness; to give evidence of any point.—We speak that we do know, and testify that we have seen. *John*. iii. 12.

* TESTILY. *adv.* [from *testis*.] Fretfully; peevishly; morosely.

* TESTIMONIAL. *n. s.* [*testimonial*, French; *testimonium*, Lat.] A writing produced by any one as an evidence for himself.—Hospitable people entertain all the idle vagrant reports, and send them out with passports and testimonials, and will have them pass for legitimate. *Gow*. of the Tongue.—It is possible to have such testimonials: of divine authority as may be sufficient to convince the more reasonable part of mankind. *Burnet*.—A clerk does not exhibit to the bishop letters missive or testimonial. *Ayliffe*.

(1.) * TESTIMONY. *n. s.* [*testimonium*, Lat.] 1. Evidence given; proof by witness.—The proof of every thing must be by testimony. *Spenser*.—If I bring you sufficient testimony, my 10,000 ducats are mine. *Shak*.—Evidence is said to arise from testimony. *Wilkins*.—I could not answer it to the world, if I give not your lordship my testimony of being the best husband. *Dryden*.—I must bear this testimony to Orway's memory, that the passions are truly touched in his Venice Preserved. *Dryd*. 2. Public evidences.—We maintain the uniform testimony and tradition of the primitive church. *Whit*.—

An ark, and in the ark his testimony. *Milton*.
3. Open attestation; profession.—

Thou for the testimony of truth hast born
Universal reproach. *Milton*.
2.) TES-

(1.) **TESTIMONY.** See **LOGIC**, Part II. *See* §. 1. § II. and **METAPHYSICS**, *See* XXXVIII. § 248.

(3.) **TESTIMONY**, in law. See **EVIDENCE**.

* **To TESTIMONY.** *v. a.* To witness. A word not used.—Let him be but *testimonied* in his own bringings forth. *Shak.*

* **TESTINESS.** *n. s.* [from *testy*.] Moroseness; peevishness.—*Testiness* is a disposition or aptness to be angry. *Locke.*

* **TESTUDINATED.** *adj.* [*testudo*, Latin.] Roofed; arched.

* **TESTUDINEOUS.** *adj.* [*testudo*, Lat.] Resembling the shell of a tortoise.

(I.) **TESTUDO**, the **TORTOISE**, in zoology, a genus belonging to the class of *amphibia*, and order of *reptilia*. The body has a tail, and is defended with a bony or coriaceous covering. The mouth has naked mandibles without teeth. There are 33 species, of which

TESTUDO MIDAS, the common sea turtle, is the most remarkable. It is found in the island of Ascension and other places in the South Sea. The shell is so very strong that it can carry more than 600 lbs. on its back, or as many men as can stand on it loaded. It digs round holes in the sand, in which it lays a vast number of eggs yearly, to the amount of 1000, it is said. It broods on them during the night. Its flesh is of a greenish colour, makes excellent food, and is the favourite dish of sailors as well as of epicures. It lives on cuttle and shell fish, and grows to a prodigious size, some having been found to weigh 480 lbs. The Americans find so good account in catching turtle, that they have made themselves very expert at it; they watch them from their nests on shore, in moon-light nights; and, before they reach the sea, turn them on their backs, and leave them till morning; when they are sure to find them, since they are utterly unable to recover their former posture; at other times they hunt them in boats, with a peculiar kind of spear, striking them with it through the shell; and as there is a cord fastened to the spear, they are taken much in the same manner as the whales.

(II.) **TESTUDO** in antiquity, was particularly used among the poets, &c. for the ancient lyre; because it was originally made by its inventor Mercury, of the back or hollow of the *testudo* aquatica, or sea tortoise, which he accidentally found on the banks of the river Nile. See **LYRE**.

(III.) **TESTUDO**, in the military art of the ancients, was a kind of cover or screen which the soldiers, *e. gr.* a whole company, made themselves of their bucklers, by holding them up over their heads, and standing close to each other.

(IV.) **TESTUDO** was also a kind of large wooden tower which moved on several wheels, and was covered with bullock-hides, serving to shelter the soldiers when they approached the walls to mine them, or batter them with rams. It was called *testudo*, from the strength of its roof, which covered the workmen as the shell does the tortoise.

* **TESTY.** *adj.* [*testis*, Fr. *testurdo*, Ital.] Fretful; peevish; apt to be angry.—

Lead these *testy* rivals to astray. *Shak.*

Must I stand and crouch under your *testy* humour? *Shak.*

King Pyrrhus cur'd his spleenetic,
And *testy* courtiers with a kick. *Hudibras.*

Thou'rt such a touchy, *testy*, pleasing fellow. *Addison.*

TESZERSKEY, a town of Croatia, 6 miles SW. of Novi.

TET, a river of France, which rises in the Pyrenees, above Mont Lewis, and runs into the Mediterranean, 7 miles E. of Perpignan.

TETAHE, a town of the United States, in Georgia; 5 miles W. of Tingeloo.

TETANUS, a dreadful spasmodic disorder, in which the whole body becomes rigid and inflexible. It most commonly proves mortal. See **MEDICINE**, *Index*.

TETBURY, a town of England, in Gloucestershire, with a market on Wednesday. It has a considerable trade in corn, cattle, cheese, and other provisions, yarn, wool, malt, &c. It is 25 miles NE. of Bristol, and 99 W. of London. Lon. 1. 8. W. Lat. 51. 38. N.

TETCHA, a river of Russia, which runs into the Iset, near Dolmat, in Ekaterinenburg.

* **TETCHY.** *adj.* Forward; peevish; a corruption of *testy* or *touchy*.—

Tetchy and wayward was thy infancy. *Shak.*
—That peevish and *tetchy* master. *Granville.*

* **TETE A TETE.** *n. s.* [French.] Cheek by jowl.—

Long before the squire and dame
Are *tête à tête*. *Prior.*

Deluded mortals, whom the great
Chuse for companions *tête à tête*. *Swift.*

TETE DE BUCH, a town of France, in the department of the Gironde, seated on the side of a large bay, 30 miles SW. of Bourdeaux.

TETEROW, a town of Mecklenburg, 18 miles SW. of Gultrow.

TETERSKOI, a town of Russia, in Tunguskoï, on the Podkamenskaia. Lon. 119. 0. E. of Ferro. Lat. 59. 54. N.

* **TETHER.** *n. s.* [See **TEDDER**.] A string by which horses are held from pasturing too wide.—

Hamlet is young,

And with a larger *tether* he may walk. *Shak.*

Fame and censure with a *tether*,

By fate are always link'd together. *Swift.*

—Where it is confined, we find the shortness of our *tether*. *Swift.*

* **To TETHER.** *v. a.* [from the noun.] To tie up.

TETHEROA, or } an island of the S. Pacific
TETHERUA, } Ocean. It lies low, in Lon. 149. 30. W. Lat. 17. 4. S.

(1.) **TETHYS**, in the mythology, the greatest of all the sea goddesses, the daughter of Coelus or Uranus, and Terra, and the wife of Oceanus, and mother of the river gods, the sea nymphs, &c.

(2.) **TETHYS**, in entomology, a genus of insects belonging to the class of *vermes*, and order of *mollusca*. The body is oblong, fleshy, and without feet; the mouth consists of a cylindrical proboscis under the duplicature of a lip; and there are two foramina at the left side of the neck. The species are two, both inhabitants of the ocean.

TETIN, a town of Bohemia, 3 miles S. of Bezaun.

TETIS,

TETIS, a river of ancient Gaul, running from the Pyrenæes.

TETIUSCHI, a town of Russia, in Kazan, on the Volga, 52 miles S. of Kazan.

TETRACERA, in botany, a genus of plants belonging to the class of *polyandria*, and order of *tetragynia*, and in the natural system ranging under the doubtful. The calyx is hexaphyllous, and the capsules four. There is only one species, viz.

TETRACERA VOLUBILIS.

TETRADYNAMIA, (*τετραδυναμία*, four, and *δυναμία*, power,) four powers; the 15th class of Linnæus's Sexual System, consisting of plants with hermaphrodite flower, having six stamina, four of which are long, and two short; it corresponds to the *filigulose* of Ray, and *cruciformes* of Tournefort. All the species are distinguished by cruciform flowers. It comprehends two orders, *gynmospemia*, those plants which have naked seeds, being four in number; (except *phylla* which is monospermous;) and *angiospermia*, which contains those plants the seeds of which are inclosed in a capsule. See **BOTANY, Index**.

TETRAEDRON, or **TETRAHEDRON**, in geometry, is one of the five Platonic or regular bodies or solids, comprehended under four equilateral and equal triangles. Or, it is a triangular pyramid of four equal and equilateral faces.

(1.) **TETRAGON**, in astrology, denotes an aspect of two planets with regard to the earth, when they are distant from each other a fourth part of a circle, or 90°. The tetragon is expressed by the character $\square$, and is otherwise called a square or quartile aspect.

(2.) **TETRAGON**, in geometry, a quadrangle, or a figure having four angles. Such as a square, a parallelogram, a rhombus, and a trapezium. It sometimes also means peculiarly a square.

* **TETRAGONAL**, *adj.* [*τετραγωνος*.] Four square.—From the beginning of the disease, to the 7th day, the moon will be in a *tetragonal* or quadrilateral aspect, that is, four signs removed from that wherein the disease began; in the 14th day it will be an opposite aspect, and at the end of the third septenary *tetragonal* again. *Brown*.

TETRAGONIA, in botany, a genus of plants belonging to the class of *icosandria*, and order of *monogynia*; and in the natural system ranging under the 13th order, *succulente*. The calyx is divided into 3, 4, or 5 parts. There is no corolla; the drupæ are beneath, and the nut three or eight-celled. There are 7 species; the puticosa, decumbens, herbacea, echinata, expansa, crystallina, and japonica.

TETRAGRAMMATON, (*τετραγρμματον*, a denomination given by the Greeks to the Hebrew name of God יהוה , *Yehova*, because in the Hebrew it consists of four letters.

TETRAGYNIA, (*τετραγυνία*, four, and *γυνή*, a woman,) the name of an order in the 4th, 5th, 6th, 8th, and 13th classes in the Sexual System; consisting of plants which, to the classic character, whatever it is, add the circumstance of having 4 styles or female organs. Herb paris and grals of Parnassus furnish examples. See **BOTANY, Index**.

TETRANDRIA, (*τετραδρία*, four, and *ανδρ*, a man or husband,) the name of the fourth class in

Linnæus's Sexual System, consisting of plants with hermaphrodite flowers, which have four stamina or male organs that are of equal length. In this last circumstance consists the main difference according to Linnæus, between the plants of the class in question and those of the 14th class *didynamia*, in which the four stamina are of unequal length, two of them being long, and two short.—The orders of this numerous class are three, founded upon the number of styles or female organs. Scabious, tealzel, barren-wort, the stary plants of Ray, and the greater number of genera in this class, have one style; dodder and hyssopus have two; holly and a few others have four.

TETRAO, in ornithology, a genus of birds belonging to the order of *galline*, and thus characterized by Linnæus: There is a spot near the eyes naked or papillose, or covered, though more rarely with feathers. Gmelin has enumerated about 66 species. The genus *tetrao* comprehended both the grouse partridge, and quail; but Dr Latham, with great judgment and propriety has made two genera of them, under the names of *tetrao*, comprehending the grouse; and *perdix*, comprehending the partridge and quail. See **PERDIX**. Dr Latham thus distinguishes the genus *tetrao*: The bill is like a crooked cone, with a naked scarlet skin above each eye, and the feet feathered to the toes. He reckons 20 species. The 4 following are found in Britain:

1. **TETRAO LAGOPUS**, the *white game*, or **PTARMIGAN**, is 15 inches in length, and weighs 19 ounces. Its plumage is of a pale brown or ash colour, elegantly crossed or mottled with small dusky spots and minute bars; the head and neck with broad bars of black, rust colour, and white; the belly and wings are white, but the shafts of the greater quill feathers black. In the male, the grey colour predominates, except on the head and neck, where there is a great mixture of red, with bars of white. The females and young birds have a great deal of rust colour in them. The tail consists of 16 feathers; the two middle of which are ash coloured, mottled with black, and tipped with white; the two next black, slightly marked with white at their ends, the rest wholly black; the feathers incumbent on the tail are white, and almost entirely cover it. Ptarmigans are found in these kingdoms only on the summits of the highest hills of the Highlands of Scotland, of the Hebrides, and Orkneys; and a few still inhabit the lofty hills near Keelwick in Cumberland, as well as the mountains of Wales. They live amidst the rocks, perching on the grey stones, the general colour of the strata in those exalted situations. They are very silly birds; so tame as to bear driving like poultry; and, if provoked to rise, take very short flights, making a great circuit like pigeons. Like the grouse, they keep in small packs; but never, like those birds, take shelter in the heath, but beneath loose stones. To the taste they scarce differ from a grouse. These birds are called by Pliny *lagopi*, their feet being clothed with feathers to the claws, as the hare's are with fur: the nails are long, broad, and hollow. The first circumstance guards them from the rigour of the winter; the latter enables them to form a lodge.

H h

lodge

lodge among the snow, where they lie in heaps to protect themselves from the cold. The feet of the grouse are clothed in the same manner; but those of the two last species here described, which perch upon trees, are naked, the legs only being feathered, not being in want of such a protection.

2. **TETRAO SCOTICUS**, the **RED GAME**, or **MOOR-HOWL**, is peculiar to the British islands. The male weighs about 19 ounces; and is in length 15½ inches. The bill is black; the irides hazel coloured. The throat is red. The plumage on the head and neck is of a light tawny red; each feather is marked with several transverse bars of black. The back and scapular feathers are of a deeper red; and on the middle of each feather is a large black spot; the breast and belly are of a dull purplish brown, crossed with numerous narrow dusky lines; the quill feathers are dusky; the tail consists of 16 feathers of an equal length, all of them (except the four middlemost) are black, and the middle feathers are barred with red; the thighs are of a pale red, barred obscurely with black; the legs and feet clothed to the very claws with thick soft white feathers. The claws are whitish, very broad and strong. The female weighs only 15 ounces.—The colours in general are duller than those of the male; the breast and belly are spotted with white; and the tips of some of the coverts of the wings are of the same colour. These birds pair in the spring, and lay from six to ten eggs. The young brood follow the hen the whole summer; in the winter they join in flocks of 40 or 50, and become remarkably shy and wild; they always keep on the tops of the hills, are scarce ever found on the sides, and never descend into the valleys. Their food is the mountain berries and the tops of the heaths. See **SHOOTING**, § 4.

3. **TETRAO TETRIX**, *black grouse*, or **BLACK COCK**, like the woodcock, (Nº 4.) is fond of woody and mountainous situations; feeding on bilberries and other mountain fruits, and in the winter on the tops of the heath. In the summer they frequently descend from the hills to feed on corn. They never pair: but in the spring the male gets upon some eminence, crows and claps his wings; on which signal all the females within hearing resort to him. The hen lays seldom above 6 or 7 eggs. When the female is obliged, during the time of incubation, to leave her eggs in quest of food, she covers them up so artfully with moss or dry leaves, that it is very difficult to discover them. On this occasion she is extremely tame and tranquil, however wild and timorous at other times. She often keeps to her nest, though strangers attempt to drag her away. As soon as the young ones are hatched, they are seen running with extreme agility after the mother, though sometimes they are not entirely disengaged from the shell. The hen leads them forwards for the first time into the woods, to show them ant's eggs and the wild mountain-berries, which, while young, are their only food. As they grow older their appetites grow stronger, and they then feed upon the tops of the heather and the cones of the pine tree. In this manner they soon come to perfection. An old black cock is in length 22 inches, and weighs near four pounds. The bill is dusky;

and the plumage of the whole body black, glossed over the neck and rump with a shining blue. The coverts of the wings are of a dusky brown; the inner coverts white; the thighs and legs are covered with dark brown feathers; the toes resemble those of the former species. The tail consists of 16 black feathers, and is much forked; the exterior feathers bend greatly outwards, and their ends seem as if cut off. The female weighs only two pounds; and its length is one foot six inches. The head and neck are marked with alternate bars of dull red and black; the breast with dusky black and white, but the last predominates. The back, coverts of the wings, and tail, are of the same colour as the neck, but the red is deeper. The tail is slightly forked; it consists of 18 feathers variegated with red and black. The feathers under the tail are white, marked with a few bars of black and orange. This bird hatches its young late in the summer. It lays from six to eight eggs, of a dull yellowish white colour, marked with numbers of very small ferruginous specks; and towards the smaller end with some blotches of the same hue.

4. **TETRAO UROGALLUS**, the **WOOD COCK**, inhabits woody and mountainous countries; in particular, forests of pines, birch trees and junipers; feeding on the tops of the former and berries of the latter; the first often infects the flesh with such a taste as to render it scarcely eatable. In the spring, it calls the females to its haunts with a loud and shrill voice; and is at that time so very inattentive to its safety as to be very easily shot. It stands perched on a tree, and defends to the females on their first appearance. They lay from 8 to 16 eggs; 8 at the first and more as they advance in age. These birds are common in Scandinavia, Germany, France, and several parts of the Alps. They are found in no other part of Great Britain but the Highlands of Scotland, and are very rare even in those parts. They are there called *capercalzie*, *ouer-calzie*, and in the old law-books *capercally*; the last signifying the horse of the woods; this species being, in comparison of others of the genus, pre-eminently large. The length of the male is 2 feet 9 inches; its weight sometimes 14 lb. The female is much less, the length being only 26 inches. The sexes differ also greatly in colours. The bill of the male is of a pale yellow; the head, neck, and back, are elegantly marked with slender lines of grey and black running transversely. The upper part of the breast is of a rich glossy green; the rest of the breast and the belly black, mixed with some white feathers; the sides are marked like the neck; the coverts of the wings crossed with unulated lines of black and reddish brown; the exterior webs of the greater quill feathers are black; the tail consists of 18 feathers, the middle of which is the longest; these are black, marked on each side with a few white spots. The legs are very strong, and covered with brown feathers; the edges of the toes are pectinated.—Of the female the bill is dusky; the throat red, the head, neck, and back, are marked with transverse bars of red and black, the breast has some white spots on it, and the lower part is of a plain orange colour, the belly is barred with pale orange and black, the tips of the feathers

feathers are white. The tail is of a deep rust-colour, barred with black, tipped with white, and consists of 16 feathers. See SHOOTING, § 4.

* **TETRAPETALOUS.** *adj.* [*tetrapet-* and *-alos*.] Such flowers as consist of four leaves round the style; plants having a *tetrapetalous* flower constitute a distinct kind. *Miller*.—All the *tetrapetalous* filicose plants are alkalescent. *Arbutnol*.

TETRAPODOLOGY, *n. s.* [*tetrapod-*, and *-logy*.] that branch of zoology, which treats of quadrupeds, in the Linnean system called **MAMMALIA**.

TETRAPOLIS, an ancient name of Antioch in Syria, because it contained 4 cities.

(1.) * **TETRARCH.** *n. s.* [*tetrarcha*, Latin, *tetrarchus*, Fr. *tétrarche*.] A Roman governor of the fourth part of a province.—

Her kings and *tetrarchs*, are their tributaries.

Ben Jonson.

(2.) A **TETRARCH** is a prince who holds and governs a 4th part of a kingdom. Such originally was the import of the title *tetrarch*; but it was afterwards applied to any petty king or sovereign; and became synonymous with *ethnarch*.

* **TETRARCHATE.** *n. s.* [*tetrarchia*.] A Roman government of a fourth part of a province.

* **TETRASTICK.** *n. s.* [*tetrastichus*.] An epigram or stanza of four verses.—The *tetrastich* obliged Spenser to extend his fence to the length of four lines. *Pope*.

TETRASTYLE, in the ancient architecture, a building, and particularly a temple, with 4 columns in its front.

* **TETRICAL.** *adj.* [*tetricus*, Lat. *tetricus*.] * **TETRICOUS.** *adj.* Flowery; perverse; four.—In this the *tetrical* bailla finding him to excel, gave him as a rare gift to Solymán. *Kneller*.

TETRODON, in ichthyology; a genus of fishes arranged by Linnaeus under the class of *amphibia*, and order of *nantes*; but placed by Gmelin under the class of *pices*, and order of *branchiostegi*. The jaws are bony, stretched out, and closen at the point; the aperture of the gills is linear; the body is mureicated beneath, and there are no ventral fins. There are 13 species; of which the most remarkable is

TETRODON LINEATUS, called by Mr Hasselquist *sabaka*, which is the Egyptian and Arabic name. It has of late been found in the Nile about Cairo, but was never known in former times. It is said to grow to a prodigious size. When just caught, it prickles the skin if it is taken in the bare hands, and produces small pustules in the same manner as nettles. The fish is poisonous. Mr Forster confirms the account of the poisonous nature of a species of *tetrodon*, in his account of New Caledonia.

* **TETTER.** *n. s.* [*tetter*, Saxon.] A scab; a scurf; a ringworm.—

A most infant *tetter* bark'd about. *Shak.*

A scabby *tetter* on their pelts will stick. *Dryd.*

TETUAN, an ancient and present town of Africa, in the kingdom of Fez, and in the province of Habata. It is pretty well built, and the inhabitants are about 15,000 in number. Lon. 5. 25. W. Lat. 35. 27. N.

(1.) **TEUCER**, the son of Scamander by Ida the founder and first king of Phrygia, from whom

his subjects were called **TEUCRI**. **DARDANUS** married his daughter *Batea*, and succeeded him. *Verg. Æn. iii. 108*.

(2.) **TEUCER**, a son of **TELAMON** and brother of *Ajex*. He built a town in the isle of Cyprus, which he called **SALAMIS** from his birth-place.

TEUCRI, a name given the Trojans from **TEUCER** their first king.

TEUCRIUM, GERMANDER, in botany: A genus of plants belonging to the class of *dilignamia*, and order of *gymnospermia*; and in the natural system ranging under the 42d order, *Ferticillata*. The corolla has no upper lip, is divided into two parts beyond the base, and is divaricated where the stamina issue out. There are 30 species; of which 3 are natives of Great Britain; viz.

1. **TEUCRIUM CHAMÆDRYS**, the smaller creeping germander, hath fibrous, very creeping, spreading roots; many four-cornered, very branchy, trailing stalks, near a foot long; oval, cuneiform, cut, crenated leaves on short footstalks; and reddish flowers, growing almost in a verticillus, or whorls, round the stalk, three on each peduncle; appearing in June and July.

(2.) **TEUCRIUM SCOCCODONIA**, wood sage, or germander, is distinguished by leaves which are heart-shaped, serrated, and petiolated; by racemes, which are lateral and ranged in one row; and by an erect stem. The flowers are straw-coloured, and the filaments red. The plant has a bitter taste, and smells like hops with a little mixture of garlic. It is used in brewing in the isle of Jersey instead of hops.

3. **TEUCRIUM SCORDIUM**, the common water germander, hath creeping perennial roots, sending up many square, procumbent, or trailing stalks, branching diffusely; oblong, indented, serrated, close-fitting, opposite leaves; and small reddish flowers, generally two together, from the sides of the stalks and branches, in July and August. This plant was formerly considered as medicinal, but has now fallen into disuse. It grows naturally in marshy places, in the isle of Ely and other parts of England, and most parts of Europe; and is sometimes admitted into gardens, in moist places, for variety, and as a medicinal plant.

TEVERONE, a river of Italy, which rises in the Apennines, 50 miles above Tivoli, and falls at last into the **TIBER**.

TEVIOT, or **TIVIOR**, a river of Scotland, in Roxburghshire, which rises on the English border in the SW. of Roxburghshire, runs nearly NE. through that county, where it is joined by the **SLITTRICK** at Hawick, the **ROLE** at Cavers, the **JED** at Jedburgh, and the **OXNAM** near Crailing; it falls into the **TYNE** at Kelso.

TEVIOTDALE, a district of Roxburghshire, which gives name to the county. See **ROXBURGH**, N° 4.

TEURART, an ancient town of Africa, in Fez; seated on a mountain, near the river **Za**; it was anciently a very important city.

TEUTHIS, in ichthyology, a genus of fishes belonging to the order of *abdominales*. The head is somewhat truncated on the fore part; the branchial membrane has five rays; the teeth equal, rigid near each other, forming a regular series. There are two species, viz.

1. **Teu.**

2. **Teu.**

1. TEUTHIS HEPATUS, and

2. TEUTHIS JAVA.

TEUTHIRAS, king of Mysia. See TELEPHUS.

TEUTOBOCHUS, a gigantic king of the TEUTONES. See GIANT, § 3, and next article.

TEUTONES or) an ancient people, always

TEUTONI, } by historians joined with the CIMBRI; both seated, according to Mela, beyond the Elbe, on the Sinus Codanus, or Baltic; and there, it is supposed, lay the country of the Teutones, now *Ditmarsh*; diversity of dialects producing the different terms *Test*, *Tut*, *Dit*, *Tid*, and *Thod*, which in the ancient German language signified *people*. Of these Teutones, Virgil is to be understood in the epithet *Teutoniceus*, an appellation which more lately came to be applied to the Germans in general, and later still the appellation, *Alemanni*.

(1.) TEUTONIC, *adj.* something belonging to the Teutones.

(2.) The TEUTONIC LANGUAGE is supposed to have been the language of the ancient Germans, and hence is reckoned amongst the mother tongues. See PHILOLOGY, *Sett.* IX. and X.

(3.) TEUTONIC ORDER, an order of military knights, established towards the close of the 12th century, in the Holy Land, where, after the death of Barbarossa, the Germans behaved with so much bravery, that Henry king of Jerusalem, the patriarch, and several other princes, determined to reward their valour by instituting the order. They had at first the title of the *knights of St George*; and afterwards were called *Equites Mariani*, or *Knights of St Mary*. Among their other obligations it was required, that every knight should be of noble parentage; that the order should defend the Christian religion and the Holy Land; that they should exercise hospitality towards the Christians in general, but particularly those of their own country; and that they should with all their power endeavour to propagate and extend the Christian faith and the religion of JESUS. In 1190, having become rich by donations from the superstitious, they elected their first grandmaster, Henry Walpot, a German, who had distinguished himself by his zeal and valour. In 1191, pope Celestine III. confirmed their privileges already granted, giving them the title of the *Teutonic knights of the hospital of St Mary the Virgin*. By the conditions of this bull, they vowed perpetual continence, obedience, and poverty; obligations which it may well be imagined were not very strictly kept. See POLAND, § 3, 10, 11, 12, 16. and PRUSSIA, § 6.

TEUZAR, an ancient and considerable town of Africa, in Biledulgerid, which is divided into two parts by a river that runs through it. It is seated in a fertile country, and has a good trade in dates, &c.

* TEW. *n. s.* [*toewe*, a hempen rope, Dutch.] 1. Materials for any thing. *Skinner*. 2. An iron chain. *Ainsworth*.

* To TAW. *v. a.* [*teawian*, Sax.] To work; to beat as to soften: of leather we say to *taw*.

* TEWEL. *n. s.* [*tugau* or *tugai*, Fr.] In the back of the forge, against the fire-place, is fixed a thick iron plate, and a taper pipe in it above 5

inches long, called a *tewel*, or *tewel iron*, which comes through the back of the forge; into this *tewel* is placed the bellows. *Moxon*.

TEWIT, in ornithology. See TRINGA.

TEWKSBURY, a town in Gloucestershire, formerly noted for its monastery. It is now a large handsome corporation, containing about 500 houses, with a magnificent church. It is seated at the confluence of the Severn and Avon, has a cotton manufactory, and sends two members to parliament. Lon. 2. 13. W. Lat. 52. 0. N.

* To TEWTAW. *v. a.* [formed from *taw* by reduplication.] To beat; to break.—The method and way of watering, pilling, breaking, and *tewtawing* of hemp and flax, is a particular business. *Mortimer*.

(1.) TEXEL, a dep. of Holland, formed out of the c. devant province of North Holland. ALCEMAER and TEXEL are the chief towns. *Campredon* lies on the coast of this department.

(3.) TEXEL, a town of Holland, and capital of the department, (N^o 1) in the late prov. of N. Holland, seated at the mouth of the Zuyder-Zee, with a good harbour and a strong fort. It is seated in a fruitful island, about 6 miles long, and 5 broad, lying N. of the continent of Holland, between which and the island is one of the principal passages out of the Zuyder-Zee into the ocean. Most of the soil is applied to feed sheep, of which they have great flocks; and the cheese made of their milk is said to vie with the Parmesan. This island contains several villages, and a town on the E. side called *Bureh*, strongly fortified and garrisoned, and inhabited chiefly by fishermen. Lat. 53. 8. N. Lon. 4. 51. E.

TEXEUIT, or TEYENT, a town of Morocco, 100 miles WNW. of Morocco.

(1.) * TEXT. *n. s.* [*texte*, French; *textus*, Lat.] 1. That on which a comment is written.—

We expect your next

Should be no comment but a *text*. *Waller*.

2. A sentence of scripture.—

What error but some sober brow

Will bless it, and approve it with a *text*. *Shak*.—Some prime articles of faith are collected and concluded by comparing of sundry *texts* with one another. *White*.—His mind he should fortify with some few *texts*. *South*.

(2.) TEXT is a relative term, particularly used for a passage of scripture, chosen by a preacher to be the subject of his sermon.

* TEXTILE. *adj.* [*textilis*, Lat.] Woven; capable of being woven.—The placing of the tangible parts in length or transverse, as in the warp and woof of *textiles*. *Bacon*.—The materials of them were not from any herb, as other *textiles*. *Wilkins*.

* TEXTMAN. *n. s.* [*text* and *man*.] A man ready in quotation of texts.—Men's daily occasions require the doing of a thousand things, which it would puzzle the best *textman* readily to bethink himself of a sentence in the Bible clear enough to satisfy a scrupulous conscience of the lawfulness of. *Sanderson*.

* TEXTURINE. *adj.* [*textrina*, Lat.] Relating to weaving.—It is a wonderful artifice how newly hatched *m* ggots, not the parent animal, because

the emits no web, nor hath any *texturine* art, can convolve the stubborn leaf, and bind it with the thread it weaves from its body. *Derbam.*

*TEXTUARIST. } *n. f.* [*textuaire*, Fr. from
(1.) *TEXTUARY. } *text.*] One ready in the text of scripture; a divine well versed in scripture.

(2.) *TEXTUARY. *adj.* [*from text.*] 1. Contained in the text.—He extends the exclusion unto 20 days, which in the *textuary* sense is fully accomplished in one. *Brown.* 2. Serving as a text; authoritative.—I see no ground why his reason should be *textuary* to ours. *Glanville.*

(1.) *TEXTURE. *n. f.* [*textus*, Lat.] 1. The act of weaving.—Skins, although a natural habit unto all before the invention of *texture*, was something more unto Adam. *Brown.* 2. A web; a thing woven.—

Others, far in the grassy dale,
Their humble *texture* weave. *Thomson.*
3. Manner of weaving with respect either to form or matter.—

Under state of richest *texture* spread. *Milton.*
A veil of richest *texture* wrought the wears.

4. Disposition of the parts of bodies; combination of parts.—

Spirits not in their liquid *texture* mortal wound
Receive. *Milton.*
—They may compose bodies of the same nature and *texture* now, with water and earth composed of entire particles in the beginning. *Newton.*

(2.) TEXTURE properly denotes the arrangement and cohesion of several slender bodies or threads interwoven or entangled among each other, as in the webs of spiders, or in the cloths, stuffs, &c. Texture is also used in speaking of any union or constituent particles of a concrete body, whether by weaving, hooking, knitting, tying, chaining, indenting, intruding, compressing, attracting, or any other way. In which sense we say, a close compact texture, a lax porous texture, a regular or irregular texture, &c.

TEYA, a river of Germany, which rises 3 miles N. of Gerns, in Austria, runs through a great part of Moravia, and falls into the Marisch, 11 c. NE. of Zisterdorf.

TEYENT. See *TEXEUIT*.

TEZA, a town and fort of Fez, with a governor and garrison, 60 miles NNE. of Fez, and 72 SE. of Tetuan.

(1.) TEZCUCO, a large lake of Mexico, 4 miles N. of the Lake of Mexico, which is also called Tezcucio. See MEXICO, N^o 1, § 2, 15.

(2.) TEZCUCO, a town of Mexico, containing about 400 inhabitants, Indians and Spaniards.

TEZELA, a town of Algiers, 15 miles SW. of Oran.

TEZERGHE, a town of Fez, 100 miles ESE. of Fez.

TEZOUT, a town of Fez, 35 m. S. of Melilla.

TGIDT, a town of Arabia, in the province of Oman, 48 miles N. of Fartach.

THABOR. See *TABOR*.

(1.) THALES, a celebrated Greek philosopher, and the first of the seven wise men of Greece, was born at Miletus about 640 B. C. Thales acquired great reputation by his wisdom and learning; he

was the first among the Greeks who foretold eclipses of the sun, and made extraordinary discoveries in astronomy. Thales was the author of the IONIAN sect of philosophers, who were thus called from his being born at Miletus, a city of Ionia. He maintained that water was the principle of which all the bodies in the universe are composed; that the world was the work of God; and that God sees the most secret thoughts in the heart of man. Thales went to see Croesus, who was marching with a powerful army into Cappadocia, and enabled him to pass the Halys without making a bridge. He died soon after, at about 90 years of age. He composed several treatises in verse, on *meteors*, the *equinoxes*, &c. but they are all lost.

(2.) THALES, another celebrated Greek philosopher, a native of Gorthynia. See CRETE.

THALESTRIS, a queen of the Amazons, who came, attended by 300 women, 15 days journey to meet Alexander, during his expedition into Asia, that she might raise up a race of heroes by so great a man. *Q. Curt.* vi. c. 3. *Strabo*, 11. *Juf-tin*, c. 4.

(1.) THALIA, in Pagan mythology, one of the nine Muses. She presided over Comedy; and is represented crowned with a garland of ivy, holding a mask in her hand, and wearing buskins on her feet. See *MUSES*.

(2.) THALIA, in botany, a genus of plants belonging to the class of *monandria*, and order of *monogynia*; and in the natural system ranging under the 8th order, *Scitamineae*. The corolla is pentapetalous and undulated; and the drupe has a bilocular kernel. There is only one species, viz.

THALIA GEBICULATA.

THALICTRUM, MEADOW RUE, in botany: A genus of plants belonging to the class of *polyandria*, and order of *polygynia*; and in the natural system ranging under the 26th order, *Multiflorae*. There is no calyx; the petals are four or five in number, and the seeds are naked and without a tail. There are 15 species; three of which are indigenous, viz.

1. THALICTRUM ALPINUM, or *alpine meadow rue*, has a very simple stalk, and almost naked; and a racemus simple and terminal. It is a pretty little plant, about a fingers-length in height; the leaves all rise from the root, the stalks being naked and branched; the flowers nod, and have 4 petals, 12 stamina, and 8 pistils. It is frequent on the sides of rivulets in the highland mountains and other places.

2. THALICTRUM FLAVUM, the *common meadow rue*, has a leafy furrowed stalk, and a manifold erect panicle. It has commonly 24 stamina, and from 10 to 16 pistils. The root and leaves of this plant dye a yellow colour, and cattle are fond of it. It grows on the banks of some rivers.

3. THALICTRUM MINUS, or *small meadow rue*, has fexpartite leaves, and bending flowers. The stalk is striated, and about a foot high; the leaves are lax and divaricated, having rigid footstalks; they are smooth and glaucous, and their lobes generally trifid; the panicle is branched and open, and the flowers nod: the petals are pale green, tinged with red; the stamina are from 15

to 20; the seeds deeply striated, and from two to seven in number. This plant is frequent in sandy soils and mountainous pastures.

THALLAND, a province of Sweden, called also **DALFA** and **DALIA**, which see.

THALLITE, *n. f.* in mineralogy. See **MINERALOGY**, Part II. Chap. IV. Gen. XIII. Sp. 6.

THALWEG, the middle of the navigable Channel of the **RHINE**. See **REVOLUTION**, N^o VI. § 27.

(1.) **THAMAS**, Shaw of Persia. See **PERSIA**, § 21.

(2.) **THAMAS KOU LI KHAN**, or **NADIR SHAH**, the murderer and successor of the preceding monarch, a bloody monster. He began his bloody career with the murder of his own uncle, whose fort and territories he seized. See **DELHI**, § 3; **INDIA**, § 12, 13; and **PERSIA**, § 21.

(1.) **THAMES**, the finest river in Great Britain, which takes its rise from a copious spring, called *Thames Head*, two miles SW. of Cirencester, in Gloucestershire. It has been erroneously said, that its name is *Istis* till it arrives at Dorchester, 15 miles below Oxford, when, being joined by the Thame or Tame, it assumes the name of the *Thames*. Poetical fiction has perpetuated the error. About a mile below the source of the river is the first corn mill, which is called *Kemble Mill*. Here the river may properly be said to form a constant current; which, though not more than 9 feet wide in summer, yet in winter becomes such a torrent as to overflow the meadows for many miles around. From Somersford the stream winds to Cricklade, where it unites with many other rivulets. Approaching Kemsford, it again enters its native county, dividing it from Berkshire at Ingleham. It widens considerably in its way to Lechlade; and being there joined by the Lech, the Coln, the Churn, and the Isis, (which all rise in Cotswould Hill) about 138 miles from London, it becomes navigable for vessels of 90 tons. At Entham, in its course NE. to Oxford, is the first bridge of stone; a handsome one, of three arches. At Oxford, it is joined by the Charwell; it proceeds SE. to Abingdon, and thence to Dorchester, where it receives the Tame. Continuing its course SE. by Wallingford to Reading, and forming a boundary to the counties of Berks, Bucks, Surry, Middlesex, Essex, and Kent, it washes the towns of Henley, Marlow, Maidenhead, Windsor, Eton, Egham, Staines, Laleham, Chertsey, Weybridge, Shepperton, Walton, Sunbury, E. and W. Moulsey, Hampton, Thames Ditton, Kingston, Teddington, Twickenham, Richmond, Isleworth, Brentford, Kew, Mortlake, Barnes, Chiswick, Hammer Smith, Putney, Fulham, Wandsworth, Battersea, Chelsea, and Lambeth. Then, on the N. bank of the river, are Westminster and London, and, on the opposite side, Southwark; forming together one continued city, extending to Limehouse and Deptford; and hence the river proceeds to Greenwich, Erith, Greenhithe, Gray's Thurbeck, Gravesend, and Leigh, into the ocean. It receives in its course from Dorchester the rivers Kennet, Lodon, Coln, Wey, Mole, Wandle, Lea, Roding, Darent, and Medway. The jurisdiction of the lord mayor of London over the Thames extends

from Coln Ditch, a little to the west of Staines, to Yerdal or Yenlect to the east, including part of the rivers Medway and Lea; and he has a deputy, named the water-bailiff, who is to search for and punish all offenders against the laws for the preservation of the river and its fish. Eight times a year the lord mayor and aldermen hold courts of convocation for the four counties of Surry, Middlesex, Essex, and Kent. Though the Thames is said to be navigable 138 miles above the bridge, yet there are so many flats, that in summer the navigation westward would be entirely stopped, when the springs are low, were it not for a number of locks. But these are attended with considerable expence; for a barge from Lechlade to London pays for passing through them 13l. 15s. 6d. and from Oxford to London 12l. 18s. This charge, however, is in summer only, when the water is low; and there is no lock from London Bridge to Bolter's Lock; that is, for 5½ miles above the bridge. The plan of new cuts has been adopted, in some places, to shorten and facilitate the navigation. There is one near Lechlade, which runs nearly parallel to the old river, and contiguous to St John's Bridge; and there is another a mile from Abingdon, which has rendered the old stream toward Culham bridge useless. But a much more important undertaking has been accomplished by the junction of this river with the Severn. A canal was made, by virtue of an act of parliament in 1730, from the Severn to Wall Bridge, near Stroud. A new canal now ascends by Stroud, through the Vale of Chalford, to the height of 343 feet, by means of 28 locks, and thence to the entrance of a tunnel near Sapperton, a distance of near 8 miles. The canal is 42 feet in width at top, and 30 at the bottom. The tunnel (which is dug under ground two miles and three furlongs) is near 15 feet in width, and can navigate barges of 70 tons. The canal descending hence 134 feet, by 14 locks, joins the Thames at Lechlade, a distance of above 20 miles. In the course of this vast undertaking, the canal, from the Severn at Froomlade to Ingleham, where it joins the Thames, is a distance of more than 30 miles. A communication, not only with the **TRENT**, but with the **MERSEY**, has likewise been effected by a canal from Oxford to Coventry (See **MERSEY**); and another canal extends from this, at Braunston, to the Thames at Brentford, called *The Grand Junction Canal*. The tide flows up the Thames as high as Richmond, which, following the winding of the river, is 70 miles from the ocean; a greater distance than the tide is carried by any other river in Europe. The water is esteemed extremely wholesome, and fit for use in very long voyages, during which it will work itself perfectly fine.

(2.) **THAMES**, a river of Connecticut. See **CONNECTICUT**.

(3.) **THAMES**, another river of the United States, which runs into Lake St Clair; in Lon. 82. 10. E. Lat. 42. 45. N.

(4.) **THAMES**, a river of New Zealand, which runs into the S. Pacific Ocean on the NE. coast.

THAMAS, an ancient king of Egypt, cotemporary with **THOTH**, the Egyptian Mercury.

* **THAN**, *adv.* [*thanne*, Saxon.] A particle placed

placed in comparison after the comparative adjective or adverb, noting a less degree of the quality compared in the word that follows *than*: as, *Monarchy is better than anarchy. The hawk flies more swiftly than the pigeon.*—

*Were we not better to fall once with virtue,
Than draw a wretched and dishonour'd breath?*
Ben Jonson.

*More true delight in that small ground,
Than in possessing all the earth was found.*
Daniel.

—I never met with a more unhappy conjuncture of affairs, *than* in the business of that unfortunate earl, *King Charles*.—I love you for nothing more *than* for the just esteem you have for all the sons of Adam. *Swift.*

(1.) * *THANE*. *n. f.* [*thegn*, Saxon.] An old title of honour, perhaps equivalent to baron.—

By *Sinel's* death I know I'm *thane* of Glamis;
The *thane* of Cawdor lives. *Shak.*

(2.) *THANE* [*thanus*, Lat.] was a title formerly given to the nobility in Britain. It signifies a minister or honourable retainer, from the verb *thanian*, to minister. There were several degrees of nobility among the Anglo-Saxons; but those most commonly mentioned are the *king's thanes* and the *alderman's thanes*. The *king's thanes* seem to have been of three different degrees, according to their different degrees of wealth or favour at court. The *alderman's thanes* seem to have been of the lowest degree of nobility, and next to them those who were promoted to that dignity from their advancement in the church, from their valour, success in agriculture or commerce; for if a corol or farmer applied to learning and attained to priests' orders; if he acquitted himself so well as to obtain from a nobleman five bythes of land, or a gilt sword, helmet, and breast-plate, the reward of his valour; or if by his industry he had acquired the property of five bythes of land; or if he applied to trade, and made three voyages beyond sea in a ship of his own, and a cargo belonging to himself—he was denominated a *thane*. The *thanes* were obliged to attend the king with their followers in military expeditions, to assist in building and defending the royal castles, and in keeping the bridges and highways in proper repair. This title of *thane* was abolished in England at the conquest, upon the introduction of the feudal system by William I. The titles of *earl* and *baron* were about the same period introduced into Scotland by Malcolm Canmore, and the title of *thane* fell into disuse.

THANET, an island in the county of Kent, surrounded by the sea, except on the NE. side, where it is bounded by the branches of the Stour, now inconsiderable to what they were formerly. It contains several villages, and the sea-port towns of Margate and Ramsgate. It is celebrated for being the spot through which arts, sciences, and divine knowledge, came into this happy isle. The Britons called it *RICHBOROUGH*, from its vicinity to the city of that name, now only a venerable ruin; but the Saxons called it *Thanet*, from fire, having so many beacons erected on it. It lies open to the sea on the N. and E. with the river Wantsum on the W. and S.; is

about 10 miles long from the N. Foreland to Sarre-Bridge, and about 8 broad from Westgate to Sandwich-Ferry. The N. part of it is all arable, except some barren land, that is sown with sainfoin, which produces a load, and sometimes two loads of hay upon an acre; by which means, the land that otherwise is not worth half a crown an acre yields 30s. or 40s. The S. and W. parts of the island are most of them marsh or pasture lands. The soil is generally very fertile, especially in the best of barley, and other grain, of which it is computed above 20,000 quarters are sent hence to London in a year, besides what is sold to other places. The *ALGA MARINA*, or sea ware, is their chief manure.

* *To THANK*. *v. a.* [*thancian*, Saxon; *dancken*, Dutch; *thanken*, German.] 1. To return acknowledgments for any favour or kindness.—

The forlorn soldier, that so nobly fought,
He would have well become this place, and
grac'd

The *thankings* of a king. *Shak.*

For your stubborn answer,
The king shall know it, and, no doubt, *thank*
you. *Shak.*

—We *thank* God always for you: 2 *Tbeff. i. 3.*
To *thank* me for defending ev'n his foes.

Dryden.

2. It is used often in a contrary or ironical sense.—
For this we may *thank* Adam. *Milton.*

Thank yourself if ought should fall amiss.

Dryden.

—That Portugal hath yet no more than a suspension of arms, they may *thank* themselves, because they came so late into the treaty; and, that they came so late, they may *thank* the whigs. *Swift.*

* *THANK*. *THANKS*. *n. f.* [*thancar*, Saxon; *dancke*, Dutch.] Acknowledgment paid for favour or kindness; expression of gratitude. *Thanks* is commonly used of verbal acknowledgment, *gratitude* of real repayment. It is seldom used in the singular.—

The poorest service is repaid with *thanks*. *Shak.*

Thanks, good Egeus. *Shak.*

—I have no *thank* for all my good deed. *Ecclus. xx. 16.*—He took bread, and gave *thanks* to God. *Acts xxvii. 35.*—*Thanks* be to God, which giveth us the victory. 1 *Cor. xv.*—Some embrace suits which never mean to deal effectually in them; but they will win a *thank*. *Bacon.*—

For this to th' infinitely good we owe
Immortal *thanks*. *Milton.*

* *THANKFUL*. *adj.* [*thancful*, Sax.] Full of gratitude; ready to acknowledge good received.

—A *thankful* remembrance of his death. *Common Prayer.*—Be *thankful* unto him, and bless his name. *Psal. c. 4.*—It maketh the persons preferred more *thankful*. *Bacon.*—

Live, thou great encourager of arts;
Live ever in our *thankful* hearts. *Dryden.*

* *THANKFULLY*. *adv.* [from *thankful*.] With lively and grateful sense of good received.—Take it *thankfully*. *Shak.*—

If you have liv'd, take *thankfully* the part.

Dryden.

—I shall very *thankfully* learn. *Boyle.*

* *THANK.*

* **THANKFULNESS.** *n. f.* [from *thankful*.] Gratitude; lively sense or ready acknowledgment of good received.—He scarcely would give me thanks for what I had done, for fear that *thankfulness* might have an introduction of reward.

Sidney.—

Sweet prince, you learn me noble *thankfulness*. *Shak.*

—Retire with all *thankfulness* of heart. *Taylor.*—*Thankfulness* and submission make us happy. *L'Estrange.*

* **THANKLESS.** *adj.* [from *thank*.] 1. Unthankful; ungrateful; making no acknowledgment.—

Left to great good as he for her had wrought
Should die unknown, and buried be in *thankless*
thought. *Spenser.*

How sharper than a serpent's tooth it is
To have a *thankless* child. *Shak.*

One grateful woman to thy fame supply'd
What a whole *thankless* land to his deny'd. *Pope.*

2. Not deserving, or not likely to gain thanks.—The contracting and extending the lines and sense of others, if the first authors might speak for themselves, would appear a *thankless* office. *Watson.*—

Bring home on thy breast more *thankless* scars. *Crafshaw.*

* **THANKLESSNESS.** *n. f.* [from *thankless*.] Ingratitude; failure to acknowledge good received. Not t'have written then, seems little less
Than worst of civil vices, *thanklessness*. *Donne.*

* **THANKOFFERING.** *n. f.* [*thank* and *offering*.] Offering paid in acknowledgment of mercy.—A thousand *thankofferings* are due to providence. *Watts.*

* **THANKS.** See **THANK.**

* **THANKSGIVING.** *n. f.* [*thanks* and *give*.] Celebration of mercy.—These sacred hymns Christianity hath peculiar to itself, the other being songs too of praise and *thanksgiving*. *Hooker.*—Of old there were songs of praise and *thanksgiving* unto God. *Neb. xii. 46.*—We should acknowledge our obligations to God for the many favours we receive, by continual praises and *thanksgiving*. *Tillotson.*—The common practice of all Christian churches and states, in appointing and keeping days of publick *thanksgiving* and humiliation. *Nelson.*

* **THANKWORTHY.** *adj.* [*thank* and *worthy*.] Deserving gratitude; meritorious.—This is *thankworthy*, if a man endure grief. 1 *Pet. ii. 19.*—

If love be compell'd,

How can it grateful or *thankworthy* prove?

Davies.

THANN, a town of France, in the dep. of the Upper Rhine; 13½ miles NNE. of Befort, and 18 SSE. of Colmar.

THANNHAUSEN, a town of Suabia, capital of a lordship so named, 22 miles E. of Ulm.

THANWALD, a town of Silesia, 13 miles NW. of Breslaw.

THAPSIA, the DEADLY CARROT, in botany, a genus of plants belonging to the class of *pentandria*, and order of *dignia*; and in the natural system ranging under the 45th order, *Umbellatae*. The fruit is oblong, and girt with a membrane. There are five species:

1—5. **THAPSIA ASCLEPIUM, FOETIDA, GAR-**

ANICA, TRIFOLIATA, and VILLOSA. The roots of the foetida were formerly ordered in medicine, but are now entirely disused; a small dose operating with extreme violence both upwards and downwards.

(1.) **THAPSUS**, a town of Africa Proper, where Scipio and Juba were defeated by Julius Cæsar. *Liv. 29. c. 30.*

(2.) **THAPSUS**, a town of Sicily, N. of Syracuse. See **SICILY**, § 6.

THARGELIA, in Grecian antiquity, festivals in honour of Apollo and Diana.

* **THARM.** *n. f.* [*tbearm*, Sax. *darm*, Dutch, the gut.] Intestines twisted for several uses.

THAROPOS, the father of Oeagrus and grandfather of ORPHEUS. Bacchus made him king of Thrace. *Diod. 4.*

THARUS, in ornithology, the Chilese eagle. See **FALCO**, N° 16.

(1.) **THASOS**, or } an island in the Ægean sea,
(1.) **THASUS**, } anciently called *Æthria*, famous for its gold mines; with a town so named.

(2.) **THASUS**, a brother of Cadmus, whom he accompanied in search of Europa. *Apollod. 3.*

(1.) * **THAT.** *pronoun.* [*thata*, Gothick; *that*, Saxon; *dat*, Dutch.] 1. Not this, but the other. He wins me by *that* means I told you. *Shak.*

Octavia, not only *that*,

That were excusable, *that* and thousands more. *Shak.*

2. Which; relating to an antecedent thing.—The finner makes an aberration from the scope or mark *that* is set before him. *Perkins.*—

You'll rue the time

That clogs me with this answer. *Shak.*

Nothing they but dust can show,
Or bones *that* hasten to be so. *Cowley.*

—A judgment *that* is equal and impartial must incline to the greater probabilities. *Wilkins. 3.* Who; relating to an antecedent person.—

Saints *that* taught and led the way to heaven. *Tickel.*

4. It sometimes serves to save the repetition of a word or words foregoing.—

I'll know your business, *that* I will. *Shak.*
—They said, what is *that* to us? see thou to *that*. *Matth.*—Ye defraud, and *that* your brethren. 1 *Cor. vi. 8.*—Yet for all *that*—I will not cast them away. *Lev. xxvi. 44.*—We must direct our prayers to right ends; and *that* either in respect of the prayer itself, or the things we pray for. *Duty of Man.*—

They weep, as if they meant

That way at least proud Nabas to prevent. *Cowley.*

—This Runick subject will occur upon that of poetry. *Temple.*—What is inviting in this sort of poetry proceeds not so much from the idea of a country life itself, as from *that* of its tranquillity. *Pope. 5.* Opposed to *this*, as the other to one—

This is not fair, nor profitable *that*. *Dryden.*

6. When *this* and *that* relate to foregoing words, *this* is referred like *hic* or *cery* to the latter, and *that* like *ill* or *cela* to the former.—

In this scale gold, in t'other fame does lie,
The weight of *that* mounts *this* so high. *Cowley.*

7. Such as.—By religion is meant a living up to those

those principles, *that* is, to act conformably to our best reason. *Tillotson*. 8. That which; what.

Sir, I think the meat wants *that* I have. *Shak.*

9. The thing.—The Nazarite bath vowed, besides *that* his hand shall get. *Numb. vi. 21.*—

He made *that* art which was a rage. *Cowley.*

10. The thing which then was.—

Secure proud Nabas slept,

And dreamt, vain man, of *that* day's barb'rous sport. *Cowley.*

11. By way of eminence.—

This is *that* Jonathan the joy and grace,
That Jonathan in whom does mixt remain

All that fond mothers wish. *Cowley.*

Hence love himself, *that* tyrant of my days. *Cowley.*

12. In *THAT*. Because; in consequence of.—

Things are preached not in *that* they are taught,
but in *that* they are published. *Hooker.*—

(1.) * *THAT*, conjunction. 1. Because.—

It is not *that* I love you less

Than when before your feet I lay. *Waller.*

Forgive me *that* I thus your patience wrong. *Cowley.*

2. Noting a consequence.—

That he should dare to do me this disgrace,

Is fool or coward writ upon my face? *Dryden.*

—The custom and familiarity of these tongues do

sometimes so far influence the expressions in these

epistles, that one may observe the force of the

Hebrew conjugations. *Locke*. 3. Noting indication.

—We answered, *that* we held it to agreeable,

that we thought an hour spent with him was

more years of our former life. *Bacon*.—They saw

so much light, as to believe *that* when they died,

they went immediately to the stars. *Heylyn*.—I

have shewed before, *that* a mere possibility to the

contrary, can by no means hinder a thing from

being highly credible. *Wilkins*. 4. Noting a final

end.—

Treat it kindly, *that* it may

With at least with us to stay. *Cowley.*

* *THATCH*. *n. f.* [*thace*, Saxon, *brov*, Skinner.

from *thac*, a roof; in Islandick, *thak*. Mr Lye.] To

straw laid upon the top of a house to keep out

the weather.—

Hard by a flye, beneath a roof of *thatch*

Dwelt Obloquy. *Pope.*

—A plough-boy, who has never seen any thing

but *thatched* houses, naturally imagines that

thatch belongs to the very nature of a house.

Waller.—

Then came rosy Health from her cottage of

thatch. *Smart.*

* *TO THATCH*. *v. a.* [*thaccian*, Saxon.] To

cover as with straw.—

Make false hair, and *thatch*

Your poor thin roofs with burthens of the dead, *Shak.*

—Moss groweth chiefly upon ridges of houses tiled or *thatched*. *Bacon*.—

Then Rome was poor, and there you might behold

The palace *thatch'd* with straw. *Dryden.*

Sonnet or elegies to Chloris

Might raise a house above two stories:

A lyric ode would state, a catch

Would tile, an epigram would *thatch*. *Swift.*

VOL. XXII. PART I.

* *THATCHER*. *n. f.* [from *thatch*.] One whose trade is to cover houses with straw.—

You merit new employments daily;

Your *thatcher*, ditcher, gard'ner, baily. *Swift.*

—Ash is universal timber; it serves the soldier, seaman, carpenter, *thatcher*, and husbandman. *Mortimer.*

THAU, a lake of France, in the dept. of the Herault, near the coast of the Mediterranean, between Frontignan and Agde.

THAUMANTIAS, in the mythology, a name of Iris, the goddess of the rain-bow; from her father THAUMAS.

THAUMAS, a son of Oceanus and Terra, who married Electra, by whom he had Iris, the Harpies, &c.

THAUMASIUS, a mountain of Arcadia, the birth-place of Jupiter, according to the poets.

* THAW. *n. f.* [from the verb.] 1. Liquefaction of any thing congealed.—A man of continual dissolution and *thaw*. *Shak.*—

His stubborn heart, still as ice

More hardened after *thaw*. *Milton.*

2. Warmth such as liquifies congelation.—

I was the prince's jester, and duller than a great *thaw*. *Shak.*

—That cold country where discourse doth freeze in the air all Winter, and may be heard in the next Summer, or at a great *thaw*. *Wilkins.*—

When sharp frosts had long constrain'd the earth,

A kindly *thaw* unlocks it with cold rain. *Dryd.*

(1.) * *TO THAW*. *v. n.* [*thawian*, Saxon; *degen*, Dutch.] 1. To grow liquid after congelation; to melt.—

When thy melted maid

His letter at thy pillow hath laid:

If thou begin'st to *thaw* for this,

May my name step in. *Donne.*

It on firm land

Thaws not but gathers heap. *Milton.*

—Having let that ice *thaw* of itself, and frozen the liquor a second time, we could not discern any thing. *Boyle.*—

Or starting from a half year's sleep,

From Hecla view the *thawing* deep. *Grainger.*

2. To remit the cold which had caused frost.

(2.) * *TO THAW*. *v. a.* To melt what was congealed.—

Where Phœbus' fire scarce *thaws* the icicles. *Shak.*

Think not that Cæsar bears such rebel blood,

That will be *thaw'd* from the true quality. *Shak.*

My love is *thaw'd*. *Shak.*

She can unlock

The clapping charm, and *thaw* the numbing spall. *Milton.*

Burnish'd steel, that cast a glare

From far, and seem'd to *thaw* the freezing air. *Dryden.*

Her icy heart is *thaw'd*. *Granville.*

THAWING. *part. n. f.* [from *thaw*.] the resolution of ice into its former fluid state by the warmth of the air. See CONGELATION, and FROST.

THAXTED, an incorporated town of England, in Essex, with a fine church, and a market on Friday, seated near the Chelmer, 20 miles N.W. of Chelmsford.

! j Chelms-

Chelmsford, 6 N. of Dunmow, and 43 NNE. of London. Lon. ϕ . 22. E. Lat. 51. 56. N.

* **THE**, article. [*de*, Dutch.] 1. The article noting a particular thing.—

He only lived but till he was a man,

The which no sooner had his prowess confirm'd,
In the unshrinking station where he fought.

But like a man he died! *Shak.*

—He put him in mind of *the* long pretence he had
to be groom of the bed chamber, for *the* which he
had the queen's promise. *Clarendon.*—

Unhappy till *the* last, *the* kind releasing knell.

Cowley.

I'll march *the* muses, Hannibal!

Cowley.

The fair example of the heavenly lark.

The fruit

Of that forbidden tree, whose mortal taste

Brought death into *the* world. *Milton.*

Night shades *the* groves, and all in silence

lie.

All but *the* mournful Philomel and I. *Pope.*

2. Before a couplet is commonly cut off in verse.—

Who had *th'* especial engines been to rear

His fortunes up into the state they were. *Dan.*

Th' adorning thee with so much art

Is but a bar'rous skill. *Cowley.*

3. Sometimes *he* is cut off.—

In this scale gold, in *t'* other fame does lie.

Cowley.

4. It is used by way of consequential reference.

—*The* longer sin hath kept possession of the heart,
The harder it will be to drive it out. *Duty of Man.*

5. In the following passage *the* is used according
to the French idiom.—As all the considerable gov-
ernments among the Alps are commonwealths,
so it is a constitution the most adapted of any to
the poverty of these countries. *Addison.*

THEA, in botany. See **TEA**, N^o 1, § 1—11.

THEAKIKI. lake of the United States, which
runs into Lake Illinois in Lon. 89. 15. W. Lat.
42. 52. N.

THEALE, a small town of England, in Buck-
inghamshire, seated on the Kennet, 4 miles W. of
Reading.

THEANGELA, a town of Caria.

THEANO, a town of Naples, in Iavora, with
a bishop's see. 15 miles N. of Capua.

THEANUM. See **TEANUM**.

THEATE, a town of Naples, with a bishop's
see. See **CHRIST**.

THEATINES, a religious order in the Romish
church, so called from their principle founder
John Peter Caraffa, the bishop of **THEATE**, or
Chieti, in the kingdom of Naples, and afterwards
pope, under the name of *Paul IV*. The names
of the other founders were Grestan, Boniface,
and Configlieri. These four pious men desiring
to reform the ecclesiastical state, laid the founda-
tion of an order of regular clerks at Rome in
the year 1524. Pope Clement VII. approved the
institution, and permitted the brethren to make
three religious vows, to elect a superior every
3 years, and to draw up statutes for the regu-
lation of the order. They first endeavoured, by
their example, to revive among the clergy the
poverty of the apostles and first disciples of our
Saviour, and were the first who assumed the title
of regular clerks.

* **THEATRAL**. *adi.* [*theatral*, Fr. *theatralis*,
Lat.] Belonging to a theatre.

(1.) * **THEATRE**. *n. f.* [*theatre*, Fr. *theatrum*,
Lat.] 1. A place in which shews are exhibited;
a playhouse.

This wife and universal theatre,
Presents more woful pageants than the scene

Wherein we play. *Shak.*

—They all stood as in a theatre beholding this
light. *Bacon.* 2. A place rising by steps or gra-
dations like a theatre.—

Shade above shade, a woody theatre. *Milton.*

A native theatre, which rising slow,

By just degrees o'erlook'd the ground below.

Dryden.

No theatres of oaks around him rise. *Harris.*

(2.) **THEATRE**, ANCIENT HISTORY OF THE

GRECIAN. For the origin of the DRAMATIC

ART, we naturally look to Greece, the nursery

of the arts and sciences. It derived its origin

from the hymns which were sung in the festivals

of Bacchus in honour of that deity. While these

resounded in the ears of the multitude, choruses

of Bucchants and Fauns, ranged round certain

obscene images which they carried in triumph

procession, chanted lascivious songs, and some-

times sacrificed individuals to public ridicule. The

hymns in honour of Bacchus, while they describ-

ed his rapid progress and splendid conquests, be-

came imitative; and in the contests of the Pythi-

an games, the players on the flute who entered

into competition were enjoined by an express law

to represent successively the circumstances that

had preceded, accompanied, and followed the

victory of Apollo over Python. Some years after

this regulation, Sufarion and **THESPIS**, both born

in a small borough of Attica, named *Icaria*, ap-

peared each at the head of a company of actors,

the one on a kind of stage, the other in a cart.

The former attacked the vices and absurdities of

his time; and the latter treated more noble sub-

jects, which he took from history. Sufarion re-

presented his first pieces towards the year 580 be-

fore Christ. Some years after, Thespis made his

first attempts in tragedy, and acted his Alcexis in

536. Thespis had more than once seen in the festi-

vals, in which as yet hymns only were sung, one

of the fingers, mounted on a table, form a kind

of dialogue with the chorus. From this hint he

conceived the idea of introducing into the trage-

dies an actor who, by simple recitals introduced

at intervals, should give relief to the chorus, di-

vide the action, and render it more interesting.

This happy innovation, together with some other

liberties in which he had allowed himself, gave

alarm to SOLON, but the excessive approbation

and delight with which the pieces of Thespis and

Sufarion were received, at once justified and ren-

dered useless his suspicious foresight. The poets,

who till then had only exercised their genius in

dithyrambs and licentious satire, struck with the

elegant forms which these species of composition

began to assume, dedicated their talents to trage-

dy and comedy. Soon after a greater variety was

introduced in the subjects of the former of these

poems. *Phrynicus*, the disciple of Thespis, made

choice of that kind of verse which is most suitable

to the drama, was the author of some other chan-

ges,

ger, and left tragedy in its infancy. *ÆSCHYLUS* received it from his hands enveloped in a rude vestment, its visage covered with false colours, or a mask unexpressive of character, without either grace or dignity in its motions, inspiring the desire of an interest which it with difficulty excited, still attached to the buffooneries which had amused its infant years, and expressing its conceptions sometimes with elegance and dignity, but frequently in a feeble and low style, polluted with gross obscenities. In his first tragedies he introduced a second actor; and afterward, copying the example of *SOPHOCLES*, who had just entered on his theatrical career, he admitted a third, and sometimes even a fourth. By this multiplicity of personages, as the chorus now held only a subaltern station, *Æschylus* shortened its part. To give an impression of *greatness* he raised his actors on stilts, and covered their faces with masks. He also clothed them with magnificent robes. Instead of those wretched scaffolds which were formerly erected in haste, he obtained a theatre furnished with machines, and embellished with decorations. Here the sound of the trumpet was reverberated, incense was seen to burn on the altars, the shades of the dead to arise from the tomb, and the *FURIES* to rush from the gulphs of *TARTARUS*. The effect of so many new objects could not but astonish the spectators; nor were they less surprised and delighted at the intelligence displayed in the performance of the actors, whom *Æschylus* almost always exercised himself. The progress of the art was extremely rapid. *Æschylus* was born 525 years before Christ, 11 years after *Thespis* had acted his *Alceus*. He had for competitors *CHOERILUS*, *Pratinas*, and *Phrynichus*, whose glory he eclipsed, and *Sophocles*, who rivalled his own. *Sophocles* was born about the year 497 B.C. about 14 years before *Euripides*. These carried tragedy to the highest perfection to which it attained among the Greeks. *ÆSCHYLUS* painted men greater than they can be, *SOPHOCLES* as they ought to be, and *EURIPIDES*, as they are. It was not till after a long infancy that comedy began suddenly to make a rapid improvement in Sicily. Instead of a succession of scenes without connection or tendency, the philosopher *EPICHRMUS* introduced an action, all the parts of which had a dependence on each other; and conducted his subject, without wandering from it, through a just extent to a determinate end. His pieces, subjected to the same laws as tragedy, were known in Greece, where they were considered as models; and comedy soon shared with her rival the suffrages of the public, and the homage due to genius. The Athenians, especially, received her with transport, and many of their poets exercised their genius in this novel species of composition; as *Magnes*, *Cratinus*, *Crates*, *Pherecrates*, *Eupolis*, and *Aristophanes*. They all flourished in the age of *Pericles*. In such of their pieces as have come down to us, the gods and heroes are travelled, gross and obscene language is often employed, and virulent invectives are often thrown out against individuals of the first rank for genius and virtue. Towards the end of the Peloponnesian war the licentiousness of comedy was restrained. The chorus was

laid aside, because the rich citizens were alarmed, and would no longer contribute money to support it, nor provide masks with portraits for exposing individuals. The poets being thus restrained from mentioning names of living persons on the stage, invented false names, but still exposed real and known characters. *ARISTOPHANES*, in some of his latest pieces, has given us some good examples of this kind of comedy, which is sometimes called the *middle comedy*. *COMEDY* was still liable to abuse, and therefore required farther reformation. As the use of real names had formerly been prohibited, real subjects were also forbidden; and thus was formed what is called the *new comedy*, which has continued to be cultivated and improved in modern times.

(3.) THEATRE, DESCRIPTION OF AN ANCIENT GRECIAN. To give some idea of a Grecian theatre, we shall describe very shortly the theatre of *Bacchus* in Athens, which was built by the famous architect *Philos* in the time of *Pericles*. The part intended for the spectators was of a semicircular form, at the diameter of which was erected the stage. The orchestra occupied the space where the pit in modern theatres is situated, where the music, the chorus, and the *MIMI* were placed. It was four feet elevated above the ground. The spectators were arranged in three galleries round all the sides of the orchestra except that of the stage, each gallery containing 8 rows of seats. At the farther end of the orchestra, where the stage is erected in modern theatres, stood the *thymele* or *logeon*, but projecting a little towards the audience. It was a little higher than the orchestra, and did not extend the whole breadth of it. In some theatres it was only six feet square. Here the principal part of the chorus made their recitations, and in comical interludes the *mimi* performed. Behind the *THYMELE* appeared the stage or proscenium, considerably elevated. No part of this theatre was covered except the stage, and a high gallery called *cirois* set apart for the women. The Athenians, being exposed to the weather, came usually with great cloaks, to secure them from the rain or the cold; and for defence against the sun, they had the *sciadion*, a kind of parasol, which the Romans used also in their theatres by the name of *umbellæ*; but when a sudden storm arose, the play was interrupted, and the spectators dispersed. The chorus, according as the subject demanded, was composed of men and women, old men or youths, citizens or slaves, priests, soldiers, &c. to the number of 15 in tragedy, and 24 in comedy. The chorus came upon the stage preceded by a flute-player, who regulated their steps; sometimes one after the other, but in tragedy more frequently three in front and five in depth, or five in front and three in depth. The pay of those performers who had acquired great reputation was considerable. *Polaus* gained a talent in two days (equal to £125 Sterling). Several judicious remarks on the difference between the ancient and modern theatre, are inserted under the article ART, § 1. 8.

(4.) THEATRE, DESCRIPTION OF AN ANCIENT ROMAN. Dramatic entertainments were introduced at Rome in A. U. C. 391. They were called *ludi scenici*, because they were first acted in a shade

I i 2 formed

formed by the branches and leaves of trees. They were borrowed immediately from Etruria, whence also they received their first players. These Etrurians at first only danced to a flute, without either singing or acting. The Roman youth soon imitated them at their solemn festivals, adding saffery in rude verses, and gestures adapted to the subject. These verses were called *Fescennini* from Fescennia, a city of Etruria. Livius Andronicus was the first poet who wrote a regular play in Latin. This happened in A. U. C. 512 or 513, about 160 years after the death of Sophocles and Euripides, and 52 after that of MENANDER. The Grecian model was afterwards introduced and cultivated much by succeeding dramatic writers. This was the model of Menander, for the old and middle comedy was unknown at Rome. As the Romans were only imitators of the Greeks in the dramatic art, as well as in most of the arts and sciences, nothing more is necessary to be said in addition to the account which we have already given of the Grecian stage.

(5.) THEATRE OF ENGLAND, HISTORY OF THE. The first origin of the English stage is hid in obscurity. It was not, however, copied from the Grecian or Roman; for it was evidently different in form as well as in matter, and may with more propriety be deduced from Gothic original. It appears that there were theatrical entertainments in England almost as early as the conquest; for we are told by William Stephanides or Fitz-Stephen, a monk, who in the reign of Henry II. wrote his *Descriptio Nobilissima Civitatis Londonie*, that "London, instead of the common interludes of the theatre, had plays of a more holy kind; representations of the miracles of confessors, and the sufferings of martyrs. At this time there were also certain sets of idle people, who travelled the countries and were called *Mummers*, a kind of vagrant comedians, whose excellence consisted altogether in mimicry and humour. It is probable that, soon after this time, the dramatic representations called *Mysteries* were exhibited: These mysteries were taken from scripture history; some represented the creation of the world, with the fall of Adam and Eve; some the story of Joseph; and others even the incarnation and sufferings of the Son of God. These Mysteries were succeeded by *Moralities*, in which there were some rude traces of a fable and a moral; and some also of poetry, the virtues, vices, and other affections of the mind being frequently personified. After these Moralities came what were called *Interludes*, which made some approaches to wit and humour. In the time of Henry VIII. one or two pieces had been published under the classical names of *Comedy* and *Tragedy*, but they seem not to have been intended for popular use. It was not till the religious ferment had subsided, that the public had leisure to attend to dramatic poetry. In the reign of Elizabeth, tragedies and comedies began to appear in form, and could the poets have persevered, the first models were good. *Corbodu*, a regular tragedy, was acted in 1561; and Gascoigne, in 1566, exhibited *Jocasta*, a translation from Euripides, as also *The Supplices*, a regular comedy, from Aristotle, near 30 years before any of Shakespeare's were printed. The people however still retained

a relish for their old mysteries and moralities, and the popular dramatic poets seem to have made them their models. The graver sort of moralities appear to have given birth to our modern tragedy; as our comedy evidently took its rise from the lighter interludes of that kind. Even after the people had been accustomed to tragedies and comedies, moralities still kept their ground. One of them, entitled *The New Cusum*, was printed so late as 1573. At length they assumed the name of *masques*, and with some classical improvements, became in the two following reigns the favourite entertainments of the court. As for the old mysteries, which ceased to be acted after the reformation, they seem to have given rise to a third species of stage exhibition; which, though now confounded with tragedy or comedy, were by our first dramatic writers considered as quite distinct from them both; these were historical plays, or histories; a species of dramatic writing which resembled the old mysteries in representing a series of historical events simply in the order of time in which they happened, without any regard to the *three unities*. Of this description were many of the pieces which the age of Elizabeth produced, the principal author of which era was the immortal SHAKESPEARE. Such an author could not fail to establish the reputation of the theatre, and insure its prosperity. In this flourishing state it continued during the whole reign of James I; dramatic authors abounded, and every year produced a number of new plays; it became a fashion for the nobility to celebrate their weddings, birth days, and other occasions of rejoicing, with masques and interludes, which were exhibited with surprising expence; our great architect, Inigo Jones, being frequently employed to furnish decorations, with all the luxuriance of his invention and magnificence of his art. The king and his lords, and the queen and her ladies, frequently performed in these masques at court, and the nobility at their private houses; nor was any public entertainment thought complete without them. Yet even about this flourishing period, many of our ancient dramatic pieces were performed in the yards of carriers' inns; in which the comedians, who then first united themselves in companies, erected an occasional stage. The stage was strewn with rushes, which, in the time of Shakespeare, were the usual covering of floors in England. The curtain opened in the middle, and was drawn backwards and forwards on an iron rod. In some play-houses they were woollen, in others made of silk.—Towards the rear of the stage there appears to have been a balcony, the platform of which was probably 8 or 10 feet from the ground, and in many of our old plays, part of the dialogue was spoken from thence; and in the front of this balcony curtains were also hung. The mechanism of our ancient stage seldom went beyond a painted chair or a trap-door, and few, if any of them, had moveable scenes. When tragedies were performed the stage was hung with black. In the early part of Shakespeare's acquaintance with the theatre, the want of scenery seems to have been supplied by the simple expedient of writing the names of the different places where the scene was laid in the progress of the play,

play, which were disposed in such a manner as to be visible to the audience. It is probable that the stage was formerly lighted by two large branches, of a form similar to those now hung in churches. They gave place in a subsequent period to small circular wooden frames, furnished with candles, eight of which were hung on the stage, four at either side; and these within a few years were wholly removed by Mr Garrick, who, on his return from France, first introduced the present commodious method of illuminating the stage by lights not visible to the audience. Many of the companies of players were formerly so thin, that one person played two or three parts; and a battle on which the fate of an empire was supposed to depend was decided by half a dozen combatants. It appears to have been a common practice, in their mock engagements, to discharge small pieces of ordnance on the stage. Before the exhibition began, three flourishes or pieces of music were played, or, in the ancient language, there were three *foundings*. Music was likewise played between the acts. The instruments chiefly used were trumpets, cornets, and hautboys. The band, which did not consist of more than five or six performers, sat in an upper balcony, over what is now called the stage-box. The person who spoke the prologue was ushered in by trumpets, and usually wore a long black velvet cloak. The amusements of our ancestors, before the commencement of the play, were of various kinds, such as reading, playing at cards, drinking ale, or smoking tobacco. It was a common practice to carry table-books to the theatre, and, either from curiosity or enmity to the author, or some other motive, to write down passages of the play that was represented; and there is reason to believe that the imperfect and mutilated copies of some of Shakespeare's dramas which are yet extant were taken down in short-hand during the exhibition. At the end of the piece, the actors, in noblemen's houses and in taverns, where plays were frequently performed, prayed for the health and prosperity of their patrons; and in the public theatres for the king and queen. This prayer sometimes made part of the epilogue. Hence, probably, as Mr Steevens has observed, the addition of *Vivant rex et regina* to the modern play-bills. Plays, in the time of Shakespeare, began at one o'clock p. m. and the exhibition was usually finished in two hours. Even in 1667 they commenced at three. When Goffon wrote his *School of Abuse* in 1579, it seems the dramatic entertainments were usually exhibited on Sundays. Afterwards they were performed on that and other days indiscriminately. It appears from a contemporary writer, that exhibiting plays on Sunday had not been abolished in the third year of king Charles I. The taste for theatrical entertainments continued during great part of the reign of king Charles I. but in 1633 it began to be opposed by the Puritans from the press; and the troubles that soon after followed entirely suspended them till the restoration of king Charles II. in 1660. Till this time no woman had been seen upon the English stage, the characters of women having always been performed by boys, or young men of an effeminate aspect; but the power of real and beau-

tiful women was now added to the stage. From that period the stage has held the rank to which it is entitled as the first of rational amusements. The powerful OTWAY, the pathetic ROWE, and the sublime although extravagant LEE, produced, in the end of the 17th, and the early part of the 18th century, their excellent tragedies, which, with those of SHAKESPEARE, and a small number of others, are the *stock pieces* of the theatres; for few are the productions of Melpomene within the last 50 years that have been able to obtain this footing. The comic muse, however, has been cultivated with more success. A splendid chain, the links of which are continuous, although of unequal brilliancy, extends from CONGREVE to SHERIDAN. Of late years, indeed, a nauseous superfluity of trite and palling sentiment, a childish indulgence in *barlequinade*, and an unnatural adoption of the gloomy and *gigantesque* absurdities of Germany, have prevailed but too much on the British stage. Yet let us hope that these are but the follies of a day, and that their place on the English boards will soon be supplied by the native and legitimate drama,—that drama, which, never inattentive to the rules of composition, yet renders them subservient to the dictates of truth and of nature.

(6.) THEATRE, PRESENT STATE OF THE, IN GREAT BRITAIN. There are in London only three theatres licensed to perform tragedies and comedies; Drury-Lane, Covent-Garden, and the little theatre in the Haymarket; the latter a summer, and the two former winter houses. The winter theatres open in October, and continue performing until the end of June, and the summer house is open in the intermediate months. That part in all the houses which is appropriated for the reception of the audience is fitted up in the most elegant and commodious manner; and no art or embellishment which can heighten the delusion of the scene is omitted on the stage. The dresses are characteristic and superb, the machinery skilful, the scenery beautiful, the orchestra powerful and harmonious, and the performers in general excellent. The prices of admission have been gradually raised, until they now are, boxes 6s. pit 3s. 6d. galleries 2s. and 1s. Such establishments are not confined to London; every town in the island has its regular or occasional theatre; and in many cities, as Birmingham, Liverpool, York, Glasgow, &c. they yield only to those of London in size. The emoluments of the best actors are great, amounting to several thousands in a year; and the most eminent hold that rank in society to which they are entitled by their abilities. The King's Theatre, or Opera House, we have noticed under OPERA. There are *spectacle* houses in London, as Astley's amphitheatre, Jones's circus, Sadler's Wells, &c. but as their performances are chiefly equestrian or pantomimic, we do not consider them as properly belonging to the article THEATRE.

* THEATRICAL. THEATRICK. *adj.* [*theatrum*, Lat.] Scenick; suiting a theatre; pertaining to a theatre.—*Theatrical* forms fickle hard for the prize of religion: a distorted countenance is made the mark of an upright heart. *Decay of Piety.*—

Load

Load some vain church with old *theatrick*
state. *Pope.*

* **THEATRICALY.** *adv.* [from *theatrical*.]
 In a manner suited the stage.—

Her voice *theatrically* loud. *Pope.*

• **THEATRICK.** See **THEATRICAL.**

THEBÆ, *plur.* the ancient name of **THEBES**
 in Bæotia.

(1.) **THEBAIC,** *adj.* [from *Thebes* or *Thebais*.]
 Of or belonging to **THEBES** or **THEBAIS**

(2.) **THEBAIC POWDER.** See **PHARMACY, Index.**

(3.) **THEBAIC TINCTURE,** a name given to
LAUDANUM. of the tincture of opium.

(1.) **THEBAID,** a celebrated heroic poem of
 Statius, the subject of which is the civil war of
 Thebes, between the two brothers Eteocles and
 Polynices, or Thebes taken by Thebes.

(2.) **THEBAID,** or **THEBAIS,** the ancient
 name of an extensive district
 in the S. of Upper Egypt, so called from **THEBES**,
 its chief city. It is the least fertile and the least
 populous of any country in Egypt. It is the retreat
 of many Greek Christians, but is chiefly inhabited
 by Arabs, who are zealous enemies to the Turks.
 It is now called **SAID**.

(1.) **THEBAN,** *adj.* [from *Thebes*.] Of or
 belonging to, or sprung from Thebes.

(2.) **THEBAN LEGION,** a legion of Roman sol-
 diers, who suffered martyrdom for Christianity
 under Dioclesian and Maximian. It was com-
 manded by St **MAURICE**, and, together with the
 officers, amounted to 6600 men. This legion re-
 ceived its name from the city of Thebes in Egypt,
 where it was raised. It was sent by Dioclesian to
 check the Bagaudæ, who had excited some dis-
 turbances in Gaul. Maurice having carried his
 troops over the Alps, the emperor Maximian com-
 manded him to employ his utmost exertions to
 extirpate Christianity. This proposal was received
 with horror both by the commander and by the
 soldiers. The emperor, enraged at their oppo-
 sition, commanded the legion to be decimated;
 and when they still declared that they would
 sooner die than do any thing prejudicial to the
 Christian faith, every tenth man of those who
 remained was put to death. Their perseverance
 excited the emperor to still greater cruelty; for
 when he saw that nothing could make them re-
 linquish their religion, he commanded his troops
 to surround them, and cut them to pieces. **Ma-
 urice**, the commander of these Christian heroes,
 and **Exuperus** and **Candidus**, officers of the le-
 gion, who had chiefly instigated the soldiers to
 this noble resistance, signalized themselves by
 their patience and their attachment to the doc-
 trines of the Christian religion. They were mas-
 sacred, it is believed, at Agaune, in Chablais,
 the 22d September 286.—Notwithstanding many
 proofs which support this transaction, **Dubordier**,
Hottinger, **Moyle**, **Burnet**, and **Mosheim**, doubt
 the fact.

THEBANS, *n. s.* the citizens of Thebes.

THEBARTON, a town of England, in Suffolk,
 SW. of Dunwich.

(1.) **THEBES,** an ancient city of Egypt, capital
 of the district of **THEBAIS**, was one of the most
 renowned cities of the ancient world. It was
 also called **DIOSPOLIS**, or the city of Jupiter; and

was built, according to some, by **OSIRIS**, ac-
 cording to others by **BUSIRIS**. Its length, in
 Strabo's time, was 80 furlongs, or 10 miles; but
 this was nothing in comparison of its ancient ex-
 tent, before it was ruined by Cambyzes, which
 was no less than 420 stadia, or 52 miles and an
 half. The wealth of this city was so great, that,
 after it had been plundered by the Persians, what
 was found, on burning the remains of the pillage,
 amounted to above 300 talents of gold and 2300
 of silver.

(II. 1.) **THEBES**, the name of a celebrated city
 of ancient Greece. It is supposed to have been
 built by Cadmus, about the year of the world
 2555. This Cadmus, according to the Greeks,
 was the son of Agenor king of Sidon or of Tyre;
 but the Sidonians say he was his cook, and that
 his wife was a musician at court, with whom he
 ran away into Greece. The Greek writers tell
 us, that being commanded by his father to go in
 search of his daughter Europa, whom Jupiter in
 the shape of a bull had carried off, and forbid to
 return without her, he built, or rebuilt, the city
 of Thebes, after having long sought her in vain.
 He was at first opposed by the Hyantes and Aones,
 the former of whom he defeated in battle, and
 forced to retire into Locris; the latter submitted,
 and were incorporated among his subjects.

(2.) **THEBES, ANCIENT HISTORY OF THE**
KINGDOM OF. Those who endeavour to extract
 some truth from the multitude of fables in which
 the early part of the Grecian history is obscured,
 are of opinion that Cadmus was one of the Can-
 naanites expelled by Joshua; and that he was of
 the family of the Cadmonites mentioned by Moses
 and Joshua. He is universally allowed to have
 introduced the Phœnician letters into Greece, set
 up the first schools, and introduced brass; which,
 from him, had the name of **CADMEAN** given to it.
 The government of Thebes continued for a long
 time monarchical; and the names of a number of
 its kings have been transmitted to us, with some
 account of their transactions; but so much ob-
 scured by fable, that little certain can be deter-
 mined concerning them. See **CREON**, **ETEOCLES**,
LAÏUS, **ŒDIPUS**, &c. We shall therefore here
 only take notice of that period of it when the
 Thebans emerged from their obscurity, and for a
 time held the sovereignty of Greece.

(3.) **THEBES, HISTORY OF THE REPUBLIC OF,**
UNTIL THE BATTLE OF LEUCTRA. Though
 the Thebans are famed in the early period of their
 history for their martial exploits, yet in process
 of time they seem to have degenerated. At the
 time of the invasion of Xerxes, they were the first
 people in Greece who were gained over to the
 Persian interest. On account of this misbeha-
 viour, they were become very obnoxious to the
 other states, especially to the Athenians, whose
 power and renown increased every day, and
 threatened at last to swallow them up altogether.
 The Thebans being in no condition to oppose
 such a formidable power, put themselves under the
 protection of the Spartans, who, out of jealousy
 of the Athenians, readily forgave them; and so
 grateful were the Thebans for the kindness shown
 them at this time, that, during the whole of the
 Peloponnesian war, Sparta had not a more faithful

ally.

ally. By these means they not only recovered the government of Bœotia, of which they had been formerly in possession, till deprived of it on account of their siding with the Persians, but their city became one of the first in Greece. By this prosperity the Thebans were so much elated, that, when the peace of Antalcidas came to be signed, they refused to agree to it, as they were thus once more deprived of the government of Bœotia; so that it was not without the utmost difficulty that they were overawed into it by the other states. Not content with forcing them to give up this point, however, the Spartans undertook to change the form of the Theban government, which at this time was a democracy, and accomplished it through the treachery of those who had the care of the citadel. The Thebans continued under the power of the Spartans for 4 years; at the end of which term a conspiracy being formed against them by some of the principal people in the city, among whom was a young nobleman, named *Pelopidas*, the Spartans were massacred and driven out, and the citadel regained. During the tumult Epaminondas, afterwards the celebrated general, with a number of the best citizens, joined the party of Pelopidas; and the latter having called a general assembly of the Thebans, proclaimed liberty to them, and exhorted them in the strongest manner to fight for their country. This speech was received with the greatest acclamations; Pelopidas was unanimously proclaimed the preserver of Thebes, and was charged with the management of the war which was then to be declared against Sparta. These transactions so much exasperated the Spartans, that they immediately sent their king Cleombrotus against them, though it was then the depth of winter. The Athenians, in the mean time, who had hitherto assisted the Thebans, declined any farther connection, lest they should draw upon themselves the resentment of the Spartans. But they were soon after determined to act again on the same side, by an attempt which the Spartan general, Sphodras, had rashly made on the Piræum or harbour of Athens. Thus, by means of the Athenians, a powerful diversion was made in favour of the Thebans, who gradually recovered all the towns of Bœotia, and at length began to act offensively against their enemies, and made a powerful invasion in Phocis. They had now many sharp encounters with them; which, though they did not amount to decisive battles, yet raised their courage, and depressed that of the Spartans. In the battle of *TANAGRA*, the Lacedæmonians were entirely defeated by the Athenians and their allies. Soon after this, Pelopidas with a body of only 300 Thebans, entirely routed and dispersed near 1000 Spartans. These successes of the Thebans greatly alarmed the Athenians, who continually fought to oppose their growing power. In this opposition they were joined by the Plataeans, who on this account became extremely obnoxious to the Thebans, so that they at last came to a resolution to surprise their city. This they accomplished, and entirely destroyed it, together with *THESPIA*, another city extremely well affected to Athens. Soon after this, the Thebans, encouraged by their success, began to think of en-

larging their territories, and of making encroachments on their neighbours, as they saw other states had done before them. When the general treaty for restoring peace to Greece came to be proposed by the Athenians, and was upon the point of being executed by the rest of the states, the Thebans refused to agree to it; unless they were comprehended in it under the name of *Bœotians*. The consequence was, that Sparta declared war against them, about the year *A. A. C.* 371. The Thebans were in no small consternation to see themselves engaged in a war with the powerful Spartans, without any ally to assist them. However, they resolved to make the best defence they could; and put their army, consisting of 6000 men, under the command of Epaminondas; and at *LEUCTRA*, defeated the Spartans with great slaughter, as related under that article.

(4.) *THEBES, HISTORY OF, UNTIL THE DEATH OF PELOPIDAS.* The victorious general, desirous to improve this great victory, sent an herald, crowned with garlands, to communicate it in form to the Athenians, in hopes that this would be an effectual means to reunite them to the Theban interest. But it proved quite otherwise. Athens, which now looked upon them with a jealous eye, and had then in view the sovereignty of Greece, chose rather, if they could not wholly obtain it, to share it with Sparta, than to let the Thebans into the whole; and therefore even declined giving their herald audience. However, the Thebans took care to strengthen themselves by alliances; and, besides the Arcadians and Eleans, had got the Phocians, Locrians, Acarnanians, Eubœans, and other states, under their dependence: so that they were now in a condition to act offensively against the Spartans. Accordingly, under pretence of assisting the Arcadians, they entered Peloponnesus with a gallant army, with Epaminondas and Pelopidas at their head. Here they were joined by the Arcadian and other confederate forces; so that the whole amounted to 40,000, or 50,000 men, besides great numbers of those who followed the camp rather for plunder than fighting, and were computed about 20,000 more. The army was divided into four columns, and moved straight towards Sellasia, the place of their rendezvous, from which they pursued their journey with fire and sword towards Sparta. But here they were repulsed by Agesilaus, who was then returned to that metropolis. To repair, in some measure, this disgrace, and at the same time to leave some lasting monument which should redound as much to his glory as to the mortification of the Spartans, Epaminondas left not their territories till he had restored the posterity of the old Messenians to their ancient dominions, out of which they had been banished near 300 years; rebuilt their capital, and left a strong garrison for its defence. He was, however, like to have been stopped in his return by Iphicrates, whom the Athenians had sent with 12,000 men to intercept him; but this last loitered so long at Corinth, that the Thebans had passed the defiles of Cenchreæ, the chief place where he could have obstructed his retreat had he taken possession of it in proper time. Epaminondas continued his march till he came in full view of the city

city of Corinth. He found the roads choked up with trees, rocks, stones, and every thing that could render them impassable; and the Corinthians well fortified, and resolute on a stout defence. But he came so furiously upon them, notwithstanding all these difficulties, that they abandoned all their entrenchments and outworks to the Thebans, and fled into the city. Thither these pursued them sword in hand, and made an horrid slaughter of them; inasmuch that Corinth must have unavoidably fallen into their hands, had their generals pursued these advantages; but whether they were afraid of the Athenians falling upon them, or apprehended some dangerous ambush in a country with which they were but indifferently acquainted; or whether the army was too much weakened through so many fatigues; or lastly, whether the coldness of the season, it being then the depth of winter, would not permit them to proceed farther, they immediately marched towards Boeotia. This gave such an handle to their enemies, that they met with a very mortifying reception at their return to Thebes, where they were both arrested, and clapped up as state prisoners, for having presumed to prolong their command four months longer than the time limited by law, which time took in almost the whole of their expedition from their first entrance into Peloponnesus. However, at last, the judges being ashamed to proceed any farther, they were both honourably acquitted. This prosecution had been chiefly carried on and encouraged by Meneclides, a discontented Theban, and a bold and able speaker, who, by his artful calumnies at the trial, had so far prevailed with the judges as to get Epaminondas deprived of the government of Boeotia for a whole year, though he could not gain the same advantage against Pelopidas, who was then a greater favourite of the people, as being his senior. By this delay the Spartans, with much difficulty, had recovered themselves from their great defeat at Leuctra, and settled their affairs in as good a posture as they could; but though they had repulsed the Thebans in Peloponnesus, yet from the exploits they had performed there, especially in the dismembering the whole kingdom of Messenia from them, they had still cause to fear what their forces might do under two such generals; and had accordingly taken care to strengthen themselves against them, and to provide themselves with a great number of auxiliaries from other states, especially from Athens, with which they had renewed their old treaty, and had agreed that each should have the command five days alternately. Soon after this treaty the Arcadians renewed the war, and took Pallene in Laconia by storm, put the garrison to the sword, and were presently assisted by the Argives and Eleans, and especially by the Thebans who sent to them 7000 foot and 300 horse under Epaminondas. This so alarmed the Athenians that they immediately sent Gobrias with some forces to oppose his passage, and he so behaved himself against the Thebans, that they were forced to abandon Peloponnesus a second time. This ill success gave fresh occasion to the enemies of Epaminondas to blame his conduct in the highest terms, notwithstanding the singular bravery with

which he and his troops had forced the pass. His friends could not but suspect him of partiality for the Spartans, in not pursuing his advantage over them, and making a greater slaughter of them when he had it in his power; whilst his enemies made it amount to no less than treachery to his country: so that their brave general was once more deprived of the government of Boeotia, and reduced to the condition of a private man. He did not continue long under this disgrace, before an occasion offered to make his services again of such necessity to the state, as to give him an opportunity to retrieve his fame, and wipe off the stain which his enemies had thrown upon him. The Thessalians, who had groaned some time under the tyranny of the usurper ALEXANDER, surnamed the *Pherean*, sent an embassy to Thebes to implore their aid and protection; upon which Pelopidas was immediately sent as ambassador to expostulate with him on their behalf. He was then in Macedon, whence he took the young prince Philip, afterwards the celebrated PHILIP II. to protect and educate him; and, upon his return, marched directly to Pharsalus in Thessaly, to punish the treachery of some mercenaries, who had deserted the Thebans in that expedition; but when he came thither, he was surprised to be met by the tyrant at the head of a numerous army before that city, whilst his own was but an handful of men. However, whether he supposed, or would be thought to do so, that Alexander came thither to justify himself, and answer to the complaints alleged against him, he went, with Ismenias his colleague, to him unarmed and unattended, not doubting but his character as ambassador from so powerful a republic, joined to his own character and authority, would protect them from insult or violence: but he found himself mistaken; for Alexander had no sooner got them in his hands, than he caused them to be seized, and sent prisoners to Phere. The Thebans, highly resenting the indignity offered to their ambassadors, sent immediately an army into Thessaly; but the generals were repulsed with great loss by the *Pherean* usurper; and it was owing to Epaminondas, who was among them only as a private sentinel, that they were not totally cut off. For the Thebans, finding themselves in such imminent danger, which they attributed to the incapacity of their generals, had immediately recourse to him, whose valour and experience had been so often tried; and, partly by persuasions and intreaties, and partly by threats, obliged him to take the command. This soon gave a different turn to their affairs, and converted their flight into a safe and regular retreat; for he took the horse and light-armed foot, and placed himself at their head in the rear, and charged the enemy with such vigour and bravery, that he obliged them to desist from their pursuit. However, as the army had suffered such loss before as not to be able to pursue them in their turn, he was obliged to return with them to Thebes, with their pusillanimous generals; where the latter were fined 12,000 drachmas each, and the former was reinstated in the command, and sent with a new reinforcement to repair the late dishonour, and prosecute their revenge. The news of his being in full march on this errand

greatly

greatly alarmed the tyrant ; but Epaminondas, preferring the safety of his imprisoned colleague to all other considerations, forbore pushing hostilities to extremes, for fear of provoking the enemy to wreak all his fury on him : to prevent which, he contented himself for a while hovering about with his army, and now and then with such slight skirmishes as should intimidate the tyrant, and bring him the sooner to make some satisfactory offers. Alexander being fully convinced of the superiority of the Theban general, was glad to accept of a truce of 30 days, and to restore Pelopidas and Ismenias to him ; upon which he immediately withdrew his forces, and returned with them to Thebes. By this time Thebes was raised to such a height of reputation and glory, as to begin to aim at the sovereignty of Greece. The main obstacle to it was, that the other states grew so jealous of her present greatness, as to enter into the strongest alliances and confederacies to prevent its farther growth ; so that not being able now to procure many allies at home, they made no difficulty to seek for them abroad ; and the Lacedæmonians, by leading the van, gave them a plausible pretence to follow their steps, and to procure an alliance with Persia, which at that time was ready to accept of their offers on any terms ; the only question was, which of the three states should be preferred, Sparta, Athens, or Thebes. The Thebans proposed to their new confederates to send proper deputies to the Persian court, to support their respective interests ; which they readily agreed to. These were the Arcadians, Eleans, and Argives ; at the head of whose deputation Pelopidas was sent on the behalf of the Thebans ; which the Athenians being apprised of, appointed two on their part. These being all arrived at the Persian court, began to pursue each their respective interests ; but Pelopidas had by that time gained such credit there, both for his singular address and his extraordinary exploits, that he was distinguished in a particular manner from all the other deputies, and was received by the king with the highest marks of honour and esteem, who freely owned himself convinced that the Thebans were the people on whom he could most safely depend ; and after having greatly applauded the equity of his demands, ratified and confirmed them with great readiness, to the no small mortification of the other states. The substance of them was, that the liberties formerly granted to the other towns of Greece should be confirmed ; that Messenia, in particular, should continue free and independent on the jurisdiction of Sparta ; that the Athenians should lay up their fleet ; and that the Thebans should be looked upon as the ancient and hereditary friends of Persia. The Thebans took advantage of the dissensions which prevailed among the Greeks as a pretence for increasing their forces ; and Epaminondas thought it a proper opportunity for his countrymen to make a bold effort to obtain the dominion at sea, as they had obtained it in a great measure at land. He proposed it to them in a public assembly, and encouraged their hopes from the experience of the Lacedæmonians, who in Xerxes's time, had with

ten ships only at sea, gained the superiority over the Athenians, who had no fewer than 200 ; and added, that it would be a disgrace now to Thebes to suffer two such republics to engross the empire of so extensive an element, without putting in at least for their share of it. The people readily came into his proposal, with extraordinary applause, and immediately ordered 100 galleys to be equipped ; and in the meanwhile sent him to Rhodes, Chios, and Byzantium, to secure those states in their interest, and get what assistance he could from them. His negotiation had all the success that could be wished for, notwithstanding the strenuous opposition of the Athenians ; and of their admiral Laches, who was sent with a powerful squadron against him. But what more effectually thwarted all his measures, was the work that they found for him on land, and the obliging the Thebans to take part in the quarrels that then reigned among their neighbours : so that whatever projects they had concerted, they proved abortive at this time. During the absence of that general, and of his colleague Pelopidas, the Orchomenians being spirited up by some Theban fugitives, had formed a design to change the Theban government into an aristocracy ; and 300 horsemen of the former had been actually sent to put it in execution. Their project, however, was timely discovered by the vigilance of the magistrates, who caused them to be seized, and put immediately to death. They next sent a sufficient force against the city of ORCHOMENOS, with orders to put all the men to death, and to sell the women and children for slaves, which was punctually done ; after which they razed that noble city to the ground. Pelopidas was then on his way to Thessaly, at the head of a powerful army, whither he had been sent to assist the Thessalians, who still groaned under the tyranny of Alexander the Phærian, and had made several brave efforts to recover their liberty, but had been still overpowered by that usurper. Being joined by the Thessalians, he encamped in the face of the enemy, though far superior in numbers, and consisting of above 20,000 men. A fierce engagement soon ensued, in which both sides fought with uncommon bravery. The place where the battle was fought was called *Cynocephala*, from several little hills on it, between which there lay a large plain. Both sides endeavoured at first to post themselves on these eminences with their foot, whilst Pelopidas ordered his cavalry to charge that of the enemy below ; which they did with such success, that they soon put them to the rout, and pursued them over the plain. This obliged the tyrant to gain the tops of the hills, where he greatly annoyed the Thessalians who endeavoured to force those ascents : so that Pelopidas was obliged to give over his pursuit to come to their relief. This immediately inspired the Thessalians with fresh courage, who again charged the enemy at several onsets ; and soon threw them into such disorder, that they were forced to give way. Pelopidas no sooner perceived the advantage, than he began to look about for Alexander, with a design of engaging him. Having found him out as he was commanding his right wing, and endeavouring to rally his

men, he moved directly to him; and being got near enough to be heard by him, challenged him to decide the battle by single combat. Alexander, instead of accepting the offer, turned about, and with all the speed he could, ran to screen himself amongst his guards. Upon this Pelopidas charged him with such furious speed, that he obliged him to retire farther, and shelter himself within the thickest ranks; the sight of which made him attack with fresh vigour, and fight more desperately against him. He tried in vain several times to break through their ranks to reach him, cutting down great numbers of those that came forward to oppose him; but his eagerness at length exposed him so far to the enemy's darts, that some of them went quite through his armour, and gave him a desperate wound or two, while the rest advanced and stabbed him in the breast with their spears.

(5.) THEBES, HISTORY OF, UNTO THE DEATH OF EPAMINONDAS. It is scarce possible for words to express the grief and despair which not only his brave Thebans, but likewise the Thessalians and other allies, showed at the sight of their slain general: some of the latter, who had perceived the danger he was exposed to, came down the hill with all possible speed to his relief; but when they perceived that they were come too late to save him, both they and the rest of the little army thought on nothing now but to revenge his death. They rallied accordingly, both horse and foot, as quick as possible, and began to charge the enemy afresh, and with such desperate fury, that they at length gained a complete victory over them, and killed above 5000 of them in their pursuit, besides a much greater number which they had slain on the field of battle, though they still looked upon all these advantages as vastly too small to compensate the loss of their brave general. The news of his death had no sooner reached Thebes, than the whole city went into mourning. However, they sent a reinforcement to the army of 7000 foot and 700 horse, as well to revenge the death of that general, as to improve the victory he had gained over the enemy; by the help of which they fell so furiously on them, that they quickly broke and totally defeated the shattered remains of Alexander's army. Hereupon he was forced to sue for peace, and to accept it on such conditions as the conquerors thought fit to impose. He was at length dispatched in his bed by his wife Thebe, assisted by her brothers, about seven years after his defeat. His body was afterwards dragged along the streets, trodden under foot, and left a prey to the dogs. All this while the Thebans were watching to improve every commotion that happened, every success they met with, to the forwarding of their then favourite project, of increasing their power, and to give laws to Greece. Their late success in Thessaly, and the rupture between the Arcadians and Mantineans at the same time, about some consecrated money which the former had taken out of the temple of Olympia to pay their troops employed against the Eleans, and which the latter called a downright sacrilege, besides other discords in the other states of Greece, gave fresh encouragement to Thebes to set up for arbiters in those

disputes; and so much the more, as those who had embezzled the sacred money, and wanted rather to embroil matters than to have them brought to light, sent that republic word that the Arcadians were just upon the point of revolting to the Spartans, and advised them to come and put an immediate stop to it. At the same time they dispatched some private directions to a Theban officer at Tegea, to apprehend several of their own people as disturbers of the peace. This was accordingly done, and several eminent persons were confined as prisoners of state: they were soon after discharged, and loud complaints were made against such arbitrary and unjust proceedings. The officer was accused before the Theban senate for having intermeddled in their affairs, and endeavoured to interrupt the good correspondence between the two states. It was even insisted on by some of the Tegeans, that he should be indicted and proceeded against by his principals; whilst the more moderate, who foresaw the consequences that were likely to attend such appeals, and that it would infallibly bring the Thebans upon them, loudly protested against their marching into their territories, and did all they could to prevent it. The Thebans, however, were become too powerful and ambitious to miss so fair an opportunity of getting once more footing in Peloponnesus, and Epaminondas was so far from making a secret of their design, that he told the Arcadian deputies in justification of it, that as it was on their account that the Thebans engaged in the war, they had acted treacherously with them in making peace with Athens without their consent. This speech alarmed them greatly; so that even those who were best affected to the Thebans disliked it; and all who had the welfare of Peloponnesus at heart, agreed with the Mantineans, that there was no time to be lost to use all proper means to prevent the impending storm. Athens and Sparta were accordingly applied to, and were easily prevailed upon to assist the Mantineans against the Thebans; and to prevent all disputes about the command of the army, it was agreed that each state should have it in its own territories. But Epaminondas set off in full march at the head of his Boeotian troops, with some Euboean auxiliaries, and a body of stout Thessalian horse; and was joined by the Messenians, Argives, and several other nations, as soon as he had entered Peloponnesus. The confederate army against him had ordered their rendezvous at Mantinea, the place which they concluded would be first attacked, as being the chief seat of those who had revolted from the Thebans. But whilst they were securing themselves on that side, Epaminondas, who wisely considered how far this confederacy and expedition must have drained Sparta of its main strength, broke up privately from Nemæa, where he had lain for some time encamped, and marched all that night to surprise that important capital; but his project being discovered, the vigilant king took care to disconcert it; so that, though the Theban general made several vigorous assaults on that city, he was so stoutly repulsed, and the Spartans behaved with such intrepid valour, that he was forced to retire and turn his arms against Mantinea, which he judged to be quite

quite defenceless; and indeed it was not only drained of its troops, but likewise of its inhabitants, who took that opportunity to gather in their harvest, and were scattered all over the country; so that he would not have met with any difficulty in gaining the town, had not the Athenian auxiliaries come unexpectedly to its relief, and given him a fresh repulse. These two last defeats greatly exasperated the Theban general; and what added to his difficulties was, that the time allotted him for his expedition was almost expired. He was moreover got far into the enemy's country, and saw how narrowly they watched all his motions, and how well prepared they were to oppose him. Under all these difficulties, he considered, that he must immediately resolve upon a decisive battle. In this engagement Epaminondas made the wisest disposition of his troops, attacked and fought with the most intrepid courage and conduct, and had opened himself a way through the Spartan phalanxes, thrown them into the utmost confusion, and made a terrible slaughter of them, inasmuch that the field of battle was covered with their wounded and slain, when in the heat of the fight, having ventured too far, to give them a total overthrow, the enemy rallied again, pouring three volleys of darts at him, some of which he drew out and returned to them, till at length, being covered with wounds, and weakened with the loss of blood, he received a mortal wound from a javelin, and was with great difficulty rescued from the enemy by his brave Thebans, and brought alive, though speechless, into his tent. As soon as he had recovered himself, he asked his friends what was become of his shield; and being told that it was safe, he beckoned to have it brought to him. He next inquired which side had gained the victory; and being answered, The Thebans; he replied, *Then all is well*: and upon observing some of his friends bewailing his untimely death, and his leaving no children, he answered, Yes; I have left two fair daughters, the victory of *LeuGra*, and this of *Mantineia*, to perpetuate my memory. Soon after this, upon drawing the javelin out of his body, he expired.

(6.) **THEBES, HISTORY OF, UNTO ITS TOTAL DESTRUCTION BY ALEXANDER.** The consequence of this great general's fall, and of this bloody fight, in which neither side could boast any great advantage over the other, but a great loss of men on both sides, inasmuch that Xenophon makes it a drawn battle, was, that both parties agreed on a cessation of arms, and parted, as it were by consent, to take care of their wounded and slain. The Thebans indeed thus far gained the greater share of glory, that they renewed the fight, and after a most desperate contest, gained the victory over those Spartans that opposed them, and rescued the body of their dying general out of their hands. However, an effectual end was put to this bloody war, and a general peace agreed on by all but Sparta; who refused it only because the Messenians were included in it. But as to the Thebans, they had no great reason to boast of this dear bought victory, since their power and glory began to decline from that very time;

so that it might be truly said, that it rose and set with their great general. On the death of Epaminondas, the Thebans relapsed into their former state of inactivity and indolence; and at last having ventured to oppose Alexander the Great, their city was taken, and the inhabitants slaughtered for several hours, after which the buildings were destroyed. (See *MACEDON*, § 10.)

(7.) **THEBES MODERN HISTORY OF.** Thebes was rebuilt by Cassander, but never afterwards made any considerable figure among the states of Greece. About the year 146 B. C. it fell under the power of the Romans, under which it continued till the extinction of their empire by the Turks. It is now called *THIVE*, and is nothing to what it was formerly; yet it is 4 miles in circumference, but so full of ruins, that there are not above 4000 Turks and Christians in it. It is now famous for a fine sort of white clay, of which they make bowls for pipes after the Turkish fashion. They are never burnt, but dry naturally, and become as hard as a stone. There are two mosques in Thebes, and a great number of Greek churches. It is seated between two small rivers, in Lon. 23. 40. E. Lat. 38. 17. N.

THECAM, a small town of Northumberland, NW. of Corenfle.

THECLA, a noble and learned lady of Alexandria, in Egypt, who in the 4th century, transcribed the whole of the Bible in the Greek language, from the original *SEPTUAGINT* copy, then preserved in the Alexandrian Library; and this ancient copy is still preserved, and constitutes the celebrated *Alexandrine Manuscript*, so often appealed to by commentators. It was presented to King Charles I. by CYRILLUS LUCARIS, patriarch of Constantinople, in 1628. See *SCRIPTURE*, *SECT. VIII.*

THEDDINGWORTH, a town of England, in Leicestershire, NW. of Harborough.

THEDDLESTHORP, a town of Lincolnshire, near Saltfleet.

THEDINGHAUSEN, a town of Germany, in Westphalia, and in the county of Hoya, 12 miles NNW. of Hoya.

* **THEE**, the oblique singular of *thou*.—

Poet and Saint, to *thee* alone were giv'n
The two most sacred names of earth and heav'n.
Cowley.

(1.) * **THEFT.** *n. f.* [from *thief*] 1. The act of stealing.—*Theft* is an unlawful felonious taking away of another man's goods against the owner's knowledge or will. *Cowel.*—His *thefts* were too open. *Shak.*

Their nurse Euriphile,

Whom for the *theft* I wedded, stole these children.
Shak.

—Decree in trade, a secret *theft*: extortion, an impudent *theft*. *Holyday.*—The *thefts* upon the public can be looked into and punished. *Davenant.* 2. The thing stolen.—If the *theft* be certainly found in his hand alive, whether, ox, ass, or sheep, he shall restore double. *Exod. xxii. 4.*

(2.) **THEFT.** In English Law, or SIMPLE LARCENY, is "the felonious taking and carrying away of the personal goods of another." By the Jew-

THE LAW it was only punished with a pecuniary fine, and satisfaction to the party injured; and in the civil law, till some very late constitutions, we never find the punishment capital. The laws of Draco at Athens punished it with death; but his laws were said to be written with blood; and Solon afterwards changed the penalty to a pecuniary mulct. And so the Attic laws in general continued; except that once, in a time of dearth, it was made capital to break into a garden and steal figs; but this law, and the informers against the offence, grew so odious, that from them all malicious informers were styled *SYCOPHANTS*; a name which we have much perverted from its original meaning. The punishment of theft throughout the greatest part of Europe is *capital*. The Anglo-Saxon laws nominally punished theft with death, if above the value of 12d.; but the criminal was permitted to redeem his life by a pecuniary ransom; as, among their ancestors the Germans, by a stated number of cattle. But in the 9th year of Henry I. this power of redemption was taken away, and all persons guilty of larceny above the value of 12d. were directed to be hanged; which law continues in force to this day. For though the inferior species of theft, or *petit larceny*, is only punished by whipping at common law, or, (by stat. 4 Geo. I. c. 11.) may be extended to transportation for 7 years, as is also expressly directed in the case of the Plate-glass Company; yet the punishment of *grand larceny*, or the stealing above the value of 12d. (which sum was the standard in the time of king Athelstan, above 800 years ago), is at common law regularly death, although the mercy of juries will often make them strain a point, and bring in larceny to be under the value of twelvepence, when it is really of much greater value.

(4.) **THEFT**, in Scots Law. See *LAW, Part III. Chap. III. Sect. IV. § 28—30.*

THEFT-BOTE, *n. s.* [from the Saxon *theof*, i. e. a thief and *bote*, *compensatio*,] the receiving of a man's goods again from a thief, after stolen, or otherwise amends not to prosecute the felon, and to the intent the thief may escape; which is an offence punishable with fine and imprisonment, &c.

THEFTUOUS, *adj.* in Scots law, thievish, pilfering, addicted or habituated to theft.

THEIFENECE, a town of Germany, in Carinthia, 5 miles NE. of Wolfsborg.

THEIMSDORF, a town of Lusatia, 6 miles E. of Rornenburg.

* **THEIR**. *n. s.* [*theora*, of *them*, Saxon.] 1. Of them: the pronoun possessive, from *they*.—

The round world should have shook

Lions into civil streets, and citizens into their dens. *Shak.*

—For the Italians, Dante had begun to file *their* language in verse before Boccaccio. *Dryden.* 2.

Theirs is used when any thing comes in construction between the possessive and substantive.—Prayer we always have in our power to bestow, and they never in *theirs* to refuse. *Hooker.*—They gave the same names to their own idols which the Egyptians did to *theirs*. *Raleigh.*—

The penalty to thy transgression due,
And due to *theirs* which out of thine will grow.
Milton.

Nothing but the name of zeal appears,
'Twixt our best actions and the worst of *theirs*.
Denham.

The fault is more *their* language than *theirs*.
Roscommon.

—Which established law of *theirs* seems too strict.
Dryden.—

And reading wish, like *theirs*, our fate and fame.
Pope.

THEISM, *n. s.* [from *ΘΕΟΣ*, God.] The doctrine, or belief, that there is but one God. This word is synonymous with *Deism*, the latter being derived from the Latin, the former from the Greek. See **DEISM**.

THEIST. *n. s.* [from *ΘΕΟΣ*, Gr. God.] One who believes in the eternal existence of one God. A word synonymous with *Deist*. See **DEIST**. All Christians, Jews, and even Mahometans, are Theists, or Deists, though all Theists are not Christians.

THEISTICAL, *adj.* [from *Theist*.] Of or belonging to Theism, or Deism; the opposite of *atheistical*; favouring of the principles of Deism.

THELIGONUM, in botany, a genus of plants belonging to the class of *monœcia*, and order of *polyandria*: and in the natural method ranging under the 53d order, *Scabridæ*. The male calyx is bifid; there is no corolla; the stamina are generally 12. The female calyx is also bifid; there is no corolla; only one pistil; the capsule is coriaceous, unilocular, and monospermous. There is only one species, viz.

THELIGONUM CYNOCRAMBE, which is indigenous in the South of Europe.

THELUSSON, Peter Isaac, a native of Geneva, who settled for many years as a merchant in London, where he accumulated an immense fortune, which, at his death in 1798, he left by will to be disposed of as follows. Above 100,000l. to his widow and children, and all the rest to accumulate till a certain period, when if none of his descendants shall then be in life, the whole is to be devoted to the Sinking Fund, to pay off the NATIONAL DEBT, and to be entirely at the disposal of the British Parliament. It is estimated, that within 120 years, there will be none of his posterity in life, and the sum will then have accumulated to 140 millions of pounds sterling. His descendants applied to the Court of Chancery to get this will set aside, but without success.

* **THEM**, the oblique of *they*.—The materials of *them* were not from any herb. *Wilkins.*

THEMAR, a town of Franconia, in Henneberg seated on the Werra. In 1634, it was mostly burnt by the Croats. It is 12 miles SE. of Meiningen.

* **THEME**. *n. s.* [*thème*, Fr. from *θημα*.] 1. A subject on which one speaks or writes.—Every object of our idea is called a *theme*, whether it be a being or not being. *Watts.*—

Two truths are told,

As happy prologues to the swelling act
Of the imperial *theme*. *Shak.*

When a soldier was the *theme*, my name
Was not far off. *Shak.*

O! could I flow like thee, and make thy
stream

My great example, as it is my *theme*. Denham.
Whatever near Eurota's happy stream,
With laurels crown'd, had been Apollo's *theme*.

Roscommon.

These now no more shall be the mule's *themes*.

Pope.

1. A short dissertation written by boys on any topic.—Forcing the empty wits of children to compose *themes*. Milton. 3. The original word whence others are derived.—Let scholars daily reduce the words to their original or *theme*. Watts.

(1.) THEMIS, in the mythology, the goddess of justice, but different from *ASTRÆA*; she was a daughter of Coelus and Terra, and according to the poets, was compelled to marry Jupiter, by whom she became mother of the *PARCÆ* or *FATES*, and of *Dice*, *Eunomia*, *Irene*, &c. Her oracle was famous in Attica in the age of *DEUCALION*, who consulted her after the Deluge, and was directed how to repopulate the world. She is represented with a pair of scales in one hand, and a sword in the other. Lemp.

(2.) THEMIS, the daughter of Ilus, king of Troy, who married Capys, and became mother of *ANCHISES*, the father of *JENAS*. *Apollod.* iii. c. 12.

(3.) THEMIS, in geography, a river of Transylvania, which runs into the Alaut, near Marienburg.

THEMISON, a celebrated physician of Laodicea, a disciple of *ASCLEPIADES*. He founded the *METHODIC SECT*, with a view to the more easily teaching and practising the art of medicine. (See *MEDICINE*, *Index*.) Themison gave the first account of *diacodium*, which was prepared of the juice and decoction of poppy-heads and honey. He invented a purging medicine called *heira*.

THEMISTIUS, an ancient Greek orator and philosopher, a native of Paphlagonia, who flourished in the 4th century. He had great interest and favour with the emperors in his time, and, though a heathen, was of a very tolerating spirit. He taught for many years at Constantinople, of which city he was made præfect by Julian and Theodosius; and lived to be very old. More than 50 of his orations are still extant, besides commentaries on several parts of Aristotle's works.

THEMISTOCLES, the renowned Athenian admiral, general, and patriot, who gained the battle of *SALAMIS* against the Persians. Being banished his country by his ungrateful fellow citizens, he fled to Artaxerxes king of Persia; but to avoid taking up arms against his country, he slew himself, 464 B. C. See *ATTICA*, § 11.

* **THEMSELVES**. *n. s.* [See *THEY* and *SELFS*.] 1. These very persons: in this sense it is nominative.—Whatever evil befalleth in that, *themselves* have made *themselves* worthy to suffer it. Hooker.

2. The oblique case of *they* and *selves*.—They open to *themselves* at length the way.

Milton.

—Such things as in *themselves* are equally true and certain, may not yet be capable of the same kind or degree of evidence. Wilkins.—Give them kind usage till they come perfectly to *themselves*. Locke.

* **THEN**. *adv.* [than, Gothick; than, Saxon;

dan, Dutch.] 1. At that time.—The *then* bishop of London, Dr Laud. Clarendon.—

Thence, then a boy, with my arms I laid.

Dryden.

2. Afterwards; immediately afterwards; soon afterwards.—if an herb be cut off from the roots in Winter, and *then* the earth be trodden down hard, the roots will become very big in Summer. Bacon. 3. In that case; in consequence.—If God's immediate speaking and writing argueth precepts to be perpetually moral; *then* his not writing of precepts argueth them to be temporary. White.—

Had not men been fated to be blind,
Then had our lances pierc'd the treach'rous wood.

Dryden.

Had fate so pleas'd I had been eldest born,
And *then* without a crime the crown had worn.

Dryden.

—If all this be so, *then* man has a natural freedom. Locke. 4. Therefore; for this reason.—Whiles *then* the apostle moves us to unity. Holyday.—

If *then* his providence

Out of our evil seek to bring forth good. Milt.
Now *then* be all thy weighty cares away.

Dryden.

5. At another time: as *now* and *then*, at one time and other.—

Now shaves with level wing the deep, *then* soars.

Milton.

—One while the master is not aware of what is done, and *then* in other cases it may fall out to be his own act. L'Estrange. 6. That time: it has here the effect of a noun.—

Till *then* who knew

Milton.

THENAR, or **TENAR**, in anatomy, the muscle that draws the thumb from the fingers, called also *Abductor brevis Pollicis*. See *ABDUCTOR*, § 10, and *ANATOMY*, § 214, N° 2.

THENATH. See *TAANATH-SHILOH*.

* **THENCE**. *n. s.* [contracted, according to *Minsheu*, from *there hence*.] 1. From that place.

Fast by the oracle of God; I *thence*

Invoke thy aid.

Milton.

Surat he took, and *thence* preventing fame,
By quick and painful marches thither came.

Dryden.

2. From that time.—There shall be no more *thence* an infant of days. Isa. lxxv. 3. For that reason.—

Not to sit idle with so great a gift

Uclefs, and *thence* ridiculous about him. Milt.

3. From *thence* is a barbarous expression, *thence* implying the same, yet it wants not good authorities.—

From *thence*; from him, whose daughter

His tears proclaim'd his parting with her;

thence

We have cross'd.

Shak.

There plant eyes, all mist from *thence*

Purge and disperse.

Milton.

* **THENCEFORTH**. *adv.* [*thence* and *forth*.]

1. From that time.—

Thenceforth this land was tributary made

T'ambitious Rome.

Spenser.

—They shall be placed in Leinster, and have land given

given them, to labour *thenceforth* for their living.
Spenser.—

Wrath shall be no more
Thenceforth, but in thy presence joy entire.

Milton.

2. *From thenceforth* is a barbarous corruption, though it has crept into books where it ought not to be found.—

Avert

His holy eyes; resolving *from thenceforth*
To leave them to their own polluted ways.

Milton.

—Men grow acquainted with these self-evident truths; but whosoever does so, finds in himself that he then begins to know a proposition which he knew not before, and which *from thenceforth* he never questions. *Locke.*

* **THENCEFORWARD.** *adv.* [*thence* and *forward*.] On from that time.—When he comes to the Lord's table, every communicant professes to lead a new life *thenceforward*. *Kettleswell.*

THEOBALD, Lewis, the son of an attorney at Sittingbourne in Kent, was a well-known writer and critic in the early part of the 18th century. He engaged in a paper called the *Censor*, published in *Miss's Journal*, wherein, by delivering his opinions with too little reserve concerning some eminent wits, he exposed himself to their resentment. Upon the publication of Pope's *Homer*, he praised it in terms of extravagant admiration, yet afterwards thought proper to abuse it as earnestly; for which Pope at first made him the hero of his *Dunciad*, though he afterwards laid him aside for another. Mr Theobald not only exposed himself to the lashes of Pope, but waged war with Mr Dennis, who treated him more roughly, though with less satire. He nevertheless published an edition of *Shakespeare*, in which he corrected, with great pains and ingenuity, many faults that had crept into that poet's writings. This edition is still in great esteem, being in general preferred to those published by Pope, Warburton, and Hanmer. He also wrote some plays, and translated others from the ancients.

THEOBROMA, in botany, a genus of plants belonging to the class of *polyadelphia*, and order of *pentandria*; and in the natural system ranging under the 37th order, *Colummiferae*. The calyx is triphyllous; the petals, which are five in number, are vaulted and two-horned; the nectarium is pentaphyllous and regular; the stamina grow from the nectarium, each having five antheræ. There are three species, viz.

1. **THEOBROMA ANGUSTA.**

2. **THEOBROMA CACAO**, or *chocolate tree*. This tree delights in shady places and deep valleys. It is seldom above 20 feet high. The leaves are oblong, large, and pointed. The flowers spring from the trunk and large branches; they are small, and pale red. The pods are oval and pointed. The seeds or nuts are numerous, and curiously stowed in a white pithy substance. See **CHOCOLATE**.

3. **THEOBROMA GUAZUMA.**

(1.) * **THEOCRACY.** *n. f.* [*theocratic*, Fr. *théocratique*, and *cratie*.] Government immediately superintended by God.—The characters of the reign of Christ are chiefly justice, peace, and divine presence or conduct, which is called *theocracy*. *Barnet.*

(2.) **THEOCRACY.** The only theocracy, or a state governed by the immediate direction of God alone, that ever was in the world, was the ancient government of the Jews before the reign of Saul. Many Christians believe that the final consummation of all things will terminate in an universal theocracy.

* **THEOCRATICAL.** *adj.* [*theocratique*, Fr. from *theocracy*.] Relating to a government administered by God.—The government is neither human nor angelical, but peculiarly *theocratical*. *Barnet.*

THEOCRITUS, the father of pastoral poetry, was born at Syracuse in Sicily, and flourished under Hiero, who began his reign about A. A. C. The compositions of this poet are distinguished among the ancients by the name of *Idylliums*, in order to express their smallness and variety: they would now be called *Miscellanies*, or *Poems on several Occasions*. The works of this poet were first published in folio by Aldus Manutius at Venice in 1495. But the best edition was published in 1770, in 2 vols 4to, by Mr Thomas Warton.

THEODATUS, or **THEODORUS**, the third king of the Ostrogoths in Italy, was raised to the throne by his aunt Amalasuntha, who married him, but whom the villain ungratefully murdered. See **ITALY**, § 8.

THEODICY. *n. f.* a branch of metaphysics, otherwise called *Metaphysical Theology*. See **METAPHYSICS**, § 6.

THEODOBERT, grandson of Clovis. See **FRANCE**, § 7. 8.

(1.) * **THEODOLITE.** *n. f.* A mathematical instrument for taking heights and distances.

(2.) **THEODOLITE.** See **GEOMETRY**, Part II. Sec. II.

THEODORE, king of Corsica, baron Nieuhoff in the county of La Marc in Westphalia. He had his education in the French service, and afterwards went to Spain; but being of an unsettled disposition, he quitted Spain, and travelled into Italy, England, and Holland, in search of some new adventure. He at last fixed his attention on Corsica, and formed the scheme of rendering himself sovereign of that island. He went to Tunis, where he fell upon means to procure some money and arms; and then went to Leghorn, from whence he wrote a letter to the Corsican chiefs Giafferi and Paoli, offering considerable assistance to the nation if they would elect him as their sovereign. This letter was configned to Count Dominico Rivarola, who acted as Corsican plenipotentiary in Tuscany; and he gave for answer, that if Theodore brought the assistance he promised to the Corsicans, they would very willingly make him king. Upon this he, without loss of time, set sail, and landed at Tavagna in spring 1736. He had a few attendants with him; and his manners were so engaging, and his offers so plausible, that he was proclaimed king of Corsica before Count Rivarola's dispatches arrived to inform the chiefs of the terms upon which he had agreed. Theodore instantly assumed every mark of royal dignity. The Genoese were not a little confounded with this unexpected adventurer. They published a violent manifesto against Theodore, treating him with great contempt; but at the same time

time showing they were alarmed at his appearance. Theodore replied in a manifesto, with all the calmness and dignity of a monarch; but after being about eight months in Corsica, perceiving that the people began to cool in their affections towards him, he assembled his chiefs, and declared he would keep them no longer in a state of uncertainty, being determined to seek in person the support he had so long expected. He settled an administration during his absence, recommended unity in the strongest terms, and left the island with reciprocal assurances of fidelity and affection. He went to Holland, where he was so successful as to obtain credit from several rich merchants, particularly Jews, who trusted him with cannon and other warlike stores to a great value, under the charge of a supercargo. With these he returned to Corsica in 1739; but by this time the French, as auxiliaries to the Genoese, had become so powerful in the island, that though Theodore threw in his supply of warlike stores, he did not incline to venture his person, the Genoese having set a high price on his head. He therefore again departed; and after many unavailing attempts to recover the crown, at length retired to England, where he was reduced so low as to be several years before his death a prisoner for debt in the King's Bench. At length, to the honour of some gentlemen of rank, a charitable contribution was set on foot for him in 1753, by which he was released from prison; but the remainder of his life was spent in extreme poverty. Theodore died 11th Dec. 1756, and was buried in St Anne's churchyard, Westminster. He left a son, the late Col. FREDERICK, who was an accomplished gentleman.

THEODORET, bishop of St Cyricus in Syria, in the 4th century, and one of the most learned fathers of the church, was born A. D. 386, and was the disciple of Theodorus of Mopsuestes and St John Chrysostom. Having received holy orders, he was with difficulty persuaded to accept of the bishopric of St Cyricus, about A. D. 420. He displayed great frugality in the expences of his table, dress, and furniture, but spent considerable sums in improving and adorning the city of Cyricus. Yet his zeal was not confined to his own church: he went to preach at Antioch and the neighbouring towns, where he became admired for his eloquence and learning, and had the happiness to convert multitudes of people. He wrote in favour of John of Antioch and the Nestorians, against Cyril's *Twelve Anathemas*: he afterwards attacked the opinions of Nestorius, and was deposed in the synod held by the Eutychians at Ephesus; but was again restored by the general council of Chalcedon, in which he was present, in 451. It is thought that he died soon after; though others say that he lived till A. D. 457. There are still extant Theodore's excellent *Commentary on St Paul's Epistles*, and on several other books of the Holy Scriptures. 2. His *Ecclesiastical History*, from the time of Arius to Theodosius the Younger. 3. *History of the Anchorites*. 4. *Epistles*. 5. *Discourses on Providence*. 6. A treatise entitled, *De Curandis Græcorum Affectionibus*; and other works. The best edition is that of Sirmond, in Greek and Latin, in 4 vols folio.

(1.) **THEODORICK**, the first and greatest monarch of the OSTROGOTHS in Italy. He had many virtues, shaded with some vices. He defeated Clovis king of France, and Odoacer king of Italy, A. D. 526. See FRANCE, § 6. GOTHS, and ITALY, § 6. and 7.

(2.) **THEODORICK**, or THIERRI, king of Metz; the eldest son of Clovis. See FRANCE, § 7.

THEODORUS, bishop of Mopsuestes, a city in Cilicia, a learned prelate of the 5th century. He wrote a *Commentary on the Psalms*, another *On the Twelve Minor Prophets*; which, with some other fragments, are extant. He died A. D. 428. But his works were condemned in the 5th general council, as favouring Nestorianism (see NESTORIANS) and Socinianism.

THEODOSIA. See CAFFA, N° 2.

THEODOSIANS. See CONTOBARDITES.

(1.) **THEODOSIUS**, a celebrated mathematician, who flourished in the times of Cicero and Pompey, but the time and place of his death are unknown. Theodosius chiefly cultivated that part of geometry which relates to the doctrine of the sphere, concerning which he published three books, of which a good English translation was made by Dr Barrow.

(2.) **THEODOSIUS I.** called the GREAT, was a native of Spain. The valour he had shown, and the great services he had done to the empire, made Gratian, attacked by the Goths and Germans, to admit him as a partner in the government. He received the purple in A. D. 379, aged 43. See CONSTANTINOPLE, § 8.

(3.) **THEODOSIUS II.** See CONSTANTINOPLE, § 8. EUDOCIA, and PULCHERIA, N° 3.

(1.) **THEODOTUS**. See ITALY, § 8. and THEODATUS.

(2.) **THEODOTUS**, a native of Byzantium, who flourished in the reign of Marcus Aurelius, and at first professed Christianity, but during the persecution under that emperor, renounced it, and afterwards set up a new heresy, called from him *Theodotian*, or *Theodosian*. See THEODOSIANS. He was a tanner by profession.

THEOGNIS, an ancient Greek poet of Megara in Achaia, who flourished about the 59th Olympiad, 144 B. C. We have a work of his extant, concerning a summary of precepts and reflections, usually to be found in the collections of the Greek minor poets.

(1.) * **THEOGONY**. *n. f.* [*theogenic*, Fr. *theogonie*.] The generation of the gods. *Bailey*.

(2.) **THEOGONY**, [from *Θεός*, God, and *γενετήρ*, genitura, seed or offspring.] Hesiod gives us the ancient theogony, in a poem under that title. Among the most ancient writers, Dr Burnet observes, that theogony and cosmogony signified the same thing. In effect, the generation of the gods of the ancient Persians, fire, water, and earth, is apparently no other than that of the primary elements. See POLYTHEISM.

* **THEOLOGER**. } *n. f.* [*theologien*, Fr. *theologie*.]
* **THEOLOGIAN**. } *logus*, Lat.] A divine; a professor of divinity.—Some theologians desire places erected only for religion by defending oppressions. *Hayward*.—

They to their viands fell: nor seemingly
The

The angel, nor in mist, the common glofs
Of *theologians*, but with keen dispatch
Of real hunger. *Milton.*

* **THEOLOGICAL.** *adj.* [*theologique*, Fr. *theologia*, Lat.] Relating to the science of divinity.—Although some pens have only symbolized the same from the mystery of its colours, yet are there other affections might admit of *theological* allusions. *Brown.*—They generally are extracts of *theological* and moral sentences drawn from ecclesiastical and other authors. *Swift.*

* **THEOLOGICALLY.** *adv.* [from *theological*.] According to the principles of theology.

* **THEOLOGIST.** } *n. s.* [*theologus*, Lat.] A
* **THEOLOGUE.** } divine; one studious in
the science of divinity.—The cardinals of Rome; which are *theologues*, friars, and schoolmen. *Bacon.*

A *theologue* more by need than genial bent.

Dryden.

—It is no more an order, according to popish *theologists*, than the prima tonsura, they allowing only seven ecclesiastical *theologists*. *Ayliffe.*

T H E O L O G Y.

ETYMOLOGY AND DEFINITIONS.

* **THEOLOGY.** *n. s.* [*theologie*, Fr. *θεολογία*.] Divinity.—The whole drift of the scripture of God, what is it but only to teach *theology*? *Theology*, what is it but the science of things divine? *Hooker.*—She was most dear to the king in regard of her knowledge in languages, in *theology*, and in philosophy. *Hayward.*—The oldest writers of *theology* were of this mind. *Tillotson.*

THEOLOGY OF DIVINITY is that science which treats of the being and attributes of God, his relations to us, the dispensations of his providence, his will with respect to our actions, and his purposes with respect to our end. The word was first used to denote the systems of those poets and philosophers who wrote of the genealogy and exploits of the gods of Greece. Hence ORPHEUS, MUSEUS, HESIOD, PHERCYDES, and PYTHAGORAS, were called *theologians*; as was PLATO, on account of his speculations on the same subject. It was afterwards adopted by the earliest writers of the Christian church, who styled the author of the apocalypse, by way of eminence, *ὁ θεολόγος*, the *Divine*.

INTRODUCTION.

THE Pagan systems are treated of under **POLYTHEISM**; and that of the Mahometans under **ALCORAN** and **MAHOMETANISM**: the only theology of which we have to treat at present is **CHRISTIAN THEOLOGY**, which comprehends that which is commonly called *natural*, and that which is *revealed* in the scriptures of the Old and New Testaments. These taken together, and they ought never to be separated, compose a body of science so important, that in comparison with it all other sciences sink into insignificance. But if this knowledge be necessary to all Christians, it is doubly so to those who are appointed to feed the flock of Christ.

The principles of this science are to be found only in the word and works of God; but before entering on this study, much previous knowledge is requisite. A general acquaintance with the physical and mathematical sciences is necessary; for just and enlarged conceptions of the God of the universe, cannot otherwise be obtained. See **PHYSICS**, *Sec.* III. The student should also make himself acquainted with the principles of logic, the several powers of the human mind, and the different sources of evidence; in doing which he

will find the greatest assistance from Bacon's *Novum Organum*, Locke's *Essay on the Human Understanding*, Reid's *Essays on the Intellectual and Active Powers of Man*, and Tatham's *Chart and Scale of Truth*. These works, of which the young student ought to make himself master, will teach him to think justly, and guard him against a thousand errors, which those who have not laid such a foundation are apt to embrace as the truths of God.

It is obvious that a knowledge of the languages in which the scriptures were written, is absolutely necessary; and the student will not neglect to read those works of the ancients as well as moderns, which will direct him in the acquisition of that simple but powerful oratory which ought to be possessed by a preacher of the gospel.

PRELIMINARY DIRECTIONS for the STUDY of THEOLOGY.

CHRISTIAN THEOLOGY is divided into two great parts, *natural* and *revealed*: the former comprehending that which may be known of God from the creation of the world, even his eternal power and Godhead; the latter, that which is discovered to man only in the Bible.

Concerning the extent of natural theology many opinions have been formed; but into these disputes we mean not to enter. It is undeniable that there are some of the principles of theology which may be called *natural*; for though it is probable that the parents of mankind received all their theological knowledge by *supernatural* means, it is yet obvious that some parts of that knowledge must have been capable of a proof purely rational, otherwise not a single religious truth could have been conveyed through the succeeding generations of the human race but by the immediate inspiration of each individual. We indeed admit many propositions as certainly true, upon the sole authority of the Jewish and Christian scriptures; but it is self-evident that we could not do either the one or the other, were we not convinced by natural means that God exists, that he is a Being of goodness, justice, and power, and that he inspired with divine wisdom the penmen of these sacred volumes. Now, though it is very possible that no man or body of men, left to themselves from infancy in a desert world, would ever have made a theological discovery; yet whatever propositions relating to the being and attributes of the first cause and the duty of man, can be demonstrated

monstrated by human reason, independent of written revelation, may be called *natural theology*, and are of great importance, as being to us the first principles of all religion. Natural theology, in this sense of the word, is the foundation of the Christian revelation; for without a previous knowledge of it, we could have no evidence that the scriptures of the Old and New Testaments are indeed the word of God.

The young divine, therefore, in the regular order of his studies, ought to make himself master of *natural theology* before he enter upon the important task of searching the scriptures. On this subject many books have been published in our own and other languages; but perhaps there are none more worthy of attention than *The Religion of Nature Delineated* by Mr WOLLASTON, CUMBERLAND on the *Law of Nature*, PALEY's *Elements of Moral Philosophy*, and CUDWORTH's *Intellectual System*.

After such a course, he may study the scriptures, directing himself as much as possible of the prejudices of education in behalf of a particular system of faith, and sitting down to the study of the sacred volume as of a work to which he is an entire stranger. He ought first to read it as a moral history of facts and doctrines, beginning with the books of Moses, and proceeding through the rest, not in the order in which they are commonly published, but in that in which there is reason to believe they were written. (See SCRIPTURE.) In this perusal we would advise him to consult no commentator, because his object now is not to study the doctrines contained in the bible, but merely to discover what are the subjects of which it treats. Many histories of the bible have been written; among these, Stackhouse's, with all its defects, may be useful as a guide to the series of facts recorded in the scriptures. Between the Old and New Testaments there is a great chasm in the history of the Jewish nation; but it is supplied in a very able and satisfactory manner by Dr PRIDEAUX, whose *Connection of the History of the Old and New Testaments* is one of the most valuable historical works in any language. Shuckford's *Sacred and Profane History of the World connected*, may likewise be read with advantage, as throwing light upon many passages of the Old Testament.

It will next be the student's business to consider the doctrines of scripture, and to distinguish such as relate to the whole human race, from those in which Abraham and his posterity were alone interested. He must therefore travel over the sacred volume a second time; and still we would advise him to travel without a guide. From Walton's *Polyglot bible*, and the large collection called *Critici sacri*, he may indeed derive much assistance in his endeavours to ascertain the sense of a difficult text; but he should make little use of commentators and expositors, and still less of system-builders, till he has formed some opinions of his own respecting the leading doctrines of the Jewish and Christian religion. In the course of this inquiry into the import of the sacred volume, the student will pay particular attention to the circumstances of the age and country in which its

various writers respectively lived, and to the nature of the different styles, *analogical* and *parabolical*, in which it is written. He will likewise keep in mind that God, whom it claims for its author, is the parent of truth, and that all his actions and dispensations must be consistent with one another. He will therefore compare the different passages of the Old and New Testaments which relate to the same doctrine, or to the same event, reasonably concluding that the bible must be the best interpreter of itself.

Those systems of divinity which are most approved are;—by the divines of the *Arminian school*, Episcopius's *Theologic Institutiones*, Limborch's *Theologia Christiana*, and Locke's *Reasonableness of Christianity*; whilst the followers of CALVIN have preferred the *Institutiones* of their master, Turretine's *Institutio Theologic Elenctica*, and Gill's *Body of Divinity*.

As the Jewish and Christian dispensations are closely linked together, being in truth but parts of one great whole, it is impossible to have an adequate notion of the latter without understanding the design of the former. Now, though the Mosaic religion is nowhere to be learned but in the Old Testament, it may be proper for our student, after he has formed his own opinions of it from that sacred source, to know what has been written on the subject by others. For illustrating the ritual law, a learned prelate warmly recommends the *Ductor Dubitantium* of Maimonides, and Spencer's book entitled *De Legibus Hebræorum Ritualibus*. Both works have undoubtedly great merit; but our young divine will do well to read along with them *Hermanni Witsii Egyptiæ*, and Dr Woodward's *Discourse on the Worship of the Ancient Egyptians*, communicated to the London Society of Antiquaries in 1775, where some of Spencer's notions are shortly and ably refuted. On the other parts of this dispensation, the reader will find much erudition and ingenuity displayed in the 2d part of Warburton's *Divine Legation of Moses demonstrated*.

Having proceeded thus far in the course, the student's business should now be to enquire seriously what evidence there is that the doctrines which he has so carefully studied were indeed revealed in times past by God. The first step towards the embracing of any truth is, to get fairly rid of the objections which are made to it; and the general objections made by deistical writers to the Christian revelation are by no writer more completely removed than by Bishop Butler, in his celebrated work entitled *Analogy of Religion natural and revealed to the Constitution and Course of Nature*. The student must also read *Grotius de Veritate Religionis Christianæ*, and Stillingfleet's *Origines Sacreæ*. Other works may be read with great advantage, as Paley's *Evidences of the Christian Religion*, and Leslie's *Short Method with the Deists*. To these defences of revelation we may add the collection of sermons preached at Boyle's lecture from 1691 to 1732, published in 3 vols. fol. 1739; the works of Leland; Bishop Newton's *Disquisitions on the Prophecies*; and above all, Lardner's *Credibility of the Gospel History*, with the Supplement.

L I

Having

Having satisfied himself of the truth of revelation in general, it may be useful for the young divine to provide a defence of the Christian religion against the objections of modern Judaism. In this part of his studies he will need no other instruction than what he may reap from Limborch's work entitled *De Veritate Religionis Christianæ amica collatio cum erudito Judæo*. See OROBIO and LIMBORCH.

The various controversies subsisting between the several denominations of Christians, about points which separate them into different churches, ought next to be studied in the order of the course; yet we would by no means recommend deep immersion in polemical controversies. A complete knowledge of ecclesiastical history will be a safe introduction to this part of the study. There are many histories of the Christian church which possess great merit, but we are acquainted with none which appears wholly impartial. MOSHEIM's is perhaps the most perfect compend. There is no coming at the true history of the primitive church, but by studying the works of the primitive writers. The rise and progress of the Reformation in general, may be best learned from Sicidan's book *De Statu Religionis et Reipublicæ, Caroli V. Cæsaris. Commentarii*; the History of the Reformation of the Church of Scotland from KNOX and SPOTSWOOD; and that of the Church of England from the much applauded work of Bishop BURNET. The Bp. of Landaff recommends DUPIN's, EACHARD's, GREGORY's, FORMEY's, and JABLONSKI's *Ecclesiastical Histories*, as works of merit.

After this course of ecclesiastical history, the young divine may read with advantage the most important controversies which have agitated the Christian world; for he will now read them without danger of giving up his faith to the mere authority of great names. To enumerate these controversies, and to point out the ablest authors who have written on each, would be a very tedious, but not a very profitable task. On that between the Romish and Protestant churches, we would recommend CHILLINGWORTH's *Religion of Protestants a safe way to Salvation*; in which the long dispute between the Popish and Reformed churches is placed on its proper ground, the Holy Scriptures.

PART I.

OF NATURAL THEOLOGY.

SECT. I. Of the BEING and ATTRIBUTES of GOD.

THE existence of God is the foundation of all religion, and the first principle of the science which is the subject of this article. It is likewise a principle which must command the assent of every man who has any notion of the relation between effects and their causes, and whose curiosity has ever been excited by the phenomena of nature. This great and important truth we have elsewhere endeavoured to demonstrate; (see METAPHYSICS, SECT. XXXI—XXXIX; but it may be proved by arguments much more simple than the nature of that article required us to use.

We see that the human race, and every other

species of animals, is at present propagated by the co-operation of two parents; but has this process continued from eternity? A moment's reflection will convince us that it has not. Let us take any one man alive, and, to avoid perplexity, let us suppose his father and mother dead, and himself the only person at present existing; how came he into the world? It will be said he was produced mechanically or chemically by the conjunction of his parents, and that his parents were produced in the same manner by theirs. Let this then be supposed; it must surely be granted, that when this man was born, an addition was made to the series of the human race. But a series which can be enlarged may likewise be diminished; and by tracing it backwards, we must at some period, however remote, reach its beginning. There must therefore have been a first pair of the human race, who were not propagated by the conjunction of parents. How did these come into the world?

ANAXIMANDER tells us, that the first men and all animals were bred in warm moisture, inclosed in crustaceous skins like crab-fish or lobsters; and that when they arrived at a proper age, their shelly prisons growing dry, broke, and made way for their liberty. EMPEDOCLES informs us, that mother Earth at first brought forth vast numbers of legs, and arms, and heads, &c. which, approaching each other, arranging themselves properly, and being cemented together, started up at once full grown men. Another of these philosophers relates, that there first grew up a sort of worms, which having their roots in the earth, attracted thence a kind of milk for the nourishment of the fœtus, which in process of time broke through the membranes and shifted for itself; whilst the Egyptian fathers of this hopeful school contented themselves with simply affirming, that animals like vegetables sprung at first from the bosom of the earth.

Surely those fables, or their followers, should have been able to tell us why the earth has not in any climate this prolific power of putting forth vegetable men or the parts of men at present. If this universal parent be eternal and self-existent, it must be incapable of decay or the smallest change in any of its qualities: if it be not eternal, we shall be obliged to find a cause for its existence, or at least for its form and all its powers. But such a cause may have produced the first human pair, and undoubtedly did produce them, without making them spring as plants from the soil. Indeed the growth of plants themselves clearly evinces a cause superior to any vegetative power which can be supposed inherent in the earth. No plant, from the sturdy oak to the creeping ivy, can be propagated but by seed or slips from the parent stock; but when one contemplates the regular process of vegetation, the existence of every plant implies the prior existence of a parent seed, and the existence of every seed the prior existence of a parent plant. Which then of these, the oak or the acorn, was the first, and whence was its existence derived? Not from the earth; for we have the evidence of universal experience that the earth never produces a tree but from seed, nor seed but from a tree. There must therefore be some superior power which formed the first seed or the first

first tree, planted it in the earth, and gave to it those powers of vegetation by which the species has been propagated to this day.

Thus clearly do the processes of generation and vegetation indicate a power superior to those which are usually called the *powers of nature*. The same thing appears no less evident from the laws of attraction and repulsion, which plainly prevail through the whole system of matter, and hold together the stupendous structure. Experiment shows that very few particles of the most solid body are in actual contact with each other; (see *OPTICS, Index, and PHYSICS, Sect. III.*) and that there are considerable interstices between the particles of every elastic fluid, is obvious to the smallest reflection. Yet the particles of solid bodies strongly cohere, whilst those of elastic fluids repel each other. How are these phenomena accounted for? To say that the former is the effect of attraction and the latter of repulsion, is only to say that two individual phenomena are subject to those laws which prevail through the whole of the classes under which they are respectively arranged; whilst the question at issue is concerning the *ORIGIN OF THE LAWS THEMSELVES*, the *power* which makes the particles of gold cohere, and those of air repel each other. Power without substance is inconceivable; and by a law of human thought, no man can believe a being to operate but where it is in some manner or other actually present: but the particles of gold adhere, and the particles of air keep at a distance from each other, by powers exerted where no matter is present. There must therefore be some substance endowed with power which is not material.

Of this substance or Being the power is evidently immense. The earth and other planets are carried round the sun with a velocity which human imagination can hardly conceive. That this motion is not produced by the agency of these vast bodies on one another, or by the interposition of any material fluid, has been shown elsewhere, (see *METAPHYSICS, Sect. XVIII. and XX.*; and *OPTICS, Index*); and since it is a law of our best philosophy, that we are not to multiply substances without necessity, we must infer that the same Being which formed the first animals and vegetables, endowing them with powers to propagate their respective kinds, is likewise the cause of all the phenomena of nature, such as *cohesion, repulsion, elasticity, and motion*, not excepting even the motions of the heavenly bodies themselves.

If this powerful Being, who is the parent of vegetable and animal life, and the source of all corporeal motions, be self-existent, intelligent, and independent in his actions and volitions, he is an original or FIRST CAUSE, and that Being whom we denominate GOD. If he be not self-existent and independent, there must be a cause in the order of nature prior and superior to him, which is either itself the first cause, or a link in that series of causes and effects, which, however vast we suppose it, must be traced ultimately to some one Being, who is self-existent, and has in himself the power of beginning motion, independent of every thing but his own intelligence and volition. In vain the Atheists allege, that the series may ascend infinitely, and for that reason have no first

mover or cause. An infinite series of successive beings involves an absurdity and contradiction, (see *METAPHYSICS, Sect. XIII. XIV. XV.*); but not to insist upon this at present, we shall only beg leave to consider such a series as a whole, and see what consequences will flow from the supposition. That we may with logical propriety consider it in this light, is incontrovertible; for the birth of every individual of the human race shows that it is made up of parts; but parts imply a whole as necessarily as an attribute implies its substance. As in this supposed series there is no cause which is not likewise an effect, nor any body moving another which was not itself moved by a third, the whole is undeniably equivalent to an infinite effect, or a finite body moved; but if a finite effect must necessarily have proceeded from a cause, and a finite body in motion must have been put into that state by a mover, is there a human mind which can conceive an infinite effect to have proceeded from no cause, or an infinite body in motion to have been moved by nothing? No, surely! An infinite effect, were such a thing supposable, would compel us to admit an INFINITE CAUSE, and an infinite body in motion a mover of infinite power.

This great cause is GOD, whose wisdom, power, and goodness, all nature loudly proclaims. That the phenomena which we daily see evince the existence of one such Being, has just been shown; and that we have no reason to infer the existence of more than one, a very few reflections will make abundantly evident. For, not to say more stress than it will bear upon that rule of Newton's, which forbids us to multiply substances without necessity, such a harmony prevails through the whole visible universe, as plainly shows it to be under the government of one INTELLIGENCE. That on this globe the several elements serve for nourishment to plants, plants to the inferior animals, and animals to man; that the other planets of our system are probably inhabited, and their inhabitants nourished in the same or a similar manner; that the sun is so placed as to give light and heat to all, and by the law of gravitation to bind the whole planets into one system with itself—are truths so obvious and so universally acknowledged, as to supersede the necessity of establishing them by proof. The fair inference therefore is, that the solar system and all its parts are under the government of one intelligence, which directs all its motions, and all the changes which take place among its parts, for some wise purposes. To suppose it under the government of two or more intelligences would be highly unreasonable; for if these intelligences had equal power, equal wisdom, and the same design, more than one of them would evidently be superfluous; and if they had equal power and contrary designs, they could not be the parents of that harmony which we perceive to prevail in the system.

But the Being capable of regulating the movements of so vast a machine, may well be supposed to possess infinite power, and to be capable of superintending the motions of the universe. That the widely extended system of nature is but one system, of which the several parts are united by many bonds of mutual connexion, has been shown

l. l. a

elsewhere,

elsewhere, (see PHYSICS, *See* IV. V.), and appears daily more and more evident from their progress in physical discoveries; and therefore it is in the highest degree unreasonable to suppose it has more than one author, or one supreme governor.

As the unity of *design* apparent in the works of creation plainly proves the unity of their Author, so do the immensity of the whole, and the admirable adjustment of the several parts to one another, demonstrate His power and His wisdom.

No reasoning could be more satisfactory on this point than a reference to the numerous articles in this work of NATURAL HISTORY, ASTRONOMY, &c. Under every head the adoring student will discover endless proofs that there must be some Almighty MIND who modelled and preserves the universe; lays the causes of things so deep; prescribes them such uniform and steady laws; defines and adapts them to certain purposes; and makes one thing to fit and answer another so as to produce one harmonious whole.

But the GOODNESS of God is not less conspicuous in his works than his power or his wisdom. The view of a landscape is pleasant; the taste of nourishing food is pleasant; sounds not too loud are agreeable, while musical sounds are exquisite; and hardly any smells, except such as are excited by effluvia obviously pernicious to the brain, are disagreeable; whilst some of them, if not too long indulged, are delightful. Our lives are preserved and the species is continued by obeying the impulse of appetites, of which the gratification is exquisite, when not repeated too frequently, to answer the purposes of the Author of our being. Since, then, God has called forth his consummate wisdom to contrive and provide for our happiness, and has made those things which are necessary to our existence and the continuance of the race sources of our greatest sensual pleasures, who can doubt but that benevolence is one of his attributes, and the attribute in which he himself most delighteth? But it is not from sensation only that we may infer the benevolence of the Deity: He has formed us with minds capable of intellectual improvement, and he has implanted in the breast of every man a very strong desire of adding to his knowledge. This addition indeed cannot be made without labour; but a very short progress in any study converts what was irksome into a pleasure of the most exalted kind; and he who by study enlarges his ideas, and is conscious that he is daily rising in the scale of intelligence, experiences a high degree of complacency. That the practice of virtue is attended with a pleasure of the purest kind, is a fact which no man has ever questioned but the habitually vicious. The benevolence of a Being, who seems thus anxious to furnish us with both sensual and intellectual enjoyments, and who has made our duty our greatest pleasure, cannot be questioned; and therefore we must infer, that the Author of Nature wishes the happiness of the whole sensible and intelligent creation.

To such reasoning it has been objected, "Why, if the Author of Nature be a benevolent Being, are we necessarily subject to pain, diseases, and death?" The scientific physiologist replies, Because from these evils Omnipotence itself could not in our present state exempt us, but by a con-

stant series of *miracles*. The world is governed by general laws, without which there could be among men neither ARTS nor SCIENCES. As long as we have material and solid bodies capable of motion, liable to resistance from other solid bodies, supported by food, subject to the agency of the air, and divisible, they must necessarily be liable to pain, disease, corruption, and death, and that too by the very influence of those laws which preserve the order and harmony of the universe. Thus gravitation is a general law so necessary, that were it for a moment suspended, the world would instantly fall to pieces; and yet by this law the man must inevitably be *crushed* to death upon whom a tower shall chance to tumble. Again, the attraction of cohesion is a general law, without which it does not appear any corporeal system could possibly exist: it is by this law too, or a modification of it, that the glands and lacteals of the human body extract from the blood such particles as are necessary to nourish the solids; and yet it is by the very same modification of the same law that a man is liable to be *poisoned*.

"But why is every disorder attended with sickness or with pain? and why is such a horror of death implanted in our breasts, feeling that by the laws of nature death is inevitable?" We answer, That sickness, pain, and the dread of death, serve the very best purposes. Could a man be put to death, or have his limbs broken, without feeling pain, the human race had long ago been extinct. If we felt no uneasiness in a fever, we should be insensible to the disease, and die before we suspected our health to be impaired. The horror which generally accompanies our fear of death tends to make us more careful of life, and prevents us from quitting this world rashly when our affairs prosper not according to our wishes, and tends perhaps more than any thing else to make us live while we are here in such a manner as to ensure our happiness hereafter.

Thus, from every view that we can take of the works and laws of God, and even from considering the objections which have sometimes been made to them, we are compelled to acknowledge the benevolence of their Author.

The substance or essence of this self-existent, all-powerful, infinitely wise, and perfectly good Being, is to us wholly incomprehensible. That it is not MATTER, is shown by the process of argumentation by which we have proved it to exist; but what it is we know not. It is sufficient for all the purposes of religion to know that God is somehow or other present to every part of his works; that existence and every possible perfection is essential to him; and that he wishes the happiness of all his creatures. From these truths we might proceed to prove and illustrate the perpetual superintendence of his providence, both general and particular, over every the minutest part of the universe. (See PROVIDENCE, § 2. and MORAL PHILOSOPHY, Part II. *See* III. IV.) We shall only observe here, that the manner in which animals are propagated affords us as complete a proof of the constant superintendence of divine power and wisdom, as it does of the immediate exertion of these faculties in the formation of the parent pair of each species. For were this business of propa-

gation

gation carried on by necessity and mechanical laws, it is obvious, that in every age there would be generated, in each species of animals, the very same proportion of males to females that there was in the age preceding. On the other hand, did generation depend upon fortuitous mechanism, it is not conceivable but that, since the beginning of the world, or, according to the hypothesis, during the course of eternity, several species of animals should in some ages have generated nothing but males, and in others nothing but females; and that of course many species would have been long since extinct. As neither of these cases has ever happened, the preservation of the various species of animals, by keeping up constantly in the world a due, though not always the same proportion, between the sexes of male and female, is a complete proof of the superintendence of divine providence.

SECT. II. Of the DUTIES and SANCTIONS of NATURAL RELIGION.

FROM the short view we have taken of the divine perfections, it is evidently our duty to reverence in our minds the self-existent Being to whom they belong. He who has considered seriously the power, the wisdom, and the goodness, displayed in the works of God, must be convinced that he has no imperfection; that his power can accomplish every thing which involves not a contradiction; that his knowledge is intuitive, and free from the possibility of error; and that his goodness exceeds to all without partiality. With silent gratitude and elevation glowing in the breast of the contemplative man, he will be careful not to form even a mental image of that all-perfect Being to whom they are directed, for he knows that God is not material. The man who has any notion of the perfections of the Supreme Being will never speak lightly of him or make use of his name at all but on great and solemn occasions.

Whether worship is a fruit of natural religion, is a point of dispute; but no doubts can be entertained as to the foundation of moral virtue. Reason clearly perceives it to be the will of our Maker, that every individual of the human race should treat every other individual as, in similar circumstances, he could justly expect to be treated himself. It is thus only that the greatest sum of human happiness can be produced; (see MORAL PHILOSOPHY, Part III. Sect. I.—III.) for were all men temperate, sober, just in their dealings, faithful to their promises, charitable to the poor, &c. it is obvious that no miseries would be felt upon earth, but the few which, by the laws of material and corporeal nature, unavoidably result from the union of our minds with systems of matter. But it has been already shown, that the design of God in forming sentient beings was to communicate to them some portion, or rather some resemblance, of that felicity which is essential to himself; and therefore every action which in its natural tendency co-operates with this design must be agreeable to him, as every action of a contrary tendency must be disagreeable. From this reasoning it follows undeniably, that we are obliged not only to be just and beneficent to one another, but also to abstain from all unnecessary cruelty to inferior animals.

There are few questions of greater importance, than “What are the sanctions by which natural religion enforces obedience to her own laws?” Natural religion as a system of doctrines influencing the conduct, is exceedingly defective in this point, unless it afford sufficient evidence, intelligible to every ordinary capacity, of the immortality of the soul, or at least of a future state of rewards and punishments. That it does afford this evidence, is strenuously maintained by some deists, and even by many philosophers, who profess Christianity.

One great argument made use of to prove that the immortality of the soul is among the doctrines of natural religion, is the universal belief of all ages and nations that men continuing to live in some other state after death has separated their souls from their bodies. Hence it is argued *omnium consensus nature vox est*. But there appears not to be any proof of that doctrine being the deduction of human reasoning. The popular belief of Paganism, both ancient and modern, is so fantastic and absurd, that it could never have been rationally inferred from what nature teaches of God and the soul.

The philosophers of Greece and Rome, despising the popular mythology of their respective countries, employed much time and great talents in disquisitions concerning the human soul and the probability of a future state; and if the genuine conclusions of natural religion on this subject are anywhere to be found, one would naturally look for them in the writings of those men whose genius and virtues did the highest honour to human nature. Yet it is a fact which cannot be controverted, that the philosophers held such notions concerning the substance of the soul and its state after death, as could afford no rational support to suffering virtue, (see METAPHYSICS, Sect. XXXI.) SOCRATES is indeed an exception. But although his opinions were juster, yet he had formed none with certainty. “I would have you to know said he, on the last day of his life that I have great hopes I am now going into the company of good men; yet I would not be too peremptory and confident concerning it.” *Plato in Phæd.* CICERO also expressed similar doubts.

To us who know, by stronger evidence, that the soul is immortal, and that there will be a future state in which all the obliquities of the present shall be made straight, the argument drawn from the moral attributes of God, and the unequal distribution of the good things of this life, appears to have the force of demonstration. Yet none of us will surely pretend to say, that his powers of reasoning are greater than were those of Socrates and Cicero: and therefore the probability is, that had we been like them destitute of the light of revelation, we should have been disturbed by the same doubts.

Upon the whole, the hope of a future state is the only support of virtue and religion; and we think the arguments which we have stated elsewhere, and above referred to, make the reality of it so highly probable, that, though there were no other evidence, he would act a very foolish part who should confine his attention wholly to the present life.

But

But were the arguments which the light of nature affords for the immortality of the human soul as absolutely convincing as any geometrical demonstration—natural religion would still be defective; because it points out no method by which such as have offended God may be certainly restored to his favour, and to the hopes of happiness which by their sin they had lost. To point out how guilty man is to be reconciled to his Maker is the grand object of revealed religion, and the darkness which the theology of nature leaves on this point is to us who live under the sunshine of the gospel happily removed by the various revelations contained in the scriptures of the Old and New Testaments. These taken together, and in the order in which they were given, exhibit such a display of providence, such a great, benevolent, over-ruling divine system of doctrines, and such precepts of practical wisdom, as the ingenuity of man could never have discovered. The Christian, with the scriptures in his hands, can regulate his conduct by an infallible guide, and rest his hopes on the surest foundation. These scriptures it is now our business to examine.

PART II.

OF REVEALED THEOLOGY.

SECT. I. *Of the Divisions of Theology.*

IN every civilized country the popular system of theology has claimed its origin from divine revelation. The pagans of antiquity had their augurs and oracles; the Chinese have their inspired teachers, Confucius and Fohi; the Hindoos have their sacred books derived from Brama; the followers of Mahomet have their koran dictated by an angel; and the Jews and Christians have the scriptures of the Old and New Testaments, which they believe to have been written by holy men of old, who spake and wrote as they were moved by the Holy Ghost.

That the claims of ancient Paganism to a theology derived from heaven, as well as the similar claims of the Chinese, Hindoos, and Mahometans, are ill founded, has been shown in various articles of this work, (see CHINA, HINDOSTAN, MAHOMETANISM, MYTHOLOGY, and POLYTHEISM); whilst, under the articles PROPHECY, RELIGION, REVELATION, and SCRIPTURE, we have sufficiently proved the divine inspiration of the Jewish and Christian scriptures, and of course the divine origin of Jewish and Christian theology. These indeed are not two systems of theology, but two parts of one system, which was gradually revealed as men were able to receive it: and therefore both scriptures must be studied by the Christian divine.

Artificial systems of theology are commonly divided into two great parts, the *theoretic* and the *practical*; and these again are subdivided into many inferior branches. Under the theoretic part are sometimes classed,

1. **DOGMATIC THEOLOGY**; which comprehends an entire system of all the dogmas or tenets which a Christian is bound to believe and profess. The truth of these the divine must clearly per-

ceive, and be able to enforce upon his audience; and hence the necessity of studying what is called,

2. **THE EXEGESIS**, or the art of attaining the true sense of the holy scriptures; and,

3. **HERMENEUTIC THEOLOGY**, or the art of interpreting and explaining the scriptures to others; an art of which no man can be ignorant who knows how to attain the true sense of them himself.

4. **POLEMICAL THEOLOGY**, or controversy; and,

5. **MORAL THEOLOGY**, which is distinguished from moral philosophy, or the simple doctrine of ethics, by teaching a much higher degree of moral perfection than the mere light of reason could ever have discovered, and adding new motives to the practice of virtue.

The practical sciences of the divine are,

1. **HOMILETIC, or PASTORAL THEOLOGY**; which teaches him to adapt his discourses from the pulpit to the capacity of his hearers, and to pursue the best methods of guiding them by his doctrine and example in the way of salvation.

2. **CATECHETIC THEOLOGY**, or the art of teaching youth and ignorant persons the principal points of evangelical doctrine, as well with regard to belief as to practice.

3. **CASUISTIC THEOLOGY**, or the science which decides on doubtful cases of moral theology, and that calms the scruples of conscience which arise in the Christian's soul during his journey through the present world.

We have mentioned these divisions and subdivisions of the science of theology, not because we think them important, but merely that our readers may be at no loss to understand the terms when they meet with them in other works. Of such terms we shall ourselves make no use, for the greater part of them indicate distinctions where there is no difference, and tend only to perplex the student.

SECT. II. *Of God and his Attributes.*

THE Jewish lawgiver, who records the earliest revelations that were made to man, begins his history with a display of the wisdom and power of God in the creation of the world. He does not inform his countrymen, and expect them to believe, upon the authority of his divine commission, that God *exists*; for he well knew that the being of God must be admitted, and tolerably just notions entertained of his attributes, before man can be required to pay any regard to miracles which afford the only evidence of a primary revelation. "In the beginning (says he) God created the heavens and the earth." Here the being of God is assumed as a truth universally received; but the sentence, short as it is, reveals another which, as we shall afterwards shew, human reason could never have discovered.

But before we consider the CREATION of the world, what the scripture says of it, with the opinions of the most enlightened ancients on the same subject, it will be proper to attend to the appellation which is here given to God; and inquire what light is thrown upon it by subsequent revelations. The passage in the original is ברא אלהים, where it is remarkable that the Creator is deno-

denominated by a noun in the plural number, signifying literally "persons under the obligation of an oath to perform certain conditions." This is certainly a very extraordinary denomination for the one supreme and self-existent Being; and what adds to the strangeness of the phraseology is, that the verb with which this plural noun is made to agree is put in the singular number. What now could be the sacred historian's motive for expressing himself in this manner? His style is in general remarkable for its plainness and grammatical accuracy; and we believe it would be difficult to find in all his five books a single phrase not relating to the Supreme being in which there appears such a violation of concord.

To this it has been replied that Moses uses the plural noun to express in a magnificent way the majesty of God, just as it is customary for kings and earthly potentates, when publishing edicts and laws, to call themselves *we* and *us*. But there is no evidence on record that such a mode of speaking was introduced among kings at a period so early as the era of Moses. Let it be observed, too, that whenever this phraseology was introduced among men, the plural noun was in every grammatical tongue joined to a plural verb; whereas Moses not only puts the noun and the verb in different numbers in the verse under consideration, but afterwards represents the *אֱלֹהִים* as saying, "let us make man in our image;" and, "behold the man is become as one of us." Such phrases as these last were never used by a single man, and therefore cannot have been borrowed from human idioms.

Is there then a plurality of gods? No; there is nothing which the scriptures more frequently or more earnestly inculcate than the unity of the divine nature. The texts asserting this great and fundamental truth are almost numberless. "Unto thee (says Moses to his countrymen) it was shewed, that thou mightest know that the Lord is God; there is none else besides him. Know therefore that the Lord *be* is God in heaven above and upon the earth beneath: there is none else." And again, "Hear, O Israel, the Lord our God is one Lord," or, as it is expressed in the original, "Jehovah our God is one Jehovah," one Being to whom existence is essential, who could not have a beginning and cannot have an end. In the prophecies of Isaiah, God is introduced as repeatedly declaring, "I am Jehovah, and there is none else; there is no God besides me; that they may know from the rising of the sun and from the west, that there is none besides me: I am Jehovah, and there is none else: Is there a God besides me? Yea there is no God; I know not any." In perfect harmony with these declarations of Moses and the prophets, our Saviour, addressing himself to his father says, "This is life eternal, that they might know Thee, the only true God, and Jesus Christ whom thou hast sent;" and St Paul, who derived his doctrine from his divine Master, affirms, that "an idol is nothing in the world; and that there is none other God but one."

The unity of the divine nature, which, from the order and harmony of the world, appears probable to human reason, these texts of revelation put beyond a doubt. Hence the first precept

of the Jewish law, and, according to their own writers, the foundation of their whole religion, was, "Thou shalt have none other gods before Me." Hence, too, the reason of that strict command to Jews and Christians to give divine worship to none but God: "Thou shalt worship the Lord thy God, and him only shalt thou serve;" because he is *God alone*. Him only must we fear, because he alone hath infinite power; in him alone must we trust, because "He only is our rock and our salvation;" and to him alone must we direct our devotions, because "he only knoweth the hearts of the children of men."

It will not be contended then, that the word *אֱלֹהִים* indicates a plurality of gods. In the opinion, however, of many eminent divines, it denotes, by its junction with the singular verb, a plurality of persons in the one Godhead; and some few have contended, that by means of this peculiar construction, the Christian doctrine of the Trinity may be proved from the first chapter of the book of Genesis. To this latter opinion we can by no means give our assent. That there are three distinct persons in the one divine nature may be inferred with sufficient evidence from a multitude of passages in the Old and New Testaments diligently compared together; but it would perhaps be rash to rest the proof of so sublime a mystery upon any single text of holy scripture, and would certainly be so to rest it upon the text in question. That Moses was acquainted with this doctrine, we, to whom it has been explicitly revealed, may reasonably conclude from his so frequently making a plural name of God to agree with a verb in the singular number: but had we not possessed the brighter light of the New Testament to guide us, we should never have thought of drawing such an inference. For supposing the word *אֱלֹהִים* to denote clearly a plurality of persons, and that it cannot possibly signify any thing else, how could we have known that the number is neither more nor less than three, had it not been ascertained to us by subsequent revelations?

There are indeed various passages in the Old Testament, of the phraseology of which no rational account can be given, but that they indicate more than one person in the Godhead. Such are those texts already noticed; "and the Lord God said let us make man in our image after our likeness;" and "the Lord God said, behold the man is become like one of us." To these may be added the following, which are to us perfectly unintelligible upon any other supposition; "and the Lord God said, let us go down, and there confound their language." "If I be a Master (in the Hebrew *adonim*, MASTERS), where is my fear?" "The fear of the Lord (JEHOVAH) is the beginning of wisdom, and the knowledge of the Holy (in the Hebrew *holy ones*) is understanding." "Remember thy Creator (Hebrew thy CREATORS) in the days of thy youth." "And now the Lord God and his SPIRIT hath sent me." "Seek ye out of the book of the Lord and read; for my mouth it hath commanded, and his SPIRIT it hath gathered them.

That these texts imply a plurality of divine persons, seems to us incontrovertible. It does not, however, appear evident from these passages, or

from

from any other that we recollect in the Old Testament, that the persons in Deity are three and no more: but no sober Christian will harbour a doubt but that the precise number was by some means or other made known to the ancient Hebrews; for inquiries leading to it would be naturally suggested by the form in which the high-priest was commanded to bless the people. See Num. vi. 24—26.

Of this benediction it has been well observed, that if its three articles be attentively considered, they will be found to agree respectively to the three persons taken in the usual order of the FATHER, the SON, and the HOLY GHOST. The Father is the author of *blessing and preservation. Grace and illumination* are from the Son, by whom we have "the light of the knowledge of the glory of God, in the face of Jesus Christ." *Peace* is the gift of the Spirit, whose name is the *Comforter*, and whose first and best fruit is the work of *peace*.

Similar to this benediction, but much more explicit, is the form of Christian baptism; which, to us who live under the sunshine of the gospel, establishes the truth of the doctrine of the Trinity beyond all reasonable ground of dispute. "Go (says our blessed Saviour) and teach all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Ghost." If those who believe the inspiration of the scriptures could require any further proof that the Godhead comprehends a Trinity of persons in one nature, we might urge upon them the apostolic form of benediction; "The grace of our LORD JESUS CHRIST, and the love of GOD, and the communion of the HOLY GHOST, be with you all."

But how, it will be asked, can *three* divine persons be but *one* and *the same* God? This is a question which has been often put, but which, we believe, no created being can fully answer. The divine nature and its manner of existence is to us wholly incomprehensible; and we might with greater reason attempt to weigh the mountains in a pair of scales, than by our limited faculties to fathom the depths of infinity. The Supreme being is present in power to every portion of space, and yet it is demonstrable, that in his essence he is not extended (see METAPHYSICS, *SECT. XIV.*) Both these truths, his inextensibility and omnipresence, are fundamental principles in what is called *natural religion*; and when taken together they form, in the opinion of most people, a mystery as incomprehensible as that of the Trinity in unity. Indeed there is nothing of which it is more difficult for us to form a distinct notion than *unity* simple, and absolutely indivisible; and we are persuaded that such of our readers as have been accustomed to turn their thoughts inwards, and reflect upon the operations of their own minds, will acknowledge the difficulty is not much less to them. Though the Trinity in unity, therefore, were no Christian doctrine, mysteries must still be believed; for they are as inseparable from the religion of nature as from that of revelation; and atheism involves the most incomprehensible of all mysteries, even the beginning of existence without a cause. We must indeed form the best notions that we can of this and of all other

mysteries; for if we have no notions whatever of a Trinity in unity, we can neither believe nor disbelieve that doctrine. It is however to be remembered, that all our notions of God are more or less analogical; that they must be expressed in words which, literally interpreted, are applicable only to man; and that propositions understood in this literal sense may involve an apparent contradiction, from which the truth meant to be expressed by them would be seen to be free, had we direct and adequate conceptions of the divine nature. On this account it is to be wished that men treating of the mystery of the holy TRINITY, had always expressed themselves in scripture language, and never aimed at being wise beyond what is written.

In the scriptures the three persons are denominated by the terms FATHER, SON, and HOLY GHOST, or by GOD, the WORD, who is also declared to be God, and the SPIRIT OF GOD. If each be truly God, it is obvious that they must all have the same divine nature, just as every man has the same human nature with every other man; and if there be but ONE GOD, it is equally obvious that they must be of the same individual substance or essence, which no three men can possibly be. In this there is a difficulty; but, as will be seen by and by, there is no contradiction. The very terms FATHER and SON imply such a relation between the two persons so denominated, as that though they are of the same substance, possessed of the same attributes, and equally God, just as a human father and his son are equally men, yet the second must be personally subordinate to the first. In like manner, the HOLY GHOST, who is called the Spirit of God, and is said to proceed from the Father, and to be sent by the Son, must be conceived as subordinate to both, much in the same way as a son is subordinate to his parents, though possessed of equal or even of superior powers. That this is the true doctrine, appears to us undeniable from the words of our Saviour himself, who, in a prayer addressed to his Father, styles him by way of pre-eminence, "the only true God," as being the fountain or origin of the Godhead from which the Son and the Holy Ghost derive their true divinity. In like manner, St Paul, when opposing the polytheism of the Greeks, says expressly, that "to us there is but one GOD, THE FATHER, OF whom are all things, and we in, or for, him; and one LORD JESUS CHRIST, BY whom are all things, and we by him."

Some modern divines of great learning, however, contend, that the three persons in Deity are all *consubstantial, co eternal, co-ordinate*, without derivation, subordination, or dependence, of any sort, as to nature or essence; whilst others affirm, that the second and third persons derive from the first their personality, but not their nature. We shall consider these opinions as different, though, from the obscurity of the language in which we have always seen them expressed, we cannot be certain but they may be one and the same. The maintainers of the former opinion hold, that the three persons called *Elohim* in the Old Testament, naturally independent on each other, entered into that agreement before the creation of the world, that

one of them should in the fulness of time assume human nature, for the purpose of redeeming mankind from that misery into which it was foreseen that they would fall. This antemundane agreement, they add, constitutes the whole of that paternal and filial relation which subsists between the first and second persons whom we denominate Father and Son; and they hold, that the Son is said to be begotten before all worlds, to indicate that *He* who was before all worlds was *begotten*, or to be begotten, into the office of redeemer; or, more decisively, to signify that he undertook that office before the creation, and *assumed* to himself some appearance or figure of the reality in which he was to execute it; and he is called *μωϋσῆς* or the only begotten, because he *alone* was begotten into the office of redeemer.

This doctrine is sufficiently overturned by two sentences of holy scripture, about the meaning of which there can be no dispute. "In this (says St John) was manifested the love of God towards us, because that God sent his only begotten son into the world, that we might live through him." Taking the word *son* in its usual acceptation, this was certainly a wonderful degree of love in the Father of mercies to send into the world on our account a person so nearly related to him as an only son; but if we substitute this novel interpretation of the words *only begotten son* in their stead, the apostle's reasoning will lose all its force. St John will then be made to say, "In this was manifested the love of God toward us, because that God sent a divine person equal to himself, and no way related to him, but who had before the creation covenanted to come into the world, that we might live through him." Is this a proof of the love of the person here called God? Again, the inspired author of the epistle to the Hebrews, treating of our Saviour's priesthood, says, among other things expressive of his humiliation, that "though he was a son, yet learned he obedience (or, as others would render the words *μαθήναι ὁμολογῆσαι*, he taught obedience) by the things which he suffered" (*Heb. v. 8.*) If the word *son* be here understood in its proper sense, this verse displays in a very striking manner the condescension of our divine Redeemer, who, though he was no less a person than the proper Son of God by nature, yet vouchsafed to learn or teach us obedience by the things which he suffered; but if we substitute this metaphorical sonship in place of the natural, the reasoning of the author (for that he is reasoning cannot be denied) will be very extraordinary, "Though this divine personage agreed before all worlds to suffer death for the redemption of man, yet learned he obedience, or yet taught he us obedience, by the things which he suffered." What sense is there in this argument? Is it a proof of condescension to fulfil one's engagement? Surely, if the meaning of the word *son*, when applied to the second person of the blessed Trinity, were what is here supposed, the inspired writer's argument would have been more to the purpose for which it is brought had it run thus; "Though he was *not* a son, *i. e.* though he had made no previous agreement, yet condescended he to learn or teach," &c.

VOL. XXII. PART I.

The other opinion, which supposes the Son and the Holy Ghost to derive from the Father their personality, but not their nature, is to us wholly unintelligible; for personality cannot exist, or be conceived in a state of separation from all natures, any more than a quality can exist in a state of separation from all substances. The former of these opinions we are unable to reconcile with the unity of God; the latter is clothed in words that have no meaning. Both, as far as we can understand them, are palpable polytheism; more palpable indeed than that of the Grecian philosophers, who, though they worshipped gods many and lords many, yet all held one God supreme over the rest. See POLYTHEISM, p. 124, 125.

But if the Son and the Holy Ghost derive their nature as well their personality from the Father, will it not follow that they must be posterior to him in *time*, since every effect is posterior to its cause? No; this consequence seems to follow only by reasoning too closely from one nature to another, when there is between the two but a very distant analogy. It is indeed true that, among men, every father must be prior in *time* as well as in the *order* of nature to his son; but were it essential to a man to be a father, so as that he could not exist otherwise than in that relation, it is obvious that his son would be coeval with himself, though still, as proceeding from him, he would be posterior in the order of nature. This is the case with all necessary causes and effects. The visible sun is the immediate and necessary cause of light and heat, either as emitting the rays from his own substance, or as exciting the agency of a fluid diffused for that purpose through the whole system. Light and heat therefore must be as old as the sun; and had he existed from all eternity, they would have existed from eternity with him, though still, as his effects, they would have been behind him in the order of nature. Hence it is, that as we must speak analogically of the Divine nature, and, when treating of mind, even the Supreme mind, make use of words literally applicable only to the modifications of matter, the Nicene fathers illustrate the eternal generation of the second person of the blessed Trinity by this procession of light from the corporeal sun, calling him *God of God, light of light*.

Another comparison has been made use of to enable us to form some notion, however inadequate, how three divine persons can subsist in the same substance, and thereby constitute but one God. Moses informs us, that man was made after the *image* of God. That this relates to the soul more than to the body of man, has been granted by all but a few gross anthropomorphites; but it has been well observed, that the soul, though in itself one indivisible and unextended substance, is conceived as consisting of three principal faculties, the *understanding*, the *memory*, and the *will*. Of these, though they are all coeval in time, and equally essential to a rational soul, the understanding is in the order of nature obviously the first, and the memory the second; for things must be perceived before they can be remembered; and they must be remembered and compared together before they can excite volition, from

M m

being

being, some agreeable, and others disagreeable. The memory therefore may be said to spring from the understanding, and the will from both; and as these three faculties are conceived to constitute one soul, so may three Divine persons, partaking of the same individual nature or essence, constitute one God.

These parallels or analogies are by no means brought forward as proofs of the Trinity, of which the evidence is to be gathered wholly from the word of God; but they serve perhaps to help our labouring minds to form the justest notions of that adorable mystery which it is possible for us to form in the present state of our existence; and they seem to rescue the doctrine sufficiently from the charge of contradiction, which has been so often urged against it by Unitarian writers. To the last analogy we are aware it has often been objected, that the soul may as well be said to consist of ten or twenty faculties as of three, since the passions are equally essential to it with the understanding, the memory, and the will, and are as different from one another as these three faculties are. This, however, is probably a mistake; for the best philosophy seems to teach us, that the passions are not innate; that a man might exist through a long life a stranger to many of them; and that there are probably no two minds in which are generated *all* the passions (see *PASSION*, § 4.); but understanding, memory, and will, are absolutely and equally necessary to every rational being. But whatever be in this, if the human mind can be *conceived* to be one indivisible substance, consisting of different faculties, whether many or few, why should it be thought an impossibility for the infinite and eternal nature of God to be communicated to three persons acting different parts in the creation and government of the world, and in the great scheme of man's redemption.

To the doctrine of the Trinity many objections have been made, as it implies the divinity of the Son and the Holy Ghost; of whom the former assumed our nature, and in it died for the redemption of man. These we shall notice when we come to examine the revelations more peculiarly Christian; but there is one objection which, as it respects the doctrine in general, may be properly noticed here. It is said that the first Christians borrowed the notion of a Tri-une God from the later Platonists; and that we hear not of a Trinity in the church till converts were made from the school of Alexandria. But if this be the case, we may properly ask, whence had those Platonists the doctrine themselves? It is not surely so simple or so obvious as to be likely to have occurred to the reasoning mind of a Pagan philosopher; or, if it be, why do Unitarians suppose it to involve a contradiction? The Platonic and Pythagorean Trinities never could have occurred to the mind of him who, merely from the works of creation, endeavoured to discover the being and attributes of the Creator; and therefore, as those philosophers travelled into Egypt and the East in quest of knowledge, it appears to us in the highest degree probable, that they picked up this mysterious and sublime doctrine in those regions where it had been handed down as a dogma from the re-

most ages, and where we know that science was not taught systematically, but detailed in collections of sententious maxims and traditional opinions. If this be so, we cannot doubt but that the Pagan Trinities had their origin in some primordial revelation. Nothing else indeed can account for the general prevalence of a doctrine so remote from human imagination, and of which we find vestiges in the sacred books of almost every civilized people of antiquity. The corrupt state in which it is viewed in the writings of PLATO and others, is the natural consequence of its descent through a long course of oral tradition; and then falling into the hands of men who bent every opinion as much as possible to a conformity with their own speculations. The Trinity of Platonism therefore, instead of being an objection, lends, in our opinion, no feeble support to the Christian doctrine, since it affords almost a complete proof of that doctrine's having made part of the first revelations communicated to man.

As the one God, to whom Moses gives the plural name *ELOHIM*, thus comprehends three persons; let us inquire what power this Tri-une God exerted, when, as the same sacred writer informs us, he created the heavens and the earth. That by the heaven and the earth is here meant the whole universe, visible and invisible, is known to every person acquainted with the phraseology of Scripture; and we need inform no man conversant with English writers, that by *creation*, in its proper sense, is meant bringing into *being*, or making that to *exist* which existed not *before*. It must, however be acknowledged, that the Hebrew word *בָּרָא* does not always imply the production of substance, but very often the forming of particular organized bodies out of pre-existing matter. Thus when it is said that "God created great whales, and every living creature that moveth, which the waters brought forth abundantly after their kind," and again, that "he created man male and female; though the word *בָּרָא* is used on both occasions, we are not to conceive that the bodies of the first human pair, and of these animals, were brought into being from non-entity, but only that they were formed by a proper organization being given to pre-existent matter. But when Moses says, "In the beginning God created the heaven and the earth," he cannot be supposed to mean that "in the beginning God only gave form to matter already existing of itself;" for in the very next verse we are assured that after this act of creation was over, "the earth was still *without form, and void*;" or, in other words, in a chaotic state.

The Jews, before the coming of our Saviour, undoubtedly understood their lawgiver to teach a proper *creation*, as is plain from that passage in the 2d book of the Maccabees, in which a mother, to persuade her son to suffer the cruellest tortures rather than forsake the law of his God, uses the following argument: "I beseech thee, my son, look upon the heavens and the earth, and all that is therein, and consider that God made them of things that were not." To the same purpose the inspired author of the Epistle to the Hebrews, when magnifying the excellence of faith, says, "Through faith we understand that the worlds were

were framed by the word of God, so that things which are seen were not made of things which do appear;" where, as bishop Pearson has ably proved, the phrase *ex nihilo* or is equivalent to *ex deo* in the quotation from the Maccabees. From the first verse, therefore, of the book of Genesis, we learn a most important truth, which all the uninspired wisdom of antiquity could not discover. It assures us, that as nothing exists by chance, no nothing is necessarily existing but the three divine persons in the one Godhead. Every thing else, whether material or immaterial, derives its substance, as well as its form or qualities, from the fiat of that self-existent Being, "who was, and is, and is to come."

It does not, however, follow from this verse, or from any other passage in the sacred Scriptures, that the whole universe was called into existence at the same instant; neither is it by any means evident that the chaos of our world was brought into being on the first of those six days during which it was gradually reduced into form. From a passage in the book of Job, in which we are told by God himself, that when the "foundation of the earth was laid, the morning stars sang together, and all the sons of God shouted for joy," it appears extremely probable that worlds had been created, formed, and inhabited, long before our earth had any existence. Nor is this opinion at all contrary to what Moses says of the creation of the stars; for though they are mentioned in the same verse with the sun and moon, yet the manner in which, according to the original, they are introduced, by no means indicates that all the stars were formed at the same time with the luminaries of our system. Most of them may have been created long before, and some of them since our world was brought into being; for that clause (verse 16.), "he made the stars also," is in the Hebrew no more than "and the stars;" the words *he made* being inserted by the translators. The whole verse therefore ought to be rendered thus: "And God made two great lights; the greater light to rule the day, and the lesser light with the stars to rule the night;" where nothing is intimated with respect to the time when the stars were formed, any more than in that verse of the Psalms (cxxxvi. 9.) which exhorts us to give thanks to God, who made the moon and stars to rule by night; for his mercy endureth "for ever." The first verse of the book of Genesis informs us, that all things spiritual and corporeal derive their existence from God; but it is nowhere said that all matter was created at the same time; and the generations of men afford sufficient evidence of a successive and continual creation of spirits.

That the whole corporeal universe *may have been* created at once must be granted; but if so, we have reason to believe that this earth, with the sun and all the planets of the system, were suffered to remain for ages in a state of chaos, "without form, and void;" because it appears from other scriptures, that worlds of intelligent creatures existed, and even that some angels had fallen from a state of happiness, prior to the era of the Mosaic cosmogony. That the sun and the other planets revolving round him were formed at the same

time with the earth, cannot indeed be questioned; for it is not only extremely probable in itself from the known laws of nature, but is expressly affirmed by the sacred historian, who relates the formation of the sun and moon in the order in which it took place. Into the particulars of his narrative we have no occasion to enter, as it is sufficiently explained and vindicated under the article CREATION, § 3—9. See also ANGELS, § 6.

How strongly do the works of creation impress upon our minds a conviction of the infinite power of their Author! He spoke, and the universe started into being; he commanded, and it stood fast. How mighty is the arm which "stretched out the heavens, and laid the foundations of the earth; which removeth the mountains, and they know it not; which overturneth them in his anger; which shaketh the earth out of her place, and the pillars thereof tremble! How powerful the word which commandeth the sun, and it riseth not, and which sealeth up the stars;" which sustaineth numberless worlds of amazing bulk suspended in the regions of empty space, and directs their various and inconceivably rapid motions with the utmost regularity! "Lift up your eyes on high, and behold who hath created all these things? By the word of the Lord were the heavens made, and all the host of them by the breath of his mouth. Hell is naked before him, and destruction hath no covering. He stretcheth out the north over the empty place, and hangeth the earth upon nothing. He has measured the waters in the hollow of his hand, and meted out the heavens with a span, and comprehended the dust of the earth in a measure; and weighed the mountains in scales, and the hills in a balance. Behold! the nations are as a drop of the bucket, and are counted as the small dust of the balance; behold, he taketh up the isles as a very little thing. All nations before him are as nothing, and they are counted to him less than nothing, and vanity. To whom then will ye liken God, or what likeness will ye compare unto him?"

As the works of creation are the effects of God's power, they likewise in the most eminent manner display his wisdom. This was so apparent to Cicero, even from the partial and very imperfect knowledge in astronomy which his time afforded, that he declared those who could assert the contrary void of all understanding. But if that great master of reason had been acquainted with the modern discoveries in astronomy, which exhibit numberless worlds scattered through space, and each of immense magnitude; had he known that the sun is placed in the centre of our system, and that, to diversify the seasons, the planets move round him with exquisite regularity; could he have conceived that the distinction between light and darkness is produced by the diurnal rotation of the earth on its own axis, instead of that disproportionate whirling of the whole heavens which the ancient astronomers were forced to suppose; had he known of the wonderful motions of the comets, and considered how such eccentric bodies have been preserved from falling upon some of the planets in the same system, and the several systems from falling upon each other;

had he taken into the account that there are yet greater things than these, and "that we have seen but a few of God's works;"—that virtuous Pagan would have been ready to exclaim, in the words of the Psalmist, "O Lord, how manifold are thy works! In wisdom hast thou made them all; the earth is full of thy riches."

That creation is the offspring of unmixed goodness, has been already shown, with sufficient evidence, (see *METAPHYSICS*, § 6, 189. and the preceding part of this article); and from the vast number of creatures on our earth endowed with life and sense, and a capability of happiness, and the infinitely greater number which probably inhabit the planets of this and other systems, we may infer that the goodness of God is as boundless as his power. Surely the Author of so much happiness must be essential goodness; and we must conclude with St John, that "God is LOVE."

These attributes of power, wisdom, and goodness, so conspicuously displayed in the works of creation, belong in the same supreme degree to each person in the blessed Trinity; for Moses declares that the heaven and the earth were created, not by *one* person, but by the ELOHIM. The *λογος*, indeed, or second person, appears to have been the *immediate* Creator; for St John assures us, that "all things were made by him, and that without him was not any thing made that was made." St Paul expressly affirms, that by the second person in the blessed Trinity "were ALL things created that are in the heaven, and that are in earth, *visible and invisible*, whether they be THRONES, or DOMINIONS, or PRINCIPALITIES, or POWERS: all things were created by him and for him; and he is before all things, and by him all things consist." Coloss. iv. 17. Indeed the Hebrew Scriptures, in more places than one, expressly declare that this earth, and of course the whole solar system, was *formed* as well as *created*, not by any inferior being, but by the *true* Gpd, even *Jehovah* alone. (See Isa. xl. 12. xlv. 24. Jer. x. 10—13.)

But though it be thus evident that the *λογος* was the immediate Creator of the universe, we are not to suppose that it was without the concurrence of the other two persons. The Father, who may be said to be the fountain of the Divinity itself, was certainly concerned in the creation of the world, and is therefore in the apostle's creed denominated "the Father Almighty, *Maker of heaven and earth*;" and that the Holy Ghost, or third person, is likewise a Creator, we have the express testimony of two inspired writers. "By the word of the Lord (says the Psalmist) were the heavens made, and all the host of them by the BREATH (Hebrew, SPIRIT) of his mouth." And Job declares, that the "SPIRIT of God made him, and that the breath of the Almighty gave him life." Indeed these three divine persons are so intimately united, that what is done by one must be done by all, as they have but one and the same will.

SECT. III. *Of the ORIGINAL STATE of MAN, and the FIRST COVENANT of ETERNAL LIFE, which GOD vouchsafed to make with him.*

In the Mosaic account of the creation, every attentive reader must be struck with the manner

in which the supreme Being is represented as making man. See Gen. i. 26—31. and ii. 1, 2, 3. which is a very remarkable passage, and contains much important information. It indicates a plurality of persons in the Godhead, describes the nature of man as he came at first from the hands of his Creator, and furnishes data from which we may infer what were the duties required of him in that primeval state, and what were the rewards to which obedience would entitle him. We proceed to inquire into the specific nature of the first man. This must be implied in the *image of God*. Now this image or likeness could not be in his body; for the infinite and omnipotent God is without body, parts, or passions, and therefore such as nothing *corporeal* can resemble. Some have contended, that man is the only creature on this earth who is animated by a principle essentially different from *matter*; and hence he is said to have been formed in the divine image, on account of the immateriality of that vital principle which was infused into his body when the "Lord God breathed into his nostrils the breath of life, and man became a living soul." That this account of the animation of the body of man indicates a superiority of the human soul to the vital principle of all other animals, cannot, we think, be questioned. It has been shown elsewhere (see *METAPHYSICS*, *Sec.* IV. V. and VI.), that the power of sensation, attended with individual consciousness, as it appears to be in all the higher species of animals, cannot result from any organic structure, or be the quality of a compound extended being. The vital principle in such animals, therefore, must be immaterial as well as the human soul; but as the word *immaterial* denotes only a negative notion, the souls of men and brutes, though both immaterial, may yet be substances essentially different. This being the case, it is plain that the divine image in which man was formed, and by which he is distinguished from the brutes, cannot consist in the mere circumstance of his mind being a substance different from matter, but in some positive quality which distinguishes him from every other creature on this globe.

About this characteristic quality various opinions have been formed. Some have supposed that the image of God in Adam appeared in that rectitude, righteousness, and holiness, in which he was made, which were perfect; his understanding was free from all error; his will biased to that which is good. And this righteousness (say they) was *natural*, and created with him. They therefore call it *original righteousness*.

To this doctrine many objections have been made; because nothing which is produced in a man without his knowledge and consent can be in him either virtue or vice. Adam was unquestionably placed in a state of trial, which proves that he had righteous habits to *acquire*; but perfect righteousness is inconsistent with a state of trial. That Adam was not so, is plain, as he yielded to the first temptation with which he was assailed.

Since man was made in the image of God, that phrase, whatever be its precise import, must denote something *peculiar*, and at the same time essential to human nature; but the only quality at once natural and peculiar to man is his reason. It has therefore

therefore been concluded that it was the faculty of reason which made the resemblance. To give strength to this argument it is observed, that when God says, "let us make man in our image," he immediately adds, "and let them have dominion over the fish of the sea, and over the fowl of the air, and over the cattle, and over all the earth;" but as many of the cattle have much greater bodily strength than man, this dominion could not be maintained but by the faculty of reason bestowed upon him and withheld from them.

If the image of God was impressed only on the mind of man, this reasoning seems to be conclusive; but to this it is objected that man does not resemble God in his reasoning faculty more than in his form. And it would be little short of idolatry to imagine that God is obliged to compare ideas and notions together; to advance from particular truths to general propositions; and to acquire knowledge, as we do, by the tedious processes of inductive and syllogistic reasoning. There can therefore be no direct image of God either in the soul or in the body of man; and the phrase really seems to import nothing more than those powers or qualities by which man was fitted to exercise dominion over the inferior creation; as if it had been said, "Let us make man in our image, after our likeness, that *they may have dominion*," &c. But the erect form of man contributes in some degree, as well as his rational powers, to enable him to maintain his authority over the brute creation; for it has been observed by travellers, that the fiercest beast of prey, unless ready to perish by hunger, shrinks back from a steady look of the human face divine. Dr GILL advances another opinion, viz. that all the members of Christ's body, being written in the book of God's decrees, and having an ideal existence from eternity in the divine mind; therefore the body of Adam might be said to be formed after the image of God, because it was made according to that idea. But the objections to this interpretation appear unanswerable. It is obvious, that whatever more may be meant by the image of God in which man was made, the phrase undoubtedly comprehends all those powers and qualities by which he is enabled to maintain his authority over the inferior creation. Among these the faculty of reason is confessedly the most important; for it is by it that man is capable of being made acquainted with the Author of his being, the relation which subsists between them, and the duties implied in the relation from the creature to the Creator.

That the first man however, was not left to discover these things by the mere efforts of his unassisted reason we have endeavoured to show in another place; (see RELIGION), and the conclusion to which we were there led, is confirmed by the portion of revelation before us. The inspired historian says, that "God blessed the seventh day and *sanctified* it, because that in it he had rested from all his works which he created and made;" but Adam could not have understood what was meant by the *sanctification* of a particular day, or of any thing else, unless he had previously received some religious instruction. There cannot therefore be a doubt, but that as soon as man was made,

his Creator communicated to him the truths of what is called natural religion, which we have endeavoured to explain and establish in *Part I.* of this article; and to these were added the precept to keep holy the Sabbath day, and set it apart for the purposes of contemplation and worship.

This was a very wise institution, as all the divine institutions must be. "The great end for which we are brought into life, is to attain the knowledge and be confirmed in the love of God. This includes obedience to his will in thought, word, and deed, or that course of conduct which can alone make us happy here, and fit us for eternal glory hereafter. But of these things we cannot retain a proper sense without close and repeated application of thought; and the unavoidable cares and concerns of the present life occupying much of our attention, it is, in the nature of things, necessary that some certain portion of time should be appropriated to the purposes of religious instruction and the public adoration of our Creator, in whom we all live, and move, and have our being." Hence Dr Taylor has inferred that though the particular time is a matter of positive appointment, the observance of a sabbath in general is a duty of natural religion, as having its foundation in the reason of things. See SABBATH, § 3—5.

Man therefore in his *natural* and original state was a rational and religious being, bound to do "justice, to love mercy, to walk humbly with his God, and to keep holy the Sabbath day." These seem to be all the duties which in that state were required of him; for as soon as he was introduced into the terrestrial paradise and admitted into covenant with his Maker, he was placed in a *supernatural* state, when other duties were of course enjoined.

That our first parents were both made on the sixth day, Moses expressly affirms, Gen. i. 27: v. 2. but that they were introduced into the garden of Eden on that day, is an opinion which, however general, seems not to be reconcilable with the narrative of the sacred penman. After telling us, that on the sixth day God finished all his works, which he saw to be very good, and rested on the seventh day, he briefly recapitulates the history of the generations of the heavens and of the earth, gives us a more particular account of the formation of the first man, informing us that the "Lord God formed him out of the dust of the ground, and breathed into his nostrils the breath of life, when man became a living soul;" and then proceeds to say, that the "Lord God planted a garden eastward in Eden, where he put the man whom he *had formed*." From this short history of the first pair it appears beyond dispute evident, that neither the man nor the woman was formed *in* the garden; and that from their creation some time elapsed before the garden was prepared for their reception, is likewise evident from a comparison of Gen. i. 29. with Gen. ii. 16, 17. In the first of these passages God gives to man, immediately after his creation, "every herb bearing seed which was upon the face of all the earth, and *every tree*, without exception, in which was the fruit of a tree bearing seed; to him he said it should be for meat." In the 2d, "he commanded the man, saying, of every

every tree of the garden thou mayest freely eat; but of the tree of knowledge of good and evil, thou shalt not eat of it; for in the day thou eatest thereof thou shalt surely die." When the first grant of food was given, Adam and his wife must have been where no tree of knowledge grew, and they must have been intended to live at least so long in that state as they should have occasion for food, otherwise the formal grant of it would have been superfluous.

In this original state man was under the discipline of what we have called *natural religion*, entitled to happiness while he should perform the duties required of him, and liable to punishment when he should neglect those duties, or transgress the law of his nature as a rational and moral agent. This being the case, it is a matter of some importance, and which will enable us to perceive more clearly the prerogatives of Christianity, to ascertain if we can, what the rewards and punishments are which natural religion holds out to her votaries.

That under every dispensation of religion the pious and virtuous man shall, during the whole of his existence, enjoy more happiness than misery; and that the incorrigibly wicked shall have a greater portion of misery than happiness, are truths which cannot be controverted by any one who admits, that the Almighty Governor of the universe is a Being of wisdom, goodness, and justice. But respecting the rewards of virtue and the punishment of vice, more than these general truths seems not to be taught by natural religion. How long our first parents continued innocent and happy in Paradise, is no where recorded. It is generally thought, that the period of their continuance in that station was not long. Of this, however, nothing can be said with certainty. They may have lived for *years* or only a *few days* in their original state; but it is necessary to distinguish between that state in which they were under no other dispensation than what is commonly called *natural religion*, entitled, upon their obedience, to the infinite rewards of piety and virtue, and their state in Paradise when they were put under a new law, and by the free grace of God promised, if they should be obedient, a supernatural and eternal reward. Into that state we must now attend them, and ascertain if we can, the precise terms of the first covenant.

Moses, who in this investigation is our only guide, tells us, that the Lord God, after he had formed the first pair, "planted a garden eastward in Eden, and took the man and put him into the garden to dress it and to keep it. And the Lord God (continues he) commanded the man, saying, of every tree of the garden thou mayest freely eat; but of the tree of the knowledge of good and evil thou shalt not eat of it; for in the day that thou eatest thereof, thou shalt surely die." The only law peculiar to his paradisaical state was the command not to eat of the fruit of the tree of the knowledge of good and evil. This was a positive precept, not founded in the nature of man, but very proper to be the test of his obedience to the will of his Creator. This was sanctioned by the penalty of *death* denounced against disobedience; and the subjects of that law must have understood

somewhat of the nature of this penalty; but Christian divines, have differed widely in opinion respecting the full import of the Hebrew words which our translators have rendered by the phrase *thou shalt surely die*. All, however, agree that they threatened death, in the common acceptation of the word, or the separation of the soul and body, as one part of the punishment to be incurred by eating the forbidden fruit; and hence we must infer, that had the forbidden fruit not been eaten, our first parents would never have died, because the penalty of death was denounced against no other transgression. What therefore is said respecting the fruit of the tree of knowledge, implies not only a *law* but also a *covenant* promising to man, upon the observance of one positive precept, *immortality* or *eternal life*; which is not essential to the nature of any created being, and cannot be claimed as the merited reward of the greatest virtue or the most fervent piety.

This obvious truth will enable us to dispose of the objections which have been sometimes brought by free-thinking divines against the wisdom and justice of punishing so severely as by death a breach of a mere positive precept; which, considered in itself, or as connected with the general principles of moral obligation, appears to be of little importance. We have only to reply, that as an exemption from death is not due either to the nature or to the virtue of man, it was wise and just to make it depend upon the observance of a positive precept, to impress upon the minds of our first parents a constant conviction that they were to be preserved *immortal*, not in the ordinary course of divine providence, but by the special grace and favour of God. The same consideration will show us the folly of those men who, because the terms of the first covenant, as stated in some systems of theology, agree not with certain philosophical maxims which they have adopted, are for turning all that is said of the trees of knowledge and of life into figure and *allegory*. But the other trees which Adam and Eve were permitted to eat were certainly *real trees*, or they must have perished for want of food. And what rules of interpretation will authorise us to interpret *eating* and *trees* literally in one part of the sentence and figuratively in the other? A garden in a delightful climate is the habitation, and the fruits produced in that garden the food, prepared for the progenitors of the human race; and though in the garden actually fitted up for this purpose two trees were remarkably distinguished from the rest, perhaps in situation and appearance as well as in use, the distinction was calculated to serve the best of purposes. The one, called the *tree of life*, of which, while they continued innocent, they were permitted to eat, served as a sacramental pledge or assurance on the part of God, that as long as they should observe the terms of the covenant their life should be preserved; the other, of which it was death to taste, was admirably adapted to impress upon their minds the necessity of implicit obedience to the Divine will, in whatever manner it might be made known to them.

It appears plain from the whole Mosaic account, that Adam and Eve were endued with such powers of body and mind as fitted them to exerce

life dominion over the other animals; that those powers constituted the image of God, in which they are said to have been formed; that they received by immediate revelation the first principles of all useful knowledge; that they lived for some time entitled to the natural rewards of piety; that they were afterwards translated into paradise, where they were placed under a new law, with the penalty of death threatened to the breach of it, and the promise of endless life if they should faithfully observe it; and that they were endued with the gifts of the Holy Ghost, to enable them to fulfil the terms of that covenant, which has been improperly termed the *covenant of works*, since it flowed from the mere *grace of God*, and conferred great and gratuitous privileges on man.

SECT. IV. *Of the FALL of ADAM, and its CONSEQUENCES.*

FROM the preceding account of the primeval state of man, it is evident that his continuance in the terrestrial paradise, together with all the privileges which he there enjoyed, were made to depend upon his observance of one positive precept. No other duty was incumbent on him, except, perhaps, to keep the *SABBATH*, then first instituted. The punishment was denounced only against eating the fruit of the tree of the knowledge of good and evil. To the word *death* in that passage divines have affixed many different meanings, which we need not enumerate, most of them being very absurd, and the meaning of the word is sufficiently obvious. In any acceptance of the word, it denoted something *new* to Adam, which he could not understand without an explanation of the term; and therefore, it was threatened as the punishment of the only transgression he could commit.

The abstaining from a particular fruit in the midst of a garden abounding with fruits of all kinds, was a precept which at first view appears of easy observation; and the penalty threatened against the breach of it was, in every sense, awful. The precept, however, was broken notwithstanding that penalty; and though we may thence infer that our first parents were not beings of such absolute perfection as by some divines they have been represented, we shall yet find, upon due consideration, that the temptation by which they were seduced, when taken with all its circumstances, were such as no wise and modest man will think himself able to have resisted. The short history of this important transaction is related in *Gen. iii.* which the reader may consult.

The covenant, which, on the introduction of our first parents into paradise, their Creator was graciously pleased to make with them, being broken by their violation of the condition on which they were advanced to that happy state, whereupon the historian tells us, that "lest they should put forth their hand and take also of the tree of life and eat, and live for ever, the Lord God sent them forth from the garden of Eden, to till the ground from whence they were taken." Their minds must now have been burdened with the inward sense of guilt, and they must have dreaded the threatened death; of which, however, they had probably no idea.

God, however, did not find them forth thus hopeless and forlorn from the paradise of delights which they had so recently forfeited. He determined to punish them for their transgression, but at the same time to give them hopes of recovering more than their lost inheritance. Calling therefore the various offenders before him, and inquiring into their different degrees of guilt, he began with pronouncing judgment on the serpent in terms which implied that there was still mercy for man. "And the Lord God said unto the serpent, Because thou hast done this, thou art cursed above all cattle, and above every beast of the field; upon thy belly shalt thou go, and dust shalt thou eat all the days of thy life; and I will put enmity between thee and the woman, and between thy seed and her seed; it shall bruise thy head, and thou shalt bruise his heel." That this sentence has been fully inflicted on the serpent, no reasoning can be necessary to prove.

But the serpent was only the *instrument* of the temptation. We are told, that when the foundations of the earth were laid, the morning stars sang together, and all the sons of God shouted for joy; and it is at least probable that there would be similar rejoicing when the six days work of creation was finished. If so, Adam and Eve, who were but a little lower than the angels, might be admitted into the chorus, and thus be made acquainted with the existence of good and evil spirits. At all events, their gracious and merciful Creator would inform them that they had a more powerful enemy than a brute; that he was a rebellious angel capable of deceiving them in many ways; and that they ought therefore to be constantly on their guard against his wiles. They must have known too that they were themselves animated by something different from matter; and when they found they were deceived by the serpent, they might surely, without any remarkable stretch of sagacity, infer, that their malignant enemy had actuated the organs of that creature in a manner somewhat similar to that in which their own souls actuated their own bodies. If this be admitted, the degradation of the serpent would convince them of the weakness of the tempter when compared with their Creator; and confirm their hopes, that since he was not able to preserve unhurt his own instrument of mischief, he should not be able finally to prevail against them; but that though he had bruised their heels, the promised seed of the woman should at last bruise his head, and recover the inheritance which they had lost. See *PROPHESY*, § 3.

Having thus punished the original instigator to evil, the Almighty Judge turned to the fallen pair, and said to the woman, "I will greatly multiply thy sorrow; in sorrow shalt thou bring forth children; and thy desire shall be to thy husband, and he shall rule over thee. And unto Adam he said, Because thou hast hearkened unto the voice of thy wife, and hast eaten of the tree of which I commanded thee, saying, Thou shalt not eat of it; cursed is the ground for thy sake; in sorrow shalt thou eat of it all the days of thy life. Thorns also and thistles shall it bring forth unto thee, and thou shalt eat the herb of the field. In the sweat of thy face shalt thou eat bread till thou return unto

unto the ground; for out of it wast thou taken, for dust thou art, and unto dust shalt thou return."

Here is a terrible denunciation of toil and misery, and death, upon our first parents, which has since been continued in a greater or less degree upon all their posterity. But they were not left without hope of restoration to some better state. Had they been furnished with no ground of hope beyond the grave, we cannot believe that the Righteous Judge of all the earth would have added to the penalty originally threatened. That penalty they would doubtless have incurred the very day on which they fell; but as they were promised a deliverance from the consequences of their fall, it was proper to train them up by severe discipline for the happiness reserved for them in a future state.

After the passing of their sentence, the man and woman were turned out into the world, where they had formerly lived before they were placed in the garden of Eden; and all future access to the garden was for ever denied them. They were not, however, in the same state in which they were originally before their introduction into Paradise: They were now conscious of guilt; doomed to severe labour; liable to sorrow and sickness, disease and death; and all these miseries they had brought, not only upon themselves, but also, as we learn from different passages of the New Testament, upon their unborn posterity to the end of time. Such is the brief but melancholy account given by MOSES, the earliest and most authentic of historians, of that fatal event, which first

"Brought death into the world, and all our woe."

This, as well as the whole system of revelation in general, has been objected to by infidels, and represented as both ridiculous and unreasonable, that the great Creator should subject a whole race of rational beings to misery for such a silly offence as the *eating of an apple*. This objection has been answered by no writer more satisfactorily than by MR NICHOLLS, in his *Conference with a Theist*; wherein he argues, that the Creator had certainly a right to put his rational creatures upon a *test of obedience*; which was the only mark of gratitude they could give; and that *such a test* could only be made by such a command of *abstinence*. And he adds, that none of all the *duties* of the moral law, afterwards delivered to Moses, could have afforded such a test to our first parents; for Adam, having daily converse with his Creator, could be in no danger of worshipping any other god, or making images of his invisible Creator; neither was he under any temptation of profaning his name; natural *parents* he had none; *murder* he could not commit, nor *theft*, nor *adultery*; nor could a being who had received a whole *world* full of every enjoyment, *covet* any thing *more*. The prohibition of a particular *fruit* was therefore the only test, that could be prescribed as a trial of obedience to Adam.

That women would have had less sorrow in the bringing forth of children; that we should have been subjected to less toil, and exempted from death, had our first parents not fallen from their paradisaical state—are truths incontrovertible by

him who believes the inspiration of the Holy Scriptures.

Death was certainly introduced by their fall: for the inspired apostle assures us, that in *Adam all die*; and again, that *through the offence of one many are dead*. Many contend, that it includes death, *corporeal, spiritual or moral, and eternal*; and that all mankind are subjected to these three kinds of death, on account of their share in the guilt of the original transgression, which is usually denominated *original sin*, and considered as the source of all moral evil.

That all men are subjected to death corporeal in consequence of Adam's transgression, is universally admitted; but that they are in any sense partakers of his *guilt*, and on that account subjected to death spiritual and eternal, has been very strenuously denied. But it would extend this article beyond all due limits, to enter into this controversy, which it is impossible to decide.

Some few divines of this school are indeed of opinion, that the phrase, "By one man's disobedience many were made sinners," means nothing more than that the posterity of Adam, through his sin, derive from him a *corrupt nature*. But though this be admitted as an undoubted truth, the more zealous abettors of the system contend, that it is not the whole truth. "It is true (say they) that all men are made of one man's blood, and that blood is tainted with sin; and so a clean thing cannot be brought out of an unclean. What is born of the flesh is flesh, carnal and corrupt: every man is conceived in sin, and shapen in iniquity; but then there is a difference between being *made sinners* and becoming *sinful*. The one respects the *guilt*, the other the *pollution* of our nature; the one is previous to the other, and the foundation of it. Men receive a corrupt nature from their immediate parent; but they are made sinners, not by any act of their disobedience, but only by the *imputation* of the sin of Adam."

Such are the consequences of Adam's fall, and such the doctrine of *original sin*, as maintained by the more rigid followers of CALVIN. That great reformer, however, was not the *author* of this doctrine. It had been taught, so early as in the beginning of the 5th century, by St AUGUSTINE, the celebrated bishop of Hippo (see AUGUSTINE), and the authority of that father had made it more or less prevalent in both the Greek and Roman churches long before the Reformation. Calvin was indeed the most eminent modern divine by whom it has been held in all its rigour; and it constitutes one great part of that theological system, which, from being taught by him, is now known by the name of Calvinism. Those by whom it is embraced maintain it with zeal, as, in their opinion, forming, together with the other tenets of their master, the only pure system of evangelical truths; but it hath met with much opposition in some of the Lutheran churches, as well as from private divines in the church of England, and from the great body of Dutch remonstrants. (See CALVINISM, ARMINIANS, and SYNOD OF DORT.)

The ARMINIANS of the present day are agreed in opposing the doctrine of the rigid Calvinists, and in stating their own notions of the consequences

quences of Adam's fall; but from that event their adversaries deduce one consequence, which some of them admit, and others deny. It is said, that though we cannot possibly be partakers in Adam's guilt, we yet derive from him a moral taint and infection, by which we have a natural *propensity to sin*; that having lost the image of God, in which he was created, Adam begat sons in his own image; and, in one word, that the sensual appetites of human nature were inflamed, and its moral and intellectual powers greatly weakened, by the eating of the forbidden fruit. The heathens themselves acknowledged and lamented this depravity, though they were ignorant of the source from which it sprang. The Scriptures assert it, affirming that no man can be born pure and clean; that whatever is born of the flesh, or comes into the world by ordinary generation, is flesh, carnal and corrupt; that the imagination of the thoughts of man's heart is *only evil continually*; that the heart is deceitful above all things, and desperately wicked; and that out of it proceeds all that is vile and sinful: and the history of all ages confirms these melancholy truths.

SECT. V. HISTORICAL VIEW of THEOLOGY from the FALL of ADAM to the COMING of CHRIST.

The events treated of in the last section paved the way for the coming of Christ, and the preaching of the gospel; and unless we thoroughly understand the origin of the gospel, we cannot have an adequate conception of its design. By contrasting the first with the second Adam, St Paul gives us clearly to understand, that the great purpose for which Christ came into the world and suffered death upon the cross, was to restore to mankind that life which they had lost by the fall of their original progenitor. The preaching of the gospel, therefore, commenced with the first hint of such a restoration; and the promise given to Adam and Eve, that "the seed of the woman should bruise the head of the serpent," was as truly evangelical as these words of the apostle, by which we are taught, that "this is a faithful saying, and worthy of all acceptance, that Christ Jesus came into the world to save sinners." (1 Tim. 1. 15.) The former text, taken by itself, is indeed obscure, and the latter is explicit; but both belong to the same system, for the scriptures contain but two covenants or dispensations of God to man, in which the whole race is included.

CHRISTIANITY, therefore, is indeed *very near as old as the creation*; but its principles were at first obscurely revealed, and afterwards gradually developed under different forms, as mankind became able to receive them. (See PROPHECY, § 2. 3.) All that appears to have been at first revealed to Adam and Eve was, that by some means or other one of their posterity should in time redeem the whole race from the curse of the fall; or, if they had a distinct view of the means by which that redemption was to be wrought, it was probably communicated to them at the institution of sacrifices. (See SACRIFICE, § 2-4.) This promise of a future deliverer served to comfort them under their heavy sentence; and the institution of sacrifices, whilst it impressed upon their minds

lively ideas of the punishment due to their transgression, was admirably calculated to prepare both them and their posterity for the great atonement which, in due time, was to take away the sins of the world.

After the fall, God was graciously pleased to manifest himself to the senses of our first parents, and visibly to conduct them by the angel of his presence in all the rites and duties of religion. This is evident from the different discourses which he held with Cain, as well as from the complaint of that murderer of being hid from his face, and from its being said, that "he went out from the presence of the Lord, and dwelt on the east of Eden." Nor does it appear that God wholly withdrew his visible presence, and left mankind to their own inventions, till their wickedness became so very great, that his spirit could no longer strive with them. Adam continued 930 years a living monument of the justice and mercy of God; of his extreme hatred and abhorrence of sin, as well as of his love and *long-suffering* towards the sinner. He was very sensible how sin had entered into the world, and he could not but apprise his children of its author. He would at the same time inform them of the unity of God, and his dominion over the evil one; of the means by which he had appointed himself to be worshipped; and of his promise of future deliverance from the curse of the fall. Such information would produce a tolerable idea of the Divine Being, and afford sufficient motives to obey his will. The effects of it, accordingly, were apparent in the righteous family of SETH, who soon distinguished themselves from the posterity of Cain, and for their eminent piety were honoured with the appellation of *the sons of God*. Of this family sprang a person so remarkable for virtue and devotion, as to be exempted from Adam's sentence and the common lot of his sons; for after he had walked with God 300 years, and prophesied to his brethren, he was translated, that he should not see death. Of this miraculous event there can be no doubt but that his contemporaries had some visible demonstration; and as the fate of Abel was an argument to their reason, so the translation of Enoch was a proof to their senses of another state of life after the present. See ENOCH.

Notwithstanding this watchful care of God over his fallen creature man, vice, and probably idolatry, spread through the world with a rapid pace. The family of Seth married into that of Cain, and adopted the manners of their new relations. Rapine and violence, unbounded lust and impurity of every kind, prevailed universally: and when those giants in wickedness had filled the earth with tyranny, injustice, and oppression—when the whole race was become entirely carnal—God, after raising up another prophet to give them frequent warnings of their fate for the space of 120 years, was at length obliged, in mercy to themselves, as well as to the succeeding generations of men, to cut them off by a general deluge. See DELUGE.

Thus did God, by the spirit of prophecy, which is by some supposed to have been hereditary in the heads of families; by frequent manifestations

of his own presence; and by uninterrupted tradition, make ample provision for the instruction and improvement of the world for the first 1600 years. After the deluge, he was pleased to converse again with NOAH, and make in his person a new and extensive covenant with mankind. (See PROPHECY, § 3.) Of his power, justice, and goodness; of his supreme dominion over the earth and the heavens; of his abhorrence of sin, and his determination not to let it go unpunished—that patriarch and his family had been most awfully convinced; nor could they or their children, for some time, want any other argument to enforce obedience, fear, and worship. The sons of Noah were 100 years old when the deluge overwhelmed the earth. They had long conversed with their ancestors of the old world, had frequented the religious assemblies, observed every Sabbath-day, and been instructed by those who had seen Adam. It is therefore impossible that they could be ignorant of the creation of the world, of the fall of man, or of the promise of future deliverance from the consequences of that fall; or that they could offer their sacrifices, and perform the other rites of the instituted worship, without looking forward with the eye of faith to that deliverance seen, perhaps obscurely, through their typical oblations.

In this state of things, with the awful remembrance of the deluge continually present to their minds, religion might for some time be safely propagated by tradition. But when by degrees mankind corrupted that tradition in its most essential parts; when, instead of the one Supreme God, they set up several orders of inferior deities, and worshipped all the host of heaven; when, at the same time, they were uniting under one head, and forming a universal empire under the patronage of the sun, their chief divinity; (see BABEL)—God saw it necessary to disperse them into distinct colonies, by causing such discord among them as rendered it impossible for any one species of idolatry to be at once universally established.

After this dispersion, there is reason to believe that particular revelations were vouchsafed wherever men were disposed to regard them. PELEG had his name prophetically given him from the dispersion which was to happen in his days; and not only his father HEBER, but all the heads of families mentioned from Noah to ABRAHAM, are with much plausibility supposed to have had the spirit of prophecy on many occasions. Noah was undoubtedly both priest and prophet; and, living till within two years of the birth of Abraham, or, according to others, till that patriarch was near 60 years old, he would surely be able to keep up a tolerable sense of true religion among such of his descendants as sojourned within the influence of his doctrine and example. His religious son SHAM, who lived till after the birth of ISAAC, could not but preserve in tolerable purity the faith and worship of the true God among such of his own descendants as lived in his neighbourhood.

But though the remains of true religion were thus preserved among a few righteous men, idolatry, with its inseparable attendants, unnatural lusts and cruel superstition, had in a short time prevailed so far among the sons of Noah, that God,

in his infinite wisdom, saw it expedient not only to shorten the lives of men, but also to withdraw his presence from the generality, who had thus rendered themselves unworthy of such communications; and to select a particular family, in which his worship might be preserved pure amidst the various corruptions that were overspreading the world. With this view ABRAHAM was called; and after many remarkable trials of his faith and constancy, admitted to a particular intimacy and friendship with his Maker. God entered into a peculiar covenant with him, engaging to be his guide, protector, and defender; to bestow all temporal blessings upon him and his seed; and to make some of those seed the instruments of conveying blessings of a higher kind to all the nations of the earth.

It was doubtless for his great faith that Abraham was fixed upon to be the parent of that people who should preserve the knowledge of the unity of God in the midst of an idolatrous and polytheistic world; but we are not to imagine that it was for his sake only that all this was done, or that his less worthy descendants were, by the equal Lord of all, treated with partial fondness for the virtues of their ancestor; it was for the benefit of mankind in general that he was called from his father's house, that he might preserve the doctrine of the Divine unity in his own family, and be an instrument in the hand of Providence to convey the same faith to the nations around him. Accordingly, we find him distinguished among the neighbouring princes, and kings reproved for his sake; who being made acquainted with his prophetic character, desired his intercession with God. History tells us of his conversing on the subject of religion with the most learned Egyptians, who appear to have derived from him or some of his descendants the rite of circumcision, and to have been for a while stopt in their progress towards the last stage of that degrading idolatry which afterwards rendered their national worship the opprobrium of the whole earth. (See MYSTERIES, § 7, 13; MYTHOLOGY, § 10; and POLYTHEISM, p. 123. and 124.) We are informed that his name was held in the greatest veneration all over the East; that the Magians, Sabians, Persians, and Indians, all gloried in him as the great reformer of their respective religions: and it appears extremely probable, that not only the BRACHMANS, but likewise the Hindoo god BRAHMA, derive their names from the father of the faithful.

But if Abraham had manifestations of the Almighty more frequent and familiar, the rest of the world was by no means left without sufficient light. Lot professed the true religion in the midst of Sodom. In Canaan we meet with MELCHIZEDEC, king of Salem, and priest of the most high God, who blessed Abraham, and to whom that patriarch himself did homage. Abimelech, king of Gerar, receiving an admonition from the Lord, immediately paid a due regard to it; and the same sense of religion and virtue descended to his son. Laban and Bethuel acknowledged the Lord, and the former was even favoured with a vision. In Arabia we find Job and his three friends, all men of high rank, entering into the deepest disquisitions in theology; agreeing about the unity

omnipotence

omnipotence, and spirituality of God; the justice of his providence, with other fundamental articles of true religion; and mentioning divine inspiration or revelation as a thing not uncommon in their age or country. (See ELIHU and JOB.) BALAAM appears to have been a true prophet; but as he was unquestionably a man of bad morals, the natural inference is, that the gift of prophecy was then, as afterwards, bestowed on individuals, not for their own sakes, but for the sake of mankind in general; and that, as in "every nation, he who feareth God and worketh righteousness is accepted of him;" so in those early ages of the world, when mankind were but children in religious knowledge, they were blessed with the light of divine revelation wherever they were disposed to make a proper use of it.

This disposition, however, appears to have been found in few, and therefore God was pleased to adopt Abraham and part of his posterity as the race from which the great Redeemer was to spring; to train them up by degrees in suitable notions of their Creator; and gradually to open up to them, as they were able to receive it, the nature of that dispensation under which "all the nations of the earth were to be blessed in the patriarch's seed." (See PROPHECY, § 2, 3; and PROPHECY.) For this purpose he held frequent correspondence with them; and to strengthen and confirm their faith, he daily gave them new promises. He blessed Isaac, and miraculously increased his substance, to the envy of the neighbouring princes. He foretold the condition of his two sons, renewed the promise made to Abraham, and blessed Jacob, with whom he condescended to converse as he had conversed with Abraham and Isaac; and to whom he again renewed the great promise. But even at this highly favoured period, IDOLATRY had begun to gain some footing even among the relations of Abraham; witness LABAN's idols, which Rachel stole. See Gen. xxxi. 34. But at this period the great Author of all goodness repeated his revelations to Abraham and his descendants, ISAAC and JACOB, to prevent their relapsing into the savage state, and savage idolatry. See SAVAGISM.

The worship of the patriarchs at this period seems to have consisted chiefly of the three kinds of sacrifice (see SACRIFICE); to which were doubtless added prayers and praises. Such of them as looked forward to a future redemption, and had any tolerable notion of the means by which it was to be effected, as Abraham certainly had, must have been sensible that the blood of bulls and of goats could never take away sin, and that their sacrifices were therefore valuable only when they were offered in faith of that great promise, "which they, having seen it afar off, believed, and were persuaded of it; and confessed that they were strangers and pilgrims upon earth." That such persons looked for a "better country, even a heavenly one," in a future state, is highly probable; though the precise measure of their knowledge we can only conjecture. They believed in a future Redeemer according to the promise. The patriarchal worship had the same end in view with the Christian—the attainment of everlasting life in

heaven, although the generality of men appear not, in the early age of which we now write, to have extended their views beyond the present life.

But the world was ready to lose all knowledge of the true God and his worship, had he not taken effectual care to preserve that knowledge in one nation, from which it might be conveyed to the rest of mankind at different times, and in greater or less degree, as they should be capable of receiving it. To this purpose he made way for the removal of Jacob and his family to one of the most improved and polished countries of the world; and introduced them into it in a manner so advantageous as to give them an opportunity of imparting much religious knowledge to the natives. The natives, however, were gross idolaters; and that his chosen people might be as far as possible from the contagion of their example, he placed them upon the borders of Egypt, where, though they multiplied exceedingly, they were by their very occupation still kept a separate people, and must have been rendered, by a long and severe oppression, in a great degree averse from the manners and religion of their neighbours. This aversion, however, seems to have gradually become less and less; and before they were miraculously redeemed from their house of bondage, they had certainly lost all correct notions of the unity of God, and the nature of his worship, and had adopted the greater part of the superstitions of their task-masters. In such a state of things, to have suffered them to remain longer in Egypt could have served no good purpose; and therefore, to fulfil the promise which he had given to Abraham, God determined to deliver them out of the hands of the Egyptians, by means which should convince both them and their offspring of his own supremacy over heaven and earth.

Moses being appointed to demand of Pharaoh leave for the Israelites to go three days journey into the wilderness to serve the God of their fathers, it was necessary that he should be endowed with the power of working miracles, to evince the reality of his divine mission. For an account of the wonders by which the Almighty manifested himself, by means of his servant, on this occasion, we must refer to Exodus vii.—xii. We can only remark here, that no fewer than ten miraculous exertions of supernatural power were necessary to be made before the hardened monarch of Egypt would consent to let the Hebrews depart to serve the true God. But at last, in consequence of the dreadful effects of the last miracle, the death of the *first born*, Pharaoh at last consented to the departure of the Israelites; but soon repenting, he was drowned, with all his host, in pursuit of them, in the Red Sea.

It is a fact ascertained by profane history, as well as sacred, that the Israelites were once slaves in Egypt, and that they at last got free. Now it has been justly remarked, that considering the great power of the Egyptian monarch, their having obtained their liberty in any other way than in the manner recorded by Moses, would have been a *greater miracle* than all the ten he records.

Upon these ten miraculous exertions of the divine power it has also been justly remarked, that

most of them were such as to militate directly against the idolatry of Egypt. The two first of them were exerted upon their great god, the river NILE, whose waters were turned into blood, and made to produce noxious swarms of frogs. The murrain upon the cattle was also a visible judgement upon their absurd idolatry and *brute-worship*, (see POLYTHEISM, p. 123, 124) for these cattle were among their chief deities. (See APIS.) The *ſ*, which became a plague, was a god of the Phœnicians and the extraordinary thick *darkness*, effectually put to *defiance* the power of the chief god of Egypt, OSIRIS, whom they adored as the SUN, the fountain of LIGHT. But the swarm of lice struck even Pharaoh's magicians themselves with such astonishment, that they acknowledged it to be a work of the Almighty.

THE GOD OF ISRAEL having thus magnified himself over the Egyptians and their gods, and rescued his people from bondage by such means as must not only have struck terror and astonishment into the whole land, but also have spread his name through all the countries which had any communication with that far-famed nation, proceeded to instruct and exercise the Hebrews for many years in the wilderness. He inculcated upon them the unity of the Godhead; gave them statutes and judgments more righteous than those of any other nation; and, by every method consistent with the freedom of moral agency, guarded them against the contagion of idolatry and polytheism. He sent his angel before them to keep them in the way, took upon himself the office of their supreme civil governor, and by his presence directed them in all their undertakings. He led them with repeated signs and wonders through the neighbouring nations, continued to try and discipline them till they were tolerably attached to his government, and established in his worship, and introduced them into the Promised Land when its inhabitants by their crimes had become ripe for destruction. At their entrance into it, he gave them a summary repetition of their former laws, with more such ordinances, both of a ceremonial and moral kind, as were both suited to their temper and circumstances, as well as to prefigure, and by degrees to prepare them for a more perfect dispensation under the Messiah. See MOSAIC LAW, § I, 1—3; SABBATH and SACRIFICE.

The Jewish law had two great objects in view; of which the first was to preserve among them the knowledge of the true God, a rational worship springing from that knowledge, and the regular practice of moral virtue; and the 2d was to fit them for receiving the accomplishment of the great promise made to their ancestors. When the true God first tells them, by their leader Moses, that if they would obey his voice indeed, and keep his covenant, then they should be a PECULIAR TREASURE to him above all people: to prevent them from supposing that he shared the earth with the idols of the heathen, and had from partial fondness chosen them for his *portion*, he immediately adds, for ALL THE EARTH IS MINE. By this addition he gave them plainly to understand that they were chosen to be his *peculiar treasure* for some purpose of general import-

ance; and the very first article of the covenant which they were to keep was, that they should have *no other gods* but HIM. So inveterate, however, was the principle which led to an intercommunity of the objects of worship, that they could not have kept this article of the covenant but in a state of separation from the rest of mankind; and that separation could neither have been effected nor continued without the visible providence of the Almighty watching over them as his peculiar treasure. Upon this separation every thing depended; and therefore, to render it the more secure, JEHOVAH, who in compliance with their prejudices had already assumed the appellation of *their God*, was graciously pleased to become likewise their supreme Magistrate, making them a "kingdom of priests and a holy nation" and delivering to them a digest as well of their *civil* as of their *religious* laws.

The Almighty thus becoming their King, the government of the Israelites was properly a THEOCRACY, in which the two societies, civil and religious, were of course incorporated. They had indeed after their settlement in the Promised Land, at first, several temporary judges occasionally raised up; and afterwards permanent magistrates called *kings*, to lead their armies in war, and to give vigour to the administration of justice in peace; but neither those judges nor kings could abrogate a single law of the original code, or make the smallest addition to it but by the spirit of prophecy. They cannot therefore be considered as supreme magistrates, by whatever title they governed; for they were to go out and come in at the word of the priests, who were to ask counsel for them of the Lord, and with whom they were even associated in all judicial proceedings, as well of a civil as of a spiritual nature. Under any other than a theocratic government the Hebrews could not have been kept separate from the nations around them; or if they could, that separation would not have answered the great purpose for which it was established. "The people on their leaving Egypt were sunk into the grossest idolatry. To recover them by the discipline of a separation, it was necessary that the idea of God and his attributes should be impressed upon them in the most *sensible* manner. But this could not be commodiously done under his character of God of the universe: but under his character of *King of Israel* it might. Hence we find him in the Old Testament so frequently represented with *affections* analogous to human passions. The civil religion in which he stood to the Israelites made such a representation natural; the grossness of their conceptions made it *necessary*; and the guarded manner in which it was always qualified prevented it from becoming mischievous." Hence too it is, that under the Mosaic dispensation, idolatry was a crime of *state*, punishable by the civil magistrate. No mere *human* authority could have lawfully established it.

It was for the same purpose of guarding them against idolatry, and preventing all undue communications with their heathen neighbours, that the ritual law was given, after their presumptuous rebellions in the wilderness. After their repeated apostacies, and iniquitous wishes to mix with the surrounding

surrounding nations, it was necessary to subject them to a multifarious ritual, of which the ceremonial parts were solemn and splendid, fitted to engage and fix the attention of a people whose hearts were gross; to inspire them with awful reverence, and to withdraw their affections from the pomp and pageantry of those idle superstitions which they had so long witnessed in Egypt. To keep them warmly attached to their public worship, that worship was loaded with operose and magnificent rites, and so completely incorporated with their civil polity as to make the same things at once duties of religion and acts of state. The service of God was indeed so ordered as to be the constant business as well as entertainment of their lives, supplying the place of all other entertainments; and the sacrifices which they were commanded to offer on the most solemn occasions, were of such animals as the Egyptians and other Heathens deemed *sacred*.

But it was not against Egyptian idolatry only that the ritual law was framed: the nations of Syria, in the midst of whom the Israelites were to dwell, were addicted to many cruel and absurd superstitions, against which it was as necessary to guard the people of God as against the brute worship of Egypt. But the Phœnician sacrifices of their children to Moloch were shocking. (See *MOLoch, POLYTHEISM*, p. 123 and 124; and *SACRIFICE*, § 6.) The Phœnicians and the Canaanites entertained an opinion that every child came into the world with a *polluted nature*, and that this pollution could be removed only by a *lustral fire*. Hence they took their new born infants, and with particular ceremonies made them pass through the flame of a pile sacred to Baal or Moloch, the symbols of their great god the sun. Sometimes this purgation was delayed till the children had arrived at their 10th or 12th year, when they were made either to leap through the flame, or run several times backwards and forwards between two contiguous sacred fires; and this lustration was supposed to free them from every natural pollution, and to make them through life the peculiar care of the deity in whose honour it was performed. But besides this, thousands of infants were burnt in the cruellest manner. See *BEN HINNOM*, and *SACRIFICE*, § 6. The true God, however, who would have no fellowship with idols, forbade all such purgations among his people, whether done by fires consecrated to himself or to the bloody deities of the Syrian nations. "There shall not be found (says he) among you any one that maketh his son or his daughter to pass through the fire."

Few precepts in the Jewish law are more frequently repeated than that which prohibits the feeding of a kid in its mother's milk; among the nations round Judea, the feeding upon a kid boiled in its mother's milk, was an essential part of the impious and magical ceremonies celebrated in honour of one of their gods, who was supposed to have been suckled by a she-goat. Hence in the Samaritan Pentateuch, the text runs thus; "Thou shalt not feed a kid in its mother's milk; for whoever does so, is as one who sacrifices an abominable thing, which offends the God of Jacob." Another precept, apparently of very little

importance, is given in these words: "Ye shall not round the corners of your heads, neither shalt thou mar the corners of thy beard." But its wisdom is seen at once, when we know that at funerals it was the practice of many of the heathens, in that early period, to round the corners of their heads, and mar their beards, that by throwing the hairs they had cut off upon the dead body, or the funeral pile, they might propitiate the shade of the departed hero; and that in other nations particularly in Phœnicia, it was customary to cut off all the hair of their heads except what grew upon the crown, which, with great solemnity, was consecrated either to the sun or to Saturn. The unlearned Christian, if he be a man of reflection, must read with some degree of wonder such laws as these: "Thou shalt not sow thy vineyard with divers seeds, lest the fruit of thy seed which thou hast sown and the fruits of thy vineyard be defiled. Thou shalt not plow with an ox and an ass together. Thou shalt not wear a garment of divers sorts, or of woollen and linen together." But his wonder will cease when he knows that all these were superstitious practices from which the Sabian idolaters of the East expected the greatest advantages. Their belief in magic and judicial astrology led them to imagine, that by sowing different kinds of corn among their vines they should propitiate the gods which were afterwards known in Rome by the names of *Bacchus* and *Ceres*; that, by yoking animals so heterogenous as the ox and the ass in the same plough, they should by a charm secure the favour of the deities who presided over husbandry; and that a garment composed of linen and woollen, worn under certain conjunctions of the stars, would protect its owner, his flocks, his herds, and his field, from all malign influences, and render him in the highest degree prosperous through the whole course of his life. But *magical ceremonies*, of which the very essence seems to have consisted in uniting in one group, or jumble things never brought together by nature, were always performed to render propitious good or evil demons; (see *MAGIC*;) and therefore such ceremonies, however unimportant in themselves, were in that age most wisely prohibited in the Mosaic law, as they naturally led those who were addicted to them to the worship of idols and impure spirits.

If an accurate examination of the whole Jewish ritual be made in this manner, every precept of it will be found to be directed against some idolatrous practice of the age in which it was given. It was therefore admirably calculated to keep the Israelites a separate people, and to prevent too close an intercourse between them and their gentile neighbours. And their civil institutes, even those which appear the most trifling, were all contrived with the most consummate wisdom to promote the same end. The distinction between clean and unclean animals, prevented their eating and drinking with pagans.

That these laws might operate more powerfully on minds gross and carnal, they were all enforced by temporal sanctions. This was indeed the natural and even necessary consequence of the theocratic government established in Israel. Nor were temporal rewards and punishments held out only to the nation as a collective body; they were

promised

promised and threatened to every individual in his private capacity as the certain consequence of his obedience or disobedience. Every particular Hebrew was commanded to honour his father and mother, that it might go well with him, and that his days might be prolonged; whilst he who cursed his father or mother was sure to be put to death. Against every idolater, and even against the wilful transgressor of the ceremonial law, God repeatedly declared he would set his face, and would cut off that man from among his people.

From these peculiarities in the Jewish dispensation, some divines have rashly concluded, that the ancient Israelites had no hope whatever beyond the grave; and that in the whole Old Testament there is not a single intimation of a *future state*. In the earliest periods of their commonwealth, the Israelites could, indeed, only infer, from different passages of their sacred books, that there would be a general resurrection of the dead, and a future state of rewards and punishments; but from the writings of the prophets, it appears, that before the Babylonish captivity that doctrine must have been very generally received. (See *JON. xix. 25.*) In the *Psalms*, and in the prophecies of *Isaiah*, *Daniel*, and *Ezekiel*, there are several texts which seem to prove incontrovertibly, that, at the time when these inspired books were written, every Israelite who could read the scriptures must have had some hopes of a resurrection from the dead. For example, *Isaiah* has these remarkable words; "Thy dead men shall live; together with my dead body shall they arise. Awake and sing, ye that dwell in the dust; for thy dew is as the dew of herbs, and the earth shall cast out the dead." These words are undoubtedly figurative, and were uttered to give the Israelites consolation in very disastrous times. It was indeed a prophecy only of a temporal deliverance; but as it is expressed in terms relating to the death and resurrection of man, the doctrine of a resurrection must then have been well known, and generally received, or such language would have been altogether unintelligible. In the book of *Ezekiel*, ch. xxxvii. 3. there is also a particular description of the resurrection; which must have made the hope and belief of it very general among the Jews.

But notwithstanding the intelligent and righteous Israelites who "all died in faith, and not having received the promises, but having seen them afar off, were persuaded of them and embraced them, confessing that they were strangers and pilgrims on earth, who desired a better country, that is, a heavenly one," we are not to suppose that this heavenly desire arose from any thing taught in the law of Moses. That law, when taken by itself, as unconnected with prior and subsequent revelations, makes no mention whatever of a heavenly inheritance, which St Paul assures us was given 430 years before to Abraham by a promise which may be traced back to the first ray of comfort vouchsafed to fallen man in the sentence passed on the original deceiver. "Wherefore then served the law? It was added, (says the apostle,) because of transgressions, till the seed should come to whom the promise was made." The transgressions here alluded to were polytheism and idolatry, which with their never-

failing train of cruel and detestable vices, had overpread the whole world; and the primary intention of the law was to stem the torrent of these corruptions, for which we have seen it was admirably calculated.

Obvious as it is, that a future state of rewards and punishments made no part of the Mosaic dispensation, yet the law had certainly a spiritual meaning to be understood when the fulness of time should come. Every Christian sees a striking resemblance between the sacrifice of the paschal lamb, which delivered the Israelites from the destroying angel in Egypt, and the sacrifice of the Lamb of God, which taketh away the sin of the world. Indeed the whole ritual of sacrifice must have led the more intelligent of them to faith in a future sacrifice; by which, while the heel of the seed of the woman should be bruised, the head of the serpent should be completely crushed: (see *SACRIFICE. § 2—4.*) and as prophets were raised up from time to time, to prepare them for the coming of the Messiah, and to foretell the nature of his kingdom, there can be no doubt but that those inspired teachers would lay open to them, as far as was expedient, the temporary duration of the Mosaic law, and convince them that it was only the *shadow of better things to come*. From the nature of their ritual, and the different prophecies vouchsafed them, which became more and more explicit as the time approached for their accomplishment, they must surely have been led to expect redemption from the curse of the fall by the sufferings of their Messiah; but that any one of them knew precisely the manner in which they were to be redeemed, and the nature of that religion which was to supersede their own, is wholly incredible. Such knowledge would have made them impatient under the yoke of ordinances to which they were subjected; for after the Christian faith came into full splendour, mankind could be no longer under the tuition of such a schoolmaster as the law, which "had only a *shadow* of good things, but so far from their reality, not even the *very image* of them." Through these shadows, however, the Jews, aided by the clearer light of prophecy, might have seen enough of God's plan of redemption to have made them acknowledge Jesus, when he came among them working miracles of mercy, for the Messiah so long promised.

While the Israelites were thus gradually prepared for the coming of the Prince of Peace, we must not suppose that the rest of the world was totally neglected. The dispersion of the ten tribes certainly contributed to spread the knowledge of the true God among the eastern nations. The subsequent captivity of the tribes of Judah and Benjamin must have confirmed that knowledge in the great empires of Babylon and Persia; and that particular providence of God which afterwards led Ptolemy Philadelphus to get the Jewish scriptures translated into the Greek language, laid the divine oracles open to the study of every accomplished scholar. At last, when the arms of Rome had conquered the civilized world, and rendered Judea a province of the empire; when learning and philosophy were so universally diffused throughout the civilized world that the success of an impolite was impracticable and hopeless; when the

police

police of the Roman government was such that the intelligence of every thing important was quickly transmitted from the most distant provinces to the capital of the empire; "when that *fulness of time* was come, God sent forth his SON, made of a woman, made under the law, to redeem them that were under the law, that we might receive the adoption of sons."

SECT. VI. VIEW OF THEOLOGY, more PECULIARLY CHRISTIAN.

The time fixed by the Jewish prophets for the coming of the Messiah being arrived, "a messenger was sent before his face to prepare his way before him by preaching the baptism of repentance for the remission of sins." This messenger was JOHN the Baptist, a very extraordinary man, and the greatest of all the prophets. His birth was miraculous, the scene of his ministry the wilderness, his manners austere, and his preaching upright, without respect of persons. He frankly told his audience that he was *not* the MESSIAH, that the Messiah would soon appear among them, that "he was mightier than himself, and that he would baptise them with the Holy Ghost and with fire."

Mightier indeed he was; for though born of a woman the Messiah was not the son of a human father; and though living for the first 30 years of his life in obscurity and poverty, he was the lineal descendant of DAVID, and heir to the throne of Israel. But the dignity of his human descent, great as it was, vanishes from consideration when compared with the glory which he had with his Father before the world was. The Jewish dispensation was given by the ministry of Moses, and illustrated by subsequent revelations vouchsafed to the prophets; the immediate author of the Christian religion is the *Logos*; or second person of the blessed Trinity, of whom St John declares, that "he was in the beginning with God, and was God; that all things were made by him; and that without him was not any thing made that was made." We have already proved, that in the one Godhead there is a TRINITY of persons; and that the *Logos* is one of the three, is apparent from these words of the apostle, and from many other passages of sacred scripture. Thus he is called the LORD OF HOSTS *himself*; the *first and the last, besides whom there is no God*; the MOST HIGH GOD; God *blest for ever*; the MIGHTY GOD; the EVERLASTING FATHER, JEHOVAH *our righteousness*; and THE ONLY WISE GOD *our Saviour*. This great Being, as the same apostle assures us, was made flesh, and dwelt among men; not that the divine nature was or could be *changed* into humanity, for God is immutable, the same Almighty and incomprehensible Spirit yesterday, to day, and for ever; but the WORD or second person in the Godhead, assuming a human soul and body into a personal union with himself, dwelt upon earth as a man, veiling his divinity under mortal flesh. Hence he is said elsewhere to have been "manifested in the flesh," and "to have taken upon him the nature of man;" phrases of the same import with that which asserts "the WORD to have been made flesh."

This INCARNATION of the Son of God is per-

haps the greatest mystery of the Christian faith, and that to which ancient and modern heretics have urged the most plausible objections. The doctrine of the Trinity, though expressly scriptural, is equally incomprehensible; but the nature of God and his *mode of existence* must necessarily be incomprehensible by finite beings. And therefore it is a philosophical truth, that a revelation, which should contain nothing but comprehensible truths, would be equally incredible and useless. As well may we expect a river to contain the ocean, as a finite being to comprehend the INFINITE GOD. The difficulty is not how *two natures* so different as the *divine* and *human* can be so intimately united as to become one person; for this union in itself is not more inconceivable than that of the soul and body in one man: but that which at first is apt to stagger the faith of the reflecting Christian is the *infinite distance* between the two natures in Christ, and the comparatively small importance of the object, for the attainment of which the eternal Son of God is said to have taken upon him our nature.

Much of this difficulty however will vanish to him who considers the ways of Providence, and attends to the meaning of the words in which this mystery is taught. The importance of the object for which the WORD condescended to be made flesh, we cannot adequately know. The oracles of truth indeed inform us, that Christ Jesus came into the world to save sinners; but there are passages scattered through the New Testament (Eph. i. 10. Col. i. 19, 20.) which indicate not obscurely, that the influence of his sufferings extends to other worlds besides this; and if so, who can take upon him to say, that the quantity of good which they may have produced was not of sufficient importance to move even to this condescension a Being who is emphatically styled LOVE?

But although every thing he did and taught and suffered was intended only for the benefit of man, we shall, in the daily administration of providence, find other instances of the divine condescension; which, though they cannot be compared with the incarnation of the second person in the blessed Trinity, are yet sufficient to reconcile our understandings to that mystery when revealed to us by the Spirit of God. That in Christ there should have dwelt on earth "all the fulness of the Godhead bodily," is indeed a truth by which the devout mind is overwhelmed with astonishment; but it is little less astonishing that the omnipotent Creator should be intimately present at every instant of time to the meanest of his creatures, "upholding all things, the vilest reptile as well as the most glorious angel, by the word of his power." Yet it is a truth self-evident, that, without this constant presence of the Creator, nothing which had a beginning could continue one moment in being, but the whole visible universe would fall into annihilation. See METAPHYSICS, *SECT. XXXV*; MORAL PHILOSOPHY, *Part II. SECT. IV.* and PROVIDENCE, § 2.

The particular way in which God is present to his works, we cannot know. He is not diffused through the universe like the *anima mundi* of the PLATONISTS; but that he is in power as intimately

ly present now to every atom of matter, as when he first brought into existence, is equally the dictate of sound philosophy and of divine revelation; for "in him we live, and move, and have our being." If then the divine nature be not debased, if it cannot be debased by being constantly present with the vilest reptile on which we tread, why should our minds recoil from the idea of a still closer union between the second person of the ever blessed Trinity and the body and soul of Jesus Christ? The one union is indeed different from the other, but we are in truth equally ignorant of the nature of both. Reason and revelation assure us that God must be present to his works to preserve them in existence; and revelation informs us farther, that one of the persons in the Godhead assumed human nature into a personal union with himself, to redeem myriads of rational creatures from the miserable consequences of their own folly and wickedness. The importance of this object is such, that, for the attainment of it, we may easily conceive, that he who condescends to be potentially present with the worms of the earth and the grass of the field, would condescend still farther to be personally present with the spotless soul and body of a man. Jesus Christ lived indeed a life of poverty and suffering upon earth, but his divine nature was not affected by his sufferings. At the very time when, as a man, he had not a place where to lay his head; as God, he was in heaven as well as upon earth, dwelling in light inaccessible; and while, as a man, he was increasing in wisdom and stature, his divinity was the fulness of him who filleth all in all, and from whom nothing can be hid.

Perhaps the very improper appellation of *mother of God*, which at an early period of the church was given to the Virgin Mary, may have been one cause of the reluctance with which the incarnation has been admitted; for as we have elsewhere observed (see MARY, N^o 1. and NESTORIUS), such language, in the proper sense of the words, implies what those by whom it is used cannot possibly believe to be true; but it is not the language of scripture. We are there taught, that "Christ being in the form of God, thought it no robbery to be equal with God; but made himself of no reputation, and took upon him the form of a servant, and was made in the likeness of man;" that "God sent forth his Son made of a woman, made under the law, to redeem them that were under the law, that we might receive the adoption of sons," (Phil. ii. 6, 7. Gal. iv. 4, 5.) and that "the word who was in the beginning with God, and was God, by whom all things were made, was made flesh, and dwelt among men (who beheld his glory, the glory as of the only begotten of the Father), full of grace and truth;" but we are nowhere taught that, as God, he had a *mother*! It was indeed the doctrine of the primitive church, that the very principle of personality and individual existence in Mary's son, was union with the uncreated Word; and this doctrine is thought to imply the miraculous conception, which is recorded in the plainest terms by two of the evangelists; for he was conceived by the Holy Ghost and born of a virgin; but, as God, he had been begotten from

all eternity of the Father, and in order of nature was prior to the Holy Ghost. This is evident from the appellation of *λογος* given to him by St. John; for the term being used in that age, both by the Jewish Rabbies and the heathen philosophers, to denote the second divine subsistence, which they considered as an eternal and necessary emanation from the first, sometimes called *λογος* and sometimes *θεος*; and the apostle giving no intimation of his using the word in any uncommon sense, we must necessarily conclude, that he meant to inform us that the divinity of Christ is of eternal generation. That the term *λογος* was used in this sense by the later Platonists, we have sufficiently shewn in another place. (See PLATONISM.)

We may therefore justly conclude, that the Nicene fathers expressed themselves properly, when they declared that the only begotten Son of God was begotten of his Father before all worlds, and is *God of God*; for if St. John had believed the *λογος* or word to be unbegotten, contrary to the belief of all who made use of the phrase at the time when he wrote, he would surely have expressed his dissent from the generally received opinion. This however he is so far from doing, that he gives the amplest confirmation of that opinion, by declaring, that "he beheld the glory of the word incarnate as the glory of the only begotten of the Father;" for this declaration is true only of the divinity of Christ, his human nature not being begotten of the Father, but conceived by the Holy Ghost of the Virgin Mary. Hence our blessed Lord assures us, that "as the Father HATH life in HIMSELF, so hath he given the Son to have life in himself; that "the Son can do nothing of himself, but what he seeth the Father do;" and that "he knew the Father, because he was from him and sent by him." (John v. 26; vii. 29.) We must therefore agree with bishop Pearson, that "though the Father and Son are both truly God; and therefore equal in respect of nature, yet the one is greater than the other, as being the fountain of the Godhead. The Father is God; but not of God; Light, but not of Light. Christ is God, but of God; Light, but of Light. There is no difference or inequality in the nature or essence, because the same in both; but the Father of our Lord Jesus Christ hath that essence of himself, from none; Christ hath the same essence, not of himself, but from him."

The great object of this divine person's being sent into the world, and born of a woman, was to bruise the head of the serpent, and restore mankind to the inheritance which had been forfeited by Adam's transgression. Every dispensation of Providence from the fall had been preparatory to this restoration. Prophets had been raised from time to time to preserve in the early ages of the world the knowledge and worship of the true God; the children of Abraham had been separated from the surrounding nations for the same purpose; and by the dispersion of the ten tribes, the captivity of the other two in Babylon, and the translation of the Hebrew scriptures into the Greek language, much of the knowledge which had been revealed to the Israelites

racites was gradually diffused over the eastern world.

While the Jews were thus the instruments of enlightening the heathen nations of antiquity, their intercourse with those nations made them almost unavoidably acquainted with the philosophy which was cultivated among the Chaldeans, the Persians, and the Egyptian Greeks; and ingrafting many of the opinions derived from those schools upon the doctrines of Moses and the prophets, they corrupted their own religion while they improved that of their neighbours. Hence, by the time that Christ came among them, they had made the word of God of none effect through a number of idle fancies which they inculcated on the people as the traditions of the elders; and as they had attached themselves to different masters in philosophy, their unauthorized opinions were of course different according to the different sources whence they were drawn. The peculiar tenets of the *ESSENES* seem to have been a species of mystic Platonism. The *PHARISEES* are thought to have derived their origin from a Jewish philosopher of the Peripatetic school; and the resemblance between the doctrines of the *SADDUCEES* and the philosophy of *EPICURUS* has escaped no man's observation.

Most of these sects however, though they opposed each other, agreed in the expectation of the *MESSIAH* promised to their fathers; but, unhappily for themselves, expected him to be a great and temporal prince. To this mistake several circumstances contributed; some of their prophets had foretold his coming in lofty terms, borrowed from the ritual law, and the splendour of earthly monarchs. The necessity of casting this veil over those living oracles is evident from the very nature of PROPHECY. At the time when the predictions were made, the Mosaic system had not run out half its course, and was therefore not to be exposed to popular contempt by an information that it was only the harsh rudiment of one more perfect. To prevent, however, all mistakes in the candid and impartial, when the Messiah should arrive with the credentials of miraculous powers, other prophets had described him in the clearest terms as having no form nor comeliness, as a sheep dumb before his shearers, and as a lamb brought to the slaughter; but the Jews had suffered so much from the Chaldeans, the Greeks, and other nations by whom they had been conquered, and were then suffering so much from their masters the Romans, that their carnal minds could think of no deliverance greater than that which should rescue their nation from every foreign yoke. What men earnestly wish they are very ready to believe.

As our Saviour came for a very different purpose, the first object of his mission was to rectify the notions of his erring countrymen, to fit them for the deliverance which they were to obtain through him. Accordingly, he embraced every opportunity of inveighing against the false doctrines taught as traditions of the elders; and by his knowledge of the secrets of all hearts, he exposed the vile hypocrisy of those who made a gain of godliness. The Jews had been led, by their separation from the rest of the world, to consider

themselves as the peculiar favourites of Jehovah; and the consequence was, that, contrary to the spirit of their own law, and the explicit doctrines of some of their prophets, they looked upon all other nations with abhorrence, as upon people physically impure. These prejudices the blessed Jesus laboured to eradicate. Having desired a lawyer, by whom he was tempted, to read that part of the law of Moses which commanded the Israelites to love their neighbours as themselves, he compelled him, by means of a parabolical account of a compassionate Samaritan, to acknowledge, that, under the denomination of *neighbour* the divine lawgiver had comprehended all mankind as the objects of love. The importance in which Moses held the ritual law, and to which, as the means of preserving its votaries from the contagion of idolatry, it was justly entitled, had led the Jews to consider every ceremony of it as of intrinsic value and perpetual obligation; but Jesus brought to their recollection God's declared preference of *mercy* to *sacrifice*; shewed them that the weightier matters of the law, judgment, mercy, and faith, claimed their regard in the first place, and its ceremonial observances only in the second; and taught them, in conformity with the predictions of their own prophets, that the hour was about to come when the worship of God should not be confined to Jerusalem, but that "true worshippers should everywhere worship the Father in spirit and in truth."

CHRIST having come into the world, to break down the middle wall of partition between the Jews and Gentiles, and to introduce a new dispensation of religion which should unite all mankind as brethren in the worship of the true God, he did not merely restore the moral part of the Mosaic law to its primitive purity, but added many new and refined precepts, which, had never occurred either to Jew or Gentile. The Hebrew lawgiver had prohibited murder under the penalty of death; but Christ extended the prohibition to causeless anger, and to contemptuous treatment of our brethren, commanding his followers, to forgive their enemies, and to love all mankind. Adultery was forbidden by the law of Moses but Jesus said to his disciples, whosoever looketh on a woman to lust after her, hath committed adultery with her already in his heart." The *lex talionis* was in force among the Jews, so that the man who had deprived his neighbour of an eye or a tooth, was to suffer the loss of an eye or a tooth himself; but this mode of punishment, being inconsistent with the mild spirit of Christianity, was abolished by our blessed Lord, who severely prohibited the indulgence of revenge, and commanded his followers to love even their enemies. Perjury has in every civilized nation been justly considered a crime of the highest atrocity, and the Mosaic law doomed the false witness to bear the punishment, whatever it might be, which he intended by swearing falsely to bring upon his brother; but the author of the Christian religion forbade not only false swearing, but swearing *at all*, except on solemn occasions, and when an oath should be required by legal authority. See OATH.

By thus restoring the law to its original purity, O o and

and in many cases extending its sense, the blessed Jesus executed the office of a PROPHET to the lost sheep of the house of Israel; but had he not been more than an ordinary prophet, he could not have abrogated the most trivial ceremony of it, nor even extended the sense of any of its moral precepts; for their great lawgiver had told them, (Deut. xviii. 15.) that "the Lord their God would raise up unto them but one Prophet, like unto him, to whom they should hearken." That Prophet was by themselves understood to be the Messiah, whom they expected to tell them all things. It was necessary therefore that Jesus, as he taught ~~some~~ new doctrines, and plainly indicated that greater changes would soon be introduced, should vindicate his claim to that exalted character which alone could authorise him to propose innovations. This he did in the amplest manner, by fulfilling prophecies and working miracles; (see MIRACLES, § 3, and PROPHECY, § 3.) so that the unprejudiced part of the people readily acknowledged him to be of a truth "that prophet who should come into the world—the Son of God, and the King of Israel." He did not, however, make any change in the national worship, or assume to himself the smallest civil authority. He had submitted to the rite of circumcision, and strictly performed every duty, ceremonial as well as moral, which that covenant made incumbent upon other Jews; thus fulfilling all righteousness. Though the religion which he came to propagate was in many respects contrary to the ritual law, it could not be established, or that law abrogated, but in consequence of his death, which the system of sacrifices was appointed to prefigure; and as his kingdom, which was not of this world, could not commence till after his resurrection, he yielded, during the whole course of his life, a cheerful obedience to the civil magistrate, and wrought a miracle to obtain money to pay the tribute that was exacted of him. Being thus circumstanced, he chose from the lowest and least corrupted of the people certain followers, whom he treated with the most endearing familiarity for 3 years, and commissioned at his departure to promulgate such doctrines as, consistently with the order of the divine dispensations, he could not personally preach himself. With these men, during the course of his ministry on earth, he went about continually doing good, healing the sick, casting out devils, raising the dead, reproving vice, preaching righteousness, and instructing his countrymen, by the most perfect example which was ever exhibited in the world, of whatsoever things are true, or honest, or just, or pure, or lovely, or of good report. The Scribes and Pharisees, however, finding him not that conqueror whom they vainly expected, becoming envious of his reputation among the people, and being filled with rancour against him for detecting their hypocritical arts, delivered him up to the Roman governor, who, though convinced of his innocence, yielded to the popular clamour, and crucified him between two thieves, as an enemy to Cæsar. (See PILATE.)

In yielding up his dying breath he said, *It is finished*—thus intimating that the great purpose was now fulfilled, for which he had come into the

world, and which, as he formerly told his disciples, "was not to be ministered unto but to minister, and to give his life a ransom for many;" for his blood, as he assured them at the institution of the Eucharist, "was to be shed for the remission of sins." That Christ died *voluntarily* for us, the *just* for the *unjust*, and that "there is none other name under heaven given among men whereby we must be saved;" is the uniform doctrine of the prophets who foretold his coming, of John the Baptist, who was his immediate harbinger, and of the apostles and evangelists who preached the gospel after his ascension into heaven. Thus Isaiah says of the Messiah, that "he was wounded for our transgressions, and bruised for our iniquities; that the chastisement of our peace was upon him, and that with his stripes we are healed; that we had all like sheep gone astray, turning every one to his own way, and that the Lord laid on him the iniquity of us all; that he was cut out of the land of the living, and stricken for the transgression of God's people; that his soul or life was made an offering for sin; and that he bore the sin of many, and made intercession for the transgressors." The Baptist, "when he saw Jesus coming unto him, said to the people, Behold the Lamb of God, which taketh away the sin of the world;" plainly intimating that his death was to be a sacrifice, since it was only as a sacrifice that the Jews could form any conception of a lamb taking away sin. The epistles of St Paul are so full of the doctrine of Christ's satisfaction, and these texts are so well known to all Christians; that it is needless to quote particular texts in proof of it. See Paul's epistles in general; also, John, x. 7, 8. 1 John, i. 7, ii. 2. 1 Peter, ii. 21, &c. That Christ died for the benefit of the human race, is a truth so apparent from these and numberless other texts, that no man professing Christianity has hitherto called it in question. Very different opinions have been formed indeed concerning the nature and extent of that benefit, and the means by which it is applied; but that the passion and death of the blessed Jesus were essential parts of his ministry on earth, has never been controverted, unless perhaps by those modern UNITARIANS who have presumed to correct the supposed errors of the apostles and evangelists. That on the cross he made satisfaction to his Father for the sins of the world, is the general belief of Christians; but presumptuous men, aiming at being wise beyond what is written, have started a thousand idle questions concerning the necessity of such satisfaction, and the manner in which it was made. We enter not into these impious debates. The Scriptures have nowhere said what God *could* or *could not* do; and on this subject we can know nothing but what they have taught us. That "we are reconciled to God by the death of his Son," is the principal doctrine of the New Testament; and, without presuming to limit the power, the mercy, or the wisdom, of him who created and sustains the universe, we shall endeavour to show that it is a doctrine worthy of all acceptance." In doing this, we shall state impartially the opinions which men of various pious have held respecting the form or manner in which Christ by his death made satisfaction to God

God for the sins of the world; and leave our readers to embrace that opinion which shall appear to them most consonant to the general sense of sacred Scripture.

The strictest CALVINISTS interpreting literally such texts of Scripture as speak of his being made sin for us, of his *bearing our sins in his own body on the tree*, and of the Lord's *laying on him the iniquity of us all*, contend, that the sins of the elect were lifted off from them and laid upon Christ by *imputation*, much in the same way as they think the sin of Adam is imputed to his posterity. "By bearing the sins of his people (says Dr Gill), he took them off from them, and took them upon himself, bearing or carrying them as a man bears or carries a burden on his shoulders. There was no sin in him inherently, but sin was put upon him by his Divine Father, as the sins of the Israelites were put upon the scape-goat by Aaron. (See Gill's *Body of Divinity*, vol. ii. B. iii. Ch. v.)

To the ARMINIANS or REMONSTRANTS, this doctrine of the *imputation* of the sins of men to the Son of God appears as absurd as the similar doctrine of the imputation of the sin of Adam to his unborn posterity; and it is certainly attended with consequences which have alarmed serious Christians of other denominations. For if it were possible in the nature of things, says the Arminian, to transfer the guilt of one person to another, and to lay it upon him as a burden, it could not be done without violating those laws of *equity* which are established in the scripture and engraven on the human heart. But this is not possible. To remove guilt from the *sinner* and lay it upon the *innocent* may therefore be safely pronounced impossible even for Omnipotence itself, for it implies that a thing may be and *not* be at the same instant of time; and the doctrine which teaches that this removal was made from the elect to Christ, is an imagination of yesterday, which has no countenance from scripture, and is contrary to the established constitution of things. "Christ's being made sin for us," and "bearing our sins in his own body on the tree," therefore, can only mean that by his sufferings we are freed from the punishment of our sins; it being in scripture a common figure of speech, as even Dr Gill acknowledges, to denote by the word *sin* the consequences of sin. That this figure is used in those texts from which he infers that Christ took the sins of the elect upon himself, is evident from the verse which he quotes from the gospel of St Matthew; in which it is said, that "himself took our infirmities and bore our sicknesses." But that he actually took upon himself the sins of mankind, or that those sins were imputed to him by God, who punished him as a person whom he considered as *guilty*, is a doctrine equally injurious to the *justice* of the Father and to the *immaculate purity* of the Son.

The zeal with which this doctrine was taught by some of the earliest reformers, and the impossibility of admitting it, which every reflecting and unprejudiced mind must feel, was probably one of the causes which drove Socinus and his followers to the other extreme of denying Christ's satisfaction altogether, and considering his death as

nothing more than that of an ordinary martyr, permitted for the purpose of attesting the truth of his doctrine, and paving the way for his resurrection, to confirm the great promise of immortality. According to these men, forgiveness is freely dispensed to those who repent, by the essential goodness of God, without regard to the merit or sufferings of any other being; and the gospel is laid to save from sin, because it is the most perfect lesson of righteousness. The great objection of CRELLIUS to the doctrine of the satisfaction is, that it is a hindrance to piety; for if Christ has paid the whole debt, he thinks that we must have *nothing to do*, as nothing more can be required of us. And if it were indeed true that our sins are imputed to Christ, and his righteousness imputed to us, this objection would be insurmountable; for God could not justly exact a double punishment for the same sin, or inflict misery upon those to whom he imputes perfect righteousness. But as to this imaginary transferring of virtues and vices from one person to another, the Christian scriptures give no countenance; so they nowhere call the death of Christ a *satisfaction* for the sins of men. The term has indeed been long in use among divines, and when properly explained it may be retained without danger; but in treating of this subject, it would perhaps be more prudent to restrict ourselves to the use of scripture language, as the word *satisfaction* carries in it the idea of a debt paid and accepted; whereas Paul says, that "eternal life is the *gift* of God through Jesus Christ our Lord; and that we are *justified freely by his grace* through the redemption that is in Jesus Christ, whom God has set forth to be a propitiation through faith in his blood."

To attain adequate notions of redemption and justification, it will be necessary to look back to the fall; for the great purpose for which Christ was promised, and for which he came into the world, was, by bruising the head of the serpent, to restore mankind to the inheritance which they had lost through the transgression of Adam. This is apparent not only from the original promise made to the woman, but also from different passages in the epistles of St Paul, who expressly calls Christ the second Adam, and says, that, "as by the offence of one, judgment came upon all men to condemnation; even so by the righteousness of one, the *free gift* came upon all men unto justification of life;" that, "as by one man's disobedience many were made sinners, so by the obedience of one shall many be made righteous;" and that, "as in Adam all die, even so in Christ shall all be made alive." Hence it was that John the Baptist, when he saw Jesus coming to him, said to his disciples, "Behold the Lamb of God which taketh away, not the *sins*, but the *sin* of the world," evidently alluding to Adam's sin and its consequences; since no other sin was ever committed of which the consequences extend to the whole world.

It is therefore undeniable, that whatever we lost in the first Adam is restored to us by the second; and so they who believe that the punishment denounced against eating the forbidden fruit was death *corporal*, *spiritual*, and *eternal*, must believe

believe that we are redeemed from all these by Christ; who having "appeared once in the end of the world to put away sin by the sacrifice of himself, died for us, that whether we wake or sleep we should live together with him." If the image of God in which man was created was lost by the breach of the first covenant, it is more than restored to us "by the Mediator of a better covenant, which is established upon better promises;" if by the sin of Adam we were utterly indisposed, disabled, and made opposite to all that is spiritually good, and wholly inclined to all evil, and that continually, we are freed from that dreadful curse by "our Saviour Jesus Christ, who gave himself for us, that he might redeem us from all iniquity, and purify to himself a peculiar people zealous of good works;" and if for our share in the first transgression we be justly liable to all punishments in this world and in that which is to come, the apostle assures us, that "when we were enemies we were reconciled to God by the death of his Son, because that God was in Christ reconciling the world to himself, not imputing their trespasses unto them." As Jesus is "the Lamb slain in the divine decree from the foundation of the world," these beneficial consequences of his death have been extended, by a retrospective view, to all in every age whose names are written in the book of life, though it is absurd to suppose that he literally took their sins upon him, and impious to imagine that he suffered under the imputation of sin.

Such is the general doctrine of redemption, as it is taught by the more moderate Calvinists and the more moderate Remonstrants; for moderate Christians of all denominations, though they express themselves differently, have nearly the same views of the fundamental articles of their common faith. It must not, however, be concealed, that many divines of great learning and piety, though removed to an infinite distance from the school of Socinus, contend strenuously against the doctrine of vicarious atonement for actual transgressions of the moral law. These are the more zealous Arminians, who deny that we inherit any moral taint or intellectual weakness from our first parents, whom they believe never to have been in a state of greater perfection than many of their posterity who are called *degenerate*. According to them, we lost nothing by the fall of Adam but our title to eternal life or perpetual existence, together with those graces of the Holy Spirit which were bestowed under the first covenant to train mankind for the society of heaven; and as eternal life and supernatural grace constituted one free gift, they might, when forfeited, be restored by any means or upon any condition which should seem expedient to the all-wise Donor. Moral virtue, comprehending piety, was the condition of that favour and protection which the creature man, in his original state, could claim from his Maker; but obedience to a positive command was the condition of the free gift of immortality conferred upon Adam on his introduction into paradise. The claim arising from the relation between the creature and the Creator is indissoluble; so that the man who, by a transgression of the moral law, has forfeited the favour of God, may reasonably

hope to recover it by sincere repentance and a return to his duty: and nothing but such repentance and reformation can recover it; because, in a moral agent, nothing can be agreeable to God but moral dispositions, which cannot be transferred from one person to another, and for the want of which nothing can atone. Our virtues are not required, nor our vices prohibited, as if the one could profit and the other injure him who created us. He commands us to be virtuous, and forbids us to be vicious, only because virtue is necessary to our own *happiness*, and vice productive of *miser*y. Were an immoral man to be introduced into the society of angels and just men made perfect, he would not experience in that society what we are taught to expect from the joys of heaven; because to such joys his acquired habits would be wholly repugnant. Nor could the sufferings of any person whatever, or the *imputation* of any extrinsic righteousness, make that mind which had long been immersed in the grossest sensuality relish the intellectual and refined enjoyments of heaven; or the man who had been the habitual slave of envy, malice, and duplicity, a fit inhabitant of that place where all are actuated by *MUTUAL LOVE*. On the other hand, say the divines whose doctrine we are now detailing, it is impossible to suppose that the Father of mercies, who knows whereof we are made, should have doomed to eternal misery any moral agent who had laboured through life to serve him in sincerity and in truth; or that any atonement could be necessary to redeem from the pains of hell the man whose pious and virtuous dispositions have, through penitence and prayer, become suited to the society of heaven. Unsinning perfection never was, nor ever could be, expected in man. He is brought into the world free indeed from vice, but equally destitute of virtue; and the great business of his life is to guard his mind from being polluted by the former, and to acquire dispositions habitually leading to the practice of the latter. Till these habits be fairly formed, it seems impossible that he should not sometimes deviate from the paths of rectitude, and thereby incur a temporary forfeiture of the divine favour; but the very constitution of his mind, and the purpose for which he is placed in a state of probation, show that the divine favour thus forfeited can be recovered only by repentance and reformation.

Widely different, however, is the case with respect to the forfeiture and recovery of a free gift, to which man has no natural claim. When the condition is broken on which such a gift was bestowed, repentance can be of no avail; it must be either irrecoverably lost, or restored by the mere good pleasure of the giver. *IMMORTALITY* or *perpetual existence* is a gift which, upon certain terms, was freely bestowed upon the human race, and forfeited by the transgression of their first parents violating those terms. It was restored by the free grace of God, who was pleased to ordain, that "since by man came death, by man should also come the resurrection of the dead: for as in Adam *all* die, even so in Christ shall *all* be made alive." Hence the apostle, writing to the Romans of the benefits of being the children of God, and joint heirs with Christ, summeth up
those

those benefits with the resurrection from the dead. "For the creature, *i. e.* mankind, was made subject (says he) to vanity or death, not willingly, but by reason of him who hath subjected the same in *hope*: because the creature itself also shall be delivered from the bondage of corruption into the glorious liberty of the children of God. For we know that the whole creation groaneth, and travaileth in pain together until now: and not only *they*, but *ourselves* also, who have the first fruits of the spirit, even we ourselves, groan within ourselves, waiting for the adoption, *viz. the redemption of our body.*" That this redemption of our body is the consequence of the sacrifice of Christ, is taught in the most explicit terms in the epistle to the Hebrews; of which the inspired author informs us, that "forasmuch as the children are partakers of flesh and blood, he also himself likewise took part of the same; that through *death* he might destroy him that had the power of death, that is the devil; and deliver them, who through fear of death were all their life-time subject to bondage." A vicarious atonement made with this view, the divines, whose theory we are now considering, insist to be perfectly irrational and inconsistent with the strictest justice. "The law of nature (say they) allows not of vicarious atonement; but ordains that the man who transgresseth shall himself bear the punishment of his iniquity; a punishment which no man deserves for the faults of another, unless he be partaker of the guilt by joining in the transgression." And in proof of this their opinion, they appeal to the words of God himself, declaring to Moses, (Ex. xxx. 33.) "Whoever hath sinned against me, him will I blot out of my book." But when the free gift of immortality was lost, it was with great wisdom, say they, that God restored it through a Mediator who should make atonement by his blood for the breach of the first covenant; since such a mediation implies that the gift restored is merely of *grace*, to the attainment of which man could no further co-operate than by his hopes and wishes.

To this view of redemption, and indeed to every view of it which we have yet taken, an objection forces itself upon the mind. Throughout the New Testament LIFE and IMMORTALITY are considered as a FREE GIFT, and called so in express words by St Paul. To the scheme under consideration it is essential to consider them as such; and yet we know that a large price was paid for them, as St Paul likewise acknowledges, when he twice tells the Corinthians that they were bought with a price. Hence the sacred writers seeing, in this case, the perfect agreement between a FREE GIFT and a PURCHASED POSSESSION, call it sometimes by the one and sometimes by the other name.

A restoration to life and immortality from that state of unconsciousness or extinction as living agents, to which all mankind were doomed in consequence of the fall of Adam, is that great salvation which we have obtained through the blood of our Redeemer; and, according to the theologians whose theory we are now considering, it was the only thing in the divine intention when the promise was given to the first mother that the

seed of the woman should bruise the head of the serpent. But though they contend thus earnestly that the death of Christ does not operate *directly* as an atonement for the *actual* sins of men, they admit that it does so *indirectly* and by necessary consequence, since it gives opportunities for repentance and newness of life, which under the first covenant they did not enjoy. The new covenant by the death of Christ secures immortality to man, and gives him opportunities, as long as he shall be in a state of probation, of recovering the divine favour when forfeited, whether by a moral transgression or a temporary violation of the peculiar condition of the covenant. Hence they admit the truth of the apostle's doctrine, that we are gainers by the fall of Adam and the redemption wrought by Christ; which will appear when we come to consider their notions of Christian justification. But they consider it as no small confirmation of their opinion, that it tends to put an end to the long agitated disputes concerning the *extent* of redemption, and to reconcile passages of scripture which, on the commonly received theories both of Calvinists and Arminians, seem to be at variance with each other.

It is one of the fundamental doctrines of the CALVINISTIC school, that "none are redeemed by Christ, effectually called, justified, adopted, sanctified, and saved, but the ELECT only." (*Confession of Faith*, ch. iii. § 6.); and if the notions of redemption which, in the end of the 17th century, were very generally embraced, be admitted as just, it will not be easy to overturn the arguments by which that doctrine is supported. Such of them as are connected with the great question of election and reprobation, and enter into the decision of it, we have stated in another place, (see PREDESTINATION, § 2.); but it is farther argued, that the doctrine of *universal redemption* reflects on the wisdom, the justice, and the power of God, and robs him of his *glory*.

The scriptures assure us that all men shall not be saved; but how can this be, if Christ died for *all*, and the scheme of salvation by his death was formed by infinite wisdom? The Arminians indeed say, that those who fail of salvation fail through their own fault in not performing the conditions required of them; but God either *knew* or *knew not* that such men would not perform such conditions. If he knew it not, his knowledge is limited; if he did know it, where was his wisdom in providing a scheme of redemption for men to whom he was aware that it would be of no benefit? This notion of a *limited redemption*, as they think it more worthy of the sovereignty of God, they believe to be taught by our Saviour himself, in John vi. 37—40.

But the ARMINIANS, on the other hand, contend, that it is impious to limit the effects of Christ's death to a *chosen few*, since it appears from scripture, that by the decree and intention of his Father he tasted death for *every man*, that *all*, without exception, might through him obtain remission of their sins. For God so loved the *world*, that he gave his only begotten Son, that *whosoever* believeth in him should *not perish*, but have *everlasting life*. In perfect conformity with the doctrine of his divine Master, St Paul teaches, that

that "Christ died for *all* ; that God was in Christ reconciling the *world* to himself, not imputing their trespasses unto them ;" that "he will have *all* men to be saved, and to come unto the knowledge of the truth ;" that "Christ gave himself a ransom for *all* ;" and that "Jesus was made a little lower than the angels, that by the grace of God he should taste death for *every man*." The very same thing is taught by St Peter, and St John. The former says that "the Lord is not willing that *any* should perish, but that *all* should come to repentance ;" and the latter, that "Jesus Christ the righteous is the propitiation for our sins ; and not for our's only, but for *the whole world*."

Upon these texts, the Arminians are willing to rest their doctrine of UNIVERSAL REDEMPTION ; though they think that a very strong additional argument for its truth arises from the numberless absurdities which flow from the contrary opinion. Thus, say they, the apostles were commanded by our Saviour to "go into *all* the world and preach the gospel to *every creature*," and all who hear it preached are required to believe it. Lastly, if Christ died not for *all*, then is it certain that he cannot claim dominion *over all* in consequence of his death and resurrection ; but St Paul says expressly, that "to *this end* Christ both died, and rose and revived, that he might be the Lord both of the *dead and living*." The Arminians, however, acknowledge, that though Christ died for *all*, there are many who will not be saved ; for, say they, the death of Christ did not literally pay the debts incurred by sinners, but only obtained for them the gracious covenant of the gospel, by which all who believe in him, and sincerely endeavour to work out their own salvation with fear and trembling, are *entitled* to forgiveness of sins and eternal life.

Such is the state of this controversy as it was agitated between the Calvinists and Arminians of the 17th century ; but the present leaders of this latter school are of opinion, that it never could have been started, had not both parties mistaken the purpose for which Christ died. It is not conceivable, say they, that any thing for which the eternal Son of God took upon him human nature, and in that nature suffered a cruel and ignominious death, shall not be fully accomplished ; and therefore, if in the divine intention he died to make atonement for the sins of men actual as well as original, we must of necessity conclude that those for whom he died shall certainly be saved. Yet we learn from scripture that *many* shall go away into everlasting punishment, though the same scripture repeatedly assures us, that Christ gave his life a ransom for *ALL*, and that he is the propitiation for *the whole world*. To reconcile these different passages of scripture is impossible, if we suppose that he laid down his life to atone for the *actual* transgressions of men ; but if the direct purpose of the Godhead in forming this stupendous plan of redemption was, that the death of Christ should be the ransom of all from the *grave or utter extinction*, every difficulty is removed ; for we know that all, the wicked as well as the righteous, shall through him be raised to life at the last day. But this is evidently a mere *quibble*, and is only an *evason* of the difficulty ; for

eternal existence in misery would be worse than *ANNIHILATION*. But against all such mean and impious quibbles, two texts are decisive of the whole controversy.—"God is LOVE," and his "TENDER MERCIES are over *ALL* his WORKS." These texts are plain and intelligible, and perfectly consistent with the PERFECT WORK OF REDEMPTION accomplished by Jesus Christ. To argue in opposition to them, as the rigid Calvinists and even some Arminians do, that the *justice* of God is still unsatisfied, is derogatory from the infinite merits of Christ ; and to plead as others have often done, that the *glory* of God requires and consists in the *eternal punishment* of sinners, is a kind of *blasphemy* against the *Holy Ghost*, for it represents the Deity as an inexorable tyrant, instead of a God of *infinite mercy* ; and it is evidently founded upon the false ideas of *human glory* entertained by conquerors in all ages, who thought they could not be great or glorious, but in proportion as they massacred their fellow mortals, and spread ruin, devastation, and destruction throughout the globe. Let not that single text, "our God is a *consuming Fire*," be urged in opposition to all this : the meaning of that text is evidently, (when taken in consilience with the rest of revelation,) neither more nor less, than this, that as Fire is the most powerful of all chemical agents, and consumes and purifies the precious metals, gold, silver, and platinum, from all dross and alloy ; so God will finally *purify* all the dross and corruption introduced into the present state of things by sin, and create a *New Heaven* and a *New Earth* wherein dwelleth RIGHTEOUSNESS. Any other view of the final consummation of all things is contrary to the general tenor of Scripture ; and is more derogatory from the DIVINE GLORY than even the *Brute-worship* of Egypt.—The still smaller voices of reason and revelation equally agree in this *eternal truth*, that the only GLORY of an infinitely good Being can consist only in the extension and expansion of his GOODNESS through and upon all animated and sensitive beings, among myriads of worlds throughout the infinity of space. Readers who are prejudiced in favour of particular systems may think we have here used too much freedom with long established *opinions* ; But, consistent of the eternal rectitude of those sentiments, we are persuaded, that

—We, with truths like these,
"Will none offend, whom 'tis a praise to please."

Young.

Among these various opinions respecting the complete object of the death of Christ. The serious reader, divesting himself of prejudice, must search the scriptures, and adopt the theory which he shall find most explicitly taught in that sacred volume ; but as in every system it is admitted, that *one purpose* for which Christ died was to redeem mankind from the everlasting power of the grave, and bring to light, life, and immortality, it is of the utmost importance to know whether that purpose has been *fully attained*. And as the scriptures give us no hopes of being rescued from the dominion of death but by a resurrection, some evidence seems necessary to evince that a general resurrection shall actually take place. This we are promised as one great benefit purchased for us by the

the sufferings of Christ on the cross. And since the price has been *paid*, and paid thus *visibly*, the nature of the covenant requires that the benefit should be as *visibly enjoyed* by the person whose sufferings obtained it for his brethren. "If the Redeemer himself had not been seen to enjoy the fruits of the redemption procured, no hopes could have remained for mankind. This is the conclusion which St Paul himself draws: "If Christ be not risen (says he), then is our preaching vain, and your faith is also *vain*; ye are yet in your sins. (1 Cor. xv. 15, 23.) Then they also, who are fallen asleep in Christ, are perished—*απολωτες*—are lost, as if they had never existed. But now (adds he) is Christ risen from the dead, and become the first fruits of them that *sleep*. For since by man came *death*, by man came also the *resurrection* of the dead: For as in Adam *all die*, even so in Christ shall *ALL be made alive*."—So necessarily connected, is the resurrection of Christ with the very essence of Christianity.

We have in another place (see RESURRECTION, § 2.) stated some arguments for the truth of this fundamental article of our common faith. But as attempts are daily made, sometimes openly and sometimes with the most insidious art, to propagate in this nation the French doctrine of death being only *eternal sleep*, we shall here resume the subject, and endeavour to show that it was absolutely impossible for the apostles to persuade the world, or to *think* of persuading the world, that their Master rose from the dead, if his resurrection had not been real.

Under the article MIRACLE, § 3, we have said, that "the very *refutation* of the apostles to propagate the belief of *false* miracles in support of such a religion as that which is taught in the New Testament, is itself as great a miracle as human imagination can easily conceive." We might illustrate this position by the resurrection of Jesus, which in such a case we must suppose the apostles resolving to publish as an unquestionable fact, whilst they were *conscious* that they themselves *stole the body* from the sepulchre, and saw it in their custody under the dominion of death. But surely the bare supposition of such a proposal is sufficient to show the *impossibility* of carrying into effect so absurd, so horrible, and so impious a measure—a measure diametrically opposite to all the principles and motives of human actions.

Abp. King has supposed, that the human WILL is a faculty distinct from the understanding and the appetites; that activity is essential to it; and that previous to an election formed, it is equally *indifferent* to all objects. But neither his Grace, nor any other assertor of human liberty, has ever affirmed or supposed, that any man or body of men could deliberately choose *evil* for its *own sake*, or enter zealously upon a tedious and difficult enterprise, from which *no good* could *possibly arise*, and from which *unmixed misery* was clearly *foreseen* as the *necessary result of every step of the progress*. Such, however, must have been the choice and the conduct of the apostles, when they resolved to preach a new religion founded on the resurrection of Jesus, if they did not certainly know that Jesus had risen from the dead. And this conduct must have been adopted, in opposition to every

motive which can influence the human mind; must have been persevered in by a great number of men and women, without the smallest contradiction having ever appeared in the various testimonies, which at different times, and under the cruellest tortures, they all gave to a variety of circumstances, of which not one had its foundation in *truth*. He who can admit this supposition, will not surely object to the incredibility of *miracles*. The resurrection of a man from the dead is an event so different indeed from the common course of things, that nothing but the most complete evidence can make it an object of rational belief; but as the resurrection of Jesus has always been said to have had God for its Author, it is an effect which does not exceed the power of the cause assigned, and is therefore an event possible in itself and capable of proof. It is a deviation from the laws of nature, but it is not contradictory to any one of those laws.

But that a great number of men and women should deliberately form a plan of ruin and misery to themselves, without a prospect of the smallest advantage either in this world or in the next, is as different from the common course of things as the resurrection from the dead; and therefore in itself at least as great a miracle: but that they should persist in prosecuting this plan in the midst of torments; that they should spread themselves over the whole world, and everywhere publish a number of falsehoods, without any one of them contradicting the rest; that truth should never escape them either in an unguarded moment, or when lingering on the rack, and yet that all their *lies* should be in perfect agreement with each other; that they should every one of them court sufferings for a person whom they knew to be an *impostor*; that not one of the number—not even a single *woman*—should have had so much compassion for a fellow-creature, as to rescue him from the flames, by confessing a truth which could injure nobody—not even the suffering deceivers themselves;—all this is not only different from the common course of things, but directly contrary to the most known laws of nature, and is therefore not miraculous, but may be pronounced *impossible*. Yet this impossibility we must admit, or acknowledge, that as "Christ died for our sins, according to the Scriptures, and was buried; so he rose again the third day, according to the Scriptures; that he was seen of Cephas, then of the twelve; after that of above 500 brethren at once; after that of James; then of all the apostles; and that he was last of all seen of St Paul," who was converted by the vision, to preach the faith which till then he had persecuted. See PAUL, N° 1.

Thus are we assured, that "those who have fallen asleep in Christ are not lost, since he is risen from the dead, and become the first fruits of them that *sleep*. For since by man came death, by man came also the resurrection of the dead. For as in Adam all die, even so in Christ shall all be made alive. But every man in his own order: Christ the first-fruits, afterwards they that are Christ's at his coming;" &c, 1 Cor. xv. 20—24.

JESUS, having conversed familiarly with the eleven apostles for 40 days after his resurrection, instructing them in the things pertaining to the kingdom

dom of God; having extended their authority as his ministers, by giving them a commission to teach all nations, and make them his disciples, by baptizing them in the name of the Father, and of the Son, and of the Holy Ghost; and having promised them power from on high to enable them to discharge the duties of so laborious an office—led them out as far as Bethany, that they might be witnesses of his ascension into heaven. On this occasion, he told them all, “Ye shall receive power, after the Holy Ghost is come upon you; and ye shall be witnesses unto me, in Jerusalem, Judea, Samaria, and unto the uttermost parts of the earth; but tarry ye in Jerusalem, until ye be endued with power from on high. And he lift up his hands, and while he blessed them, it came to pass, that he was parted from them, and a cloud received him out of their sight. And while they looked stedfastly towards heaven, two men stood by them in white apparel, who said, Ye men of Galilee, why stand ye gazing up into heaven? This same Jesus, who is taken up from you into heaven, shall so come, in like manner as ye have seen him go into heaven. And they worshipped him and returned to Jerusalem with great joy.” Luke, xxiv. 49—53. Acts. i. 6—12.

That our blessed Lord ascended into heaven, will hardly be denied by any one who admits that he rose from the dead. The ascension was indeed the natural consequence of the resurrection. The purpose for which he died was to recover for the descendants of Adam every privilege which they had forfeited through his transgression; and if mankind were by the terms of the first covenant to enjoy eternal life in heaven, some proof was necessary that Christ by his death and resurrection had opened heaven to all faithful observers of the terms of the second. Hence it was prophesied (Ps. lxxviii. 18. cx. 1.) of the Messiah, in whom all nations of the earth were to be blessed, that “he should ascend on high, lead captivity captive, and sit on the right hand of God until his enemies should be made his footstool.” It was therefore of the greatest importance to the apostles to have sufficient proof of their Master’s exaltation to the right hand of the Majesty on high; for otherwise they could neither have looked for an entrance into heaven themselves, by a new and living way, as the author of the epistle to the Hebrews expresses it, nor have preached Jesus as the Messiah promised to their fathers, in whom these prophecies were fulfilled. But the proof vouchsafed them was the most complete that the nature of the thing would bear. The spectators of the ascension were many; for, according to St. Luke, those who returned from the Mount of Olives to Jerusalem, and prepared themselves for the coming of the Holy Ghost, were in number about six score; and to such a cloud of witnesses the evangelist would not have appealed, had not the fact he was recording been very generally known. Yet these were perhaps but part of the witnesses; for since Christ had told his disciples that he was to ascend to his Father and their Father, to his God and their God, and that he was going to prepare a place for them, that where he is there they might be likewise; we can hardly doubt but that all who believed in him

as the Redeemer of the world would take care to be present, not only to view their Master’s triumph over all his enemies, but also to have a sight of that glory of which a share awaited themselves. It was on this occasion probably that he was seen after his resurrection by above 500 brethren at once, of whom the greater part were alive at the writing of St. Paul’s first epistle to the Corinthians.

Notwithstanding the multitudes of people that saw Jesus lifted up from the mount, and gradually vanish out of their sight, some other evidence seemed necessary to certify them of the place to which he had gone. Two angels therefore appear, and attest what human eyes could not see, but what was indeed the consequence of what they had seen. They attest that Christ had ascended to heaven, not to descend again till the last day; and surely, with respect to this point, the citizens of heaven were the most unexceptionable witnesses. We must therefore acknowledge and confess, against all the wild heresies of old, that Jesus Christ the Son of God, who died and rose again, did with the same body and soul with which he had lived upon earth ascend up “into heaven, there to appear in the presence of God for us.” “Seeing then that we have a great high priest, who is passed into the heavens, Jesus the Son of God, we may through him come boldly unto the throne of grace, that we may obtain mercy, and find grace to help in time of need.”

But it is not the office of a priest only that our Lord discharges in heaven; he is represented as sitting on the right hand of God, to denote that *regal* authority with which he is now vested; “angels, and authorities, and powers, being made subject to him.” (1 Peter, iii. 22.) Hence it is, that after his resurrection, he said of himself, “all power is given unto me in heaven and in earth;” for, as St. Paul informs us (Phil. ii. 8—10.) “because he humbled himself and became obedient unto death, even the death of the cross, therefore God hath highly exalted him, and given him a name which is above every name; that at the name of Jesus every knee should bow, of things in heaven, and things on earth, and things under the earth.” And this submission is due to him, because “God raised him from the dead, and set him at his own right hand in the heavenly places, far above all principalities and powers, and might, and dominion, and every name that is named, not only in this world, but also in that which is to come; and hath put all things under his feet, and gave him to be head over all things to the church.” (Eph. i. 20, &c.) As God, Christ possessed a kingdom, which, as it had no beginning, can never have an end; but the dominion, of which the apostle is here treating, was conferred upon him as the MEDIATOR of the new covenant, and will no longer continue than till his enemies shall be subdued; for we are told that “he must reign till he hath put all enemies under his feet; and that the last enemy which shall be destroyed is death.” “He will ransom his subjects from the power of the grave; he will redeem them from death. O death, he will be thy plague; O grave, he will be thy destruction.” (Hos. xiii. 14.) The trumpet shall sound, the graves shall be opened, all the sons and daughters of Adam, shall return

to life, and death shall be swallowed up in victory. "Then cometh the end, when the office of mediator ceasing, he shall have delivered up the kingdom to God, even the Father, when he shall have put down all rule and all authority and power. For when all things shall be subdued unto him, then shall the Son also be subject unto him that put all things under him, that God may be ALL IN ALL."

The first conspicuous proof which our blessed Lord gave of being vested with supreme power, and made head over all things to the church, was on the day of Pentecost. He had told the apostles that he would pray the Father to give them another comforter, who should abide with them for ever, even the Spirit of truth, who should teach them all things, and bring all things to their remembrance which he had said unto them. He had assured them, that it was expedient for them that he himself should go away; "for if I go not away (said he, John xvi. 17.) the COMFORTER will not come unto you; but if I depart, I will send him unto you." At his last interview with them, just before his ascension, he had desired them to tarry at Jerusalem till they should be endued with power from on high, before they entered upon their great work of converting the nations. These promises were amply fulfilled; by the gift of tongues as related in Acts ii. 1-13. That those who heard the apostles speak so many different languages were amazed, is what we should naturally suppose; but that a single individual among them remained unconvinced, is astonishing: for the gift of tongues is one of the most palpable miracles that ever was wrought. It is likewise one of the best authenticated miracles; for the *Acts of the Apostles* was written not more than thirty years after the event took place (see *SCRIPTURE*, Sect V.); and it is not conceivable that, within so short a period, St Luke, or any man of common sense, would have appealed for the truth of what he recorded to so many inveterate enemies of the Christian name, had he not been aware that the miraculous gift of tongues was a fact incontrovertible. We all know how desirous the Jewish rulers were to stop the progress of the faith, by whatever means, whether of fraud or force; but if this miracle was not really performed, they had now an opportunity of doing it effectually by means to which truth and honour would give their approbation. Thousands must have been alive in the city of Jerusalem who were men and women at this time when the apostles were said to have been thus suddenly inspired with the tongues of the Parthians, Medes, Elamites, Cappadocians, Cretes, Arabians, Libyans, Cyrenians, Romans, and natives of Pontus, Asia, Pamphylia, Egypt, Mesopotamia, &c.; and as these foreigners were themselves either Jews by descent, or at least proselytes to the Jewish religion, surely the chief priests would have found multitudes ready, both at home and abroad, to contradict this confident appeal of St Luke's, if contradiction had been possible. We read however of no objection whatever being made to the miracle. Some of the audience, indeed, when the apostles addressed people of so many nations in all their respective languages, not understanding what was

said, and taking it for jargon which had no meaning, concluded, not unnaturally, that the speakers were full of new wine, and mocked them for being drunk so early in the day; but this is a circumstance which, so far from rendering the miracle doubtful, adds much to the credit of the historian, as it would hardly have occurred to the writer of a narrative wholly false, and would certainly not have been mentioned, had he known that the apostles really attempted to impose upon the multitude unmeaning sounds for foreign languages.

The immediate author of this gift, so necessary to the propagation of the gospel, was the *Spirit of truth*, or the *Comforter*, who is the *HOLY GHOST*, and the third person in the blessed Trinity. That there are three persons in the one God-head, has been already shewn at large in this article; and that the Holy Ghost is one of these three, is evident from the form of baptism instituted by Christ himself. But as more plausible objections have been urged against his divinity than any that we have met with against that of Christ, it is proper to consider these before we proceed to give an account of the graces which he imparted to the infant church, and of the apostles preaching under his influence. By the Arians the Holy Ghost is considered as a creature; by the Socinians and modern Unitarians, as they call themselves, the words *Holy Ghost* are supposed to express, not a person or Spiritual subsistence, but merely an *energy or operation*, a *quality or power* of the Father, whom alone they acknowledge to be God. If this doctrine can be confuted, the Arian hypothesis will fall to the ground.

The SOCINIANS admit that in the Scriptures many things are spoken of the Holy Ghost which can be properly predicated only of a person; but the inference drawn from this concession they endeavour to invalidate by observing, that in scripture there are likewise expressions in which things are predicated of abstract virtues, which can be literally true only of such persons as practise these virtues: as in 1 Cor. xiii. 4, 6, of *Charity*. In like manner, say they, personal actions are attributed to the Holy Ghost, which itself is no person, but only the virtue, power, or efficacy, of God the Father; because God the Father, who is a person, performs such actions by that power, virtue, or efficacy in himself, which is denominated *the Holy Ghost*. Thus when we read, Acts x. 9, 20, that "the Spirit said unto Peter, Behold three men seek thee;" we must understand that God the Father was the person who spoke these words and sent the three men; but because he did so by that virtue in him which is called the *Spirit*, therefore the *Spirit* is said to have spoken the words and sent the men. Again, when "the Holy Ghost said to those at Antioch, Separate me Barnabas and Saul for the work whereunto I have called them;" (Acts xiii. 2.) we are to conceive that it was God the Father who commanded the two apostles to be separated for the work to which he had called them; but because he had done all this by that power within him which is called the Holy Ghost, therefore his words and actions are attributed to the Holy Ghost, just as long suffering in men is attributed to charity.

This is plausible, and would have some more force were *all* the actions which in scripture are attributed to the Holy Ghost of such a nature as that they could be supposed to have proceeded from the person of God the Father in consequence of any particular power or virtue in him; but this is far from being the case. Thus "the Spirit is said to make intercession for us:" (Rom. viii. 26, 27.) but with whom can we suppose God the Father, the fountain of divinity, to intercede? Our Saviour assured his disciples, that the Father would, in his name, send to them the Holy Ghost, who is the *Comforter*: (John xiv. 26. xv. 26. &c.) that he would himself send the Comforter unto them from the Father; that the Comforter should not speak of himself, but speak only of what he should hear; and that he should receive of Christ's, and shew it unto them. But we cannot, without blasphemy and absurdity, suppose that the Father would in the name of Christ, *send himself*; that the Son would send the Father from the Father; that the Father would not speak of himself, but speak only what he *heard*; or that either the Father in person, or a *quality* of the Father, should receive any thing of Christ to shew unto the apostles.

The sagacity of SOCRINUS, perceived the force of such objections as these to his notion of the Holy Ghost being nothing more than the power of the Father personified; and therefore he invented another *prosopopeia* to serve his purpose in the interpretation of those texts to which this one cannot be applied. "The Spirit of God (says he) may be considered either as a *property* or *power* in God, or as the things on which that power is working. When taken in the former sense, the Spirit, where any personal attribute is given to it, means God the Father; when taken in the latter sense, it means the *man* on whom the power of the Father is working; who as long as he is affected by that power, is therefore called the Spirit of God;" and he quotes, we think most absurdly, the 10th verse of the 2d ch. of 1 Cor. as a text in which by the Spirit is meant an inspired man who could search all things, yea, even *THE DEEP THINGS OF GOD*.

How his followers, who deny the plenary inspiration even of Christ, will relish such a degree of inspiration as this, which raises mere men to a temporary *equality* with God, we know not; but leaving them to settle the dispute with their master as they best can, we shall produce one or two passages in which personal attributes are given to the Spirit of God, where it is impossible to conceive that Spirit either as a *power* inherent in the Divine Father, or as the person on whom that power is operating. We need not bring new texts into view, as some of those already quoted will serve our purpose. When our Saviour promises that the HOLY GHOST, the COMFORTER, the SPIRIT OF TRUTH, should be sent by the Father and the Son to the apostles, we have seen, that by the Spirit he could not mean the Father, or a property of the Father; neither could he possibly mean the apostles themselves, unless we are to suppose that the Father and the Son *sent St Peter to St Peter*, and that St Peter, so sent, came to St Peter! Again, when Jesus Christ

faith of the Holy Ghost, "he shall receive of mine and shall shew it unto you," he could not, for the reason already assigned, mean by the Holy Ghost the Father or the power of the Father; and surely his meaning was not, that the apostles, under the influence of the power of the Father, should receive something and shew it each to himself! The Holy Ghost therefore is unquestionably a person; for though there are many passages of scripture in which the *gifts* of the Holy Ghost are called the *Holy Ghost*, they are so called by a very common figure of speech, in which the effect receives the name of its cause: and since this person is joined with the Father and the Son in the formula of Christian baptism; since they who lied to the Holy Ghost are said to have lied unto God; (Acts v. 4.) since blasphemy against him is a more heinous offence than the same sin against even the Father or the Son; and since it was by the operation of the Holy Ghost that Jesus Christ was conceived of the Virgin Mary, and even on that account called the *Son of God*—it follows undeniably, that the Holy Ghost is God, of the same substance with the Father and Son.

It was this DIVINE SPIRIT, who on the day of Pentecost, inspired the apostles with the knowledge of different languages; and as these were given only to enable them to preach the gospel to every creature, it can admit of no doubt but that he, who so amply provided the means of preaching, would take care that the gospel should be preached in purity. Our Saviour had told his apostles that the COMFORTER would guide them into all the truth (*ὅτι πάντα τὰ ἀληθινὰ*), and bring all things to their remembrance, whatsoever he had said unto them; but if they had not comprehended the meaning of what he said, the bare remembrance of his sayings would have been of little importance. That before this miraculous shedding abroad of the Spirit they had but a very imperfect knowledge of his doctrines, and of the purpose for which he had come into the world, is apparent from that unseasonable question which they put to him when assembled to witness his glorious ascension; "Lord, wilt thou at this time restore again the kingdom to Israel?" Their minds still cherished with fondness the vain prospect of *temporal* power; but after the day of Pentecost they were directed to nobler objects. From the same Spirit they received diversities of gifts besides that of language; for we are assured by St Paul, when speaking of the early converts to Christianity in general, that "to one was given by the Holy Spirit the word of *WISDOM*; to another the word of *KNOWLEDGE* by the same Spirit; to another *FAITH*, by the same Spirit; to another the gifts of *HEALING* by the same Spirit; to another the working of *MIRACLES*; to another *PROPHECY*; to another *DISCERNING OF SPIRITS*; to another *DIVERS KINDS OF TONGUES*; to another the *INTERPRETATION* of tongues:" (1 Cor. xii. 8—12.) and these gifts, which were severally divided, either among private Christians or among the inferior orders of ministers in the church, we have reason to believe were all bestowed in a greater or less degree upon each of the apostles.

Men thus qualified were well fitted to declare all the counsel of God. By the word of *wisdom*, they commu-

communicated to the Gentile nations a pure system of religion; turning them from the vanity of idols to the worship of the living God: by the word of knowledge, they preached the great doctrines of revelation both to Jews and Gentiles, shewing them that there is none other name under heaven given unto men whereby they may be saved than the name of JESUS CHRIST, and by their gifts of healing and of miracles, &c. they were enabled to prove unanswerably that their doctrines were divine. They taught everywhere the unity of God, the creation of the world, the fall of man, the necessity of redemption, the divinity of the Redeemer, his sacrifice on the cross to restore mankind to their forfeited immortality, and the terms of the new covenant into which they had through him been graciously admitted by God.

Such a view as our limits would admit of, we have given of all these doctrines, except that which respects the terms of the gospel covenant; but these being explicitly stated only by St Paul and St James we could not till now investigate them, without violating the historical order into which, for the sake of perspicuity, we have digested the several parts of this short system. Our Saviour himself has indeed taught with great plainness the necessity of faith and baptism to the salvation of those who have an opportunity of hearing the gospel preached with power; (see BAPTISM;) and in his sermon on the mount, which is such a lecture of ETHICS founded on religion, as the Son of God only could have delivered, we learn, that "unless our righteousness shall exceed the righteousness of the Scribes and Pharisees, we shall in no case enter into the kingdom of heaven; and that even the very first thoughts of vice are highly criminal. St Paul, however, attributes our justification to the bare act of believing; for he repeatedly assures us, "that a man is justified by FAITH without the deeds of the law;" while St James, on the other hand, affirms, "that by WORKS a man is justified, and not by faith only."

This apparent difference in the language of these two apostles, for we hope to show that it is only *apparent*, has produced among divines opinions really different respecting the justification of Christians; and the principal of these opinions we shall endeavour to state. But previous to this, it is proper to ascertain the meaning of the word JUSTIFICATION; for we must say, that for want of accurate definitions, many theological controversies are nothing better than empty logomachies; and perhaps no controversy merits this charge more than that which, in the end of the 17th century and in the beginning of the 18th, was so violently agitated concerning the *causes*, the *instruments*, and *conditions* of justification.

Between *pardon* of sin and *justification* there is so close a connection, that many writers consider the terms as synonymous, and infer, that he who is pardoned is *ipso facto* justified. That every Christian who shall be pardoned at the judgment of the great day, will likewise be justified, is indeed true; but, in propriety of speech, *justification* is a word of a very different import from *pardon*, and will entitle the Christian to what mere pardon could not lead him to expect. An innocent per-

son, when falsely accused and acquitted, is *justified* but not *pardoned*; and a criminal may be *pardoned*, though he cannot be *justified* or declared *innocent*. A man whose sins are pardoned is free from punishment; but the justified Christian is entitled to everlasting life, happiness, and glory. If we were only pardoned through Christ, we should indeed escape the pains of hell, but could have no claim to the enjoyments of heaven; for these, being more than the most perfect human virtue can merit, must be, what in the Scriptures they are always said to be, "the gift of God through Jesus Christ our Lord." Hence it is, that St Paul, distinguishing between mere remission of sins and justification, declares that Jesus our Lord was *delivered* for our offences, and *raised* again for our *justification*." Rom. iv. 25.

The word *justification*, as used both by St Paul and St James, has been very generally considered as a *forensic* term, expressing the sentence of a judge. The most eminent reformed divines of all denominations, (Limborch, Bull, Waterland, Warburton, Beveridge, Gill, &c.) and even many of the Romanists themselves, have strenuously contended, that this is its genuine sense, when it is distinguished from mere remission of sins, regeneration, and sanctification; and if so, it will signify God's pronouncing a person *just*, either as being perfectly blameless, or as having fulfilled certain conditions required of him in the Christian covenant. But that "there is not a just man upon earth, who doth good, and sinneth not," we are assured, by the most complete evidence possible, the joint dictates of our own consciences and of divine revelation; and therefore whosoever is pronounced just by the Judge of all the earth, must be so, either because, though not absolutely blameless, he has performed the conditions required of him in the covenant of grace, or because Christ has fulfilled all righteousness in his stead.

If this be the Scripture doctrine of justification, it must be wholly the act of God, and cannot be the effect either of our faith or of our virtue. Accordingly, we are said by the apostle to be justified *freely* by his grace through the redemption that is in Jesus Christ: whom *God hath set forth* to be a propitiation through faith in his blood, (Rom. iii. 24, 25.) The act of justification therefore, proceeds from the divine philanthropy, and cannot be performed by the instrumentality of faith; for it is not God but man, who believes; and man is not the justifier of himself. To talk of any kind of *instrument* of justification besides the propitiation set forth by God, is indeed to make use of very improper language.

In this sentiment of the illustrious Bp. Bull of St David's, that justification is solely an act of God's grace, some of the most eminent divines both among the Calvinists and Arminians agree; and indeed it is not easy to conceive how any man can entertain a different sentiment, when considering justification in its proper sense. Many, however, treat of justification not only in the active sense, as it is the act of God, for all admit that it is he who justifies; but likewise in a passive sense, as it means our *privilege* or *possession* holden of him, when we are said to be justified by his grace.

In this view of the subject they may talk, with sufficient propriety, of an *instrument* of justification, not as the mean by which it is conveyed, but as the medium through which it is *received* by the true Christian. And hence Drs Waterland and Warburton, of whom the former was not a thorough Calvinist, and the latter was a professed Arminian, strenuously maintain the doctrine of the Westminster Confession, that "faith receiving and resting on Christ is the *alone* instrument of justification: though it cannot be alone in the person justified, but must ever be accompanied with all other saving graces, and be a faith which worketh by love."

But notwithstanding this agreement between the leaders of the rival sects, they have found abundant matter of controversy respecting faith and works, in deciding the great question, "Whether, when God justifies man, he considers him as absolutely *righteous* on account of Christ's righteousness performed in his stead; or only as *just*, because he has fulfilled the conditions of the covenant of grace, which does not require of him perfect righteousness?" The former is the doctrine of the more rigid Calvinists, the latter that of the Arminians or Remonstrants.

"A notion (says Dr Gill) obtained some years ago, that a relaxation of the law and the severities of it has been obtained by Christ; and a new law, a *remedial* law, a law of milder terms, has been introduced by him, which is the gospel; the terms of which are, faith, repentance, and new obedience: and though these be imperfect, yet, being sincere, they are accepted by God in the room of a perfect righteousness. But *every article of this scheme* (continues he) *is wrong*; for the law is not relaxed, nor any of its severities abated; Christ came not to destroy, but to fulfil it; and therefore it requires the same holy, just, and good things, as ever. Nor is the gospel a new law. There is nothing in it (says he) which looks like a law; for it has no commands in it, but all promises, being a pure declaration of grace and salvation by Christ; nor are faith, repentance, and new obedience, required by it as *conditions* of men's acceptance with God. Faith and repentance are gospel doctrines and parts of the gospel ministry; they are *graces*, and not *terms* required to be performed by men of themselves. Faith is the gift of God, and repentance is a grant from him. It is not true (continues our author) that God will accept of an imperfect righteousness in the room of a perfect one; nor can any thing more highly reflect upon the justice and truth of God, who is the judge of all the earth, than to suppose that he can ever account that as a righteousness which is not one."

Having thus proved, by arguments which were almost in the same words stated long before by Bishop Beveridge, that the gospel is no relaxation of the law, he proceeds to lay down his own notions of justification, of which (he says) "the sole matter, or that for the sake of which a sinner is justified before God, is the *righteousness of Christ*—that which he did and suffered on earth, in our nature, in our stead, and as our representative. That is commonly called his active and passive obedience; and when the purity and holiness of

his own nature was added to it, the whole made up the *δικαιοσύνη του Θεού*, the *righteousness of the law*, which was fulfilled by him as the head and representative of his people: for whatever the law required is necessary to a sinner's justification before God, and it required of sinners more than it did of man in innocence. Man was created with a pure and holy nature, conformable to the pure and holy law of God, and it was incumbent on him to continue so, and to yield in it perfect and sinless obedience; in the failure whereof he was threatened with death. Man did fail; by which his nature was vitiated and corrupted, and his obedience became faulty and imperfect. He therefore became liable to the penalty of the law, and still perfect obedience was required of him. To the justification of a sinner therefore is required the most complete obedience, active and passive; or, in other words, purity of nature, perfect obedience, and the sufferings of death; all which meet in Christ, the representative of his people, in whom they are justified. There are indeed some divines (continues our author) who exclude the active obedience of Christ from being any part of the righteousness by which men are justified. They allow it to have been a condition requisite in him as a Mediator, qualifying him for his office; but deny that it is the *matter* of justification, or reckoned for righteousness to man. But without the active obedience of Christ the law would not be satisfied; the language of which is, *Do and live*; and unless its precepts be obeyed, as well as its penalty endured, it cannot be satisfied; and unless it be satisfied, there can be no justification. If therefore men are justified by the righteousness of Christ, it must be by his active obedience imputed and made over to them, so as to become theirs, *even as David describeth the blessedness of the man unto whom God imputeth righteousness without works*. That this is really the way in which men are justified, our author thinks evident, because they must be justified either by an inherent or by an imputed righteousness; but they cannot be justified by their inherent righteousness, for that is imperfect, and therefore not justifying. Hence the apostle 'counts all things but dung, that he may win Christ and be found in him; not having his own righteousness, which is of the law, but that which is *through the faith of Christ*, the righteousness which is of God by faith.' But by such a righteousness as this a man cannot be justified in any other way than by an imputation of it to him. Whence it follows, that 'by one man's disobedience many were made sinners by imputation, so by the obedience of one shall many be made righteous,' by having that obedience placed to their account."

As this author properly considers justification as the act of God, he does not approve of the language in which faith is called the *instrument* either of *conferring* or *receiving* it.—"Faith (says he) is merely the evidence of justification to the person justified; for 'faith is the evidence of things not seen.' The righteousness of God, or the God-man and Mediator Jesus Christ, is revealed from faith to faith in the everlasting gospel; and therefore must be *before* it is revealed, and *before* the faith to which it is revealed.

vealed. Faith is that grace whereby a soul, having seen its guilt and its want of righteousness, beholds in the light of the Divine Spirit a complete righteousness in Christ, renounces its own, lays hold on that, puts it on as a garment, rejoices in it, and glories of it; the Spirit of God witnessing to his spirit that he is a justified person; and so he is evidently and declaratively 'justified in the name of the Lord Jesus, and by the Spirit of our God.' Faith adds nothing to the *esse*, only to the *bene esse* of justification; which is a complete act in the eternal mind of God, without the being or consideration of faith, or any foresight of it. In the account of God, a man is as much justified before his faith as after it; and after he does believe, his justification depends not on his acts of faith, for though *we believe not, yet God abides faithful* to his covenant engagements with his Son, by whose suretyship-righteousness the elect are justified; but by faith men have a comfortable sense, perception, and apprehension of their justification, and enjoy that peace of soul which results from it. It is by that only, under the testimony of the Divine Spirit, that they know their interest in it, and can claim it, and so have the comfort of it."

Though this language differs from that of the *Westminster Confession*, the author seems not to teach a different doctrine; for if faith be that grace by which a soul renounces its own righteousness, and lays hold of Christ's, which it puts on as a garment, it must be that very thing which the compilers of the Confession meant by their definition of faith receiving and resting on Christ and his righteousness, when they called it "the *alone instrument* of justification." Accordingly our author elsewhere teaches, that "true faith in sensible sinners assents to Christ and embraces him, not merely as a Saviour of man in general, but as a special suitable Saviour for them in particular. It proceeds upon Christ's being revealed in them as *as to* them, by the spirit of wisdom and revelation, in the knowledge of him as a Saviour that becomes them. It comes not merely through external teachings, by the hearing of the word from men; for no man, faith our blessed Lord can come to me except the Father draw him; but such souls as are thus drawn, having heard and learned of the Father, believe not only in the *doctrine* of Christ, but also in *himself*, trusting in him alone for everlasting life and salvation."

Were it not that this author, in every thing that he writes, has an eye to the doctrine of ELECTION and REPROBATION, which he screws up to a greater height than almost any other divine with whose works we are acquainted, he would differ little in his notions of justification from the more moderate Arminians. "Justification (says LIMBORCH) is the merciful and gracious act of God, whereby he fully absolves from all guilt the truly penitent and believing soul, thro' and for the sake of Christ apprehended by a true faith: or gratuitously remits sins upon the account of faith in Jesus Christ, and graciously imputes that faith for righteousness." Here indeed the *imputation* of Christ's righteousness is expressly denied; but Dr WATERLAND, who can hard-

ly be considered as a Calvinist, seems to contend for the imputation of that righteousness to the sinner, as well as for faith being the instrument by which it is received.

"It cannot be for nothing (says that writer in his *Summary Views*) that St Paul so often and so emphatically speaks of man's being justified by faith in Christ's blood; and that he particularly notes it of Abraham, that he *believed*, and that his faith was counted to him for justification, when he might as easily have said that Abraham, to whom the gospel was preached, was justified by gospel faith and obedience, had he thought faith and obedience equally instruments of justification. Besides, it is on all hands allowed, that though St Paul did not directly oppose faith to *evangelical works*, yet he comprehended the works of the *moral law* under those which he excluded from the office of *justifying*, in his sense of the word justification. He even used such arguments as extended to all kinds of works; for Abraham's works were excluded, though they were undoubtedly evangelical. To prove that he interprets the apostle's doctrine fairly, our author quotes from the genuine epistle of Clemens of Rome a passage, in which it appears beyond a doubt, that this fellow-labourer of St Paul so understood the doctrine of justifying faith as to oppose it even to *evangelical works*, however exalted. It is true (continues our author,) Clemens elsewhere, and St Paul almost everywhere, insists upon true holiness of heart and obedience of life as indispensable conditions of salvation and justification. But the question about *conditions* is very distinct from the other about *instruments*; and therefore both parts may be true, viz. that faith and obedience are equally conditions, and equally indispensable, and yet faith over and above is emphatically the instrument both of receiving and holding justification."

But though our author contends that faith is the *instrument* of justification, he does not, like the ANTINOMIANS, teach that it will save men *without works*. "The covenant of grace (says he) has conditions annexed to it of great importance, for without them no instruments can avail. These are faith and obedience, as St JAMES hath particularly maintained. St PAUL had before determined the general and previous question respecting the plea by which we ought to abide; and when some libertines had perverted his doctrine of faith and grace, St James showed that the very faith which rests in a covenant of grace implies a cordial submission to the conditions of that covenant. The perfect agreement between St Paul and St James in the article of *justification*, appears very clear and certain. St Paul declares, that in order to come at justification, it is necessary to stand upon grace, not upon merit; which St James does not deny, but rather confirms, in what he says of the perfect law of liberty. (James i. 25. ii. 12.) St Paul makes faith the instrument of receiving that grace; which St James does not dispute, but approves by what he says of Abraham (ii. 23.); only he maintains also, that justification depends equally upon faith and good works; which St Paul also teaches and inculcates in effect through all his writings. If St Paul had

had precisely the same question before him which St James happened to have, he would have decided just as St James did. Their principles were exactly the same, but the questions were diverse; and they had different adversaries to deal with, and opposite extremes to encounter.

"That faith, which is here called a *condition*, is of much wider compass than that faith which is precisely the instrument of justification. For faith as a *condition* means the whole complex of Christian belief, as expressed in the creeds; while faith as an *instrument* means only the laying hold on grace, and resting in Christ's merits in opposition to our own deservings; though this also, if it is a vital and operative principle, must of course draw after it an hearty submission to, and observance of, all the necessary conditions of that covenant of grace whereon we repose our whole trust and confidence. So that St Paul might well say, "Do we then make void the law through faith? God forbid: Yea, we establish the law." We exempt no man from religious duties; which are duties still, though they do not *merit*, nor are practicable to such a degree as to be above the need of pardon; they are necessary conditions in their measure of justification, though not sufficient in themselves to *justify*, nor perfect enough to stand before God, or to abide trial; and so our resting in Christ's atonement by an humble self-denying faith is our last resort, our anchor of salvation both sure and steadfast.

"That good works, internal and external, are *conditions* properly so called, is clear from the whole tenor of Scripture, as hath been often proved by our own divines, and by the most judicious among the foreign Reformed. Yet some have been very scrupulous as to this innocent *name* even while they allow the absolute necessity of good works as indispensable qualifications for future blessedness. Why not *conditions* therefore as well as *qualifications*? Perhaps because that name might appear to strike at absolute predestination, or unconditional election; and there may lie the scruple; otherwise the difference appears to lie rather in *words* than *things*.

"Some will have them called not conditions, but *fruits* or *consequents* of justification. If they mean by justification the same as the grace of the Holy Spirit, and the first grace of faith springing from it, they say true."

Such is the doctrine of Christian justification as it has been taught by the followers of Calvin, and by some of the most eminent Arminians who flourished in the end of the 17th and beginning of the 18th century. They appear not, from this view of their opinions, to differ so widely as some of them have wished the world to believe. It is evident that Dr Waterland, though he rejects some of the distinguishing tenets of Calvinism; lays greater stress upon *faith* in his scheme of justification than Dr Gill himself; and that they both consider it as the *instrument* by which the adult Christian must receive the imputed righteousness of Christ. The greater part of modern Arminians, however, exclaim against the *imputation* of Christ's righteousness, as a doctrine false in itself, and fraught with the most pernicious con-

sequences; and they would be ready to tell Dr Gill, in his own words, that "of his scheme every *article* is *wrong*." It is not true (say they) that God exacts of man, or ever did exact of him an obedience absolutely perfect; for under every dispensation man was in a state of discipline; and had habits of virtue and piety to acquire. Most of them, after Bp. Bull, dislike the use of such unscriptural phrases as the *instrument of justification*, applied either to faith or to works; and think, that by considering God as the sole justifier of man, upon certain conditions, they can more precisely ascertain the distinct provinces of faith and obedience in the scheme of justification, than either their brethren of the old school of Arminius, or their rivals of the school of Calvin. But, to those whom the foregoing remarks on the infinite goodness of God may *please*, both parties have multiplied words to no purpose. See p. 194.

By the very constitution of man, piety and virtue are duties, which if he do not sincerely perform, he must of course forfeit the favour of his Maker; but the most perfect performance of his natural duties would not entitle him to a supernatural and eternal reward. Eternal life is the *gift* of God through Jesus Christ; and it is surely reasonable that we should acknowledge it to be so, and not claim it as a *debt* due to our merits. The pious and virtuous man has a natural claim to more happiness than misery during the period of his existence, a claim founded on the attributes of that God who called him into being; but he has no natural claim to a future life, and still less to a *perpetuity of existence*. This is a truth not more clearly taught in the holy scripture than consonant to the soundest philosophy; and yet, by not attending to it, have St Paul and St James been set at variance, and the most opposite doctrines taught respecting the justification of Christians.

That piety and virtue are, through the divine justice and benevolence, entitled to reward, is a truth incontrovertible; but that man who is of yesterday is *naturally immortal*—that a being who began to exist by the mere good will of his Maker, has in himself a principle of perpetual existence, independent of that will—is a direct contradiction. Whatever began to be, can be continued in being only by the power, and according to the pleasure, of the infinite Creator; but it pleased the Creator, of his free grace, at first to promise mankind eternal life, on the single condition of their first father's observing one positive precept. That precept was violated, and the free gift lost: but the covenant was renewed in Christ, who "by his death hath abolished death, and by his resurrection hath brought to light life and immortality." The condition annexed to the gift thus restored was *faith*; for "being justified by faith, we have peace with God through our Lord Jesus Christ; by whom also we have access by faith into this grace wherein we stand, and rejoice in the hope of the GLORY OF GOD." Faith therefore in the Son of God and Saviour of the world, is not only a condition, but the *sole* condition, of that justification which is peculiarly Christian; for since Christ, without any co-operation of ours, hath purchased for us the free gift of

of eternal life, we shall be guilty of the grossest ingratitude to our Divine Benefactor, and impiously claim an independence on God, if we look upon that gift either as a *right* inherent in our nature, or as a *debt* due to our meritorious deeds. By the grace of the Christian covenant, all mankind are rendered immortal in consequence of the death and resurrection of Christ, who is the Lamb slain, in the divine decree, from the foundation of the world; but to obtain immortal *happiness*, they must observe the conditions, which are repentance from dead works and faith in Christ the Redeemer, by which alone we can obtain the divine favour, and enjoy either present or future happiness; which is merely the *gift* of God through Jesus Christ our Lord.

Upon the whole, the sum of Christianity, as we are taught by the beloved disciple, is comprehended in this commandment of God, "that we should *believe* on the name of his Son Jesus Christ, and *love one another* as he gave us commandment." In perfect harmony with him, the great apostle of the Gentiles, from mistaking whose words much empty noise has been raised about this question, assures us, that "in Christ Jesus nothing can avail to our eternal happiness, but faith, which *WORKETH BY LOVE*;" and he informs Titus, that it "is a true saying, and what he wills to be constantly affirmed, that they who have believed in God be careful to maintain good works."

Indeed no man can have complete faith in Christ, who believes not the promises of the gospel; but all those promises, except the single one of a resurrection from the dead, are made to us upon the express condition that we obey the law of the gospel.

Such are the notions of justification entertained by those who in the present age have been considered as the leaders of the sect of ARMINIANS. How far they are just, the reader must decide for himself, as our business is chiefly to collect into one point of view the scattered opinions of others; but under every view of this doctrine which we have taken, the Christian covenant appears much more gracious than that into which Adam was admitted in paradise; since it affords room for repentance, even to that man who may be so unhappy as to be withdrawn for a time into apostacy from the terms of the covenant. Whether the death of Christ, therefore, was a *direct* atonement for the actual sins of men, or only operated as such *indirectly*, by procuring for them repeated opportunities of repentance, it is an undoubted truth, that, "if through the offence of one man be dead, much more the grace of God, and the gift by grace, which is by one man, Jesus Christ, hath abounded unto many. And not as it was by one that sinned, so is the gift: for the judgment was by one offence to *condemnation*, but the free gift is of many offences unto *justification*." (Rom. v. 16.)

Thus graciously has the divine goodness displayed itself in the restoration of our lost inheritance. But it stopp not here. The same bountiful Lord of life, for its further security, imparts to every true believer the strength and light of his Holy Spirit to support faith in working out

our salvation. Our blessed Saviour, "who gave himself for us, that he might redeem us not only from death, but likewise from all iniquity, and purify to himself a peculiar people zealous of good works," promised, before he left this world, to send to his followers the Holy Ghost or Comforter to abide with them for ever, to guide them into all truth, to bring all things to their remembrance whatsoever he had said unto them, and, as we learn from other passages of scripture, to "work in them both to will and to do of his good pleasure." How amply this promise was fulfilled to the apostles, we have already seen; but we are not to suppose that it was restricted to them. As man is designed for a supernatural state in heaven, he stands in need of supernatural direction to guide him to that state. "No man (says our Saviour) can come to me except the Father draw him: for as no man knoweth the things of a man save the spirit of a man which is in him, even so none knoweth the things of God but the Spirit of God." This omniscient Spirit indeed "searcheth all things, yea, even the deep things of God," and revealeth them to the sons of men, to enlighten their understandings and purify their hearts. The grace which he sheds abroad is either external and general, or internal and particular. The former has been extended to the whole church of God under the patriarchal, Mosiac, and Christian dispensations, in such a revelation of the divine will as was sufficient to instruct men unto eternal life, whether they had a clear view or not of that stupendous plan of redemption, by which the kingdom of heaven was opened to them after the forfeiture of the terrestrial paradise; for there have been "holy prophets ever since the world began; and prophecy came not at any time by the will of man, but holy men of God spake as they were moved by the Holy Ghost." Hence it is that all scripture was given by inspiration of God, to teach us every thing which is necessary for us to know and believe; and the scripture is that work of the spirit which is extended to the universal church.

The same Holy Spirit which thus generally reveals the objects of faith to the church, doth likewise particularly illuminate the minds of individual believers, working in them an assent to that which is taught them from the written word. It was thus that "the Lord opened the heart of Lydia, that she attended to the things which were spoken by Paul;" it is thus that "the word preached doth not profit, if it be not mixed with faith in them who hear it;" and it is thus that "God deals to every man the measure of faith;" for "by grace we are saved, through faith, which is not of ourselves; it is the gift of God." This illumination of the Spirit was conveyed to the apostles "in a sound from heaven as of a rushing mighty wind," because it was meant to testify to the world that they were chosen ministers of the gospel; but the ordinary Christian receives it in the "still small voice," because it is conveyed to him only to open his understanding that he may understand the scriptures.

Another operation of the Spirit on the minds of believers is that which in scripture is called REGENERATION; for "according to his mercy
God

God saveth us by the washing of regeneration and renewing of the Holy Ghost, which he sheds on us abundantly through Jesus Christ our Lord." To those who believe that we derive from Adam a corrupted nature, this particular grace must appear so absolutely necessary, that without it we could have no relish for heaven or heavenly things. "The natural man (we are told) receiveth not the things of the Spirit of God; for they are foolishness to him: neither can he know them, because they are spiritually discerned." Indeed, whatever be the powers of our moral faculties, when compared with those of our first father, it is so long before they be completely developed, that we should infallibly be lost, if we were not blessed by a supernatural guide, when reason is incapable of directing our conduct. Our passions and appetites are in their full strength before experience has furnished the mind with materials, by means of which motives may be weighed; and therefore it would be impossible, during the giddy period of youth, to keep them in due subjection, were we not influenced by divine grace. So true is it, that "except a man be born again of water and of the Holy Ghost, he cannot enter into the kingdom of God." This change in our dispositions, from an immoderate attachment to earth to a relish for the things of heaven, is in scripture called "a renewing of our minds, a new creation, a new man;" in opposition to our natural disposition, which is called "the old man, corrupted according to the deceitful lusts." The ancient fathers of the church, as well as some very eminent modern divines, generally speak of *Baptism* as the instrument in God's hand of man's regeneration; and for the truth of their opinion they appeal to John iii. 3, 5. Ephes. v. 25, 26. and 1 Cor. vi. 11. in which great stress is certainly laid upon the washing of water, as well as upon sanctification by the word. See BAPTISM.

A third office of the Holy Spirit is to lead, direct, and govern us through all the periods of our lives. Without such a leader and guide, the temptations with which we are surrounded would certainly overcome us, and we should faint long before we arrive at the end of our journey. By the very constitution of our nature we are subjected to the influence of sense, of which the objects are present, whilst the enjoyments of heaven are future, and seen, as at a distance, only by the eye of faith; but "the law of the Spirit of life, in Christ Jesus, hath made us free from the law of sin and death; for God worketh in us both to will and to do of his good pleasure; and as many as are thus led by the Spirit of God, they are the sons of God; and while they walk in the Spirit, they do not fulfil the lusts of the flesh." Without the aid of the same Spirit, we could not even make our prayers acceptable; for since "our confidence in God is, that he heareth us only when we ask any thing according to his will; and since we know not what we should pray for as we ought, the Spirit itself maketh intercession for us with groanings that cannot be uttered."

A fourth operation of the HOLY GHOST, as he is the sanctifier of Christians, is to join them to Christ, and make them members of that one body of which he is the head. "For by one Spirit

are we all baptized into one body; and as the body is one and hath many members, and all the members of that one body, being many, are one body, so also is Christ." "Hereby we know that God abideth in us, by the Spirit which he hath given us;" and as, in the ordinary course of his dealings with Christians, this Spirit is first given in baptism, so is it continued to the faithful by the instrumentality of the Lord's supper. That ordinance we have elsewhere (see SUPPER OF THE LORD) proved to be a federal rite; and surely no time can be supposed so highly sanctified for the reception of the graces of the Holy Spirit, as that in which we renew our federal union with our Lord and Master in the communion of his body and blood.

It is likewise the office of the Holy Ghost to give us an earnest of our everlasting inheritance, to create in us a sense of the paternal love of God, and thereby to assure us of the adoption of sons. "As many as are led by the Spirit of God, they are the sons of God; and because we are sons, God hath sent forth the spirit of his Son into our hearts. For we have not received the spirit of bondage again to fear; but we have received the Spirit of adoption, whereby we cry *Abba* Father; the Spirit itself bearing witness with our spirits, that we are the children of God."

As the gifts of grace are generally annexed to means, to the proper use of the word and sacraments, it is a sixth office of the same Spirit to sanctify such persons as are regularly set apart for the work of the ministry, and ordained to offer up the public prayers of the people; to bless them in the name of God; to teach the doctrines of the gospel; to administer the sacraments instituted by Christ; and to perform all things necessary "for the perfecting of the saints, for the work of the ministry, for the edifying of the body of Christ." The same spirit which illuminated the apostles, and endowed them with power from above to perform personally their apostolic function, fitted them also for sending others, as they were sent by their Divine Master; and for establishing such a constitution of the church as was best adapted for preserving Christians in the unity of the Spirit and bond of peace. They committed a standing power to a successive ministry, to be conveyed down to the end of the world; and those who are vested with that power are obliged to "take heed unto themselves, and to all the flock over which the HOLY GHOST hath made them overseers, to feed the church of God, and to contend earnestly for the faith which was once delivered unto the saints." See EPISCOPACY, INDEPENDENTS, PRESBYTERIANS, POPE, SCOTLAND, § 96, QUAKERS, and SANDEMANIANS.

By these and the like means doth the Spirit of God sanctify the sons of men; and in consequence of this sanctification proceeding immediately from his office, he is called the HOLY SPIRIT and the COMFORTER. That this is such a provision "for renewing us in the spirit of our minds, and enabling us to put on the new man, which, after God, is created in righteousness and true holiness," as, when made known by revelation, appears to have been expedient, may be conceived to have been

been even necessary, and though reason could hardly have hoped for it, is contradicted by none of our natural notions either of God or of man. Many, however, are the controversies to which it has given rise in the church of God; some contending that it is given only unto the elect, upon whom it operates with resistless efficacy; others affirming that it is offered to all, but in such a manner as that, by the abuse of their free will, it may be "resisted, grieved, and quenched;" and some few, still intoxicated with the pride of Pelagius, think it is not necessary, and of course is not bestowed.

The questions concerning ELECTION, the efficacy of grace, and the final perseverance of the saints, we have stated elsewhere, and given a summary view of the arguments by which the contending parties maintain their respective opinions (see PREDESTINATION, § 2); and the texts of Scripture which we have just quoted, under the different heads of sanctification, show sufficiently that the opinion of Pelagius is directly contrary to the doctrine of the apostles. It may not be improper to inquire whether it be as agreeable to reason and experience as its proud patrons seem to imagine.

If it be unreasonable to expect any assistance from the Spirit of God in carrying on the work of our own salvation, how came so many of the wisest and best of men in all ages to believe, that he who sincerely endeavours to discharge his duty is supported in that endeavour by assistance from heaven? SOCRATES, it is well known, professed to believe that his own conduct was under the direction of a superior spirit, which he called a demon; and Plutarch, as quoted by Wollaston, speaks of the gods assisting men, by "exciting the powers or faculties of the soul: by suggesting secret principles, imaginations, or thoughts; or, on the contrary, by diverting or stopping them." Of the same opinion Cicero seems to have been. (See *Cic. de Div. lib. i. § 8. 51.*) That the poets and philosophers of the heathen world derived these notions from primeval tradition, cannot, we think, be questioned; but if they had been absurd they would not have been so universally embraced; Socrates and Cicero were men of as great natural sagacity as Pelagius or any of his followers. It is indeed far from being incredible that the Father of spirits should occasionally direct the thoughts and actions of men.

Socrates, Plutarch, and Cicero, and all the virtuous and wise men of antiquity, admitted this in

effect, upon no better evidence than that of oral tradition, supported by their own meditations, and the principles of their own conduct. But let us, who enjoy the light of divine revelation, study the practical precepts of the GOSPEL, consider the consequences which they have had on the peace and happiness of society, and compare the general conduct of Christians with that of the Jews, Pagans, and Mahometans. See RELIGION.

From this short view of the several dispensations of revealed religion, it is evident that the gospel is not only the best but the last gift of the kind which man has to expect from his Maker; that the scheme of revelation is completed; and that the pretences of Mahomet and of other modern enthusiasts to divine inspiration are not only false, but fraught with contradictions. All these men admit the divine origin of the Mosaic and Christian religions; but it appears from the scriptures, in which those religions are taught, that the system of revealed truths which constitute the Patriarchal, Mosaic, and Christian revelations, commenced with the fall of man, and was completed by the restoration to life and immortality by the sacrifice of Christ upon the cross. A new revelation therefore like that of Mahomet cannot be admitted without rejecting the whole Bible, though the impostor himself every where acknowledges the inspiration of Abraham, of Moses, and of Christ. Nor is greater regard due to the claims of Christian enthusiasts. Such of these men as pretend to have been in heaven (See BOEHMEN), and thence to have brought spiritual discoveries to the earth, have either forgotten, or never understood, that in the scriptures of the Old and New Testaments the great scheme of Providence appears to be closed, in full completion of its one regular, entire, and eternal purpose; that St Paul has pronounced a curse upon any man or angel from heaven who should preach another gospel, than what has been already preached by the apostles and evangelists; that in their writings we are taught every thing which it is our duty to believe or to practise in order to our own salvation; and that we have the promise of our blessed Lord himself, that the Spirit of truth shall remain with us to guide us into all necessary truth, till the great day when he shall come again to judge the world in righteousness, and render to every man according to his works. (See THEOSOPHISTS.)

T H E

T H E

*THEOMACHIST. *n. f.* He who fights against the gods. *Bailey.*

*THEOMACHY. *n. f.* [θεομαχία and μάχη.] The fight against the gods by the giants. *Bailey.*

THEOMAGI. [from θεοι, and μαγος, wife.] persons endued with divine wisdom.

THEOMAGIC. *n. f.* Divine wisdom.

THEOMANCY. *n. f.* [from θεοι, and μαντια, prophecy.] The gift of PROPHECY.

(1.) THEON, an ancient Greek Sophist, who wrote a Treatise on Oratory, entitled *Prognusuf*.

VOL. XXII. PART I.

meta. It is still extant, and is written with elegance. It was printed at Leyden in 1726; with a Latin translation.

(2.) THEON, an eminent philosopher and mathematician of Alexandria, who flourished in the reign of Theodosius the Great, and taught mathematics in a school at Alexandria, which was afterwards kept up by his unparalleled daughter, the learned lady Hypatia, who, in spite of her beauty, learning, and other accomplishments, died a martyr to Christianity, in a barbarous pagan mob.

Q q

mob.

enob. (See HYPATIA.) Theon wrote several works; particularly, *A Commentary on Euclid*, which was printed in Greek, at Basil, in 1588, fol. and a *Commentary on Aratus*; Oxford, 1672, in 4to.

THEOPASCHATITES, a sect of Christian heretics, who flourished in the 5th century, and taught that all the three persons in the Godhead suffered on the Cross. They were the followers of Peter Fullo Bp. of Antioch. See FULLO.

THEOPHANE, in fabulous history, the daughter of Bifalus, whom Neptune metamorphosed into a sheep, to free her from her numerous suitors, and conveyed her to the island of *Crumissa* where, assuming to himself the form of a ram, he begot on her the celebrated ram with the golden fleece, which carried PHRYXUS across the Hellespont, and afterwards gave rise to the expedition of the Argonauts. See ARGONAUTS and NEPTUNE.

(1.) **THEOPHANES**, an ancient Greek historian, born at Mitylene, and an intimate friend of Pompey the Great, who on his account bestowed many favours on the Mitylenians. After the battle of Pharsalia, he gave Pompey the well-meant but fatal advice to fly to the ungrateful tyrant of Egypt, Ptolemy Auletes, who murdered him. See POMPEY. Theophanes wrote a *History of Byzantium*, which was printed at Paris, in fol. in 1649.

(2.) **THEOPHANES**, M. Pompeius, the son of the preceding, was made governor of Asia, and was otherwise highly favoured by Tiberius.

(3.) **THEOPHANES**, George, another Greek historian, born at Constantinople, in the 7th century, of a noble family. He entered into the monastic order, and was received with great respect at the 7th general Council; but the emperor Leo the Armenian, banished him to Samothrace: where he died in 828. He wrote a Chronicle of the Greek empire, beginning where SYCELLUS ends, and continued down to the reign of Michael Curopalatus. It was printed at the Louvre, in fol. in 1655.

(4.) **THEOPHANES PROKOPOVITCH**, a celebrated Russian historian, born in 1681. He entered into orders, and was promoted to be Archbishop of Novogorod. He wrote the *Life of Peter the Great*, and several *Treats on Theology*. He died in 1756. In this arrangement we have followed Dr Watkins in the last Edit. of his *Biog. Hist. and Chron. Dict.* 8vo, 1806. But we suspect that the Dr has misplaced the article, which certainly should have been inserted under P at PROKOPOVITCH; *Theophanes* being evidently the Archbishop's Christian name.

THEOPHANIA *plur.* festivals anciently held at Delphi, in honour of Apollo.

THEOPHILANTHROPISTS, [from *Θεός*, God, *φίλος*, to love, and *άνθρωπος*, a man]; a sect of deists, who, in September 1796, published at Paris a sort of catechism or directory for social worship. The sect found a considerable number of adherents during the ferment of the Revolution; but we believe is not now in existence.

(1.) **THEOPHILUS**, [Gr. *Θεός* and *φίλος*, i. e. a lover of God], an eminent primitive Christian, who seems to have been very well named, as well as of a superior rank, from the polite manner in which St Luke addresses him, and whom St Luke has honoured to eternity, by dedicating his

Gospel, and his history of the *Acts of the Apostles* to him. It is surprising, that no other memoir remains of him.

(2.) **THEOPHILUS**, a writer and bishop of the primitive church, was educated a Heathen, and afterwards converted to Christianity. He was ordained bishop of Antioch A. D. 170; and he governed this church 12 or 13 years. He was a vigorous opposer of certain heretics of his time, and composed a great number of works; all of which are lost, except three books to Autolycus, a learned Heathen of his acquaintance, who had undertaken to vindicate his own religion against that of the Christians. It is remarkable, that this patriarch of Antioch was the first who applied the term *Trinity* to express the Three Persons in the Godhead.

THEOPHRASTA, in botany, a genus of plants belonging to the class of *pentandria* and order of *monogynia*. The corolla is campanulate, with divisions and segments obtuse; the capsule unilocular, globular, very large, and many-seeded. There is only one species.

THEOPHRASTA AMERICANA.

THEOPHRASTUS, a celebrated Greek philosopher, the son of Melanthus, was born at Ereus in Lesbos. He was first the disciple of Leucippus in his own country; next of the celebrated PLATO at Athens; and last of ARISTOTLE. He succeeded Aristotle in the Peripatetic school, and conducted the charge with such high reputation that he had about 2000 scholars. He is highly celebrated for his industry, learning and eloquence, and for his generosity and public spirit. He is said to have twice freed his country from the oppression of tyrants. He contributed liberally towards defraying the expence attending the public meetings of philosophers; which were held, not for the sake of show; but for learned and ingenious conversation. In the public schools he commonly appeared, as Aristotle had done, in an elegant dress, and was very attentive to the graces of elocution. He lived to the advanced age of 105: Some say of 107. Towards the close of his life, he grew exceedingly infirm, and was carried to the school on a couch. He expressed great regret on account of the shortness of life; and complained that nature had given long life to fags and crows, to whom it is of little value, and had denied it to man, who, in a longer duration, might have been able to attain the summit of science; but now, as soon as he arrives within sight of it, it is taken away. His last advice to his disciples was, that, since it is the lot of man to die as soon as he begins to live, they should take more pains to enjoy life as it passes, than to acquire posthumous fame. His funeral was attended by a large body of Athenians. He wrote many valuable works, of which all that remain are, several treatises on the *Natural History of Plants and Fossils*; *Of Winds*, *Of Fire*, &c. an excellent moral treatise, entitled *Characters*; which, he says in his preface, he composed when he was 99 years of age. It has been repeatedly translated into French, English, &c. To Theophrastus we are indebted for preserving the works of Aristotle. See ARISTOTLE.

THEOPHYLACT, } a learned Greek father,
THEOPHYLACTUS, } born at Constantinople, about

about A. D. 1070, or earlier. He became Abp. of Achrida, and metropolitan of all Bulgaria. He wrote *Commentaries on the Gospels*, the *Acts*, several of the *Epistles*, and of the *minor Prophets*; also *Institutio Regia*; *Letters*; and some *bisporical treatises*. His whole works were printed at Paris in fol. 1647; also at Venice, in 4 vols. 1754—1763.

THEOPOLIS, [Θεός, and πόλις, a city,] *q. d.* the city of God, a name given to ANTIOCH.

(1.) **THEOPOMPUS**, a celebrated Greek orator and historian, was born in the island of Chios, and flourished in the reign of Alexander the Great. He was one of the most famous of all the disciples of Isocrates, and won the prize from all the panegyrist who Artemisia invited to praise Mausolus. He wrote several works, which are lost.

(2.) **THEOPOMPUS**, king of Sparta, a binarch of the family of Proclidæ. (See SPARTA, § 3.) He succeeded his father Nicander, and distinguished himself, by introducing many new regulations; among these, the most remarkable was his institution of the EPHORIA, an aristocratic court, who afterwards assumed or acquired so much power, as to impeach, try, and execute some of the best of the Spartan kings. See AGES III. He died after a long and successful reign, during which the Messenian war was carried on; about A. A. C. 723.

* **THEORBO**. *n. f.* [tiórba, Italian; tuorbe, Fr.] A large lute for playing a thorough bass, used by the Italians. *Bailey*.—

He wanted nothing but a song,
And a well tun'd theorbo hung. *Builer*.

(1.) * **THEOREM**. *n. f.* [theoreme, Fr. θεωρημα.] A position laid down as an acknowledged truth.—Having found this the head theorem of all their discourses. *Hooker*.—Nor is the subtilty greater in moral theorems than in mathematical. *Mare*.—Many observations go to the making up of one theorem. *Graunt*.—Here are three theorems. *Dryden*.

(2.) A **THEOREM** is a proposition which terminates in theory, and which considers the properties of things already made or done; or it is a speculative proposition deduced from comparing together several definitions. A theorem is something to be proved, and a PROBLEM something to be done.

* **THEOREMATICAL**. } *adj.* [from theorem.]
* **THEOREMATICK**. } Comprised in theo-
* **THEOREMICK**. } rems; consisting in
theorems.—*Theoremick* truth, or that which lies in the conceptions we have of things, is negative or positive. *Grew*.

* **THEORETICAL**. **THEORETICK**. **THEORICAL**. **THEORICK**. *adj.* [theoretique, French; from θεωρητικός;] [theorique, Fr. from θεωρημα.] Speculative; depending on theory or speculation; terminating in theory or speculation; not practical.—

The act and practice part of life
Must be the mistress to this theoricque. *Shak*.

—The *theoretical* part of the inquiry being interwoven with the historical conjectures. *Boyle*.—For *theoretical* learning, there is nothing yet complete. *Burnet*.

* **THEORETICALLY**. **THEORICALLY**. *adv.* [from theoretick] [from theorick.] Speculatively; not practically.

(1.) * **THEORICK**. *adj.* See **THEORETICAL**.
(2.) * **THEORICK**. *n. f.* [from the adjective.] Speculation, not practice.—

The bookish theorick. *Shak*.
* **THEORIST**. *n. f.* [from theory.] A speculatist; one given to speculation.—The greatest theorists have given the preference to such a government as that which obtains in this kingdom. *Addison*.

THEORIUS, [Gr. θεωρητής, i. e. clear-sighted.] A surname of Apollo, at Trozene. *Lempr*.

(1.) * **THEORY**. *n. f.* [theorie, Fr. θεωρημα.] Speculation; not practice; scheme; plan or system yet subsisting only in the mind.—If they had been themselves to execute their own theory in this church, they would have seen. *Hooker*.—In making gold, the means hitherto propounded to effect it are in the practice full of error, and in the theory full of unfound imagination. *Bacon*.—As to the theory and speculation of virtue and vice, mankind are much the same. *South*.—

Religion is not theory, but act. *Harte*.
(2.) **THEORY**, in general, denotes any doctrine which terminates in speculation, without considering the practical uses or application thereof.

THEOSOPHISTS, [from Θεός, God and σοφία, wisdom,] a fanatical sect of philosophers, who rose about the end of the 16th century, and made a figure in almost every country in Europe. They pretended to derive all their knowledge from divine illumination. They boasted that, by means of this celestial light, they were not only admitted to the intimate knowledge of God, and of all divine truth, but had access to the most sublime secrets of nature. They ascribed it to the singular manifestation of divine benevolence, that they were able to make such a use of the element of fire, in the chemical art, as enabled them to discover the essential principles of bodies, and to disclose stupendous mysteries in the physical world. Hence they were also called FIRE-PHILOSOPHERS. They even pretended to an acquaintance with those celestial beings, who form the medium of intercourse between God and man, and to a power of obtaining from them, by the aid of magic, astrology, and other similar arts, various kinds of information and assistance. One of their chief leaders and ornaments, was the celebrated Paracelsus, from whom they were also called PARACELSISTS. To this class also belonged Daniel HOFFMAN, Robert Fludd, or Flood, an English physician, Jacob Boehmen, VAN HELMONT, Peter Poirer, and the ROSICRUCIANS. In France the doctrine was zealously propagated by RIVIER. In Denmark, by SEVERINUS, and in Germany, by KUNZWARTH. See BOEHMEN, &c.

THEOTIMUS, an ancient Grecian historian, who wrote a history of Italy.

THEOXENTA, a festival held annually in all the cities of Greece, but chiefly at Athens, in honour of all the Gods.

THEOXENIUS, a surname of Apollo.

(1.) **THERA**, one of the SPORADES islands in the Ægean Sea, called also CALLISTA, and now SANTORIN. It was first inhabited by a colony of Phœnicians, who were left there by CADMUS, under Memliarès. *Herodotus*, 4. *Strabo*, 8.

(2.) **THERA**, an ancient town of Caria.

THERAMBUS, a town of Macedon, near Pellenae.

THERAMENES, a celebrated Athenian general, patriot, and philosopher. He defeated the Megareans, and suppressed a tumult in Athens; (See *ATTICA*, § 13.) but the Athenians being at last completely subjugated by the Spartans, who demolished their walls, and subjected them to 30 tyrants, all under Spartan influence, except Theramenes, who was the only one of the 30 that stood up for the interest of his country. The rest abused their power in the most cruel and arbitrary manner. But Theramenes's patriotic opposition to these tyrants only ended in his own death. (See *ATTICA*, § 14.) It is said that when he drank the bowl of poison, he drank to the health of *Critias*, his accuser, but along with that compliment he imprecated a curse on the tyrant, which was soon after fulfilled.

THERAPEUTÆ, a term applied to those that are wholly in the service of religion. This general term has been applied to particular sects of men, concerning whom there have been great disputes among the learned. A Jewish sect were so called, from the extraordinary purity of their religious worship. With a kind of religious phrenzy, they placed their whole felicity in the contemplation of the Divine nature. Detaching themselves wholly from secular affairs, they transferred their property to their relations or friends, and withdrew into solitary places, where they devoted themselves to a holy life. How long this sect continued is uncertain; but it is not improbable that, after the appearance of Christianity in Egypt, it soon became extinct.

(1.) * **THERAPEUTICK**. *adj.* [*θεραπευτικος*.] Curative; teaching or endeavouring the cure of diseases.—*Therapeutick* or curative physic restores the patient into sanity. *Brown*.—The practice and *therapeutick* is distributed into the conservative, preservative, and curative. *Harvey*.—Medicine is justly distributed into prophylactic, or the art of preserving health; and *therapeutick*, or the art of restoring it. *Watts*.

(2.) **THERAPEUTICS**, that part of medicine which acquaints us with the rules that are to be observed, and the medicines to be employed, in the cure of diseases.

(1.) **THERAPNE**, an ancient town of Laconia, on the W. bank of the Eurotas, where Apollo had a temple, called *Phæbeum*; near Lacedæmon. Castor and Pollux were born in it, and hence called *Therapnai*.

(2.) **THERAPNE**, a daughter of Lelex, king of Sparta, who gave name to the above town.

THERAS, a son of Autelson, a Spartan, who colonized **THERA**.

* **THERE**. *adv.* [*thar*, Gothic; *ther*, Saxon; *daer*, Dutch; *der*, Danish.] 1. In that place.—

I'll not be *there*. *Shak.*

Mad ambition shall attend her *there*. *Pope.*

2. It is opposed to *here*.—To see thee *here*, to see thee *there*. *Shak.*—Could their relishes be as different as they are *here*. *Locke.*

Darkness *there* might well seem twilight *here*. *Milton.*

3. An exclamation directing something at a distance.—

A guard *there*; seize her. *Dryden.*

4. It is used at the beginning of a sentence with the appearance of a nominative case, but serves only to throw the nominative behind the verb: as, *a man came*, or, *there came a man*. It adds however some emphasis, which, like many other idioms in every language, must be learned by custom, and can hardly be explained. It cannot always be omitted without harshness: as, *in old times there was a great king*. For reformation of error *there* were that thought it a part of Christian charity to instruct them. *Hooker*.—*There* are delivered in holy Scripture many weighty arguments for this doctrine. *White*.—*There* cannot in nature be a strength so great, as to make the least moveable to pass in an instant, or all together, through the least place. *Digby*.—*There* have been that have delivered themselves from their ill. *Suckling*.—In human actions *there* are no degrees described. *Taylor*.—Wherever *there* is sense or perception, there some idea is actually produced. *Locke*. 5. In composition it means that: as *thereby*, *by that*.

* **THEREABOUT**. } *adv.* [*there* and *about*, *thereabouts*.] } *abouts* is therefore less proper. 1. Near that place.—One speech I loved; 'twas *Aeneas's* tale to Dido; and *thereabout* of it especially, where he speaks of Priam's slaughter. *Shak.* 2. Nearly; near that number, quantity, or state.—Between the 14th of king John and 50th of king Edward III. containing 150 years or *thereabouts*, there was a continual bordering war. *Davies*.—Find a house to lodge 150 persons, whereof 20 or *thereabouts* may be attendants. *Milton*.—

Some three months since, or *thereabout*. *Suckling*.—Water is 13 times rarer, and its resistance less than that of quicksilver *thereabouts*. *Newton*. 3. Concerning that matter.—They were much perplexed *thereabout*. *Luke*, xxiv. 4.

* **THEREAFTER**. *adv.* [*there* and *after*.] According to that; accordingly.—Proportion the body *thereafter*. *Peachment*.—Would'st thou not eat? *thereafter* as I like The giver. *Milton*.

* **THEREAT**. *adj.* [*there* and *at*.] 1. At that; on that account.—It blusheth *thereat*, but glorieth in the contrary. *Hooker*. 2. At that place.—Broad is the way that leadeth to destruction, and many go in *thereat*. *Mat.* vii. 13.

* **THEREBY**. *adv.* [*there* and *by*.] By that; by means of that; in consequence of that.—The people may *thereby* learn what their duties are. *Hooker*.—

Him to defend *thereby*. *Spenser*.—Being come to the height, they were *thereby* brought to an absolute necessity. *Davies*.—

Nothing can need a lie; A fault, which needs it most, grows two *thereby*. *Herbert*.

—The violet on the paper will not suffer any change *thereby*. *Newton*.

* **THEREFORE**. *adv.* [*there* and *for*.] 1. For that; for this; for this reason.—

Therefore to our best mercy give yourselves. *Shak.*
Falstaff is dead,
And we must yern *therefore*. *Shak.*

—Therefore I compose myself to meet a storm.
Lucas. 2. Consequently.—He blushes; *therefore* he is guilty. *Spektor.*—The glory *therefore* was greater to conquer without powder. *West.* 3. In return for this; in recompence for this or for that.
 —What shall we have *therefore*? *Mat* xix. 27.

* *THEREFROM.* *adv.* [*there and from*] From that; from this.—Do all that is written in the law, that ye turn not aside *therefrom*. *Jos* xxiii. 6.—The leaves that spring *therefrom* grow white. *Mortimer.*

* *THEREIN.* *adv.* [*there and in*] In that; in this.—

Therein our letters do not well agree. *Shak.*
 —I find myself unable to serve you *therein* as you desire. *Bacon.*
 Possess it, and all things that *therein* live.

Milton.
 —We shall *therein* find many charms. *Dryden.*

* *THEREINTO.* *adv.* [*there and into*] Into that.—Let not them that are in the countries enter *thereinto*. *Luke.*—We will now make some entrance *thereinto*. *Bacon.*

* *THEREOF.* *adv.* [*there and of*] Of that; of this.—We yield to the stream *thereof*. *Hooker.*—

When 'tis past, not any part remains
Thereof, but the reward which virtue gains.
Denham.

—Several instances might be brought from other states *thereof*. *Swift.*

* *THEREON.* *adv.* [*there and on*] On that.—If *thereon* you rely. *Shak.*

—When he thought *thereon* he wept. *Mark* xiv. 72.—Its foundation is laid *thereon*. *Woodward.*

* *THEREOUT.* *adv.* [*there and out*] Out of that.—

Thereout a strange beast with seven heads arose. *Spenser.*

* *THERETO.* *THEREUNTO.* *adv.* [*there and to, or unto*] To that.—We yield *thereunto* our ungrudging assent. *Hooker.*—This sort of base people doth not for the most part rebel of themselves, having no heart *thereunto*. *Spenser.*

Next *thereunto* did grow a goodly tree. *Spenser.*
 That whereby we reason, live and be
 Within ourselves we strangers are *thereto*.

Davies.
 —A larger form of speech were safer than that which punctually prefixeth a constant day *thereto*. *Brown.*—What might his force have done, being brought *thereto*. *Daniel.*—That it is the appointment of God, might be argument enough to persuade us *thereunto*. *Tillotson.*

* *THEREUNDER.* *adv.* [*there and under*] Under that.—Those which come nearer unto reason, find paradise under the equinoctial line, judging that *thereunder* might be found most pleasure and the greatest fertility. *Raleigh.*

* *THEREUNTO.* See *THERETO*.

* *THEREUPON.* *adv.* [*there and upon*] 1. Upon that; in consequence of that.—What can we less *thereupon* conclude. *Hooker.*—

He hopes to find you forward;
 And *thereupon* he sends you this good news. *Shak.*

Thereupon give me your daughter. *Shak.*
 —Many times inconveniences do arise *thereupon*.

Davies.—Children are chid for having failed in good manners, and have *thereupon* reproofs and precepts heaped upon them. *Locke.*—Solon finding the people engaged in two violent factions, of the poor and the rich, and in great confusion *thereupon*, made due provisions for settling the balance of power. *Swift.* 2. Immediately.

THEREUS. See *TEREUS*, and *PHILOMELA*, N° 2.

* *THEREWITH.* *adv.* [*there and with*] 1. With that.—Germany had stricken off that which appeared corrupt in the doctrine of the church of Rome, but seemed in discipline still to retain *therewith* very great conformity. *Hooker.*—

All things without, which round about we see,
 We seek to know, and have *therewith* to do.

Davies.
Therewith at last he forc'd him to unite
 One of his grasping feet, him to defend *therewith*.

Spenser.

2. Immediately.

* *THEREWITHAL.* *adv.* [*there and withal*] 1. Over and above.—

Therewithal the execrable act
 On their late murder'd king they aggravate. *Daniel.*

2. At the same time.—

Well, give her that ring, and give *therewithal* That letter. *Shak.*

3. With that.—

His hideous tail then hurled he about,
 And *therewithal* enwrapt the nimble thighs
 Of his froth-foamy steed. *Spenser.*

4. The compounds of *there* meaning *that*, and of *bere* meaning *this*, have been for some time passing out of use, and are no longer found in elegant writings, or in any other than formulaary pieces.

THERIACA ANDROMACHI, a compound medicine made in the form of an electuary. See *PHARMACY*, *Index*.

* *THERIACAL.* *adj.* [*θηριακα*; from *theriaca*, Latin.] Medicinal; physical.—The virtuous bezoar is taken from the beast that feedeth upon the mountains, where there are *theriacal* herbs. *Bacon.*

THERITAS, a surname of Mars, in Laconia.

(1.) *THERMA*, an ancient town of Africa.
 (2.) *THERMA*, a town of Macedonia, afterwards called *THESSALONICA*, in honour of the sister of Alexander the Great.

(1.) *THERMÆ*, hot baths or bagnios. Luxury and extravagance were in nothing carried to such heights as in the thermæ of the Roman emperors. Ammian complains, that they were built to such an extent as to equal whole provinces; from which Valerius would abate, by reading *piscine* instead of *provincie*. And yet after all, the remains of some still standing are sufficient testimonies for Ammian's censure; and the accounts transmitted of their ornaments and furniture, such as being laid with precious stones (*Seneca*), set round with seats of solid silver (*Pliny*), with pipes and cisterns of the same metal (*Statius*), add to, rather than take from, the censure. The most remarkable bagnios were those of Dioclesian and Caracalla at Rome, great part of which remain at this

this day; the lofty arches, stately pillars, variety of foreign marble, curious vaulting of the roofs, great number of spacious apartments, all attract the curiosity of the traveller. They had also their summer and winter baths.

(2.) *THERMÆ SELINUNTÆ*, an ancient town of Sicily, near Selinus, famous for its hot baths; now called *Sciacta*. See *SCIACCA*.

THERMÆUS SINUS, a bay of Macedon, on the coast of *THERMA* of Thessalonica, afterwards called *Sinus Macedonicus*. *Strabo*.

THERMI, a town of Asiatic Turkey, in *Natalia*; 24 miles N. of Bursa.

(1.) *THERMIA*, an island in the Grecian Archipelago, so called from its abounding with hot springs; S. of the isle of *Zia*, and N. of *Serfanto*, near the Gulf of *Engia*. It is 12 miles long, and 5 broad. The soil is fertile and well cultivated; producing vines, (of which good wine is made,) barley, figs, cotton trees, and mulberry trees, on which are bred great numbers of silk-worms, which produce a great deal of silk. Bees, honey and wax, also abound; and partridges are so numerous, that they may be got almost gratis. The people, who are Greek Christians, are about 16,000.

(2.) *THERMIA*, an ancient city, capital of the above island, anciently very extensive and splendid; and still pretty large, abounding with many beautiful relics of its former grandeur. It is a bishop's see; and has a great trade in silk, wax, honey, &c. It is seated on the S. coast. Lon. 24. 50. E. Lat. 17. 31. N.

THERMIDOR, the 11th month in the new French Calendar. It begins on the 19th July, and ends on the 17th August. See *CALENDAR*, § 3.

(1.) *THERMODON*, a river of ancient *Bœotia*, near *Tanagra*, called also *Hæmon*. *Strabo* II.

(2.) *THERMODON*, or } a river of Cappadocia,
THERMODON, } in the country of the
Amazons; running into the *Euxine* Sea, near *Thermicyra*. It is now called *TERMEH*.

THERMO-LAMP, *n. s.* a late French invention for affording a brilliant light at a small expense, of which we gave a hint under the article *HYDROGENE GAS*. It has since been much improved by a Mr *Murdoch*, and by Messrs *Bolton* and *Watt*, and has been found to succeed completely after repeated trials, by different persons in *Glasgow*, *Port-Glasgow*, *Greenock*, &c. The principle is, that in submitting coals, wood, &c. to what is called *distillation*, a certain inflammable gas comes over, which readily burns, when a lighted match is applied to it. The instrument is thus used. An iron vessel, (if of a conical shape, with the base of the cone uppermost, so much the better), capable of containing one gallon and a half, has a lid adapted to an opening in the top of it, above five inches diameter. The lid must fit it closely, so as to allow no air to escape; and in order to keep it from being blown off, a neck should be attached to the vessel which I shall call the pot, and a cross beam should be connected to this neck at the one side, and by a joint at the other. From one corner of this pot a ground iron tube must issue at least one foot; and joined to this is another tube, made of iron, brass, lead, tin,

or white iron, which terminates in a small caulk, having one end out, and inverted in a vessel of water. From the end of the inverted vessel fix a tube, which you may convey where you please, either to a window, counter, or table; and let this last tube terminate in a number of small holes. The instrument is now fit for use. Place the pot on a common fire, and put into it about six pound weight of coals. Allow the lid to remain open till all the watery moisture is exhaled from the coals; then shut down the lid, and fix it. The air now rushes through the tube, and is washed from all impurities by the water, and then passing through the water, escapes by the window or counter tube. Set fire to it as it issues from the small holes, and it will burn with great splendor. The number of lights will be determined by the number of holes; and there is no danger from this apparatus whatever—By turning a stop-cock attached to the tubes, or by withdrawing the fire, it can be put out in an instant—It has not yet been accurately determined how long such a quantity of coals will afford a sufficiency of light for an ordinary sized shop; but it is probable, from the trials that have been made, that eight or ten pounds of coals will serve for six hours.

(1.) * *THERMOMETER*, *n. s.* [*thermometre*, Fr. *thermomètre* and *mesure*.] An instrument for measuring the heat of the air, or of any matter.—The greatest heat is about two in the afternoon, when the sun is past the meridian, as is evident from the thermometer. *Brown*.

(2.) *THERMOMETER*, ACCOUNT OF THE DISCOVERY OF THE. The thermometer was invented about the beginning of the 17th century; but, like many other useful inventions, it has been found impossible to ascertain to whom the honour of it belongs. *Boerhaave* ascribes it to *Cornelius Drebbel* of *Alcmaer*, his own countryman. *Fulgenzio* attributes it to his master *Paul Sarpi*, the great oracle of the Venetian republic; and *Viviani* gives the honour of it to *Galileo*. But all these are posthumous claims. *Sanctorio* claims this honour to himself; and his assertion is corroborated by *Borelli* and *Malpighi*, of the *Florentine* academy, whose partiality is not to be suspected in favour of a member of the *Patavina* school. Perhaps the best way to reconcile these different claims would be, to suppose that the thermometer was really invented by different persons about the same time.

(3.) *THERMOMETER*, AIR. The first form of this instrument for measuring the degrees of heat and cold, was the *air* thermometer. It is a well known fact, that air expands with heat so as to occupy more space than it does when cold, and that it is condensed by cold so as to occupy less space than when warmed, and that this expansion and condensation is greater or less according to the degree of heat or cold applied. The principle then on which the air thermometer was constructed is very simple. The air was confined in a tube by means of some coloured liquor; the liquor rose or fell according as the air became expanded or condensed. What the first form of the tube was, cannot now perhaps be well known, but the following description of the air thermometer will fully explain its nature. The air thermometer

mometer consists of a glass tube BE, *Plate 333. Fig. 1.* connected at one end with a large glass ball A, and at the other end immersed in an open vessel, or terminating in a ball DE, with a narrow orifice at D; which vessel, or ball, contains any coloured liquor that will not easily freeze. Aquafortis tinged of a fine blue colour with a solution of vitriol or copper, or spirit of wine tinged with cochineal, will answer this purpose. But the ball A must be first moderately warmed, so that a part of the air contained in it may be expelled through the orifice D; and then the liquor pressed by the weight of the atmosphere will enter the ball DE, and rise, for example, to the middle of the tube at C, at a mean temperature of the weather; and in this state the liquor by its weight, and the air included in the ball A, &c. by its elasticity, will counterbalance the weight of the atmosphere. As the surrounding air becomes warmer, the air in the ball and upper part of the tube, expanding by heat, will drive the liquor into the lower ball, and consequently its surface will descend; on the contrary, as the ambient air becomes colder, that in the ball is condensed, and the liquor pressed by the weight of the atmosphere will ascend: so that the liquor in the tube will ascend or descend more or less according to the state of the air contiguous to the instrument. To the tube is affixed a scale of the same length, divided upwards and downwards from the middle C into 100 equal parts, by means of which the ascent and descent of the liquor in the tube, and consequently the variations in the cold or heat of the atmosphere, may be observed. This instrument was extremely defective; for the air in the tube was not only affected by the heat and cold of the atmosphere, but also by its weight.

(4.) THERMOMETER, ALCOHOL. The air being found improper for measuring with accuracy the variations of heat and cold according to the form of the thermometer which was first adopted, another fluid was proposed about the middle of the 17th century, by the Florentine academy. This fluid was *spirit of wine*, or ALCOHOL, as it is now generally named. The alcohol being coloured, was inclosed in a very fine cylindrical glass tube previously exhausted of its air, having a hollow ball at one end A, and hermetically sealed at the other end D. The ball and tube are filled with rectified spirit of wine to a convenient height, as to C, when the weather is of a mean temperature, which may be done by inverting the tube into a vessel of stagnant coloured spirit, under a receiver of the air-pump, or in any other way. When the thermometer is properly filled, the end D is heated red hot with a lamp, and then hermetically sealed, leaving the included air of about one third of its natural density, to prevent the air which is in the spirit from dividing it in its expansion. To the tube is applied a scale, divided from the middle, into 100 equal parts, upwards and downwards. As spirit of wine is capable of a very considerable degree of rarefaction and condensation by heat and cold, when the heat of the atmosphere increases, the spirit dilates, and consequently rises in the tube; and when the heat decreases, the spirit descends, and the degree or quantity of the motion is shown by a scale. The

alcohol thermometer was not subject to some of the inconveniences which attended the air thermometer. In particular, it was not affected by variations in the weight of the atmosphere: accordingly it soon came into general use among philosophers. It was, at an early period, introduced into Britain by Mr Boyle. To this instrument, as then used, there are, however, many objections. The liquor was of different degrees of strength, and therefore different tubes filled with it, when exposed to the same degree of heat, would not correspond. There was also another defect: The scale which was adjusted to the thermometer did not commence at any fixed point. The highest term was adjusted to the great sunshine heats of Florence, which are too variable and undetermined; and frequently the workman formed the scale according to his own fancy. While the thermometer laboured under such disadvantages, it could not be of general use.

(5.) THERMOMETER, ATTEMPTS TO IMPROVE THE. To obtain some fixed unalterable point by which a determined scale might be discovered, to which all thermometers might be accurately adjusted, was the subject which next drew the attention of philosophers. Mr BOYLE, who seems at an early period to have studied this subject with much anxiety, proposed the freezing of the essential oil of anniseeds as a convenient point for graduating thermometers; but this opinion he soon laid aside. Dr HALLEY next proposed that thermometers should be graduated in a deep pit under ground, where the temperature both in winter and summer is pretty uniform; and that the point to which the spirit of wine should rise in such a subterraneous place should be the point from which the scale should commence. But this proposal was evidently attended with such inconveniences, that it was soon abandoned. He made experiments on the boiling point of water, of mercury, and of spirit of wine: and he seems rather to give a preference to the spirit of wine. (See *Phil. Trans. Abr. II. 34.*) He objected to the freezing of water as a fixed point, because he thought that it admitted of considerable latitude.

(6.) THERMOMETER, DISCOVERY OF SIR ISAAC NEWTON RESPECTING THE. It seems to have been referred to the all-conquering genius of Sir Isaac Newton to determine this important point, on which the accuracy and value of the thermometer depends. He chose, as fixed, those points at which water freezes and boils; the very points which the experiments of succeeding philosophers have determined to be the most fixed and convenient. Sensible of the disadvantages of spirit of wine, he tried another liquor which was homogeneous enough, capable of a considerable rarefaction about 15 times greater than spirit of wine. This was linseed oil. It has not been observed to freeze even in very great colds, and it bears a heat about four times that of water before it boils. With these advantages it was made use of by Sir Isaac Newton, who discovered by it the comparative degree of heat for boiling water, melting wax, boiling spirit of wine, and melting tin; beyond which it does not appear that this thermometer was applied. The method he used for adjusting the scale of this oil thermometer was as follows:

Supporting

Supposing the bulb, when immersed in thawing snow, to contain 10,000 parts, he found the oil expand by the heat of the human body so as to take up one 39th more space, or 10'356 such parts; and by the heat of water boiling strongly, 10'725; and by the heat of melting tin, 11'516. So that reckoning the freezing point as a common limit between heat and cold, he began his scale there, marking it 0, and the heat of the human body he made 12°; and consequently, the degrees of heat being proportional to the degrees of rarefaction, or 256 : 725 :: 12 : 34, this number 34 will express the heat of boiling water; and by the same rule, 72 that of melting tin. This thermometer was constructed in 1701. But to the application of oil as a measure of heat and cold, there are insuperable objections. It is so *viscid*, that it adheres too strongly to the sides of the tube. On this account it ascends and descends too slowly in case of a sudden heat or cold. In a sudden cold, so great a portion remains adhering to the sides of the tube after the rest has subsided, that the surface appears lower than the corresponding temperature of the air requires. An oil thermometer is therefore not a proper measure of heat and cold.

(7.) THERMOMETER, FARTHER IMPROVEMENTS OF THE. All the thermometers hitherto proposed were liable to many inconveniences, and could not be considered as exact standards for pointing out the various degrees of temperature. This led Reaumur to attempt a new one, an account of which was published in 1730 in the Memoirs of the Academy of Sciences. This thermometer was made with spirit of wine. He took a large ball and tube, the dimensions and capacities of which were known; he then graduated the tube, so that the space from one division to another might contain 1000th part of the liquor; the liquor containing 1000 parts when it stood at the freezing point. He adjusted the thermometer to the freezing point by an artificial congelation of water; then putting the ball of his thermometer and part of the tube into boiling water, he observed whether it rose 80 divisions: if it exceeded these, he changed his liquor, and by adding water lowered it, till upon trial it should just rise 80 divisions; or if the liquor, being too low, fell short of 80 divisions, he raised it by adding rectified spirit to it. The liquor thus prepared suited his purpose, and served for making a thermometer of any size, whose scale would agree with his standard. This thermometer was far from being perfect. As the bulbs were three or four inches in diameter, the surrounding ice would be melted before its temperature could be propagated to the whole spirits in the bulb, and consequently the

freezing point would be marked higher than it should be. Dr Martine accordingly found, that instead of coinciding with the 32d degree of Fahrenheit, it corresponded with the 34th, or a point a little above it. Reaumur committed a mistake also respecting the boiling point; for he thought that the spirit of wine, whether weak or strong, when immersed in boiling water, received the same degree of heat with the boiling water. But it is well known that highly rectified spirit of wine cannot be heated much beyond the 175th degree of Fahrenheit, while boiling water raises the quicksilver 37 degrees higher. There is another thermometer that goes by the name of *Reaumur's*, which shall be afterwards described. At length a different fluid was proposed, by which thermometers could be made free from most of the defects hitherto mentioned. This fluid was mercury, and seems first to have occurred to Dr HALLEY in the 17th century; but was not adopted by him on account of its having a smaller degree of expansibility than the other fluids used at that time. Boerhaave says that the mercurial thermometer was first constructed by Olaus ROEMER; but the honour of this invention is generally given to FAHRENHEIT of Amsterdam, who presented an account of it to the Royal Society of London in 1724. That we may judge the more accurately of the propriety of employing mercury, we will compare its qualities with those of the fluids already mentioned, air, alcohol, and oil. Air is the most expansible fluid, but it does not receive nor part with its heat so quickly as mercury. Alcohol does not expand much by heat. In its ordinary state it does not bear a much greater heat than 175° of Fahrenheit; but when highly rectified it can bear a greater degree of cold than any other liquor hitherto employed as a measure of temperature. At Hudson's Bay, Mr Macnab, by a mixture of vitriolic acid and snow, made it to descend to 69 below 0 of Fahrenheit. There is an inconvenience, however, attending the use of this liquor; it is not possible to get it always of the same degree of strength. As to oil, its expansion is about 15 times greater than that of alcohol; it sustains a heat of 600°, and its freezing point is so low that it has not been determined; but its viscosity renders it useless. Mercury is far superior to alcohol and oil, and is much more manageable than air. 1. As far as the experiments already made can determine, it is of all the fluids hitherto employed in the construction of thermometers, that which measures most exactly equal differences of heat by equal differences of its bulk: its dilations are in fact very nearly proportional to the augmentations of heat applied to it†. 2. Of all liquids it is the most easily freed from air.

† We have affirmed that the expansions of the bulk of quicksilver by heat are nearly (for they are not strictly so) in a regular arithmetical progression, according to the quantity of heat it is exposed to; and such seems to be the case according to the Table published by M. de Luc, at page 309. of his first volume on the Modifications of the Atmosphere. The following extract of this table shows these variations; and the first and second differences are added, in order to render these irregularities more sensible. They are such as can hardly be conceived from the nature of any substance, without the influence of extraneous and accidental causes, which may have escaped the attention of the observer; neither have they been found exactly true by Dr Crawford. M. de Luc supposes the whole heat from melting ice to that of boiling water to be divided into 80 parts; by the fractional subdivisions of which he expresses the absolute quantities of heat, answering to each 5, or 10 degrees of.

3. It is fitted to measure high degrees of heat and cold. It sustains a heat of 600° of Fahrenheit's scale, and does not congeal till it fall 39 or 40 degrees below 0. 4. It is the most sensible of any fluid to heat and cold, even air not excepted. Sir Benjamin Thompson, now Count Rumford, found that mercury was heated from the freezing to the boiling point in 58 seconds, while water took two minutes 13 seconds, and common air 10 minutes and 27 seconds. 5. Mercury is a homogeneous fluid, and every portion of it is equally dilated or contracted by equal variations of heat. Any one thermometer made of pure mercury is, *ceteris paribus*, possessed of the same properties with every other thermometer made of pure mercury. Its power of expansion is indeed about six times less than that of spirit of wine, but it is great enough to answer most of the purposes for which a thermometer is wanted.

(8.) THERMOMETER, FIXED POINTS, RULES, AND TABLES, FOR ADJUSTING THE. The fixed points which are now universally chosen for adjusting thermometers to a scale, and to one another, are the boiling and freezing water points. The boiling water point, it is well known, is not an invariable point, but varies some degrees according to the weight and temperature of the atmosphere. In an exhausted receiver, water will boil with a heat of 98° or 100°; whereas in Papin's digester it will acquire a heat of 412. Hence it appears that water will boil at a lower point, according to its height in the atmosphere, or to the weight of the column of air which presses upon it. In order to insure uniformity, therefore, in the construction of thermometers, it is now agreed that the bulb of the tube be plunged in the water when it boils violently, the barometer standing at 30 English inches (which is its mean height round London), and the temperature of the atmosphere 55°. A thermometer made in this way, with its boiling point at 212°, is called by Dr Horsley *Bird's Fahrenheit*, because Mr Bird was the first person who attended to the state of the barometer in constructing thermometers. As artists may be often obliged to adjust thermometers under very different pressures of the atmosphere, philosophers have been at pains to discover a general rule which might be applied on all occasions. M. de Luc, in his *Recherches sur les Mod. de l'Atmosphere* from a serie of experiments, has given an equation for the allowance on account of this difference, in Paris measure, which has been verified by Sir George Schuckburgh; also Dr Horsley,

Dr Maskelyne, and Sir George Schuckburgh, have adapted the equation and rules to English measures, and have reduced the allowances into tables for the use of the artist. Dr Horsley's rule, deduced from De Luc's is this:

$$\frac{99}{8990000} \text{ logs. } x - 92.804 = h.$$

where h denotes the height of a thermometer plunged in boiling water, above the point of melting ice, in degrees of Bird's Fahrenheit, and x the height of the barometer in 10ths of an inch. From this rule he has computed the following table, for finding the heights, to which a good Bird's Fahrenheit will rise when plunged in boiling water, in all states of the barometer, from 27 to 31 English inches; which will serve, among other uses, to direct instrument-makers in making a true allowance for the effect of the variation of the barometer, if they should be obliged to finish a thermometer at a time when the barometer is above or below 30 inches; though it is best to fix the boiling point when the barometer is at that height.

Equation of the Boiling Point.

The numbers in the first column of this table express heights of the quicksilver in the barometer in English inches and decimal parts: the second column shows the equation to be applied, according to the sign prefixed, to 212° of Bird's Fahrenheit, to find the true boiling point for every such state of the barometer. The boiling point for all intermediate states of the barometer may be had with sufficient accuracy, by taking proportional parts, by means of the third column of differences of the equations. See *Phil. Trans.* lxiv. art. 30; also Dr Maskelyne's *Paper*, vol. lxiv. art. 20.— In the following table we have the result of 15 different observations made by Sir George Schuckburgh compared with the result of M. de Luc's rules.

R r

Height

of Reaumur's thermometer (= 21.5 of Fahrenheit's scale); so that the whole sum of these fractions amounts exactly to the assumed number 80. They are as follow:

Reaumur's Thermometer.	Fahrenheit's Thermometer.	Quantities of heat.	First differences.	Second differences.
Degrees 80	212			
70	189.5	9.44	.16	
60	167	9.60	.10	+ .06
50	144.5	9.70	.16	— .06

(9.) THERMOMETER, IMPROVEMENTS ON THE, PROPOSED BY THE ROYAL SOCIETY. The Royal Society, fully apprised of the importance of adjusting the fixed point of thermometers, appointed a committee of seven gentlemen to consider of the best method for this purpose; and their report is published in the *Phil. Trans.* vol. lxvii. part ii. art. 37. They observed, that though the boiling point be placed so much higher on some of the thermometers now made than on others, yet this does not produce any considerable error in the observations of the weather, at least in this climate; for an error of $1\frac{1}{2}^{\circ}$ in the position of the boiling point, will make an error only of half a degree in the position of 92° and of not more than a quarter of a degree in the point of 62° . It is only in nice experiments, or in trying the heat of hot liquors, that this error in the boiling point can be of much importance. In adjusting the freezing as well as the boiling point, the quicksilver in the tube ought to be kept of the same heat as that in the ball. When the freezing point is placed at a considerable distance from the ball, the pounded ice should be piled to such a height above the ball, that the error which can arise from the quicksilver in the remaining part of the

tube, not being heated equally with that in the ball, shall be very small, or the observed point must be corrected on that account according to the following table:

Heat of Air.	Correction.
42°	.00087
52	.00174
62	.00261
72	.00348
82	.00435

The correction in this table is expressed in 1000th parts of the distance between the freezing point and the surface of the ice: e.g. if the freezing point stands seven inches above the surface of the ice, and the heat of the room is 62, the point of 32° should be placed $7 \times .00261$, or .018 of an inch lower than the observed point. A diagonal scale will facilitate this correction. The committee observe, that in trying the heat of liquors, care should be taken that the quicksilver in the tube of the thermometer be heated to the same degree as that in the ball; or if this cannot be done conveniently, the observed heat should be corrected on that account; for the manner of doing which, and a table calculated for this purpose, we must refer to their excellent report in the *Phil. Trans.* vol. lxvii. part ii. art. 37. With regard to the choice of tubes, they ought to be exactly cylindrical. But though the diameter should vary a little, it is easy to manage that matter in the manner proposed by the Abbé Nollet by making a small portion of the quicksilver, e.g. as much as fills up an inch or half an inch, slide backward and forward in the tube; and thus to find the proportions of all its inequalities, and thence to adjust the divisions to a scale of the most perfect equality. The capillary tubes are preferable to others, because they require smaller bulbs, and they are also more sensible, and less brittle. The most convenient size for common experiments has the internal diameter about the 40th or 50th of an inch, about 9 inches long, and made of thin glass, that the rise and fall of the mercury may be better seen. The next thing to be considered, is of what number of degrees or divisions the scale ought to consist, and from what point it ought to commence. As the number of the divisions of the scale is an arbitrary matter, the scales which have been employed differ much from one another in this circumstance. Fahrenheit has made 180 degrees between the freezing and boiling water point. Amontons made 73, and Sir Isaac Newton only 34. There is, however, one general maxim, which ought to be observed: That such an arithmetical number should be chosen as can easily be divided and subdivided, and that the number of divisions should be so great that there shall seldom be occasion for fractions. The number 80 chosen by Reaumur answers extremely well in this respect because it can be divided by several figures without leaving a remainder; but it is too small a number: the consequence of which is, that the degrees are placed at too great a distance from one another, and fractions must therefore be often employed. We think, therefore, that 160 would have been a more convenient number. Fahrenheit's

heit's number 180 is large enough, but when divided its quotient soon becomes an odd number. As to the point at which the scale ought to commence, various opinions have been entertained. If we knew the beginning or lowest degree of heat, all philosophers would agree, that the lowest point of the thermometer ought to be fixed there; but we know neither the lowest nor the highest degrees of heat; we observe only the intermediate parts. All that we can do then, is to begin it at some invariable point, to which thermometers made in different places may easily be adjusted. If possible too, it ought to be a point at which a natural well known body receives some remarkable change from the effects of heat or cold. Fahrenheit began his scale at the point at which snow and salt congeal. Kirwan proposes the freezing point of mercury. Sir Isaac Newton, Hales, and Reaumur adopted the freezing point of water. The objection to Fahrenheit's lowest point is, that it commences at an artificial cold never known in nature, and to which we cannot refer our feelings, for it is what few can ever experience. There would be several great advantages gained, we allow, by adopting the freezing point of mercury. It is the lowest degree of cold to which mercury can be applied as a measure; and it would render unnecessary the use of the signs plus and minus, and the extension of the scale below 0. But we object to it, that it is not a point well known; for few, comparatively speaking, who use thermometers, can have an opportunity of seeing mercury congealed. As to the other advantage to be gained by adopting the freezing point of mercury, namely, the abolition of negative numbers, we do not think it would counterbalance the advantage to be enjoyed by using a well-known point. Besides, it may be asked, Is there not a propriety in using negative numbers to express the degree of cold, which is a negative thing? Heat and cold we can only judge of by our feelings: the point then at which the scale should commence, ought to be a point which can form to us a standard of heat and cold; a point familiar to us, from being one of the most remarkable that occurs in nature, and therefore a point to which we can with most clearness and precision refer to in our minds on all occasions. This is the freezing point of water chosen by Sir Isaac Newton, which of all the general changes produced in nature by cold is the most remarkable. It is therefore the most convenient point for the thermometers to be used in the temperate and frigid zones; we may say over the globe, for even in the hottest countries of the torrid zone many of the mountains are perpetually covered with snow.

(10.) THERMOMETERS, GENERALLY USED. Having now explained the principles of the thermometer as fully as appears necessary to make it properly understood, we will now subjoin an account of those thermometers which are at present in most general use. These are Fahrenheit's, De l'Isle's, Reaumur's, and Celsius's. Fahrenheit's is used in Britain, De l'Isle's in Russia, Reaumur's in France, and Celsius's in Sweden. They are all mercurial thermometers.

I. THERMOMETER, CELSIUS'S, which is used

in Sweden, has a scale of 100 degrees from the freezing to the boiling water point.

(ii.) THERMOMETER, DE L'ISLES. In 1733, M. De l'Isle of Peterburgh constructed a mercurial thermometer on the principles of Reaumur's spirit thermometer. See Plate CCCXXXV. In his thermometer, the whole bulk of quicksilver, when immersed in boiling water, is conceived to be divided into 100,000 parts; and from this one fixed point the various degrees of heat, either above or below it, are marked in these parts on the tube or scale, by the various expansion or contraction of the quicksilver, in all imaginable varieties of heat.—Dr Martine apprehends it would have been better if De l'Isle had made the integer 100,000 parts, or fixed point, at freezing water, and from thence computed the dilations or condensations of the quicksilver in those parts; as all the common observations of the weather, &c. would have been expressed by numbers increasing as the heat increased, instead of decreasing, or counting the contrary way. However, in practice it will not be very easy to determine exactly all the divisions from the alteration of the bulk of the contained fluid. And besides, as glass itself is dilated by heat, though in a less proportion than quicksilver, it is only the excess of the dilatation of the contained fluid above that of the glass that is observed; and therefore, if different kinds of glass be differently affected by a given degree of heat, this will make a seeming difference in the dilations of the quicksilver in the thermometers constructed in the Newtonian method. Either by Reaumur's rules or De l'Isles, thermometers have stood at different degrees of the scale when immersed in thawing snow: having stood in some at 154°, while in others it has been at 156° or even 158°.

iii. THERMOMETER, DE LUC'S, OR REAUMUR'S. The thermometer now used in France is called *Reaumur's*; but it is very different from the one originally invented by Reaumur in 1730, and described in the Memoirs of the Academy of Sciences. The one invented by Reaumur was filled with spirit of wine; and though its scale was divided by the author into 80 parts, of which 0 was the freezing point and 80 the boiling water point, yet in fact 80 was only the boiling point of the spirit of wine that he employed, which, as Dr Martine computes, corresponded with 180 of Fahrenheit. But the thermometer now used in France is filled with mercury; and the boiling water point, which is at 80, corresponds with the 212th degree of Fahrenheit. The scale indeed commences at the freezing point, as the old one did. The new thermometer ought more properly to be called *De Luc's thermometer*, for it was first made by De Luc; and is in fact as different from Reaumur's as it is from Sir Isaac Newton's. When De Luc had fixed the scale, and finished an account of it, he showed the MS. to M. De la Condamine. Condamine advised him to change the number 80; remarking, that such was the inattention of physicians, that they would probably confound it with Reaumur's. De Luc's modesty, as well as a predilection for the number 80, founded, as he thought, on philosophical reasons, made

made him decline following this advice. But he found by experience that the prediction of Condamine was too well founded.

iv. THERMOMETER, FAHRENHEIT's, consists of a slender cylindrical tube and a small longitudinal bulb. To the side of the tube is annexed a scale which Fahrenheit divided into 600 parts, beginning with that of the severe cold which he had observed in Iceland in 1709, or that produced by surrounding the bulb of the thermometer with a mixture of snow or beaten ice and sal ammoniac or sea salt. This he apprehended to be the greatest degree of cold, and accordingly he marked it, as the beginning of his scale, with 0; the point at which mercury begins to boil, he conceived to show the greatest degree of heat; and this he made the limit of his scale. The distance between these two points he divided into 600 equal parts or degrees; and by trials, he found that the mercury stood at 32 of these divisions, when water just begins to freeze, or snow or ice just begins to thaw; it was therefore called the degree of the freezing point. When the tube was immersed in boiling water, the mercury rose to 212, which therefore is the boiling point, and is just 180 degrees above the former or freezing point. But the present methods of making the scale of these thermometers, which is the sort in most common use, is first to immerse the bulb of the thermometer in ice or snow just beginning to thaw, and mark the place where the mercury stands with a 32; then immerse it in boiling water, and again mark the place where the mercury stands in the tube, which mark with the num. 212, exceeding the former by 180; dividing therefore the intermediate space into 180 equal parts, will give the scale of the thermometer, and which may afterwards be continued upwards and downwards at pleasure. Other thermometers of a similar construction have been accommodated to common use, having but a portion of the above scale. They have been made of a small size and portable form, and adapted with appendages to particular purposes; and the tube with its annexed scale has often been enclosed in another thicker glass tube, also hermetically sealed, to preserve the thermometer from injury. And all these are called *Fahrenheit's thermometers*.

v. THERMOMETER, KEITH's. A new self-registering thermometer has more lately been invented by Mr Keith of Ravelstone, which we consider as the most ingenious, simple, and perfect, of any which has hitherto appeared. Its simplicity is so great, that it requires only a very short description to make it intelligible. AB, Fig. 7. Plate CCCXXXIV. is a thin glass tube about 14 inches long and $\frac{3}{16}$ ths of an inch caliber, close or hermetically sealed at top. To the lower end, which is open, there is joined the crooked glass tube BE, seven inches long, and $\frac{1}{8}$ th of an inch caliber, and open at top. The tube AB is filled with the strongest spirit of wine, and the tube BE with mercury. This is properly a spirit of wine thermometer, and the mercury is used merely to support a piece of ivory or glass, to which is affixed a wire for raising one index or depressing another, according as the mercury rises or falls. E is a small conical piece of ivory or glass, of

such a weight as to float on the surface of the mercury. To the float is joined a wire called the *float-wire*, which reaches upwards to H, where it terminates in a knee bent at right angles. The float-wire, by means of an eye at a, moves easily along the small harpsichord wire GK. LL are two indexes made of thin black oiled silk, which slide upwards or downwards with a force not more than two grains. The one placed above the knee points out the greatest rise, and the one placed below it points out the greatest fall, of the thermometer. When the instrument is to be prepared for an observation, both indexes are to be brought close to the knee H. It is evident, that when the mercury rises, the float and float-wire, which can be moved with the smallest force, will be pushed upwards till the mercury become stationary. As the knee of the float-wire moves upwards it will carry along with it the upper index L. When the mercury again subsides, it leaves the index at the highest point to which it was raised, for it will not descend by its own weight: As the mercury falls the float-wire does the same; it therefore brings along with it the lower index L, and continues to depress it till it again become stationary or ascend in the tube; in which case it leaves the lower index behind it as it had formerly left the upper. The scale to which the indexes point is placed parallel to the harpsichord wire. It may be seen more distinctly in fig. 8. Pl. 334. That the scale and indexes may not be injured by the wind and rain, a cylindrical glass cover, close at top, and made so as to exactly fit the part FG, is placed over it. The ingenious inventor has another improvement in contemplation, which, if upon trial it be found to answer, will make this thermometer as perfect as can be desired, provided there do not arise some errors from the variable pressure of the atmosphere. He proposes to adopt clock work to this thermometer, in such a way as to register with the utmost precision the degrees of heat and cold for every month, day, and minute in the year. The same ingenious gentleman has invented a self-registering barometer, upon the same principles with his self-registering thermometer. M. De Luc has described the best method of constructing a thermometer, fit for determining the temperature of the air, in the mensuration of heights by the barometer. He has also shown how to divide the scale of a thermometer, so as to adapt it for astronomical purposes in the observation of refractions. Mr Cavallo, in 1781, proposed the construction of a thermometrical barometer, which by means of boiling water might indicate the various gravity of the atmosphere, or the height of the barometer. But as he does not say that the instrument has been tried with the desired success, we need not describe it. Those who wish to know his ideas respecting it, may consult the *Philos. Transf.* vol. lxxi. p. 524.

vi. THERMOMETER, LORD CHARLES CAVALLO's. As in meteorological observations it is necessary to attend to the greatest rise and fall of the thermometer, attempts have been made to construct a thermometer which might register the greatest degree of heat, or greatest degree of cold, which took place during the absence of the observer.

server. In 1756, Lord Charles Cavendish presented to the Royal Society of London a thermometer in two different forms; the one contrived to mark the greatest degree of heat, and the other the greatest degree of cold. The first consists of a glass tube AB, Plate CCCXXXIII. fig. 3. with a cylindrical bulb B at the lower end, and capillary at the top, over which there is fixed a glass ball C. The bulb and part of the tube are filled with mercury, the top of which shows the degrees of heat as usual. The upper part of the tube above the mercury is filled with spirit of wine; the ball C is also filled with the same liquor almost to the top of the capillary tube. When the mercury rises, the spirit of wine is also raised, and falls into the ball C, which is so made that the liquor cannot return into the tube when the mercury sinks; consequently the height of the spirit of wine in the ball, added to that in the tube, will give the greatest degree of heat to which the thermometer has pointed since last observation. When a new observation is to be made, the instrument must be inclined till the liquor in the ball cover the end of the capillary tube. In this thermometer it is evident that the mercury must be affected by the weight and elasticity of the spirit of wine, and therefore it will not correspond to any of the common mercurial thermometers.—The thermometer for showing the greatest degree of cold is represented in fig. 4. Plate CCCXXXIII. by the crooked tube ABCD. This instrument is filled with spirit of wine, with the addition of as much mercury as is sufficient to fill both legs of the syphon, and about a fourth or fifth part of the hollow ball C. We are not told what the proportion of mercury was to that of spirit of wine. The degrees of heat are shown by the rise or fall of the mercury in the leg AB. The thermometer marks the greatest fall by means of the hollow ball C. When the mercury in the longer leg sinks by cold, that in the shorter will rise and run over the ball C, from which it cannot return when the mercury subsides in the shorter and rises in the longer leg. The upper part of the shorter leg will therefore be filled with a column of spirits of a length proportional to the increase of heat; the bottom or lower surface of which, by means of a proper scale, will show how much the mercury has been lower than it is; which being subtracted from the present height, will give the lowest point to which the mercury has fallen. That the thermometer may be fitted for a new observation, the mercury must be made to run back from the ball into the short leg, by inclining the tube and heating the ball.

vii. THERMOMETER, REAUMUR'S. See N° iii.

viii. THERMOMETER, RUTHERFORD'S. In 1790 a paper was given into the Royal Society of Edinburgh, describing two thermometers, newly invented by Dr John Rutherford of Middle Bailiff; the one for registering the highest, and the other for registering the lowest degree of heat to which the thermometer has risen or fallen during the absence of the observer. An account of them may be found in the 3d volume of the Transactions of the Society.

iv. THERMOMETER, SIX'S. In 1782, Mr Six proposed a self-registering thermometer, different

from Lord Charles's. It is properly a spirit of wine thermometer, though mercury is also employed for supporting an index. *a b*, Fig. 5. Pl. CCCXXXIII. is a thin tube of glass 16 inches long, and $\frac{1}{8}$ ths of an inch caliber: *c d e* and *f g b* are smaller tubes about $\frac{1}{16}$ th of an inch caliber. These three tubes are filled with highly rectified spirit of wine, except the space between *d* and *g*, which is filled with mercury. As the spirit of wine contracts or expands in the middle tube, the mercury falls or rises in the outside tubes. An index, such as that represented in Fig. 6. Pl. CCCXXXIII. is placed on the surface, within each of these tubes, so light as to float upon it. *k* is a small glass tube $\frac{1}{8}$ ths of an inch long, hermetically sealed at each end, and inclosing a piece of steel wire nearly of its own length. At each end, *l, m*, of this small tube, a short tube of black glass is fixed, of such a diameter as to pass freely up and down within either of the outside tubes of the thermometer *c c* and *f b*. From the upper end of the index is drawn a spring of glass to the fineness of a hair, and about $\frac{1}{4}$ ths of an inch long; which being placed a little oblique, presses lightly against the inner surface of the tube, and prevents the index from descending when the mercury descends. These indexes being inserted one into each of the outside tubes, it is easy to understand how they point out the greatest heat or cold that has happened in the observer's absence. When the spirit of wine in the middle tube expands, it presses down the mercury in the tube *h f*, and consequently raises it in the tube *c c*; consequently the index on the left hand tube is left behind, and marks the greatest cold, and the index in the right hand tube rises and marks the greatest heat.

(II.) THERMOMETERS, METHOD OF COMPARING TOGETHER. The above are the principal thermometers now used in Europe; and the temperatures indicated by any of them may be reduced into the corresponding degrees on any of the others by means of the following simple canons; in which R signifies the degrees on the scale of Reaumur, F those of Fahrenheit, and S those of the Swedish thermometer.

2. To convert the degrees of Reaumur into those of Fahrenheit; $\frac{R \times 9}{4} + 32 = F$.

2. To convert the degrees of Fahrenheit into those of Reaumur; $\frac{F - 32 \times 4}{9} = R$.

3. To convert the Swedish degrees into those of Fahrenheit; $\frac{S \times 9}{5} + 32 = F$.

4. To convert Fahrenheit's into Swedish; $F - \frac{32 \times 5}{9} = S$.

5. To convert Swedish degrees into those of Reaumur; $\frac{S \times 4}{5} = R$.

6. To convert Reaumur's degrees into Swedish; $R \times \frac{9}{4} = S$.

To such readers as are unacquainted with the algebraic expression of arithmetical formulæ, it will be sufficient to express one or two of these in words

words to explain their use.—1. Multiply the degree of Reaumur by 9, divide the product by 4, and to the quotient add 32, the sum expresses the degree on the scale of Fahrenheit.—2. From the degree of Fahrenheit subtract 32, multiply the remainder by 4, and divide the product by 9, the quotient is the degree according to the scale of Reaumur, &c. As many other thermometers have been used besides these, and consequently observations taken by them, it is of importance to have them placed in such a point of view, that they may be easily compared with any of these four now in general use. We therefore give them in *Plate 335*, in the same order as they were arranged by Dr Martine in his valuable *Essay on the Construction and Graduation of Thermometers*, and at the same time adding those of Celsius and de Luc. We call it by the name of *De Luc* for the sake of distinguishing it from Reaumur's spirit of wine thermometer, which may be seen in the same *Plate*. It is unnecessary to describe any of these more minutely, as they are no longer used. Those who wish to read a more particular account of them may consult Dr Martine's *Essays*.

(12.) THERMOMETERS, NEWTON'S AND MARTINE'S FURTHER IMPROVEMENTS OF. The thermometers above described are very limited in their extent; they indeed point out to the lowest degrees of heat which are commonly observed even in cold climates, but they by no means reach to those degrees of heat which are very familiar to us. The mercurial thermometer extends no farther than to 600 of Fahrenheit's scale, the heat of boiling mercury; but we are sure that the heat of solid bodies, when heated to ignition, or till they emit light, far exceeds the heat of boiling mercury. To remedy this defect, Sir Isaac Newton, whose genius overcame those obstacles which ordinary minds could not approach, attempted by an ingenious experiment to extend the scale to any degree required. Having heated a mass of iron red-hot, and exposed it to the cold air, he observed the time which elapsed till it became cold, or of the same temperature with the air; and when the heat so far decreased, that he could apply some known measure (as a thermometer) to it, he observed the degrees of heat lost in given times, and thence drew the general conclusion, that the quantities of heat lost in given small spaces are always proportional to the heat remaining in the body, reckoning the heat to be the excess by which it is warmer than the ambient air. So that taking the number of minutes which it took to cool after it came to a determined point in an arithmetical progression, the decrements of the heat of iron would be continually proportional. Having by this proportion found out the decrements of heat in a given time after it came to a known point, it was easy, by carrying upwards the same proportion to the beginning of its cooling, to determine the greatest heat which the body had acquired. This proportion of Sir Isaac's was found by Dr Martine to be somewhat inaccurate. The heat of a cooling body does not decrease exactly in proportion to that which the body retains. As the result of many observations, he found that two kinds of proportion took place, an arithmetical as well as the geometrical propor-

tion which Sir Isaac Newton had adopted; namely, that the decrements of heat were partly proportional to the times (that is, that quantities of heat are lost in equal times,) as well as partly in proportion to the remaining heat; and that if these two are added together the rule will be sufficiently accurate. By the geometrical proportion which Sir Isaac Newton adopted, he discovered the heat of metals red hot or in fusion.

(13.) THERMOMETERS, SELF-REGISTERING. See N^o v, vi, and ix.

X. THERMOMETER, WEDGWOOD'S IMPROVED. The method above mentioned, in § 12, so successfully pursued by Sir Isaac, was sufficient to form a scale of high degrees of heat, but was not convenient for practical purposes. Accordingly the ingenious Mr Josiah Wedgwood, who is well known for his great improvement in the art of pottery, applied himself in order to discover a thermometer which might be easily managed. After many experiments recorded in the *Philos. Trans.* but which it is unnecessary to detail here, he has invented a thermometer which marks with much precision the different degrees or ignition, from a dull red heat visible in the dark to the heat of an air furnace. This thermometer is extremely simple. It consists of two rulers fixed upon a smooth flat plate, a little farther asunder at the one end than at the other, leaving an open longitudinal space between them. Small pieces of alum and clay mixed together are made of such a size as just to enter at the wide end; they are then heated in the fire along with the body whose heat we wish to determine. The fire, according to the degree of heat it contains, diminishes or contracts the earthy body, so that when applied to the wide end of the gage, it will slide on towards the narrow end, less or more according to the degree of heat to which it has been exposed. That this instrument may be perfectly understood, we have given a representation of it in *Plate 334*, fig. 9. ABCD is a smooth flat plate; and EF and GH two rulers or flat pieces, a quarter of an inch thick, fixed flat upon the plate, with the sides that are towards one another made perfectly true, a little farther asunder at one end EG than at the other end FH: thus they include between them a long converging canal, which is divided on one side into a number of small equal parts, and which may be considered as performing the offices both of the tube and scale of the common thermometer. It is obvious, that if a body, so adjusted as to fit exactly at the wider end of this canal, be afterwards diminished in its bulk by fire, as the thermometer pieces are, it will then pass further in the canal, and more and more so according as the diminution is greater; and conversely, that if a body so adjusted as to pass on to the narrow end, be afterwards expanded by fire, as is the case with metals, and applied in that expanded state to the scale, it will not pass so far; and that the divisions on the side will be the measures of the expansions of the one, as of the contractions of the other, reckoning in both cases from that point to which the body was adjusted at first. I is the body whose alteration of bulk is thus to be measured. This is to be gently pushed or slid along towards the end FH, till it is stopped by the converging sides

sides of the canal. Mr Wedgwood at first used clay for his thermometer pieces; but he soon found it impossible to procure fresh supplies of the same quality. He therefore had recourse to an artificial preparation. As the earth of alum, or *alumina*, is the pure argillaceous earth to which all clays owe their property of diminishing in the fire, he mixed some of this earth with the clay, and found it to answer his wishes completely, both in procuring the necessary degree of diminution, and of increasing its unvitrescibility. The only way of ascertaining the proportion of alum earth to be added is by repeated trials. Mr Wedgwood found that 10 cwt. of the porcelain clay of Cornwall required all the earth that was afforded by 5 cwt. of alum. But as the clay or alum differs in quality, the proportion will also differ. There can now, however, be no difficulty in making thermometers of this kind, as common clay answers the purpose very well, and alum earth can easily be procured. Those who wish to see a more particular account of this subject may peruse Mr Wedgwood's papers in the *Philos. Trans.* for 1782, 1784, and 1786. As Mr Wedgwood's thermometer begins at the lowest degree of ignition, and Fahrenheit's goes no higher than the boiling point of mercury, Mr Wedgwood continued to fill up the interval of the scale by using a piece of silver instead of his common thermometer pieces; and that in this way he has found that 130 degrees of Fahrenheit are equal to one of his. He has accordingly, by observing this proportion, continued Fahrenheit's scale to the top of his own. We are now therefore enabled to give a scale of heat from the highest degree of heat produced by an air furnace to the greatest degree of cold hitherto known, which was produced at Hudson's Bay in Dec. 1784, by a mixture of vitriolic acid and snow. Of the remarkable degrees between these extreme points we shall lay before our readers

A SCALE.

	<i>Fahren- heit's scale.</i>	<i>Wedg- wood's scale.</i>
Extremity of Wedgwood's scale	32277°	240°
Greatest heat of his small air-furnace	21877	160
Cast iron melts	17977	130
Greatest heat of a common smith's forge	17327	125
Welding heat of iron, greatest	13427	95
least	12777	90
Fine gold melts	5237	32
Fine silver melts	4717	28
Swedish copper melts	4587	27
Brass melts	3807	21
Heat by which his enamel colours are burnt on	1857	6
Red-heat fully visible in day-light	1077	0
Red-heat fully visible in the dark	947	1
MERCURY BOILS, also linseed and other expressed oils	600	
Oil of turpentine boils	560	
Sulphuric acid boils	546	
Lead melts	540	
Bismuth melts	460	
Tin melts	408	
Sulphur melts	244	
Nitrous acid boils	212	

*Fahrenheit's
scale.*

Cows milk boils	213
WATER BOILS	212
Human urine boils	206
Brandy boils	190
Alcohol boils	174
Serum of blood and white of eggs harden	156
Bees wax melts	142
Heat of the air near Senegal sometimes	111
Hens hatch eggs about	108
Heat of birds from	103 to 111
Heat of domestic quadrupeds from	100 to 103
Heat of the human body	92 to 99
Heat of a swarm of bees	97
Heat of the ocean under the equator	80
Butter melts	74
Sulphuric acid of the specific gravity of 1780 freezes at	45
Oil of olives begins to congeal	43
Heat of hedgehogs and marmots in a torpid state	39½
WATER FREEZES and snow melts	32
Milk freezes	30
Urine and common vinegar freezes	28
Human blood freezes	25
Strong wines freeze	20
A mixture of one part of alcohol and three parts of water freezes	7
A mixture of snow and salt freezes	0 to 4
Brandy, or a mixture of equal parts of alcohol and water freezes	— 7
Spirit of wine in Reaumur's thermometer froze at Torneo	— 34
MERCURY FREEZES	— 39 or 40
Cold produced by Mr Macnab at Hudson's Bay by a mixture of vitriolic acid and snow	— 69

(1.) THERMOMETRIC, *adj.* Of or belonging to the THERMOMETER, or to the measurement of heat. See THERMOMETRICAL.

(2.) THERMOMETRIC, *n. s.* is also used by the modern French chemists, *substantively*, for the unknown principle of Heat; or Caloric. But their theory is called in question by Dr Gleig, upon facts afforded by the recent discoveries of Dr Herschel.

* THERMOMETRICAL. *adj.* [from *thermo-* meter.] Relating to the measure of heat.—His heat raises the liquor in the *thermometrical* tubes *Cheyne*.

THERMOPYLÆ, in ancient geography, a narrow pass or defile, between the Sinus Maliacus on the E. and steep mountains, reaching to Oeta, made dreadful by impassable woods, on the W.; leading from Theffaly to Locri and Bœotia. These mountains divide Greece in the middle, in the same manner as the Appenines do Italy; forming one continued ridge from Leucate on the W. to the sea on the E. with thickets and rocks interspersed; that persons even prepared for travelling, much less an army encumbered with baggage, cannot easily find a commodious passage. In the valley verging towards the Sinus Maliacus, the road is only 60 paces broad; the only military way for an army to pass, if not obstructed by an enemy; and therefore the place is called *Pylæ*, and

and by others, on account of its hot water, *Thermopylae*. It is famous for the brave stand made by LEONIDAS and 300 Spartans against the whole army of Persia; and also for the Amphyctiones, the common council or states general of Greece, assembling there twice a-year, in spring and autumn. See SPARTA, § 5.

* THERMOSCOPE. *n. f.* [*thermoscope*, French; *θερμός* and *σκοπία*.] An instrument by which the degrees of heat are discovered; a thermometer.—By the trial of the *thermoscope*, fishes have more heat than the element which they swim in. *Arab.*

THERMUM, an ancient town of Ætolia, on the Evenus. *Polyb.* 5.

THERO, or } tyrant of Agrigentum, but no
THERON, } tyrant in the modern sense. See
AGRIGENTUM, § 2; CARTHAGE, § 4; and SY-
RACUSE, § 3.

THERONDELS, a town of France, in the dep. of Aveyron, 3 miles NE. of Mur.

THEROUANNE, an ancient town of France, in the dep. of the Straits of Calais, and late capital of the Morini. It was taken and demolished in 1653 by Charles V. It is 6 miles S. of St Omer, and 6 W. of Aire.

THERPANDER. See TERPANDER.

THERSANDER, a son of Polynices, and grandson of OEDIPUS, king of Thebes. He went with the Greeks to the Trojan war, and was killed by TELEPHUS. *Virg. Æn.* v.

THERSILOCHUS, a general of the Pæonians, in the Trojan war. He was killed by Achilles. *Virg. Æn.* vi.

THERSIPPUS, an Athenian dramatic writer, who died in A. A. C. 954.

THERSITES, an officer among the Greeks during the Trojan war, infamous for his scurrility, and remarkable for his deformity. He ridiculed the chief generals, particularly Agamemnon, Ulysses, and Achilles; but the latter killed him with a stroke of his fist, for ridiculing his grief for PENTHESILEA. *Hom. Il.* ii. 212.

THERVERTON, or THEVERTON, a town of England, N. of Exeter, seated on the Exeter. It is a great thoroughfare.

* THESE, *pronoun*, the plural of *this*. 1. Opposed to *those*, or to some others.—

Did we for *these* barbarians plant and sow
On *these*, on *these* our happy fields bestow?

Dryden.

2. *These* relates to the persons or things last mentioned; and *those* to the first.—More rain falls in June and July than in December and January; but it makes a much greater show upon the earth in *these* months than in *those*, because it lies longer upon it. *Woodward.*

THESEA, in antiquity, feasts celebrated by the Athenians in honour of THESEUS, consisting of sports and games, with mirth and banquets. Such as were poor and unable to contribute to them were entertained at the public expence.

THESEIDÆ, a name given the Athenians from THESEUS. *Virg. Geor.* ii. 213.

THESEUS, a famous hero of antiquity, ranked among the demi-gods. He was the son of Ægeus king of Athens. He threw Sciron, a cruel robber, down a precipice; fastened Procrustes tyrant of Attica to a bending pine, which, being let loose,

tore him afunder; killed the Minotaur kept in the labyrinth by king Minos, in Crete; and by the assistance of that prince's daughter, ARIADNE, who gave him a clue, escaped out of that labyrinth, and sailed with his deliverer to the isle of Naxos, where he had the ingratitude to leave her. Theseus afterwards overcame the Centaurs, subdued the Thebans, and defeated the Amazons. He assisted his friend PIRITHOUS in his expedition to hell to carry off Proserpine; but was imprisoned by Pluto, till he was released by Hercules. He also established the ISTHMEAN GAMES, in honour of Neptune; united the twelve cities of Attica; and founded a republic there, 1236 B. C. Some time after, taking a voyage into Epirus, he was seized by Aidonius king of the Molossians; meanwhile Menestheus rendered himself master of Athens. But at length Theseus being released from prison, retired to Scyros, where king Lycomedes caused him to be thrown from the top of a rock. Theseus had several wives; the first of whom was the beautiful Helena; the second Hippolyte, queen of the Amazons, by whom he had Hippolytus; and the last, Phædra, sister to Ariadne, who punished him for his infidelity to her sister, by her incestuous passion for his son Hippolytus. See ÆGEUS, ARIADNE, HIPPOLYTUS, MINOS, MINOTAUR, PHÆDRA, &c.

(1.) * THESIS. *n. f.* [*these*, Fr. *thesis*.] A position; something laid down, affirmatively or negatively.

An honest, but a simpler pair,

May serve to make this *thesis* clear.

Prior.

(2.) A THESIS is a general position which a person advances, and offers to maintain. In taking degrees in universities, the candidates are generally obliged to write a thesis which they must afterwards defend.

THESIUM, BASE FLUELLIN, in botany, a genus of plants belonging to the class of *pentandria*, and order of *monogynia*. The calyx is monophyllous, with the stamina inserted into it: there is only one seed, which is inferior. There are 17 species, one of which is a British plant, viz.

THESIUM LINOPHYLLUM, or BASTARD TOAD FLAX. It has a foliaceous panicle, with linear leaves, and flowers in June and July.

* THESMOTHETE. *n. f.* [*thesmotebete*, Fr. *thesmotebete*; *θεσμός* and *τις*.] A lawgiver.

THESPIA, an ancient town of Bæotia, destroyed by the Thebans. See THEBES, N° II. § 3.

THESPIA, a famous Greek tragic poet, and the first representer of tragedy at Athens. He carried his troop from village to village in a waggon, from which they performed their pieces. *Alceus* was the first tragedy they performed at Athens, 536 B. C. See THEATRE, § 2.

THESPIUS, king of THESPYA, in Bæotia, who had 50 daughters, all of whom Hercules got with child, of sons each, in one night.

THESPROTIA, an ancient country of Epirus, on the sea-coast, on the W. of Ambracia; famous for its oracle of DODONA. It was seated between the Acheron and the Cocytus. *Hom.*

THESSALIA. See THESSALY.

(1.) THESSALIAN, *adj.* Of or from THESSALY.

(2.) THESSALIAN CHAIR, so called from *Thes-*
saly.

faly, where chairs of this figure were most in use; it is recommended by Hippocrates in place of a machine for reducing a recent luxation of a shoulder bone. The back of this chair is perpendicular to the seat, as Galen tells us: by which construction it is accommodated to the operation.

(3.) **THESSALIANS**, *n. f.* the people of **THESSALY**.

THESSALLOTIS, a province of ancient **THESSALY**, lying on the S. bank of the Peneus.

THESSALONIANS, the people of **THESSALONICA**. St Paul early planted the gospel among them, and wrote two *Epistles* to them. See *SCRIPTURE*, *Secd. X.*

(1.) **THESSALONICA**, the daughter of Philip I. king of Macedon, and sister of Alexander the Great. She was married to **CASSANDER**, and bore him 3 sons, Philip IV. Antipater and Alexander V. but she was murdered by her son Antipater. See **MACEDON**, § 17.

(2.) **THESSALONICA**, a city of Macedonia, so named from the above princess, being anciently called **THERMA**. It was once very powerful, and early received the Christian faith. It is a city of importance, and now called *Salonichi*. See **SALONICHI**.

(1.) **THESSALUS**, a son of Hercules and Caliope, the daughter of Eurypilus, who settled in **THESSALY** and gave name to it.

(2.) **THESSALUS**, a celebrated physician of Lydia, who flourished at Rome, in the reign of Nero, and came into great business among the Patricians. He adopted the system of **THEMISON**, the founder of the **METHODISTS**, and was rather more violent than Themison himself, in treating all his predecessors and contemporaries with contempt. See **MEDICINE**, § 71.

THESSALY, a country of Greece, whose boundaries have been different at different periods. It was bounded on the S. by the southern parts of Greece, or *Græcia Propria*; E. by the *Ægean*; N. by Macedonia and Mygdonia; and W. by Illyricum and Epirus. It was generally divided into four provinces, **THESSALOTIS**, **Pelagiotis**, **Mizotis**, and **Phthiotis**, to which some add *Magnæcia*. It has been severally called **ÆMONIA**, *Pelagium*, **ARGOS**, **HELLAS**, *Argeia*, *Dryopis*, **PELAGIA**, *Pyrrheia*, &c. The name of **Thessaly** is derived from **THESSALUS**, its first monarch. **Thessaly** is famous for a deluge which happened here in the age of Deucalion. Its mountains and cities are also celebrated, such as **OLYMPUS**, **PEIRON**, **Ossa**, **Larissa**, &c. The Argonauts were partly natives of **Thessaly**. The inhabitants of the country passed for a treacherous nation, so that false money was called *Thessalian coin*, and a perfidious action a *Thessalian deceit*. **Thessaly** was originally governed by kings till it became subject to the Macedonian monarchs. The cavalry was universally esteemed, and the people were superstitious and addicted to the study of magic. (*Lum. 6. v. 438, &c.; Dionys. 219; Cart. 3. c. 2; Eريان, F. H. 3. c. 1; Paus. 4. c. 36. l. 10. c. 1; Helia, 2. c. 3.; Justin 7. c. 6; Diod. 4.*) **Thessaly** is now called **JANNA**, a province of European Turkey, bounded by Macedonia on the N.; by the archipelago on the E.; by Achaia or Livadia on the S. and by Epirus on the W.

VOL. XXII. PART I.

THESTIA, a town of *Ætolia*, between the *Euenus* and *Achelous*. *Polyb. 5.*

THESTIUS, the son of Parthæon, king of Pleuron, and father of **ALTHÆA**, **Plexippus**, and **Toxens**.

THESTOR, the son of Idmon and Laothoe, and father of **CALCHAS**.

THETÆ. See **PELATÆ**.

THETFORD, a borough of England, in Norfolk, with a market on Sat. seated on the Little Ouse. The Lent assizes are held in it. It has 3 churches, a free school, and town-hall. It is governed by a mayor, 10 aldermen, and 20 counsellors. It was anciently a large city, and had 40 churches and several monasteries, but was destroyed during the wars of the Danes and Saxons. It has a good trade in wool; and is 30 miles SSE. of Lynn Regis; and 80 NE. of London. Lon. 0. 50. E. Lat. 52. 28. N.

THETHMOSIS, king of Egypt. See **EGYPT**, § 8.

THETIS, in Pagan mythology, the wife of **OCEANUS**, and the mother of **Nereus** and **Doris**, who were married to each other; and from this marriage sprung the nymphs of the earth and sea. Among the sea nymphs there was one named *Thetis the Younger*, who excelled all the rest in beauty, and for whom Jupiter conceived such a passion, that he resolved to espouse her: but being informed by the *Destinies*, that she would bring forth a son who would rise above his father, he married her to **Peleus**. To their nuptials all the gods and goddesses were invited except **Discord**, who, to be revenged for this contempt, threw a golden apple into the assembly, on which was engraven, *For the fairest*. **Juno**, **Pallas**, and **Venus**, disputed for this apple; but **Paris** being chosen to decide the difference, adjudged it to **Venus**. From this marriage of **Thetis** and **Peleus** sprung **ACHILLES**.

THEU, a town of France, in the dep. of the Ourte, and late bishopric of Liege. Near it the Austrians were defeated by the French republicans in 1794. It is 3 miles W. of Spa.

THEVA, a town of Hindostan, in the Carnatic; 60 miles WSW. of Tiagur.

(1.) **THEVENOT**, Melchisedec, librarian to the king of France, and a celebrated writer of travels, was born at Paris in 1621. He travelled through a considerable part of Europe and into Asia. He laid down rules, and invented an instrument, for finding of the **LONGITUDE**, and the declination of the **NEEDLE**. The dearest employment of his life was the collection of scarce books, of which he formed a very valuable collection. He assisted at a conclave held on the death of Pope Innocent X. and was the French envoy at Genoa. He died in Oct. 1692, aged 71. His *Travels* into the Levant, &c. were published in English, in 1681, folio; and in French at Paris, in 1663, folio. He wrote also *L'Art de Nager*, the Art of Swimming, 12mo, 1696.

(2.) **THEVENOT**, John, another celebrated traveller, who travelled in Asia, and published an account of his travels, in 3 vols 4to, and in 5 vols 12mo. He died in 1667.

THEVERTON. See **THEVERTON**.

THEURGIA, [Lat] See **THEURGY**.

S s

* **THEURGY**.

(1.) * **THEURGY**. *u. s.* [*theurgy*.] The power of doing supernatural things by lawful means, as by prayer to God. *Bailey*.

(2.) **THEURGY**, in ancient superstition, was that sacred part of magic sometimes called *white magic*, or the *white art*, in opposition to *NECROMANCY*, or the *black art*. The word is formed from *θεος*, God, and *εργον*, work; *q. d.* the art of doing divine things, or things which God alone can do: or the power of working extraordinary and supernatural things, by invoking the names of God, saints, angels, &c. Accordingly, those who have written of magic in general, divide it into three parts: the first whereof is called *theurgy*, as operating by divine or celestial means; the 2d, *natural magic*, performed by the powers of nature; and the 3d, comprehending *neecromancy*, *sorcery*, and *witchcraft* or *magic*, performed by the assistance of demons or departed men. See **MAGIC**, § III.

(1.) **TILUTIS**, a town and district of Arcadia.

(2.) **THEURIS**, in fabulous history, king of the above territory, went to the Trojan war, and fought with Agamemnon, and when Minerva came to assist the Greek monarch, is said to have wounded the goddess in the thigh! He immediately went home, where Minerva appeared to him, and showed him the wound; on which he died. This story is seriously told by Pausanias, viii. c. 28.

* **THEW**. *u. s.* [*theaw*, Saxon.] 1. Quality; manners; customs; habit of life; form of behaviour. Obsolete.—

Yec worthy been for worth and gentle *theaws*.

Spenser.

To be upbrought in gentle *theaws*.

Spenser.

2. In *Shakespeare* it seems to signify brawn, or bulk, from the Saxon *theaw*, *the thigh*, or some such meaning.—

Nature crescent does not grow alone

in *theaws* and bulk.

Shak.

—Cue I for the limbs, the *theaws*, the stature, bulk and big semblance of a man? *Shak.*

* **THEWED**. *adj.* [from *theaw*.] Educated; habituated; accustomed. Obsolete.—

Yet would not seem too rude, and *theawed* in ill.

Spenser.

* **THEY**. *u. s.* in the oblique case *them*, the plural of *he* or *she* [*thi*, Saxon.] 1. The men; the women; the persons.—*They* are in a most warlike preparation. *Shak.*—

The Spartans

Must now confess, if *they* have any goodness,

The trial just and noble.

Shak.

They eat on beds of silk and gold.

Ben Jon.

They know

To joy the friend and grapple with the foe.

Prior.

2. Those men; those women; opposed to some others.—

Only *they*,

That come to hear a merry play,

Will be deceiv'd.

Shak.

'Tis remarkable, that *they*

Talk most who have the least to say.

Prior.

3. It is used indefinitely; as the French *on dit*.—

There, as *they* say, perpetual night is found

In silence brooding.

Dryden.

4. [The plural of *this*, *that*, or *it*.] The things,—

Thoughts, which should indeed have died
With them, *they* think on.

Shak.

In her hair *they* look'd more gay,

Than growing in their native bed.

Prior.

THEYCHEEK. } two lakes of N. Ame-

THEYCHOLEKED. } rica; 1. in Lon. 109.

W. Lat. 69° N.; the latter in Lon. 102. 5. W.

Lat. 64° N.

THEYDON BOIS. } 3 small towns of Eng.

THEYDON GARNON. } land in Essex, in Ep-

THEYDON MONT. } ping Foren; W. of the

Rhodeses.

THEYSSE, a river of Hungary, which runs in-

to the Danube; 19 miles NW. of Belgrade.

THEZE, a town of France, in the dep. of the Lower Pyrenees: 12 miles N. of Pau, and 13 E. of Orthez.

THIACAR, a town of Thibet, 25 leagues SE. of Liala.

THIAN, a town of Germany, in Ty. ol, 13 miles W. of Bolzano.

THIAUCOURT, a town of France, in the dep. of Meurthe, 14 miles SW. of Metz.

THIBERVILLE, a town of France, in the dep. of the Eure, 7 miles W. of Bernay, and 9 E. of Lisieux.

THIBET. See **TIBET**.

* **THIBLE**. *u. s.* A lice; a scummer; a spatula. *Aist.*

THICHALLIN. See **SCHEHALLIEN**.

(1.) * **THICK**. *adj.* [*thicke*, Sax. *dick*, Dutch; *dyck*, Danish; *thickur*, Hindick.] 1. Not thin.

2. Dense; not rare; gross; crass.—God caused the wind to blow, to cleanse the air of *thick* vapours and unwholesome mist. *Raleigh*.—To warm milk pour spirit of nitre: the milk presently after will become *thicker*. *Arbutnot*. 3. Not clear; not transparent; muddy; feculent.—

Thick ey'd musing and curs'd melancholy.

Shak.

—A fermentation makes all the wine in the vessel *thick* or foul. *Temple*—

Encumber'd in the mud, their oars divide,

With heavy strokes, the *thick* unwieldy tide.

Addison.

4. Great in circumference; not slender.—My little finger shall be *thicker* than his loins. 1 *Kings*, xii.—Thou art waxen fat; thou art grown *thick*. *Deut.* xxxii. 15. 5. Deep; noting the third dimension: as, a plank four feet long, two feet broad, and five inches *thick*. 6. Noting comparative bulk; as, the door was three inches *thick*.

7. Frequent; in quick succession; with little intermission.—They charged the defendants with their small shot and Turkey arrows as *thick* as hail. *Knollys*.—Favours came *thick* upon him. *Watson*.—This being once a week, came too *thick* and too often about. *Spelman*—

His pits as *thick* as handgrenados flew.

Reascommas.

Not *thicker* billows beat the Libyan main.

Nor *thicker* harvests on rich Hermus rise. *En.*

8. Close; not divided by much space; crowded.

Amid the *thickest* woods.

Spenser.

—The people were gathered *thick* together. *Luke*, xi. 29.—

Conquists he strew'd where'er he came,

Thick as the galaxy with stars.

Dryden.

—Objects

— Objects of pain or pleasure do not lie *thick* enough together in life. *Addison*. 9. Not easily pervious; set with things close to each other.—

Though *thick* of bars that give a scanty light.

Dryden.

Black was the forest, *thick* with beech it stood.

Dryden.

Amount of rough ascent and *thick* with wood.

Dryden.

—Bring it near some *thick-headed* tree. *Mortimer*.

10. Coarse; not thin.—A pomegranate, or some such *thick* coated fruit *Bacon*.—*Thick* leaved weeds among the grass. *Mortimer*. 11. Without proper intervals of articulation.—

Speaking *thick*, which nature made his blemish,

Became the accents of the valiant,

To seem like him. *Shak*.

(1.) * *THICK*. *n. s.* [from the adjective.] 1. The thickest part, or time when any thing is thickest.

—Archimedes having blown up a great part of the wall of the Spanish station, in the *thick* of the dust and smoke entered his men. *Knolles*. 2. *THICK*

AND *THIN*. Whatever is in the way.—

Through *thick* and *thin* she followed him.

Hudibras.

For a small sum to swear through *thick* and *thin*.

Dryden.

(3.) * *THICK*. *adv.* [It is not always easy to distinguish the adverb from the adjective.] 1. Frequently; fast.—

'Tis some disaster,

Or else he would not send so *thick*. *Denham*.

I hear the trampling of *thick* beating feet.

Dryden.

2. Closely.—

The vale an iron harvest seems to yield.

Of *thick* sprung lances in a waving field. *Dryd*.

—A little plat of ground *thick* sown, is better than a great field which lies fallow. *Norris*. 3. To a great depth.—If you apply it *thick* spread. *Wiser*.

Cato has piercing eyes, and will discern

Our frauds, unless they're cover'd *thick*. *Addis*.

4. *THICK* AND *THREEFOLD*. In quick succession; in great numbers.—They came *thick* and *threefold* for a time. *L'Estrange*.

(4.) * *THICK*. *n. s.* A thicket; a place full of bushes.—

Mists and rotten fogs

Hang in the gloomy *thicks*. *Drayton*.

(1.) * *To THICKEN*. *v. a.* [from *thick*.] 1. To make thick. 2. To make close; to fill up interstices.—Waters evaporated and mounted up into the air, *thicken* and cool it. *Woodward*. 3. To condense; to make to concrete.—The white of an egg gradually dissolves by heat, exceeding the heat of a human body; a greater degree of heat will *thicken* it into a white mass. *Arbutnot*.

4. To strengthen; to confirm.—

This may help to *thicken* other proofs,

That do demonstrate thinly. *Shak*.

5. To make frequent. 6. To make close or numerous; as, to *thicken* the ranks.

(2.) * *To THICKEN*. *v. n.* 1. To grow thick.

2. To grow dense or muddy.—

Thy lustre *thickens*

When he shines by. *Shak*.

3. To concrete; to be consolidated.—

Water flogt gives birth
To grass and plants, and *thickens* into earth.

Prior.

4. To grow close or numerous.—

The press of people *thickens*. *Dryden*.

—He saw the crowd *thickening*. *Tatler*. 5. To grow quick.—

The combat *thickens*, like the storm. *Addis*.

* *THICKET*. *n. s.* [*thicket*, Saxon.] A close knot or tuft of trees; a close wood or copse.—

I drew you hither,

Into the chiefest *thicket* of the park. *Shak*.

Within a *thicket* I repos'd. *Chapman*.

—Thus, or any of his, could not in haste creep through those desert regions, which the length of 130 years after the flood had fortified with *thickets*.

Raleigh.—

How often, from the steep

Of echoing hill, or *thicket*, have we heard

Cælestial voices, to the midnight air,

Singing their Creator? *Milton*.

My brothers slept to the next *thicket* side

To bring me berries. *Milton*.

He to *thickets* fled

Conceal'd from aiming spears. *Dryden*.

I've known young Juba rile before the sun,

To beat the *thicket* where the tyger slept. *Cato*.

THICK-HEADED, dull, stupid; applied to trees,

full of leaves at the top. See *THICK*, § 1. *def*.

9. * *THICKLY*. *adv.* [from *thick*.] 1. Deeply; to a great quantity.—Mending cracked receivers,

having *thickly* overlaid them with diachylon. *Boyle*.

2. Closely; in quick succession.

* *THICKNESS*. *n. s.* [from *thick*.] 1. The state of being thick; density. 2. Quantity of matter interposed; space taken up by matter interposed.—In the darkened room, against the hole at which the light entered, I could easily see through the whole *thickness* of my hand the motions of a body placed beyond it. *Boyle*. 3. Quantity laid on quantity to some considerable depth.—Poll a tree, and cover it some *thickness* with clay on the top. *Bacon*. 4. Confidence; grossness; not rareness; ipsititude.—Nitre mingled with water to the *thickness* of honey, and anointed on the bud after the vine is cut, it will sprout forth. *Bacon*.—Diseases imagined to come from the *thickness* of blood, come often from the contrary cause. *Arbutnot*. 5. Imperviousness; closeness.—The *thickness* of the shades drew into them all the birds. *Addison*. 6. Want of sharpness; want of quickness.—A person found himself, being at some times subject to a *thickness* of hearing. *Holder*.—Between the weakness of my eyes and *thickness* of hearing, I should lose the greatest pleasure. *Swift*.

THICKNESS, Philip, Etq. an eminent English writer, highly esteemed for his honour, probity, and feeling for persons in distress, as well as for his literary talents, and social virtues. He was some time lieutenant governor of Landguard Fort. He wrote, 1. *Observations on the French Nation*: 8vo. 2. *A Year's Journey through France and Spain*; 1777. 8vo. 3. *The New Bath Guide*; 1778. 4. *Valetudinarian's Bath Guide*; 1780. 5. *Queries to Lrd Audley*; (his son,) 1781. 6. *A Year's Journey through the Pais Bas and the Austrian Netherlands*; in 2 vols 8vo; 1784. 7. *A*

A Letter to the Earl of Coventry; 1785. 8. Letter to Dr James Mackittrick Adair; 1787. 9. Memoirs and Anecdotes of Himself; 1788. 10. Memoirs of Mr Gainborough; 1788. 11. Junius Discovered; 1789. 12. Letter to C. Bonnor, Esq. deputy Comptroller of the Post-Office; 1792. He died suddenly, in his coach, beside his lady, near Saumers, on a jaunt to Paris, Nov. 28th, 1792.

* **THICK-SCULLED.** *adj.* Dull; stupid.—
They're pleased to hear their *thick-scul'd* judges cry.
This fighting fool, this *thick-scul'd* hero,
This blunt unthinking instrument of death.

Dryden.

(1.) * **THICKSET.** *adj.* [*thick* and *set*.] Close planted.—
His neck shoots up a *thickset* thorny wood.

Dryden.

—The world is *thickset* with the numerous productions of the creatures. *Greav.*
(2.) **THICKSET.** *n. f.* in commerce, a kind of ribbed tustian. *Ash.*

* **THICKSKIN.** *n. f.* [*thick* and *skin*.] A coarse gross man; a numskul.—
The shallow'st *thickskin* of that fort. *Shak.*

THEBLEMONT, a town of France, in the dep. of Marne; 7½ miles ESE. of Vitry.

* **THIEF.** *n. f.* [*thiub*, Gothick; *thief*, Saxon; *dief*, Dutch. It was anciently written *thieef*, and appears to have been of two syllables; *thie* was wont to be taken for *thrift*, so that *thie* of is he that takes of or from a man his *thie*, that is, his *thrift* or means whereby he *thrives*.] 1. One who takes what belongs to another; *the thief* steals by secrecy, and *the robber* by violence; but these senses are confounded.—
Take heed, for *thieves* do foot by night. *Shak.*
—He was a *thief*, and had the bag. *John.*
Can you think I owe a *thief* my life,
Because he took it not by force? *Dryden.*

2. An excessiveness in the snuff of a candle.—
Th' oil sparkles, *thieves* about the snuff do grow.
* **THIEF CATCHER.** *THIEF-TAKER.* *n. f.* [*thief* and *catch*, *thief* and *lead*, *thief* and *take*.] One whose business is to detect thieves, and bring them to justice.—A wolf passed by as the *thief leaders* were dragging a fox to execution. *L'Estrange.*

My ev'nings all I would with sharpers spend,
And make the *thief catcher* my bosom friend.

Bramston.

THIEF-LIKE. *adj.* [*thief* and *like*.] Ugly; ill-favoured; resembling a thief.
* **THIEF-TAKER.** See **THIEF-CATCHER.**

THIEL, or **TIEL,** a city of Holland, in the department of the Rhine, and ci-devant province of Dutch Guelderland, seated on the north bank of the Wahal, in the island of **TIELER-WIERT.** In its suburb of Santwyck it has a strong fort, which was besieged in vain by the Spaniards in 1628; but was destroyed by the French in 1674, but since rebuilt. It is seated in a marsh, 15 miles W. of Nimeguen, and 18 NNE. of Bois-le-duc.

(1.) **THIELE,** a river of Switzerland, which rises in the Vaudois, runs through the lakes, of Neufchatel and Bienné; and falls into the Aar, 3 miles below Buren.

(2.) **THIELE,** a town of Switzerland, in Neufchatel, between the lakes of Neufchatel and Bienné, 5 miles NE. of Neufchatel.
THIELIN, John Philip, an eminent painter, born at Mechlin, in 1618. He was a nobleman of considerable fortune, and was employed by the king of Spain. He excelled in painting flowers highly natural. He had 3 daughters, who inherited his genius, and painted equally well. He died in 1667.

THIELLEN, a town of Switzerland, in the canton of Uri, 2 miles NW. of Altorf.

THIENE, a town of Maritime Austria, in the Vicentino, 9 miles NW. of Vicenza.

THIERRI I. or **THEODORIC I.** king of France, the 3d son of Clovis II.; was dethroned by Childeric, but recovered his throne, and died in 1791. See **FRANCE**, § 9.

THIERRY II. or the son of Dagobert III. was **THIERRY II.** educated in a monastery; but was raised to the throne of France by Charles Martel, in 720. He died in 737. See **FRANCE**, § 10.

(1.) **THIERS,** John Baptist, a learned divine of the Sorbonne, born at Chartres, in 1686. After being a professor in the university of Paris, he was made Bp. of Champrom, in Chartres. He wrote 1. A Treatise on Superstitions respecting the Sacraments; 2. De Fessorum immunitate liber; 3. A history of Perukes; and other curious tracts.

(2.) **THIERS,** in geography, a town of France, in the dep. of Puy de Dome, famous for its manufactures of cutlery, paper, cards, thread, &c. 20 miles E. of Clermont, and 21 SE. of Genat. Long. 21. 13. E. Ferro. Lat. 45. 52. N.

THIERSHIEM, a town of Franconia, in Culmbach, 16 miles N. of Wunsiedel.

* **TO THEVE.** *v. n.* [*from thief*.] To steal; to practise theft.

* **THIEVERY.** *n. f.* [*from thieve*.] 1. The practice of dealing; theft.—
Their false treason and vile *thievery*. *Spenser.*
I'll example you with *thievery*. *Shak.*

—He makes it a help unto *thievery*. *Brown.*—Amongst the Spartans *thievery* was a practice morally good and honest. *South.* 2. That which it stolen.—
Injurious time now, with a robber's haste,
Craves his rich *thievery* up. *Shak.*

* **THIEVISH.** *adj.* [*from thief*.] 1. Given to stealing; practising theft.—
What, would'st thou have me go and beg my food?
A *thievish* living on the common road? *Shak.*

O *thievish* night!
Why should'st thou, but for some felonious end
In thy dark lantern thus close up the stars?
The *thievish* god suspected him. *Addison.*

2. Secret; sly; acting by stealth.—
Four and twenty times the pilot's glass
Had told the *thievish* minutes how they pass. *Shak.*

* **THIEVISHLY.** *adv.* [*from thievish*.] Like a thief.—
They lay not to live by their works,
But *thievishly* loiter and lurke. *Tasso.*

* **THIEV.**

* **THIEVISHNESS.** *n. s.* [from *thievish*.] Disposition to steal; habit of stealing.

(1.) * **THIGH.** *n. s.* [*theob*, Saxon; *thico*, Icelandic; *die*, Dutch.] The *thigh* includes all between the buttocks and the knee. The *thigh* bone is the longest of all the bones in the body: its fibres are close and hard: it has a cavity in its middle: it is a little convex and round on its fore side, but a little hollow, with a round and small ridge on its backside. *Quincy*.—He touched the hollow of his *thigh*. *Gen. xxxii. 25*.—The flesh dissolved, and left the *thigh* bone bare. *Wiseman*.

(2.) **THIGH**, in anatomy. See **ANATOMY**, *Index*. **THIGH-BONE.** *n. s.* [*thigh* and *bone*.] The chief bone of the thigh. See **ANATOMY**, *Index*.

THILAY, a town of France in the dep. of Ardennes, $7\frac{1}{2}$ miles NNE. of Charleville.

* **THILK.** pronoun. [*thilk*, Saxon.] That same. Obsolete.

I love *thilk* lass; alas, why do I love? *Spenser*.

* **THILL.** *n. s.* [*thille*, Saxon, a piece of timber cut.] The shafts of a wagon: the arms of wood between which the last horse is placed.—More easy a wagon may be drawn in rough ways if the forewheels were as high as the hinder wheels, and if the *thills* were fixed under the axis. *Mortimer*.

* **THILLER.** } *n. s.* [*thill* and *borse*.] The
* **THILL-HORSE.** } last horse; the horse that goes between the shafts.—

With collars and harness for *thiller* and all. *Tusser*.

—Thou hast got more hair on thy chin, than Dobbin my *thill* horse has on his tail. *Shak*.

* **THIMBLE.** *n. s.* This is supposed by *Minshew* to be corrupted from *thumb bell*. A metal cover, by which women secure their fingers from the needle when they sew.—

Your ladies and pale visag'd maids,
Like Amazons, come tripping after drums;
Their *thimbles* into armed gauntlets change,
Their needles to lances. *Shak*.

Who stole a *thimble* or a spoon? *Hud*.

—Veins that run perpendicular to the horizon, have valves sticking to their sides like so many *thimbles*; which, when the blood presses back, stop its passage, but are compressed by the forward motion of the blood. *Cheyne*.

(1.) * **THIME.** *n. s.* [*thymus*, Lat. *thym*, Fr.] A fragrant herb from which the bees are supposed to draw honey. This should be written *thyme*.—

Fair marigolds, and bees alluring *thyme*. *Spens*.

(2.) **THIME.** See **THYMUS**.

(1.) * **THIN.** *adj.* [*thinn*, Saxon; *thunner*, Icelandic; *dunn*, Dutch.] 1. Not thick.—Beat gold into *thin* plates. *Exod*. 2. Rare; not dense.—The hope of the ungodly is like *thin* froth. *Wisd. v. 14*.—In the day when the air is more *thin*, the sound pierceth better. *Baron*.—

They cannot change

Their element, to draw the *thinner* air. *Milton*.
—The waters of Boristhenes are so *thin* and light, that they swim upon the top of the stream of the river Hypanis. *More*.—To warm new milk pour any alkali, the liquor will remain at rest, though it appear somewhat *thinner*. *Arbutnot*. 3. Not close; separate by large spaces.—

He pleased the *thin* and bathful audience.

Roscommon.

How could he that host seduce to sin,
Whose fall has left the heavenly nation *thin*?

Dryden.

Thin herbage in the plains.

Dryden.

Thin on the towers they stand.

Dryden.

Mankind grown *thin* by his destructive sword.

Addison.

Leave the senate *thin*!

Young.

4. Not closely compacted or accumulated.—Seven *thin* ears blasted with the east wind. *Gen*.

5. Exile; small.—

Thin hollow sounds.

Dryden.

6. Not coarse; nor gross in substance: as, a *thin* veil. 7. Not abounding.—Ferrara is very large, but extremely *thin* of people. *Addison*. 8. Not fat; nor bulky; lean; slim; slender.—A slim

thin-guttled fox made a hard shift to wriggle his body into a hen roost. *L'Estrange*.

(2.) * **THIN.** *adv.* Not thickly.—Spain is *thin* sown of people. *Bacon*.

Thin sown with ought of profit.

Milton.

Comes the blind fury with th' abhorred sheers,
And slits the *thin* spun life.

Milton.

Thin-leaved arbut hazle-graffs receives. *Dryd*.
—A country gentleman, if it be like to rain, goes not abroad *thin* clad. *Locke*.

* To **THIN.** *v. a.* [from the adjective.] 1. To make thin or rare; to make less thick.—The serum of the blood is neither acid nor alkaline; oil of vitriol thickens, and oil of tartar *thins* it a little. *Arbutnot*. 2. To make less close or numerous.—The bill against root and branch never passed, till both houses were sufficiently *thinned* and over-awed. *King Charles*.—

T' unload the branches, or the leaves to *thin*,
That suck the vital moisture of the vine. *Dryd*.
'Tis Cæsar's sword has made Rome's senate little,

And *thin*'d its ranks. *Addison*.

3. To attenuate.—

The vapours, by the solar heat

Thinn'd and exhal'd, rise to their airy seat.

Blackmore.

* **THINE.** pronoun. [*thein*, Gothick; *thin*, Saxon; *dijn*, Dutch.] Belonging or relating to thee; the pronoun possessive of *thou*. It is used for *thy* when the substantive is divided from it: as, *this is thy house*; *thine is this house*; *this house is thine*.—

Thou hast her, France; let her be *thine*.

Shak.

* **THING.** *n. s.* [*thing*, Saxon; *din*, Dutch.] 1. Whatever is; not a person. A general word.—Do you chide? I have a *thing* for you.

—You have a *thing* for me!

It is a common *thing*.

Shak.

—The great master he found busy in packing up his *things*. *Knolles*.—The remnant of the meat-offering is a *thing* most holy. *Lev. ii. 3*.—Says the master, you devour the same *things* that they would have eaten, mice and all. *L'Estr*.—When a *thing* is capable of good proof in any kind, men ought to rest satisfied in the best evidence for it which that kind of *things* will bear. *Wilkins*.—

I shall blush to own so rude a *thing*. *Dryden*.
—Men, who understand any *thing* of wisdom,

Tillotson.

Tillotson.—Princes, when they know the true state of things, are not unwilling to prevent their own ruin. *Davenant*. 2. It is used in contempt.—I have a *thing* in prose. *Swift*. 3. It is used of persons in contempt, or sometimes with pity.—

See, sons, what *things* you are! *Shak.*
A *thing* by neither man nor woman priz'd.

Dryden.

—Never any *thing* was so unbred as that odious man. *Congreve*.—The poor *thing* sigh'd. *Addison*.

I'll be this abject *thing* no more. *Granville*.

4. It is used by *Shakepeare* once in a sense of honour.—

That I see thee here,

Thou noble *thing*! more dances my wrapt heart.

Shak.

THINGWALL, a town of England, in Cheshire, near Woodchurch, between the Dee and the Mersey.

(1.) * *To THINK*. *v. n.* preter. *thought*. [*thank-gan*, Gothic; *thencean*, Saxon; *denken*, Dutch.]—To have ideas; to compare terms to things; to reason; to cogitate; to perform any mental operation, whether of apprehension, judgment, or illustration.—*Thinking*, in the propriety of the English tongue, signifies that sort of operation of the mind about its ideas, wherein the mind is active; where it, with some degree of voluntary attention, considers any thing. *Locke*.—

What am I? or from whence? for that I am

I know, because I *think*. *Dryden*.

—Those who perceive dully, or retain ideas in their minds ill, will have little matter to *think* on. *Locke*.—It is an opinion that the souls always *think*, and that it has the actual perception of ideas in itself constantly, and that actual *thinking* is as inseparable from the soul, as actual extension is from the body. *Locke*.—These are not matters to be slightly and superficially *thought* upon. *Tillotson*.—His experience of a good prince must give great satisfaction to every *thinking* man. *Addison*.

2. To judge; to conclude; to determine.—Let them marry to whom they *think* best. *Numb.* xxxvi. 6.—

I fear we shall not find

This long desired king such as was *thought*.

Daniel.

—Can it be *thought* that I have kept the gospel terms of salvation? *Laet.* 3. To intend.—

Thou *thought'st* to help me. *Shak.*

4. To imagine; to fancy.—

Something since his coming forth is *thought* of. *Shak.*

Edmund, I *think*, is gone. *Shak.*

—Nature hath provoked men to *think* of such a thing. *Burnet*.—Those who love to live in gardens, have never *thought* of contriving a winter garden. *Speater*. 5. To muse; to meditate.—

You pine, you languish, love to be alone,
Think much, speak little. *Dryden*.

6. To recollect; to observe.—

We are come to have the warrant.

—Well *thought* upon; I have it here. *Shak.*

—*Think* upon me, my God, for good. *Neb.* v. 19.

7. To judge; to be of opinion.—Among ladies you *think* you are safe. *Swift*. 8. To consider; to doubt; to deliberate.—Any one may *think* with himself, how then can any thing live in Mer-

cury and Saturn? *Bentley*. 9. *To THINK* on. *To contrive*; to light upon by meditation.—

Venus *thought* on a deceit. *Swift*.

10. *To THINK* of. *To estimate*.—The opinions of others whom we know and *think* well of, are no ground of assent. *Locke*.

(1.) * *To THINK*. *v. a.* 1. *To imagine*; to imagine in the mind; to conceive.—Charity *thinketh* no evil. 1 *Cor.* xiii. 5.—

Nor *think* superfluous others aid. *Milton*.

Think nought a trifle, though small. *Young*.

2. *To THINK* much. *To grudge*.—

He *thought* not much to clothe his enemies.

Milton.

—If we consider our infinite obligations to God, we have no reason to *think* much to sacrifice to him our dearest interests in this world. *Tillotson*.

2. *To THINK* scorn. *To disdain*.—He *thought* scorn to lay hands on Mordecai alone. *Esh.* iii.

4. *Me THINKETH*. It seems to me. *Me THOUGHT*. It appeared to me. These are anomalous phrases of long continuance and great authority, but not easily reconciled to Grammar. In *me thinketh*, the verb being of the third person, seems to be referred not to the thing, and is therefore either active, as signifying to cause to think; or has the sense of seems, *me thinks*; it seems to me.—

Me thought I saw the grave where Laura lay.

Sidney.

—*Me thinketh* the running of the foremost is like that of Ahimaz. 2. *Sam.* xviii. 27.

* *THINKER*. *n. f.* [from *think*.] One who thinks in a certain manner.—You may as well hope to make a good musician by a lecture on the art of music, as a coherent *thinker*, or strict reasoner, by a set of rules. *Locke*.—If a man had an ill-favoured nose, deep *thinkers* would impute the cause to the prejudice of his education. *Swift*.

(1.) * *THINKING*. *n. f.* [from *think*.] Imagination; cogitation; judgment.—He put it by once; but, to my *thinking*, he would fain have had it. *Shak.*—

His *thinkings* are below the moon, not worth
His serious considering. *Shak.*

I heard a bird so sing,

Whose music, to my *thinking*, pleas'd the king.

Shak.

—I was a man, to my *thinking*, very likely to get a rich widow. *Addison*.

(2.) *THINKING* is a general name for any act or operation of the mind.

* *THINLY*. *adv.* [from *thin*.] 1. Not thickly. 2. Not closely; not numerously.—It is commonly opinioned, that the earth was *thinly* inhabited before the flood. *Brown*.—

Our walls are *thinly* mann'd. *Dryden*.

* *THINNESS*. *n. f.* [from *thin*.] 1. The contrary to thickness; exility; tenuity.—Ticking is molt in the soles, arm-holes, and sides, because of the *thinness* of the skin. *Bacon*.—

Like gold to airy *thinness* heat. *Donne*.

—Transparent substances, as glass, water, air, &c. when made very thin by being blown into bubbles, or otherwise formed into plates, do exhibit various colours, according to their various *thinnesses*. *Newton*.—Too great *thinness* and delicacy of the vessels. *Arbutnot*. 2. Paucity; scarcity.—

To hide the *thinness* of their flock. *Dryden*.

—16

—In country villages pope Leo VII. indulged a practice through the *thinness* of the inhabitants. *Ayliffe*. 3. Rareness; not spiffitude.—Those pleasures that spring from honour, the mind can nauseate, and quickly feel the *thinness* of a popular breath. *South*.

THIONVILLE, an ancient and strong town of France, in the dep. of the Moselle, and ci-devant prov. of Lorraine; anciently belonging to the duchy of Luxemburg, and once, the capital and residence of the French kings of Aufrasia. In 1558, it was taken by the French; and in 1643, it was again taken by them under the prince of Conde; and finally ceded to France by the treaty of the Pyrenees, in 1659. In 1792, it withstood a long siege and bombardment by the Austrians; which lasted during the whole campaign. It is seated on the Moselle, over which it has a bridge defended by a horn-work; 14 miles N. of Metz, and 195 NE. of Paris. Lon. 6. 15. E. Lat. 49. 21. N.

THIR, *pron.* [Scottish.] *plur.* of *this*, but expressing an idea quite distinct from both *these* and *those*: hence it might merit adoption into the English language. (See *Dictionary*, § 4.) It is still used in various forms of writing in the Scots Law: particularly in indentures between masters and apprentices; which begin thus: "Thir indentures bear leal and soothfast witnessing." &c.

(1.) * **THIRD**. *adj.* [*thritiba*, Saxon. The first after the second; the ordinal of three.—This is the *third* time. *Shak.*—Such clamours are like the signed quarrels of combined cheats, to deduce some *third* person. *Decay of Piety*.

(2.) * **THIRD**. *n. f.* [from the adjective.] 1. The third part.—

To thee and thine hereditary ever,
Remain this ample *third* of our fair kingdom.

Shak.

Men of their broken debtors take a *third*,
A sixth, a tenth, letting them thrive again. *Shak.*
—The protestant subjects of the abbey make up a *third* of its people. *Addison*.—No sentence can stand that is not confirmed by two *thirds* of the council. *Addison*. 2. The sixtieth part of a second.—Divide the natural day into 24 equal parts, an hour into 60 minutes, a minute into 60 seconds, a second into 60 *thirds*. *Holder*.

(3.) **THIRD MAJOR**, } in Music. See *Music*,
(4.) **THIRD MINOR**, } *Defin.* § 9.

* **THIRDBOROUGH**. *n. f.* [*third* and *borough*.]
An under-constable.

* **THIRDLY**. *adv.* [from *third*.] In the third place.—First, metals are more durable than plants; secondly, they are more solid; *thirdly*, they are wholly subterranean. *Bacon*.

THIRENSTEIN, a town of Lower Austria, with a handsome castle, near the Danube.

* **To THIRL**. *v. a.* [*thirlan*, Sax.] To pierce; to perforate. It is now pronounced and written *thirl*. *Ainsworth*.

THIRLAGE. See *LAW*, Part III. Chap. II. § 8. IX. § 12.

THIRLBY, Styan, J. L. D. a learned English critic, born in 1692. He wrote a *Defence of the Trinity*, and other works, and edited *Justin's Works*, in fol. 1723. He died in 1753.

THIRLMERE, LAKE. See *LEATHES*.
